Punta Sanhueza. 64°49' S, 62°51' W. A point between Punta Krug and Punta Guzmán, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1951-52, for Capitán de corbeta Eduardo Sanhueza Carmona, skipper of the *Lientur* during that expedition, and who conducted hydrographic surveys in the area.

Sanitation. Sanitation in Antarctica has been woefully inadequate until recent times. Although today showers, flush toilets (ladies' and gents'), and washer/dryers are the order of the day in most Antarctic stations, it is not difficult to imagine how tough it must have been in the old days. On board ship, a couple of years at a stretch, things would get pretty bad, and men rotted — literally. The relevant facilities on board the inevitably tiny vessel were astonishingly small and crude, and waste matter was dumped overboard into the icy seas. There were no showers or bathtubs, no deodorants, no toothpaste, hand cream or toilet paper. The situation improved only a little in the 19th century, the better diet contributing only slightly to the overall improved conditions. This is one of the not unsung reasons why women were "forbidden" entry to high southern latitudes until recently — the impracticality of the facilities. By Scott and Amundsen's time, things had improved still further. Amundsen had a w.c. at his base, Framheim, but out on the trail he suffered grievously from piles, and was frank about it. Most of the other pioneers suffered similarly, but they did not refer to it, especially the British, for whom it was infra dig even to have alluded to such a problem. The dogs and ponies had an easier time of it, of course, and most of the dogs would eat their own excrement, and that of the humans too. The British, especially, did not look on this at all favorably, but it's a zoological fact of life, and it alleviated the problem of waste disposal somewhat, particularly around the bases. Toilet paper (for humans) seems to have been first taken to Antarctica by the British Antarctic Expedition of 1910-13 (Scott's), and in 1934 Byrd took a 5-gallon can stuffed with it for his "alone" stay at Bolling Advance Weather Station. One of the big problems of the polar pioneers was functioning naturally in the extreme cold, out there on the trail at 86°S. If the weather was clement outside the small tent, it was comparatively easy. One just turned against the wind, and acted smartly. If it was, say -60°F it was definitely an inside job, in a small corner of the tent especially allotted for this purpose. There is a wonderfully funny series of little articles written by some of the lads at Halley Bay Station, and gathered together by Andy Smith in his brilliant web page on that base. Delicacy (this being a family book) prevents the reproduction of any of that material, and it was a similar delicacy that impelled my publisher (quite rightly, too) to pare my own article on sanitation, which had gotten totally out of hand by the time I presented it. This little entry merely scratches the surface of a fascinating subject, one that is definitely worth further study and possibly a thesis, a monograph, or even a short book.

Sanjiao Bandao *see* **Stinear Peninsula**

Sankaku-iwa. 71°24' S, 35°41' E. A pyramidal nunatak, rising to about 2075 m, 4 km E of Mount Fukushima, in the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979 (name means "triangular rock").

Sankyaku-yama. 68°35' S, 41°02' E. A hill, rising to 98.8 m above sea level, the highest on Cape Omega, on the coast of Queen Maud Land. Named by the Japanese on March 22, 1979 (name means "tripod hill"), for the surveyors who plotted it.

Sanmartín, Juan José. b. 1891, Salta, Uruguay. He was one of the alfereces de navío (ensigns) aboard the *Instituto de Pesca No. 1*, when that vessel tried unsuccessfully to rescue Shackleton's men stranded on Elephant Island, in 1916.

Sanqing Shan. 69°23' S, 76°19' E. A hill in the Larsemann Hills. Named by the Chinese.

Sansom Island *see* **Sansom Islands**

Sansom Islands. 69°43' S, 73°45' E. Two low rock islands in Sandefjord Bay, on the Ingrid Christensen Coast, about 40 km WNW of Mount Caroline Mikkelsen. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Knattskjera (i.e., "the crag skerry"). The islands were visited in Jan.-Feb. 1969, by the ANARE Prince Charles Mountains Survey party, who made geological investigations here. The Australians built a refugio here, and renamed the islands as Sansom Islands, for Julian R. "Sam" Sansom, medical officer with the ANARE party on the Amery Ice Shelf in 1968 (*see* **Amery Ice Shelf Station**). The Russians named the bigger of the two islands as Sansom Island.

Sansom Ridge. 70°50' S, 69°00' E. An ice ridge, rising to perhaps 348 m above sea level, about 19.3 km wide, and about 32.2 km long, just E of Jetty Peninsula, on the W side of the Amery Ice Shelf. Discovered by the ANARE Amery Ice Shelf Party in 1968, led by Max Corry. Named by ANCA for Sam Sansom (*see* **Sansom Islands**), a member of that party.

Sansyoku-dai. 68°28' S, 41°26' E. A flat-topped hill in the E part of Cape Akarui, NE of Cape Omega, on the coast of Queen Maud Land. Surveyed geologically by JARE in 1975 and 1980. Named by the Japanese on Nov. 24, 1981 (the name means "three colors terrace").

The *Santa*. A 355-ton, 143 foot 6-inch whale catcher, built at Smith's Dock, Middlesbrough, in 1936, for Salvesen's South Georgia Company. She caught for the *Salvestria* in 1936-37, and for the *New Sevilla* in 1937-38, 1938-39, and 1939-40. During World War II she saw service as a Royal Navy minesweeper, and was mined off Sardinia on Nov. 23, 1943, and sank.

Santa Bárbara Refugio. 79°58' S, 37°48' W. Argentine summer-only refugio opened 270 km S of General Belgrano Station by an Army team led by Capitán José Tramontana, at 80 m above sea level, on Oct. 25, 1963. It was inaugurated on Dec. 4, 1963.

Santa Claus Island. 64°59' S, 65°46' W. One

of the several rocks off the E coast of Hugo Island, in the W approach to Bismarck Strait, 60 km W of Cape Monaco, Anvers Island. The name, which has been in common use since the 1990s, is not yet official. There is an American automatic weather station here (see below).

Santa Claus Island Automatic Weather Station. 64°59' S, 65°46' W. An American AWS on Santa Claus Island, one of the rocks off the E coast of Hugo Island, on the W side of the Antarctic Peninsula. Formerly called Hugo Island AWS, it was installed in Dec. 1994, at an elevation of 25 m, and was removed in Feb. 2003.

The *Santa Cruz*. Argentine ship in the South Shetlands in Feb. 1948, as part of the naval maneuvers led by Contra almirante Harald Cappus (q.v. for more details of the operation). Juan B. Basso was skipper of the ship.

Santa Cruz Point. 62°31' S, 59°33' W. A high, rocky bluff, ice-free in summer, standing out from the glaciers surrounding it, and forming the E point of Greenwich Island, and the SW entrance point of English Strait, 5.5 km SE of Punta Bascopé, in the South Shetlands. It was known to 19th-century sealers, but, if it was named by them, that name has not come down. Named by the Argentines as Punta Santa Cruz, perhaps for the *Santa Cruz*, although the British say it was named for the Argentine province of Santa Cruz. It appears on an Argentine chart of 1949. ChilAE 1949-50 called it Punta Tac ("TAC" is their abbreviation for Territorio Antártico Chileno), and it appears as such on a 1962 Chilean chart, and also in the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. The names Santa Cruz and Tac were, of course, impossible for the British, so UK-APC named it (for themselves only) as Spencer Bluff, on Aug. 31, 1962. The name Spencer had been applied by Weddell in the 1820s to both English Strait and Lewthwaite Strait, the name Spencer simply not catching on at that time. Capt. Sir Robert Cavendish Spencer (1791-1830), had been the skipper of the *Owen Glendower*, on the South America station, 1819-22, at the time of the discovery of the South Shetlands. It appears as Spencer Bluff on a British chart of 1962. US-ACAN accepted the name Santa Cruz Point in 1965. Last plotted by the UK, in late 2008.

Pico Santa Fé *see* **Mount Spann**

Santa Fe Hill *see* **Mount Spann**

Santa Fé Nunatak *see* **Mount Spann**

The *Santa Maria*. German yacht, skippered by Wolfgang "Wolf" Kloss, which visited the South Shetlands and the Antarctic Peninsula in 1990-91. She was back in 1994-95, and again in 1996-97, this last time carrying tourists. She was back in the 1997-98, 1998-99 and 1999-2000 seasons, but this time with no tourists and only to the Antarctic Peninsula. Kloss was again skipper. She was back, again under Kloss, with 3 passengers, in Antarctic waters in 2001-02, 2002-03, and 2005-06.

Bahía Santa Marta *see* **Duperré Bay**, **Saint Martha Cove**

Caleta Santa Marta *see* **Saint Martha Cove**

The *Santa Micaela*. A 6000-ton, 101.36-meter landing ship (tank) (i.e., an LST), built at the Bethlehem Shipyard, in Hingham, Mass., and launched on Feb. 21, 1944, as *LST-1065*. On June 23, 1947, she was struck from the U.S. Navy list, and on Jan. 17, bought by Naviera Pérez Companc, in Argentina, as a merchant navy vessel, and renamed the *Santa Micaela*. She was chartered by the Argentine Army as a cargo vessel to take part in ArgAE 1950-51 (Captain Juan Santiago Farrell), after which she was returned to her owners. In 1960 she was sold to the Patagonian Import and Export Company, and in 1963 sold again, to the Manifran Line, and renamed the *Mar Tirreno*. In 1974 she was sold for scrap.

Cerro Santa Micaela *see* **Marin Bluff**

Cordón Santa Micaela *see* **Kinnear Mountains**

The *Santa Rita*. Argentine ship, part of ArgAE 1982-83 She investigated the potential for fishing off the Antarctic Peninsula. Captain José Luis Lesmi was her skipper that season.

Cabo Santa Rita *see* **Saint Rita Point**

Cordillera Santa Teresita *see* **Neptune Range**

Isla Santa Teresita *see* **Eagle Island**

Macizo Santa Teresita *see* **Dufek Massif**

Santa Teresita Range *see* **Dufek Massif**

Santa Teresita Refugio. 66°22' S, 62°55' W. Argentine refuge hut built by the Army in Sept. 1963 on the shelf ice at Adie Inlet, at the N tip of Churchill Peninsula, on the E side of Graham Land. It was inaugurated on Oct. 4, 1953. Now dismantled.

Santos Peak. 64°25' S, 61°32' W. Rising to 570 m, S of Murray Island, near the SW end of Graham Passage, on the Danco Coast, on the W coast of Graham Land. First roughly charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point, between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Alberto Santos-Dumont (1873-1932), Brazilian aeronautics pioneer working in France. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Sanwick, Herman. Known as Otto. b. Dec. 3, 1896, Henden, SD, son of Norwegian immigrants, farmer John Sanwick and his wife Amalia. The family moved to Seattle in the first decade of the 20th century, where John Sanwick became an architect, and Herman went up to Anchorage, to work for the Alaska Engineering Company. Then he went to sea, as an engineer, based out of Seattle, married, divorced, and once, while 90 feet below during a salvage, was attacked by a giant octopus. He was chief engineer on the *North Star*, during USAS 1939-41. He died in Seattle, on Aug. 10, 1971.

Sanyuan Dao *see* **Knuckey Island**

Sanz, Ifigenio. Argentine naval teniente de fragata, who was leader of the 1951 wintering-over party at Órcadas Station.

Saparevo Glacier. 62°54' S, 62°23' W. A glacier, 1.8 km long and 2 km wide, on Smith Island, in the South Shetlands, it flows from the NW slopes of Imeon Ridge, N of Mount Christi, into Vedena Cove. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the settlement of Saparevo, in southwestern Bulgaria.

Sapin-Jaloustre, Jean Robert. b. 1896. French physician and biologist on FrAE 1950, he wintered-over that year at Port-Martin, during which he discovered the emperor penguin colony on Pointe Géologie. He was on the science faculty at the University of Paris, and died in 1968.

Ostrov Sapozhok *see* **Sapozhok Island**

Sapozhok Island. 68°53' S, 77°55' E. An island, rising to an elevation of 133 m above sea level, 1.25 km ENE of the easternmost point of Torckler Island, in the Rauer Islands. Charted by SovAE 1956, and named by the Russians as Ostrov Sapozhok. ANCA translated the name.

Sapp Rocks. 82°30' S, 51°48' W. Two exposed rocks on land, rising to about 775 m above sea level, 3 km N of Alley Spur, along the NW side of the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground during the 1965-66 USGS Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Clifton Earl Sapp (b. Aug. 10, 1935, Dallam Co., Tex., son of Ury Stanley Sapp and Delphia May Throckmorton. He died on Oct. 9, 1997, in Miss.), USN, hospital corpsman who wintered-over at Pole Station in 1965.

Sapper Hill. 81°24' S, 160°38' E. An ice-covered peak, 3 km NE of Hermitage Peak, and at the mouth of Starshot Glacier, 11 km N of Mount Ubique, in the N part of the Surveyors Range. Named by NZGSAE 1960-61 for the Royal Engineers (their nickname is "the Sappers," and their motto is "Ubique"). US-ACAN accepted the name in 1965.

Islote Sara *see* **Islote Riofrío**

Nunatak Sara *see* **Vaca Nunatak**

The *Saragossa*. Built in 1911, as the *Siamese Prince*, for the Prince Line, she was bought by Salvesen's Whaling Company in 1924, to replace the lost *Neko*, and converted into the 4847-ton whaling factory ship *Saragossa*. She first went to the South Shetlands and Graham Land, in 1925-26, and was back there in 1926-27 (also in the South Orkneys that season), 1927-28, 1928-29, 1929-30, and 1930-31, also doing pelagic whaling. In 1931-32 she was one of the last of the old-style factories operating in Antarctic waters without a stern slip. She operated along the ice-edge until March 16, 1932, when a fire broke out in 62°18' S, 55°48' W. She was abandoned, and sank, along with a cargo of whale oil. The crew were rescued, and taken to South Georgia. Her whale catchers, over the years, included the *Shera*, the *Stina*, the *Stefa*, the *Silva* and the *Svega*.

The *Sarah*. A 40-ton shallop (or tender) to the *Jane Maria* during the New York Sealing Expedition of 1820-21, in the South Shetlands. She was assembled at the Falkland Islands from a kit brought down on the *Jane Maria* in 1819. Nicknamed the *Sally*, she was commanded by Capt. Donald McKay, and was lost at sea on April 8, 1821, with 9 men aboard.

The *Sarah E. Spear*. Sealing brig, built in Robbinston, Maine, which arrived, newly launched, in Boston on July 2, 1851, under the command of Capt. Frost, and was handed over to Capt. George Keene, who sailed her out of Boston on July 11, bound for Stonington, where she had just been bought by a whaling outfit. She arrived in Stonington on July 19, and was quickly refitted, leaving Stonington (still under Capt. Keene) on Aug. 6, 1851, bound for the Pacific whaling and sealing grounds. She was in the South Shetlands for that 1851-52 season, and then returned to Stonington, where Capt. William Pendleton took her over for the 1852-53 season. She left Stonington on Sept. 27, 1852, under Pendleton, bound for the South Shetlands. When they returned to Stonington in 1853, Keene again assumed command, and took her out of Stonington on July 28, 1853, for a third season in the South Shetlands. This time she left in company with the barque *United States* (and her tender, the schooner *Flying Cloud*). They met up with the *Aeronaut* and her two tenders coming out of Mystic the same day, and sailed as a fleet. However, she didn't make it to the South Shetlands. On Oct. 9, 1853, in a gale off the Falklands, the *Spear* and the *Flying Cloud* were sunk. All crew were saved.

Sarah Ridge *see* **Atlantic Club Ridge**

The *Sarah W. Hunt*. New London sealer in the South Shetlands for the 1887-88 and 1888-89 seasons, under Capt. James W. Buddington. She took only 39 skins, and was probably back the following season, 1889-90 (under Capt. John O. Spicer), but there were no seals left. They were also there for the 1890-91 season. On Feb. 28, 1891, they buried crewman Joseph H. Montaro, in South Georgia. In 1891-92 James Buddington was her skipper in the South Shetlands, and she picked up 41 fur seal skins. She was also at the South Sandwich Islands, where she picked up 400.

The *Sarah W. Vorwerk*. German yacht, skippered by Capt. Henk Boersma, which carried tourists to the South Shetlands and the Antarctic Peninsula in 1996-97. She had a crew of 8, and could carry 2 passengers. She was back at the Antarctic Peninsula only, same skipper, in the 1997-98 and 1998-99 seasons, this time with no tourists, and in the 1999-2000 season, again only to the peninsula, and again with no tourists. Under Boersma, she was back in Antarctic waters in 2000-01, 2001-02, and 2002-03.

The *Sarandí*. A 1264-ton, 92.6 meter frigate built by the Leatham D. Smith Shipbuilding Company, in Sturgeon Bay, Wisc., as the U.S. Navy patrol gunboat *Chattanooga*, and launched on Aug. 7, 1943. On Aug. 16, 1944, she became the *Uniontown*, serving as a weather station in the Arctic. She was decommissioned on Dec. 20, 1945, and struck from the U.S. Naval list on Jan. 8, 1946. In July 1947 she was sold to the Argentine navy, as a frigate, and renamed *Sarandí*. She was in Antarctic waters in 1948-49, with the *Heroína*. Captain was Carlos Núñez Monasterio, replaced by Capt. Óscar R. Solari. They investigated and disproved the existence of Macey's Island and Swain's Island, and conducted biological and oceanographic observations. She was in the South Sandwich Islands in 1952, under the command of Capt. Domingo G. Luis. She was sold on June 29, 1967.

Ensenada Sarandí *see* **Ensenada Echeverry**

Islote Sarandí *see* **Beagle Island**

Sarao Point. 74°08' S, 163°26' E. A rock outcrop, about 10 sq m in area, and with an elevation of some meters, clearly visible on the Tourmaline Plateau. Discovered by Robert Sarao and Claudio Giudici in Jan. 1990, and named by the Italians for Sgr. Sarao, a member of 5 Italian expeditions to Antarctica, who had an accident at this outcrop in 1993-94.

Lake Saraswati. 70°46' S, 11°44' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

Saratoga Table. 83°20' S, 50°30' W. A high, flat, snow- and ice-covered plateau, rising to 2025 m, 13 km long and 10 km wide, in the S portion of the Forrestal Range, in the Pensacola Mountains, just S of Kent Gap and Lexington Table. Discovered and photographed on Jan. 13, 1956, during the famous non-stop flight from McMurdo to the Weddell Sea and back (*see* **Operation Deep Freeze I**). Plotted in 83°37' S, 49°45' W. Named by US-ACAN in 1957, for the *Saratoga*, the American World War II aircraft carrier (not in Antarctica). Photographed aerially by USN in 1964, and surveyed from the ground during the 1965-66 USGS Pensacola Mountains Project. These efforts enabled USGS to replot the feature. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Paso Saravia. 80°32' S, 39°30' W. A very isolated and difficult pass on the Polar Plateau. Named by Operación 90 (q.v.), for César Cao Saravia (1918-1988), a Salteño from Argentina.

Sarcophagus Pond. 77°33' S, 160°43' E. A small, ice-covered pond, about 250 m ENE of Dauphin Point, in Labyrinth, in the area of the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. In 2003-04 a USAP field party took samples from this pond, and named it for the coffin-shaped rock in the middle. US-ACAN accepted the name in 2004.

Sares, Henry *see* **USEE 1838-42**

Sargent Glacier. 85°23' S, 163°50' W. A steep-walled tributary glacier flowing SE from the Herbert Range into the Axel Heiberg Glacier, just SE of Bell Peak, in the Queen Maud Mountains. Probably first seen by Amundsen during his trek to the Pole in 1911, it was first mapped during ByrdAE 1928-30. Named by US-ACAN in 1967, for Howard H. "Tad" Sargent III, ionosphere physicist with the National Bureau of Standards, who wintered-over at Pole Station in 1964.

Sargento Ayudante Roque C. Cisterna Refugio. 77°52' S, 34°19' W. Argentine refugio opened by the Army on Jan. 27, 1976. Known as Cisterna.

Sargento Cabral Refugio. 63°50' S, 58°21' W. Argentine refuge hut built by the Army on a rock surface at Pitt Point, on the W side of the Prince Gustav Channel, and inaugurated on Sept. 18, 1964, as Fortín Sargento Cabral (i.e., Fort Sergeant Cabral). It is now dismantled.

Sargento Mariani Refugio. 78°01' S, 45°58' W. Argentine refuge hut opened by the Army on Sept. 24, 1980, on the Filchner Ice Shelf, near Gould Bay. Known as Mariani.

Sarie Marie Base. 72°01' S, 2°48' W. A South African geological field station and emergency base, built at Grunehogna Peaks, on Ahlmann Ridge, in Queen Maud Land, in 1982-83. It was operated as a South African summer station every season from 1984-85, until it was dismantled and removed in April-May 2002.

The *Sarka*. A 355-ton, 143 foot 6-inch whale catcher built in 1936 by Smith's Dock, Middlesbrough, for Salvesen's Sevilla Whaling Company. She caught for the *Sourabaya* in Antarctica in 1936-37, 1937-38, 1938-39, and 1939-40. In 1940-41 she was again in Antarctic waters, catching for the *Svend Foyn*. She was a Royal Navy minesweeper during World War I (no change of name), and, after the war, was returned to her owners. She caught for the *Southern Harvester* in 1947-48, 1948-49, 1949-50, and 1950-51, and was a buoy boat for the same factory ship in 1951-52. She was laid up in 1952, in 1954 sold to a company in Valparaíso, and subsequently became the *Juan IV*, plying off the Chilean coast for years. In 1979 she was sold to the Chilean Navy as a floating target, and duly sunk.

Sarkofagen *see* **Sarkofagen Mountain**

Sarkofagen Mountain. 72°10' S, 16°45' E. A somewhat isolated nunatak in Carsten Borchgrevinkisen, 17.5 km S of Mount Yakovlev, in the Russkiye Mountains, in the easternmost part of Fimbulheimen, in Queen Maud Land. Mapped by cartographers with the Norsk Polarinstitutt, from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Sarkofagen (i.e., "the sarcophagus"). US-ACAN accepted the name Sarkofagen Mountain in 1970.

Canal Sarmiento *see* **George VI Sound**

The *Sarmiento de Gamboa*. Spanish oceanographic research ship, 70.5 m long, built at the Freire Shipyards, in Vigo, and launched on Jan. 30, 2006. She was used in 2006-07 in Antarctica. Named after the 16th-century Spanish explorer.

Sarnoff Mountains. 77°10' S, 145°00' W. A range of mountains, 40 km long, and between 6 and 13 km wide, it separates Boyd Glacier from Arthur Glacier, in the Ford Ranges of Marie Byrd Land. The W end of the range was discovered and photographed aerially on Dec. 5, 1929, during ByrdAE 1928-30, and roughly plotted from these photos. The range was mapped in greater detail by ByrdAE 1933-35 and USAS 1939-41. Named by Byrd for David Sarnoff (1891-1971), president of RCA, provider of radio equipment for ByrdAE 1933-35. US-ACAN accepted the name in 1970.

Cabo Sarratea *see* **Exotic Point**

Sarsee Volcano *see* **Larsen Nunatak**

Punta Sartorio *see* **Sartorius Point**

Sartorius Island *see* **Greenwich Island**

Sartorius Point. 62°34' S, 59°39' W. Nearly

3 km E of Ephraim Bluff, on the S coast of Livingston Island, in the South Shetlands. As early as 1820, sealers were using the name Point Hardy for this feature, for Admiral Hardy (*see* **Hardy Cove**). Fildes charted this feature in 1820–21, and Powell did so in 1821–22, the name appearing as both Point Hardy and Hardy Point. However, the name Hardy Point was later mis-applied to Fort Point, which lies to the E. It was re-charted by the Discovery Investigations in 1934–35. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by FIDS between 1957 and 1959. On Aug. 31, 1962, UK-APC named this feature as Sartorius Point, in order to avoid any confusion, and also to avoid confusion with Hardy Point, in the South Sandwich Islands. Sartorius Island had been the name used by Weddell for Greenwich Island (q.v.). The point appears as such on a British chart of 1962. US-ACAN accepted this situation in 1965. The Argentines call it Punta Sartorio.

Gora Sarycheva. 70°37' S, 66°46' E. A nunatak, due E of Mount McGregor, in the N part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Punta Sarzosa. 64°32' S, 62°03' W. The extreme N point of Nansen Island, in the entrance to Wilhelmina Bay, off the W coast of the Antarctic Peninsula. Named by the Chileans for Julio Sarzosa Lorens, a sailor on the *Baquedano*, during ChilAE 1955–56. The Argentines call it Punta Carbone.

Sasazaki *see* **Tokei, Hirose**

Sastrugi. Meant to be pronounced with a soft "g," but it never is. The singular is sastrugus, with, of course, a hard "g." Wavelike irregularities which look like miniature snow dunes, they rise from a few inches in height to more than 3 feet from the ground, and have long tails descending downwind, sometimes to a length of 50 feet. They move continually as the wind reshapes them. At places they played hell with the early sledging expeditions, and later, with planes coming in to land.

Cape Sastrugi. 74°37' S, 163°41' E. A sharply projecting point, 2.5 km NW of Snowy Point, it marks the SW extremity of a plateau that lies W of Campbell Glacier, on the W side of the Deep Freeze Range, and overlooks the N portion of the Nansen Ice Sheet, in Victoria Land. First explored by Victor Campbell's Northern Party during BAE 1910–13, and named by them on Jan. 24, 1912, for the large and extensive sastrugi that impeded their progess when approaching this point. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Såta *see* **Såta Nunatak**

Såta Nunatak. 69°46' S, 37°17' E. 0.8 km N of Kista Nunatak, on the E side of Fletta Bay, along the SW shore of Lützow-Holm Bay, on the Prince Harald Coast. Photographed aerially by LCE 1936–37, and mapped in 1946 from these photos by Norwegian cartographers, who named it Såta (i.e., "the haystack"). US-ACAN accepted the name Såta Nunatak in 1968.

The *Satellite*. A 21-foot catamaran, built by Barracuda Technologies, in Rio. In company with the *Kotic* (skipper Oleg Bely), South African Duncan Ross (aged 39) and Brazilian Roberto Pandiani (aged 45), two experienced cat sailors, sailed her from Ushuaia, and, 82 hours later, on Feb. 7, 2003, arrived in Antarctic waters, the first to cross the Drake Passage in an open catamaran.

The Satellite. 67°51' S, 61°07' E. A small rock peak rising to 1100 m above sea level, and protruding slightly above the ice sheet, 5 km SW of Pearce Peak, and 13 km E of Baillieu Peak, in Mac. Robertson Land. Discovered and named on Feb. 18, 1931 by BANZARE. US-ACAN accepted the name in 1947. On Feb. 26, 1947, during OpHJ 1946–47, this feature's rough location was verified by aerial photos. ANCA has also accepted the name.

Satellite Snowfield. 71°28' S, 69°45' W. At the SE side (the British say SW) of the Walton Mountains, in the south-central part of Alexander Island. It actually extends from 71°20' S to 71°37' S, and from 69°20' W to 70°10' W. Roughly mapped in 1959 by Searle of the FIDS, working from aerial photos taken in late 1947 by RARE 1947–48. Surveyed from the ground by BAS personnel from Fossil Bluff, between 1961 and 1973. Re-mapped by the (British) Directorate of Overseas Surveys (DOS) from NASA/USGS satellite imagery. Named by UK-APC on Dec. 20, 1974, not for the satellite imagery, but for the satellites (moons) of the planets that lent their names to several features in this area. US-ACAN accepted the name in 1975.

Sato, Ichimatsu. b. 1877, Fukushima. One of the helmsmen on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910–12. He died in 1959.

Ostrov Saturn *see* **Saturn Island**

Saturn Glacier. 72°00' S, 68°35' W. A glacier, 24 km long and 10 km wide, it flows E from the SE part of Alexander Island into the ice shelf of George VI Sound between Two Step Cliffs and Citadel Bastion, and N of Corner Cliffs. Seen aerially by Ellsworth on Nov. 23, 1935, and roughly surveyed in Oct. 1936 by BGLE 1934–37. Photographed aerially in late 1947, by RARE 1947–48, and surveyed from the ground by Fids from Base E in 1949. Named by UK-APC on March 31, 1955, for the planet. US-ACAN accepted the name later in 1955. It appears on a U.S. Hydrographic Office chart of 1956. Originally plotted in 71°59' S, 68°45' W, it was mapped over its length by Searle of the FIDS in 1959, working off the RARE photos, and plotted by him in 71°56' S, 68°42' W. It appears with these new coordinates in the 1977 British gazetteer. The coordinates used at the beginning of this entry are the ones used by US-ACAN. The Argentines, who use the British coordinates, call it Glaciar Saturno.

Saturn Island. 66°08' S, 101°09' E. In the Bunger Hills. Charted by SovAE 1956, and named by them as Ostrov Saturn. ANCA calls it Saturn Island (which means the same thing).

The *Saturnin*. French yacht, skippered by Christophe Houdaille, which visited the South Shetlands and the Antarctic Peninsula in 1989–90. She wintered-over in South Georgia in 1991, and was back in Antarctic waters, this time skippered by Claude Houdaille, to the same places, in 1992–93 and 1994–95.

Glaciar Saturno *see* **Saturn Glacier**

Sauna Cave. 77°32' S, 167°08' E. A fumerole of significant size, 450 m SE of Western Crater, on Mount Erebus, on Ross Island. Used as a sauna. Named by NZ-APC on Sept. 14, 2001.

[1]**Mount Saunders** *see* **Saunders Mountain**

[2]**Mount Saunders**. 85°21' S, 165°26' E. Also called (erroneously) Mount Sanders. Rising to 2895 m (the New Zealanders say 3202 m), 7 km NNW of Mount Nimrod, and about 10 km SE of Mount Mills, in the N portion of the Dominion Range (it forms part of the W escarpment of that range). Discovered by BAE 1907–09, and named by Shackleton for Edward Saunders, a NZ reporter with the *Lyttelton Times* (his father, Edward Saunders, was editor), hired by Shackleton's publisher, William Heinemann, to be Shackleton's secretary on the trip back from NZ to England after the expedition. Each day, Shackleton would dictate for a couple of hours, Saunders would type up the copy, and then Shackleton would immediately correct if necessary. This way, the report of the expedition was largely completed by the time the ship reached England. Saunders (b. 1882) had first met Shackleton in 1901, when the *Discovery* pulled into Lyttelton on her way south for BNAE 1901–04. He had interviewed Shackleton in 1907, before the *Nimrod* had left NZ for Antarctica. He became a close friend of Shackleton's, went to work at other newspapers, and worked on the book of Shackleton's 1914–17 expedition as well. US-ACAN accepted the name in 1952, and NZ-APC followed suit. *See also* **Mount Ida**.

Punta Saunders *see* **Saunders Point**

Saunders, Alfred. In later years he affected the middle name of Henry, but, in fact, this was entirely made up, as was his age (as we shall see later). His brother Frank's middle name was Henry, which is where he got the idea. b. Dec. 26, 1895, Shoreditch, London, but grew up partly on Cavendish Street, Edmonton, son of french polisher Alfred Saunders and his wife Elizabeth Ann Bates. He became a photographer, and worked at the Marine Station at Grytviken, in South Georgia, each season between 1925 and 1931. He was lab assistant on the 1933–35 *Discovery II* cruise, on which he "captured the South Orkneys" in his photographs. He was back again on the 1935–37 cruise, as lab assistant and (this time) official photographer. Famous for his studies of the sea elephant, and the shot of the party of pilot whales. He wrote *A Camera in Antarctica*, in 1950. He later became a professional photographer, with a studio at High Street, Pinner (from 1961 called Humphrey Saunders Studios), although he lived for decades at 4 Ebury Close, Northwood. According to a little article about him on a Tristan da Cunha web page, he died in 1982, aged 83, and the UK gazetteer says his years were 1900–1982. No Alfred Henry Saunders died in 1982, certainly not at age 83, but an Alfred Saunders (and only one) did die that year,

in Watford, and his death certificate says he was born on Dec. 26, 1899. So, this has to be our man. His age at death, although right there on his death certificate, is only as reliable as the informant giving the date to the authorities. However, there was no Alfred Saunders born on that date, but there was an Alfred Saunders born on Dec. 26, 1895, and baptized at St Columba, Hackney, on April 18, 1900, at the age of 5 — and that is our man.

Saunders, Harold Eugene. b. Nov. 29, 1890, Washington, DC, but grew up in Detroit, son of a Canadian father, wheelsman Fred Henry Saunders, and his wife, Rose Henrietta "Rosina" Stoll. On June 16, 1908, he was admitted to the U.S. Naval Academy, graduating in 1912, and working his way up through the officer ranks. In 1920, while based in Vallejo, Calif., he married Grace, and they moved to DC, and then, in 1925, to New Hampshire, where he was commander of the Construction Corps in Portsmouth. From there they moved to Takoma Park, Md., in 1929. He was a captain when he became cartographer for ByrdAE 1928-30 (with which he went to Antarctica) and ByrdAE 1933-35. A friend of Admiral Byrd's, he was chairman of US-ACAN, 1948-61, and specialized in developing maps of Antarctica from aerial photographs. He was the leading hydrodynamicist in the USA, his three-volume work *Hydrodynamics in Ship Design* being published between 1957 and 1965. He died on Nov. 11, 1961, in Takoma Park.

Saunders Bank. 76°50' S, 155°00' W. An undersea feature in the central Ross shelf, named in association with the Saunders Coast. US-ACAN accepted the name in 1988. In 1997 the name was changed to Saunders Bank.

Saunders Basin *see* **Saunders Bank**

Saunders Bluff. 72°45' S, 160°44' E. A small, isolated bluff, about 14 km ESE of Miller Butte, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Jeffrey J. Saunders, biolab technician at McMurdo, 1965-66.

Saunders Coast. 77°45' S, 150°00' W. That portion of the coast of Marie Byrd Land between Cape Colbeck and Brennan Point. Explored from the air of Dec. 5, 1929, during ByrdAE 1928-30, and mapped by Harold E. Saunders from photos taken on that flight. The coast was completely mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1964, for Saunders. NZ-APC accepted the name.

Saunders Hill. 66°19' S, 110°32' E. A rounded, rocky hill, projecting into the SE part of O'Brien Bay, just E of the Windmill Islands. First mapped in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1963, for William Y. Saunders, biologist at Wilkes Station in 1961.

Saunders Mountain. 76°53' S, 145°42' W. Also called Mount Saunders (not to be confused with the other Mount Saunders). A massive island-like mountain, resembling a mass of peaks, in the Ford Ranges of Marie Byrd Land, between the mouths of Crevasse Valley Glacier and Arthur Glacier, at the W end of the Denfeld Mountains, on the Saunders Coast. Discovered aerially on Dec. 5, 1929, during ByrdAE 1928-30, and named by Byrd for Harold E. Saunders. US-ACAN accepted the name in 1966.

Saunders Point. 60°42' S, 45°19' W. The S extremity of South Coronation Island, between Amphibolite Point and Tophet Bastion, in Orwell Bight, off the S coast of Coronation Island, in the South Orkneys. Charted by personnel on the *Discovery II* in 1933, as part of the main island, and named by them for Alfred Saunders. US-ACAN accepted that name and situation in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The feature was surveyed by Fids from Signy Island Station between 1956 and 1958, and by 1963 UK-APC had corrected the situation, and US-ACAN had followed suit. It appears on a 1947 Argentine map, as Punta Saunders, and that was the name accepted by the 1970 Argentine gazetteer.

Saunders Rock. 85°25' S, 127°02' W. A rock on land, 5 km NW of Feeley Peak, between Davisville Glacier and Quonset Glacier, on the N side of the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for John T. Saunders, electronics technician at Byrd Station in 1960.

Saunders Valley. 62°13' S, 58°58' W. A valley, 1.4 km long, and of varying width, trending WNW-ESE into Hydrographers Cove, just N of Clement Hill, in the S part of Fildes Peninsula, on King George Island, in the South Shetlands. BAS did geological work here, 1975-76. Named by UK-APC on Feb. 7, 1978, for University of Birmingham geologist Andrew David Saunders (b. 1951, near Birmingham), who worked here with that BAS party (he did not winter-over). It appears in the 1980 British gazetteer. US-ACAN accepted the name. Last plotted by the UK, in late 2008. Note: The SCAR gazetteer includes the following crypticism: "Córrego Wind (Brazil. Península Fildes map, 1984)." This implies that the Brazilians mapped it in 1984 as Córrego Wind, and they may have done ("córrego" means "stream" in Portuguese").

Sauria Buttress. 80°32' S, 20°24' W. A rock buttress rising to about 1300 m, to the SE of Lundstrom Knoll, at the E end of the Pioneers Escarpment, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Charles-Marc Sauria (1812-1895), French inventor of the first practical friction match, in 1831. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Saussure Glacier. 67°11' S, 67°00' W. Flows NE from the Tyndall Mountains, on Arrowsmith Peninsula, into Lallemand Fjord, on the Loubet Coast of Graham Land. Photographed aerially by FIDASE in 1957. Geologists from Rothera Station worked here in 1980-81. Named by UK-APC on April 3, 1984, for Horace-Bénédict de Saussure (1740-1799), Swiss naturalist and physicist who, in 1787, while in the process of making the third-ever ascent of Mont Blanc, was the first to recognize that erratic boulders had been moved great distances by ice. It appears in the 1986 British gazetteer. US-ACAN accepted the name. *See also* **Schimper Glacier**.

Mount Sauter *see* **Terningskarvet Mountain**

Sauter, Siegfried. b. 1916, Germany. Aerial photographer with Hansa Luftbild, on the plane *Boreas* during GermAE 1938-39. He died on June 3, 2008, aged 92, the last survivor.

Sauter Range *see* **Terningskarvet Mountain**

Sauterriegel *see* **Terningskarvet Mountain**

Savage Glacier. 72°28' S, 96°09' W. Flows E into Seraph Bay, S of Tierney Peninsula, at the E end of Thurston Island. Its terminus was discovered by helicopter during the USN Bellingshausen Sea Expedition of Jan.-Feb. 1960, plotted in 72°18' S, 95°46' W, and named by US-ACAN in 1960, as Savage Inlet, for Lt. John Savage, USN, dental officer on the *Glacier* during the expedition. It was later charted over its entire length, and renamed Savage Glacier, being replotted in 72°25' S, 96°05' W. It has since been replotted again.

Savage Inlet *see* **Savage Glacier**

Savage Nunatak. 86°27' S, 124°58' W. A nunatak, 11 km SE of Hatcher Bluffs, along the E margin of the upper Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Henry C. Savage, builder at Byrd Station in 1962.

Savage Ridge. 78°29' S, 163°22' E. A ridge extending out from near the summit of Mount Morning for 10 km, immediately N of Barlow Rocks, at the top of Koettlitz Glacier, in Victoria Land. Named by US-ACAN in 1994, for Michael L. Savage of the department of meteorology at the University of Wisconsin, who wintered-over at Pole Station in 1980, and then returned to Antarctica for 5 summer seasons, developing the use of automatic weather stations.

The *Savannah*. French yacht, skippered by Joël and Dominique Marque, which visited the South Shetlands and the Antarctic Peninsula in 1999-2000 and 2000-01.

Savatier, André-Alexandre. b. June 3, 1823. French cabin boy on the *Astrolabe* during FrAE 1837-40.

Savin Nunatak. 73°52' S, 68°02' W. An isolated nunatak, rising to about 1550 m above the ice plateau at the base of Palmer Land, 50 km SW of Mount Vang, in the SE part of the English Coast. Surveyed during the USGS Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Samuel M. Savin, USARP glaciologist at Byrd Station, 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Savins, Dennis Roy. b. March 3, 1928, Portsmouth, son of Arthur James Savins and his Welsh wife Hilda Frances Punchard. He joined FIDS in 1958, as a radio operator, and wintered-over at Halley Bay Station in 1959. He died in Richmond, Yorks, in 1983.

Savio, Per John. b. 1877, Sør-Varanger, Norway, as Per John Persen, son of Lapp fisherman Per Savio and his wife Anne Aslaksdatter. A dog handler, one of two who wintered over on BAE 1898-1900. He was out one day, with the dog Lars, and fell through a crevasse, 60 feet. In the long time it took for him to dig his way back up with a knife, Lars stayed at the entrance to the crevasse, never went away. Savio died in 1905. *See also* **Must, Ole**.

Savoia Peak. 64°51' S, 63°26' W. Rising to 1415 m, at the NE end of (and the highest peak in) Sierra DuFief, in the SW part of Wiencke Island, in the Palmer Archipelago. Discovered in 1898 by BelgAE 1897-99, and first climbed on Feb. 7, 1905, by Pierre Dayné and Jacques Jabet, during FrAE 1903-05. Named by Charcot as Sommet Luigi di Savoia, for Prince Luigi Amedeo Di Savoia (1873-1933), duke of the Abruzzi, one of the great Arctic explorers. It also appears on various maps from FrAE 1903-05 and FrAE 1908-10 as Sommet Duc des Abruzzes, Pic Luigi de Savoie, Pic Louis-de-Savoie, Louis-de-Savoie Peak (in the English-language translation of one of his maps), and Pic Luigi di Savoia. It appears on a 1916 British chart as Luigi di Savoia Peak, and on a 1943 U.S. Hydrographic Office chart it appears as "Luigi di Savoia." It appears on a 1949 Argentine chart as Pico Luigi di Savoia, but on a 1953 chart as Pico Luis de Saboya, and on two 1957 charts as variously Pico Luigi de Savoia and Pico Luis de Savoia. It was Pico Luis de Saboya that was accepted by the 1970 Argentine gazetteer. On Nov. 21, 1949, UK-APC accepted the name Luigi di Savoia Peak, and that was the name that appeared in the 1955 British gazetteer. In 1955 the peak was re-surveyed by Fids from the *Norsel* and from Base N. On Sept. 23, 1960, UK-APC accepted the shortened name of Luigi Peak, and it appears as such on a British chart of 1961. US-ACAN accepted the name Savoia Peak in 1965. The Chilean gazetteer of 1974 accepted the name Pico Luigi Di Savoia. In Italian, where persons' names are concerned, there are two spellings for the word meaning "of" or "from"—"di" and "Di." If the word is a fundamental part of an ordinary person's name, such as "Giacomo Di Rossi," then it has to have a capital "D." One cannot say "Giacomo di Rossi"; that would mean "Giacomo of Rossi," and thus make no sense. Similarly, Leonardo Da Vinci is best with a capital "D" ("Da" being a similar way of saying "Di"). Without a doubt, the best way to render the Duke of Abruzzi's name is with the capital D.

Mount Saw. 68°11' S, 56°44' E. An isolated mountain, about 27 km (the Australians say about 31 km) SSE of Mount Cook, in the Leckie Range, in Kemp Land. Plotted from ANARE air photos. Named by ANCA on July 29, 1965, for Brian Saw, ANARE helicopter pilot in 1965, off the *Nella Dan*. US-ACAN accepted the name in 1967.

Sawadowskij Hukk. 68°53' S, 90°40' W. A small cape in the area of Zavadovskijbreen, on Peter I Island. Named by the Russians. It means "Zavadovskiy Point."

Sawert Rocks. 67°31' S, 62°50' E. A group of small islands and rocks in water, 4 km (the Australians say about 6 km) ENE of Azimuth Island, in the NE part of Holme Bay, off the Mawson Coast of Mac. Robertson Land. Plotted from 1958 ANARE aerial photos. Named by ANCA for Alan W. Sawert, radio officer at Mawson Station in 1959, and at Wilkes Station in 1966. US-ACAN accepted the name in 1965.

Sawtooth *see* **Armadillo Hill**

Sawyer Island. 65°26' S, 65°32' W. An island, 3 km long, N of Pickwick Island, in the Pitt Islands, in the Biscoe Islands. Roughly charted by ArgAE 1954-55, it appears on a 1957 chart from that country (but was apparently unnamed). Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for the Dickens character in *Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. It appears on an Argentine chart of 1964, as Isla Contramaestre Rivera, for Rivera, who served on the *Uruguay* in 1904-05. The Argentine gazetteer of 1970 accepted that name, long as it is.

Sawyer Nunatak. 75°44' S, 161°50' E. A small but distinctive nunatak, 5 km SE of Mount Stephens, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Joseph O. Sawyer, satellite geodesist who wintered-over at McMurdo in 1966.

Saxby, Eric John. b. Jan. 24, 1937, Christchurch, NZ. Assistant maintenance officer at Scott Base in 1974-75, and also that summer was base leader at Vanda Station. He was back in Antarctica in 1975-76, working with the Americans out of Dome C, to recover the crashed Herc. He was base leader at Vanda again, 1977-78, and in 1981-82 was back at Vanda, as NZ coordinator for the geological studies of the mountains in northern Victoria Land. In 1983-84 he was deputy leader at Scott Base, and leader for the winter of 1984.

Saxby Pass. 71°36' S, 167°45' E. A snow-covered pass through the Lyttelton Range, S of Lange Peak, in the Admiralty Mountains. It was used by an NZARP field party led by R.H. Finlay in 1981-82, as they traveled between Atkinson Glacier and Dennistoun Glacier. Named by NZ-APC in 1982, for Eric Saxby. US-ACAN accepted the name in 1994.

Saxby Range. 72°04' S, 167°08' E. A broad mountain range rising to 2450 m, bounded by Jutland Glacier, Rucker Glacier, Pearl Harbor Glacier, and Midway Glacier, in the Victory Mountains of Victoria Land. Named by NZ-APC in 1982, for Eric Saxby. US-ACAN accepted the name in 1994.

Saxton Ridge. 70°37' S, 66°52' E. A mountain ridge just S of the Thomson Massif, in the Aramis Range of the Prince Charles Mountains. Plotted from 1956 ANARE aerial photos. Named by ANCA for Richard Alan "Dick" Saxton (b. Dec. 28, 1923, Melbourne; of Glen Iris, Vic.), who wintered-over as officer-in-charge of Wilkes Station in 1963. He was still alive and well in 2009. US-ACAN accepted the name in 1967.

Nunatak Saxum *see* **Saxum Nunatak**

Saxum Nunatak. 63°10' S, 56°02' W. An isolated nunatak, rising to 430 m (the British say 455 m), and dome-shaped when seen from the S, 10 km N of Mount Tholus, near the NW coast of Joinville Island. Surveyed by Fids from Base D in Jan. 1954, and so named by them because of the conspicuous rock wall on its N side (saxum means "wall" in Latin). UK-APC accepted the name on Sept. 4, 1957, and it appears on a British chart of 1962. US-ACAN accepted the name in 1963. The Argentines call it Nunatak Saxum.

Glaciar Sayce *see* **Sayce Glacier**

Sayce Glacier. 65°05' S, 62°59' W. Flows SW into the head of Flandres Bay, immediately N of Pelletan Point, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960 for Benjamin Jones "B.J." Sayce (1837-1895), photography pioneer from Liverpool. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Sayce.

Sayen Rocks. 73°40' S, 94°37' W. Two small rock exposures on land, visible from the northward, near the crest of the ice-covered heights between Miller Crag and Sutley Peak, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61. Named by US-ACAN in 1963, for Lawrence D. "Larry" Sayen (b. Feb. 17, 1939), VX-6 photographer in the Jones Mountains in Jan. 1961.

Sayer, Captain *see* **Sayre**

Sayer Nunatak. 62°28' S, 60°08' W. Rising to 210 m, on the shore of Dragon Cove, S of Williams Point, on the NE side of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-59. A BAS geological party visited it in 1975-76. Named by UK-APC on Feb. 7, 1978, for Capt. Sayre (q.v.). It appears in the British gazetteer of 1980. US-ACAN accepted the name.

Cerro Sayes. 63°24' S, 57°33' W. A hill about 1.5 km S of Cerro Muga, in the central part of Trinity Peninsula, at the N end of the Antarctic Peninsula. Named by the Chileans for aviation mechanic 2nd sergeant Juan Sayes Troncoso, one of the Air Force crew on the *Angamos* during ChilAE 1946-47.

Sayre, Captain. Of Sag Harbor, NY. Captain of the *General Scott*, in the South Shetlands for the 1821-22 season. There are several candidates for this man, all of them from the Sayre family in or around Southampton, Long Island. The most likely is Isaac Sayre.

Ozero Sbrosovoe *see* **Sbrosovoye Lake**

Sbrosovoye Lake. 70°45' S, 11°35' E. A small lake, 1.5 km SW of Tyuleniy Point, in the Schirmacher Hills of Queen Maud Land. Mapped by SovAE 1961, and named by the Russians that year, as Ozero Sbrosovoe (i.e., "fault lake"). US-ACAN accepted the name Sbrosovoye Lake in 1970.

Scadding, Adrian Gilbert. b. March 29, 1911, Cowes, Isle of Wight. He qualified as a teacher in London, in 1932, and then taught at Newport Boys' School, IOW. In 1937, in the Isle of Wight, he marrried Rita Netten, and moved to The Moorings, Station Road, Wootton, on the island, and lived there until he died (however, he did do one or two things in between). When World War II broke out he was commissioned into the RNVR, in navigation and meteorology. He served on the *Enterprise* and the *Galatea*, and was on the *Hermes* when the Japanese sunk her in 1942. He became head of the Naval Research Station, in Simonstown, South Africa, as senior met man for all of Natal and Zululand. In 1946, as a lieutenant commander, he returned to his school, as acting headmaster, but in 1947 joined FIDS, and left Tilbury on Dec. 19, 1947, on the *John Biscoe*, bound for Port Stanley. He was meteorologist and base leader at Base B for the winter of 1948. After his tour, he returned to Port Stanley, and from there to Montevideo, where he caught the *Highland Monarch* back to London, arriving on Jan. 21, 1949. Back in the Isle of Wight, he taught at Ryde Secondary, and then at Bishop Lovett. In the 1960s he left teaching to become a met consultant to the oil industry, retiring in 1980. His wife died in 1995, and he died in the Isle of Wight, on Dec. 31, 2004.

Scaife Mountains. 75°06' S, 65°08' W. A group of mountains rising to about 1300 m, W of Prehn Peninsula, between Ketchum Glacier and Ueda Glacier, on the Orville Coast, at the very S of Palmer Land. They include Mount Brundage, Mount Macnowski, and Mount Terwileger. Discovered aerially on Nov. 21, 1947, by RARE 1947–48, and named by Ronne for Mr. and Mrs. Scaife, of Pittsburgh. Alan Magee Scaife (1900–1958) was an industrialist and philanthropist, of (among many other things) the Mellon National Bank, of Pittsburgh, a contributor to the expedition. He was married to Sarah Mellon (niece of Andrew Mellon). Ronne plotted this feature in 75°30' S, 63°25' W, and it appears that way on a 1955 U.S. Hydrographic Office chart. Mapped by USGS from USN air photos taken between 1965 and 1967, the group appears, with the corrected coordinates, on the 1969 USGS sketch map of Ellsworth Land–Palmer Land. At some stage US-ACAN accepted the name, probably in 1949, as it appears in the 1956 American gazetteer. UK-APC accepted the name on Dec. 20, 1974. It appears in the 1993 British gazetteer.

Scale Lake. 68°35' S, 78°10' E. A small lake in a depression, just W of Collerson Lake, on Breidnes Peninsuala, in the Vestfold Hills. It was investigated by biologists from Davis Station in 1974. Named by ANCA.

Scallop Hill. 78°12' S, 166°44' E. A volcanic trachyte dome, rising to 225 m (the New Zealanders say 180 m), directly behind Cape Spirit, on the E edge of Black Island, in the Ross Ice Shelf. Named by NZGSAE 1958–59 for a fossiliferous conglomerate on top of the hill which contains a Chlamid lamellibranch commonly called scallops. US-ACAN accepted the name in 1963. It gave its name to the Scallop Hill formation.

Scallop Ridge. 85°26' S, 139°00' W. An undulating ridge, 5 km long, it forms the SW portion of the Berry Peaks. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named descriptively by US-ACAN in 1967, for the curving outline.

Scalpel Point. 62°10' S, 58°37' W. A rocky promontory W of Pond Hill, at Goulden Cove, Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, in honor of the surgeons at Arctowski Station.

Scambos Glacier. 77°44' S, 149°25' W. About 60 km long, it flows to the Sulzberger Ice Shelf. Named by US-ACAN in 2003, for Theodore A. Scambos, of the National Snow and Ice Data Center, in Boulder, Colo., who, from the 1980s on, has been using remotely sensed data for field and theoretical studies of Antarctic ice behavior.

Lake Scandrett. 69°24' S, 76°22' E. A long lake between very steep-sided cliffs, in the Larsemann Hills. Named by ANCA for Graham Scandrett, senior helicopter pilot during the establishing of Law Base in 1986. The Chinese call it Longquan Hu.

Scanlan Peak. 71°05' S, 65°23' E. The most southerly of a group of 3 peaks about 8.5 km SE of Husky Massif, in the Prince Charles Mountains of Mac. Robertson Land. Plotted from 1960 ANARE air photos. Named by ANCA for Anthony Michael "Mike" Scanlan, cook at Davis Station for the winter of 1961. US-ACAN accepted the name in 1967.

Scanniello Peak. 77°31' S, 168°49' E. Rising to 2200 m, it marks the highest and most southwesterly point of Tekapo Ridge, in the Kyle Hills, on Ross Island. Named by US-ACAN in 2000, for Jeffrey Scanniello, long-term ASA field engineer, who was active in surveying at McMurdo and Pole Station from 1990 onwards. He wintered-over at McMurdo in 1994. NZ-APC accepted the name on Feb. 20, 2001.

[1]**The *Scapa***. A 125-ton, 94 foot 8-inch whale catcher, built by Hawthorn, in Leith, and owned by Salvesen's. With the *Sonja* and the *Silva*, she was one of the first 3 whale catchers built in a British shipyard. After successful trials in Iceland, she went to South Georgia, working out of there in 1910–11. She was catching for the *Neko* in Antarctic waters every season from 1911–12 to 1922–23, and in 1923 was sold to H.M. Wrangell's Larvik Company, and became the *Fynd II*. In 1926 she became the *Corona IV*, and was registered in Vigo, Spain. In 1928 she was sold to a Copenhagen company, and her name changed back to the *Scapa*. She was subsequently sold several more times, in 1949 becoming the *Vesper*, and was broken up in Norway, in 1963.

[2]**The *Scapa***. A 221-ton, 110-foot 4-inch British whale catcher, built for Salvesen's in 1923, by Smith's Dock, Middlesbrough, she was the sister catcher to the *Sacra*. She was launched on Jan. 8, 1924, and went to Leith Harbor, in Georgia, and caught for the shore station there during the 1924–25 season. For the 1925–26, 1926–27 and 1927–28 seasons she caught for the *Saragossa*, in Antarctic waters. She capsized 15 miles off Laurie Island, in the South Orkneys, on Jan. 23, 1928, while in pursuit of a whale. 13 out of the 17 crew were killed, including the captain, Gustav Mathisen. 2 of the survivors were found by the *Busen II* the following day, drifting on a block of ice, and the other 2 were found on a rock off Laurie Island, by the *Sonja*. The *Scapa* was replaced by the *Sitka*.

Scapa Rock. 60°38' S, 44°52' W. A rock in the water between Saddle Island and the Weddell Islands, N of Laurie Island, in the South Orkneys. Charted by the Discovery Expeditions, in 1933. A USARP geological field party from Columbia University's Lamont-Doherty Geological Observatory made the first landing on the rock on Jan. 26, 1977. Named by UK-APC on May 21, 1979, for the whale catcher *Scapa* that went down in 1928. It appears in the 1980 British gazetteer.

SCAR *see* **Scientific Committee on Antarctic Research**

Cerros Scar *see* **Scar Hills**

Ensenada Scar *see* **Scar Inlet**

Scar Bluffs. 68°48' S, 153°32' E. Three black, rectangular, steep-sided rock outcrops, 45 km S of Cape Hudson, on Mawson Peninsula. Photographed aerially during OpHJ 1946–47, again by SovAE 1958, and by ANARE in 1959. Named by ANCA for SCAR. US-ACAN accepted the name in 1967.

Scar Hills. 63°25' S, 57°01' W. A small ridge of hills, with numerous glacial striae (i.e., "scratches"), rising to about 100 m above sea level, and extending for about 1.5 km in a NE-SW direction from the head of Hope Bay, along the SE shore of the bay, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered in 1903 by Dr. J. Gunnar Andersson of SwedAE 1901–04, and named descriptively by him as Schrammenhügel. Re-surveyed by Fids from Base D in 1945–46. UK-APC accepted the translated name Scar Hills, on Nov. 21, 1949, and it appears on a British chart of 1950, and in the 1955 British gazetteer. US-ACAN followed suit with that naming in 1952. Fids from Base D re-surveyed this feature again in 1954–56. The Argentines call this feature Cerros Scar (which means the same thing).

Scar Inlet. 65°56' S, 61°52' W. An inlet, or bay, opening SE of Delusion Point, immediately NW of Jason Peninsula, in the Larsen Ice Shelf, between Tashtego Point and Chapman Point, on the Oscar II Coast, on the E coast of Graham Land. Discovered in 1902 by SwedAE 1901–04, and named by Nordenskjöld as Scott Bucht, or Scotts Bukt, for Robert Falcon Scott. The Argentines were calling it Bahía Scott as early as 1908. It appears on 1934 and 1940 British charts

as Scott Bay, plotted in 65°30' S, 62°00' W. Following a survey by Fids from Base D in 1961, UK-APC renamed it on Feb. 12, 1964, for SCAR, because there were already too many features with the name Scott. US-ACAN accepted the new name later in 1964. It appears as such on a British chart of 1984. The coordinates then were 66°00' S, 62°00' W. The Chilean gazetteer of 1974 accepted the name Bahía Scott, but with the coordinates 65°25' S, 62°03' W. The Argentines today call it Ensenada Scar. It has since been replotted.

Scar Peak. 77°39' S, 162°33' E. Rising to 1882 m, it surmounts the N wall of Taylor Glacier, immediately E of Lacroix Valley, in Victoria Land. Named by NZ-APC on Oct. 7, 1998. US-ACAN accepted the name later in 1998.

Scarab Bluff. 71°20' S, 68°16' W. North of Giza Peak, it overlooks the Fossil Bluff hut on Alexander Island. A small plateau above the bluff contains a permanent melt pool which is a designated biological research site. In keeping with other sacred ancient Egyptian references in the area, it was named by UK-APC on Dec. 2, 1993. US-ACAN accepted the name in 1994.

Scarab Peak. 73°21' S, 163°01' E. A prominent peak, rising to 3160 m, 3 km NE of Mount Frustum, on the SE extremity of Tobin Mesa, in the Mesa Range, Victoria Land. Named by the Northern Party of NZGSAE 1962-63 for its resemblance in shape to a scarab beetle. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Scarborough Castle. 62°28' S, 60°48' W. A flat-topped craggy rock on land, rising to about 30 m, with perpendicular sides, S of Cape Shirreff, near the NE entrance point to Shirreff Cove, on the N coast of Livingston Island, in the South Shetlands. Roughly charted by Robert Fildes in 1821, and named by him for its resemblance to the 12th-century Yorkshire castle. Photographed by FIDASE 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. Chile was calling it Castillo Scarborough by 1962, and it appears in their 1974 gazetteer as Roca Castillo Scarborough. The Argentines call it Roca Fortín ("fortín" meaning a small fort).

Roca Scarborough Castle *see* **Fortín Rock**

Scarffe, John Martyn. Known as Martyn Scarffe. b. Feb. 4, 1935, Wallasey, Cheshire, son of customs and excise man Robert Henry Scarffe and his wife Mary Sherwin Winifred Singlehurst (of the family that owned the famous Red Cross Shipping Line). As a child, when the Germans started bombing Liverpool, he was evacuated to Northern Ireland, to be with his uncle. He left school in 1951, joined the Royal Navy, and in 1956-57 was a petty officer electrician on the *Protector*, which was taking Angus Erskine to Detaille Island for the winter, when an incoming Fid for Base W went sick. Erskine asked Scarffe if he would replace the sick Fid. Being a mountain climber and adventurous sort, Scarffe cleared it with the Navy, and he was seconded to FIDS, wintering-over at Base W in 1957 as general assistant and mountain climber. No other Fid was ever taken into the organization in this manner. After his tour there he returned to Stanley on the *John Biscoe*, and then re-joined the *Protector*, getting as far as Cape Town, when he received news that his father had died. The RN wouldn't allow him to fly back to England for the funeral. Out of the Navy in 1960, he became an electrician working on submarines at Cammellairds Ship Lines, in Birkenhead, and in 1962 he married Maureen Welford. That year his uncle in California sponsored him as an immigrant, and he worked as a film technician in Hollywood for 12 years, then returned to England, to work for Rank Films just outside London. After a few years he went into retail management, and then security. His second wife was Sylvia Brown.

Scarlatti Peak. 71°12' S, 69°37' W. A conspicuous pyramidal peak rising to 750 m (the British say 785 m, which is probably right), 13 km NW of Holst Peak, and 20 km E of the Walton Mountains, between those mountains and the LeMay Range, in the central part of Alexander Island. First mapped in 1959-60 by Searle of the FIDS, working from air photos taken during RARE 1947-48, and plotted by him in 71°15' S, 70°26' W. Named by UK-APC on March 2, 1961, for the composer Alessandro Scarlatti (1660-1725). US-ACAN accepted the name later in 1961. It appears on a 1962 U.S. Hydrographic Office chart, plotted in 71°16' S, 70°26' W. The coordinates were corrected from Jan. 1973 U.S. Landsat images, and with the new coordinates it appears in the 1977 British gazetteer.

Scarlett-Streatfeild, Norman John *see* **The *St Austell Bay*** (under **Saint**)

Scarnell, Francis. Baptized Sept. 25, 1748, Portsmouth, son of Francis Scarnell and Elizabeth Doling. On Jan. 3, 1772 he joined the *Resolution* as quartermaster, for Cook's 2nd voyage, 1772-75. On July 10, 1772 he became an able seaman.

Scend Rocks. 64°48' S, 64°15' W. A small group of rocks in water, 2.5 km SW of Rumbler Rock, and 4 km WNW of the Outcast Islands, SW of Wylie Bay, off the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed and charted by an RN Hydrographic Survey unit in 1956-57. Named by UK-APC on July 7, 1959, a scend being the horizontal forward and backward flow of sea water breaking over a shallow obstruction, caused by the incoming ocean swell. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Cabo Scesa *see* **Cabo Dreyfus**

Mount Schaefer. 71°22' S, 166°23' E. Rising to 1825 m, it marks the W extremity of Robinson Heights, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Paul William Schaefer (b. 1940), USARP entomologist at McMurdo, 1966-67.

Schaefer Islands. 73°40' S, 103°24' W. A small group of islands close to the NW end of Canisteo Peninsula, 3 km SW of the Lindsey Islands, in the Amundsen Sea. Mapped by American cartographers from air photos taken in Dec. 1946 by OpHJ 1946-47. Named by US-ACAN in 1970, for William A. Schaefer, geologist on the Ellsworth Land Survey of 1968-69.

Schäfer, Alfons. 2nd carpenter on the *Schwabenland*, during GermAE 1938-39.

Schalitz, Louis. 2nd bosun on the *Deutschland*, during GermAE 1911-12.

Schanz Glacier. 79°45' S, 83°40' W. Flows S for 13 km, between Soholt Peaks and the Collier Hills, to enter Union Glacier, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Lt. Cdr. (later Capt.) Thomas Ladd "Tom" Schanz (b. July 23, 1930, Dallas, Tex. d. June 10, 2010, Dallas), VX-6 supply officer during OpDF 65 (i.e., 1964-65).

Schärer, Anthony John "Tony." b. 1937, Brighton, son of Frederick H. Schärer and his wife Kathleen M. Street. After Oxford, he joined FIDS in 1961, as a meteorological assistant, and wintered-over at Base F in 1962 and 1963 (by the time he got there, FIDS had become BAS), also providing kennels and rearing husky pups. He also wintered-over as a general assistant at Base E in 1964. In 1969, in Brighton, he married Lorna Lillywhite.

Scharfenberg. 74°11' S, 162°44' E. A peak, NW of Mount Meister, in the Eisenhower Range of Victoria Land. Named by the Germans.

Scharffenbergbotnen. 74°34' S, 11°05' W. A cirque (or corrie) between Mount Bergersen, Torsviktoppen, Wrighthamaren, Engenhovet, and Gerhardsennuten, in Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Dr. Johann Scharffenberg (1869-1965), outspoken opponent of Nazism and boldly public advocate of Norwegian Resistance during World War II.

Scharon Bluff. 70°58' S, 167°24' E. A steep rock bluff rising to 1000 m, on the S side of Tapsell Foreland, it surmounts the N side of Barnett Glacier, 14 km W of Cape Moore, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Harry LeRoy Scharon (known as LeRoy) (b. Jan. 21, 1915, Baltimore. d. May 15, 2004, Houston), geophysicist, U.S. exchange scientist at Molodezhnaya Station in the winter of 1968.

Schatz Ridge. 78°29' S, 86°03' W. An outlying ridge, 1.5 km long, 1.5 km NW of Knutzen Peak, on Taylor Ledge, in the Sentinel Range of the Ellsworth Mountains. The ridge has the appearance of a nunatak with 2 peaks, the higher (eastern) one rising 200 m above the ice surface. Named by US-ACAN in 2006, for Gerald S. Schatz, research analyst and editor of the National Academy of Sciences News Report, who authored a number of papers on Antarctic environment, conservation and legal issues in the 1970s and 1980s, on temporary appointment to ITT.

Schauinsland. 68°06' S, 67°01' W. The most westerly mountain peak on Butson Ridge, sep-

arating Northeast Glacier from McClary Glacier, at Marguerite Bay, in the Antarctic Peninsula. It is an important survey and view point for scientific work. Descriptively named by the Germans on Oct. 9, 1996, for their mountain of the same name in the Black Forest (name means "look into the country").

Schaumberg, Fritz. One of the mountain climbers on David Lewis's 1977-78 *Solo* expedition.

Schaus Ice Rises. 71°03' S, 72°40' W. A group of small ice rises in the Wilkins Ice Shelf, aligned E-W just off the N side of Eroica Peninsula, Alexander Island. Mapped by USGS from ground surveys, and USN air photos taken between 1967 and 1968, and also from U.S. Landsat images taken in Jan.-Feb. 1973. Named by US-ACAN for Cdr. Richard Schaus, USN, assigned to the NSF's Division of Polar Programs, as aviation projects officer, 1979-80. UK-APC accepted the name on May 13, 1991.

Nunatak Scheaffino. 66°05' S, 60°36' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Scheimpflug Nunatak. 64°48' S, 62°36' W. Rising to about 400 m, near the terminus of Deville Glacier, on Arctowski Peninsula, at Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57 and from ground surveys conducted by Fids from Base O that same season. Named by UK-APC on Sept. 23, 1960, for Theodor Scheimpflug (1865-1911), Austrian aerophotogrammetry pioneer. US-ACAN accepted the name in 1965.

Schenck, William *see* **USEE 1838-42**

Schenck Peak. 69°40' S, 72°18' W. Rising to about 500 m in the Desko Mountains, 3 km SW of Morrill Peak, in the SE part of Rothschild Island, off the NW coast of Alexander Island. Named by US-ACAN for Cdr. James N. Schenck (b. May 20, 1927, the day Lindbergh crossed the Atlantic. d. Aug. 19, 2010, Virginia Beach, Va.), a merchant marine officer from 1945, he joined the U.S. Coast Guard in 1957, and was executive officer on the *Staten Island* during OpDF 71 (i.e., 1970-71), retiring from the Coast Guard in 1976 to become a marine surveyor until 1993. Originally plotted in 69°40' S, 72°25' W, it has since been replotted. UK-APC accepted the name on June 11, 2008.

The *Schepelsturm*. A large West German ocean-going anchor and cable handling and supply tug, 1501 tons, 61.8 meters long, built by Elsfleth, launched on April 9, 1975, and flying a Liberian flag. She was the vessel used on GANOVEX 79. Skipper was Udo Rieck. In 1995 she was sold, and renamed the *Englishman*.

Schepelsturmkliff. 70°48' S, 167°45' E. A cliff, SE of the Lyall Islands, in Victoria Land. Named by the Germans, for the *Schepelsturm*.

Mount Scherger. 73°13' S, 62°55' E. Just W of Mount McCauley, in the southern Prince Charles Mountains, in the area of Lambert Glacier. First seen by John Seaton, during an ANARE photographic flight of Nov. 1956, and mapped by Morris Fisher, ANARE surveyor at Mawson Station in 1957. Named by ANCA on Nov. 10, 1958, for Air Marshal Sir Frederick Rudolph William Scherger (1904-1984), RAAF, chief of the air staff in Australia, 1957-61. US-ACAN accepted the name in 1965.

Scheuermann Spur. 79°51' S, 155°35' E. A broad, ice-covered limb of the Darwin Mountains, between the head of Hatherton Glacier and the W end of the Prebble Icefalls. It has a relativey flat summit area, rising to about 1600 m above sea level, that tapers southward to a narrow snout. A rock cliff marks the W side facing Hatherton Glacier. Named by US-ACAN in 2001, for Mike Scheuermann, air projects specialist with the NSF's Office of Polar Programs (OPP), 1995-2001, and former USN liaison officer to OPP.

Scheuren Stream. 77°24' S, 163°39' E. A meltwater stream 1.5 km W of Gneiss Point, it issue from the front of the Wilson Piedmont Glacier and flows N into the Bay of Sails, on the coast of southern Victoria Land. Named by Robert L. Nichols, a geologist here, for engineer John Joseph Scheuren, Jr. (b. Aug. 2, 1909, Mass. d. May 17, 1995, Weymouth, Mass.), chief of the Metcalf and Eddy Engineering Party here in 1957-58, and vice president of the company since 1952. US-ACAN accepted the name in 1968.

Mount Schevill. 85°07' S, 167°12' W. A conspicuous mountain, rising to 1995 m, it overlooks the head of Somero Glacier, about 8 km SE of Mount Johnstone, in the Queen Maud Mountains. Named by US-ACAN in 1966, for biologist William Edward Schevill (b. July 2, 1906, Brooklyn. d. July 25, 1994, Concord, Mass.), USARP whale expert at McMurdo Station in 1964-65.

Playa Schiappacasse. 62°28' S, 60°47' W. A small beach, about 120 m long, SE of Punta Yeco, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Paulina Schiappacasse Cambiaso, geographer here with the Instituto Antártico Chileno during ChilAE 1990-91. *See also* **Playa Paulina**.

Mount Schicht. 71°26' S, 13°08' E. A prominent mountain with several summits, 6 km WSW of Ritscher Peak, in the Gruber Mountains of Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39, and named by Ritscher as Schicht-Berge (i.e., "stratum mountains") because of its appearance. US-ACAN accepted the translated name Mount Schicht in 1970.

Schicht-Berge *see* **Mount Schicht**

Schichtberge *see* **Mount Schicht**

Schiffsbach. 62°11' S, 58°54' W. A stream that flows into Schiffsbucht, on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Schiffsbucht. 62°11' S, 58°54' W. A small bay at Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Mount Schimansky. 70°50' S, 63°49' W. A ridge-like mountain, rising to about 2200 m, 10 km NW of Heintz Peak, in the Welch Mountains, in the north-central part of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN in 1976, for Lt. Cdr. John Albert Schimansky, USN, VXE-6 Hercules aircraft commander on many aerial photographic and ice-sensing missions during OpDF 70 (i.e., 1969-70) and OpDF 71 (i.e., 1970-71). UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Schimper, Andreas Franz Wilhelm. Known as Willy. b. 1856. Botanist from Bonn University, who was on the *Valdivia*, during the German Navy Oceanographic Expedition of 1898-99. He died on Sept. 9, 1901, in Germany.

Schimper Glacier. 80°18' S, 25°05' W. Flows NNE into Slessor Glacier, in the E part of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Karl Friedrich Schimper (1803-1867), German botanist who, in 1835, originated the theory of the ice age in Europe to explain the distribution of erratic boulders. The name appears in the 1974 British gazetteer. US-ACAN accepted the name. *See also* **Saussure Glacier**.

Schindewolfgletscher. 71°28' S, 164°29' E. A glacier between Copperstain Ridge to the W and Mount Radspinner to the E, in the Mirabito Range, in the Bowers Mountains. Named by the Germans, presumably for Otto Heinrich Schindewolf (1896-1971), professor of geology and paleontology at the University of Tübingen, 1948-64.

Schirmacher, Richardheinrich. b. 1909, Germany. Lufthansa pilot who took part in GermAE 1938-39, as pilot of the *Boreas*. Like Rudolf Mayr (q.v.) he flew several test flights from the Azores to New York just prior to the expedition, but on the *Nordstern*'s sister plane, the *Nordwind*.

Schirmacher Hills. 70°45' S, 11°40' E. A thin strip of low and exposed hilly coastline about 16 km long, and 5 km at its widest, with numerous meltwater ponds, 60 km N of the Humboldt Mountains, between the inland ice and the ice shelf, on the Princess Astrid Coast of Fimbulheimen, in Queen Maud Land. The area was discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Schirmacheroase (i.e., "Schirmacher oasis"), for Richardheinrich Schirmacher. The British and Americans translated this as the Schirmacher Oasis. In 1966 US-ACAN redfined the area, dropped the term Schirmacher Oasis, and created the name Schirmacher Hills. The Norwegians call the hills Vassfjellet (i.e., "the water mountain"), and the central part of the hills they call Sundsvassheia (q.v.). For a more complete history of this feature, *see* **Schirmacheroasen**.

Schirmacher Massif. 71°37' S, 62°20' W. An island-like mountain massif, rising to 1675 m (in Mount Geier), 5 km W of Rowley Massif, and surrounded by the flow of Rankin Glacier and Cline Glacier, at the head of Odom Inlet, on the Black Coast, on the E coast of Palmer

Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972–73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Eberhard G. Schirmacher, topographic engineer in charge of the USGS Lassister Coast Survey Party, 1969–70 and 1970–71, and at Pine Island Bay, 1974–75. UK-APC accepted the name on Jan. 21, 1976.

Schirmacher Oasis *see* **Schirmacher Hills, Schirmacheroasen**

Schirmacher Ponds. 70°45' S, 11°40' E. A group of meltwater ponds in the Schirmacher Hills, 60 km N of the Humboldt Mountains, on the coast of Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and named by Ritscher as Schirmacher Seenplatte, in association with the Schirmacher Oasis (Ritscher's name for the general area of which the Schirmacher Hills became the main part). US-ACAN accepted the translated name Schirmacher Ponds in 1966. *See* **Schirmacheroasen**.

Schirmacher Seenplatte *see* **Schirmacher Ponds**

Schirmacheroasen. 70°44' S, 11°40' E. This is a Norwegian name meaning "the Schirmacher oasis," and reflects, to some degree, the feature discovered and photographed aerially by GermAE 1938–39, which Ritscher named Schirmacheroase, after Richardheinrich Schirmacher. The English-speaking world translated this as the Schirmacher Oasis. It was called an oasis because it is an ice-free area. Included within the feature were the Schirmacher Hills (what the Norwegians call Vassfjellet), and the Schirmacher Ponds (which Ritscher named Schirmacher Seenplatte). The central part of the hills, the Norwegians call Sundsvassheia. In 1966, US-ACAN did away with the term Schirmacher Oasis, and created the terms Schirmacher Hills and Schirmacher Ponds. For their Schirmacheroasen concept, the Norwegians added Vassholisen (i.e., "the water hole ice"), which is what they call the ice shelf N of the W part of the hills. So, effectively, because part of the feature is ice, it is no longer an ice-free oasis, and so is a misnomer. Georg Forster Station was here, as was Maitri Station, and Novolazarevskaya Station was established on the ice.

Schist Peak. 77°19' S, 162°00' E. Rising to 1650 m, surmounting the divide between Willis Glacier and Packard Glacier, or (to put it another way) between Victoria Valley and Debenham Glacier, in the Saint Johns Range of Victoria Land. This peak forms the back wall of the northern of 2 ice-filled cirques from which an excised stream bed enters the W end of Lake Vida. From this peak a ridge extends NE to Mount Harker. Named by VUWAE 1959–60 for the rock type of which this feature is composed. US-ACAN accepted the name in 1964.

Schist Point. 60°43' S, 45°14' W. A conspicuous point at the W side of the Divide Peaks, near the E end of Orwell Bight, on the SE coast of Coronation Island, in the South Orkneys. Surveyed by personnel on the *Discovery II* in 1933 and again in 1948–49 by Fids from Signy Island Station, who so named it because it marks the E limit at sea level of the metamorphic rocks in this part of Coronation Island. On a 1943 USAAF chart it appears in error as Saunders Point. UK-APC accepted the name Schist Point on March 31, 1955, and US-ACAN followed suit in 1956. It was re-surveyed by Fids from Signy in 1956–58.

Schivestolen. 74°20' S, 9°44' W. The SW part of the mountain area the Norwegians call Helsetskarvet, in Milorgfjella, in the N part of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Jacob Schive (1897–1969), Norwegian Army officer and Resistance leader during World War II.

Schjaer, Sigurd *see* **Órcadas Station**, 1919, 1922

Schjelderupveggen. 74°39' S, 11°01' W. A rock face between Wrighthamaren and Imerslundryggen, in the N part of Sivorgfjella, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Ferdinand Schjelderup (1886–1955), Norwegian judge and Resistance leader during World War II.

Cerro Schlatter. 63°26' S, 57°18' W. A hill, about 6 km W of Mount Taylor, and some 5 km N of Duse Bay, in the area of Hope Bay, Trinity Peninsula. Named by the Chileans for Roberto Schlatter (*see* **Schlatter Glacier**). The Argentines call it Cerro Siempre Nevado (i.e., "always snow covered hill").

Schlatter Glacier. 77°41' S, 161°27' E. Flows from the Asgard Range toward Lake House, in Pearse Valley, Victoria Land. Named by US-ACAN in 1976, for Roberto Pablo Schlatter Vollmann, Chilean biologist and veterinarian of the Instituto de Zoología, at the Universidad Austral de Chile, at Valdivia, who worked in the USARP bird-banding program relative to the Adélie penguin and the south polar skua, at Cape Crozier, 1969–70 and 1970–71. During ChilAE 1980–81, Dr. Schlatter made a complete investigation into the bird community.

Schloredt Nunatak. 75°03' S, 134°15' W. A nunatak, 1.5 km S of Bleclic Peaks, at the S extremity of the Perry Range, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Jerry L. Schloredt (b. Oct. 12, 1936), USN, chief construction electrician who was nuclear power plant operator at McMurdo in 1966, 1967, and 1969. He was a lieutenant commander when he became chief of the plant detachment in 1973.

Cabo Schlossbach *see* **Cape Schlossbach**

Cape Schlossbach. 75°08' S, 63°06' W. It forms the E end of Prehn Peninsula, and the S side of the entrance to Gardner Inlet, between that inlet and Hansen Inlet, on the Orville Coast, on the E side of the base of Palmer Land. Discovered aerially on Nov. 21, 1947, by RARE 1947–48, and named by Ronne for Ike Schlossbach. It appears on Ronne's map of 1948, but plotted in 75°09' S, 62°54' W, and as such also appears on a 1955 U.S. Hydrographic Office chart. US-ACAN accepted the name in 1949. Mapped by USGS from USN air photos taken between 1965–67, and it appears, with the corrected coordinates, on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. It appears on a 1952 Argentine chart as Cabo Schlossbach, and that is what the Argentines call it today. The Chilean gazetteer of 1974 accepted that name too.

Mount Schlossbach. 78°03' S, 154°48' W. A peak, 1.5 km SE of Mouht Nilsen, in the S group of the Rockefeller Mountains, on Edward VII Peninsula. Discovered aerially on Jan. 27, 1929 by ByrdAE 1928–30. Named by US-ACAN in 1947, for Ike Schlossbach. NZ-APC accepted the name.

Schlossbach, Isaac "Ike." b. Aug. 20, 1891, Bradley Beach, near Neptune, NJ, son of Russian dry goods storekeeper Abraham Schlossbach and his wife Martha. One of the major figures in Antarctic (and Polar) history. In 1930 he retired as a naval aviator, having lost an eye in a plane crash. In 1931 he was navigator on the submarine that took Sir Hubert Wilkins to the Arctic. He first went to Antarctica as one of the shore party on ByrdAE 1933–35. In 1937 he was back on another Arctic expedition (with MacGregor). During USAS 1939–41 he was in Antarctica again, at West Base, and was one of the crew who occupied the Rockefeller Mountains Seismic Station in Nov.–Dec. 1940. He was called back to the Navy for World War II, and served at a weather post in Labrador. He was also at Guadalcanal, and at an air station in Newfoundland. In 1947–48, a retired commander, USN, he volunteered for RARE, and was made captain of the *Port of Beaumont, Texas*, and second-in-command of RARE, if he could get his skipper's license in time (which he did). In 1955–56 he was at Mawson Station with ANARE; in 1956–57 and 1957–58 he was in the Weddell Sea area, in 1959–60 he was on the *Glacier*, and in 1960–61 he was back in Antarctica as a consultant and observer. Toward the end of his life, he lived with his old expedition comrade, Doc McLean and his family for a few months before going into a retirement home, and he died, unmarried, on Aug. 23, 1984, in Manasquan, NJ. *See* the Bibliography (Goodrich).

Schlossbach, Theodore R. "Ted." b. July 22, 1906, Neptune, NJ. Brother of Ike Schlossbach. He was medical officer on Ellsworth's 1935–36 expedition. He died April 19, 1995, in Manasquan, NJ.

Schmehl Peak. 69°34' S, 158°45' E. Rising to 750 m, at the N end of the ridge overlooking the junction of Walsh Glacier with Tomilin Glacier (indeed, it is on the W side of the Tomilin), in the Wilson Hills of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. (jg) Peter W. Schmehl, USNR, Hercules aircraft navigator during OpDF 68 (i.e., 1967–68). ANCA accepted the name on July 31, 1972.

Mount Schmid. 77°58' S, 85°40' W. Rising

to 2430 m, on the S side of Embree Glacier, 8 km E of Mount Goldthwait, in the Sentinel Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Capt. Ernest A. Schmid, U.S. Army, who helped build Pole Station in 1956-57.

Schmidhöhe. 74°39' S, 163°59' E. A heght on the SW side of Mount Browning, in the Northern Foothills, on the coast of Victoria Land. Named by the Germans, possibly for Michael Schmid-Thomé, who was on GANOVEX III (1982-83).

Schmidt, Ferdinand-Léopold. b. Sept. 6, 1819, Nancy. On May 29, 1838, at Valparaíso, he joined the *Astrolabe* as an apprentice seaman, for FrAE 1837-40. On July 12, 1838 he was promoted to junior seaman, and on Jan. 1, 1840 to ordinary seaman. In the meantime he had been to Antarctica for the 1839-40 season.

Schmidt, Dr. Paul F. Chemist from Leipzig who was on the *Valdivia* during the German Navy Oceanographic Expedition, 1898-99.

Schmidt Glacier. 79°15' S, 83°42' W. A glacier, about 30 km long, in the Pioneer Heights of the Heritage Range, it flows N from near Hall Peak, along the W side of the Thomson Escarpment and the Gross Hills, to coalesce with the lower part of Splettstoesser Glacier, N of Mount Virginia, in the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains party of 1961-62, for Paul G. Schmidt, geologist with the party. US-ACAN accepted the name in 1964.

Schmidt Hills. 83°14' S, 57°48' W. A group of rock hills, about 24 km long, N of Childs Glacier and W of Roderick Valley, between that valley and the Foundation Ice Stream, in the Neptune Range of the Pensacola Mountains. The highest point is Mount Nervo (about 1070 m), and the feature also includes Mount Coulter, Pepper Peak, Robbins Nunataks, and Wall Rock. In 1963-64, USGS surveyed these hills from the ground, and USN photographed them aerially, with USGS mapping the feature from these efforts. Named by US-ACAN in 1965, for Dwight L. Schmidt, geologist and student of Antarctic rocks at Carleton College, Minn., who was in the Pensacola Mountains in 1962-63, 1963-64, and 1965-66. In those days the coordinates were plotted in 83°15' S, 57°15' W, but they were corrected by USGS by 1969. UK-APC accepted the name (and the new coordinates) on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Schmidt Nunataks. 69°53' S, 158°56' E. A cluster of nunataks about 16.6 km S of Pope Mountain, and 17.5 km SE of Governor Mountain, in the Wilson Hills of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for James L. Schmidt, USN, aviation electronics mate 2nd class with VX-6 who wintered-over at McMurdo in 1967. ANCA accepted the name on July 31, 1972.

Schmidt Peak. 86°15' S, 144°50' W. Along the S side of the California Plateau, it marks the end of a narrow ridge 5 km NE of Parker Bluff, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Dennis C. Schmidt, VX-6 photographer, in Antarctica during OpDF 1963 (i.e., 1962-63), OpDF 1964 (i.e., 1963-64), and OpDF 1967 (i.e., 1966-67).

Schmidt Peninsula. 63°19' S, 57°54' W. A small peninsula, connected to Cape Legoupil by a low isthmus, and projecting from that cape toward the W, and terminating in the S at Toro Point, N of Unwin Cove, on the W coast of Trinity Peninsula. Named by ChilAE 1947-48 as Península Capitán del Ejército de Chile, Sr. Hugo Schmidt Prado, for Captain Hugo Schmidt Prado of the Chilean Army, the first commander of General Bernardo O'Higgins Station, in 1948, the station being established on this peninsula. By 1951, however, even the Chileans had begun to be intimated by the weight of the name, and so shortened it to Península Schmidt. US-ACAN accepted the name Schmidt Peninsula in 1964, and UK-APC followed suit on Dec. 15, 1982.

Mount Schmidtman. 76°34' S, 161°00' E. A peak to the N of Mount Naab, at the NE end of Eastwind Ridge, in the Convoy Range of Victoria Land. In association with the ridge, it was named by US-ACAN in 1999, for Capt. Richard D. Schmidtman, U.S. Coast Guard, skipper of the *Eastwind* during OpDF 60 (i.e., 1959-60). NZ-APC accepted the name on Nov. 4, 1999.

Schmitt, Waldo Lasalle. b. June 25, 1887, Washington, DC, son of engineer Ewald Schmitt and his wife Fanny Hesselbach. He went to work for the National Museum, in Washington, married Alvina Stumm on Nov. 19, 1914, and was the marine biologist on the *Fleurus* at Deception Island in 1927, collecting invertebrates. On May 20, 1927, he left Montevideo on the *American Legion*, and arrived back in New York on June 10, 1927. He remained with the Museum for decades. He was back in Antarctica on the *Staten Island* in 1962-63 [sic], at Marguerite Bay and in the Weddell Sea. He died on Aug. 5, 1977, in Washington, DC.

Schmitt Mesa. 74°56' S, 64°05' W. A prominent, mainly ice-covered mesa, or tableland, 24 km long, 8 km wide, and rising to about 1000 m above sea level, it forms the S rampart of the Latady Mountains, at the base of the Antarctic Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Waldo L. Schmitt. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Schmitter Peak. 71°16' S, 66°21' E. A small mountain peak about 6 km SW of Mount Woinarski, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Ulrich "Rick" Schmitter, who wintered-over three times in Antarctica as a cook, at Davis Station in 1964, Mawson Station in 1978, and Casey Station in 1980. He was also at Macquarie Island in 1966. In 1978, at Mawson, he assisted at an appendectomy. US-ACAN accepted the name in 1967.

Schmohe, Fred William. b. Oct. 4, 1904, Union, Ill., son of farmer Fred Schmohe and his wife Louise. His middle name came from his uncle William, who lived in the farm next door. After a spell of working as a laborer on his father's farm, he joined the U.S. Navy on Sept. 25, 1923, and was an electrician's mate 1st class on the *Bear*, during both halves of USAS 1939-41. He was promoted to chief electrician's mate for the 2nd half of the expedition. During World War II, he was commissioned as a lieutenant (jg), and became a pilot. He died on May 14, 1985, in San Bernardino, Calif., and was buried in Riverside three days later.

Schmutzler Nunatak. 74°57' S, 72°10' W. Rising to about 1500 m (the British say about 1400 m), about 1.5 km NW of Neff Nunatak, and about 2.5 km SSW of Gaylord Nunatak, in the Grossman Nunataks, ESE of the Lyon Nunataks, where Ellsworth Land meets southern Palmer Land. Mapped by USGS from air photos taken by USN between 1965 and 1968. Named by US-ACAN in 1988, for Robin A. Schmutzler, USGS cartographer who was a member of the joint USGS-BAS geological party to the Orville Coast in 1977-78. UK-APC accepted the name on Feb. 15, 1988.

Schneebach. 62°10' S, 58°58' W. A stream that flows W out of the lake the Germans call Schneesee, on Fildes Peninsula, on King George Island, in the South Shetlands. Named by the Germans.

Schneesee. 62°10' S, 58°57' W. A little lake on Fildes Peninsula, in King George Island, in the South Shetlands. Named by the Germans.

Schneide *see* **Madsensåta**

Schneidengruppe *see* **Johnson Peaks**

Schneider, Carlos Oliver *see under* **O**

Schneider Glacier. 79°29' S, 84°17' W. About 24 km long, it flows N between Dunbar Ridge and Inferno Ridge, and merges with Balish Glacier before joining Splettstoesser Glacier, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Cdr. Arthur F. Schneider, VX-6 maintenance officer during OpDF 65 (i.e., 1964-65), and commander of VX-6 during OpDF 68 (i.e., 1967-68).

Schneider Hills. 82°36' S, 42°45' W. A group of hills, rising to 735 m (in Ruthven Bluff) S of San Martín Glacier, they form the S half of the Argentina Range, in the Pensacola Mountains. Also included in these hills are Lisignoli Bluff, Sosa Bluff, and Pujato Bluff. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, as part of their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Otto Schneider, chief scientist of the Instituto Antártico Argentino in the 1950s and 1960s. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Schneider Peak. 71°37' S, 62°41' W. Rising to about 1300 m near the head of Rankin Glacier, 10 km WSW of Mount Geier, on the Schirmacher Massif, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Visited by a joint USGS-BAS geological party in 1986-87. Named by US-ACAN in 1988, for David L. "Duke" Schneider (b. March 7, 1943), USGS geodesist who wintered-over at Casey Station (Australian) in 1974, as part of USGS's satellite surveying team there. While assigned to the Law Dome ice-drilling team in March 1974, Duke helped to rescue 3 Australian workers whose Nodwell had fallen into a deep crevasse. UK-APC accepted the name on May 13, 1991.

Schneider Ridge. 72°56' S, 61°23' E. A rock outcrop in the Goodspeed Nunataks, about 15 km E of Skinner Nunatak, in the southern Prince Charles Mountains. First sighted by an ANARE seismic traverse party in 1957. Photographed aerially by ANARE in 1958 and 1960. Named by ANCA on Nov. 27, 1973, for Eckard "Ekie" Schneider, helicopter engineer with the ANARE Prince Charles Mountains Survey Party of 1972. The Russians call it Gora Rusakova, after Kazakh geologist Mikhail Petrovich Rusakov (1892-1963).

Schneider Rock. 74°08' S, 115°05' W. A rock on land, 5 km N of the Siglin Rocks, it protrudes through the ice on the W side of Martin Peninsula, on the Bakutis Coast of Marie Byrd Land. Lichens and petrels are to be found here. First photographed aerially in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Lt. R.P. Schneider, USN, maintenance co-ordinator at Williams Field during OpDF 66 (i.e., 1965-66). Originally plotted in 74°07' S, 114°51' W, it has since been replotted.

Schnidrighorn. 72°52' S, 166°17' E. A peak, immediately SW of Brandalberg, in the Lawrence Peaks, in Victoria Land. Named by the Germans.

Schobert Nunatak. 85°31' S, 162°14' W. Overlooks the terminus of Bowman Glacier, 6 km E of Mount Dean, at the NE end of the Quarles Range, in the Queen Maud Mountains. First mapped by ByrdAE 1928-30. Named by US-ACAN in 1967, for William J. Schobert, VX-6 aviation electrician and maintenance shop supervisor for several OpDF seasons between 1964 and 1967.

Schoeck Peak. 79°53' S, 82°51' W. Rising to 1810 m, directly at the head of Henderson Glacier, in the Enterprise Hills of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Peter A. Schoeck, aurora scientist at Little America, 1957.

Schoening Peak. 78°32' S, 85°28' W. A high, steep, rocky peak, rising to 4743 m, at the E edge of the summit plateau of the Vinson Massif, 2.8 km E of Mount Vinson, in the Sentinel Range of the Ellsworth Mountains. Named by US-ACAN in 2006, for Peter K. Schoening (1936-2004), a member of the American Antarctic Mountaineering Expedition of 1966-67, which was the first to climb Mount Vinson and several other high peaks in the Sentinel Range.

Schofield, A. b. 1875, Hull, Yorks. On July 26, 1907, at Poplar (in London), he signed on to the *Nimrod* as a fireman for BAE 1907-09, but was discharged at Lyttelton on Dec. 19, 1907, thus never getting to Antarctica.

Schofield Peak. 72°36' S, 166°18' E. A peak, 1.5 km SE of Mount McCarthy, at the head of Webb Névé, in the Barker Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Edmund A. Schofield, biologist at Hallett Station in 1963-64, and at McMurdo in 1967-68.

Bahía Schokalsky *see* **Schokalsky Bay**

Détroit Schokalsky *see* **Schokalsky Bay**

Schokalsky Bay. 69°17' S, 70°03' W. Also seen spelled as Shokalsky Bay and Chokalskii Bay. A bay, 14 km wide at its entrance, indenting the NE coast of Alexander Island for 10 km W of Cape Brown, between that cape and Mount Calais. Hampton Glacier discharges tremendous amounts of ice into the head of this bay at a steep gradient, causing the ice there to be extremely broken and irregular, and discourages the use of this bay and glacier as an inland sledging route onto the NE part of Alexander Island. First seen and roughly charted from a distance in Jan. 1909, by FrAE 1908-10, and thought by them to be a strait separating Mount Nicholas from Alexander Island. Charcot thus named it Détroit Schokalsky, for Russian geographer, meteorologist, and oceanographer Yuliy Mikhailovich Schokal'skiy (1856-1940), of Saint Petersburg University. It appears as such on Charcot's 1912 map. This was rendered Détroit Shockalski by Bongrain in 1914, even though Charcot had used the spelling that Schokalsky himself used when transliterating his name into Roman script. It appears on a 1914 British chart as Schokalsky Strait, and that was the name seen on Wilkins' map of 1929, and on a 1932 Discovery Investigations chart. However, on a 1916 British photograph it appears as Shokalski Strait. On Feb. 1, 1937, the coast in this vicinity was partly photographed aerially by BGLE 1934-37, and the bay was roughly surveyed. However, they could not find Charcot's "détroit." Fids from Base E, in Nov.-Dec. 1948, surveyed the area again, and found that this bay was actually what Charcot had in mind. The low-lying Hampton Glacier to the S gave it the appearance of a channel, which is what had fooled Charcot. FIDS renamed it Schokalsky Bay, and plotted it in 69°15' S, 69°55' W, and that name, and those coordinates were accepted by UK-APC on March 31, 1955, and by US-ACAN later that year. It appears as such on a 1955 U.S. Hydrographic Office chart, and in the 1956 British gazetteer. However, the British surveyed it again, and the coordinates were corrected by 1960. With the new coordinates, it appears in the 1977 British gazetteer. The Argentines call it Bahía Schokalsky.

Islote Scholander *see* **Scholander Island**

Scholander Island. 66°22' S, 66°58' W. An island, 2.5 km E of Watkins Island, in the Biscoe Islands. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Per Fredrick Scholander (1905-1980), professor of physiology at the Institute of Oceanography, at La Jolla, Calif., 1958-80, specializing in polar physiology. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Islote Scholander.

Scholars Peak. 77°35' S, 163°05' E. A peak on the W side of Mount Falconer, in the area of New Harbor, in Victoria Land. Named by US-ACAN in 1998. NZ-APC accepted the name on Oct. 7, 1998.

Canal (de) Schollaert *see* **Schollaert Channel**

Chenal (de) Schollaert *see* **Schollaert Channel**

Strait of Schollaert *see* **Schollaert Channel**

Schollaert Channel. 64°30' S, 62°50' W. A wide and clear strait running NW-SE between Hulot Peninsula (on Brabant Island) to the NE and Guépratte Island and Parker Peninsula (on Anvers Island) to the SW, it connects Dallmann Bay with Gerlache Strait, in the Palmer Archipelago. The SE entrance was discovered and roughly charted on Jan. 30, 1898, by BelgAE 1897-99, and the feature was named by de Gerlache as Chenal de Schollaert, for François Schollaert (1851-1917), Belgian statesman who helped secure government support for de Gerlache's expedition. It appears as such on the 1899 and 1900 maps of the expedition. On Dr. Frederick Cook's 1900 English language version of the maps, it appears as Strait of Schollaert, and on Irízar's Argentine map of 1903 as Canal de Schollaert. The NW entrance to the channel was charted by FrAE 1903-05, and appears on Charcot's 1906 map. Nordenskjöld, among others, refers to the feature as Chenal Schollaert, and on Balch's 1904 map it appears as Schollaert Strait. All the other interested nations had translations similar to that, and misspellings abounded, of course. On an American Geographical Society map of 1905 it appears as Schollaert Sound, and on Balch's 1912 map it appears as Dallmann Strait, named in association with Dallmann Bay. It was recharted by the Discovery Investigations in 1927, and the name Schollaert Channel first appears on their 1929 chart. It appears as Schollart Channel (sic) on a 1942 USAAF chart, but the name accepted by US-ACAN in 1947 was Schollaert Channel, and that name was also accepted by UK-APC, on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a 1959 British chart. It appears on a Chilean chart of 1947 as Canal Schollaert, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. In 1949, David James, formerly of the FIDS, mentions Melchior Channel, apparently referring collectively to this feature and Dallmann Bay. Schollaert Channel was photographed aerially by FIDASE in 1956-57.

Schollaert Sound *see* **Schollaert Channel**

Schollaert Strait *see* **Schollaert Channel**

Schönbäck, G.F. b. 1879, Sweden. Steward on SwedAE 1901-04.

Schönenberg. 71°38' S, 162°57' E. A peak, due N of Mount Lugering, in the Bowers Mountains of Oates Land, in Victoria Land. Named by the Germans.

Schonyan, Paul Wilhelm Otto. From Invercargill, NZ. Crewman on the *Jacob Ruppert*, 1934-35, i.e., for the second half of ByrdAE 1933-35.

Schoofs Nunatak. 73°18' S, 64°04' W. An isolated nunatak, 30 km WNW of Mount Barkow, rising to about 1500 m above the otherwise featureless ice plateau westward of the heads of Meinardus Glacier and Haines Glacier, on the Lassiter Coast of Palmer Land. Surveyed by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Gerald J. Schoofs, USARP radioscience researcher at Byrd Station in 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Schoonmaker Ridge. 79°39' S, 158°50' E. A jagged ridge that runs E for about 7 km from the S part of the Reeves Plateau, in the Cook Mountains. Named by US-ACAN in 2000, for remote sensing scientist James William "Bill" Schoonmaker, Jr., a topographic engineer with USGS, who spent 3 summers in Antarctica between 1972 and 1976, conducting geodetic work at Pole Station, Byrd Station, and in the Antarctic Peninsula, the Ellsworth Mountains, and the Ross Ice Shelf, where he determined the precise location of geophysical sites established during the Ross Ice Shelf Project of 1973-74. NZ-APC accepted the name on Feb. 20, 2001.

Mount Schopf. 84°48' S, 113°25' W. An elongated, mesa-like mountain, rising to 2990 m, and mostly ice-covered, just E of the Buckeye Table, between the Wisconsin Range and the Ohio Range. Surveyed by the Horlick Mountains Traverse Party in Dec. 1958. Named by US-ACAN in 1962, for USGS geologist and paleobotanist James M. Schopf, with the Coal and Geology Laboratory, at Columbus, Ohio, who greatly assisted the field geologist during that expedition by analyzing coal and related rock specimens from this mountain. Schopf was (later) a member of the Horlick Mountains Party of 1961-62.

Ensenada Schott *see* **Schott Inlet**

Schott Inlet. 72°09' S, 60°55' W. A small, ice-filled inlet indenting the E side of Merz Peninsula, close S of Cape Darlington, and N of Flagon Point, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially in Dec. 1940, by USAS 1939-41. Surveyed from the ground and charted in 1947 by a joint sledging team of personnel from RARE 1947-48 and Fids from Base E, and named by FIDS for Dr. Gerhard Schott (1866-1961), of Hamburg, who had been oceanographer on the German Navy Oceanograpic Expedition, 1898-99. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a 1955 U.S. Hydrographic Office chart. It was further photographed aerially by USN, in 1969, and appears on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a Chilean chart of 1966, as Ensenada Schott, and that is the name the Chileans use today.

Schrammenbach. 62°09' S, 58°56' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Schrammenhügel *see* **Scar Hills**

Schreiner, Ingvald Flach. b. Jan. 27, 1905, Kristiania, Norway, son of prominent Kristiania professor of anatomy Kristian Emil Schreiner and his wife Alette Falch. Doctor on the *Kosmos* in 1929, he disappeared in Antarctic waters with Leif Lier on Dec. 26 of that year, while on a reconnaissance flight for whales.

Schroder, Adolf Harald Villiam. b. Aug. 5, 1884, Svaneke, Bornholm, Denmark, son of Lars Peter Breum Frederik Schroder and his wife Sabine Marie Kristine Andersen. He was baptized at Bornhol, on Sept. 7, 1884. On Nov. 18, 1911, at Hobart, he signed on to the *Aurora*, as an able seaman, at £5 per month, for AAE 1911-14. He left the expedition at Lyttelton, NZ, on March 18, 1913.

Schrøder, Albert Darger. b. Oct. 14, 1892, Ålesund, Norway, son of broker Hilmar Schrøder and his wife Marie Darger. He went to sea in 1923, as a ship's engineer on Norwegian merchant vessels, and was 1st engineer on the *Wyatt Earp* during Ellsworth's last expedition, 1938-39.

Schroeder, William Herbert. Known as Herbert. b. March 8, 1918, Watertown, Mass., but raised partly in Fairport, Ia., Key West, Fla., and Newton, Mass., son of biologist (actually an ichthyologist) William Charles "Bill" Schroeder and his wife Adah Jensen. Herbert's father was with the U.S. Bureau of Fisheries, and from 1932 was business manager with the Woods Hole Oceanographic Institute. While still a student, Herbert took the job of 4th mate on the *North Star* during USAS 1939-41. On May 12, 1941, in Springfield, Mass., he enlisted as a private in the Army, and headed out for Pearl Harbor. He later lived in Lynnwood, Wash., and died in Seattle on Oct. 23, 1995.

Schroeder Hill. 85°23' S, 175°12' W. A rock prominence, rising to 2680 m, 5.5 km SE of Ellis Bluff, in the Cumulus Hills. Named by US-ACAN in 1966, for Henry B. Schroeder, USARP meteorologist with the U.S. Weather Bureau, who wintered-over at Pole Station in 1964. He was also field assistant at Byrd Station in 1964-65.

Schroeder Peak. 82°15' S, 158°37' E. Rising to 2230 m, 5 km NW of Mount Kopere, and 7 km N of Lyttelton Peak, in the Cobham Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for James E. Schroeder, glaciologist at Little America, 1959-60. ANCA accepted the name.

Schroeder Spur. 71°38' S, 160°30' E. A large mountain spur, S of Edwards Glacier and the parallel Thomson Spur, at the S end of the Daniels Range, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lauren A. Schroeder, USARP biologist at McMurdo, 1967-68.

Schubert Inlet. 70°56' S, 70°18' W. An inlet, 22 km long, 8 km wide, and filled with shelf ice, it indents the W coast of Alexander Island between the Colbert Mountains and the Walton Mountains, off the E side of Wilkins Sound, between the Handel Ice Piedmont and the Lewis Snowfield. In 1959-60 Searle of the FIDS mapped this feature from air photos taken in 1947 by RARE 1947-48. He plotted it in 70°52°S, 70°55' W, and had it extending NW-SE. Named by UK-APC on March 2, 1961, for the Austrian composer Franz Peter Schubert (1797-1828), who died too young. US-ACAN accepted the name later in 1961, and it appears on a 1962 U.S. Hydrographic Office chart. U.S. Landsat images taken in Feb. 1979 show it to extend W-E, and the coordinates were corrected.

Schubertgipfel. 72°47' S, 3°43' W. The peak immediately E of Ovbratten Peak, on Høgfonna Mountain, in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Named by the Germans for Wolfgang Schubert, who was on GANOVEX III (1982-83).

Schuberthügel. 70°35' S, 161°14' E. A hill in the extreme SE part of the Kavrayskiy Hills, in Oates Land, in Victoria Land. Named by the Germans, presumably for Wolfgang Schubert (*see* **Schubertgipfel**).

Isla Schule *see* **Schule Island**

Schule Island. 65°46' S, 65°33' W. A small island, 6 km E of Laktionov Island, off the E coast of Renaud Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57, but first shown accurately on a 1957 Argentine government map (but not named). Named by UK-APC on July 7, 1959, for John J. Schule Jr., U.S. oceanographer who organized the sea-ice service of the U.S. Hydrographic Office in 1950. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Isla Schule.

Schulte Hills. 73°35' S, 163°50' E. A small group of low hills, 8 km SSW of Stewart Heights, in the Southern Cross Mountains of Victoria Land. Named by the Southern Party of NZGSAE 1966-67, for Frank J. Schulte, geologist with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1968. Originally plotted in 73°35' S, 163°53' E, it has since been replotted.

Schulthess Buttress. 84°47' S, 115°00' W. A broad, ice-capped bluff between Ricker Canyon and Higgins Canyon, on the N side of the Buckeye Table, in the Ohio Range. It has steep ice and rock cliffs, and is prominent when viewed from northward. Surveyed in Dec. 1958 by the Horlick Mountains Traverse Party. Named by US-ACAN in 1962, for Emil Schulthess, Swiss photographer who accompanied the party on

part of the traverse. In 1960, he published the photographic book, *Antarctica*.

Mount Schultz *see* **Mount Schutz**

Schultz Glacier. 77°19' S, 162°20' E. Flows E between Pond Peak and Purgatory Peak into Victoria Lower Glacier. Named by US-ACAN in 1976, for Lt. Robert L. Schultz, USN, officer-in-charge of the Naval Support Force winter-over detachment at McMurdo in 1975.

Schulz, Robert. Chief engineer on the *Schwabenland* during GermAE 1938-39.

Schulz Crag. 78°23' S, 161°11' E. A rock crag forming the E side of Halfway Nunatak, almost in the center of the upper Skelton Glacier. Named by US-ACAN in 1994, for Thomas J. Schulz, USGS cartographer, a member of the 1982-83 geodetic control team in the McMurdo Dry Valleys, the first joint US-NZ cooperative effort to establish mapping control in order to map the entire region at a scale of 1:50,000.

Schulz Point. 66°17' S, 110°29' E. The SW point of Shirley Island, in the Windmill Islands. First mapped from air photos taken in 1947 by OpHJ 1946-47 and in 1948 by OpW 1947-48. Named by US-ACAN in 1963, for Richard Louis Schulz (b. Aug. 18, 1935, Indianapolis), who joined the U.S. Navy in Sept. 1952, and who wintered-over as construction mechanic at Wilkes Station in 1958. After serving in Vietnam, he retired from the Navy in May 1971. ANCA accepted the name.

Schulze Cove *see* **Bolsón Cove**

Schulzgebirge *see* **Annandags Peaks**

Schulzhöhen. 74°06' S, 6°30' W. Heights just NW of Sørflya (the most southeasterly mountain on the Kirwan Escarpment), in Maudheimvidda, in Queen Maud Land. Named by the Germans.

Mount Schumacher. 71°55' S, 2°58' W. Rising to 1230 m, 10 km SW of Nils Jørgen Peaks, on the W side of Ahlmann Ridge, in the NE part of Maudeheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Schumacherfjellet, for Nils Jørgen Schumacher. US-ACAN accepted the translated name Mount Schumacher in 1962.

Schumacher, Nils Jørgen. b. 1919, Finnmark, Norway. Senior meteorologist on NBSAE 1949-52. He was back in Antarctica for the first phase of NorAE 1956-60.

Schumacherfjellet *see* **Mount Schumacher**

Mount Schumann. 71°40' S, 73°42' W. A snow-covered mountain rising to about 600 m (the British say about 500 m), just SW of the head of Brahms Inlet, on Beethoven Peninsula, in the SW part of Alexander Island. First mapped by Searle of the FIDS in 1959, working from air photos taken in late 1947 during RARE 1947-48. He plotted it in 71°35' S, 73°38' W. Named by UK-APC on March 2, 1961, for the German composer, Robert Schumann (1810-1856). US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and with the new coordinates the feature appears in the 1977 British gazetteer.

Schumann Nunatak. 72°35' S, 163°18' E. A nunatak, 3 km S of Salvador Nunatak, at the SW end of the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Edward A. Schumann, cosmic ray researcher at McMurdo in 1967.

Schüssel Cirque. 71°34' S, 11°33' E. Also called Grautfatet. A large, west-facing cirque containing Schüssel Moraine, in the north-central part of the Humboldt Mountains, in the W part of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Ritscher called it In der Schüssel (i.e., "in the bowl"), and a little later Grosse Brei-Schüssel (i.e., "great mash bowl"). Renamed by US-ACAN in 1970. The Norwegians call it Grautfatet (i.e., "the mash bowl").

Schüssel Moraine. 71°34' S, 11°32' E. A large morainal deposit occupying Schüssel Cirque, in the north-central part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, who named the cirque. This moraine was first plotted from these photos. Photographed aerially again by SovAE 1961, and named by the Russians, in association with the cirque. US-ACAN accepted the name Schüssel Moraine in 1970.

Schutt Glacier. 78°16' S, 161°31' E. On the NW side of Stepaside Spur, on the E side of the upper Skelton Glacier, in Victoria Land. Named by US-ACAN for John W. Schutt, of the department of geology and planetary sciences at the University of Pittsburgh, who was a member of the USAP meteorite search teams in Victoria Land, in 7 field seasons between 1981 and 1992.

Mount Schutz. 69°46' S, 159°16' E. Rising to 1260 m, at the E side of the head of Noll Glacier, in the Wilson Hills, about 28 km SSE of Parkinson Peak, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Cdr. Albert C. Schutz, Jr. (b. Aug. 27, 1932. d. Sept. 15, 2003, Old Hickory, Tenn.), who came into the U.S. Navy from the Merchant Marine on March 19, 1953, just in time for Korea, and who was an aircraft commander in LC-117D and co-pilot in LC-130 aircraft during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). He served in Vietnam. ANCA accepted the name on July 31, 1972, but (apparently) as Mount Schultz. The name is Schutz.

Schutz, J. *see* **Órcadas Station**, 1917

Schutzhafen. 73°18' S, 169°09' E. A small bay, S of Mount Lubbock, in Victoria Land. Named by the Germans.

Mount Schuyler. 63°44' S, 58°41' E. Rising to 1435 m off the NE extremity of the Detroit Plateau, 2.28 km SSW of Sirius Knoll, 4.45 km W of Antonov Peak, 9.35 km W by N of Mount Daimler, and 12.75 km NNW of Mount Reece, it sutrmounts Russell West Glacier to the N and Victory Glacier to the S, in Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for American scholar, explorer, and diplomat Eugene Schuyler (1840-1890), who investigated the crushing of the Bulgarian April uprising of 1876, and co-authored the draft decision of the subsequent 1877 Constantinople Conference. He was one of the first 3 Americans to get a PhD from an American university, and the first American translator of Turgenev and Tolstoy. He had graduated from Yale at the age of 19.

The *Schuyler Otis Bland*. Known as the *Bland*. A 15,910-ton, 454-foot vessel, built in 1950 at the Ingalls Shipyard, in Pascagoula, Miss., and launched in Jan. 1951, named for the Virginia congressman. She was acquired by the U.S. Navy in 1961, and was in Antarctic waters in 1977-78 and 1978-79, both seasons under the command of Capt. Bjørn J. Werring. In the first season, she picked up tons of radioactive dirt from McMurdo, and took it back to the USA. She was sold on Nov. 28, 1979.

Schwabe, Adolf. Chief bosun on the *Deutschland*, during GermAE 1911-12.

Schwabengletscher. 70°53' S, 165°50' E. A glacier to the W of Tiger Peak, in the Anare Mountains. Named by the Germans.

The *Schwabenland*. Built in Kiel in 1925, she was owned by Lufthansa, and in 1934 converted into an airplane service craft, acting as a floating re-fueling base for Lufthansa's air mail service between Africa and South America. 8488 tons, 468 feet long, 59 feet wide at her broadest, she had a top speed of 11 knots, and had a powerful catapult on board for the planes. She was loaned, along with her captain, Kottas, to Ritscher for GermAE 1938-39, taking aboard 2 aircraft, the *Boreas* and the *Passat*. She was due to repeat the performance in 1939-40, but the war got in the way. On Oct. 2, 1939, now converted into a man-o'-war, she sank the *Clement* in the South Atlantic, and in 1944 herself came to grief off Norway.

Schwabenland Canyon. 66°35' S, 18°00' E. An undersea feature at the Antarctic Circle, off the coast of Queen Maud Land.

Schwabenland Expedition *see* **German Antarctic Expedition 1938-39**

Schwackenunatak. 72°52' S, 163°37' E. Just SE of Solo Nunatak, at the SW side of the Evans Névé, in Victoria Land. Named by the Germans.

Schwall Peak. 76°51' S, 160°54' E. Rising to about 1200 m, adjacent to Staten Island Heights, and about 7 km WNW of Mount Gunn, in the S portion of the Convoy Range of Victoria Land. Named by US-ACAN for Capt. Karen Schwall, the first female U.S. Army officer in Antarctica, who specialized in logistics and air and ship operations 1988-91. From 1991 to 1996 she was the logistics manager with Antarctic Support Associates, much involved during the hand-over of OpDF from Navy to civilian control. She was the first woman to command McMurdo (Oct.-Dec. 1994; and again Feb.-Aug. 1995). NZ-APC accepted the name on Nov. 4, 1999.

Schwartz, Georges. b. Aug. 19, 1920, France. We know he was raised largely by a relative named Erna (*see* **Nunatak Erna**). He was in Greenland, and then on the French Polar Expedition 1949-51, to Adélie Land, wintering-over at Port-Martin Station in 1950 (as a general assistant) and again in 1951 (as a dog man). He was observer and dog handler with ANARE at Mawson Station for the winter-over of 1954, having joined the *Kista Dan* at the Kerguélen Islands on the expedition's way south. On this expedition he accompanied Bob Dovers on his sledge jouney to Edward VIII Bay.

Schwartz Cove. 72°24' S, 99°28' W. An ice-filled cove indenting the Abbot Ice Shelf, W of Williamson Peninsula, on the S side of Thurston Island. The Trice Islands lie at the entrance to this cove. Named by US-ACAN in 2003, for Cdr. Isador Joseph Schwartz (b. Jan. 13, 1909, Pittsburgh. d. April 6, 1989, Marietta, Ga.), a Naval Academy graduate of 1932, and executive officer of the *Pine Island* during OpHJ 1946-47. He was a captain by 1955, and retired from the Navy in June 1963. James Shuler describes him as "a short, rotund, cigar-smoking tyrant" [*James*; RoseDog Books, Pittsburgh, 2010].

Schwartz Peak. 74°10' S, 76°15' W. A rock peak rising to about 1000 m, 24 km ESE of FitzGerald Bluffs, and SE of Carroll Inlet, on the English Coast of Ellsworth Land. The peak is one in a chain of small summits lying southeastward of the bluffs, and is the dominant feature near the center of the group. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935. Surveyed by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN in 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Bruce L. Schwartz, USGS topographic engineer at Byrd Station, in 1967-68. It appears on the 1968 USGS sketch map of the Bryan Coast-Ellsworth Land. UK-APC accepted the name on Dec. 20, 1974.

Schwartz Range. 67°08' S, 55°38' E. A broken range of peaks extending in a NE-SW direction for about 22 km, W of Wilma Glacier, and about 27.5 km SW of Edward VIII Bay, in Kemp Land, in East Antarctica. Discovered in Nov. 1954 by Bob Dovers and Georges Schwartz, during an ANARE sledging journey to Edward VIII Bay. Named by the ANCA on Nov. 28, 1955, for Schwartz. US-ACAN accepted the name in 1961.

Schwarz, José. Argentine naval ensign who was whaling inspector aboard the *Lancing*, 1926-27.

Schwarz, Wilhelm. b. Sept. 28, 1873, Überlaud, Pomerania. He joined the *Gauss* as an able seaman for GermAE 1901-03. At Cape Town, in Dec. 1901, on the way south, the cook left the ship, and Schwarz replaced him for the rest of the trip.

Schwarze Hörner *see* **Svarthorna Peaks**

Schwarze Pyramide. 72°29' S, 160°25' E. A pyramid-shaped rock close NE of Mount Chadwick, about 3 km ESE of Mount Walton, in the Outback Nunataks. Named by the Germans. It is just possible that this is the German name for Mount Chadwick itself.

Schwarze Spinne. 73°22' S, 166°52' E. A peak in the Mountaineer Range of Victoria Land. Named by the Germans ("the black widow spider").

Schweitzer Glacier. 77°50' S, 34°40' W. Flows W along the N side of the Littlewood Nunataks into Vahsel Bay, on the Luitpold Coast. Lerchenfeld Glacier, trending west-northwestward, coalesces with the lower portion of it. Discovered in Jan. 1912, by GermAE 1911-12, roughly mapped by them in 77°48' S, 34°40' W, and named by Filchner as Schweitzer Gletscher (or Schweitzergletscher), for Berlin journalist Major Georg Schweitzer (1850-1940), chairman of the organizing committee and first president of the German Antarctica Expedition Society, and famous for his biography of Emin Pasha. It appears as Schweitzer Glacier on a 1942 USAAF chart, plotted in 77°50' S, 34°00' W, and, as such, US-ACAN accepted it in 1947, and it appears as such on an American Geographical Society map of 1962. The coordinates were corrected by the time the 1969 American gazetteer came out, and with those new coordinates, the name appeared on a British chart of 1971, and was finally accepted by UK-APC on Dec. 9, 1981. It appears on a 1966 Argentine map as Glaciar Schweitzer. It was last delineated from U.S. Landsat images taken on Jan. 27, 1973.

Schweitzergletscher *see* **Schweitzer Glacier**

Mount Schwerdtfeger. 78°21' S, 162°46' E. Rising to 2950 m, on the ridge at the head of Renegar Glacier, about 2.5 km S of Mount Kempe, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1994, for Werner Schwerdtfeger, senior meteorological researcher at the University of Wisconsin, a driving force in the study of Antarctic meteorology. His specialty was barrier winds E of the Antarctic Peninsula.

Schwerdtfeger Automatic Weather Station. 79°35' S, 169° 27' E. An American AWS at an elevation of 54 m, on the Ross Ice Shelf. It began operating on Jan. 24, 1985. It was visited on Jan. 22, 2005, and was found to have moved half a mile due north. Named for Werner Schwerdtfeger (*see* **Mount Schwerdtfeger**). There was an Australian AWS named Schwerdtfeger (*see* **GC46**).

Schwob Peak. 75°53' S, 128°39' W. Rising to 2715 m, 2.5 km S of Mount Petras, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for William S. "Bill" Schwob (b. March 15, 1927, Buffalo, NY), a graduate of the U.S. Coast Guard Academy (and later its commandant), promoted to captain on July 1, 1965, and skipper of the *Southwind* during OpDF 72 (i.e., 1971-72). He left the *Southwind* in mid-1972, and retired to Clearwater, Fla., as a rear admiral, on June 30, 1979.

Schytt, Stig Valter. Known as Valter, and last name pronounced rather like "shoot." b. Oct. 17, 1919, Stockholm, Sweden. He studied under Hans Ahlmann, and in 1945 led a glacier research expedition into the Swedish mountains, where he established the University of Stockholm's Tarfala research station, in the Tarfala Valley, Kebnekeise, in Swedish Lapland, a station that grew and grew in size and fame under his guidance, as a field camp for glaciologists. He was chief glaciologist and 2nd-in-command of NBSAE 1949-52, and was Sweden's leading glaciologist and polar scientist when he died on March 30, 1985, in the Tarfala Valley, en route to the research station.

Schytt Glacier. 71°35' S, 3°40' W. A large, broad glacier, about 100 km long, it flows northward between Giaever Ridge and Ahlmann Ridge, in the NE part of Maudheimvidda, in Queen Maud Land, to the Jelbart Ice Shelf. Mapped by Norwegian cartographers from ground surveys conducted during NBSAE 1949-52, and from air photos taken during the same expedition, and named by them as Schyttbreen (this must not be pronounced as it might appear in English), for Valter Schytt. US-ACAN accepted the translated name Schytt Glacier in 1962.

Schyttbreen *see* **Schytt Glacier**

Science. Scientific studies in Antarctica, especially during IGY (1957-58), have increased incalculably the knowledge of the entire Earth. The first scientific efforts were the maps drawn by the early sealers of 1820-21, and the rocks, minerals, and plants brought back by them (*see* **McKay, Donald**; **Astor, B**; and **Napier, William**).

Scientific Committee on Antarctic Research. Known as SCAR. Until 1961 this organization was known as the Special Committee for Antarctic Research, but still called SCAR. Organized in Sept. 1957 by the International Council of Scientific Unions (ICSU), the first meeting of this non-governmental agency was at The Hague on Feb. 3-5, 1958. Its purpose was to encourage scientific co-operation in Antarctica, and to co-ordinate all Antarctic research. It was a successor to IGY, and a sister concept to the Antarctic Treaty, and, indeed, helps keep the treaty in force. Those present at The Hague were: Argentina, Australia, Belgium, France, Japan, Norway, UK, USA, USSR. The 2nd meeting was held in Moscow, on Aug. 4-11, 1958. It had its 19th meeting at San Diego in June 1986. Presidents: 1958-63 G.R. Laclavère, of France; 1963-70 Laurence Gould, of the USA; 1970-74 Gordon de Q. Robin, of the UK; 1974-78 T. Gjelsvik, of Norway; 1978-82 G.A. Knox, of NZ; 1982-86 James H. Zumberge, of the USA; 1986-90 Claude Lorius, of France; 1990-94 Dick Laws, of the UK; 1994-98 A.C. Rocha-Campos, of Brazil; 1998-2002 R.H. Rutford, of the USA; 2002-06 J. Thiede, of Germany; 2006-08 C.G. Rapley, of the UK (resigned); 2008- M.Z. Kennicutt, of the USA. For more information about the organization before 1961 *see* **Special Committee for Antarctic Research**.

Scientific stations. Many countries have operated scientific stations in Antarctica. For lists see the country concerned, then (using that entry

as a lead) each individual station. For a description of a scientific station *see* **South Pole Station**, and various other station entries throughout this book. Some stations are permanent, some are summer only, and today some of them welcome tourists. Indeed, some are tourist traps to the extent that the attitude will shift toward anti-tourism if that station has only science on its mind (and perhaps that has already happened). If a scientific station is out to take the Yankee dollar, then it will embrace tourists with increasingly open arms, and put them up at its hotels, and welcome them to its gift shops, etc, until it all becomes psychologically damaging to everyone. In Dec. 1988 there were 40 year-round stations, one summer one (Italy), and one abandoned one (Norway). The year-round ones were USSR (8), Argentina (6), Great Britain (4), USA (3), Chile (3), Australia (3), Japan (2), and the following countries with one only: Brazil, China, the two Germanys, Korea, NZ, Poland, Uruguay, France, India, and South Africa. *See also* **Norway, Belgium, Spain, Sweden, and Greenpeace**. Below is a chronological list of the main ones (for refugios, i.e., refuge huts, *see* under the entry **Refugios**. For camps and other transient field buildings, *see* individual entries, or under the name of the country, or under an expedition). The dates signify the date the station opened. **Feb. 22, 1904**: Omond House. This was the first scientific base in Antarctica, and it was Scottish. Situated on Laurie Island, in the South Orkneys, it was turned over to the Argentines in 1905 because the Scots no longer wanted it. **1905**: Órcadas Station. This was Ormond House, as run by the Argentines. **Jan. 1929**: Little America. Byrd's base for ByrdAE 1928-30. Not really a scientific station, but an expedition base where scientific studies were carried out. **Feb. 1934**: Little America II opened. Byrd's base for ByrdAE 1933-35. Same caveat as for the previous Little America. **March, 1934**: Bolling Advance Weather Station opened. This is where Byrd wintered alone, so it was really a one-man scientific station. **March 6, 1940**: Little America III (West Base) opened. This was the first North American effort to realize the concept of a permanently manned station with annually rotated personnel. **March 27, 1940**: East Base opened. **Feb. 3, 1944**: Base B (Deception Island). This British base for Operation Tabarin was the first actual scientific station in Antarctica in modern times. **Feb. 7, 1944**: Base D (aborted). **Feb. 11, 1944**: Base A (Port Lockroy Station). **Feb. 19, 1945**: Base P (never used). **Feb. 13, 1945**: Base D (Hope Bay). **Jan. 21, 1946**: Base C. **Feb. 25, 1946**: Base E (Stonington Island). **Jan. 1947**: Little America IV. **March 31, 1947**: Melchior. **Jan. 7, 1947**: Faraday (at that point of time known as Argentine Islands, or Base F). **1947**: Arturo Prat (known as Soberanía back then). **1947**: Base G (Admiralty Bay Station). **March 18, 1947**: Signy Island Station. **Jan. 25, 1948**: Decepción. **Feb. 1948**: O'Higgins. **Feb. 3, 1950**: Port-Martin. **1950**: Maudheim. **April 6, 1951**: Brown. **March 21, 1951**: San Martín. **1951**: González Videla. **Dec. 17, 1952**: Esperanza. **Dec. 1952**: Petrel. **April 1, 1953**: Teniente Cámara. **Nov. 21, 1953**: Jubany. **Feb. 13, 1954**: Mawson. **Jan. 18, 1955**: Belgrano. **1955**: Base N (Arthur Harbour Station). **March 11, 1955**: Base Y (Horseshoe Island Station). **1955**: Aguirre Cerda. **Jan. 15, 1956**: Base Z (Halley Bay Station). **Jan. 1956**: McMurdo. **Feb. 13, 1956**: Mirnyy. **Feb. 21, 1956**: Base W (Detaille Island Station). **May 27, 1956**: Pionerskaya. **1956**: Little America V. **1956**: Charcot. **1956**: Dumont d'Urville. **Oct. 1956**: Oazis (from 1959 known as Dobrowolski). **1956**: Base O (Danco Coast Station). **Jan. 13, 1957**: Davis. **Jan. 20, 1957**: Scott Base. **Jan. 23, 1957**: South Pole Station. **Jan. 1957**: Ellsworth. **Feb. 12, 1957**: Hallett. **Feb. 14, 1957**: Showa. **Feb. 16, 1957**: Wilkes. **April 12, 1957**: Vostok. **1957**: Byrd, Roi Baudouin, Base J (Prospect Point Station), Norway Station, and Komsomolskaya. **Dec. 16, 1957**: Vostok II. **Feb. 16, 1958**: Sovietskaya. **March 10, 1959**: Lazarev. **Dec. 1960**: Byrd II (New Byrd) (later called Byrd Surface Station). **Feb. 3, 1961**: Station T (Adelaide Station). **Feb. 18, 1961**: Novolazarevskaya. **March 15, 1961**: Matienzo. **1961**: Base K (Fossil Bluff Station). **Jan. 14, 1963**: Molodezhnaya. **Jan. 1963**: Sanae. **Feb. 25, 1965**: Palmer. **April 2, 1965**: Sobral. **Dec. 1965**: Plateau. **Feb. 22, 1968**: Bellingshausen. **1968-69**: Vanda. **Feb. 19, 1969**: Casey. **1969**: Frei. **Oct. 29, 1969**: Marambio. **Nov. 1969**: Siple. **July 1970**: Mizuho. **Feb. 25, 1971**: Leningradskaya. **1971-72 summer**: Sodruzhestvo. **Early 1973**: Russkaya. **Dec. 27, 1974**: Dome C. **Oct. 25, 1975**: Rothera. **Feb. 26, 1977**: Arctowski. **March 8, 1977**: Primavera. **Feb. 5, 1979**: Belgrano II. **Jan. 30, 1980**: Belgrano III. **March 9, 1980**: Russkaya. **1980**: Marsh, González Videla II. **March 1981**: Georg von Neumayer. **1981**: Chiloé. **1982**: Soyuz. **1982**: Filchner. **Jan. 1983**: Gondwana. **1983**: Grunehogna. **1983**: Dakshin Gangotri. **1984**: Ferraz. **Dec. 1984**: Asuka. **Dec. 22, 1984**: Artigas. **Jan. 1985**: Teniente Carvajal. **Feb. 20, 1985**: Great Wall. **Jan. 14, 1986**: Edgeworth David. **1986**: Progress (Russia). **Dec. 1986**: Baia Terra Nova (from 2004 known as Mario Zucchelli). **Jan. 18, 1987**: Druzhnaya IV. **1987**: Georg Forster. **1987**: Greenpeace. **Jan. 1988**: Juan Carlos, Svea. **Feb. 17, 1988**: King Sejong. **April 1, 1988**: Progress II. **April 26-29, 1988**: Ohridski. **1988**: Druzhnaya III. **1989**: Wasa. **1989**: Aboa. **Feb. 26, 1989**: Zhongshan. **1989**: Machu Picchu. **1989**: Maitri. **1990**: Gabriel de Castilla. **Feb. 1990**: Troll. **March 2, 1990**: Vicente. **1991**: Jinnah. **Feb. 1993**: Tor. **1994**: Escudero. **Feb. 1995**: Dome Fuji. **July 29, 1996**: General Ramón Cañas Montalva. **1996**: Vernadsky. **Jan. 1997**: Concordia. **Dec. 8, 1997**: Teniente Ruperto Elichiribehety. **Dec. 6, 1999**: Arturo Parodi. **March 11, 2001**: Kohnen. **Jan. 13, 2006**: Law-Racovitza. **Feb. 2006**: Mendel. **End of 2007**: Princess Elisabeth. **2009-10**: Bharti.

Scientists. The first scientist to work in Antarctica was W.H.B. Webster, in 1829. He arrived that year at Deception Island, in the South Shetlands, aboard the *Chanticleer*, to study plants and animals, and to conduct ice experiments. He left a couple of self-recording thermometers behind him. James Eights was the first American scientist to go to Antarctica, on the Palmer-Pendleton Expedition of 1829-31. Over the next 120 years every major expeditin took down its share of scientists, and since IGY (1957-58) most of the people who go are scientists and support personnel (actually, though, tourists outnumber everyone else).

Scoble Glacier. 67°23' S, 60°27' E. A glacier, 6 km (the Australians say 9 km) W of Campbell Head, Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Breoddane (i.e., "the glacier points"). Renamed by ANCA on Nov. 28, 1955, for Charles H. "Charlie" Scoble, diesel engineer who drowned at Macquarie Island (not in Antarctica). On July 4, 1948 he was crossing the ice on what would later be named Scoble Lake, and fell in. His body was found next spring, and the Australian government, in a fit of generosity not uncommon, gave £1100 to his widow, provided she made no further claim. US-ACAN accepted the name in 1965.

Score Ridge. 79°39' S, 155°53' E. A rock ridge about 4 km NW of Lindstrom Ridge, in the north-central part of the Meteorite Hills, in the Darwin Mountains. Named by US-ACAN in 2001, for Roberta Score, manager of NASA's Antarctic Meteorite Laboratory, at the Johnson Space Center, in Houston, 1978-96. She was a member of the ANSMET meteorite search teams in several areas of the Transantarctic Mountains, in 1984-85 and 1988-89, and was supervisor at the Crary Science and Engineering Center, at McMurdo, from 1996 to 2001.

Scorefjell *see* **Skorefjell**

Cape Scoresby. 66°34' S, 162°45' E. A high bluff marking the N end of Borrodaile Island, in the Balleny Islands. Charted by the personnel on the *Discovery II* in 1936-38, and named by them for the *William Scoresby*, their sister ship. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ gazetteer.

Scoresby Bay *see* **William Scoresby Bay**

Scorpio Peaks. 70°31' S, 67°26' W. A conspicuous massif, rising to about 750 m, with 2 high conical peaks dominating its W end, and with a ridge of lower peaks extending eastward, it separates Meiklejohn Glacier from Millett Glacier on the W edge of Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the constellation Scorpio. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Le Scorpion *see under* **L**

The *Scotia*. A very strong 275-ton barque-rigged auxiliary screw steamer, 140 feet long, and 29 feet broad, purchased by William S. Bruce in Norway for his ScotNAE 1902-04. Originally the whaler *Hecla*, she was built of oak, elm, pitch pine, and greenheart, had sides 2 feet thick, and had seen much Arctic service. Bruce brought the ship to the Clyde, where she was re-named, and completely overhauled by Ailsa Shipbuilding

Company, under the able guidance of eminent naval architect, G.L. Watson. On Oct. 18, 1902 she had a successful trial in the Clyde, indicating that she could do 8 knots top speed, and cruise at 6. Capt. Thomas Robertson skippered her down south for the expedition, and Bruce froze her in the ice at Laurie Island for the winter of 1903, which, although it was done deliberately, had not been his original intention. In 1905 she was sold for £5019 and 9d, to a Dundee whaling consortium, but with Robertson still skipper. In 1913 she was in Labrador on ice patrol, and in 1916 was wrecked on the Sully Islands, off South Wales.

Bahía Scotia *see* **Scotia Bay**

Scotia Arc *see* **Scotia Ridge**

Scotia Bank. 74°00' S, 22°30' W. An undersea feature in the Weddell Sea, with a least depth of about 300 m, located at about the most southerly point reached by the *Scotia*, in March 1904, during ScotNAE 1902-04. The name was proposed by Heinrich Hinze in Jan. 1997, and accepted by international agreement in June 1997.

Scotia Bay. 60°46' S, 44°40' W. A bay, 4 km wide, between Cape Murdoch and Point Rae, and bounded to the W by Mossman Peninsula, on the S side of Laurie Island, in the South Orkneys. Discovered and roughly charted in Dec. 1821 by Powell and Palmer. Further charted by Weddell in 1822. Surveyed on March 26, 1903, by ScotNAE 1902-04, and named in 1904 by Bruce for his ship, the *Scotia*. Their base, Omond House, was at the head of the bay (it was later Órcadas Station). It appears on Sørlle's chart of 1912 as Scottish Bay (and on his 1930 chart as Scottish Bukt). It was recharted by the Discovery Investigations in 1933 and 1937. US-ACAN accepted the name Scotia Bay in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The Argentines have been calling it Bahía Scotia since it was named, and that was the name accepted by the 1970 Argentine gazetteer, although it appears by error on a 1958 Argentine chart as Bahía Buchan (*see* **Buchan Bay**).

Scotia Ridge. Also called Scotia Arc, South Andillean Arc, South Atlantic Arc, South Sandwich Arc. An undersea ridge that runs between the Weddell Sea and South Georgia (54°S). Although it centered on 57°S, 27' W, part of it did extend south above 60°S. The past tense is used here, because in 1987, by international agreement, it was decided that, for clarity, the ridge should be split up into the North Scotia Ridge (which falls outside the interest area of this book) and the South Scotia Ridge (q.v).

Scotia Sea. Although this sea centers on 57°30' S, 40° 00' W, part of it does extend farther south than 60°S. It is bounded by South Georgia, the South Sandwich Islands, and Shag Rocks. Named about 1932 for the *Scotia*. *See also* **Drake Passage**.

Scotland. If Scotland were to regain its status as an independent country, and if it were to press a claim to a wedge of Antarctic territory, it might have good grounds, as good as any other country, and perhaps better than any. Captain Cook, the first navigator into Antarctic waters, was the son of a refugee Jacobite, and James Weddell and Matt Brisbane, two of the early sealers in at the South Shetlands, were also Scotsmen. The *Adeona* was a sealing ship out of Greenock. Several Scotsmen went to Antarctica in American sealing vessels in the 19th century, and the Dundee Whaling Expedition of 1892-92, and ScotNAE 1902-04 were both exclusively Scottish. Colin Archer, the great Norwegian shipbuilder who built the *Southern Cross* (1898-1900) and the *Fram* (1910-12) was actually a Scotsman. Salvesen's, the great whaling company, was out of Leith, in Edinburgh. As in every field of endeavor, Scotsmen tend to succeed out of all proportion to their numbers.

Scotland, Cecil Dagwell. b. 1928, Belfast. He joined FIDS in 1955, as a meteorologist, and wintered-over at Base Y in 1956, and was leader of Signy Island Station in 1957. On his return to the UK, he moved back to Belfast, and later in the 1960s to Bangor, also in Northern Ireland, where he died in 1997.

Scotland Edge. 67°32' S, 68°12' W. A gap between the W end of Stork Ridge and the N edge of Reptile Rock, on Adelaide Island. In the center of the gap is a small rock outcrop, Jim Buttress, rising to about 300 m. Named by UK-APC on June 26, 2001, for Baroness Patricia Janet Scotland of Asthall (b. 1955, Dominica; created a life peer in 1997; married name Mawhinney), the first black woman QC, and privy councillor from 2001. The reason she has this feature named after her is that in 1999 she was appointed parliamentary under secretary of state at the Foreign and Commonwealth Office, with responsibility for British Overseas Territories. From 2007 to 2010 she was Gordon Brown's attorney general, the first woman ever to hold this office.

ScotNAE *see* **Scottish National Antarctic Expedition**

[1]**The *Scott***. Chilean whale catcher, built in Norway, for the Corral Company (*see* **Sociedad Ballenera Corral**), and which caught for the *Tioga* in Antarctic waters in 1911-12 and 1912-13.

[2]**The *Scott***. A 105-foot long, radio-equipped Norwegian whale catcher, built in 1925 for Johann Rasmussen's Southern Whaling Company, and working for the *Svend Foyn I*. She had a 20-foot beam, and was powered by a 500 hp engine, capable of 12 to 15 knots. At 2 A.M., on March 31, 1926, she left Deception Island in a storm, looking for whales. On April 1 she got stranded, and radioed to the mother ship. The *Svend Foyn I*'s other catcher, the *Alex Lange*, went to her rescue, and she was re-floated, and helped to Deception Island, where she was repaired. No lives were lost. In 1936 she was sold and became the *Haug II*.

Bahía Scott *see* **Scar Inlet**

Cape Scott. 71°07' S, 168°05' E. About 10 km SE of Cape Oakeley, with an ice tongue extending about 24 km northward, at the W side of the terminus of Dennistoun Glacier, on the N coast of Victoria Land. Discovered by Ross in 1841, and named by him for Peter Astle Scott. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Macizo Scott *see* [1]**Mount Scott**

Massif Scott *see* [1]**Mount Scott**

Monte Scott *see* [1]**Mount Scott**

[1]**Mount Scott**. 65°09' S, 64°03' W. Also called Scott Massif. It is, indeed, a horseshoe-shaped massif, rising to 882 m, and open to the SW (the Chileans say the SE), with its convex side fronting on Girard Bay, and its NW side fronting on Lemaire Channel, on the E side of Penola Strait, on the Graham Coast, on the W coast of Graham Land. Discovered (but not named) by BelgAE 1897-99. Roughly mapped by FrAE 1908-10, and named by Charcot as Massif Scott, for Robert F. Scott. It appears as Mount Scott on British charts of 1930 amd 1948, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1946 Argentine chart as Macizo Scott (i.e., "Scott massif"), but on a 1949 Argentine chart as Monte Scott, that latter name being the one accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. It was photographed aerially by FIDASE in 1956-57, and by a FIDS team during the 1958 RN hydrographic survey of the area.

[2]**Mount Scott** *see* **Mount Robert Scott**

Scott, Donald Jay "Scotty." b. Aug. 22, 1935, Syracuse, NY, son of welder Donald Jay Scott and his wife Gertrude Posenauer. His mother married again, to Adolph Cziesler. He joined the Navy in 1954, and went to Naval Construction School in Port Hueneme, Calif., to become a Seabee. Then to Greenland, then in March-April he was in Davisville, RI, as a utilitiesman 3rd class, when he saw the call for Navy volunteers for Antarctica. In Oct. 1955 he married Nancy Merriam, in NY, and a few weeks later shipped south on *YOG-34* (q.v. for itinerary). He and Chief Wise did the first building of the first hut at Hut Point. He wintered-over at McMurdo then, on Nov. 25, 1956, was flown to the Pole as one of the 10 who made up the 2nd party to go in to build South Pole Station (q.v.). He was the second man named Scott to stand at the South Pole. On Dec. 24, 1956 he and Al Hisey were among the first group to leave the Pole, and actually flew to Little America V for Christmas Day, then on to McMurdo, then on Feb. 10, 1957 he shipped out on the *Curtiss* (q.v. for itinerary). He left the Navy in May 1958, and worked as a welder, then as a millwright. In 1983 he married Earlyne Hastings, and retired in 1990, in NY.

Scott, Edith Nan. Known as Nan. b. March 23, 1943, Clinton, Okla., daughter of Howard Milton Scott and his wife Lena Corinne. She became a microbiologist, was Dr. Harold Muchmore's lab technician, and had been to Antarctica several times with him when, in Nov. 1973, she and Donna Muchmore (Dr. Muchmore's wife, who was replacing the assistant lab tech) became the first women ever to work at the South Pole. She went every summer to Pole Station, except

1977-78, to collect blood samples from the wintering-over personnel. She gained her PhD at the University of Oklahoma, and was associate professor of research medicine there.

Scott, Gilbert. b. Feb. 6, 1878, Hanging Langford, Wilts, but raised in Upton Scudamore, and Stapleford, near Salisbury, son of shepherd Jesse Scott and his wife Edna Jane Spencer. He joined the Royal Marine Light Infantry as a private on Nov. 7, 1896, and was still that rank, and based at the Marine barracks at Alverstoke, Hants, when he volunteered and was was taken on the *Discovery* at Cape Town as a wardroom domestic (steward) for BNAE 1901-04. He wrote a diary during the expedition. After the expedition, he returned, a corporal, to Alverstoke, and remained there for years, being promoted to sergeant. He served in World War I, but was killed on May 6, 1915, in the Dardanelles, while serving with the Portsmouth Battalion of the Marines.

Scott, John G. Captain of the Boston sealing brig *Emerald*, 1820-21.

Scott, Nan *see* **Scott, Edith Nan**

Scott, Peter Astle. b. Feb. 25, 1816, Gillingham, Kent, son of Royal Navy purser James Scott. He joined the Royal Navy on Feb. 14, 1829, was promoted to mate on Sept. 1, 1835, and served on the *Terror* during the Ross Expedition 1839-43. On Oct. 4, 1843, he was promoted to lieutenant, served on the *Columbia*, surveying the Atlantic coast of Canada between 1846 and 1866. On March 18, 1847, he married Maria Archibald Hobbs, in Eastport, Maine. On Jan. 1, 1862, he was promoted to commander, and on Sept. 4, 1866, after being skipper of the *Duncan* in the Bay of Fundy, retired as a captain. He went to work for the Canadian department of marine and fisheries, was naval adviser to the Canadian government, 1869-89, and in 1881 was captain of the Canadian government ship *Charybdis*. He died at Shooters Hill, London, on March 31, 1900.

Scott, Peter Markham. b. Sept. 14, 1909, London, son of Robert F. Scott (i.e., Scott of the Antarctic). He went to Antarctica several times, notably in 1966, and again in Feb. 1968, when he was tour leader on the *Navarino*. He was the first person to be knighted for his services to conservation. He died on Aug. 30, 1989.

Scott, Robert Falcon "Con." b. June 6, 1868, Devonport, son of brewer John Edward Scott and his wife Hannah Cuming. Scott was a career Navy man, joining the training ship *Britannia* in 1881. He served as a midshipman on various ships between 1883 and 1887, was promoted to lieutenant, and spent 4 years in tall ships. In 1898-99 he was torpedo lieutenant on the *Majestic*, under Capt. Egerton, a man with Arctic experience, who recommended Scott for the planned BNAE 1901-04. Scott was seemingly picked out of the blue by Sir Clemens Markham, president of the Royal Geographical Society, to lead this new Antarctic expedition, and would become (for 100 years anyway, until superseded by Shackleton) the most legendary (if not necessarily the greatest) of all the Antarctic explorers. He was (notwithstanding Carsten Borchgrevink) the first real explorer in Antarctica, as opposed to navigators or discoverers, or sealers or whalers, or adventurers, and pioneered the use of sledges and dogs on the continent. On June 30, 1901 he was promoted to commander, and transferred to the *Discovery* as her skipper, leaving England on Aug. 5, 1901. The epitome of heroism, he and two companions trekked to 82°16' 33" S, a new southing record, in late 1902, and barely made it back to base alive. He preferred manhauling sledges to having dogs pull them, and exhibited the most astonishing endurance and will power, as he did on BAE 1910-13, his second expedition. In between expeditions, he was promoted to captain in 1904, served on various ships, wrote the first expedition's narrative, and in 1908, while serving as a staff officer at the Admiralty, he married sculptress Edith Agnes Kathleen Bruce (known as Kathleen), sister of Wilfred Bruce (q.v.). He went south again, as leader of BAE 1910-13, and was the second leader to stand at the South Pole, on Jan. 17, 1912, a month after Amundsen. An excellent writer and diary-keeper, he kept it up to the end, dying with his four companions on his return from the Pole. His, Wilson's, and Bowers' bodies were discovered 8 months later, along with Scott's diary. The last entry reads: "Every day we have been ready to start for our depot, *11 miles* away, but outside the door of the tent it remains a scene of whirling drift … we shall stick it out to the end, but we are getting weaker, of course, and the end cannot be far. It seems a pity, but I do not think I can write more." Also discovered and brought back to London was his last letter to his wife, written at stages during the trip back, the last part not long before the famous final diary entry. This letter was not made public by his descendants until Jan. 11, 2007, which seems very odd, and (at the time of writing this book) slightly suspicious. Putting cynicism aside, the letter (addressed by Scott to his widow) says, in part: "We are in a very tight corner and I have doubts of pulling through"; "I shall not have suffered any pain, but leave the world fresh from harness"; "[we are] in splendid physical condition"; "we have gone down hill a good deal since I wrote the above. Poor Titus has gone"; he exhorts Kathleen to marry again (she did, in 1922, to Lt. Cdr. Edward Hilton Young, later Lord Kennett); he refers many times to "the boy" (meaning young Peter). The last bit says, in part, "We have decided not to kill ourselves but to fight it to the last for that depot, but in the fighting there is a painless end" [he has just told her that they are 11 miles from the depot]. Scott was never knighted, not even posthumously, but his wife was later made Lady Scott in her own right (she died on July 25, 1947). Those are some of the bare facts surrounding Scott, but what about the theories? Was he a bungling fool, or was he a hero? Was he an immature martinet who led his men to certain death, or was he a man who knew what he wanted and expected others to keep up with him? Did he really run out of steam in the blizzard (and, if so, did all three men run out of steam together?), or did he decide he could not face life, and talk the others into dying with him in the tent? Was he a weak, vacillating glory-seeker, or was he an old fashioned hero who faced problems when he came to them? These questions and more are being asked with greater and greater frequency, it seems, as time goes by. This author believes this of Scott: Whatever his faults he was one of the greatest of the Antarctic explorers, and a true hero who shall be remembered that way in an age now when heroes are hard to find. He had the qualities that we all wish we had, and maybe some of us do, and those who knock him probably know they don't have — guts, determination, physical and mental strength, romanticism, theatricalism, an overriding sense of competition and fear of failure, a devil-may-care attitude about hardship, a sense of glory, and a great awareness of the Grand Gesture.

Scott, Roger George. b. March 8, 1917, Scotts Bluff, Nebr., son of George Washington Scott and his wife Libby Long. Roger's father was a laborer in a sugar company, but worked his way through the ranks, in the 1920s taking the family to Delta, Colo., where he got a job as a sugar foreman. The family later moved to Sacramento, Calif. Roger joined the U.S. Navy, and, on Sept. 23, 1939, he boarded the *San Jacinto* in San Juan, Puerto Rico, along with Eddie Bradshaw and Walter Szeeley, and four days later was in New York, bound for the Navy Yard in Boston, where all three of them were to take up posts as seamen 1st class on the *Bear*, for USAS 1939-41. For the 2nd half of the expedition he was promoted to yeoman 2nd class. He died on July 24, 1962, in Alameda, Calif.

Scott, Thomas *see* **USEE 1838-42**

Scott Base. 77°50' S, 166°45' E. NZ's only active year-round station. At Pram Point at the end of Hut Point Peninsula, on Ross Island, about 2 miles E of McMurdo Station. **1955**: NZ surveyors, including geophysicist Trevor Hatherton, went with OpDF I to plan the base as the Ross Island station for BCTAE 1955-58 (NZ's involvement in that expedition being 1957-58). Ed Hillary and Bob Miller selected the site. Arthur S. Helm (*see* **Helm Glacier**) chose the name. **Jan. 1956**: A 3-man NZ reconnaissance party led by Hatherton, found a suitable site at the foot of Ferrar Glacier, at Butter Point, across McMurdo Sound from McMurdo Station. Then they chose Pram Point instead, as a better site. **1956**: Ed Hillary and his BCTAE depot-laying group built the base (to the design of William Frank Ponder), with help from Admiral Dufek of OpDF. **Jan. 20, 1957**: The base was opened officially. Hillary was its first leader, and Trevor Hatherton was scientific leader. It also served NZ during IGY. Its original life-span was only going to be a couple of years. The 1956-57 IGY summer party was: Arnold J. Heine (technical officer), Lin H. Martin (professional engineer), and J.H. Hoffman (explosives expert). **1957 winter**: Ed Hillary (technically he was base leader, although he was hardly ever there), Trevor Hatherton (scientific leader), Harry Ayres, Ron Balham, Jim Bates, Richard Brooke, Ernest Buck-

nell, Roy Carlyon, John Claydon, Bill Cranfield, Murray Ellis, Ted Gawn, Vern Gerard, Bernie Gunn, Peter Macdonald, George Marsh, Bob Miller, Peter Mulgrew, Herb Orr, Neil Sandford, Wally Tarr, Guyon Warren. **1957-58 summer**: The IGY party was A.F. Davidson (technical officer) and J.H. Hoffman (explosives expert). **1958 winter**: 11 men. Lin Martin (leader), Don C. Thompson (senior scientist), Lt. Franco Faggioni (Italian scientist), Bob H. Henderson and A.L. "Buzz" Burrows (technicians), Les O. Duff (mechanic), M. Graeme Midwinter (scientist), Peter A. Yeates (radio officer), I. Mike Gibson (radio technician), Murray Robb (diesel engineer), and Maurice J.H. Speary (cook). **1959 winter**: 13 men. Leonard Rodney "Rod" Hewitt (leader), Brian Sandford (senior scientist), Frans van Der Hoeven, Al W. Stuart, and Paul T. Heiser (USARP scientists), Arnold J. Heine (stores, NZGSAE), Ronald V. "Ron" Pemberton (radio technician), Peter Phillips (radio operator), Mervyn F. Rodgers (technician), Graham F.G. Ward (senior maintenance officer), Leonard J. Sales (maintenance officer), Kenneth C. "Ken" Wise (NZGSAE field assistant), and Eric S. Wedgewood (cook). **Nov. 19, 1959**: Lt. Tom Couzens died in a crevasse. **1959-60**: It was decided to keep Scott on as a permanent scientific station, and additions began to be made. **1960 winter**: 14 men. Lt. Cdr. James Lennox-King (leader), Frank A. McNeil (senior scientist), Garth J. Matterson and Peter J. Hunt (surveyors), Colin A. Bailey and Robert J. Buckley (maintenance officers), Robert G. Collins (carpenter), Don W. Webster (science technician), Dudley W. Holmes, Colin A. Jenness, and Jack G. Taylor (technicians), Graeme N. Johnstone (mechanic), Peter A. Yeates (radio officer), and John A. Warren (cook). **1960-61 summer**: Capt. L.D. Bridge was officer-in-charge, and was scheduled to be for the upcoming winter, but had to return to NZ for personal reasons. **1961 winter**: 13 men. V.E. "Mick" Donnelly (leader), Robert A. "Bob" Clements (senior scientist), Rory Shanahan (scientist), William H. "Bill" Deverall (radio oficer), Robert S. "Bob" Cranfield, Peter C.S. Graham, and Uwe J. Sobiecki (technicians), W. Raymond "Ray" Logie (senior maintenenace officer), Bernard A.M. Foley (naintenance officer), William R. "Bill" Hare (mechanic), Wally Herbert (NZGSAE field assistant), Peter M. Otway (NZGSAE surveyor), and Kenneth L. "Ken" Fairclough (cook). **1962 winter**: 13 men. Athol Renouf Roberts (leader), Ian R. Richards (senior scientist), Ronald W. Hewson (NZGSAE surveyor), Howard D. O'Kane (photographer), Graham B. McKenty (carpenter), John D. Mills (senior maintenance officer), William F. "Bill" Timms (electrician), Eric Vickers (radio operator), Alexander G. French, Anthony C. Langston, and Grant A. Williams (technicians), Kevin P. Pain (NZGSAE field assistant), and Caleb F. Beech (cook). **1963 winter**: 14 men. Lt. Col. Ronald Arthur "Ron" Tinker (leader), A. George Lewis (senior scientist), Ian D. Cave (scientific officer), Malcolm R.J. Ford (NZGSAE surveyor), Murray S.R. Smith (biologist), Quentin F. McLea (radio officer), Barry M.T. Waters (carpenter), Don W. Webster and Trevor J. Ancell (technicians), William J. "Bill" Doull (electrician), Leonard H. Louden (mechanic), James D. Graveson (field assistant and driller), Maurice J. Sheehan (field assistant), and Les Wells (cook). **1964 winter**: 13 men. Russel Endean Rawle (leader), A. George Lewis (senior scientist), Duncan R. Miller (scientific officer), William R. "Bill" Lucy (surveyor and handyman), J. Edward "Ted" Gawn (radio operator), Gerald K. Graham (carpenter), John D.C. Fabian (fitter mechanic), Brian M. Judd (fitter electrician), John D. Mills (engineer), Thomas Hetherington and Hereward A. Horsfield (technicians), David R. "Dave" Massam (handyman and field assistant), and Bryan D. George (cook). **1965 winter**: 14 men. Adrian Goodenough Hayter (leader), A.L. "Buzz" Burrows (senior scientist), J. Edward Gawn (radio operator), Brian M. Judd (engineer), Brian B. Dorrington (electrician), George Jones, Trevor E. Sanson, Jack Calvert, and D.L. "Yogi" Foster-Lynam (technicians), Charles E. "Charlie" Hough (mechanic), Robert C. "Bob" Wright (storeman), David R.C. "Dave" Lowe and Ivan B. McDonald (field assistants), and D. John Haycock (cook). **1966 winter**: Michael Maynard Prebble (leader), Andrew Porter (senior scientist), Gerard Ternahan (radio operator), Norman W. Dewson (engineer), Raynor P. Greeks (carpenter), Ian P. Johnson (senior technician), David M. Randell and Ray Vickers (technicians), Allan G. Junge (electrician), Terance O. McGeough (mechanic), Roger O. Bartlett (field assistant), and Alvin C. Davidson (cook). **1967 winter**: 12 men. Colin Maxwell Clark (leader), Peter C. Whiteford (scientific officer), Gordon B. Dawson (senior technical officer), Norman C. "Norm" White (radio operator), Warwick N. Earl and Robert H. "Bob" Murdock (technicians), Robert G. "Bob" Rae (assistant maintenance officer), Christopher M. "Chris" Rickards (electrician), Robert J. "Bob" Sopp (diesel mechanic), Robin Kidd (vehicle mechanic), Warwick R. Orchiston (field assistant and dog handler), and Bryan D. George (cook). **1968 winter**: 11 men. William James "Bill" Webb (leader), Ian P. Johnson (senior science technician), George R. Edlin (postmaster), Warwick R. Fergusson, David R. "Dave" Henderson, and John S. Talbot (technicians), Russell E. Houliston (electrician), Alan J. Magee (diesel mechanic), Carey Irwin (vehicle mechanic), Grahame R. Champness (field assistant and dog handler), and Ian W. Wratt (cook). **1969 winter**: 11 men. Robin Foubister (leader), Peter Lennard (senior technical officer), Brian Hool (postmaster), David Blackburn (Post Office radio technician), Allan Guard (engineer), Nigel Millar and Keith Mandeno (technicians), Wayne Maguiness (mechanic), Christopher M. "Chris" Rickards (electrician), Noel Wilson (field assistant and dog handler), and Glen Francis Gill (cook). **1970 winter**: 11 men. Robert Bruce Willis (known as Bruce) (leader), Peter Graham (senior technician), Peter Hide and Peter Kerr (technicians), Peter Wigg (fitter electrician), Roger Lusby (fitter mechanic), Howard Marriott (engineer), Ian Wilton (Post Office radio technician), Bob Handcock (postmaster), Chris Knott (field assistant), and Russell Powick (chef). **1971 winter**: 12 men. Brian Porter (leader), Ron Nimmo (senior technical officer), Jim Rankin (engineer), Paul Christiensen (A.M.O.), Stuart Miller (mechanic), Murray Dawson and David Clough (technicians), Alec McFerran (electrician), Jim Windsor (radio technician), Graham Crooks (postmaster), Mac Riding (field assistant and dog handler), and Frank Bond (cook). **1972 winter**: James Richard Milton "Jim" Barker (leader), John Elder (scientific officer), Malcolm MacDonald (engineer), Roger Parkinson (A.M.O. and mechanic), John Maine and Kevin Weatherall (technicians), David Clark (electrician), Kevin Matson (radio technician), Allan Burgess (postmaster), Dick McBride (P.R.O. and field assistant), and Peter McNeill (chef). **1973 winter**: 11 men. Peter Gersham Frazer (leader), Phil Owens (senior technician), Allan Dawrant (Post Office radio technician), John Williams and Philip Scothern (technicians), John Housiaux (engineer), Wayne Reeves (electrician), George Turner (mechanic), Neville Copeland (postmaster), John Bitters (A.M.O. and dog handler), and John Halewood (chef). **1974 winter**: Harold Everard Wilfred "Harry" Jones (leader), Titch Gibson (postmaster), Les Walker (Post Office radio technician), Bill Johnston (base engineer), Tony Atkinson (senior technical officer), Garth Cowan and Stuart Clarke (technicians), Chris Wilkins (electrician), Bob Grant (mechanic), Mike Wing (field assistant and dog handler), and Ray Colliver (cook). **1975 winter**: James Arthur "Jim" Newman (b. 1933) (leader), Alan Campbell (postmaster), Allan Hardie (Post Office radio technician), Garry McCullough (base engineer), Dave Hope, Craig Nickerson, and Peter Jemmett (technicians), Bob Kitchener (electrician), Robert Livingstone (mechanic), John Stevens (assistant maintenance officer and dog handler), and Ken Parker (cook). **1976**: Major renovations began to be effected. **1976 winter**: Hamish Durward Raynham (leader), Barry Scannell (postmaster), Allan Dawrant (Post Office radio technician), Ted Ramsbotham (base engineer), Roger Jones (senior technician), Clint Davis and Chris Mills (technicians), John Thomson (fitter mechanic), Grant Eames (assistant maintenance officer and mechanic), Mike Wing (field assistant and dog handler), and Ian MacLeod (cook). **1976-77 summer**: Kevin Arthur Tasker (leader). This was the first year that separate leaders would be appointed for summer and winter. **1977 winter**: James Sidney "Jim" Rankin (team leader and base engineer), Ian Johnstone (postmaster), George Money (Post Office radio technician), Kevin Weatherall (senior technical officer), Rod Fearn and Ian Minchington (technicians), Ian Booker (fitter mechanic), Howard Richards (fitter electrician), Richard Wills (field assistant and dog handler), and Roel Keizer (chef). **1977-78 summer**: Robert Samuel Straight (leader).

1978 winter: John Ridgeway Lythgoe (officer-in-charge), Randy Waller (postmaster), Paul Dennison (Post Office radio technician), John Thomson (base engineer), Warwick Williams (senior technical officer), Dean Drake and Will Kimber (technicians), Barry Hiscock (fitter mechanic), Mike Lord (fitter electrician), Steve Chambers (assistant maintenance officer and dog handler), and Russell Arnott (chef). **1979 winter**: John Raynor Presland (officer-in-charge), Ted Robinson (deputy leader), Thelma Rodgers (scientific officer; she was the first NZ woman to winter-over in Antarctica), Maurice Challinor (postmaster), Allister Babbington (Post Office radio technician), Tom Stephenson (base engineer), Alan Burt and Ray Vincent (technicians), Bob Geddes (fitter mechanic), Chris Cunningham (fitter electrician), Graeme Abernathy (assistant maintenance officer), Pete Cleary (field assistant and dog handler), and Brent Trevathan (chef). **1979-80 summer**: Michael Maynard Prebble (officer-in-charge). **1980 winter**: Charles Ashley "Cas" Roper (officer-in-charge and senior technical officer), Dave Rees (deputy leader and assistant maintenance officer), Leo Slattery (postmaster), Andy Hayden (Post Office radio technician), Norm Hills (base engineer), Roger Phillips (technician), Brian Hagan (mechanic), Rex Hendry (electrician), Doug Keown (storekeeper), Con Faber (field assistant and dog handler), and Warwick Bull (chef). **1980-81 summer**: Roger Joseph Clark (officer-in-charge). **Early 1980s**: The base had tripled in size. **1981 winter**: John Bamford Simms (officer-in-charge and base engineer), Tom Earl (deputy leader and senior technical officer), Don McKnight (scientific officer), Ian Johnstone (postmaster), Robin Hodgson (Post Office radio technician), Stan Whitfield (technician), Bruce Scott (mechanic), John Mackey (electrician), Allan Taylor (field assistant and dog handler), and Allan Remnant (chef). **1981-82 summer**: Anthony Edward Newton (officer-in-charge). **1982 winter**: Leo Bernard Slattery (officer-in-charge and postmaster), Keith Martin (deputy leader and base engineer), Allister Babbington (Post Office radio technician), Chris Choros (senior technical officer), Ross Mason and Peter Wheeler (technicians), Peter Nelson (mechanic), Rick Walshe (electrician), Gary Bowcock (field assistant and dog handler), and Graeme Morgan (chef). **1982-83 summer**: John Martin Thurston (officer-in-charge), Graeme Woodhead (deputy leader). **1983 winter**: Graham Charles Woodhead (officer-in-charge), Rex Johnson (deputy leader and Post Office radio technician), Steve Johnson (postmaster), Andrew Harrall and Doug Martin (scientists), Lew Pemberton (base engineer), Gerry Brown (technician), Kerry Kirkness (mechanic), Norm Wear (electrician), Bill Eaton (field assistant and dog handler), and Chris Kelly (cook). **1983-84 summer**: Norman David Hardie (officer-in-charge). **1984 winter**: Eric John Saxby (officer-in-charge), Ian Sayers (deputy leader and postmster), Murray Kennett (Post Office technician), Rod Vardy (base engineer), Ralph Holwerda (senior technician), Chris Fry and Jeremy Ireland (technicians), Brian Hobern (electrician), John Hoffman (mechanic), Al Roy (field assistant and dog handler), and Ian McDonald (chef). **1984-85 summer**: Peter Lewis Cresswell (officer-in-charge). **1985 winter**: Leo Bernard Slattery (officer-in-charge and postmaster), Keith Graham (Post Office technician), Dennis Shaw (base engineer), Tony Grant (senior technician), Brian Lawson and Peter Turner (technicians), Jack Walton (carpenter), Owen Taylor (electrician), Peter Nelson (mechanic), Kevin Conaghan (field assistant and dog handler), and George Moir (chef). **1985-86 summer**: Peter Lewis Cresswell (officer-in-charge). **1986 winter**: James Sidney "Jim" Rankin (officer-in-charge). **1986-87 summer**: Stewart Guy (officer-in-charge). **1987 winter**: Keith Martin (officer-in-charge). **1987-88 summer**: Graeme Ayres (officer-in-charge). **1988 winter**: Malcolm MacFarlane (officer-in-charge). **1988-89 summer**: David Crerar (officer-in-charge). **1989 winter**: Nigel Miller (officer-in-charge). **1990 winter**: Alister Pringle (officer-in-charge). **1991 winter**: Ross McDonald (base manager and engineering manager). **1992 winter**: Kerry Patterson (base manager and chef). **1993 winter**: Roger Moffat (base manager and engineering manager). **1994 winter**: Grant Avery (winter manager and science technician). **1995 winter**: Warren Herrick (winter manager and base support officer). **1996 winter**: Ron Rogers (winter manager and engineering services manager). **1997 winter**: Mike Mahon (winter manager and senior science technician). **1998 winter**: Steve Franklin (winter manager and engineering manager). **1999 winter**: Kevin Rigarlsford (winter manager and engineering services manager). **2000 winter**: Johno Leitch (winter manager and engineering manager). **2001 winter**: Dave Brice (winter manager and field support officer). **2002 winter**: Luke Huddleton (winter manager and base engineer). **2003 winter**: Doug Bell (winter manager, electrician, and engineering services manager). **2004 winter**: Dan Mathers (winter manager and carpenter). **2005**: The two-story high Hillary Field Centre was commissioned, which added 1800 sq m to the floor space. **2005 winter**: Kevin Rigarlsford (winter manager). **2006 winter**: Vicki Addison (winter manager, domestic, and first aid officer). **2007 winter**: Glen Powell (winter manager and engineering manager). Today 85 people can summer and about 10 to 14 people in winter. Only 3 original huts remain — the IGY hut and 2 science huts. Nearby, and managed by personnel from Scott Base, are the Arrival Heights Laboratory, where atmospheric research is conducted, scientific huts at Cape Bird and Bratina Island, and several sites in the McMurdo Dry Valleys.

Scott Bay *see* **Scar Inlet**

Scott Bucht *see* **Scar Inlet**

Scott Canyon. 71°35' S, 179°00' E. Submarine feature of the Ross Sea. Named by international agreement, for Robert F. Scott.

Scott Coast. 76°30' S, 162°30' E. That portion of the coast of Victoria Land between Cape Washington in the N and Minna Bluff in the S, on the Ross Sea coast. Named by NZ-APC in 1961 for Robert F. Scott, who explored much of this coastline. US-ACAN accepted the name in 1964.

Scott Cone. 66°55' S, 163°15' E. A conical hill, rising to about 30 m, adjacent to Eliza Cone, and 3 km NNE of Cape McNab, on the S end of Buckle Island, in the Balleny Islands. Both features were named for the *Eliza Scott*, Balleny's ship. US-ACAN accepted the name in 1947.

[1]**Scott Glacier**. 66°30' S, 100°20' E. Over 38 km long and 11 km wide, it flows NNW to the coast of Queen Mary Land, between Cape Hoadley and Grace Rocks, behind the Shackleton Ice Shelf, in Wilkes Land. Discovered by the Western Base Party during AAE 1911-14, and named by Mawson for Robert F. Scott. They plotted it in 66°15' S, 100°05' E, but is has since been re-plotted. US-ACAN accepted the name in 1947.

[2]**Scott Glacier**. 85°45' S, 153°00' W. About 200 km long, it flows from the Polar Plateau in the vicinty of D'Angelo Bluff and Mount Howe, then between Nilsen Plateau and the mountains of the Watson Escarpment, and hits the Ross Ice Shelf just W of the Tapley Mountains, in the southernmost portion of ocean in the world. Discovered in Dec. 1929 by Gould's Geological Party during ByrdAE 1928-30, and named by Byrd as Thorne Glacier. It was later named Robert Scott Glacier, for the famous explorer, and then shortened to Scott Glacier, the name accepted by US-ACAN in 1966. The Russians still call it Robert Scott Glacier.

Scott Icefalls. 85°32' S, 170°15' E. Extensive icefalls near the head of Mill Glacier, between Otway Massif and the S part of the Dominion Range. Surveyed and named by the Southern Party of NZGSAE 1961-62, for Robert F. Scott. NZ-APC accepted the name, and US-ACAN followed suit in 1966. Originally plotted in 85°34' S, 170°00' E, the feature has since been replotted.

Scott Island. 67°24' S, 179°55' W. An island, 0.4 km long and 0.2 km wide, 39 m high, and covered with an ice-cap, about 500 km NE of Cape Adare (the NE extremity of Victoria Land). It looks like an elephant's head when viewed from the W. It was discovered on Dec. 25, 1902, by William Colbeck, on the *Morning*, and named by him as Markham Island, for Sir Clements Markham (*see* **Mount Markham**). However, Colbeck changed that to Scott Island, for Robert F. Scott, whose expedition (BNAE 1901-04) Colbeck was on his way to relieve. It was not seen again, and its existence was doubted, until Dec. 10, 1928, when Byrd resighted it from the *City of New York*, during ByrdAE 1928-30. It had always been obscured by the fog. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Scott Island Automatic Weather Station. 67°22' S, 179° 58' W. Two separate American AWSs on Scott Island, at an elevation of approximately 100 feet. The first one was established in 1961-62. The second one, at an elevation of 30

m, began operating on Dec. 25, 1987, stopped transmitting on March 23, 1999, and was removed.

Scott Island Bank *see* **Scott Seamounts**

Scott Islands *see* **Scott Island**

Cabo Scott Keltie *see* **Cape Scott Keltie, Keltie Head**

Cap Scott Keltie *see* **Keltie Head**

Cape Scott Keltie *see* **Keltie Head**

Kap Scott Keltie *see* **Keltie Head**

Scott Keltie Glacier. 71°33' S, 169°49' E. A very small glacier descending steeply to discharge into Robertson Bay about 3 km SE of Penelope Point, between that point and Egeberg Glacier, on the N coast of Victoria Land. First charted by BAE 1898-1900, and named by Borchgrevink for Sir John Scott Keltie (*see* **Cape Keltie**). US-ACAN accepted the name, and NZ-APC followed suit.

Scott Massif *see* **Mount Scott**

Scott Mountains. 67°30' S, 50°30' E. A large number of isolated peaks S of Amundsen Bay, which they overlook, in Enderby Land. Discovered on Jan. 13, 1930, by BANZARE, and named by Mawson as the Scott Range, for Robert F. Scott. Because of the isolation of the individual peaks within this group, the term "mountains" is preferred to "range," and the feature was redefined by ANCA on April 29, 1958. US-ACAN accepted the name in 1962.

Scott Nunataks. 77°14' S, 154°12' W. Also called Scott's Nunataks. Conspicuous twin elevations rising to about 520 m, and which form the N end of the Alexandra Mountains, on Edward VII Peninsula. Discovered in 1902 by BNAE 1901-04, but not named. Named in 1911 by Prestrud for Robert F. Scott. Prestrud led the Eastern Sledge Party up these nunataks in Dec. 1911, during Amundsen's expedition. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Scott of the Antarctic. 1949 British feature film produced by Michael Balcon and directed by Charles Frend, from a screenplay by Ivor Montagu, Walter Meade, and Mary Hayley Bell. Technical adviser was Quintin Riley (q.v.). Director of photography was Osmond Borradaile, who actually went to Antarctica in 1947 to film shots of the ice. The players were: Johnny Mills (Scott), Harold Warrender (Wilson), Kenny More (Teddy Evans), Derek Bond (Oates), Reginald Beckwith (Bowers), James Robertson Justice (Taff Evans), James McKechnie (Atkinson), Norman Williamson (Lashly), Barry Letts (Cherry-Garrard), Clive Morton (Ponting); Bruce Seton (Pennell), Chris Lee (Day), Dennis Vance (Wright), John Gregson (Crean), Diana Churchill (Kathleen Scott), Anne Firth (Oriana Wilson), Larry Burns (Keohane), Edward Lisak (Dimitri), Melville Crawford (Meares), John Owers (Hooper), Sam Kydd (Stoker McKenzie).

Scott Peninsula. 74°22' S, 117°58' W. An ice-covered peninsula, 27.5 km long, it extends from the coast of Marie Byrd Land into the Getz Ice Shelf toward the W end of Wright Island. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Lt. Col. Thomas Scott, U.S. Army finance and liaison officer for Antarctica, in 1956-57.

Scott Polar Research Institute. Seen abbreviated as SPRI. Cambridge-based institution, founded on Nov. 26, 1920, principally by Frank Debenham (who would be the first director, from 1926 to 1948), with monies left over from the Scott Memorial Fund.

Scott Range *see* **Scott Mountains**

Scott Seamounts. 68°00' S, 179°50' W. A submarine ridge off Scott Island, and centering on 67°45' S, 179°55' W. Named by international agreement in 1988. Originally (1964) called Scott Island Bank, after the landfall nearest to it.

[1]**Scott Shoal**. 73°14' S, 177°45' E. A submarine feature of the Ross Sea. Named for Robert Scott.

[2]**Scott Shoal**. 77°50' S, 170°00' W. Submarine feature of the Ross Sea, later found to be part of Pennell Bank. Named for Robert Scott.

Scott Uplands. 72°40' S, 66°00' W. A group of rounded hills rising to about 1500 m, S of the Seward Mountains, at George VI Sound, on the SW side of Palmer Land. Photographed aerially by USN between 1966 and 1969, and mapped from these photos by USGS. The feature was surveyed from the ground by BAS personnel from the Fossil Bluff station. Named by UK-APC on Feb. 7, 1978, for Roger John Scott (b. 1948), BAS surveyor who wintered-over at Base E in 1973 and 1974, and who was in charge of the first party to travel through and survey this area. The feature appears on the 1979 USGS sketch map of the N part of Palmer Land, and is in the 1980 British gazetteer. US-ACAN accepted the name.

Scottish Bay *see* **Scotia Bay**

Scottish Bukt *see* **Scotia Bay**

Scottish National Antarctic Expedition 1902-04. Abbreviated to ScotNAE 1902-04. Led by William Speirs Bruce, who had conceived the idea of his own expedition as far back as the mid-1890s, in fact just after he came back from the Dundee Whaling Expedition. What he had in mind at that time was a transantarctic traverse to test the theoretical Ross-Weddell Graben. He was actively in the planning stages when he refused the post of naturalist on Scott's BNAE 1901-04. **March 1900**: News of ScotNAE expedition first broke, Bruce's stated intention at that time being being to act in conjunction with BNAE and GerAE 1901-03 (led by von Drygalski). Nordenskjöld's SwedAE had not yet quite made the news. The British government refused to back Bruce, so, being intensely patriotic (and not a little upset) he approached the Coats family, who became his main backers for this purely Scottish-financed expedition. The Royal Scottish Geographical Society also backed Bruce, whose intention, at that stage, was to take two ships down, for two successive wintering-overs. The cost of the expedition was estimated at £35,000. **May 1901**: After highly secretive preparations, it was announced that come September, ScotNAE and SwedAE would leave simultaneously for the Antarctic. The Swedes, to name but one of the two expeditions, left pretty much on schedule. **Jan. 1902**: Bruce secured the services of old friend and former Antarctic colleague Capt. Thomas Robertson as captain of the *Hecla*, the expedition's ship, which Bruce had just bought in Norway. **Early spring 1902**: Bruce took the *Hecla* to the Ailsa Shipbuiling Company at Troon, had it re-fitted and repaired (free of charge by naval architect G.L. Watson), and renamed it the *Scotia*. That was the only ship they could afford, having failed to raise the amount needed for two. **July 1902**: Bruce's friend, the Prince of Monaco, who had done hydrographic work with Bruce in the Arctic in 1898 and 1899, donated a considerable quantity of deep-sea apparatus for the expedition. **Nov. 2, 1902**: The *Scotia* left Troon, with its main aims now being to conduct hydrography in the Weddell Sea and to survey the South Orkneys. The party consisted of Bruce and a scientific staff of 6, namely Robert Neal Rudmose-Brown (naturalist), William Cuthbertson (naturalist and artist), David Wilton (zoologist), Harvey Pirie (doctor, bacteriologist, geologist), Robert Mossman (meteorologist, climatologist, magnetician), and Alastair Ross (taxidermist). The officers and crew of the *Scotia* were mostly whalers with a lot of experience in Arctic waters: Thomas Robertson (captain); Allan Thomson Bryce (1st mate); Robert Davidson (2nd mate and icemaster); John Fitchie (3rd mate); James McDougall (bosun); Allan Ramsay (chief engineer); Henry Gravill (2nd engineer); James Rice (carpenter); the following able seamen: William Martin, Henry Anderson, James Mackenzie, Robert Mackenzie, Andrew Greig, John MacMurchie, Jim Smith (also carpenter's mate); A.J. Walker and Sandie Robertson (able boatmen); the following ordinary seamen: Gilbert Kerr (also bagpiper player and assistant taxidermist), and Shetland Johnny Smith; the following firemen: Alexander Duncan, Robert Wilson (also blacksmith), and David Low; Thomas MacKenzie (chief steward); Bill Smith (2nd steward); Edwin Florence (chief cook); and William Murray (2nd cook). Bruce had collected £24,431, but it had all been spent, and everyone knew it. **Nov. 3, 1902**: At Kingstown, in Northern Ireland, Bruce learned about a new, hefty donation of cash. **Nov. 8, 1902**: They left Kingstown. **Nov. 9, 1902**: They sailed out of sight of Tuskar Rock. **Nov. 20, 1902**: They arrived at Madeira. **Nov. 23, 1902**: They left Madeira. **Dec. 1, 1902**: They arrived at Cape Verde, leaving the same day. **Dec. 10, 1902**: The highlight of their trip across the Atlantic was at St Paul's Rocks, where Dr. Pirie fell into shark-infested sea (he survived). **Jan. 6, 1903**: They arrived at the Falkland Islands. Alan Bryce Thompson, the 1st mate, left, and 3rd mate John Fitchie replaced him. Robert Davidson, the 2nd mate, remained the 2nd mate. The position of 3rd mate was now taken by bosun James McDougall, and David Patrick, a quarryman who had earlier sailed into Buenos Aires, joined the expediton as bosun. **Jan. 22, 1903**: They left the Falklands, with 200 tons of coal and 20 months provisions. **Feb. 2, 1903**: They reached the pack-ice, and crossed 60°S.

Feb. 3, 1903: At 3 A.M. they sighted the South Orkneys. **Feb. 4, 1903**: They landed on Saddle Island, the third party ever to do so (Weddell in 1823, and Dumont d'Urville in 1838). The ship then took them south, deep-water sounding all the way. **Feb. 5, 1903**: They had to turn back due to the fast pack-ice, making 80 miles north into clear water by 9 P.M. **Feb. 6, 1903**: At noon they were in 60°10' S, 42°38' W. **Feb. 9, 1903**: At noon they were in 59°52' S, 34°12' W. **Feb. 10, 1903**: At noon they were in 60°03' S, 32°10' W, but couldn't get through the pack. **Feb. 13, 1903**: After a week of skirting the edge of the pack, they were finally able to head south again. **Feb. 17, 1903**: At noon they were in 64°18' S, 23°09' W. **Feb. 21, 1903**: They passed 70°S, and shot an emperor penguin. A tragic fire on board was narrowly avoided. **Feb. 22, 1903**: After seeing mirages, they reached their own southing record of 70°25' S, 17°12' W, before being squeezed by ice. Amaswagla (an Eskimo word meaning "plenty"), an emperor penguin, joined the ship's company at the insistence of the crew. He would walk up and down the decks giving orders. **March 4, 1903**: They took fresh water from an iceberg. **March 8, 1903**: They struck a berg in a gale, but no damage was done. **March 11, 1903**: They re-crossed the Antarctic Circle, heading north. **March 17, 1903**: Back in open water. **March 21, 1903**: They arrived back in the South Orkneys. **March 22, 1903**: They steamed past Saddle Island, and after 4 days of trying to find a harbor, they landed at Scotia Bay (as it became known), on the S side of Laurie Island. **April 1, 1903**: The house was built — Omond House, as they called it — and a small, wooden magnetic observatory was erected. This had been brought down on the ship, and was named the Copeland Observatory, after Professor Ralph Copeland, Astronomer Royal for Scotland. Before the end of March, Bruce ordered the ship frozen in, and it would remain so for 8 months. The party wintered-over, working at botany, meteorology, hydrography, and map-making, the expedition making a major contribution to science, collecting more unknown specimens than any expedition before it. The expedition was the first to make movies, and also to record the bagpipes (as played by Kerr) in Antarctica. Scotland was still trying to raise money for them, so that they could go another year. **Aug. 6, 1903**: Allan Ramsay, chief engineer of the *Scotia*, died and was buried on Laurie Island. Henry Gravill took his place. **Oct. 1903**: William Martin, seaman, became part of the scientific staff. **Nov. 22, 1903**: The *Scotia* was freed. **Nov. 27, 1903**: The *Scotia* sailed to Buenos Aires to be re-fitted, leaving behind 6 men — Mossman, Pirie, Ross, Cuthbertson, Bill Smith (the new cook), and Martin — to continue the summer study. These men, who were left with 18 months' supplies, made the first thorough study of penguins, and skied for relaxation. **Dec. 29, 1903**: While in Buenos Aires, Bruce arranged for the Argentines to take over Omond House (seeing that the British expressed no interest). **Jan. 2, 1904**: The Argentines accepted Bruce's offer. **Jan. 1904:** Seaman Robert Mackenzie was discharged at Buenos Aires for bad behavior, and seamen Greig, James Mackenzie, Alex Robertson, and McMurchie left too. Thomas Mackenzie, the chief steward, was discharged, sick, and replaced by former chief cook Edwin Florence. William Murray, the 2nd cook, was promoted. Carlos Haymes, a Uruguayan, replaced Gravill as chief engineer, and Gravill resumed his old post. **Jan. 21, 1904**: The *Scotia* set sail again, via the Falklands, with 3 Argentines aboard (Luciano Valette, Hugo Acuña, and Edgar Szmula), but minus James Rice, the carpenter. **Feb. 22, 1904**: Omond House was handed over to the Argentine Met Office (the Scottish flag was replaced with that of the Argentine Republic), and 4 of the 6 shore party re-embarked and went sailing south with Bruce, while the 3 Argentines remained at Omond to winter-over with 2 of the original shore party — R.C. Mossman (in charge) and Bill Smith (cook). **March 3, 1904**: The *Scotia* reached 72°18' S, and discovered Coats Land (guessing it to be a continuation of Enderby Land). **March 12, 1904**: They reached 74°01' S (in 23°W). **July 15, 1904**: The *Scotia* got back to Kingstown, to a tremendous reception. **July 21, 1904**: They arrived back in Scotland. They had explored 4,400 miles of sea that no one had ever sailed before. Meanwhile, Mossman, Bill Smith (the cook), and the 3 Argentines left behind on Laurie Island carried on working. **Dec. 30, 1904**: The *Uruguay* arrived with relief Argentines, and from then on Omond House became Órcadas Station.

Scottish National Antarctic Expedition 1908-11. This one never happened. It was proposed by Bruce in 1908, his aim being a continuation of ScotNAE 1902-04, and also to try to cross the Antarctic continent. One 250-ton ship would do it, and 36 men, he said, at a cost of £40,000; more, if another ship were to be obtained, which it would have to be if the land traverse were to be made. Lack of government (and other) support meant that Bruce was still trying to get it together into 1909. On Oct. 22, 1909, he asked the government for funds, and was rejected on Nov. 5. This rejection stirred up a political controversy in Great Britain. Scotland, as junior partner in the Act of Union of 1707, certainly seemed to be getting the short stick when it came to government funding. After all, all Englishmen who applied for funds for their expeditions were getting money. Even as late as the middle of 1910 Bruce was still fighting for the expedition. It would now cost £50,000, but if he could get it, the expedition could set out on May 1, 1911. But, of course, it fizzled out.

Scotts Bukt *see* **Scar Inlet**

Scott's Hut Race. First held at McMurdo on Dec. 3, 1978, and annually since. It is a 7.25 km course from the Eklund Biological Center to the tip of Hut Point, up the hill to the Cosmic Ray Lab, and back to Eklund. It came about because there were a lot of joggers at McMurdo. The Navy graded the roads for the first race, in which 89 runners took part, 85 finishing. Audrey Haschemeyer was the first woman to finish the race, in 48 minutes 43 seconds. There was a spin-off from this race. On Dec. 2, 1979 certain persons ran around the South Pole. The race began at the galley, and they went three times around the taxiway, for a grand total of 2.1 miles. Casey Jones won, in 19 minutes 22 seconds. Bill Smythe was second, in 23 minutes 43 seconds, beating by 3 seconds Martha Kane. One wonders if pole vaulting is next.

Scott's Huts. There are two still standing on Ross Island, one at Hut Point, the other at Cape Evans. Both are protected as historic sites. The one at Hut Point, 36 feet square, was constructed during February and early March 1902, during BNAE 1901-04, but was used only for storage and other similar purposes. However, it was also used as a depot. Shackleton visited it again on Aug. 14, 1908, and Scott did so again, on Jan. 15, 1911, when he named it the Discovery Hut. On this 1911 return, Scott had some things to say in his diary about the Shackleton team's occupation of the hut during BAE 1907-09: "Everyone was disgusted with the offensive condition in which the hut had been left by its latest occupants. Boxes full of excrement were found near the provisions, and filth of a similar description was thick under the veranda & even in the corners of the hut itself. Its [sic] extraordinary to think that people could have lived in such a horrible manner and in such absence of regard for those to follow — It seems evident that in no case can we inhabit the old hut." There were two other, smaller, Scott huts from 1902, built of lighter wood and covered with asbestos sheets, that were still standing when Scott went back in 1911, but they are gone now. Scott left the main hut for the last time on Nov. 3, 1911. Admiral Cruzen visited the Discovery Hut on Feb. 20, 1947, during OpHJ 1946-47. He and his party found the building intact and sealed, but didn't enter. Discovery Hut was restored in 1963 by the NZ Antarctic Society, and today it is a tourist landmark, the most historic site on the continent. The other Scott hut is 0.4 km N of Cape Evans, and was used as a base for Scott's last expedition (BAE 1910-13). It measures 50 feet by 20 feet.

Scott's Nunataks *see* **Scott Nunataks**

Scouts. **1921-22**: Shackleton was the first to take a Boy Scout to Antarctica. In fact, he took two on the *Quest* that season, Jimmy Marr and Norman Mooney. Mooney got off at Madeira on the way south, and never made it to the ice. Marr did, and thus began a lifetime of Antarctic exploration. **1928-30**: Byrd had advertised a competition for a Boy Scout, the winner to go with him on ByrdAE 1928-30. The Scout had to be between 17½ and 19½. Paul Siple, aged 19, won from the 6 finalists in New York. He wrote *A Boy Scout with Byrd*, and thus began another successful Antarctic career. Those who didn't make it were: Alden E. Snell, 18, from Washington, DC; Jack Hirschmann, 18, Minneapolis; Clark Spurlock, 17, Eugene, Oreg.; Donald H. Cooper, 17, Tacoma, Wash.; and Sumner D. Davis, 17, of Birmingham, Ala. **1947**: Art Owen, of Troop 222, Post 3, won a competition among

the Eagle Scouts of Beaumont, Texas, to accompany Finn Ronne and his crew on RARE 1947-48. Charles E. "Charlie" Landry came second, and went with the expedition as far as Panama, before flying back to Texas. **1956-57**: The next U.S. Scout to go down was Dick Chappell, selected in a national competition for OpDF II, and who went with the U.S. team in 1956 for IGY. **1961-62**: Paul Trolove, Maurice Bognuda, and Roger Best, all of NZ. **1962-63**: B.S. Bythell, D.S. Gray, C.M. Hope, all of NZ. **1963-64**: Douglas Craford, Duncan McDonald, and Francis J. Stanton, all of NZ. **1964-65**: David O. Crerar, Wilfred W. Jennsen, and Brian K. Service, all of NZ. **1965-66**: Ian Maxwell, William Atkinson, Paul Russell, and Trevor Hayes, all of NZ. **1966-67**: David S. Goulden, Dennis J. Hunt, and Anthony G. North, all of NZ. **1967-68**: Thomas Brummer, Kevin Walls, and Stephen Hills, all of NZ. **1978**: Mark Leinmiller, Eagle Scout. **1984-85**: Douglas Barnhard of McMurray, Pa. **1985-86**: Two Girl Scouts, Karen Prentice and Robin Moyle, went to McMurdo. **1988-89**: Julie Hagelin spent 8 weeks at McMurdo. **1989-90**: Robert Scot Duncan, 19, was the 6th Boy Scout selected by the Boy Scouts of America since 1928. Whatever happened to Norman Erlend Mooney, the Orkney scout who was deprived of fame at Madeira by seasickness?

Scree Cove. 67°34' S, 67°08' W. On the SW side of Blaiklock Island, off the Loubet Coast of Graham Land. Surveyed by Fids from Base E in 1948-49, who named it for the prominent scree or talus slopes along the SE shore of the cove. Mapped by FIDS cartographers from these surveys and from aerial photography by FIDASE in 1956-57. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit in 1965. It appears in the 1980 British gazetteer. The Chileans call it Caleta Guijarro (which means the same thing).

Scree Peak. 63°38' S, 57°27' W. A conspicuous, flat-topped peak (a hill, really) rising to 560 m, and with slopes covered in talus (or scree; hence the name), at the NE end of Eagle Island, in Prince Gustav Channel, off the S coast of Trinity Peninsula. Discovered, surveyed, and named in Dec. 1945 by Fids from Base D. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. One of the Argentine Antarctic expeditions named it (for themselves only) as Cerro San Agustín (i.e., "San Agustín hill"), and it appears as such in a 1978 reference. The Chileans call it Cerro Contador (i.e., "Contador hill"), for Col. Héctor Contador López, of the Chilean Army, in charge of the repairs unit for General Bernardo O'Higgins Station during ChilAE 1966-67.

Islas Screen *see* **Screen Islands**

Screen Islands. 65°01' S, 63°43' W. A group of islands extending NW for 2.5 km from Aguda Point, forming a sort of screen across the entrance to Hidden Bay (hence the name), in the Bismarck Strait, on the Danco Coast, on the W coast of Graham Land. First charted by BelgAE 1897-00. None of these islands is individually named, not these days, anyway. The Argentines produced 2 separate charts of the area in 1954; on one, the largest and southeasternmost island of this group is called Isla Gato (i.e., "cat island"), and on the other it is called Islote Morro o Gato (which means "hill or cat islet"). These were names given by ArgAE, presumably ArgAE 1953-54. It seems that ArgAE 1955-56 mistook these islands for the group that Charcot had called Îles Ménier (*see* **Ménier Island**), and the group appears on a 1957 Argentine chart as Islotes Menier (no accent mark), which was accepted by the Argentine gazetteer of 1970. In 1956-57 the group was charted by an RN Hydrographic Survey unit, and descriptively named by them as Screen Islands. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. Today, the Argentines call them Islas Screen.

Cadena Scripps *see* **Scripps Heights**

Scripps Heights. 69°09' S, 63°47' W. Rugged, largely ice-covered heights, rising to about 1690 m, deeply scarred by glaciers, surmounting the peninsula between Casey Inlet to the N, Casey Glacier to the NW, Lurabee Glacier to the S, and Hogmanay Pass to the SW, terminating on the E in Cape Walcott, at the N edge of the Eternity Range, where Ellsworth Land meets the Wilkins Coast, on the SE coast of Palmer Land. Discovered and partially photographed aerially by Wilkins on Dec. 20, 1928. He thought it to be a large island lying between 2 great transverse channels which completely severed the Antarctic Peninsula, and named it Scripps Island, for William Edmund Scripps (1882-1952), aviator, and publisher of the *Detroit News*. It appears on Wilkins' 1929 map (and also on a 1933 British chart) plotted in 70°00' S, 65°30' W. In 1936, W.L.G. Joerg, the famous U.S. cartographer, was working on the interpretation of the air photos taken by Ellsworth in Nov. 1935, and also on the early reports coming in from BGLE 1934-37. From a correlation of these, he determined the feature to be not an island, but rather a peninsula. Continuing reports from BGLE, as well as rough ground surveys and air photos taken during USAS 1939-41, confirmed this opinion, and the feature was renamed Scripps Peninsula. It appears as such on Joerg's 1937 map, as well as on a 1943 U.S. Hydrographic Office chart. The name Scripps was re-applied from the peninsula to the present feature as Scripps Ridge, which was the name accepted by US-ACAN in 1947, and plotted in 69°05' S, 63°30' W. In Nov. 1947 the feature was photographed aerially bvy RARE 1947-48, and, during that same season, its E part was surveyed by a joint sledging team of RARE personnel and Fids from Base E. UK-APC accepted the name Scripps Ridge on Jan. 28, 1953, but with the coordinates 69°06°S, 63°35' W, and, as such, it appears in the 1955 British gazetteer. FIDS cartographers, working from the RARE-FIDS photos and surveys, plotted it in 69°10' S, 63°52' W, and renamed it Scripps Heights, that name being accepted by UK-APC on Sept. 23, 1962, and by US-ACAN later that year. In 1963 the coordinates were corrected to 69°08' S, 63°40' W, and, by the time of the 1977 British gazetteer, had been corrected yet again. The Argentines call it Cadena Scripps, which really means "Scripps range."

Scripps Island *see* **Scripps Heights**

Scripps Peninsula *see* **Scripps Heights**

Scripps Ridge *see* **Scripps Heights**

Scrivener Glacier. 76°57' S, 161°37' E. A small tributary glacier flowing in a SE direction from the vicinity of Mount Woolnough and Mount Morrison to the N side of Mackay Glacier, immediately W of Mount Allan Thomson, in Victoria Land. Charted and named by BAE 1910-13. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Cabo Scrymgeour *see* **Cape Scrymgeour**

Cape Scrymgeour. 63°34' S, 56°27' W. Composed of high, conspicuous, red-colored, volcanic rock cliffs, it forms the E end of Andersson Island, in Antarctic Sound, Trinity Peninsula, off the NE tip of the Antarctic Peninsula. Roughly charted by Thomas Robertson of the *Active*, in 1893, during DWE 1893-94, and named by him for John Scrymgeour (1828-1891), owner of a bakery business at 6, Nethergate, Dundee, and at the time of his death a Harbour trustee. It appears on a 1937 British chart plotted in 63°28' S, 56°34' W. Re-identified and charted by Fids from Base D in 1947, and plotted by them in 63°36' S, 56°22' W. As such, and with those coordinates, the name was accepted by UK-APC on Sept. 8, 1953, and by US-ACAN larer that year. It appears as such in the 1955 British gazetteer. Fids from Base D re-surveyed it between 1960 and 1962, and replotted it in 63°35' S, 56°26' W, and, as such, it appears on a 1962 British chart. Its coordinates were again corrected, and, with the new coordinates, the feature appears in the 1977 British gazetteer. It appears on a Chilean chart of 1947 as Cabo Scrymgeour, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Roca Scud *see* **Scud Rock**

Scud Rock. 63°23' S, 55°01' W. An isolated rock in water, 6 km S of Moody Point (the SE extremity of Joinville Island). Roughly surveyed by Fids from Base D in Dec. 1953. Named by UK-APC on Sept. 4, 1957, for the scud (low, fast-moving clouds, i.e., "scudding clouds") prevalent here. It appears on a British chart of 1962. US-ACAN accepted the name in 1963. The Argentines translated it as Roca Scud.

Scudder Mountain. 86°07' S, 149°36' W. Rising to 2280 m, between Organ Pipe Peaks and Mount McKercher, on the E side of Scott Glacier, in the Queen Maud Mountains. The name first appears in Paul Siple's 1938 botany report on ByrdAE 1933-35, based on Quin Blackburn's visit here in 1934. US-ACAN accepted the name in 1970.

Scudder Peak. 75°53' S, 115°12' W. A small rock peak just SW of Spitz Ridge, on the S side of Toney Mountain, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Brent E.

Scudder, of the U.S. Weather Bureau, meteorologist measuring ozone at Byrd Station in 1966.

Scudding Glacier. 76°54' S, 160°45' E. An abrupt glacier, about 5.5 km long, descending into the end of Alatna Valley from the S side of Mount Gunn, in the Convoy Range of Victoria Land. This high elevation glacier is adjacent to the névé of Cambridge Glacier and snow-laden katabatic winds make their first descent into Alatna Valley over the Scudding Glacier. Even on days of relatively light winds, snow clouds derived from the high névé may be seen swirling and scudding down this glacier. Named descriptively by the 1989-90 NZARP field party in this area. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Scullin Bank. 67°22' S, 67°22' E. A submarine bank generally less than 200 m in depth, and, in places, less than 100 m, N of Scullin Monolith, it is flanked by deep channels which separate it from Storegg Bank to the W and Fram Bank to the E. Named by ANCA on March 12, 1992, in association with the monolith.

Scullin Monolith. 67°47' S, 66°42' E. A crescent-shaped rock, rising steeply from the sea to a height of 419 m above sea level, next to Murray Monolith, 6 km W of Torlyn Mountain, on the Mawson Coast of Mac. Robertson Land. On Jan. 5, 1930, land was sighted in this vicinity from an airplane, during BANZARE 1929-31. Mawson landed on this feature in a plane on Feb. 13, 1931, during the same expedition, and named it for James Henry Scullin (1876-1953) Labor prime minister of Australia, 1929-32 (he took office two days before the Wall Street crash). Meanwhile, in Jan.-Feb. 1931 Norwegian whalers charted it, and named it Mount Klarius Mikkelsen, for their skipper on that trip. The Mawson naming was accepted by US-ACAN in 1947, and Mikkelsen Peak is now the highest feature on the monolith. The Australians built a refugio here, and they also accepted the name Scullin Monolith.

Scully Terrace. 84°53' S, 169°06' E. A bold, flat-topped terrace which is triangular in plan and borders the NW part of the Supporters Range between Ranfurly Point and Mount Kinsey, on the E side of the upper Beardmore Glacier. Named by US-ACAN in 1987, for Richard Tucker Scully (known as Tucker Scully) (b. Sept. 12, 1940), director of the Office of Oceans and Polar Affairs, within the U.S. Department of State, with responsibility for policy and negotiations relative to Antarctic resources, conservation, and inspection of foreign stations under the Antarctic Treaty. NZ-APC accepted the name.

Mount Sculpture *see* **Sculpture Mountain**

Sculpture Mountain. 72°51' S, 162°03' E. A large, dissected mountain, between the Monument Nunataks and Sheehan Mesa, at the N end of the Mesa Range. Named by the Northern Party of NZGSAE 1962-63, as Sculpture Tableland, for the cuspate embayment which has been sculpted into the feature. US-ACAN accepted the name Sculpture Mountain (as being more appropriate), and NZ-APC has also accepted that name. There is a report that the Russians call it Mount Sculpture, but why they would do such a thing is unknown.

Sculpture Tableland *see* **Sculpture Mountain**

Scuppers Icefalls. 76°48' S, 161°36' E. A prominent line of icefalls, about 9 km long, and nearly 400 m high, between Mount Razorback and Mount Nespelen, in the Convoy Range of Victoria Land. The icefalls are the main outflow draining from Flight Deck Névé into Benson Glacier, and the characteristics of this outflow reminded the NZARP field party here in 1989-90 of the stormwater on a ship's deck draining through scuppers along the rail, and they thus named it. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Scurvy. Acute lack of Vitamin C. It is always fatal if untreated. Symptoms are swollen limbs, bleeding gums, loosening teeth, depression, mental derangement. It was the scourge of sailors throughout history, but became really noticeable to the world during the long ocean voyages of the 17th and 18th centuries, when it was a long time between ports. Cook devised a cure for it — fresh fruit and vegetables, even though the concept of vitamins as such was not discovered until the 20th century. Cook had great success in keeping his crews alive, but some other captains did not enforce the diet so strictly. Later, the lime juice, which had been so effective when fresh, was bottled and stored, and thus lost its value. Of course, it was the lime juice itself that was held up to ridicule, and so more scurvy appeared in the 19th century. Davis's 1821-22 crew got it, and had to recuperate in the Falklands. Some of the crew of the *Seraph* got it in 1830, and a couple of Biscoe's crew died from it in 1831. The *Zélée* had 38 cases of it in 1838. Armitage's Sept. 1902 Western Party all returned to base with scurvy during BNAE 1901-04, and Shackleton got it in 1903 during the same expedition. He got it so bad that he had to be invalided home on the *Morning*, protesting all the way. In 1912 Oates was riddled with it, and if he hadn't walked out of the tent into the blizzard, he would surely have died of scurvy instead. Dr. Raney (q.v.) reported a case of it at the South Pole as late as 1979.

Scuttle Valley. 76°38' S, 161°09' E. A small deglaciated valley with a number of small meltwater lakes in its floor, it comprises the lower elevations at the NE end of Elkhorn Ridge, and lies parallel to and just S of Towle Glacier, in the Convoy Range of Victoria Land, being separated from Towle Glacier by a dolerite ridge upon which the flank of the Towle rests 80 m above the valley floor. It was visited by VUWAE 1976-77 (led by Christopher J. Burgess). So named (jointly) by US-ACAN and NZ-APC in 1994, because a parachute and airdrop packaging were found abandoned ("scuttled") in the vicinity.

Scylla Glacier. 70°20' S, 67°00' E. A large glacier flowing E between the Athos Range and the Porthos Range, in the Prince Charles Mountains of Mac. Robertson Land, and feeding the Amery Ice Shelf from above the Lars Christensen Coast. Discovered in Dec. 1956 by Bill Bewsher's ANARE Southern Party. So named by ANCA on July 22, 1957, for Scylla of Greek mythology, because of the difficulty in crossing the region due to the glacier. US-ACAN accepted the name in 1961. Scylla and Charybdis were two awful sea monsters each inhabiting a different side of the narrow strait through which Odysseus sailed. The hero found himself between a rock and a hard place, but, with the help of Circe, he sailed closer to Scylla, and thus lost only 6 men rather than his entire crew, which fate would have befallen him if Charybdis had dropped on the ship.

Scythian Nunatak. 76°44' S, 159°47' E. An isolated ridge-like nunatak about 1.5 km SE of Trudge Valley, in the Allan Hills of Victoria Land. The Romans found the original Scythia (i.e., in the area of the Black Sea) to be continually shrouded in drifting snow, and the NZARP Allan Hills Expedition of 1964 found that to be true of this feature also, as they discovered and reconnoitered it. US-ACAN accepted the name in 1965, and ANCA followed suit on Aug. 10, 1966.

The *Sea Aspiring*. A fishing vessel, owned by the Sanford Seafood Company, in the Ross Sea in 2006-07. *See* **Squid**.

Sea Elephant Island *see* **Elephant Island**

Sea elephants *see* **Elephant seals**

The *Sea Gull*. An old, 110-ton pilot boat from New York, 73½ feet long, 20½ feet in the beam, 9 feet 9 inches in depth in hold, she had 2 guns and a crew of 15. She was part of USEE 1838-42. Lt. Johnson took over command of the *Sea Gull* at Tierra del Fuego, and after an unsuccessful venture to Deception Island (*see* **United States Exploring Expedition**), Mishipman Reid took over. She disappeared off the Chile coast in April 1839.

Sea ice *see* **Annual ice**

Sea Ice Runway. One of the three airports close to McMurdo (the others being Williams Field and Pegasus). It is not permanent, in that it is built anew on the sea ice each season, and used for a few months until early December, when the sea ice begins to break up, at which point Willy Field was used again. The advantages are that it saves wear and tear at the other two fields, and it can take wheeled aircraft. It is 3048 meters (10,000 feet) long.

Sea leopard *see* **Leopard seal**

Basse Sea-Leopard *see* **Sea Leopard Patch**

Sea Leopard Patch. 62°05' S, 58°23' W. A shoal, with a least depth of 18 m, near the center of Visca Anchorage, S of Stenhouse Bluff, Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Charted by the personnel on the *Discovery* in 1927, and named by them as Sea-Leopard Patch, for the sea leopard (or leopard seal), *Hydrurga leptonyx*. It appears as such on a British chart of 1929. It appears on a Chilean chart of 1947 as Bajo Fondo Leopardo, on a 1949 French chart as Basse Sea-Leopard, and and on a 1957 Argentine chart as Manchón Leopardo Marino (which means the same thing). US-ACAN accepted the name Sea-Leopard Patch in 1952, and UK-APC followed suit in 1955. On

Sept. 23, 1960, UK-APC removed the hyphen, and US-ACAN, in turn, followed suit. It appears on a Chilean chart of 1961 as Banco Leopardo, and in the 1974 Chilean gazetteer as Bajo Leopardo. Last plotted by the UK, in late 2008.

Sea lilies. *Promachrocrinus kerguelensis*. In 2007-08 they found beds of sea lilies stretching for hundreds of yards across the ocean floor of the Ross Sea.

Sea Lion Glacier. 62°38' S, 60°22' W. An isolated glacier, 350 m long, NW of Atlantic Club Peak and SW of Hespérides Hill, it terminates at the coast of South Bay, in the E part of Livingston Island, in the South Shetlands. The name was long in use before it was accepted officially by the Bulgarians on Oct. 29, 1996. US-ACAN accepted the name in 1998.

Sea Lion Tarn. 62°38' S, 60°22' W. A tarn occupying an area of 0.3 hectares, between (and bounded by) Sea Lion Glacier and the NE slopes of Atlantic Club Peak, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Oct. 29, 1996, in association with the glacier. US-ACAN accepted the name in 1998.

Sea lions. Order: Otariidae. They are eared seals, plentiful in the Falklands, but rarely, if ever, seen in Antarctica.

Sea Shepherd Organization. Or Sea Shepherd Conservation Society. An environmentalist group founded in 1977 (under the name Earth Force Society) by former Greenpeace founder Paul Watson. In 1996 they acquired the *Johan Hjort*, changed her name to the *Sea Shepherd III*, and, in 2002 to the *Farley Mowat*. Later they acquired the vessels *Bob Barker* and *Steve Irwin*. Their mission is to protect sea life. This organization actually seeks out and attacks whaling ships in Antarctic waters, for example.

Sea snails. Order: Liparidae. Fish living at the sea bottom.

Sea spiders *see* **Pycnogonids**

Sea stars. Also known as starfish. The Antarctic sea star is *Perknaster fuscus antarcticus*. Notable for its high level of protein (38% of the dry weight).

The *Sea Tomato*. American yacht, skippered by Edward Gillette, in at the South Shetlands and the Antarctic Peninsula for the 1987-88 season. She was rowed across the Drake Passage.

Sea urchins *see* **Echinoids**

Seabee Heights. 85°13' S, 171°15' W. Ragged, snow-covered heights, rising to 3400 m, 24 km long and 8 km wide, bounded by DeGanahl Glacier, LaVergne Glacier, and Liv Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1966, for the Seabees (q.v.).

Seabee Hook. 72°19' S, 170°13' E. A small, low, recurved spit, composed of coarse, volcanic ash, jutting out for about 0.8 km into Moubray Bay from the W side of the high, rocky ridge that forms Cape Hallett, along the coast of Victoria Land. Hallett Station was here. Discovered by a USN reconnaissance party in Jan. 1956, it was named by US-ACAN in 1956, for the Seabees who surveyed it from the *Edisto*.

Seabees. Mobile Construction Battalion (MCB) or simply CB units of the U.S. Navy, formed during World War II. They built Little America IV in 1947, during OpHJ 1946-47, and since then have played a great part in the building of American scientific stations in Antarctica. Perhaps the most famous Seabees were the 24 who built Pole Station from absolutely nothing during OpDF II in Nov. and Dec. 1956. Actually, not all 24 were Seabees; some were attached to the Seabees. Neverthless, while they were at the Pole, they were Seabees. In the spring of 1955 the Navy ran a notice for "volunteers to go to Antarctica." 10,000 men answered, but only about 200 were picked. The Navy imposed high standards, mental and physical, and the results justified the selection. Those chosen to go reported to Davisville, Rhode Island, for training. Lt. (jg) Dick Bowers, a Yale graduate, was chosen to lead a small contingent to the Pole, and, while at Davisville, he secretly chose 35 he considered the best of the best Seabees in the world for the most difficult and hazardous construction job ever undertaken in the Antarctic. Part of the training for Bowers and 12 of the Seabees was to build a Clements hut in the Detroit arsenal which had been refrigerated to -90°F. The boys shipped south in late 1955 and disembarked at McMurdo Sound. There was nothing there. But there soon would be (*see* **McMurdo**). Dick Bowers had his first selection meeting (for the Pole Seabees) in the library. 30 names were listed. Bowers then approached the men on the list. Some declined. Dave Canham thought he was going to go (but he wound up not going). Finally Bowers got 24. He organized them into 6 teams, 4 men each team, all self-sustaining. They all wintered-over at the McMurdo station they had just built, and in late 1956 the chosen Seabees were flown to the Pole (*see* **South Pole Station**). The first party to go in, on Nov. 20, were Dick Bowers, John Tuck, Bill Bristol, Tom Montgomery, Jerry Nolen, Dale Powell, Randy Randall, and Floyd Woody. Again there was nothing there when they arrived. This party of 8 were the 18th to the 26th men ever actually to stand at the Pole (*see* **South Pole** for the first 17). On Nov. 25, 1956 Dick Patton parachuted in, and early the following morning the next 10 Seabees arrived — Slats Slaton, Charlie Bevilacqua, Ed Hubel, Dick Prescott, Al Hisey, Bill Goodwin, Reggie Wagner, Duke Williamson, Ray Spiers, and Don Scott. These were the 28th to the 37th men ever to stand at the Pole. Then, on Dec. 1, 1956 the final 5 — Squirrely McCrillis, Rediron McCormick, Tiny Tyler, Bob Chaudoin, and Robbie Roberts — arrived in one plane, and Paul Siple (scientist) in another. So, these Seabees were all among the first 43 men ever to stand at the Pole, yet, with the exception of Bowers (the leader), Tuck (really a dog handler), Patton (not a Seabee at all, but a USAF sergeant who just dropped in to help) and Spiers (who was later at Byrd Station), none had an Antarctic feature named for them. Considering their fantastic achievement (Siple, who was there, called the feat "impossible") and their historical importance, this cannot be regarded as an oversight, rather as a political snub. However, with a bit of prodding this oversight started to change in 2008. After all, Admiral Dufek had stated, in the press, on March 15, 1957, "The men who built the bases, and the men who winter in, deserve recognition. A medal? Yes. And something more. Exemption from income tax during their Polar time, perhaps, or double time toward retirement." You could say this about Dufek, he supported his men.

Seabirds *see* **Birds**

Seabold, George *see* **USEE 1838-42**

Seacatch Nunataks. 63°58' S, 58°04' W. A group of nunataks rising to about 500 m, E of Holluschickie Bay, between Carro Pass and Massey Heights, on James Ross Island. BAS did geological work here between 1981 and 1983. Named by UK-APC on April 3, 1984, for the character in Kipling's *Jungle Book* (many features in this area are named after such characters). It appears in the 1986 British gazetteer. US-ACAN accepted the name. Just for reference: The name of the Kipling character is Sea Catch, not Seacatch. And he is the father seal, not the mother seal (the British, who named it, have it wrong in their gazetteer; the Americans have it right). And *The White Seal*, which is the source cited by both gazetteers, is not a book (as one is led to believe), rather chapter 4 of the *Jungle Book*.

Seafarer Glacier. 72°54' S, 166°34' E. A tributary glacier flowing southward from Webb Névé, between the Lawrence Peaks and the Malta Plateau, into Mariner Glacier, in Victoria Land. Named by the Mariner Glacier Party of NZGSAE 1966-67, in association with the term "mariner." NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Seahorse. 78°16' S, 163°17' E. A volcanic peak rising to 1008 m, 2.7 km E of Lake Porkchop, it is the easternmost volcano on the S side of Roaring Valley (at least it was described that way by an NZGSAE party led by D.N.B. Skinner in 1977-78), on the Scott Coast of Victoria Land. Named jointly by NZ-APC and US-ACAN in 1994, for the outcrop of black lava on pale granite which, when viewed from the S, resembles the head of a seahorse.

Nunataks Seal *see* **Seal Nunataks**

Punta Seal *see* **[1]Seal Point**

Seal Bay. 71°45' S, 12°45' W. Indents the NE end of Riiser-Larsen Peninsula, just southward of Cape Norvegia, on the Princess Martha Coast of Queen Maud Land. Discovered in 1930 by Riiser-Larsen, who named it Selbukta, for the many seals here. US-ACAN accepted the translated name Seal Bay in 1947.

Seal-catchers Arms *see* **Base V**

Seal Cove. 69°23' S, 76°24' E. A cove, surrounded by extremely steep, often sheer-sided cliff faces, on the E side of Fletcher Promontory, in the Larsemann Hills. Named by ANCA.

Seal Creek. 62°12' S, 58°27' W. A creek running parallel to Blaszyk Moraine, and carrying meltwater from a height of 60 m above sea level (at the S part of Sphinx Glacier), to Admiralty Bay, on King George Island, in the South Shetlands. Adjacent to the creek are breeding grounds

of elephant seals and fur seals, hence the name Potok Foczy, given by the Poles. The English language translation is Seal Creek.

Seal Glacier. 79°53' S, 81°50' W. A small glacier flowing E, just N of Parrish Peak, in the Enterprise Hills of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for G.L. Seal, USN, radioman in Antarctica for 4 austral summers up to 1966.

Seal Island *see* **Seal Islands**

[1]**Seal Islands**. 60°59' S, 55°23' W. A group of small, rocky islets and rocks, 5-10 km N of Elephant Island. They are the northernmost of the South Shetland Islands, and, due to their elevation (60 m) can be seen from a great distance. Discovered by Bransfield in 1820. The largest one was named Seal Island by William Smith that year for the number of seals caught here. The group was called Seal Rocks, and later Seal Islands. US-ACAN accepted the name Seal Islands in 1947, and UK-APC followed suit on Sept. 8, 1953. The Argentines call them Islas Foca (which means the same thing), and the Chileans tend to call them Farallones Foca (which means "seal cliffs"). Last plotted by the UK, in late 2008. None of the individual islets or rocks are individually named today, but they will be one day, when features run out and names still abound.

[2]**Seal Islands** *see* **Seal Nunataks**

Seal Nunataks. 65°03' S, 60°18' W. A chain (the British say a cluster) of 14 bare rock volcanic cones in the form of nunataks, rising to elevations of up to 320 m (the Chileans say 360 m) above the Larsen Ice Shelf, and trending WNW from Robertson Island, and protruding above the N portion of the Larsen Ice Shelf, E of Cape Fairweather, on the Nordenskjöld Coast, on the E coast of the Antarctic Peninsula. Discovered and roughly charted on Dec. 11, 1893, by Carl Anton Larsen, and named by him as the Seal Islands, a name that also appears on British charts of 1901 and 1916. Larsen also named several individual features within the group. Over the next few decades they appear with a variety of names: Sar-Inseln, Löwen-Insel, Löwen-Inseln, Sea-Lion Islands, Robben-Insel, Robben Inseln, Dirck Gerritszarkipelagen, Dirk Gerritz Archipelago, Archipel des Phoques, Jason Island (British chart of 1901; presumably this refers to one of the nunataks in the group), Islas de las Focas (Irízar's Argentine map of 1903; name means "island of the seals"), Îles des Phoques (i.e., "islands of the seals"), Nunataks des Phoques, Säl-Nunatakerna (i.e., "the seal nunataks"), and Robben Nunataks ("robben" meaning "seals" in German). Surveyed and re-defined as nunataks (rather than islands) on Oct. 8, 1902, by SwedAE 1901-04. Surveyed by FIDS in 1947. US-ACAN accepted the name Seal Nunataks in 1947, and UK-APC followed suit on Jan. 22, 1951. Today, the Argentines use the name Nunataks Foca, and the Chileans use Nunataks Seal. They include, from E to W: Christensen Nunatak, Oceana Nunatak (on Robertson Island), Pollux Nunatak, Castor Nunatak, Larsen Nunatak, Murdoch Nunatak, Arctowski Nunatak, Hertha Nunatak, Gray Nunatak, Donald Nunatak, Åkerlundh Nunatak, Bruce Nunatak, Dallmann Nunatak, Evensen Nunatak, Bull Nunatak, and Pedersen Nunatak.

[1]**Seal Point**. 63°24' S, 56°59' W. A point on a small island off the N end of the promontory between Eagle Cove and Hut Cove, on the SE shore of Hope Bay, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered and surveyed in 1903 by J. Gunnar Andersson's party during SwedAE 1901-04, and named by them as Robbenspitze (i.e., "seal point") because they killed a seal here to obviate a shortage of food and fuel. It appears as such on Nordenskjöld's maps of 1905. Re-surveyed by FIDS in 1945. UK-APC accepted the name Seal Point on Nov. 21, 1949, and it appears as such on a 1950 British chart. US-ACAN accepted that name in 1952, and it appears in the 1955 British gazetteer. On 3 separate Argentine maps of 1953 it appears variously as Islote Punta Foca (i.e., "seal point islet"), Punta Foca, and Punta Seal. It appears on a 1957 Argentine chart as Punta Foca, and on that same chart also appears Roca Foca, presumably referring to the small island on which the point lies. The 1970 Argentine gazetteer accepted the name Punta Foca for the point, and the Chilean gazetteer of 1974 accepted Punta Seal.

[2]**Seal Point**. 64°55' S, 62°57' W. A headland where Skontorp Cove and Leopard Cove meet, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. So named by the Poles in 1999, because Weddell Seals frequent this place.

[3]**Seal Point**. 71°22' S, 170°14' E. Also called Robbenspitze. A steep rock point 5.5 km S of Ridley Beach, on the W side of Adare Peninsula, in northern Victoria Land. Charted and named in 1911, by Campbell's Northern Party during BAE 1910-13. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

[1]**Seal Rock**. 66°17' S, 100°46' E. A rocky hill, rising to 61 m above sea level, about 1 km NE of Dobrowolski Station, in the Bunger Hills. Named by the Poles in 1985, for the seals here.

[2]**Seal Rock**. 77°38' S, 166°27' E. In South Bay, Ross Island. So named by BAE 1910-13, because Weddell seals basked there. NZ-APC accepted the name.

[1]**Seal Rocks** *see* **Seal Islands**

[2]**Seal Rocks**. 66°15' S, 162°16' E. Rocks in water, 15 m high, with the sea breaking on them, they extend 5 km NNW of Cape Ellsworth (the N extremity of Young Island), in the Balleny Islands. Named by US-ACAN in 1947, and NZ-APC accepted the name.

Sealer Hill. 62°40' S, 61°07' W. Rising to 70 m near the W end of South Beaches, on the S coast of Byers Peninsula, on Livingston Island, in the South Shetlands. Surveyed by BAS geological teams here in 1975-76, and named by them for the old sealers who used to frequent this area. Below the hill are at least 3 crude stone huts, presumably built by these sealers. UK-APC accepted the name on Feb. 7, 1978, and US-ACAN followed suit. It appears in the 1980 British gazetteer. Last plotted by the UK, in late 2008.

Sealers Passage. 61°01' S, 55°23' W. A marine channel running E-W between Cape Yelcho (in NW Elephant Island) and the Seal Islands, in the South Shetlands. It was used by sealers in the 1820s as a shortcut around the N coast of Elephant Island, and they were the first to chart it, albeit roughly. Surveyed in Dec. 1970 by the British Joint Services Expedition. Named by UK-APC on Nov. 3, 1971. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. Since at least 1977, the Argentines have been calling it Pasaje Foqueros (which means the same thing). Last plotted by the UK, in late 2008.

Sealing. Commercial fur sealing began in the Falkland Islands in 1766, and when Cook discovered South Georgia (54°S), and published the fact that he had seen a lot of seals in Southern waters, this led to the first wave of exploration in search of more southerly, sealing grounds. If any sealers discovered the South Shetlands and South Orkneys before 1819 (and it's possible), they kept quiet about it. In 1819 William Smith (q.v. for details) sighted the South Shetlands, and in the 1819-20 season the *Hersilia*, the *San Juan Nepomuceno*, and the *Espíritu Santo* all confirmed the presence of the islands. This led to the rush of 1820-21, when 30 American ships went south (the best known of that season being the Fanning-Pendleton Sealing Expedition), and at least 24 British vessels, and some others of other nationalities. As an example of the toll taken on the seal population in the South Shetlands just that first season, the *Hersilia* alone took 18,000 superior seal skins (who knows how many "inferior" ones were rejected — after the killing, of course), while the *San Juan Nepomuceno* took 14,600. In 1820-22 alone, 320,000 fur seals were killed in the South Shetlands. They were easy prey. They had no reason to be afraid of humans. Although some seals fled, most would come up to the men in a friendly manner and be clubbed to death, or rather near-death, and then skinned while they were still alive, so that the muscle contractions would aid in an otherwise difficult process. Sealers would be exhausted at the end of a day's work on a crowded beach, laying to left and right as they pushed their way along the beach. Some seals, however, didn't take it lying down. The diary of a crewman on the *Huntress*, in 1821-22, says, in part (Jan. 17, 1821 journal entry), "We fell in with a rookery of old Wigs (male seals). This was new work for us; these chaps, instead of fleeing from us, gave us battle, and made a formidable attack on us, which somewhat intimidated us. We, however, soon recovered from our confusion, and went to work with them, and, in one hour's hard work, took 94 of them, about 10 escaping — they were very large, some of them between 5 and 6 feet in length, and weighing from 250 to 400 pounds. It took us a long time to skin them." 1820-22 was the peak period of sealing activity in the South Shetlands, and then fur sealing died out —

after well over 100 vessels had pulled in here. After 1822 the catches fell off dramatically, and expeditions were mounted to find new lands, and vessels now combined fur sealing with elephant seal oil. In the 1860s the seal population began to grow slightly, and in 1871 James W. Buddington and others revived the U.S. Antarctic fur sealing program in the South Shetlands. No thought was given to the extinction of species, or to what would happen to the industry in the future, until 1881, when the first controlling regulations came into effect by the British in the Falklands and the Antarctic Peninsula. In 1972 a convention was signed to limit sealing in Antarctica. The Antarctic Treaty signatories were at this convention, which was fully ratified on March 11, 1978, and went into force as the Convention for the Conservation of Antarctic Seals. It restricts the number of crabeater seals taken yearly to 175,000; leopard seals to 12,000; and Weddell Seals to 5000. Ross seals, Southern elephant seals, and fur seals, are (meant to be) totally protected.

Seals. All seals are pinnipeds (i.e., they belong to the order Pinnipedia), and the pinnipeds are divided into 3 families: Phocidae (the true seals), Otariidae (the eared seals), and Odobenidae (walruses). As for the Phocids, there are 19 species, but only 5 are found in Antarctica — crabeater seals, Weddell seals, Ross seals, leopard seals, and Southern elephant seals. The eared seals include sea lions and fur seals. Seals are generally unafraid of man, and this has cost them dear. Sometimes seals travel as far as 30 miles inland, and as high up as 3000 feet. Fur seals were slaughtered so extensively that by 1822 they had virtually disappeared (after only 2 years contact with man). *See* **Fur seals, Weddell seals, Ross seals, Crabeater seals, Elephant seals, Leopard seals, Walruses**, and **Eared seals**.

Bay of Seals. 78°00' S, 158°00' W. A bay indenting the Shirase Coast. Named by NZ. It appears in the 1958 NZ provisional gazetteer.

The *Seamaster* *see* **The *UAP Antarctica***

Seamounts. Submarine mountains. The main ones in Antarctic waters are: Adare Seamounts, Althoff, Axthelm, Balleny Seamounts, Barsukov, Barth, Behaim, Dallmann, De Gerlache, Hakurei, Iselin, Kainan Maru Seamounts, Lazarev, Marie Byrd, Maud, Orca, Rosenthal, Scott Seamounts, and Umitaka.

Seaplane Point. 64°03' S, 60°46' W. At the S side of Curtiss Bay, on the Davis Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by Fids from Portal Point between 1956 and 1958, and mapped by FIDS cartographers in 1958-59 from these efforts. Named by UK-APC on Sept. 23, 1960, for Glenn Curtiss (1878-1930), seaplane pioneer. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. One of the Argentine Antarctic expeditions named it Punta Morro del Medio (i.e., "middle hill point"), from its position on the bay, and references to it as such have been seen since at least 1978. However, this was redefined (and not very well) as Cabo Morro del Medio. Either name is quite unwieldy, and needs to be changed.

Seaquist Peak. 70°45' S, 81°20' W. Rising to 800 m, it surmounts the NW end of the Meyer Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Larry R. Seaquist, meteorologist at Ellsworth Station in 1961.

Mount Searle. 67°49' S, 67°15' W. A peak rising to 1760 m, between Sally Cove and Gaul Cove, on the N side of Horseshoe Island, in Square Bay, on the Fallières Coast, on the W coast of Graham Land. Named by UK-APC on July 7, 1959, for Derek Searle (q.v.), who surveyed this mountain. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Searle, Derek John Hatherill. b. Jan. 7, 1928, Hinxton, Essex, son of smallholder (and local postmaster) Robert J. Searle and his wife Daisy Hatherill. In 1946 he joined the Army for his national service, and in 1949 went to Sheffield University, to study geography. In Sept. 1953 he finished a post-grad diploma in education (although he never taught), and then joined the Directorate of Colonial Surveys, where he heard about FIDS, which he joined in 1954, as a surveyor, went south from the UK on the *Norsel*, and wintered-over at Base Y in 1955 and 1956 (he was leader that 2nd winter). In 1957 he returned to England on the *John Biscoe* (he was chief Fid on board), and that year, in Northwood, Mdsx, he married Petra Leay (*see* **Leay Glacier**). He took a post-grad diploma in land survey at the University of London, and Prof. David Linton (his old professor at Sheffield) was looking for an assistant to go with him to cruise Antarctic waters for a couple of months on the *Shackleton*, conducting a geomorphological survey, and in Oct. 1958 they left the UK on the *Shackleton*, for the 1958-59 Antarctic season. Searle got back to Plymouth on April 8, 1959, on the *Reina del Mar*, from Callao, and went to join Prof. Linton (who had moved to Birmingham University on his return), doing mapping and research there until 1961, when he began his career in the planning department of Norfolk County Council. He died on Sept. 12, 2003, in Norwich.

Seas. The main Antarctic ones are: Amundsen, Bellingshausen, Davis, D'Urville, Kong Håkon VII Hav, Kosmonavtov, Lazareva, Mawson, Riiser-Larsen, Ross, Sodruzhestva, Somova, and Weddell.

Seasons. Summer is November, December, and January, and the sun never falls below the horizon. Therefore it is always light, one long day really. In late March a long dusk occurs, and on April 24 the sun disappears, and winter begins. This is one long night, where the sun does not shine. On Midwinter's Day, June 21, the sun reaches only to the Antarctic Circle, which is 1410 miles from the Pole. In late September a gray-pink dawn heralds the spring (as it were, although there is no real spring, and no real autumn), and then in November comes summer again. Needless to say, perhaps, but summer is cold, and winter is colder.

Mount Seaton. 70°36' S, 67°27' E. A prominent domed peak, one of the Amery Peaks, 5 km S of Sandilands Nunatak, on the E edge of Nemesis Glacier, in the Prince Charles Mountains. Plotted by Bill Bewsher's ANARE Southern Party in Jan. 1957. Named by ANCA for Pilot Officer John Alex Seaton (b. April 21, 1927), RAAF 2nd pilot with the Antarctic Flight which wintered-over at Mawson Station in 1956. That season he was promoted to flight lieutenant. On Nov. 28, 1956, he made the famous flight that discovered the Lambert Glacier. He was back flying in Antarctica in 1958-59. US-ACAN accepted the name in 1965. *See also* **Gora Mozhajskogo** and **Mount Trezubec**.

Seaton Glacier. 66°43' S, 56°26' E. About 27 km long, it flows SE into the Edward VIII Ice Shelf, at the NW part of Edward VIII Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946, by Norwegian cartographers who named it Inviksletta (i.e., "the inner bay plain"). Re-mapped by ANARE between 1954 and 1958, and renamed by ANCA on Feb. 15, 1958, for John Seaton (*see* **Mount Seaton**). US-ACAN accepted the Australian naming in 1962.

The *Seaver*. A 450-ton minesweeper, built by Hansen & Puccini, in Buenos Aires, in 1938, and launched on Aug 18 of that year, the same day as the *Robinson*. Sister ship of the *Bouchard*, she took part in ArgAE 1947-48. Captain Alberto Patrón Laplacette. She was a patrol ship in the South Shetlands that season, being relieved by the *Parker*.

Canal Seaver *see* **George VI Sound**

Punta Seaver. 65°40' S, 65°41' W. A point on one of the Vize Islands, in Zubov Bay, Renaud Island, in the Biscoe Islands. Named by the Argentines, for the *Seaver*.

Seavers Nunataks. 73°10' S, 61°58' E. Two nunataks, about 20 km N of Mount Menzies, and 26 km W of Mount Scherger, near the head of Fisher Glacier, in the southern Prince Charles Mountains. Mapped by Australian cartographers from ANARE ground surveys and air photos, 1958 and 1960-61. Named by ANCA on Oct. 23, 1962, for James A. "Jim" Seavers (of Hawthorn, Vic.), assistant cook at Mawson Station for the winter of 1961. On Jan. 20, 1962 he, Dave Trail (the leader), and Dave Keyser, arrived back at Mawson after 83 days of traverse to the Prince Charles Mountains, where they had climbed Mount Menzies, then reckoned to be the highest point in the Australian Antarctic Territory. Their trip was 1000 km. In Dec. 1961, they had used this feature as a landmark on the route across the Fisher Glacier. Seavers wintered-over at Mawson again in 1963. US-ACAN accepted the name in 1970.

Seavers Ridge. 67°03' S, 52°51' E. A rock ridge, just SE of Mount King, and 22 km ESE of Mount Renouard, in Enderby Land. Plotted by Australian cartographers from 1957 ANARE air photos. Named by ANCA for Jim Seavers (*see* **Seavers Nunataks**). US-ACAN accepted the name in 1965.

Seawater distillation plants. One was

installed at McMurdo in 1965, and a new one in 1987. The new one could supply up to 80,000 gallons of fresh water every day from McMurdo Sound. The old one became a secondary machine, used only for emergencies.

Seay Nunatak. 84°03' S, 54°38' W. Rising to 1460 m, about 5 km S of Hill Nunatak, at the SE extremity of the Neptune Range, in the Pensacola Mountains. Photographed aerially in 1963-64, by USN, surveyed from the ground by USGS during that same season, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for William K. Seay, utilitiesman who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Seay Peak. 79°05' S, 157°30' E. A pointed, ice-free peak rising to 1803 m above sea level, it is the NW summit of the Finger Ridges, in the Cook Mountains. Mapped by USGS from tellurometer surveys conducted in 1961-62, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Benny F. Seay, U.S. Army Aviation Support for USGS's Topo North and Topo South, 1961-62, which conducted the tellurometer surveys. ANCA accepted the name on Aug. 27, 1975.

Piki Sechenova. 72°20' S, 26°30' E. A group of peaks in the Sør Rondane Mountains. Named by the Russians. The Norwegians call them Sechenovpiggane (which means the same thing).

Sechenovpiggane *see* **Piki Sechenova**

Sechrist Peak. 75°23' S, 111°02' W. Rising to 1350 m, on the SW spur of the Mount Murphy massif, in Marie Byrd land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Frank S. Sechrist, U.S. exchange scientist at Molodezhnaya Station in 1975.

Sechrist Ridge. 77°14' S, 162°25' E. A narrow rock spur, 5 km long, descending NE from the central ridge just E of Mount Evans, and terminating about 2.5 km NE of Mount Bevilacqua, in the Saint Johns Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Daniel Robert Sechrist, USGS geographer from 1980, involved in traditional mapping, digital mapping, and mapping research. From 2004 he was manager of the U.S. Antarctic Resource Center, at Reston, Va., and in Nov.-Dec. 2004 was a member of the USGS team at the McMurdo Dry Valleys. NZ-APC accepted the name on April 7, 2008.

Secluded Rocks. 67°32' S, 59°20' E. Low, prominently banded rock outcrops, on the W side of Mulebreen (what the Australians call Dovers Glacier), between that glacier and Cosgrove Glacier, 10 km SSW of Kemp Peak, in Enderby Land. Mapped by Australian cartographers from ANARE ground surveys and air photos taken between 1954 and 1966. First visited by ANARE party led by Ian McLeod on Feb. 25, 1965. So named by ANCA on July 29, 1965, for the fact that the rocks are in a hollow. US-ACAN accepted the name in 1970.

Second Crater. 77°49' S, 166°40' E. A crater, 0.9 km NE of First Crater, on Arrival Heights, Hut Point Peninsula, Ross Island. Named by Frank Debenham in 1912 while surveying the peninsula as part of BAE 1910-13. US-ACAN accepted the name in 1972, and NZ-APC followed suit.

Second Facet. 77°11' S, 162°18' E. A steep, ice-free escarpment just W of First Facet, the 2 features together forming the N wall of Debenham Glacier, in Victoria Land. Charted and named descriptively by BAE 1910-13. US-ACAN accepted the name in 1964.

The 2nd Pyramid *see* **Blodwen Peak**

Secret Lake. 71°50' S, 68°21' W. A meltwater lake, 3 km W of Ares Cliff, in eastern Alexander Island. It is in a northwest-facing cirque, and is fed from an area of stagnant ice. It is 100 m above the E edge of Mars Glacier, and can be seen only from the cirque, or aerially. Surveyed by BAS between 1961 and 1973. Mapped by the (British) Directorate of Overseas Surveys, from U.S. Landsat images taken in Jan. 1973. Named descriptively by UK-APC on Dec. 20, 1974. US-ACAN accepted the name in 1975, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

The Secret Land. 1948 Oscar-winning Technicolor documentary of OpHJ 1946-47, produced and directed by Orville O. Dull, and edited by Frederick Y. Smith to 71 minutes from 90 hours of film taken by the U.S. Navy photographic corps. Van Heflin, Bob Montgomery, and Robert Taylor narrated to the words of Harvey S. Haislip and William C. Park.

Section Peak. 73°14' S, 161°55' E. A small but prominent sandstone knob at the N end of the Lichen Hills, in Victoria Land. It provides for geologists one of the few sections seen in sedimentary beds. Mapped by the Northern Party of NZGSAE 1962-63, and named descriptively by them. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Ghiacciaio Section Peak. 73°16' S, 161°57' E. A glacier, at a height of between 2300 and 2500 m above sea level, on the SE side of Section Peak, in the Lichen Hills of Victoria Land, about 170 km NNW of Baia Terra Nova Station (Mario Zucchelli Station). First seen in Dec. 1999, and named by the Italians on Feb. 22, 2002, in association with the peak.

Security. As it is highly unlikely that anyone is going to rob, vandalize, or otherwise threaten an Antarctic station, security as we know it in "civilized" countries is not really necessary, except, perhaps, to keep the tourists from trampling over scientifically special ground. Besides, at most of the bases, there is a military presence of one sort or another. Also, there is no need for spies — Antarctic research is open to all visitors. On a personal level of security, no one should leave the confines of an Antarctic station without at least one other person.

Security Bay. 64°51' S, 63°37' W. Between Homeward Point and Gauthier Point, on the N side of Doumer Island, in the Palmer Archipelago. First charted by FrAE 1903--5, and roughly surveyed by the Discovery Investigations in 1927, it appearing on their 1929 chart. It was surveyed by Port Lockroy personnel in 1944-45, during Operation Tabarin. ArgAE 1952-53 re-surveyed it, and gave it the name Bahía Sin Nombre (if that can be called a name). It was re-surveyed by an RN Hydrographic Survey unit in 1956-57, who named it Security Bay because many times during the survey they used it to protect their small craft against both the SW gales which create a heavy sea in the S entrance to Neumayer Channel and the strong northeasterly winds which funnel down the channel. UK-APC accepted the name on July 7, 1959, and it appears as such on a British chart of 1960. US-ACAN accepted the name in 1965.

Mount Seddon. 73°06' S, 65°00' E. A mountain with 2 peaks separated by an ice-filled saddle, 30 km W of Mount Stinear, on the N side of Fisher Glacier, in the southern Prince Charles Mountains. A small nunatak lies off one end of the mountain. Discovered aerially by ANARE in 1957. Named by ANCA for Norman Richard Seddon (1911-1989), managing director of BP Australia, a continuing sponsor of ANARE. US-ACAN accepted the name in 1961.

Sedgwick Glacier. 69°51' S, 69°22' W. About 11 km long and 3 km wide, it flows E from the foot of Mount Stephenson, S of Marr Bluff, on the NE coast of Alexander Island, into George VI Sound immediately N of Mount King. Discovered aerially on Aug. 16, 1936, by BGLE 1934-37, and roughly surveyed from the ground later that year by the same expedition. It appears on Stephenson's 1940 map of that expedition. Photographed aerially in late 1947, by RARE 1947-48. Re-surveyed over most of its length in 1948 by Fids from Base E, who named it for Adam Sedgwick (1785-1873), who named the Cambrian period. He was Woodwardian professor of geology at Cambridge from 1818 until his death. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a U.S. Hydrographic Office chart of that year. In 1959-60, Searle of the FIDS mapped it from the RARE air photos.

Nunataki Sedlovinnye. 70°53' S, 67°32' E. A group of nunataks due W of Battye Glacier, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

The *Sedna*. Whale catcher, built in 1912, at Smith's Dock, in Middlesbrough, for Salvesen's. She served out of Leith, South Georgia, from the 1912-13 season until the 1923-24 season, and then went to South Africa, to work for Salvesen's there for a few years. In 1928 she was transferred to Salvesen's Shetlands (Scotland) operation, and in 1929 sold to the Pontos Company, of Tønsberg, Norway. Her name unchanged, she caught for the *Pontos* in Antarctic waters in 1929-30. She foundered off Algoa Bay, South Africa, on Oct. 5, 1930, en route from Durban to Antarctica.

Cape Sedov. 69°22' S, 14°05' E. An ice cape forming the NW extremity of the Lazarev Ice Shelf, as well as the E limit of the Princess Astrid Coast of Queen Maud Land. First photographed aerially during GermAE 1938-39, and mapped from these photos. Re-mapped by SovAE 1959,

and named by them as Mys Sedova, for Georgi Yakovlevich Sedov (1877-1914), polar explorer who attempted to reach the North Pole in 1911. US-ACAN accepted the translated name in 1971. The Norwegians call it Sedovodden (which means the same thing). In 1973, this whole coast was redefined by the Norwegians, and Cape Sedov now marks the W end of the Princess Ragnhild Coast.

Mys Sedova *see* **Cape Sedov**

Sedovodden *see* **Cape Sedov**

See-Elefanten Bach. 62°09' S, 58°56' W. A stream that flows into See-Elefanten Bucht, on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

See-Elefanten Bucht. 62°09' S, 58°57' W. Some references have this feature as identical to the cove the Poles named Elephant Seal Cove (q.v.), but, although the names are very similar, the coordinates are qute different. See-Elefanten Bucht, named by the Germans, is a small bay that indents the N coast of Fildes Peninsula, King George Island, in the South Shetlands, and which receives the water from the meltwater stream the Germans call Moosbach. Like Elephant Seal Cove, this feature was named for the abundant sea elephants found here.

See Nunatak. 68°19' S, 59°09' E. The most northerly of the group of peaks forming the E part of the Hansen Mountains, about 39 km SE of Fram Peak, in Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE. Named by ANCA on July 29, 1965, for R. See, chief helicopter mechanic on the *Nella Dan*, during ANARE's 1965 expedition. US-ACAN accepted the name in 1967.

Seebärenbach. 62°10' S, 58°58' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Mount Seebeck. 85°44' S, 150°46' W. Directly at the head of Roe Glacier, in the Tapley Mountains of Queen Maud Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Richard L. Seebeck, station engineer who wintered-over at McMurdo in 1962.

Mount Seedsman. 70°09' S, 65°26' E. A mountain, in plan somewhat resembling a star, about 13 km E of Mount Dovers, and 17 km NW of Mount Jacklyn, in the Athos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Donald Lynton "Don" Seedsman (b. Oct. 18, 1938), electronics engineer who wintered-over at Mawson Station in 1964. He had also wintered-over as a physicist (IPSO) at Wilkes Station in 1962. US-ACAN accepted the name in 1967.

Seedsman, Barry William. b. Nov. 13, 1932, Sandringham, Vic. In Vietnam, Dec. 1968-Dec. 1969, he was the highly decorated commander of 35th Squadron. Retired as wing commander, RAAF, in 1974. He wintered-over at Casey Station, as base leader, in 1977.

Seekers Ridge. 71°10' S, 162°45' E. On the N side of Morley Glacier, in the Explorers Range, in the Bowers Mountains of Oates Land, in Victoria Land. Named by NZ-APC, in keeping with the theme of Explorers, etc.

Seekopf *see* **Mount Seekopf**

Mount Seekopf. 71°17' S, 13°42' E. Rising to 1300 m, it surmounts the E side of Lake Ober-See, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Seekopf (i.e., "lake peak"), in association with the lake. US-ACAN accepted the name Mount Seekopf in 1970. The Norwegians call it Sjöhausen, in association with Øvresjøen (their name for Lake Ober-See).

Mount Seelig. 82°28' S, 103°54' W. Rising to 3020 m, it is the largest and highest of the Whitmore Mountains, at the NE end of the group. Surveyed on Jan. 2, 1959 by William H. Chapman of the Horlick Mountains Traverse of 1958-59, and named by him for Walter Seelig. US-ACAN accepted the name in 1962.

Seelig, Walter Roy. b. Nov. 14, 1919, Brooklyn, son of druggist William Seelig and his wife Sophia. In 1941 he joined the USGS, in their mapping division, and married Josephine Elvira Newton. He was with the NSF's Office of Polar Programs, 1960-86, where he developed and monitored the NSF-USGS plan for topographic mapping of Antarctica. He was NSF representative in Christchurch, NZ, for 11 USARP seasons between 1971 and 1986, and made 17 trips to Antarctica and adjacent seas throughout that period. He was a member of US-ACAN, 1973-86, and its chairman from 1976 to 1986. He died on April 29, 2005, at Shady Grove Adventist Hospital in Rockville, Md., of pneumonia contracted after a hip fracture.

Seelig Peak. 82°26' S, 163°58' E. An ice-free peak rising to 1346 m, 4 km NW of Mount Christchurch, and marking the summit of the Campbell Hills, on the S side of the Nimrod Glacier. Named by US-ACAN in 2006, for Walter Seelig. NZ-APC accepted the name.

Seely Ridge. 83°53' S, 56°55' W. A ridge, 10 km long, rising to 1340 m above sea level, and trending NE from West Prongs to Heiser Ridge, in the Neptune Range of the Pensacola Mountains. Named by US-ACAN in 1995, for Benjamin Warren Seely (1873-1954), a Florida carpenter who invented the inflatable life raft in 1915 at Pensacola Air Station. UK-APC accepted the name on Nov. 11, 1995.

Seeschwalbenbach. 62°11' S, 58°59' W. A little stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Sefton Glacier. 80°45' S, 156°52' E. A glacier, between 16 and 19 km long, flowing into the S side of Byrd Glacier, just W of Rundle Peaks. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Ronald F. Sefton, ionosphere physicist at Byrd Station in 1962, 1964, and 1966 (the last two winters also being scientific leader). ANCA accepted the name.

Mount Segers. 78°25' S, 85°21' W. Rising to 2460 m, on the ridge at the E side of the head of Crosswell Glacier, 11 km E of Mount Tyree, in the central part of the Sentinel Range, in the Ellsworth Mountains. Discovered aerially by VX-6 on Dec. 14-15, 1959, and mapped by USGS from these photos. Named by US-ACAN in 1961, for Chester W. "Chet" Segers, USN, cook, from Rhode Island, who was among the first group to winter-over at Pole Station, in 1957.

Caleta Segovia. 64°41' S, 62°21' W. A cove, immediately NE of Beaupré Cove, on the SW side of Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Punta Segunda *see* **Inott Point**

Segunda Garganta *see* **Thunder Glacier**

Pontal Sehnem *see* **Niujiao Jian**

Sehnem Point *see* **Niujiao Jian**

Sei whales. Order: Cetacea. Sub-order: Mysticeti. Family: Balaenopteridae. *Balaenoptera borealis*, also called Pollack whale, short-head sperm whale, Japan finner, and sardine whale, it is 55 feet long, and weighs 25 tons, and is very much like Bryde's whale (which does not come to Antarctic waters).

Seid, Frederick Christian "Fred." b. Nov. 16, 1906, West New York, NJ, but raised partly in Manhattan, son of New York cab driver Frederick Seid and his wife Bertha I. Kalbfleisch. He later lived in Bergen, NJ, and then went to sea as a Merchant Marine radio operator, moved to Long Island, and was radio operator on Ellsworth's 1938-39 expedition. On Feb. 18, 1939, he and Harmon Rhoads left Sydney, on the *Aorangi*, arriving in Vancouver on March 10. In 1943 he went back to sea. He died on June 2, 1977, in Port Arthur, Tex.

Seilkopf Peaks. 72°41' S, 4°00' W. A group of mainly ice-free peaks and ridges between Portalen Pass and Nålegga Ridge, NW of Raudberg Valley, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Photographed aerially during GermAE 1938-39, and mapped rudely (but they are shown distinctly) by Ritscher, who named them Seilkopf Berge, for Heinrich Seilkopf (1895-1968), head of the marine aerology section of the German Hydrographic Office. They were mapped in more detail by NBSAE 1949-52. US-ACAN accepted the name Seilkopf Peaks in 1962. The Norwegians call them Seilkopffjella. Some references list Seilkopfberge and Seilkopfgipfel as one entry, and Seilkopf Peaks as another. However, they are all the same.

Seilkopfberge *see* **Seilkopf Peaks**

Seilkopffjella *see* **Seilkopf Peaks**

Seilkopfgipfel *see* **Seilkopf Peaks**

Rocher du Seisme *see under* **D**

Seismic Bluff. 77°32' S, 167°05' E. A steep bluff, rising to about 3470 m, on the SW rim of the summit caldera of Mount Erebus, on Ross Island. Named by US-ACAN in 2000, for a seismic station nearby. NZ-APC accepted the name on June 19, 2000.

Mount Seitz. 71°43' S, 166°05' E. Rising to 2130 m, it is one in the series of peaks between the Mirabito Range and the Homerun Range, 6 km SE of Mount Armagost, 14 km NW of Boss

Peak, in northern Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Thomas E. Seitz, USN, chief construction mechanic at McMurdo in 1967.

Gora Sejsmologov. 74°05' S, 5°40' W. A nunatak, NE of Urfjellgavlen, on the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Russians. *See also* **Amelangplatte**.

Sekko-dani. 71°58' S, 27°24' E. A conspicuous depression, deeper than 150 m, E of Hunakubo-dani, in the N part of Gropeheia, in Balchen Mountain, in the Sør Rondane Mountains. JARE 1981-82 took air photos, and JARE 1987-88 conducted ground surveys. Named by the Japanese on Oct. 23, 1989 ("gypsum valley"), for the huge crystals of gypsum appearing in the valley. The Norwegians translated the name as Sekkodokka.

Sekkodokka *see* **Sekko-dani**

[1]**The *Seksern***. A 249-ton, 116-foot Norwegian whale catcher (the name means "the sixth" in Norwegian), built in 1929-30 for Thor Dahl's Odd Company, and launched in 1930. She was off the coast of East Antarctica in Jan. 1931, commanded by the Brunvold Brothers, and catching for the *Thorshavn*, and was in Antarctic waters, again with the *Thorshavn*, in 1933-34. In 1940 she was chartered by the South African navy, as a minesweeper, and in 1946 was returned to Dahl. She was in Antarctic waters in 1948-49, catching for the *Thorshammer*. In 1953, she was sold and converted into a deep sea trawler.

[2]**The *Seksern***. Norwegian whale catcher, owned by Thor Dahl. She was in Antarctic waters in 1961-62, catching for the *Thorshavet*. That season she took 4 blues, 104 fins, and 46 sperm. Her gunner was Ole Amundsen.

Cape Selborne. 80°23' S, 160°45' E. A steep, rounded snow-covered cape with high cliffs, at the S side of Barne Inlet (the terminus of Byrd Glacier), it projects from the Shackleton Coast into the W side of the Ross Ice Shelf. Discovered by Scott in 1902, during BNAE 1901-04, and named by him for William Waldegrave Palmer Selborne (1859-1942), 2nd Earl of Selborne, who entered the cabinet in 1900 as 1st lord of the Admiralty. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Selbukta *see* **Seal Bay**

Mount Selby. 80°12' S, 156°23' E. Rising to over 2200 m, between Mount Henderson and Mount Olympus, in the Britannia Range. Named by NZ-APC for Michael J. "Mike" Selby, professor of earth sciences, at the University of Waikato (in Hamilton, NZ), a member of field parties in Antarctica in 1969-70, 1971-72, and 1978-79, in that last season doing geological work in the Britannia Range. US-ACAN accepted the name.

Selene Nunatak. 71°08' S, 68°48' W. Rising to about 1200 m, at the N end of Milky Way, W of Lunar Crag, on Planet Heights, in the E part of Alexander Island. In association with the name "lunar," it was named by UK-APC on Feb. 15, 1988, after the Greek goddess of the moon. US-ACAN accepted the name.

Ensenada Seligman *see* **Seligman Inlet**

Seligman Inlet. 67°50' S, 65°30' W. A large, broad inlet, with steep coasts (especially those to the S, which rise abruptly to a height of about 900 m) indenting the Larsen Ice Shelf for about 10 km between Cape Freeman and Choyce Point, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially in 1940, by USAS 1939-41. Charted by Fids from Base E in March-April 1947, and named by them for Gerald Seligman (1886-1973), founder and president of the British Glaciological Society. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1952, and in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Ensenada Seligman, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Cerro Selknam. 62°28' S, 60°47' W. A hill W of Paso Ancho and S of Valle Largo, about 600 m E of Playa Golondrina, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, in memory of the Selknam (or Ona) peoples of southern Chile.

Îlôt de la Selle *see under* **D**

Seller Glacier. 69°19' S, 66°24' W. A well-defined glacier, 30 km long and 6 km wide, it flows WNW into the Forster Ice Piedmont, just N of Flinders Peak, on the Fallières Coast, on the W coast of Graham Land. Roughly surveyed in 1936-37 by BGLE 1934-37. Re-surveyed by Fids from Base E in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for John Seller (ca. 1658-1698), navigation pioneer. US-ACAN accepted the name later in 1962. The British plot it in 69°22' S, 66°10' W.

Mount Sellery. 84°58' S, 172°45' W. A prominent peak, rising to 3895 m, between Mount Oliver and Mount Smithson, about midway along the high ridge of the Mount Wade-Mount Fisher massif, in the Prince Olav Mountains. Discovered aerially by Byrd on the baselaying flight of Nov. 18, 1929, during ByrdAE 1928-30. Surveyed by Bert Crary in 1957-58, and named by him for Harry Sellery of the U.S. National Bureau of Standards, who was Antarctic project leader for ionosphere studies in 1957-60. US-ACAN accepted the name in 1962.

Sellwood, Clarence Henry V. b. April 17, 1906, Bradfield, near Newbury, Berks. He went to sea in 1920, picking up a tattoo on both forearms. He was assistant steward on the *Discovery* during the 1st half of BANZARE 1929-31. After his part in the expedition, he took the *Bendigo* out of Melbourne, heading for London, where he arrived on June 25, 1930. He was still sailing well into World War II, as a ship's fireman with the Empire Line. In 1947 he moved to Australia. He was last heard of in 1963, and is thought to have died in Australia in a great flood and earthquake. *See* **Mount Selwood** (sic).

Selskjera. 68°49' S, 90°44' W. Three rocks W of Cape Ingrid, on the coast the Norwegians call Lazarevkysten, on the W side of Peter I Island. Name means "the seal skerries" in Norwegian.

Selsteinen *see* **Azarasi-irie**

Selungen. 71°31' S, 24°04' E. A nunatak, 7 km SE of Mount Romnaes, NW of the main group of the Sør Rondane Mountains. Name means "the seal pup" in Norwegian.

Selvatnet *see* **Azarashi Lake**

Selvick Cove *see* **Lagarrigue Cove**

[1]**The *Selvik***. Norwegian whale catcher, built in 1908, and belonging to Andorsen & Neumann's Norddeble Company, out of Christiania, and normally based at the Faroe Islands, but seconded to Antarctica for the 1910-11 season, on charter to the Hvalen Company's factory ship *Hvalen*. In Jan. 1911 the *Selvik* foundered in Belgica Strait, the first whale catcher to do so in Antarctic waters. *See also* **The *Norddeble***.

[2]**The *Selvik***. A 142-ton, 98' 8" Norwegian whale catcher, built in 1911, by Akers, of Norway, for Peder Bogen's Norrøna Company. She had a beam of 20 feet, and a 500 hp engine capable of 12 to 15 knots. In 1920 she was sold to Johan Rasmussen's Vestfold Company, and was in Antarctic waters in 1920-21, working for the *Svend Foyn I*. In 1926 she was sold to the Rosshavet Company, and became the *Star IV*.

Selvik Cove *see* **Lagarrigue Cove**

Mount Selwood. 66°54' S, 51°30' E. A mountain, 8 km NNE of Pythagoras Peak, in the Tula Mountains of Enderby Land. Plotted from 1956 ANARE air photos. Named by ANCA for Clarence Selwood, except that his name wasn't Selwood — it was Sellwood (*see* above). US-ACAN accepted the wrong spelling in 1965 (no independent checking).

Nunatak Semashko. 72°10' S, 26°21' E. Immediately N of Isachsen Mountain, on the W side of Byrdbreen, in the Sør Rondane Mountains. Named by the Russians. The Norwegians call it Semashkoknausen (which means approximately the same thing).

Semashkoknausen *see* **Nunatak Semashko**

Sembberget. 74°29' S, 8°12' W. A mountain in Amundsenisen, SE of Milorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Carl Boye Semb (1895-1971), surgeon, and Norwegian Resistance fighter during World War II. The suffix "berget" means "the mountain."

Nunatak Semënova. 81°27' S, 24°36' W. An isolated nunatak in Coats Land. Named by the Russians.

Bukhta Semërka *see* **Adams Fjord**

Gora Semevskogo. 83°09' S, 57°45' W. A nunatak, SE of Wall Rock, in the Schmidt Hills, in the Neptune Range, in the Pensacola Mountains. Named by the Russians.

Semino, R. *see* **Órcadas Station**, 1931

Semper Shaftus *see* **Pagano Nunatak**

Mount Semprebon. 82°04' S, 88°01' W. A prominent, partly snow-free peak, 1.5 km NE of Mount Barsoum, in the Martin Hills. Positioned on Dec. 10, 1958, by the U.S. Ellsworth-Byrd Traverse Party, and named by them for Louis Charles Semprebon (b. Aug. 1926), ionosphere physicist and assistant scientific leader at

Ellsworth Station in 1958. US-ACAN accepted the name in 1964.

Mount Send. 70°02' S, 159°49' E. Rising to 1180 m, on the N flank of Pryor Glacier, 16 km E of Basilica Peak, and 22.2 km E of Mount Gorton, in the S part of the Wilson Hills, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Raymond Francis Send (b. 1927), USARP geophysicist at McMurdo, 1967-68.

Sengekoven *see* **Sengekoven Cirque**

Sengekoven Cirque. 71°53' S, 5°26' E. Indents the N side of Breplogen Mountain, immediately E of Høgsenga Crags, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Plotted by the Norwegians from ground surveys and 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Sengekoven ("the small bed chamber"). US-ACAN accepted the name Sengekoven Cirque in 1967.

Senia Point. 80°31' S, 160°58' E. An ice-covered point, 14.5 km S of Cape Selborne, and marking the N side of the entrance to Couzens Bay on the W side of the Ross Ice Shelf. Named by US-ACAN in 1965, for Benjamin N. Senia (b. Aug. 31, 1899, NY. d. Feb. 26, 1971, Southfield, Mich.), captain of the *Mizar* during OpDF 62 (1961-62) and of the *Mirfak* during OpDF 63 (1962-63). Capt. Senia was the son of banker Benjamin Barton Senia and his wife Adelaide Devine; he began his career as a milk driver, then, in 1939, joined the U.S. Navy, working his way up through the officer ranks during and after World War II (in which he served on the *Thomas H. Barry*, in the Mediterranean), and by the 1950s was a captain.

The *Sennet*. SS-408. A Balao-class submarine (named for a barracuda), launched on June 6, 1944, at Portsmouth Navy Yard, in Kittery, Me., and commissioned into the Navy, as SS-408, on Aug. 22, 1944. She was used by the central group of Task Force 68 during OpHJ 1946-47, and was commanded by Joseph B. Icenhower, USN. The sub failed in the Antarctic because she was unable, after 5 days of trying, to handle the pack-ice, and was withdrawn by the *Northwind*, Jan. 2-5, 1947, and set up in open water near Scott Island, as a weather station, and also to study temperatures, salinity, and microscopic life. In 1951 she was converted to a fleet snorkel sub, and in that capacity operated in the Atlantic until mid-1968, when she sold to the Southern Scrap Material Company in New Orleans.

Sennet Glacier. 80°12' S, 158°42' E. A very steep glacier, flowing southward from Mount Aldrich into Byrd Glacier, between Yancey Glacier and Merrick Glacier, in the Britannia Range. Mapped from USN air photos. Named by US-ACAN in 1965, for the *Sennet*. ANCA accepted the name.

Senokos Nunatak. 63°53' S, 58°42' W. A rocky hill rising to 663 m in Dreatin Glacier, in the NE foothills of the Detroit Plateau, 3,27 km W of Mount Bradley, 4.6 km N of Tuff Nunatak, 11.43 km SE of Golesh Bluff, and 6.3 km S of Darzalas Peak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlements of Senokos in northeastern and southwestern Bulgaria.

Islotes Señoret. 64°26' S, 63°54' W. A group of islets lying off the peninsula that separates Hamburg Bay and Perrier Bay, on the NW coast of Anvers Island, in the Palmer Archipelago. The name appears on Chilean maps of 1947, as Islotes Almirante Señoret, or (in its abbreviated form) Islotes Almte. Señoret, named by the Instituto Hidrográfico of the Chilean Navy, after the *Almirante Señoret.* In 1963, the Chileans shortened to name to Islotes Señoret.

Senouque, Albert. b. 1884. French astronomer. He made his first mark as a teenager, when he went to Sumatra to observe an eclipse, and in 1904, while making observations at the summit of Mont Blanc, he got trapped with a guide for 7 days in a thunderstorm. He was physicist, magnetician, and photographer on FrAE 1908-10. In 1910 he became one of the first two aerial photographers, and in 1911 began a series of high-altitude balloon ascents. He was buried in Boulogne-Billancourt cemetery.

Senouque Spurs. 69°05' S, 71°11' W. Rising to about 1250 m, and extending NW from the Rouen Mountains to the Bongrain Ice Piedmont. Photographed aerially in 1947 by RARE 1947-48, and roughly mapped in 1959-60 from these photos, by Searle of the FIDS. Surveyed from the ground by BAS personnel from Fossil Bluff in 1975-76. Named by UK-APC on June 11, 1980, for Albert Senouque. US-ACAN accepted the name in 1995.

Montes Sentinel *see* **Sentinel Range**

Sentinel Buttress. 64°04' S, 58°08' W. A prominent crag containing a volcanic breccia sequence, rising to 535 m, E of Palisade Nunatak, at the head of Röhss Bay, James Ross Island. So named by UK-APC on Feb. 15, 1988, because of its commanding position in the area. US-ACAN has accepted the name.

Sentinel Islands. 66°47' S, 141°42' E. Also known as the Sentinel Isles. A small group of rocky islands, immediately off the coastal ice cliffs, 3 km E of the Curzon Islands. Photographed aerially by OpHJ 1946-47. Charted and named descriptively by the French under Liotard, in 1949-51, and named by Liotard as Îles Sentinelles, because they are the the easternmost rock outcrops along the coast of Adélie Land. US-ACAN accepted the name Sentinel Islands in 1955. None of these islands is individually named.

Sentinel Isles *see* **Sentinel Islands**

Sentinel Knoll. 68°34' S, 78°03' E. A small but conspicuous knoll about 0.7 km S of the W end of Lake Dingle, on Breidnes Peninsula, in the Vestfold Hills. It is a very useful landmark, and has a cairn on it. Named descriptively by ANCA.

Sentinel Mountains *see* **Sentinel Range**

Sentinel Nunatak. 64°46' S, 60°44' W. A high, black, pyramid-shaped nunatak, rising to 680 m, at the mouth of (i.e., on the S side of) Drygalski Glacier, on the Nordenskjöld Coast, on the E coast of Graham Land. Surveyed and charted by Fids from Base D in Nov. 1947, and named by them for its commanding position at the mouth of the glacier. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. *See also* **Tillberg Peak**.

Sentinel Peak. 77°47' S, 162°23' E. A conspicuous, pointed peak, rising to over 2000 m (the New Zealanders say about 1900 m), at the N side of Ferrar Glacier, it forms the highest point in the S central part of the Kukri Hills of Victoria Land. Discovered and named descriptively by BNAE 1901-04. US-ACAN accepted the name in 1953, and NZ-APC followed suit.

Sentinel Range. 78°10' S, 85°30' W. Also called Sentinel Mountains. A major mountain range, between 24 and 50 km wide, and trending NNW-SSE for 185 km, northward of Minnesota Glacier, it forms the N half of the Ellsworth Mountains, and contains many peaks over 4000 m, including Vinson Massif (4892 m) in the S part of the range, the highest point in Antarctica. Discovered and photographed aerially on Nov. 23, 1935, by Ellsworth and Hollick-Kenyon, and so named by Ellsworth for its prominence as a landmark on an otherwise featureless ice surface. "We came abeam of a solitary little range … I named it the Sentinel Range." US-ACAN accepted the name in 1947. It appears on a 1956 Chilean map as Cadena Centinel (sic) (which means the same thing), and on a 1962 Chilean map as Montes Centinela, and that last name is the one the Chileans use today. First visited, and partially surveyed, in Jan. 1958, by the Marie Byrd Land Traverse Party led by Charles R. Bentley. The entire range was mapped by USGS from USN air photos taken between 1958 and 1961.

Îles Sentinelles *see* **Sentinel Islands**

Sentry Cove. 62°13' S, 58°26' W. A picturesque cove indenting the W side of Admiralty Bay, on the SW side of Demay Point, between that point and Uchatka Point, on the S side of King George Island, where Admiralty Bay meets the Bransfield Strait, in the South Shetlands. Geological work was done here by BAS in 1975-76, and they named it for the serried row of upended whale skulls along the beach at the head of the cove. UK-APC accepted the name on Feb. 7, 1978. It appears in the 1980 British gazetteer. US-ACAN accepted the name. In 1980, the Poles named it Rajska Zatoka (i.e., "paradise cove"), for its appearance (ignoring, for the moment, the sentry-like skulls).

Sentry Rocks. 70°45' S, 167°24' E. Two high, rugged rocks in water, just off Cape Dayman, along the N coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named descriptively by US-ACAN in 1970.

Sentyo-yama. 71°33' S, 35°39' E. Rising to 2273 m, it is the E peak of Mount Eyskens, in the central part of the Queen Fabiola Mountains. Surveyed by JARE in 1960. Named by the Japanese on Nov. 24, 1981, for the syenite in its composition ("sentyo" meaning "syenite").

Separation Range. 84°05' S, 174°00' E. The Commonwealth Range branches in about 84°20' S, and forms 2 chains of mountains separated by Hood Glacier. This one, the E branch, running to the E of Hood Glacier, is called the Separation Range, or the East Commonwealth Range, and is about 50 km long, with Mount Patrick in the S and Mount Beacon in the N, and separating the Hughes Range from the Commonwealth Range. It terminates to the N at the Ross Ice Shelf. Named by the NZ Alpine Club Antarctic Expedition of 1959-60. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Les Sept Îles *see* under **L**

Bahía Septiembre *see* **Primero de Mayo Bay**

Punta Sepúlveda *see* **Sepúlveda Point**

Sepúlveda Point. 64°31' S, 61°35' W. The S entrance point of Recess Cove, in Charlotte Bay, on the Danco Coast, on the W coast of the Antarctic Peninsula. Named by ChilAE 1951-52 as Punta Sepúlveda, for 2nd Lt. Hernán Sepúlveda Gore, who was on the *Lientur* during that expedition. It appears as such on a Chilean chart of 1962, and was the name accepted by the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point between 1956 and 1958. UK-APC accepted the name Sepúlveda Point on Feb. 7, 1978, and it appears as such in the 1980 British gazetteer. US-ACAN accepted the British naming. The Argentines call it Punta Virto.

Sequence Hills. 73°03' S, 161°15' E. Escarpment-like hills on the W margin of the upper part of Rennick Glacier, about 11 km NW of the Caudal Hills, in Victoria Land. They provide the only good geological sequence in the area, hence the name given by the Northern Party of NZGSAE 1962-63. US-ACAN accepted the name in 1967.

Sérac. A pointed ice-ridge in a crevassed area.

The *Seraph*. A Stonington, Conn., brig owned by Ben Pendleton. She was one of the two vessels scheduled to go to Antarctica on the 1829 U.S. Government expedition which never took place (*see* **Palmer-Pendleton Expedition**, and also **United States**). In 1829-31, Pendleton took her to the South Shetlands as part of the Palmer-Pendleton expedition, with a crew of 22. Crew: Ben Pendleton (captain), William Noyes (1st mate), Joseph Noyes (2nd mate), Oliver Pendleton (3rd mate), Benjamin Y. Pendleton (4th mate), Ezekiel Gray, William Young, John Cavalier, Abraham B. Bivorie, Stephen Barker, Edwin Douglas, James M. Utter, George Jenkins, George Overtook, Thomas Skinnom, James Y. Williams (black), Samuel G. Brown (black), Elan A. Cooper, David V. Somard, Francis H. McGowan, John Mitiores, John Maloney.

Seraph Bay. 72°28' S, 95°11' W. An indentation in the SE side of Thurston Island, about 24 km wide, bounded on the SW by the Abbot Ice Shelf, on the NW by Cape Annawan, and on the SE by Dustin Island. Discovered aerially in Feb. 1940 on flights from the *Bear* during USAS 1939-41. It was more accurately delineated during the USN Bellingshausen Sea Expedition of Jan. and Feb. 1960. Named by US-ACAN in 1947, for the *Seraph*.

Serba Peak. 69°37' S, 159°03' E. A prominent rock peak rising to 830 m, it surmounts the ridge along the N side of Ferguson Glacier, about 7.4 km S of Parkinson Peak, in the Wilson Hills of Oates land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Edward W. Serba, USN, navigator on LC130-F Hercules aircraft during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). ANCA accepted the name.

Serdica Peak. 62°41' S, 60°04' W. Rising to about 1200 m in Levski Ridge, 1.8 km S of Great Needle Peak, and 2.65 km N of Aytos Point, it surmounts Macy Glacier to the W, Boyana Glacier to the SW, and Srebarna Glacier to the SE, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002. Serdica is the ancient name of Sofia (or rather of the nucleus of what became that great metropolis).

Gora Serebristaja. 74°19' S, 66°48' E. A rock outcrop of some sort in exactly the same coordinates as Wilson Bluff, at the S end of the Lambert Glacier. Named by the Russians, the odds are that it is the Russian name for Wilson Bluff.

Holmy Sergeeva. 82°22' S, 164°28' E. A group of hills NE of Mount Christchurch, in the Queen Alexandra Range, on the W side of the Ross Ice Shelf. Named by the Russians.

Zaliv Sergeja Kameneva *see* **Kamenev Bight**

Gora Sergeja Vavilova *see* **Mount Newton**

Gora Sergienko. 80°38' S, 29°24' W. A rock outcrop of some sort in the S part of the Haskard Highlands, in the W part of the Shackleton Range. Named by the Russians, it may well be their name for Guyatt Ridge.

Gora Podlëdnaja Serlapova. 74°30' S, 52°00' E. An isolated nunatak in Mac. Robertson Land. Named by the Russians.

Serlin Spur. 75°04' S, 134°42' W. A narrow, mostly snow-covered spur, 6 km S of Bowyer Butte, in Marie Byrd Land, it extends eastward from the divide between Johnson Glacier and Venzke Glacier, and intrudes into the upper part of the latter glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Ronald C. Serlin, ionosphere physicist at Siple Station in 1969-70.

Vulcano di Fango Sernio. 60°52' S, 56°28' W. A submarine mud volcano, with an area of about 239 sq km, rising to a height of about 185 m from the ocean floor, about 1990 m below the sea, W of Elephant Island, in the South Shetlands. Discovered from the *Explora*, during Project BSR, 2003-04. The name was suggested by the female leader of the project (*see* **Monte Cjavals**), after Mt. Sernio, in a region of Italy close to where she came from. The Italians accepted the name on Dec. 6, 2007.

Ostrov Serp. 66°19' S, 110°24' E. An island in the Windmill Islands, on the Budd Coast. Named by the Russians. Actually, this is the Russian name for either Hollin Island or Midgley Island, probably Midgley.

Ozero Serp. 71°59' S, 67°06' E. A lake in the Prince Charles Mountains. Named by the Russians.

Serpan Peak. 83°34' S, 54°50' W. A small peak, rising to 1445 m, it surmounts Washington Escarpment just W of Rivas Peaks, in the Neptune Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1965, for Robert D. Serpan, USGS aerologist with the Neptune Range field party in 1963-64. At that time the coordinates were plotted in 83°35' S, 54°34' W, but by 1968 they had been corrected by USGS. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Serpent Nunatak. 69°28' S, 71°00' W. A nunatak shaped like a reverse "S," rising to about 750 m just W of Tufts Pass, in the Nichols Snowfield, in the W part of Alexander Island. Surveyed by BAS from 1968 on. Named descriptively (for its shape) by UK-APC on Dec. 8, 1977, also in association with Lizard Nunatak to the SW. It appears in the 1980 British gazetteer. US-ACAN accepted the name, but with the coordinates of 69°28' S, 70°55' W.

Cerro Serrano *see* **Mount Nemesis**

Isla Serrano *see* **Lavoisier Island**

Punta Serrano. 62°28' S, 59°42' W. A point about 1.5 km SSW of Canto Point, on the W coast of Discovery Bay, on the N coast of Greenwich Island, in the South Shetlands. Named by ChilAE 1946-47 as Punta Cirujano Serrano (i.e., "Surgeon Serrano point"), for Lt. Fernando Serrano Reinella (*see* **Lavoisier Island**). However, since 1951, in order to avoid the use of compound names in Antarctica, the Chileans have used the abbreviated form.

Cabo Serrat. 65°26' S, 64°01' W. A high cape about 5 km SE of Cape Pérez, on the N coast of Beascochea Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for Javier Serrat (*see* **Serrat Glacier**). The Argentines call it Cabo Vázquez.

Serrat Glacier. 70°24' S, 161°04' E. A glacier, 16 km long, it flows N through the middle of the Kavrayskiy Hills, into the W side of Rennick Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Javier Serrat, meteorologist from the University of Chile, and of the Instituto Antártico Chileno, who, while part of ChilAE 1967-68, worked at electrical engineering at McMurdo.

Serrated Island *see* **Sierra Island**

Punta Serrucho *see* **Punta Pisano**

Services Glacier *see* **Sultan Glacier**

Cape Seryj. 66°07' S, 100°37' E. In the Bunger Hills. Charted by SovAE 1956, and named by them as Mys Seryj. ANCA translated it as Cape Seryj.

Mys Seryj *see* **Cape Seryj**

Gora Seryj Bok *see* **Marsh Nunatak**

Sessbreen. 72°04' S, 2°43' E. A glacier in the area of Troll Station, in the N part of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with Jutulsessen Mountain (the name means "the seat glacier."

Sesseggen. 72°02' S, 2°43' E. A ridge in the area of Troll Station, in the N part of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with Jutulsessen Mountain. Name means "the seat ridge."

Sessile hydrozoans. They live on the sea bed near the coasts (*see* **Fauna**).

Sessrumnir Valley. 77°37' S, 160°52' E. A high, mainly ice-free valley E of Mount Freya and Koenig Valley, in the Asgard Range of Victoria Land. Graeme Claridge (q.v.) suggested the name, for Sessrumnir, the palace of the goddess Freya in Norse mythology. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Sessums Glacier. 72°00' S, 100°33' W. Flows into the head of Henry Inlet, on the N side of Thurston island. Named by US-ACAN in 2003, for Lt. Cdr. (later Capt.) Walter Maurice Sessums (b. March 9, 1920, La. d. March 1970), helicopter pilot in the eastern Group during OpHJ 1946-47. He flew the very first helo in Antarctica. He had enlisted in the U.S. Marine Corps on March 30, 1939. He was later skipper of the *Boxer* (not in Antarctic waters).

Sestrimo Glacier. 63°30' S, 58°08' W. A glacier, 11 km long and 4 km wide, E of Mount d'Urville, on Trinity Peninsula, it flows northward to enter Bransfield Strait, at Lafond Bay. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Sestrimo, in southern Bulgaria.

Setenuten *see* **Setenuten Peak**

Setenuten Peak. 72°03' S, 4°45' E. A rock peak, rising to 2745 m, 1.5 km S of Petrellfjellet, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Setenuten (i.e., "the seat peak"), due to its shape. US-ACAN accepted the name Setenuten Peak in 1966.

The *Setter*. There were at least 8 whale catchers with this name. *Setter I* and *Setter II* (both 599 tons, 173 feet long, and built by Inglis of Glasgow, being launched in 1948), *Setter III*, and *Setter IV* (both 586 tons, launched in 1949), Setter V (540 tons, launched in 1949) etc., all owned by Rupert Trouton's United Whalers Company, of London, and which accompanied the *Balaena* to Antarctic whaling waters in the 1940s and 1950s. *Setter I* and *Setter II* both caught for the *Balaena* in 1948-49, and the *Setter II* was catching for the *Balaena* every season from then until 1958-59, the last season as a tow vessel only. In 1959 *Setter II* was laid up in Norway, and in 1961 sold for scrap. However, she was saved from the scrapyard by Salvesen's, who bought her and renamed her the *Southern Springer*, and she was in Antarctic waters for one last season, 1961-62, catching for the *Southern Harvester*. She was laid up again in 1962, and in April 1964 sold for scrap. Her end came in Denmark, in 1965. *Setter I* was bought by Salvesen's in 1960, and renamed the *Southern Setter*. She caught for the *Southern Harvester* in 1960-61, 1961-62, and 1962-63, and was then laid up at Melsomvik, Norway. In 1967 she was sold to Hallbjorn Hareide, and renamed *Hadarfisk*, being resold in 1972 to Jan Johansen, and renamed *Harjan*. On March 13, 1983, she was sunk off Skjervøy, Troms.

The *Settsu Maru*. A 9500-ton Japanese refrigeration whaling ship, in Antarctic waters in the 1952-53 season. On March 7, 1953, she got stuck in the ice, and, after a 4-day battle to save her, and with her engine room flooded, she was abandoned, with 4000 tons of whale meat and much fuel oil and equipment. This was a bad season, in general, for the Japanese whaling fleet, and this incident just added to it.

Seue Peaks. 67°19' S, 66°55' W. Peaks rising to about 1500 m between Bentley Crag and Mount Rendu, or, to put it another way, between Brückner Glacier and Antevs Glacier, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956-57, and from ground surveys conducted by FIDS between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Christian Martini de Seue (1841-1895), 19th-century Norwegian pioneer glaciologist. US-ACAN accepted the name in 1965.

Sevar Point. 62°40' S, 61°09' W. A point, forming the E side of the entrance to Raskuporis Cove, about 2 km SE of Devils Point, 2.8 km W of Nikopol Point, and 2.7 km NE of Long Rock, on the S coast of Byers Peninsula, Livingston Island, on Morton Strait, in the South Shetlands. Mapped by the British in 1968, and by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for Khan Sevar of Bulgaria, 738-54.

Peak Seven. 69°41' S, 64°42' E. Also known as West Nunatak. A peak, rising to 2182 m, 8 km WNW of Summers Peak, in the Stinear Nunataks of Mac. Robertson Land. Discovered by Bob Dovers and his 1954 ANARE Southern Party. This was their farthest south (their code name for that achievement was "seven"). Named by ANCA. US-ACAN accepted the name in 1961.

Seven Bay *see* **Adams Fjord**

Seven Buttresses. 63°36' S, 57°10' W. A series of 7 rock buttresses, or cliffs, rising to 150 m (the British say about 300 m), and separated by narrow icefalls, they extend for 6 km along the W side of Tabarin Peninsula (the E extremity of Trinity Peninsula), on the E side of Duse Bay. Probably discovered by Dr. J. Gunnar Andersson's party during SwedAE 1901-04. Surveyed by Fids from Base D in 1945-46, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952.

17 de Agosto *see* **Diecisiete de Agosto**

70 Islets. 62°14' S, 59°01' W. In the W entrance to Fildes Strait, in the South Shetlands. Surveyed and named collectively by personnel on the *Discovery II* in 1934-35. There were 3 of these islets — what is now Dart Island, and the 2 islands to the S and E of it. In other words, there were not 70 islets in the group — the name referred to the height. At least 2 of the islets were over 70 feet high. On March 2, 1961 UK-APC did away with the name 70 Islets, in order to remove this name confusion (people were looking for 70 islets and not finding them). They named the largest of the islets as Dart Island.

76th Parallel Escarpment *see* **Usas Escarpment**

Severcevtoppen *see* **Mount Severtsev**

Gora Severcova *see* **Mount Severtsev**

Gora Severgina. 83°51' S, 57°13' W. A nunatak, just SW of Heiser Ridge, in the SW part of the Neptune Range, in the Pensacola Mountains. Named by the Russians.

Severinghaus Glacier. 78°40' S, 85°15' W. Flows westward along the N side of Mount Strybing into Bender Glacier, in the S part of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, for Jeffrey P. Severinghaus, of the University of Rhode Island Graduate School of Oceanography, a USAP researcher from 1996 on the history of the atmosphere.

Lednik Severnyj. 72°42' S, 68°22' E. A glacier, E of the Barkell Platform, on the N end of the Mawson Escarpment. Named by the Russians.

Severnyj Holm *see* **Foster Island**

Mount Severtsev. 71°43' S, 12°37' E. Rising to 2540 m, 3 km NE of Pinegin Peak, between Svarthausane Crags and Isdalesegga Ridge, in the Südliche Petermann Range of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39, and first plotted from these photos. Mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the USSR in 1966, as Gora Severtseva (or Gora Severcova), for zoologist, geographer, and explorer Nikolay Alekseevich Severtsev (1827-1885). US-ACAN accepted the name Mount Severtsev in 1970. The Norwegians call it Severcevtoppen.

Gora Severtseva *see* **Mount Severtsev**

Sevier Nunatak. 71°22' S, 70°15' W. Rising to about 1000 m, SE of Richter Peaks, at the S end of the Walton Mountains, in the W part of Alexander Island, overlooking Wilkins Sound. Named by US-ACAN for Lt. Cdr. Moses T. Sevier, USN, VX-6 assistant supply officer during OpDF II (i.e., 1956-57) and OpDF III (i.e., 1957-58). He was assistant chief of staff for supply and logistics, U.S. Naval Support Force, Antarctica, during OpDF 69 (i.e., 1968-69) and OpDF 70 (i.e., 1969-70). UK-APC accepted the name on June 11, 1980.

[1]**The *Sevilla***. A former Hamburg-Amerika

Line passenger ship built in 1900 by John Priestman & Co., of Sunderland, she was bought by Salvesen's Polar Whaling Company, and converted into a 7022-ton, 397-foot whaling factory ship at Smith's Dock, in Middlesbrough in 1922. With a crew of 155, and capable of 10 knots, she first operated in the South Shetlands and off Graham Land in 1922-23 (Capt. Thomas Sinclair). That season she had black stowaways from Cape Verde. She was back in 1923-24 (Søren Beckmann was one of the whale catcher skippers that season), 1924-25, and 1925-26. In 1926-27 she was whaling in the South Orkneys, as well as the South Shetlands and Graham Land. She was back in 1927-28 (when she got as far south as 64°S) and again in 1928-29 (Hans Halvorsen skipper on both occasions). The whale catcher *Silva* caught for her that season. In 1929, because she had no stern slipway, and was therefore not modern enough for pelagic whaling, she was sold to the Sevilla Company (a company formed in Tønsberg in 1929, by Waalman & Bugge, in order to buy the ship from Salvesen's), and continued pelagic whaling off the South Shetlands and South Orkneys in 1929-30. In 1930 she was sold to the Polar Whaling Company, a London subsidiary of the Polhavet Company, of Tønsberg, Norway, and was back in Antarctic waters, whaling pelagically, for the 1930-31 season. In 1931 she was sold to the Interessantskapet (principals: Anders Jahre and Gustav B. Bull). Also in 1931 Salvesen's bought out the Sevilla Company, whose affiliates were the Sevilla Whaling Company — in the UK — and the Polar Whaling Company (formerly belonging to Polhavet), also now of the UK.

[2]**The *Sevilla*** *see* **The *New Sevilla***

Sevilla Rocks. 61°29' S, 23°54' W. A group of rocks reported by Capt. Hans Halvorsen, of the *Sevilla*, in 1928. They do not exist.

Sevlievski Peak. 62°58' S, 62°29' W. Rising to 1740 m, 1.4 km S of Drinov Peak, and 600 m NE of Slatina Peak, it overlooks Ovech Glacier to the E and Chuprene Glacier to the SW, in the Imeon Range of Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for Miroslav Sevlievski (b. 1965), who took part in BulgAE 2003-04.

Sevtopolis Peak. 62°28' S, 59°53' W. An ice-covered peak rising to 300 m in Dryanovo Heights, 3.2 km WSW of Mount Plymouth, 3.3 km SE of Crutch Peaks, and 2.5 km N of Lloyd Hill, on Greenwich Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005 for the ancient Thracian capital of Sevtopolis, near the present-day Bulgarian city of Kazanlak.

Monte(s) Seward *see* **Seward Mountains**

Seward Mountains. 72°31' S, 66°04' W. A group of isolated mountains, rising to 1525 m (the British say about 1350 m), 16 km ESE of Buttress Nunataks, and 16 km E of George VI Sound, which these mountains overlook on the W coast of Palmer Land. Discovered and roughly surveyed from the ground in Oct. 1936, by BGLE 1934-37, and named by Rymill for paleobotanist Sir Albert Charles Seward (1863-1941), professor of botany at Cambridge from 1906 to 1936. It appears on Rymill's 1938 map of that expedition, and also on Stephenson's 1940 map of the same expedition. The feature appears as Seward Nunataks on a 1948 USAF chart, and as Monte Seward on an Argentine chart of 1949. UK-APC accepted the name Seward Mountains on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer. In those days it was plotted in 72°26' S, 66°15' W. Re-plotted from USN air photos taken between 1966 and 1969, and from ground surveys conducted by BAS personnel from Fossil Bluff in 1974-75, it appears with the new coordinates in the 1977 British gazetteer, and on the 1979 USGS sketch map of the N part of Palmer Land. The Argentines and Chileans both call this feature Montes Seward.

Seward Nunataks *see* **Seward Mountains**

The Sewing Machine *see* **Sewing-Machine Needles**

Sewing-Machine Needles. 62°58' S, 60°30' W. Three prominent rock needles in water, the highest rising to 45 m above sea level, close SE of Rancho Point, Deception Island, in the South Shetlands. Originally it was a conspicuous natural arch, and was known to early 19th-century sealers in the area. It was named Symaskinen (i.e., "the sewing-machine") by whalers in the period subsequent to 1911. It appears as such on charts and text references in 1929 and 1934. M.C. Lester shows it as Sewing-Machine Rock on his map of 1920-22, during the British Imperial Antarctic Expedition, and, Bagshawe refers to it the same way in 1939. An earthquake on Jan. 4, 1925, caused the arch to collapse. It was surveyed by ChilAE 1946-47, and appears on their 1947 chart as Islotes Mohai, named after the statues on Easter Island (i.e., it is a variation of the spelling "moai"—*see* **Cerro Moai** and **Punta Rapa Nui**). There is a 1947 British reference to it as The Sewing Machine. It was re-surveyed by ArgAE 1948-49, and appears on their 1949 chart as Rocas Ministro Ezcurra, named for Pedro de Ezcurra (*see* **Ezcurra Inlet**). It appears on a 1953 Argentine chart as Rocas Ezcurra, but the name accepted by the Argentine gazetteer of 1970 was Rocas Ministro Ezcurra. It was re-surveyed by FIDS in 1953-54. UK-APC accepted the name Sweing-Nachine Needles on Sept. 4, 1957, and US-ACAN followed suit in 1963. The name Rocas Mohai appears on a 1962 Chilean chart, and that was the name accepted by the 1974 Chilean gazetteer.

Sewing-Machine Rock *see* **Sewing-Machine Needles**

Seymore, Frederick *see* **USEE 1838-42**

Cabo Seymour *see* **Seymour Island**

Cap Seymour *see* [2]**Penguin Point, Seymour Island**

Cape Seymour *see* **Seymour Island**

Île Seymour *see* **Seymour Island**

Isla Seymour *see* **Seymour Island**

Kap Seymour *see* **Seymour Island**

Seymour Insel *see* **Seymour Island**

Seymour Island. 64°17' S, 56°45' W. An island, 21 km long, and between 3 and 8 km wide, 1.5 km NE of Snow Hill Island, at the S margin of Erebus and Terror Gulf, and E of James Ross Island (separated from that island by Admiralty Sound), off the coast of the NE tip of the Antarctic Peninsula, it is sheltered and consequently receives little snow, and is free of permanent ice. It is essentially composed of two mountainous masses separated by a deep transverse break crossing the island from coast to coast at sea level. The NE part of the island shows regular relief, while the SW part is lower and more broken. Ross discovered the NE end of it on Jan. 6, 1843, described it as the NE headland of Admiralty Sound, and named it Cape Seymour, for Rear Admiral Sir George Francis Seymour (1787-1870), RN, a lord of the Admiralty, 1841-44. It appears as such on Ross's charts of 1944 and 1847, and (as Cabo Seymour) on an 1861 Spanish chart. Carl Anton Larsen roughly charted it in 1892-93 and 1893-94, and determined it to be an island. Landings were made on Dec. 2, 1892 and again on Nov. 18, 1893, when Larsen's party found the first ever Antarctic fossils here (*see* **Fossils**), even though there is no vegetation. Oddly, despite its insular status being known, it appears on Larsen's 1894 chart as Cap Seymour, a name that was translated on an 1894 British map as Seymour Point. However, on Friederichsen's 1895 German map it appears correctly, as Seymour Insel, and on Dr. Donald's 1896 map (reflecting DWE 1892-93), as Seymore Island. In 1902-03 it was further charted by SwedAE 1901-04, who also discovered a large number of fossils here. On Dr. Gunnar Andersson's map of the expedition, it appears as Kap Seymour, but on most of Nordenskjöld's maps it appears as Seymour Island (or some translated name thereof). On Sobral's 1904 Argentine map it appears as Isla Saymour, but on Irízar's Argentine map of 1907 as Isla Seymour. It occasionally still appeared as Cape Seymour (for example on a 1916 British chart), but on a 1921 British chart it appears as Seymour Island. It was surveyed by Fids from Base D between 1945 and 1947. US-ACAN accepted the name Seymour Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. FIDS studied the island in 1953-54. ArgAE 1956-57 mapped most of the island, calling it Isla Vicecomodore Marambio (*see* **Vicecomodoro Marambio Station**, which was established here in 1969), and that name was accepted by the Argentine gazetteer of 1970. However, since at least the mid-1970s the Argentines have been calling it Isla Marambio. In 1964 and 1969 it was photographed aerially by USN, and in that latter year also from a helicopter off the *Endurance*. The 1974 Chilean gazetteer accepted the name Isla Seymour. In 1979 BAS re-photographed it aerially, and in 1983 the Institute of Polar Studies (at Ohio State University) mapped it from these photos, making several changes in the coastal outline.

Seymour Island Expedition. 1982. The first major US-supported field program along the NE

flank of the Antarctic Peninsula. They went to the James Ross Island area, including James Ross Island itself, Cockburn Island, Seymour Island, Vega Island, and, to some extent, King George Island in the South Shetlands. It was also the first time a U.S. Coast Guard icebreaker was used to support a geological field program. **Feb. 4, 1982**: The *Glacier* left Punta Arenas, in Chile, and made a stop later at Cape Melville, on King George Island, to visit a geological sequence discovered during the 1980-81 season by a Polish party. They obtained samples here for future study. **Feb. 19, 1982**: In the morning, the *Glacier* arrived at Seymour Island. Helicopters took personnel and equipment to the main campsite on the S side of Cross Valley. A second, smaller camp was established on the S side of the island, to study cretaceous deposits there. It was a 19-day field season, and only 3 of these days were lost due to storms. **March 7, 1982**: The *Glacier* returned, after having carried out an on-board marine geology program in Bransfield Strait, directed by John B. Anderson of Rice University. Equipment and samples were brought back to the ship from Seymour Island by helicopter, and a reconnaissance party was flown to the N end of Snow Hill Island that same day. A storm soon brought them all back to the ship. **March 9, 1982**: Several short helo trips were made to Cockburn Island, Vega Island, and James Ross Island. The expedition was a success. These are some of the achievements: 1. The first discovery of Tertiary reptiles (lizards) in Antarctica; 2. The first discovery of bony fishes (holosteans) from the Cretaceous of Antarctica; 3. The first discovery of a Tertiary coal seam in Antarctica; 4. The discovery of several large skeletons of pleiosaurs; 5. The discovery of skeletal remains (partial skull) of a mosasaur. The expedition, supported by the NSF, comprised: William J. Zinsmeister, Thomas Devries, Carlos Macellari, Brian Huber, Michael O. Woodburne, William Daily, Rosemary Askin, Farley Fleming, Sankar Chatterjee, and Gary White. There were follow-up expeditions in 1984, 1985, and 1986-87.

Seymour Point *see* **Seymour Island**

Seymourinsel *see* **Seymour Island**

Sopka Sfinks *see* **Sfinks Hill**

Sfinks Hill. 66°16' S, 100°43' E. In the Bunger Hills. Charted by SovAE 1956, and named by them as Sopka Sfinks (i.e., Sphinx Hill"). ANCA translated it as Sfinks Hill.

Sfinksen *see* **Sphinx Mountain**

Sfinksen Nunatak. 72°18' S, 3°47' W. A nunatak, 1.5 km S of Pyramiden Nunatak, at the SW end of Ahlmann Ridge, on the N side of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NBSAE 1949-52, and from air photos taken during the same expedition, and named by them as Sfinksen (i.e., "the sphinx"). US-ACAN accepted the name Sfinksen Nunatak in 1966.

Sfinksskolten *see* **Sphinxkopf Peak**

Shabica Glacier. 70°21' S, 62°45' W. A N tributary to Clifford Glacier, it flows SE into that glacier, joining it near its terminus just E of Mount Tenniel, W of Smith Inlet, on the Wilkins Coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Stephen Vale Shabica (b. April 16, 1945, Newark, NJ), oceanographer, who, just after graduating from Brown University, wintered over as USARP scientific leader at Palmer Station in 1970, while doing research for his doctorate at Oregon State. UK-APC accepted the name on July 21, 1976.

Shabla Knoll. 62°38' S, 59°51' W. A peak rising to over 400 m in Delchev Ridge, 2.3 km ENE of Elena Peak, and 3 km SW of Renier Point, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for the town of Shabla, and the nearby Shabla Point, on the Bulgarian coast of the Black Sea.

Shabtaie Ice Ridge. 80°30' S, 140°00' W. An ice ridge between the MacAyeal Ice Stream and the Bindschadler Ice Stream, at the point where the Shirase Coast and the Siple Coast meet, in Marie Byrd Land. Named by US-ACAN in 2003, for Sion Shabtaie, of the Geophysical and Polar Research Center, at the University of Wisconsin, at Madison, who, with Charles Bentley in the mid 1980s, made a glaciological survey of the nearby Mercer Ice Stream, Whillans Ice Stream, and Kamb Ice Stream, and the intervening ice ridges.

The *Shackleton*. Known informally as the *Shack*. **Aug. 1955**: The British government bought the 590-ton, 200-foot-long Norwegian ship *Arendal*, built only that year, and renamed her after Sir Ernest Shackleton. Her purpose was to be the command ship for BCTAE 1955-58, and also to be a FIDS relief ship. **Dec. 29, 1955**: The *Shackleton* left Southampton at a full 12 knots, under the command of Capt. Bill Johnston, bound for Port Stanley. **May 26, 1956**: The *Shackleton* arrived back in Southampton, with 16 FIDS aboard, after a tour of 20,000 miles. **Oct. 1, 1956**: The *Shackleton* left Southampton, bound for Port Stanley, under the command of Captain Norman Brown. 2nd officer that season was Adam J. Kerr. 28 FIDS were aboard. **Jan. 28, 1957**: The *Shackleton* at Signy Island. **June 5, 1957**: The *Shackleton* returned to Southampton. **Oct. 1, 1957**: The *Shackleton* left Southampton, bound for Port Stanley, under Capt. Brown. Asian flu (some say it was Spanish flu) broke out on board, and the Fids had to take over the running of the ship. Fids aboard included: Derek Blundell (paleomagnetic geologist; summer only), Don Hawke (geologist; summer only), Robin Perry, Mike Stansbury, John Bibby, David Price, Alan Cameron, Dr. John Graham, Keith Hoskins, Tink Bell, and Alan Sharman. After the Bay of Biscay, they were due to have stopped at Dakar, but, being a plague ship, they made direct for Montevideo. **Oct. 25, 1957**: Jim Franks steered the *Shackleton* into Montevideo. **Nov. 3, 1957**: At Montevideo, Professor Cragg joined the ship, as did Llewellyn Chanter (reporter with the *Daily Telegraph*), and Norman Leppard. **Nov. 6, 1957**: The *Shackleton* arrived at Port Stanley. **Nov. 26, 1957**: After relieving Signy Island Station, the *Shackleton* got trapped in ice 20 miles from the South Orkneys. **Nov. 30, 1957**: In the early morning the *Shackleton* was holed 6 feet below the water line when she struck an iceberg in the Antarctic. The gash, in the lower hold, was 2 feet long and 3 inches wide. They angled the ship, and started pumping water out, and jettisoning what they could to make the ship lighter. The South Georgia whaler *Southern Lily* was first on the scene after the distress calls (24 hours later), but then the *Protector* arrived 4 days later, and escorted her to South Georgia. The passengers were taken on board the *Protector*. **Dec. 5, 1957**: The *Shackleton* arrived at Stromness, South Georgia, for repairs. **Jan. 19, 1958**: The *Shackleton* and the *John Biscoe* rendezvous'd in the Lemaire Channel. **Early 1958**: There was a major disagreement between Capt. Brown and Sir Edwin Arrowsmith, the governor of the Falklands, and Brown resigned his command of the *Shackleton* in April 1958, leaving the vessel under the temporary command of 1st officer, T. Flack. The Colonial Office said he quit due to "domestic reasons," but Capt. Brown said he quit because the *Shack* was totally inadequate, and at times, even in good weather, couldn't be steered. He also said the ship was under-equipped and not strong enough. **May 14, 1958**: The *Shackleton* arrived back in Southampton. **June 1959**: The *Shackleton* arrived back in Southampton. **Oct. 5, 1959**: The *Shackleton* sailed from Southampton, with 13 FIDS aboard. **Sept. 27, 1960**: The *Shackleton* left Southampton, under the command of Capt. David Turnbull. **Feb. 8, 1961**: The *Shackleton* arrived at Hope Bay. **Oct. 3, 1961**: The *Shackleton* left Southampton, under Capt. Turnbull. **Oct. 1962**: The *Shackleton* left Southampton, under Capt. Turnbull. **Oct. 1963**: The *Shackleton* left Southampton under Capt. Turnbull. **Oct. 1964**: The *Shackleton* left Southampton, under Capt. Turnbull. **Oct. 5, 1965**: The *Shackleton* left Southampton, under Capt. Turnbull. In 1967 and 1969 she helped rescue expeditioners from Deception Island, when the eruptions took place there. **1968**: The *Shackleton* became a royal research ship. **1969**: Turnbull left the *Shackleton*. **1971**: The *Shackleton* was rebuilt. **1973-74**: She was in the Weddell Sea, and also surveying the Scotia Sea. Skipper was George H. Selby-Smith. **1975-76**: Under skipper Philip Warne, she took down a NERC University of Birmingham party to the South Orkneys in 1975-76. **Feb. 4, 1976**: South of the Falklands, the Argentine ship *Almirante Storni* opened fire on the *Shackleton* while (and not because) Shackleton's son was aboard. **1977-78**: The University of Birmingham sent another party on the *Shackleton*. Selby-Smith was still skipper. She was back in 1980-81, with another University of Birmingham party studying geophysics, in the Weddell Sea. **1983**: The "*Shack*" was replaced as a NERC ship by the *Charles Darwin*, and was renamed the *Geotek Beta*. **1984**: She was renamed *Profiler*. **1992**: She was taken out of South Atlantic service, and

became a seismic survey vessel. That year her name was changed to *Sea Profiler*.

Cadena Shackleton *see* **Shackleton Range**

Isla Shackleton *see* **Clarence Island**

Montes Shackleton *see* **Shackleton Range**

Mount Shackleton. 65°12' S, 63°56' W. Rising to 1465 m (the British say about 1300 m), with perpendicular cliffs facing W, about 3.5 km E of Chaigneau Peak, between Leay Glacier and Wiggins Glacier, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly mapped in 1909, by FrAE 1908-10, and provisionally named by Charcot as Mont du Milieu (i.e., "middle mount"). It appears as such on Charcot's 1911 map, and, on an English language version of that map the same year, as both Middle Mount and Middle Mountain. However, on Charcot's 1912 map it appears as Pic Shackleton, named for Sir Ernest Shackleton. On a 1943 U.S. Hydrographic Office chart of 1943, it appears as Shackleton Peak, and on a 1946 Argentine chart of 1946 it appears as Pico Shakleton (sic). It was photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Mount Shackleton on July 7, 1959, and US-ACAN followed suit that year. It appears as such on a 1960 British chart. It appears on a Chilean chart of 1962 as Pico Shackleton, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines call it the same thing.

Pic Shackleton *see* **Mount Shackleton**

Pico Shackleton *see* **Mount Shackleton**

Shackleton, Ernest Henry. b. Feb. 15, 1874, Kilkea, co. Kildare, Ireland, son of Henry Shackleton, an Irish doctor who went to Dublin in 1880, and to Sydenham (later a part of London) in 1884. The explorer's mother was Henrietta Letitia Sophia Gavan. Educated at Dulwich College, at 16 Shackles (as he was sometimes known, or Shackle; never Ernie, for example) entered the Merchant Navy, and was sub lieutenant, RNR, on BNAE 1901-04, and one of the leaders under Scott. He was 27 then, and in charge of seawater analysis. He also edited the *South Polar Times*, and went up in a balloon. On Dec. 30, 1902 he, Scott, and Wilson set a new southing record of 82°16' 33," and Shackleton got scurvy. He was in terrible condition when he made it back to base, was sent home on the relief ship *Morning* on March 2, 1903, and was replaced by George Mulock. On April 9, 1904 he married Emily Mary Dorman, and he became secretary and treasurer of the Scottish Royal Geographical Society. In 1906 he stood as a Unionist for a Dundee seat, and lost. His BNAE "failure" so irked him that he got his own expedition together, BAE 1907-09, went south on the *Nimrod*, and pioneered the Beardmore Glacier route to the Pole, getting to within 97 miles of 90°S. It took a special kind of leader to turn back at this point, rather than to press on, but he knew that he and his men would never make it back if they did get to the Pole. He later told his wife that he would rather be a live donkey than a dead hero. As it was, he and his 3 companions barely made it back to Ross Island. He was knighted on Dec. 4, 1909, on his return to England, for pushing the Antarctic frontier much farther than anyone had pushed it before, except perhaps Captain Cook. He set out again in 1914 on BITE 1914-17, in order to cross the continent on foot. His ship, the *Endurance*, got caught in the ice before he ever set foot on land. There followed the most amazing sequence of events (see the notes on the expedition, **British Imperial Trans-antarctic Expedition**) which make one revise one's concepts about the limits of human endurance and determination, the physical and mental barriers imposed by the human species upon themselves. "The Boss," as he was known to his men, got a fourth expedition together, the *Quest*, in 1921-22, during which he died on Jan. 5, 1922, at Grytviken, South Georgia, they say of heart failure, brought on by angina pectoris, which is hardly surprising, considering what he had gone through on his expeditions. But he really died of old age. He was 47, and totally worn out. His last words, to his doctor, were, "What do you want me to give up now?" His body was taken to Montevideo on the *Professor Gruvel*, but his widow expressed a desire that he be buried on South Georgia, so his body was taken back there on the Southern Whaling and Sealing Company's ship *Woodville*. He was buried on South Georgia, on March 5, 1922. He wrote two books (*see* the Bibliography). As the world entered the 21st century, Scott was by far the most famous of all the Antarctic explorers, with Byrd second, Amundsen third, and Shackleton fourth. Something like that. Anyway, a determined effort on the part of book writers and movie makers shook this ranking up completely, and Shackleton rapidly took his (rightful) place as the king of the Antarctic explorers. Scott and the others simply disappeared in the blizzard of Shackleton press. There is only one historical Antarctic explorer known by name now to the man on the street, and that is Shackleton.

Shackleton Base. 77°59' S, 37°09' W. Temporary UK research station built at Vahsel Bay, on the Filchner Ice Shelf. Construction began on Jan. 30, 1956, by Ken Blaiklock and his advance party of BCTAE 1955-58. It was that expedition's base on the Weddell Sea, Blaiklock and 7 other men (Ralph Lenton, Tony Stewart, Peter Jeffries, Hannes la Grange, Roy Homard, Taffy Williams, and Rainer Goldsmith) wintering-over there in 1956. It was an exceptionally difficult winter. The ship had to leave because of the ice, but she left 300 tons of stores on the bay ice, and the 8 men raced against the clock to get them to their base, which they were building. Then a storm came up and blew away much of the supplies. This left very little oil, so there was no heat, no washing. The base was closed on Dec. 27, 1957. Anthea Arnold wrote a book about it, called *Eight Men in a Crate* (2007). Incidentally, the lads had only a small radio, and they had to get news of their predicament out to someone. They kept tapping away, in Morse, and, rather wondrously, the very, very weak signal was picked up by Gene Donnelly, FIDS radio operator at Horsehoe Island. He transmitted the message on to London. Incidentally, in Vivian Fuchs' books on BCTAE, *The Crossing of Antarctica*, and *Antarctic Adventure*, he mentions that Donnelly was a good friend of Ralph Lenton's. The fact, is, Donnelly had never even met Lenton.

Shackleton Canyon. 75°15' S, 166°00' W. A submarine feature of the Ross Sea, perhaps part of the Ross Canyon. Further exploration of this group of features will be made to determine the exact nature of what lies under the sea around this point.

Shackleton Coast. 82°00' S, 162°00' E. That portion of the coast along the W side of the Ross Ice Shelf between Cape Selborne and Airdrop Peak, at the E side of the Beardmore Glacier. Named by NZ-APC in 1961, for Sir Ernest Shackleton. US-ACAN accepted the name in 1964.

Shackleton Fracture Zone. 60°00' S, 60°00' W. An undersea feature found on the Pacific-Antarctic sheet of the Circum-Pacific Project's charts. It actually covers the area between 59°S and 60°40' S, and between 56°30' W and 61°W. Therefore, the average latitude should be 59°50' S, but it was brought up to 60°in order to include it within the limits of the Antarctic Treaty. Name approved by international agreement, in 1987, and named after Sir Ernest Shackleton.

Shackleton Glacier. 84°35' S, 176°20' W. A major glacier, over 100 km long (perhaps as much as 160 km long), and between 8 and 16 km wide (it is about 20 km wide at its mouth), it flows N from the Polar Plateau in the vicinity of Roberts Massif, approximately along the 175th meridian west, between the Bush Mountains and the Prince Olav Mountains, in the Queen Maud Mountains, to enter the head of the Ross Ice Shelf between Mount Speed and Waldron Spurs. Discovered on the flight of Feb. 29-March 1, 1940, during USAS 1939-41, and named by them as Wade Glacier, for Al Wade. However, with no disrespect to Al Wade, it was thought that such a major feature should be named for an appropriately major figure in Antarctic history, and US-ACAN renamed it Shackleton Glacier in 1947, for Sir Ernest Shackleton. NZ-APC accepted that name.

Shackleton Harbour *see* **Duperré Bay**

Shackleton Ice Shelf. 66°00' S, 100°00' E. An extensive ice shelf, about 400 km long, fronting the coast of Queen Mary Land between Junction Corner (in 94°45' E) and 105°E, and extending about 130 km (the Australians say 170 km) northward (i.e., out to sea) in its W part, and about 60 km in its E part. The W (the New Zealanders say the E) part of it was discovered and mapped by Wilkes on Feb. 21, 1840, and called Termination Land. That name was later changed to Termination Barrier, and then to Termination Ice Tongue. The entire ice shelf was discovered and explored by the *Aurora* party of AAE 1911-14, and renamed by Mawson as the Shackleton Ice Shelf, for Sir Ernest Shackleton (the New Zealanders say that the W portion was explored by the Western Base Party of this expedition). US-ACAN accepted the name in

1953, and NZ-APC followed suit. The extent of the ice shelf was mapped in greater detail in 1955, using air photos taken during OpHJ 1946–47. At that time it was thought that its E end was around the area of the Denman Glacier (in 99°E), but further mapping by SovAE 1956 showed the portion eastward of Scott Glacier to be part of this ice shelf as well, and so its eastern limit was pushed to as far as 105°E.

Shackleton Icefalls. 85°08' S, 164°00' E. Extensive icefalls of the upper Beardmore Glacier, southward of Mount Darwin and Mount Mills. Named by BAE 1910–13 for Sir Ernest Shackleton, the first to pioneer this area. US-ACAN accepted the name in 1966.

Shackleton Inlet. 82°19' S, 164°00' E. About 16 km wide, between Cape Wilson and Cape Lyttelton, this is a Ross Ice Shelf indentation into the Transantarctic Mountains (a re-entrant, as it is called), and receives the ice of the Nimrod Glacier. This is as far south as Scott got in Dec. 1902, and he named it for one of his companions on this trek, Ernest Shackleton (not knighted yet). US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Shackleton Mountain *see* **Shackleton Range**

Shackleton Mountains *see* **Shackleton Range**

Shackleton Peak *see* **Mount Shackleton**

Shackleton Range. 80°30' S, 25°00' W. A range of mountains, rising to 1875 m (in Holmes Summit), and extending in an E-W direction for about 150 km between Slessor Glacier and Recovery Glacier, behind Coats Land, or, to put it another way, from 30°30' W (in Coats Land) to 19°W (in Queen Maud Land, where the Norwegians call it Shackletonkjeda; i.e., the easternmost part of the range is situated in the southwesternmost part of Queen Maud Land). It may well have been seen (should have been seen) in Dec. 1955, by the Argentines as they flew over this area on their Expedición Polar Antártica. Formally, it was discovered aerially on Feb. 6, 1956 by BCTAE. They surveyed the W part (from 30°30' W to 22°20' W) from the ground in Oct. 1957, and named that part of the feature as the Shackleton Range, after Sir Ernest Shackleton. They also referred to it as the Shackleton Mountains. UK-APC accepted that name (Shackleton Range) and situation on July 7, 1959, and US-ACAN followed suit in 1960. Note: Ed Thiel, among others, refers to this W portion in 1958 as the Western Massif, and there is a 1959 Argentine reference to it as Cordón Los Menucos, named after the district in Argentina. On Finn Ronne's map of 1961, various western parts of the range are seen as Menucas Range (sic) (in 80°30' S, 30°00' W) and Rios Mountains (sic) (80°45°S, 30°00' W). The name Cordillera Los Menucos appears on a 1964 Argentine map, and that was the name accepted by the 1970 Argentine gazetteer. However, since 1978, the name Cordillera de los Menucos has been appearing regularly. Yet, on a 1966 Argentine chart, the range appears translated correctly as Cadena Shackleton. The whole range was mapped by USGS in 1974 from USN air photos taken in 1967, and from ground surveys conducted by BAS personnel from Halley Bay Station (supported by U.S. LC-130 Hercs) in 1968–69 and 1969–70. From that point, the name Shackleton Range was extended to include the part in Norwegian-claimed territory. On a 1972 Chilean map it appears as Monte Shackleton. Main features include, from E to W: Otter Highlands, Haskard Hghlands, La Grange Nunataks, Fuchs Dome, Herbert Mountains, Shotton Snowfield, Read Mountains, and Pioneers Escarpment.

Shackleton Station *see* **Shackleton Base**

Shackleton: The Greatest Survival Story of All Time. An exhausting (but, of course, wonderful) 2006 movie, written and directed by Charles Sturridge, and starring Kenneth Branagh as Shackleton before and during his BITE 1914–17. Originally a British TV 4-part mini-series (which explains its length when released on video), the most expensive drama ever mounted by Channel 4 to that time (it cost more than £10 million). Most of it was shot in the Arctic (ice is ice, one supposes). Rest of cast: Phoebe Nicholls (Emily Shackleton, the explorer's wife), Embeth Davidtz (Rosalind Chetwynd, the explorer's mistress), Lorcan Cranitch (Wild), Mark Tandy (Frank, the explorer's brother), Matt Day (Hurley), Eve Best (Eleanor, the explorer's sister), Kevin McNally (Worsley), Celyn Jones (Blackborow), Nigel Whitmey (Bakewell), Mark McGann (Crean), Robert Hardy (Sir James Caird), Pip Torrens (McElroy), Ken Drury (McNish), Nicholas Rowe (Orde-Lees), Rick Warden (Vincent), Christian Steel (Hussey), Chris Larkin (Marston), Ian Mercer (Holness), Nicholas Hewetson (Macklin), Shaun Dooley (Hudson), Jamie Lee (Wordie), Paul Bigley (Green), Elizabeth Spriggs (Dame Janet Stancomb-Wills), Corin Redgrave (Lord Curzon), Rupert Frazer (George V), Bjørn Fløberg (Sørlle), Sven Nordin (Jacobsen), Rolf Arly Lund (Capt. Thoralf).

Shackletonkjeda *see* **Shackleton Range**

Shackleton's Hut. Hard by Home Lake, Cape Royds, on Ross Island, this was the 33 by 19 by 8 foot home of BAE 1907–09, led by Shackleton. The shell went up between Feb. 3 and Feb. 13, 1908, and by March 5, 1908 it was completely finished. 15 men holed up there. Shackleton had his own room, and 7 other rooms had 2 men each. It still stands.

Mount Shadbolt. 76°41' S, 160°28' E. Rising to 2270 m, it is the highest summit in the N part of the Convoy Range, at the N side of the head of Towle Valley, in Victoria Land. Named by VUWAE 1976–77, led by Christopher J. Burgess, after NZ author Maurice Shadbolt. US-ACAN accepted the name in 1993.

Mount Shadow. 71°56' S, 167°30' E. A small peak, close W of (i.e., above) Shadow Bluff, at the junction of Tucker Glacier and Leander Glacier, in the Admiralty Mountains. Climbed in Jan. 1958 by NZGSAE 1957–58, and named by them in association with Shadow Bluff and nearby Mount Midnight. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Shadow Bluff. 71°57' S, 167°38' E. A rock bluff, just W of the McGregor Range, at the junction of Tucker Glacier and Leander Glacier. It is a landmark when sledging on Tucker Glacier, and is nearly always in shadow, hence the name given by NZGSAE 1957–58. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Shafer Peak. 74°01' S, 162°36' E. A prominent peak, rising to 3600 m, 5 km S of Mount Hewson, in the Deep Freeze Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Lt. Cdr. (later Capt.) Willard George Shafer (b. Sept. 6, 1931, Schenectady, NY), who joined the U.S. Navy in Oct. 1954, and who wintered-over as officer-in-charge of the nuclear power plant at McMurdo in 1965. He retired in July 1981.

Shag Crag. 64°54' S, 62°52' W. A basaltic crag rising to 79 m, S of Almirante Brown Station, at Skontorp Cove, Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999, for the blue-eyes shags nesting on the crag's SW face.

[1]Shag Point. 62°09' S, 58°27' W. A promontory and basalt stacks between Arctowski Cove and Halfmoon Cove, Admiralty Bay, King George Island, in the South Shetlands. American ornithologists Wayne Trivelpiece and Nick Volkman were guests of the Poles at Arctowski Station in 1977–78, and they named this feature. The Poles accepted the name officially in 1980.

[2]Shag Point *see* **Duthiers Point**

Shag Rock. 66°00' S, 65°38' W. A rock in water, about 160 m E of Cliff Island, and about 13 km W of Prospect Point, off Holtedahl Bay, on the Graham Coast, on the the W coast of Graham Land. Charted in Feb. 1936, by BGLE 1934–37, who named it for the blue-eyed shag. It appears on a U.S. Hydrographic Office chart of 1947, on a British chart of 1950, and the name was accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the British gazetteer of 1955.

Shagnasty Island. 60°44' S, 45°37' W. A small, rocky, ice-free island, 0.5 km W of Lenton Point, in the N part of Clowes Bay, close off the S coast of Signy Island, in the South Orkneys. Roughly surveyed (but not named) in 1933 by the personnel on the *Discovery II*, it appears on their chart of 1934. Surveyed in 1947 by FIDS, and named by them as Shagnasty Islet because of the state of the island due to the blue-eyes shags living here. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. On July 7, 1959, UK-APC redefined it as Shagnasty island, and US-ACAN followed suit in 1963.

Shagnasty Islet *see* **Shagnasty Island**

Shags. Imperial shags (*Phalacrocorax atriceps*) and Antarctic blue-eyed shags (*Phalacrocorax atriceps bransfieldiensis*) are found in the Antarctic.

Shag's Nest Shallows. A feature at Port Lockroy, named on Andrew Taylor's map of 1948. A UK-APC resolution of May 10, 2006, stated that there was not, and never had been, any move to name this feature officially.

Nunatak Shakirova. 81°31' S, 28°16' W. Due W of Quest Nunatak, in the Whichaway Nunataks, on the S side of Recovery Glacier, in Coats Land. Named by the Russians.

Shaler Cliffs. 80°17' S, 25°29' W. Rock cliffs rising to about 1000 m, 3 km ESE of Charpentier Pyramid, in the N part of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for Nathaniel Southgate Shaler (1841-1906), American paleontologist and glacial geologist. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Shallow Bay. 67°48' S, 67°28' E. A bay, about 8.5 km wide, formed by a recession of limited extent in the ice cliffs just W of Point Williams, on the coast of Mac. Robertson Land. Discovered on Feb. 12, 1931 by BANZARE, and named by Mawson for its unusual depth (shallow waters are rare along this coast). US-ACAN accepted the name in 1947, and ANCA followed suit.

Glaciar Shambles *see* **Shambles Glacier**

Shambles Camp. Scott's camp at the base of the Transantarctic Mountains. He and his four companions left there on Dec. 10, 1911, heading for the Pole. On the way back, they reached it on Feb. 18, 1912. A more official name was Camp 31.

Shambles Glacier. 67°20' S, 68°13' W. A steep and very broken glacier, 6 km long and 10 km wide, it flows E between Mount Bouvier and Mount Mangin, into Stonehouse Bay, on the E side of Adelaide Island. The lower reaches were discovered, surveyed, and roughly mapped in Jan. 1909, by FrAE 1908-10, and it appears on Charcot's map of 1912. The lower reaches were re-surveyed by Fids from Base E in Oct. 1948, and so named by them because of its very prominent hummocks and crevasses. The upper reaches were mapped by FIDS cartographers from air photos taken by RARE 1947-48 and FIDASE in 1956-57. UK-APC accepted the name for the whole glacier on March 31, 1955, and US-ACAN followed suit in 1956. It appears as such on a British chart of 1961. It was further surveyed by Fids from Base T in 1961-62. The Argentines call it Glaciar Shambles.

Shandong Bandao. 69°25' S, 76°14' E. A peninsula in the Larsemann Hills. Named by the Chinese.

Shangri-la. 78°03' S, 163°42' E. A small, secluded valley area (hence the name given by VUWAE 1960-61, after the lost valley of Shangri-la in James Hilton's wonderful novel, *Lost Horizon*, which, in time, became the world's first paperback), completely isolated by mountains, just S of Joyce Glacier and Péwé Peak. US-ACAN accepted the name in 1974. *See also* **Buddha Pass** and **Mount Lama**.

Shangri-La Valley. 67°53' S, 67°24' W. A small, verdant valley, running ENE, on the NE coast of Lagotellerie Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. First noted by Herwil Bryant on a visit here in 1940-41, during USAS 1939-41, and named by him for the rich growths of vegetation he found here (*see* the entry **Shangri-la**, above). UK-APC accepted the name on Jan. 18, 2002.

Shanhaiguan Feng *see* **Clement Hill**

Shanklin Glacier. 84°37' S, 176°40' E. Flows SE from Mount Waterman, into Muck Glacier at a point 8 km W of Ramsey Glacier, in the Hughes Range. Named by US-ACAN in 1966, for CWO David M. Shanklin, U.S. Army Aviation Detachment, which supported the Texas Tech Shackleton Glacier Expedition of 1964-65.

Shannon, Richard Lawrence Vere. b. 1897, Aughrim, co. Galway. He joined the Royal Navy in 1914, after the most astonishingly thorough and prestigious education, fought in World War I, and on Aug. 30, 1919 was promoted from acting lieutenant to lieutenant. He was promoted to lieutenant commander, and bored with peace, retired in 1927. He was then captain of the *William Scoresby*, 1929-30, and, in 1930, moved to South Africa, and joined the Fisheries and Marine Biological Survey, as captain of the new South African research ship *Africana*. During World War II he served on South African ships, minesweeping and intercepting enemy shipping, being highly decorated. From 1950 to 1958 he was skipper of the *Africana II*, and then retired. He died on Oct. 16, 1976, in Cape Town.

Shano, Alex. b. 1890, Newfoundland. A seaman since his teens, he was a deckhand on the *Eagle* in 1944-45, during the 2nd phase of Operation Tabarin.

The *Shantooti*. A 43-foot British steel ketch, skippered by Rich Howarth, which visited the Antarctic Peninsula in 1999-2000. With a crew of four — Rich, Luke, Roger, and Heath — they left Buenos Aires on Jan. 12, 2000, bound for Port Stanley and the Antarctic Peninsula. Their first anchorage was in Deception Island. They visited Vernadsky Station, and went climbing with some of the Ukrainian lads. They also visited Port Lockroy, and then, in mid-March they returned to Ushuaia, via Cape Horn, and sailed up the east coast of Argentina, to Mar del Plata.

Shanty Point. 66°25' S, 65°38' W. A small point within Darbel Bay, close W of the mouth of Cardell Glacier, between that glacier and Phantom Point, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W that same season. So named by UK-APC on July 7, 1959, because, when seen from a distance, a large rectangular boulder on the point has the appearance of a small hut with a chimney. It appears in the 1961 British gazetteer. US-ACAN accepted the name in 1964.

Shapeless Mountain. 77°26' S, 160°24' E. A massive mountain, rising to 2740 m, W of the head of Balham Valley, on the N side of the Upper Wright Glacier, and just to the W of Victoria Valley, overlooking the large area of dry valleys from Wright Valley to Skew Peak, in southern Victoria Land. So named in 1957 by the NZ Northern Survey Party of BCTAE because from almost any direction this feature is shapeless. They set up a survey station on its summit on Dec. 25, 1957. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Shapley Ridge. 86°18' S, 129°10' W. A prominent ridge overlooking Reedy Glacier, it extends E from Cleveland Mesa, and marks the E extremity of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for scientist Alan Horace Shapley (1919-2006), vice chairman of the U.S. National Committee for IGY.

Cabo Sharbonneau *see* **Cape Sharbonneau**

Cape Sharbonneau. 70°52' S, 61°19' W. A rounded, snow-covered headland that juts out into the very S portion of the Larsen Ice Shelf, on the Black Coast, on the E side of Palmer Land, forming the S side of the entrance to Lehrke Inlet. Members of East Base explored this coast in 1940, during USAS 1939-41. They roughly surveyed this feature, but, due to poor visibility at the time, they considered it an island, and named it Sharbonneau Island, for Charles Willie Sharbonneau. It appears as such on a USAAF chart of 1942. The name was also used (in error) for Morency Island on a U.S. Hydrographic Office chart of 1943. Re-defined in 1947 by the Weddell Coast Sledge Party (a joint team of personnel from RARE 1947-48 and Fids from Base E). US-ACAN accepted the name Cape Sharbonneau in 1952, and UK-APC followed suit on Jan. 28, 1953. It appears as such on a 1954 British chart, and in the 1955 British gazetteer. In those days it was plotted in 70°50' S, 61°30' W. It appears on a 1952 Argentine chart as Cabo Sharbonneau, but on one of their 1953 charts as Isla Sharbonneau. The name Cabo Sharbonneau was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. After USN air photos taken between 1966 and 1969, the coordinates were corrected, however it appears on the 1979 USGS sketch map of the N part of Palmer Land plotted in 70°48' S, 61°38' W, and (by error) in the 1982 British gazetteer plotted in 71°52' S, 61°19' W.

Isla Sharbonneau *see* **Morency Island**

Sharbonneau, Charles Willie "Charlie." b. Feb. 19, 1906, Winooski, Vt., son of teamster Edward Charbonneau (sic) and his wife Laura Pecor. For some reason (his father died in 1938 and his mother in 1963, so it wasn't an orphan situation) he and his older brother Frank were put into the Vermont Industrial School (for youthful offenders), at Vergennes, where Charles Willie did kitchen work. He was then fostered out to John Dudley, joined the Army, was stationed at Fort Ethan Allen (very close to his home town) for several years, and married Lillian Mae Jaquish on July 7, 1926, in Essex, Vt. They would have two daughters and a son. By 1930 he was a sergeant, and became the carpenter (but now a corporal) at East Base during USAS 1939-41. Early on the expedition, he'd had enough, and Dick Black would have liked to replace him and send him home. The problem was aggravated by Finn Ronne needling him about his

laziness. But, he wintered-over. By 1944 he was a first sergeant. Lillian died in 1950, and Charles Willie moved to Oklahoma, married again, to Yvonne, on Jan. 28, 1956, in Lafayette, La., which is where he died, on March 9, 1984.

Sharbonneau Island *see* **Cape Sharbonneau**

Shardikberg. 70°52' S, 162°46' E. A peak on the NW side of Mount Hager, in the Explorers Range, in the Bowers Mountains of Oates Land, in Victoria Land. Named by the Germans.

Shardikrücken. 70°52' S, 162°55' E. A ridge on the NE side of Mount Hager, in the Explorers Range, in the Bowers Mountains of Oates Land, in Victoria Land. Named by the Germans.

[1]**Shark Fin**. 62°03' S, 58°22' W. A sharp, narrow rock crest, about 230 m above sea level, between Stenhouse Glacier and Ajax Icefall, at Visca Anchorage, Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named descriptively by the Poles in 1980.

[2]**Shark Fin**. 78°22' S, 162°55' E. A sharp peak, at an elevation of 2242 m (the New Zealanders say about 2500 m), at the E end of the ridge separating Foster Glacier and Renegar Glacier, in the Royal Society Range of Victoria Land. When viewed from the S it has a likeness to the triangular shape of a shark's fin. David Skinner (*see* **Skinner Ridge**) led a NZGSAE party in this area in 1977-78. Named descriptively by NZ-APC and US-ACAN together in 1994.

Shark Fin Glacier. 78°23' S, 162°55' E. A small hanging glacier between Foster Glacier and Renegar Glacier, to the S of Shark Fin (in association with which it was named), in the Royal Society Range of Victoria Land. Named by NZ-APC and US-ACAN together in 1994.

Shark Island *see* **Håkollen Island**

Shark Peak. 68°03' S, 62°41' E. An isolated nunatak, with 2 peaks connected by a ridge, about 6 km SSW of Van Hulssen Nunatak, in the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and plotted from these photos in 1946 by Norwegian cartographers, who named it Hånuten (i.e., "the shark peak"). ANCA translated this on Aug. 10, 1966, and US-ACAN accepted the Australian translation in 1970.

Sharks Tooth. 76°02' S, 159°38' E. A small, steep-sided, tooth-like nunatak W of Beckett Nunatak, at the N side of the upper Mawson Glacier, S of McLea Nunatak, in Victoria Land. Discovered and mapped by the Southern Party of NZGSAE 1962-63, who named it descriptively. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1965.

Sharman, Alan. b. Dec. 29, 1936, Bedford, son of Frank Sharman and his wife Ruby Downs. He joined FIDS in 1957, as a meteorologist, and wintered-over at Signy Island Station in 1958. He was killed in a freak fall on April 23, 1959 at Base G.

Sharman Rock. 62°06' S, 58°28' W. A rock in water between Plaza Point and Crépin Point, King George Island, in the South Shetlands. Named by UK-APC for Alan Sharman. The term is no longer used, for the very good reason that it was found not to exist.

Gora Sharonova. 73°10' S, 63°40' E. One of 2 nunataks, very close together (the other being Gora Guseva), at the W end of the ridge the Russians call Hrebet Astrofizikov, in the southern Prince Charles Mountains. Named by the Russians.

Mount Sharp. 77°53' S, 86°10' W. Rising to over 3000 m, 3 km SE of Mount Barden, in the N part of the Sentinel Range. Mapped by the Marie Byrd Land Traverse Party of 1957-58, who named it for Prof. Robert Philip Sharp (1911-2004), member of the Technical Panel on Glaciology, U.S. National Commmittee for IGY. US-ACAN accepted the name in 1960.

Pico Sharp *see* **Sharp Peak**

Sharp, Alexander. b. Feb. 19, 1864, Lochee, near Dundee, Scotland, son of Peter Sharp and his wife Betsy Clark (Peter Sharp, as a young Perthshire shoemaker new to Dundee, had found lodgings at Betsy's mother's boarding house). He apprenticed as an iron fitter, but became a marine engineer, married Annie, and they had several children in Dundee. He was chief engineer on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Sharp, Bartholomew *see* **Sharpe**

Sharp, Michael Colin. b. April 27, 1951. BAS general assistant at Rothera Station for 2 winters between 1976 and 1980. He fulfilled the same role on James Ross Island, in 1981-82, and in 1983-84 was summer base commander at Rothera.

Sharp Glacier. 67°20' S, 66°27' W. Flows N to the head of Lallemand Fjord, close E of the Boyle Mountains, on the Loubet Coast, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base W, being mapped by FIDS cartographers from these efforts. It was found to be continuous with Forel Glacier, and was named North Forel Glacier by UK-APC on July 7, 1959. US-ACAN accepted the name in 1960, and it appears as such in the 1961 British gazetteer. However, on Sept. 23, 1960, UK-APC had renamed it Sharp Glacier, for Robert P. Sharp, U.S. glaciologist (*see* **Mount Sharp**). This new naming was not in time for the 1961 gazetteer, but it was shown as such on a 1961 British chart. US-ACAN accepted the new name in 1965.

[1]**Sharp Peak**. 62°31' S, 60°04' W. A sharp peak, rising to 467 m, 3 km NW of Edinburgh Hill, N of Moon Bay, in the NE part of Livingston Island, in the South Shetlands. Charted and named descriptively by the personnel on the *Discovery II* in 1934-35. It appears on a British chart of 1937. It appears on a Chilean chart of 1947 as Pico Puntiagudo (i.e., "sharp point"), and that name was accepted by the Chilean gazetteer of 1974. It appears on an Argentine chart of 1948 as Pico Sharp, but on one of their 1953 charts as Pico Agudo (another way of saying "sharp point"). That latter name was the one accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name Sharp Peak in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. Last plotted by the UK, in late 2008.

[2]**Sharp Peak**. 66°02' S, 65°18' W. Rising to 475 m, 3 km SE of Prospect Point, and 6 km S of Ferin Head, to the N of Holtedahl Bay, standing at 1.5 km into the interior of the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted in 1935, by BGLE 1934-37, and named descriptively by them. It appears on Rymill's 1938 map of that expedition. US-ACAN accepted the name in 1953, and UK-APC followed suit on Sept. 20, 1955. Surveyed by Fids from Base J between 1957 and 1959. It appears on a British chart of 1961. In 1962 the Argentines translated the name as Pico Sharp. Also in 1962 it appears on a Chilean chart, translated all the way as Pico Agudo, and that name was accepted by the Chilean gazetteer of 1974.

Sharp Valley. 63°52' S, 58°04' W. A small valley, trending SW-NE, 1.5 km ESE of Stoneley Point, in the N part of James Ross Island. Geological work was done here by BAS in 1981-83. Named by UK-APC on April 3, 1984, for Michael Colin Sharp (q.v.), field assistant during those years. He had also wintered-over at Rothera Station in 1978. US-ACAN accepted the name. It appears in the 1986 British gazetteer.

Sharpe, Alexander *see* **Sharp**

Sharpe, Bartholomew. Name also spelled Sharp (it didn't matter, in those days, how one spelled a name, as long as the sound was approximate). b. ca. 1650. English buccaneer, who sailed between 1679 and 1682 as captain of the pirate ship *Trinidad*. In 1679, along with Henry Morgan and Lionel Wafer (q.v.), he was involved in the capture of Porto Bello. In 1861, he became the first Englishman to travel eastward around Cape Horn, and, apparently, in so doing, got blown off course and was "near 60°S." He is reckoned to have died about 1690.

Sharpend Glacier. 78°52' S, 160°56' E. An alpine glacier, 2.5 km long and 1 km wide, flowing into Alatna Valley from the S end of Staten Island Heights, in the Convoy Range of Victoria Land. Descriptively named (for the pointed terminus of this glacier) by a 1989-90 NZARP field party to this area. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Sharrock, George *see* **USEE 1838-42**

Nunataki Shatry. 70°51' S, 71°37' E. A group of nunataks NE of the Manning Nunataks, in the E part of the Amery Ice Shelf. Named by the Russians.

Shatskijtoppen *see* **Shatskiy Hill**

Shatskiy Hill. 72°02' S, 13°21' E. A nunatak (or hill), rising to 2705 m, in the Dekefjellrantane Hills, in the Weyprecht Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground

surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition. Mapped yet again by SovAE 1960-61, and named by the Russians in 1966, as Gora Shatskogo, for geologist N.S. Shatskiy. US-ACAN accepted the translated name Shatskiy Hill in 1970. The Norwegians call it Shatskij-toppen (which means the same thing).

Gora Shatskogo *see* **Shatskiy Hill**

Mount Shattuck. 80°26' S, 81°28' W. Rising to 1430 m, at the S end of the Independence Hills, about 5 km NW of Redpath Peaks, in the Heritage Range. Named by US-ACAN in 1966, for Wayne M. Shattuck, USN, aviation machinist and air crewman (*see* **Deaths**, 1966).

Shaula Island. 66°58' S, 57°21' E. An island, about 6 km long, and 150 m high above sea level at its highest point, 1.5 km E of Achernar Island, in the Øygarden Group. Photographed aerially by LCE 1936-37, and plotted from these photos in 1946, by Norwegian cartographers, who named it Sørøya (i.e., "the south island"). First visited by an ANARE party in 1954, and they renamed it for Shaula, the star which they used for an astrofix. ANCA accepted the name Shaula Island on Feb. 18, 1958, and US-ACAN followed suit in 1965.

Mount Shaw. 69°57' S, 64°33' E. Rising to 2035 m (the Australians say 2045 m), it is the highest peak of the Anare Nunataks, in Mac. Robertson Land. The summit is exposed brown rock, but the slopes are covered with ice and snow. First visited on Nov. 30, 1955 by an ANARE party led by John Béchervaise. Named by ANCA for Peter John Randall Shaw (b. Sept. 29, 1928), meteorologist who wintered-over at Mawson Station in 1955. He had also wintered-over at Heard Island in 1953. US-ACAN accepted the name in 1961.

Shaw, Harold "Harry." b. 1885, New Basford, Notts, but from the time he was 4, raised in New Cross, Manchester, son of mechanical engineer John Shaw (a machine shop foreman) and his wife Sarah Ann Ardin. By the time he left school at 14, to be a painter in an iron works, the family was living in Gorton, Lancs, and they all later moved to Chorlton, Lancs. Still living at home, at 26, Harry needed to do something. Powerfully-built, menacing, and a bully, he became a heavyweight boxer, and may have got hit in the head too many times, for he developed epilepsy. Despite this, or perhaps because of it, he was more than welcome in the Manchester Police Force, as a constable. In 1913, he left London on the *Themistocles*, bound for Melbourne, and from there on to Queenstown, in Tasmania, where he became a police constable, being dismissed when they found out about his fits and insomnia. He moved to Hobart, became a waterside worker, and was living in a boarding house in Murray Street when he was taken on at Hobart as 3rd fireman and engine room trimmer on the *Aurora*, on Dec. 23, 1914, just a few hours before the ship sailed south for her part of Shackleton's BITE 1914-16. Needless to say, he concealed his medical record. Apparently he had been a stoker on at least one ship before, but he hated the work. Soon his night-time seizures came to light, as did his insomniac and somnambulistic walks around the deck of the ship, and these were all documented by senior officers. Alf Larkman found him to be "ignorant and insolent," and suspended him on a number of occasions. Mackintosh refers to him as "rather a nuisance." But, he was more than a nuisance. He and the steward, D'Anglade, mutinied, but after 2 days Shaw went back to work. He and D'Anglade were tried in a magistrate's court in Port Chalmers on their return to NZ, and Shaw was discharged as mentally unsound, and returned to Manchester in 1917, rejoining the police. He died in 1932, in Manchester.

Shaw, John Barrie. Known as "Barrie," or "Bod." b. May 31, 1934, Glossop, Derbyshire, son of policeman Ralph Shaw. After leaving school he worked for a while for Potter's, the calico printing company that had been started by a close relative of Beatrix Potter. He did 3 years national service (instead of the regular 2) in the RAF Police, was demobbed at 21, went to work for the Forestry Commission in Lancashire for 18 months, and then his friend Geoff Roe (who had just joined FIDS), suggested the Antarctic possibility. After an interview with Johnny Green and Bill Sloman in London, he and Roe sailed from Southampton on the *John Biscoe*, on Oct. 21, 1957. They spent a day in St. Helena, then on to Tristan da Cunha, where they dropped off agricultural experts and a terribly British lady missionary who had been at Pearl Harbor when the Japanese bombed it. The *Biscoe* did not go to Montevideo, instead going straight to South Georgia, then on to Port Stanley, and from there to Antarctica. He and Roe were meteorological assistants who wintered-over at Base F in 1958 and 1959. In 1960 the *Kista Dan* came to pick them up. That was the trip the *Kista Dan* got stuck in the ice and had to be recued by the *Glacier*. On his return to the UK, Shaw worked in a job for 2 weeks, on brake linings, then went to Canada, to work in McGill University's lab at Knob Lake from Nov. 17, 1960. There he married Helma Jahnke in 1963, and in June 1965 returned to the UK. In the October of that year he started at teachers training college, and taught juniors (all subjects) for 23 years, retiring to the Sheffield area.

Shaw, Peter *see* **USEE 1838-42**

Shaw Glacier *see* **Kichenside Glacier**

Shaw Islands. 67°33' S, 47°44' E. A group of 4 islands, 3 km N of the central part of McKinnon Island, in the SW part of Casey Bay, off the coast of Enderby Land, near the Hannan Ice Shelf. Plotted from ANARE air photos taken in 1956, and first visited by an ANARE party led by Bruce Stinear in Oct. 1957. Named by ANCA for John Eric Shaw (b. May 2, 1929), physicist who wintered-over at Mawson Station in 1957. US-ACAN accepted the name in 1965. Il'in Island is the largest of this group. The other three remain unnamed.

Shaw Massif. 72°00' S, 66°55' E. A fairly flat-topped rock massif, rising to 1355 m, on the W margin of the Lambert Glacier, 20 km S of Mount Willing, and about 41 km S of Mount Johnston, in the Prince Charles Mountains. Discovered aerially by ANARE in Nov. 1956. Named by ANCA for Bernard Edward "Bernie" Shaw (b. Jan. 9, 1928), radio supervisor who wintered-over at Mawson Station in 1957. He had also wintered-over at Macquarie Island in 1955. US-ACAN accepted the name in 1961.

Shaw Nunatak. 69°33' S, 71°18' W. A nunatak rising to about 500 m in the Nichols Snowfield, in the N part of Alexander Island. Photographed aerially by RARE 1947-48, and mapped from these photos by Searle of the FIDS in 1959-60; he plotted it in 69°33' S, 71°12' S. Re-surveyed by BAS from 1968, and replotted. Named by UK-APC on Dec. 8, 1977, for Colin Shaw (1944-1978), BAS surveyor who worked on Alexander Island in the summer of 1975-76. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Shaw Trough. 77°32' S, 160°54' E. A primary elongate trough in the feature called Labyrinth, in the Wright Valley, extending W-E across the N part of the valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for John Shaw, of the department of geography, at the University of Alberta, who, with Terry R. Healy, published observations on the formation of Labyrinth following a visit in 1975-76. NZ-APC accepted the name on Nov. 30, 2004.

Lednik Shcheglova *see* **Bally Glacier**

Lake Shchel'. 66°13' S, 101°03' E. A lake in the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ozero Shchel'. It was translated by the Australians as Lake Shchel'.

Ozero Shchel' *see* **Lake Shchel'**

Shcherbakov Range. 71°51' S, 10°32' E. It trends N-S for 32 km, immediately E of Mount Dallmann, where it marks the E extremity of the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition. Mapped yet again by SovAE 1960-61, and named by the USSR in 1963, as Hrebet Shcherbakova, for Dmitriy Ivanovich Shcherbakov (d. 1966), Soviet geologist and bureaucrat who played a great role in determining Russian scientific work in Antarctica. US-ACAN accepted the translated name Shcherbakov Range in 1970.

Hrebet Shcherbakova *see* **Shcherbakov Range**

Ostrov Shcherbinina *see* **Shcherbinina Island**

Shcherbinina Island. 68°50' S, 77°56' E. An irregular-shaped island, deeply indented by 2 bays, and with a highest elevation of about 43 m above sea level, 2.5 km SE of Filla Island, in the Rauer Islands. Charted by SovAE 1956, and named by the Russians as Ostrov Shcherbinina, for Russian geologist Ekaterina Shcherbinina. ANCA translated the name.

Nunataki Shchitovje. 70°46' S, 65°56' E. A

group of nunataks, SE of the Kilfoyle Nunataks, in the Aramis Range of the Prince Charles Mountains. Named by the Russians. Note: It is possible, though not likely, that this is another name for the Kilfoyle Nunataks.

Gory Shchukina. 69°00' S, 44°00' E. A somewhat isolated group of nunataks, inland from the Prince Olav Coast. Named by the Russians.

Gory Shchuseva. 80°38' S, 25°06' W. A group of nunataks in the Shackleton Range. Named by the Russians.

She Shan. 62°13' S, 58°58' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Shea Sisters Lake. 71°48' S, 162°00' E. An internally drained body of water, or closed-basin pond, in an ice-free portion of the SE end of the Morozumi Range, in northern Victoria Land. It has an area of 50,000 sq m, is ice-covered, and is several feet deep. It was created over 1000 years ago. It is an unofficial name given by Americans in the field in the mid-1960s.

Sheaf, James *see* **USEE 1838-42**

Mount Shear. 78°20' S, 86°08' W. Rising to 13,100 feet (over 4000 m), 6 km NW of Mount Tyree, in the Sentinel Range of the Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party of 1957-58, under Charles Bentley, who named it for James Shear. US-ACAN accepted the name in 1960.

Shear, James Algan. b. Jan. 18, 1919, Putnam, NY, son of Presbyterian clergyman Herman Ray Shear and his Kentucky-born wife Mina. He grew up partly in Ohio, and then in Pittsburgh, and became a teacher. On June 24, 1941 he joined the Air Corps as a cadet, then became a meteorologist, an instructor at Boston Umiversity, and professor of geography at the University of Kentucky. He was scientific leader at Hallett Station for the winter of 1957, until Jan. 16, 1958, when he handed over to Ken Salmon. He was the younger brother of the architect John Knox Shear, who died while Dr. Shear was in Antarctica. Dr. Shear lived at Mount Sterling, Ky., and died in Palm Beach, Fla., on Feb. 20, 1983.

Shear Cliff. 72°19' S, 170°10' E. The first prominent rock cliff on the W side of Hallett Peninsula, to the S of Seabee Hook and Hallett Station. Named by NZGSAE 1957-58, for James Shear.

Mount Shearer. 71°19' S, 163°00' E. A peak rising to 2100 m, 3.5 km NW of Mount Jamroga, in the central portion of the Bowers Mountains. Named by NZ-APC in 1982, for Ian John Shearer (b. 1941), minister of science and technology, 1980-83. US-ACAN accepted the name.

Rocas Shearer *see* **Shearer Stack**

Shearer, Thomas Alexander. b. Dec. 7, 1876, Bow, Bromley, London, son of ship's captain George Shearer and his wife Ellen. Immediately after the birth, the family headed back to Scotland, to Newburgh, in Fife, and from there to Dundee. As a result of the swift departure from London, Thomas's birth was not registered in London, although there was time to baptize him on Jan. 7, 1877, at St Mary Stratford Bow. At 15, in Dundee, he went to sea, as a steward, and, in that capacity, served on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04. He died in Essex, in 1943.

Shearer Stack. 61°55' S, 58°03' W. A rock stack, 2.5 km SW of False Round Point, off the N coast of King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Sept. 23, 1960, for the *Charles Shearer*. US-ACAN accepted the name later in 1960. The Argentines call this feature Rocas Shearer. Last plotted by the UK, in late 2008.

Shearwater Glacier. 77°19' S, 166°31' E. Immediately SE of Quaternary Icefall and W of Palais Bluff, in the NW part of Ross Island. Named by NZ-APC, for the bird.

Shearwaters. A type of medium-sized petrel, with long, narrow wings. There are 4 species seen in Antarctica, although none breed south of 54°S (i.e., South Georgia). They are: the gray petrel (*Procellaria cinerea*), the white-chinned petrel, or shoemaker (*Procellaria aequinoctialis*), the sooty shearwater, or mutton bird (*Puffinus griseus*), and the slender-billed shearwater (*Puffinus tenuirostris*).

Sheathbill Glacier. 77°18' S, 166°36' E. Due E of Quaternary Icefall, in the NW part of Ross Island. Named by NZ-APC, for the bird.

Sheathbills. Small, white, clean, pigeonlike scavenging land birds which eat anything, nest in rocks, and lay 2-4 eggs. They are the only seabirds in Antarctica which do not have webbed feet. There are 2 species, both seen in the Antarctic: *Chionis alba*, the wattled sheathbill (also known as the American sheathbill, the greater sheathbill, and the snowy sheathbill) is the largest, and breeds in the Antarctic Peninsula, the South Shetlands, and the South Orkneys. The lesser or black-faced sheathbill (*Chionis minor*) does not breed south of 60°S. In 1961-62, at Signy Island, Nev Jones (q.v.) of FIDS, did an important study of the sheathbill.

Sheehan Glacier. 70°56' S, 162°24' E. A steep, high rising, and extremely broken glacier flowing from the vicinity of Miller Peak, in the Explorers Range of the Bowers Mountains, into Rennick Glacier just S of Alvarez Glacier. Named by the Northern Party of NZGSAE 1963-64, for Maurice James Sheehan (b. Invercargill, NZ), field assistant with that party. He had also been a field assistant with the Northern Party of NZGSAE 1962-63, and a mountain climber at Scott Base in 1963. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Sheehan Island *see* **Sheehan Islands**

Sheehan Islands. 67°22' S, 59°46' E. A group of small islands at the SE side of Islay, in the William Scoresby Archipelago, 7 km off the coast of Kemp Land, and about 19 km WSW of Hobbs Island. Discovered on Feb. 18, 1931, by BANZARE. Mawson named the main one of the group as Sheehan Nunatak, for Henry John Sheehan (1883-1941; knighted 1937), assistant secretary to the Treasury (in Australia), and secretary of the Australian Antarctic Committee of BANZARE. In 1932 he became secretary. Mawson thought this island was part of the mainland, but the feature was re-defined by personnel on the *William Scoresby* on Feb. 27, 1936, as being the largest of a group of islands. In Jan. and Feb. 1937 this area was photographed aerially by LCE 1936-37, and Norwegian cartographers, using these photos in 1946, were able to map these islands much more accurately, and they named them Hamarøygalten. US-ACAN accepted the name Sheehan Islands in 1947. ANCA named the largest one (the one Mawson mistakenly defined) as Sheehan Island. None of the other islands in the group is named.

Sheehan Mesa. 73°01' S, 162°18' E. A large, prominent mesa (or tableland) 16 km WNW of Pain Mesa, in the NW part of the Mesa Range, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, as Sheehan Tableland, for Maurice Sheehan (*see* **Sheehan Glacier**), field assistant with the party. US-ACAN accepted the name Sheehan Mesa in 1967.

Sheehan Nunatak *see* **Sheehan Islands**

Sheehan Tableland *see* **Sheehan Mesa**

Sheehy, David John. b. Aug. 2, 1955. Glaciologist at Casey Station in 1979.

Sheelagh Islands. 66°32' S, 50°12' E. A group of about 6 small islands, 5 km S of Cape Kolosov, near the mouth of Amundsen Bay, and about 3 km from the continental ice cliffs of Enderby Land. It was probably here that Riiser-Larsen landed from an airplane on Dec. 22, 1929, but it was certainly these islands where an ANARE party landed on Feb. 14, 1958, and obtained an astrofix. Named by ANCA for the wife of Richard H.J. "Dick" Thompson (q.v.), 2nd-in-command of that ANARE expedition. US-ACAN accepted the name in 1965. The largest of the islands is about 0.5 km across, but none of the islands in this group is named individually.

Sheep. Scott took 45 live sheep on board the *Discovery* in 1901, for BNAE 1901-04, for food. They were slaughtered and hung in the rigging when the ship reached the ice. The expedition had roast mutton throughout their first winter. The *Koonya* carried down sheep for BAE 1907-09, the men killing them on Jan. 14, 1908, as they approached the ice.

Sheets Peak. 85°28' S, 125°52' W. Rising to over 1800 m, 1.5 km NW of Koopman Peak, on the N side of the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Joseph D. Sheets, journalist in Antarctica during OpDF 65, OpDF 66, and OpDF 67.

Cabo Sheffield *see* **Cape Sheffield**

Cape Sheffield. 62°37' S, 61°19' W. Forms the NW extremity of Rugged Island, and the SW entrance point of New Plymouth, off the W coast of Livingston Island, in the South Shetlands. Named for James P. Sheffield. It appears on a 1943 U.S. Hydrographic Office chart. It was photographed aerially by FIDASE in 1956-57. The name was accepted by UK-APC on July 7, 1959, and by US-ACAN in 1960. It appears on a 1953 Argentine chart as Cabo Sheffield, and

that is what the Argentines still call it. It was also the name accepted by the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Mount Sheffield. 80°10' S, 25°42' W. A rocky mountain rising to 915 m (the British say 785 m), it is the most northerly peak of the Shackleton Range, at the junction of Gordon Glacier and Slessor Glacier. Roughly surveyed and mapped in Oct. 1957, by BCTAE, who named it for Alfred Harold Sheffield (1900-1983), chairman of the radio communications working group for IGY, who was of great help to BCTAE. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. Photographed aerially by USN in 1967, and re-surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971.

Port Sheffield. On Rugged Island, in the South Shetlands. Named for James P. Sheffield, it is a term no longer used.

Sheffield, James Pendleton. b. Aug. 16, 1793, Stonington, Conn., son of Capt. James Sheffield and his wife Juda Pendleton. His father died when the boy was 6. He was a sailor on the *Ann and Mary* during the War of 1812, and was 2nd mate on the *Volunteer* during Edmund Fanning's trip around the world in 1815-17. From 1817-18 he was 1st mate on the *Jane Maria*, and in 1818-19 was her captain. He entered the Antarctic picture in a major way in 1819-20 when he captained the *Hersilia* to the South Shetlands for that season, the first American sealing captain known to have visited the area. It is possible that he sighted the Antarctic continent itself from Livingston Island in Jan. 1820. The following season he captained the *Hersilia* again as part of the Fanning-Pendelton Sealing Expedition of 1820-21, in the South Shetlands, and on May 13, 1821 he was captured by Spaniards off the coast of Chile. He escaped on Sept. 1821, minus the *Hersilia*, and in 1822-23 was captain of a new ship, also called the *Hersilia*, which went to the South Seas. He was master of the *Bogota*, plying the Atlantic in 1826-28.

Caleta Sheila *see* **Sheila Cove**

Sheila Cove. 60°45' S, 44°46' W. A cove off the SW side of Jessie Bay, on the N coast of Laurie Island, in the South Orkneys. Surveyed in 1903 by ScotNAE, and named by Bruce as Mary Cove, for his mother, Mary Lloyd. It was later named Sheila Cove, for Bruce's daughter. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Caleta Sheila (which means the same thing). Sheila Mackenzie Bruce was born on Sept. 19, 1909, and became a secretary. In 1936 she married Bill Willman, and they lived for decades in Cape Town. She died in July 2000, in Birkenhead.

Sheilaberg. 70°35' S, 162°34' E. A peak on the SE side of Mount Bruce, in the Bowers Mountains of Oates Land, in Victoria Land. Named by the Germans.

Mount Shelby. 68°09' S, 65°50' W. Rising to 1520 m, between Daspit Glacier and Bills Gulch, at the head of Trail Inlet, near Joerg Peninsula, on the Bowman Coast, on the E coast of Graham Land. It may have been seen by Ellsworth as he flew over this area on Nov. 23, 1935. Discovered and photographed aerially on Sept. 28, 1940, by members of East Base, during USAS 1939-41, it appears (unnamed) on a 1943 U.S. Hydrographic Office chart. Photographed aerially by RARE in late 1947, and surveyed and charted in 1948 by Fids from Base E. Named in 1948 by Finn Ronne for Marjorie Shelby (b. Aug. 27, 1918, Laurel, Miss. d. Sept. 1, 1999, New Orleans), of New Orleans, typist and editor for the RARE report. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. The Argentines wanted their own name, and in 1955 Gen. Hernán Pujato named it Cerro Aeronáutica Argentina, in honor of his country's aviators. The Chileans also wanted their own name for this feature. Capt. Eduardo Iensen Francke, of the Chilean Air Force, was chief of air operations during ChilAE 1946-47, so they named it Cerro Iensen. *See also* **Breitfuss Glacier**.

Shelby Glacier *see* **Breitfuss Glacier, Gould Glacier**

Sheldon, Ernest Brian. b. Dec. 26, 1945. BAS meteorological observer and general assistant who wintered-over at Base T in 1968, at Base E in 1969, at Base T in 1975, and at Rothera Station in 1976, the last two years as base commander.

Sheldon Glacier. 67°30' S, 68°23' W. Flows SE from Mount Mangin into Ryder Bay, in the SE part of Adelaide Island. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base T in 1961-62. Named by UK-APC on Dec. 8, 1977, for Ernest Sheldon. US-ACAN accepted the name.

Shelf ice. Easily deformable crystalline rock. It is the ice found on ice shelves.

Ozero Shel'fovoe. 70°42' S, 11°44' E. A lake in the Schirmacher Hills. Named by the Russians.

Shell Glacier. 77°16' S, 166°25' E. A W lobe of the Mount Bird Ice Cap, on Ross Island, it descends steeply from a height of about 600 m above sea level down a valley on the N side of the ridge joining Trachyte Hill and Harrison Bluff, in the center of the ice-free area on the lower W slopes of Mount Bird, to a height of 75 m above sea level. Mapped and named by NZGSAE 1958-59. The contemporary end-moraines of the Mount Bird ice-cap in this area contain abundant fragments of marine shells, plowed from the floor of McMurdo Sound and deposited at heights of 600 m or more on the W slopes of Mount Bird by greatly expanded glaciers of a Quaternary glacial period. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Isla(s) Shelter *see* **Shelter Islands**

Shelter Cove. 63°41' S, 57°57' W. A small coastal indentation in the N shore of Prince Gustav Channel, between Chapel Hill and Church Point, on Trinity Peninsula. Surveyed by Fids from Base D in 1960-61. So named by UK-APC on Feb. 12, 1964 because the cove is the only part of this coast sufficiently sheltered from the prevailing SW winds to afford a reliable camp site. US-ACAN accepted the name later in 1964.

Shelter Islands. 65°15' S, 64°18' W. A group of small islands about 0.6 km W of Winter Island, in the NW part of the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Surveyed and charted in 1935 by BGLE 1934-37, and named by them for a refuge hut they had built here, and also because the islands shelter the anchorage NW of Winter Island. The feature appears on a 1947 British chart. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. The largest of the islands appears on a 1953 Argentine chart as Isla Abrigo, but that name did not last. The Argentines call these islands Islas Abrigo (this translation appears as such in their Antarctic Supplement, from 1958 onwards, and was the name accepted by the 1970 Argentine gazetteer), and the Chileans call them Islas Shelter. None of these islands today are individually named (however, the feature does appear, erroneously, as Shelter Island, in the 1961 British gazetteer).

Mount Shelton. 71°41' S, 166°48' E. Rising to 2485 m, just W of the upper part of Rastorfer Glacier, in the E-central portion of the Homerun Range, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for John E. Shelton, USARP meteorologist at Hallett Station, 1964-65.

Shelton Head. 72°31' S, 97°19' W. A headland marked by exposed rock, 20 km W of Long Glacier, on the S coast of Thurston Island. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for John A. Shelton, meteorologist at Byrd Station in 1963-64. Originally plotted in 72°28' S, 97°25' W, it has since been replotted.

Shelton Nunataks. 75°43' S, 70°35' W. Two isolated nunataks, rising to 1030 m, 16 km SE of the Thomas Mountains, on the Orville Coast, in the E part of Ellsworth Land. Surveyed from the ground by USGS in 1961-62, during the Antarctic Peninsula Traverse, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Willard Smith Shelton, USN, electrician at Eights Station in 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Shelvocke, George. Baptized April 1, 1675, Shrewsbury, Shropshire, son of farmer Charles Shelvocke and his wife Jane. He entered the RN in 1690, served under Benbow, was purser on the *Monck* from 1707 to 1713, but by 1719 was retired in London and living in poverty. The war with Spain not only saved him, it made him a historical figure. He was hired to command the *Speedwell* (q.v.), to capture Spanish ships and loot South American ports, and thus may well have ventured into Antarctic waters. His son, George, was also on the trip. The father died in 1728.

Shenk Peak. 85°11' S, 174°45' W. A sharp peak, rising to 2540 m, just SE of Mount Kenyon, between Gillespie Glacier and LaPrade Valley, in the Cumulus Hills, just to the E of Shackleton Glacier. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65, for John C. Shenk (b. March 1938), geochemistry grad student at Texas Tech, and a member of the expedition. US-ACAN accepted the name in 1966. Mr. Shenk, who had got his bachelor's degree in 1963, from New Mexico Tech, later became a well-known geologist and consultant, mainly with oil companies.

Mount Shennan. 70°14' S, 65°33' E. A mountain, 6 km W of the Farley Massif, and 9 km WNW of Mount Jacklyn, in the Athos Range of the Prince Charles Mountains. Plotted from ANARE air photos, and named by ANCA for Kenneth John "Ken" (nicknamed "Scruffy") Shennan (b. May 22, 1932, Beechworth, Vic., but later of Benalla), assistant diesel mechanic and 2nd-in-command at Mawson Station in 1963, and senior diesel mechanic at Wilkes Station in 1965. US-ACAN accepted the name in 1967.

Shennong Bingchuan *see* **Shennong Glacier**

Shennong Glacier. 69°30' S, 76°02' E. A glacier flowing into Prydz Bay, immediately SW of McCarthy Point, and between the Bolinger Islands and Stornes Peninsula, in the Larsemann Hills, on the Ingrid Christensen Coast, where it forms a short glacier tongue. Photographed aerially by LCE 1936-37, and mapped (but, apparently) not named from these photos in 1946 by Norwegian cartographers. Named by the Chinese as Shennong Bingchuan. ANCA accepted the name Shennong Glacier on Oct. 20, 2009.

Shennong Wan *see* **Johnston Fjord**

Shenzhou Wan *see* **Thala Fjord**

Shepard, Oliver Wilfred Nicholas. b. Aug. 28, 1946, London, son of Richard Stanley Howard Shepard and his wife Kathleen Carless. After Eton, the Coldstream Guards, the SAS, and a brewing career, he became mechanic on the Trans-Globe Expedition of 1980-82, who crossed Antarctica via the South Pole. He dropped out of the expedition part-way through, but after the Antarctic segment.

Shepard Cliff. 74°08' S, 161°09' E. An isolated cliff, 6 km long, at the NE edge of Reeves Névé, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Danny L. Shepard (b. April 29, 1945), USN, construction electrician at Pole Station in 1966.

Shepard Island. 74°25' S, 132°30' W. A volcanic island, 17.5 km long, ice-capped except at its N (seaward) side, 10 km W of Grant Island, it is almost wholly embedded in the W side of the Getz Ice Shelf, off the coast of Marie Byrd Land. Discovered by USAS 1939-41, and named by Byrd as John Shepard Island, for John Shepard, Jr. (1857-1948), owner of the famous Shepard department store in Boston, 5-time mayor of Palm Beach, Fla., and a contributor to ByrdAE 1933-35. The name was accepted by US-ACAN in 1947, and was later shortened.

Shepherd, Simon *see* **USEE 1838-42**

Shepherd Dome. 74°52' S, 99°33' W. A low dome-shaped mountain at the N side of Pine Island Glacier, 6 km SW of Mount Manthe, in the S part of the Hudson Mountains. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1968, for Donald C. Shepherd, ionosphere physicist at Byrd Station in 1967.

Nunatak Sheppard *see* **Sheppard Nunatak**

Punta Sheppard *see* **Sheppard Point**

Sheppard, Robert Carl "Bobby." b. 1897. Entered the Merchant Navy in 1912, on square-riggers, and was wounded in World War I. He was keeper of Fort Amherst Lighthouse, Newfoundland, 1924-38, and commander of the *Eagle*, 1934-45. During World War II he convoyed confiscated Vichy ships across the Atlantic. In 1944, in addition, he was harbormaster at St. John's, Newfoundland, while the *Eagle* was laid up there, and, when the vessel was chartered by the British government to take part in the 2nd phase of Operation Tabarin, 1944-45, he selected a crew of 28 men to go with him to Antarctica. He was later captain of the *Trepassey*, 1945-46. He died in 1954.

Sheppard Crater. 77°48' S, 166°50' E. A distinctive breached crater rising to 200 m above sea level, about 1.3 km E of Castle Rock, on Hut Point Peninsula, Ross Island. Named by NZ-APC on Feb. 20, 2001, for Deirdre Jeanette Sheppard, New Zealand Antarctic Division's librarian, 1980-96, who worked a summer season at Vanda Station. US-ACAN accepted the name later in 2001.

Sheppard Nunatak. 63°22' S, 56°59' W. A conical nunatak, rising to 60 m (the British say 200 m), close NWN of Sheppard Point (the N side of the entrance to Hope Bay), at the NE end of the Antarctic Peninsula. First explored by SwedAE 1901-04. Charted by FIDS in 1945, and named by them in association with the point. It appears on a 1949 British chart, UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. Re-surveyed by FIDS in 1954, it appears in the 1955 British gazetteer. The Argentines call it Nunatak Sheppard.

[1]**Sheppard Point**. 63°23' S, 56°58' W. A rather sharp point marking the N side of the entrance to Hope Bay, Trinity Peninsula, at the NE end of the Antarctic Peninsula. At the extreme SE of the point a conical nunatak rises to 60 m above sea level, which is very useful for identifying the point. Discovered and surveyed in 1903, by J. Gunnar Andersson's party, during SwedAE 1901-04. Re-surveyed by FIDS in 1945, and named by them for Capt. Bobby Sheppard. It appears on a 1949 British chart, and the name was accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It was further surveyed by FIDS in Jan. 1955, and appears in the 1955 British gazetteer. The name Punta Sheppard was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

[2]**Sheppard Point** *see* **Ackley Point**

Sheppard Rocks. 75°37' S, 158°38' E. Rocks on land, 6 km NW of the Ricker Hills, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Paul D. Sheppard, construction electrician who replaced the late Andrew Moulder (*see* **Deaths**, 1966) as storekeeper at Pole Station in the winter of 1966. Mr. Sheppard was at the Pole already, but had originally been scheduled to winter-over at McMurdo. ANCA accepted the name.

The *Shera*. A 251-ton, 116-foot whale catcher built in 1928, at Smith's Dock, Middlesbrough, for Salvesen's South Georgia Company, and launched on Feb. 12, 1929. She carried out her whaling trials off the coast of South Africa that year, and then headed down to Antarctica for the 1929-30 whaling season, catching for the *Salvestria* and the *Saragossa*. In 1930-31 and 1931-32 she was catching for the *Saragossa*, and in 1932-33 for the *Salvestria*. In 1933-34, 1934-35, and 1935-36, she was catching for the *Sourabaya*, and in 1936-37 for the *Strombus*. In 1937-38 she was catching for the *New Sevilla*, and then went to the Arctic. In 1940 she was requisitioned by the Royal Navy, and transferred to the Russians in 1942. On March 9, 1942, she sank in heavy ice while in the Barents Sea.

Sheraton Glacier. 73°27' S, 68°20' E. A small glacier in the Mawson Escarpment, between Phillpot Bluff and Casey Point. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA for John W. Sheraton, geologist with the ANARE Prince Charles Mountains Survey Party of 1973.

Sheret, Michael Alan "Black Mike." b. May 13, 1937, Kirkcaldy, Fife. While still a student at Edinburgh University, he joined FIDS in 1958, as a geophysicist, and wintered-over at Halley Bay Station in 1959. He arrived back in Southampton on March 18, 1960, on the *Athlone Castle* from Cape Town.

Sheridan Bluff. 86°53' S, 153°30' W. At the head of Scott Glacier, at the S side of the junction of that glacier and Poulter Glacier, 3 km ESE of Mount Saltonstall, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN for Michael F. Sheridan, professor of geology at Arizona State University, a member of a USARP field party in the area in 1978-79.

Cape Sheriff *see* **Cape Shirreff**

Sheriff Cliffs. 83°24' S, 50°37' W. Rising to about 1750 m, to the W of Gabbro Crest, on the S side of the Saratoga Table, in the Forrestal Range, in the N part of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Steven D. Sheriff, geologist at Western Washington State University, at Bellingham, who worked in this area in 1978-79. UK-APC accepted the name on May 21, 1979.

Sherlac Point. 64°44' S, 62°40' W. At the SE end of Rongé Island, in the Errera Channel, off the Danco Coast, on the W coast of Graham Land. Roughly charted in Feb. 1898, by BelgAE 1897–99, and named by de Gerlache as Cap Charles, after Capt. Charles Lemaire (*see* **Lemaire Channel**). It appears as such on the expedition map of 1899, and, on Dr. Frederick Cook's 1900 English language version of the map, it appears as Cape Charles. It appears on a 1949 Argentine chart as Cabo Charles, but on one of their 1953 charts it appears as Cabo Clark, which, presumably, is an error. In 1956–57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. On a 1957 Argentine chart it appears as Cabo Carlos. To avoid confusion with Charles Point, in Hughes Bay, UK-APC anagrammized it on Sept. 23, 1960. US-ACAN accepted the British naming in 1965.

Sherman, Robin Lewis. b. April 21, 1935, Ryde, Isle of Wight, son of tax official Albert Sherman and his wife Lois Irene Layton. He grew up in Worthing, went to Kings College, London (geography), and joined FIDS in 1956, as a surveyor. He left England on the *Shackleton*, bound for Montevideo, Port Stanley, and South Georgia. From Nov. 21, 1956 until Jan. 28, 1957, he was mapping on Coronation Island, and then the *Shackleton* picked him up to take him to Signy Island Station, where he wintered-over in 1957. On Nov. 25, 1957 the *Shackleton* took him and Cecil Scotland to Powell Island, to do mapping there. Just after dropping them off, the *Shackleton* got punctured, and nearly sank, just north of Coronation Island. On Dec. 18, 1957 they returned to Signy on the *John Biscoe*. The *Biscoe* came to pick him up on April 14, 1958, and via Port Stanley, he returned to Southampton on June 3, 1958. He spent three months finishing his map work, and then began a career as a computer systems specialist, as a security expert working on biometrics, etc. He married Lillian Grady in May 1959, and retired to Tunbridge Wells in 1999.

Sherman Island. 72°40' S, 99°45' W. An ice-covered island, about 48 km long and 16 km wide, S of Thurston Island, in the middle of Peacock Sound, and rising above the Abbot Ice Shelf (which occupies the sound). Delineated from air photos taken in Dec. 1946, during OpHJ 1946–47. Named by US-ACAN in 1960, for Admiral Forrest Percival Sherman (1896–1951), USN, chief of naval operations (the youngest ever up until that time), 1949–51, at a time when preparations were being made for USN support for the upcoming IGY. Originally plotted in 72°38' S, 100°00' W, it has since been replotted.

Bahía Sherratt *see* **Sherratt Bay**

Sherratt, Richard. Name also seen spelled as Sheratt. b. July 10, 1774, Liverpool, son of Samuel Sherratt. He went to sea in 1790, and on July 11, 1798, bought the ship *William* from John Carmont. But he rose too fast, too soon, and on Feb. 8, 1806, in Liverpool, he went bankrupt (he is described as a master mariner, of Marrow, Liverpool, and of Blackstock, Mildred's Court). On Sept. 15, 1820 he became skipper of the sealer *Lady Troubridge*, and took her down to the South Shetlands for the 1820–21 season. While waiting to be rescued after his vessel went down on Dec. 25, 1820, he made an interesting, if inaccurate, map of the central part of the South Shetlands.

Sherratt Bay. 62°02' S, 57°49' W. Between Cape Melville and Penguin Island, on the SE side of King George Island, in the South Shetlands. Known and roughly charted by early 19th-century sealers (it appears on Sherratt's map of 1821, but unnamed). Charted by the Discovery Investigations in Jan. 1937. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS in 1958. Named by UK-APC on Sept. 23, 1960, for Richard Sherratt. US-ACAN accepted the name later that year. The Argentines call it Bahía Sherratt. Last plotted by the UK, in late 2008.

Punta Sherrell *see* **Sherrell Point**

Sherrell Point. 63°18' S, 58°42' W. The most southerly point on Astrolabe Island, off Trinity Peninsula. This feature was not only photographed aerially by FIDASE in 1956–57, it was also surveyed by them from the ground. Named by UK-APC on Aug. 31, 1962, for engineer Frederick William Sherrell (b. Feb. 2, 1932, Bere Alston, Devon. d. Aug. 5, 2001, Tavistock, of emphysema), surveyor and geologist here with FIDASE in 1955–56 (i.e., for the first part of the expedition). He had worked in Greenland. US-ACAN accepted the name later in 1962. The Argentines call it Punta Sherrell.

Cape Sherriff *see* **Cape Shirreff**

Sherve Peak. 77°31' S, 168°46' E. Rising to 2200 m in the W part of Guardrail Ridge, in the Kyle Hills, on Ross Island. Named by US-ACAN in 2000, for John Sherve, facilities maintenance supervisor and construction coordinator at McMurdo from 1988 to 1994; he wintered-over as ASA resident manager at McMurdo in 1994; and wintered-over again at McMurdo in 1998, as NSF's station manager. NZ-APC accepted the name on Feb. 20, 2001.

Sherwin Peak. 82°37' S, 161°48' E. Rising to 2290 m, it surmounts the E side of Otago Glacier, 8 km SE of Mount Chivers, in the N part of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for James S. Sherwin, ionosphere physicist at Little America in 1958.

Sherwood, Charles C. *see* **USEE 1838–42**

Lake Sheshnag. 70°46' S, 11°35' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

Skaly Shesterikova *see* **Kirby Head**

Islas Shetland del Sur *see* **South Shetland Islands**

Shetland Island *see* **South Shetland Islands**

Shewry, Arthur Lucien. b. 1923, Chelmsford, Essex, son of Charles George Shewry and his wife Dora May Bendall. After service in World War II, he was living in Stoneyhill, Newton Abbot, Devon, when he joined FIDS in 1954, as a general assistant and carpenter, and wintered-over at Base N in 1955, and in 1956 at Base G. In 1959 he went to NZ, but returned in 1966, to marry Phyllis K. Hyde, in London. He died in NZ.

Shewry Peak. 64°45' S, 63°38' W. Rising to 1065 m, N of Mount Williams, and WSW of Börgen Bay, in the SE part of Anvers Island, in the Palmer Archipelago. Surveyed from the east by Port Lockroy Station personnel of Operation Tabarin in 1944. It appears on a 1953 Argentine chart with the descriptive name Orejas Blancas (i.e., "white ears"). Re-surveyed by Fids from Base N (a team that included Arthur Shewry) in 1955. Named by UK-APC on Sept. 4, 1957, for Mr. Shewry. It appears on a British chart of 1958. US-ACAN accepted the name in 1965.

Ostrova Shhernye. 67°19' S, 49°00' E. A group of islands in Khmara Bay, on the coast of Enderby Land. Named by the Russians.

Shibata, Kanejiro. b. 1892, Aichi, Japan. A seaman on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910–12. He died in 1938.

Shibuya Peak. 75°10' S, 133°35' W. An isolated rocky nunatak, rising to 840 m, on the E side of Berry Glacier, on the Hobbs Coast of Marie Byrd Land, 6 km SE of the Demas Range. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Franklin T. Shibuya, American USARP meteorologist at Byrd Station in 1962.

Mount Shideler. 77°55' S, 154°51' W. A peak, about 1.5 km SE of Mount Fitzsimmons, in the N group of the Rockefeller Mountains, on Edward VII Peninsula. Discovered aerially on Jan. 27, 1929, by ByrdAE 1928–30. Named by USAS 1939–41, for William Henry "Doc" Shideler (1886–1958), professor of geology (and founder of the chair) at Miami University, Oxford, Ohio. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Shield Island *see* **Shield Nunatak**

Shield Lake. 68°32' S, 78°16' E. Just S of Ekho Lake, on Breidnes Peninsula, in the Vestfold Hills. It was one of several lakes investigated by ANARE biologists wintering-over at Davis Station in 1974. So named by ANCA because in plan it resembles a shield.

Shield Nunatak. 74°33' S, 164°30' E. Also called Shield Island. A prominent multiple volcanic cone at the E side of the terminus of Campbell Glacier, on the N shore of Terra Nova Bay, in Victoria Land. Named for its shape (an old Viking shield) by NZGSAE 1965–66. US-ACAN accepted the name in 1968.

Mount Shields. 70°11' S, 159°56' E. Rising to 1168 m, on the E side of Pryor Glacier, at the junction of that glacier and Robilliard Glacier, at the N end of the Usarp Mountains, in Oates Land, in Victoria Land. It was used as an electrotape station during the USGS traverse in 1961–62. Named by US-ACAN in 1964, for Staff Sgt. James K. Shields, U.S. Marine Corps, who was with VX-6 in 1962–63 and 1963–64, during the first season serving as navigator on aircraft supporting USGS's Topo West Survey of the area.

Shima, Yoshitake. b. 1881, Tokyo. Purser on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910-12. He died in 1962.

Shimen Bandao. 62°13' S, 59°01' W. A small peninsula on the much larger Fildes Peninsula, on King George Island, in the South Shetlands. Named by the Chinese.

Shimizu, Kotaro. b. 1872, Aichi, Japan. Chief engineer on the *Kainan Maru*, during Shirase's Japanese South Polar Expedition of 1910-12.

Shimizu Ice Stream. 85°11' S, 124°00' W. In the Horlick Mountains, it flows WNW from the area between the Wisconsin Range and the Long Hills, to enter the S flank of Horlick Ice Stream. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1962, for glaciologist Hiromu "Hiro" Shimizu, who was a member of Charlie Bentley's Ellsworth Highland Traverse of 1960-61. He then wintered-over at Byrd Station in 1961, and then was a member of the Antarctic Pennsula Traverse of 1961-62 (q.v.). He was later associate professor at the Institute of Low Temperature Science, at Hokkaido.

Shimizu Nunatak *see* **Anderson Nunataks**

Shimmering Icefield. 76°40' S, 159°44' E. Between Shipton Ridge and Tilman Ridge, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, who named it for its frequently shimmering appearance when seen against the sun. NZ-APC accepted the name, followed by US-ACAN in 1965, and ANCA on Aug. 10, 1966.

The *Shinano Maru*. Japanese Fisheries Agency vessel in Antarctic waters in 1979-80, as part of an expedition that also included the *Kaiyo Maru* (q.v. for more details of the expedition). The *Shinano Maru* took 18,000 tons of krill between the coasts of Mac. Robertson land and Wilkes Land. Her skipper was Kazuhito Ohkubo.

The *Shingebiss II*. American yacht, skippered by Lawrence Bailey, which visited the South Shetlands and the Antarctic Peninsula in 1993-94 and 1994-95.

Shingle Cove. 60°39' S, 45°34' W. A small, sheltered cove in the NW corner of Iceberg Bay, on the S coast of Coronation Island, in the South Orkneys. First roughly surveyed by personnel on the *Discovery II* in 1933, it appears on their 1934 chart. It seems they named it Useless Bay, for it (seems to) appear as such on their charts of 1935 and 1937. Re-surveyed by Fids from Signy Island Station in 1948-49, and named by them for the fine shingle on the landing beach on the S shore of the cove. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Re-surveyed by Fids from Signy Island Station between 1956 and 1958.

Shingle Hut. 60°39' S, 45°34' W. British depot built in Jan. 1963 (the British gazetteer says May 1962) in Shingle Cove, on the S coast of Coronation Island, by personnel from Signy Island Station, and used as a staging post for expeditions onto Coronation Island.

Shinkichi, Hanamori *see* **Hanamori, Shinkichi**

Mount Shinn. 78°27' S, 85°46' W. One of the great Antarctic mountains, 6 km SE of Mount Tyree, in the Sentinel Range of the Ellsworth Mountains. Discovered in Jan. 1958 on an IGY reconnaissance flight piloted by Gus Shinn, for whom it was named by US-ACAN in 1961. First climbed on Dec. 21, 1966. In 2001, Damien Gildea and Mike Roberts got to within 100 m of the summit, but had to turn back. Gildea was back in 2002, with Rodrigo Fica, this time getting to the top, and fixing its height at 4661 m.

Shinn, Conrad Selwyn "Gus." b. Sept. 12, 1922, Spray, NC, as Conrad Pratt Shinn, son of YMCA secretary Pinkney Shinn and his wife Mattie Jane Krimminger. As a lieutenant in the U.S. Navy, he was a pilot during OpHJ 1946-47. On his return to NC, on April 26, 1947 he married Gloria Carter. He was back in Antarctica in 1956-57, this time as a lieutenant commander, flying one of the R4Ds in to McMurdo from NZ, on Oct. 18-19, 1956. On Oct. 27, 1956 he was one of the pilots (Frankiewicz was the other one) who flew the 4 men out to establish the Beardmore Glacier Camp. He was the first man ever to land a plane at the South Pole, at 8.34 a.m, on Oct. 31, 1956. As one of the few veterans from OpHJ and one of the few who could ski, he was selected to fly the R4D Skytrain *Que Sera Sera* to the Pole to spy out the land there, to see if it was suitable for an IGY base. His 6 passengers included Admiral Dufek and Trigger Hawkes. Gus kept the engine running in -58°F temperature, and with the others stepped outside for 49 minutes, as a Globemaster circled overhead to make sure they got off again in the low temperature. He was the 17th man ever to stand at the South Pole. The markers that Scott and Amundsen had left had long since been buried, as had the flag Byrd dropped when he flew over in 1929. Shinn was back in Antarctica in 1957-58, making IGY support flights over the Ellsworth Mountains. From 1958 he was based at Pensacola, where he flew with the Blue Angels. He retired in 1963.

Shinn Ridge. 78°26' S, 85°34' W. A rock ridge extending NE for 6 km from Mount Shinn, in the Sentinel Range of the Ellsworth Mountains. Named by US-ACAN in 2006, in association with the mountain.

Shinnan Glacier. 67°55' S, 44°38' E. About 6 km wide at the mouth, it flows NW to the E border of the Prince Olav Coast of East Antarctica (it is actually the easternmost glacier on that coast), just E of Shinnan Rocks, and marks the division between Queen Maud Land and Enderby Land. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE 1961-62, and named by them on May 1, 1963 as Sinnan-hyoga (or Shinnan-hyoga) (i.e., "new south glacier"). US-ACAN accepted the name Shinnan Glacier in 1964. The Norwegians call it Carnebreen.

Shinnan Rocks. 67°57' S, 44°33' E. Also seen spelled as Sinnan Rocks. A substantial area of exposed coastal rocks on land at the W side of Shinnan Glacier, it is the largest ice-free area (116.82 sq km) on the Prince Olav Coast, in Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1961-62, and named by them on Oct. 1, 1962, as Sinnan-iwa, or Shinnan-iwa (i.e., "new south rocks"). US-ACAN accepted the name Shinnan Rocks in 1964. The Norwegians call this feature Nyheia (which means roughly the same thing), and the Russians call it Oazis Tereshkovoj.

Shinnan-hyoga *see* **Shinnan Glacier**

Shinnan-ike *see* **Sinnan-ike**

Shinnan-iwa *see* **Shinnan Rocks**

Shinobi Rock. 68°03' S, 43°44' E. Also spelled Sinobi Rock. A small rock exposure on the coast, between Kabuto Rock and Rakuda Rock, 14 km SW of Carstensfjella, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from 1962 JARE air photos, and named by them on May 1, 1963, as Sinobi-iwa, or Shinobi-iwa (i.e., "hidden rock"). US-ACAN accepted the name Shinobi Rock in 1968. The Norwegians call it Løyndeknatten (which means the same thing).

Shinobi-iwa *see* **Shinobi Rock**

Morena Ship. 73°47' S, 63°38' E. A moraine to the NE of Keyser Ridge, in the southern Prince Charles Mountains. Named by the Russians.

Ship Cone. 76°40' S, 159°35' E. A conical peak, about 1.7 km S of Townrow Peak, on the Tilman Ridge, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for a similarly-shaped peak in the Hokonui Hills of NZ. NZ-APC accepted the name, as did US-ACAN in 1965, and ANCA on Aug. 10, 1966.

Ship Harbor *see* **Clothier Harbor**

Ship Nunatak. 71°04' S, 159°50' E. A very striking nunatak rising above the ice, near the center of the upper portion of Harlin Glacier, in the Usarp Mountains, about 7.4 km SW of Lee Nunatak, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. In plan, it resembles a ship at sea, hence the name given by US-ACAN in 1970.

Shipka Saddle. 62°40' S, 60°08' W. A deep, ice-covered saddle, 250 m long, running at an elevation of over 1000 m above sea level between Lyaskovets Peak to the W and (to the E) a mountain range trending W-E toward Renier Point (this range contains Helmet Peak and Great Needle Peak), on Livingston Island, in the South Shetlands. It is part of the glacial divide between Huron Glacier to the N and Macy Glacier to the S. The midpoint of the saddle is located 2.95 km E by N of the summit of Mount Friesland, and 3.45 km SSE of Kuzman Knoll. Named by the Bulgarians on Aug. 19, 1997, after Shipka Pass, in the Stara Planina Mountains, in the Balkans. UK-APC accepted the name on April 23, 1998. Plotted by the UK in late 2008.

Shipka Valley. 62°39' S, 60°08' W. A valley, 2.4 km long and 700 m wide, descending from Shipka Saddle between the N slopes of Lyaskovets

Peak and Levski Peak, and containing within it a glacier that flows into the Huron Glacier, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, in association with Shipka Saddle.

Shipley Glacier. 71°26' S, 169°12' E. A glacier, about 40 km long, it drains the N slopes of Mount Adam and flows along the E wall of the DuBridge Range, in the Admiralty Mountains, to Pressure Bay, on the N coast of Victoria Land. Some of the glacier bypasses Pressure Bay and reaches the sea W of Flat Island. The seaward end of the glacier was first mapped by Campbell's Northern Party during BAE 1910-13, and named by Campbell (at the suggestion of Ray Priestley), for zoologist Arthur Everett Shipley (1861-1927), master of Christ's College, Cambridge (from 1910), and an authority on parasitic worms. From 1919 he was vice chancellor of the university, and was knighted in 1920. US-ACAN accepted the name. The entire glacier was mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963.

Ships. This seems a logical place to provide a glossary of some of the types of vessel encountered in the pages of this book. It is far from a comprehensive listing, of course, but hopefully it will be useful to the reader who is not an expert on ships and shipping. **Aircraft carrier**. A warship built with an extensive flat deck space for the launch and recovery of an aircraft. **Baltimore clipper**. A slim, fast schooner. **Barge**. Has several nautical definitions. The only one applicable to Antarctica is that of a boat allocated to a flag officer, used especially for ceremonial occasions, and often carried on board his flagship. **Barkentine**. Also spelled barquentine, and shortened to bark or barque. A sailing ship of 3 or more masts having the foremasts rigged square and the aftmast rigged fore and aft. **Battle cruiser**. A heavily armed warship of battleship size but with light armor, and capable of high speed. **Battleship**. A heavily armored warship of the largest size. **Boat**. A smaller vessel that can usually be carried on board a larger one. A ship cannot be carried. That is the difference between a ship and a boat. **Bomb**. A small warship carrying mortars. **Brigantine**. Brig for short. A two-masted sailing ship, rigged square on the foremast and on the fore-and-aft with square topsails on the mainmast. **Caravel**. Or carvel. A two- or three-masted sailing ship, especially one with a broad beam, a high poop deck and lateen rig. **Cargo ship**. Carries cargo, but is usually bigger than a humble freighter. **Clipper**. A fast sailing ship, usually used for trade. **Coaler**, or **collier**, or **coal ship**. Used to carry coal, often locally. **Coaster**. A vessel engaged in coastal commerce. **Corvette**. A lightly-armed escort warship. **Craft**. A single vessel, of any type. **Cruiser**. A high-speed, long-range warship of medium displacement, armed with medium-caliber weapons or missiles. **Cutter**. Has 4 definitions: 1. A sailing boat with its mast stepped farther aft so as to have a larger foretriangle than that of a sloop; 2. A ship's boat for carrying light cargo, or passengers; 3. A small, lightly armed boat, as used by Customs, etc.; 4. An icebreaker. **Destroyer**. A small, fast, lightly armored but heavily armed warship. **Factory ship**. A vessel which processes whale carcasses supplied by its whale catchers. Factory ships (or mother ships as they are also called) are usually big. **Flagship**. There are 2 meanings: 1. A ship, especially in a fleet, aboard which the commander of the fleet is quartered; 2. The most important ship belonging to a shipping company. **Flat-top**. Slang for an aircraft carrier. **Freighter**. A cargo ship. **Frigate**. A medium-sized, square-rigged warship. Later, the term was applied in Britain to a warship larger than a corvette but smaller than a destroyer, and in the USA to a warship larger than a destroyer but smaller than a cruiser. **Gig**. A light tender for a vessel, often for the personal use of a captain. **Hermaphrodite brig**. A sailing vessel with 2 masts rigged square on the foremast and fore-and-aft on the aftermast. **Hulk**. Has 2 meanings: 1. A large, unwieldy vessel; 2. The body of an abandoned ship. **Icebreaker, or ice-boat**. Has a reinforced bow for the breaking of ice. **Jollyboat**. A small boat used as a utility tender for a vessel. **Ketch**. A two-masted sailing vessel, fore-and-aft rigged, with a tall main mast and a mizzen stepped forward of the rudderpost. **Landing craft**. Any small vessel designed for the landing of troops or equipment on beaches. **Launch**. A motor-driven boat, used chiefly for transport. In the old days it was the largest of the boats of a man o' war. **Lifeboat**. A small craft, variously propelled, carried on board a larger vessel, as a means of escape or rescue. **Lighter**. A flat-bottomed barge, used for transporting cargo, especially in loading or unloading a ship. **Liner**. A passenger ship, part of a commercial fleet. **Longboat**. The largest boat carried aboard a commercial vessel. **Lugger**. A small working boat rigged with a lugsail. **Man 'o War**. A warship. **Merchantman**. A merchant ship working for the Merchant Navy (or Merchant Marine). **Oiler**. Another name for a tanker. **Packet, or packet boat**. A boat that transports mail, passengers, cargo, etc, usually on a fixed, short route. **Pilot, or pilot boat, or pilot ship**. It leads the way in a convoy. **Pinnace**. A ship's tender. **Pram**. A light tender with a flat bottom and a bow formed from the ends of the side and bottom planks meeting in a small, raised transom. **Privateer**. A small, privately-owned vessel commissioned for war service by a government. **Refrigeration ship**. One used to hold cold-store products. **Research ship**. One on which research is done. **Sailing ship**. A large sailing vessel. **Schooner**. A vessel with at least 2 masts, with all lower sails rigged fore-and-aft. **Scow**. An unpowered barge used for freight, etc. **Sealer**. A vessel engaged in sealing. **Shallop**. has 2 meanings: 1. Two-masted gaff-rigged vessel, also called a tender. 2. A light boat used for rowing in shallow water. **Ship**. A large sailing vessel with (formerly) three or more square-rigged masts. Now it is defined as a larger vessel which will not fit onto another (*see also* **Boat**). **Ship of the line**. A warship large enough to fight in the first line of battle. **Slaver, or slave ship**. Used to transport slaves from Africa to the Americas. **Sloop**. A vessel, single-masted, rigged fore-and-aft, with the mast stepped about one-third of the overall length aft of the bow. **Sloop of war**. A small, fast-sailing warship mounting some 10 to 30 small caliber guns on the deck. **Snow**: A type of bark, with square sails on both masts, and with a trysail called a snow mast. Pronounced "snoo." **Square rigger**. Any vessel with square sails. **Steamboat**. A boat powered by a steam engine. **Steamer**. A vessel driven by steam engines. **Steamship**. One powered by one or more steam engines. **Storeship**. One on which stores are kept. **Submarine**. A vessel designed to go and stay underwater for varying periods of time. **Supertanker**. A large, fast tanker of more than 275,000 tons capacity. **Supply ship**. One used to carry supplies to Antarctic scientific stations. **Survey vessel**. One from which surveys are carried out. **Tanker**. An oil carrier. **Tender**. A small vessel towed or carried by another ship. Also called a shallop. **Transport**. A ship used to carry troops or goods. **Tug, or tugboat**. A boat with a powerful engine, used for towing other vessels. **Vessel**. The generic term for any ship or boat, and the only safe one to use when describing a sea vehicle. **Warship**. A vessel armed, armored, and otherwise equipped for naval warfare. **Whale boat**. A narrow boat, from 20 to 30 feet long, having a sharp prow and stern, formerly used in whaling. **Whale catcher**. A vessel engaged in the actual harpooning of whales, after which it returns to its mother ship, usually the factory ship. **Whaler**. Has 2 definitions: 1. A vessel engaged in whaling. 2. Another name for a whale boat. **Windjammer**: A merchant cargo ship with much sail. **Yacht**. A vessel propelled by sail or other power, used especially for pleasure cruising. **Yawl**. Has 2 definitions: 1. A two-masted sailing vessel, rigged fore-and-aft, with a large mainmast and a small mizzenmast stepped aft of the rudderpost; 2. A ship's small boat, usually rowed by 4 or 6 oars. **YOG**. Yard oiler gasoline.

Ships Passage. A feature at Port Lockroy, appearing on Andrew Taylor's 1948 map. A UK-APC resolution of May 10, 2006, stated that there was not, and never had been, a move to name this feature officially.

Shipton Ridge. 76°40' S, 159°51' E. The main ridge forming the NE arm of the Allan Hills, in Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, who named it for Eric Earle Shipton (1907-1977), Himalayan mountain climber. The reason for the naming was that Odell Glacier is adjacent to this feature, and that was named after mountain climber Prof. N.E. Odell, of Otago University, who was associated with Shipton. Besides, it was a good excuse to name an Antarctic feature for one of the mountain climbing legends. Shipton was long associated with two other climbers biographized in this book — Jack Ewer and Bill Tilman. He spent a lot of time in the Himalayas, and faked the famous Yeti footprint in 1951, thus setting off a hysteria which has

never abated. He was about to lead the famous 1953 Everest expedition, but was replaced by John Hunt. In 1969, he wrote *That Untravelled World*. NZ-APC accepted the name, as did US-ACAN in 1965, and ANCA on Aug. 10, 1966.

Shipwreck Moraine. 76°51' S, 161°47' E. An extensive supraglacial moraine complex caught in the backwater ice of a valley beside Benson Glacier, between Black Pudding Peak and Mount Brogger, in the Prince Albert Mountains of Victoria Land. Named by Trevor Chinn's 1989-90 NZARP field party here. On a descent to the moraine, a motor toboggan and a sledge ran onto blue ice thinly disguised by snow, and careened out of control down the slope, tossing gear and personnel overboard as the sledge overturned. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

The *Shirase*. An 11,600-ton Japanese icebreaker and research ship, named for Nobu Shirase, and launched in 1982 to replace the *Fuji*. She was the 3rd Japanese icebreaker since IGY (*see* **The *Soya*** and **The *Fuji***). 440 feet long, 92 feet wide at her broadest, she displaced 17,000 tons, and could break continuous 5-foot-thick ice at 3 knots. Maximum speed 19 knots. At 15 knots the ship had a range of 25,000 miles. She had a flight deck, and all the latest equipment. On Dec. 3, 1983 she left Fremantle for her first trip south, under the command of Captain Mamoru Sato. She was to service Showa Station. Capt. Sato was her skipper again in 1984-85. In late 1985 she rescued the trapped *Nella Dan* off Enderby Land. Her skipper that year, and also in 1986-87, was Atsushi Kurata. She was back as the JARE ship in the following years: 1987-88 (Capt. Moritada Honda), 1988-89 (Capt. Takeshi Kamigaki), 1989-90 (Capt. Kamigaki), 1990-91 (Capt. Masanori Saito), 1991-92 (Capt. Saito), 1992-93 (Capt. Takehiro Hisamatsu), 1993-94 (Capt. Hisamatsu), 1994-95 (Capt. Tatsuo Kato), 1995-96 (Capt. Kato), 1996-97 (Capt. Masakazu Chosa), 1997-98 (Capt. Chosa), 1998-99 (Capt. Seiji Shigehara), 1999-2000 (Capt. Shigehara), and then every season until 2007-08. She was retired after 25 years of continual service, and replaced that year by a new ship of the same name, launched in Maizuru, on April 16, 2008. Her first scheduled departure for Antarctica was Nov. 2009, the Australian ship *Aurora Australis* being used in the meantime.

Shirase, Nobu. b. 1861, Konoura, Akita, Japan, as Naoshi Shirase, eldest son of a Buddhist monk. After failing as a monk himself (name of Choku), he entered the Army (as Nobu Shirase). He led the Japanese South Polar Expedition of 1910-12. The last several decades of his life were spent traveling and lecturing, in an effort to pay off debts incurred during the expedition. On Dec. 25, 1933 he became the first president of the Nippon Polar Research Institute. He died a lonely and obscure death on Sept. 4, 1946, in Koromo, Japan.

Shirase Bank. 76°40' S, 158°00' W. An undersea feature off the Shirase Coast, after which it was named by international agreement in June 1988, as Shirase Basin. It was renamed Shirase Bank, again by international agreement, in May 1993.

Shirase Basin *see* **Shirase Bank**

Shirase Coast. 78°30' S, 156°00' W. Also called the Prestrud Coast. The northerly segment of the relatively ill-defined coast along the E side of the Ross Ice Shelf and the Ross Sea, lying between the N end of the Siple Coast (83°30' S, 155°W) and Cape Colbeck, on the S coast of Edward VII Land. Named by NZ-APC in 1961, appropriately for Nobu Shirase. US-ACAN accepted the name in 1964.

Shirase Glacier. 70°05' S, 38°45' E. A large glacier flowing N from Thorshavnheiane (the area from the Belgica Mountains in the W to Queen Maud Land), into Havsbotn (which forms the head of Lützow-Holm Bay), between the Prince Harald Coast and the Prince Olav Coast, in East Antarctica. LCE 1936-37 mapped the northernmost part of the glacier as an ice-covered bay, naming it Instefjorden (i.e., "the innermost fjord"). JARE ground surveys between 1957 and 1962 revealed the true nature of this "fjord," ie. that it was simply the N part of a large glacier which they named Shirase-hyoga on Feb. 1, 1961, for Nobu Shirase. US-ACAN accepted the translated name Shirase Glacier in 1962. The Norwegians call it Shirasebreen.

Shirase-hyoga *see* **Shirase Glacier**

Shirase Kaitei-koku. 69°40' S, 38°35' E. A huge drowned glacial trough reaching to 1650 m deep, extending northward for about 100 km from Shirase Glacier, at Lützow-Holm Bay. The N end of the trough is still an unknown quantity. Mapped by JARE from soundings taken between 1959 and 1981. Named by the Japanese on Oct. 23, 1989 ("Shirase submarine valley"). The Norwegians call it Shiraserenna (which means the same thing).

Shirasebreen *see* **Shirase Glacier**

Shiraserenna *see* **Shirase Kaitei-koku**

Cape Shireff *see* **Cape Shirreff**

Shireff Camp *see* **Camp Shirreff Field Station** (under **C**)

Shireff's Cove *see* **Emerald Cove**

Shirey, Guy Otney. b. Feb. 28, 1891, Boydsville, Arkansas, son of physician Wesley L. Shirey and his wife Alice. In 1915 he married Margaret C. Watson, and during World War I was a major and physician in the U.S. Army. He was a doctor for an oil company, and living in Texarkana when he became involved with Byrd in planning ByrdAE 1933-35. He was supply officer as well as the expedition doctor, and sailed south on the *Jacob Ruppert*. However, once at the Bay of Whales it became obvious to him and everyone else that he couldn't face a year on the ice, so he went sick, and left on the *Ruppert* for NZ on Feb. 6, 1934. He was replaced by Louis Potaka (q.v.), a part-Maori doctor brought in from NZ on the *Discovery II*. On Feb. 27, 1934, Dr. Shirey steamed out of Wellington on the tanker *O.A. Knudsen*, bound for San Pedro, Calif. He died on June 30, 1947, in Los Angeles.

Mount Shirley. 75°39' S, 142°03' W. An ice-covered mountain, whose E face is marked by a prominent cirque, it surmounts the W side of the mouth of Land Glacier, on the Hobbs Coast of Marie Byrd Land. Discovered in 1939 by USAS 1939-41, and named Mount Ann Shirley for the wife of Charles C. Shirley. US-ACAN accepted the name in 1947. The name was later shortened.

Shirley, Charles C. "Charlie." b. July 27, 1909, Fargo, Ga., but raised partly in Arcadia, Fla. In response to Byrd asking for volunteers to help load the *City of New York* for ByrdAE 1928-30, Shirley volunteered for the job. He asked to go on the expedition, but Byrd advised him to get a skill first. So he did — he joined the U.S. Navy and became a photographer. He volunteered for ByrdAE 1933-35, but was turned down in favor a more experienced aerial photographer. He married Ann, and they lived in San Diego. He finally made it to Antarctica, going south on the *Bear* for USAS 1939-41, as chief photographer, making 15 aerial photo flights from West Base during that expedition. He later directed all the photo ops at Bikini, and, later still, was in charge of photographic work on OpHJ 1946-47. He retired as a lieutenant commander. In Aug. 1978, he graduated from the University of Florida's school of journalism, and died on Jan. 21, 1989, in Miami. *See also* **Carroll, Arthur J**.

Shirley Glacier. Does not seem to exist, despite occasional references.

Shirley Island. 66°17' S, 110°30' E. A rocky island, 1.5 km long, about 160 m NW of the W end of Bailey Peninsula, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken in Feb. 1947, during OpHJ 1946-47. Named by US-ACAN in 1956, for Charles C. Shirley.

Bukhta Shirokaja *see* **Shirokaya Bay**

Morena Shirokaja. 72°56' S, 66°51' E. A moraine on the NE side of the Lambert Glacier. Named by the Russians.

Shirokaya Bay. 68°32' S, 78°10' E. A wide bay, just E of Weddell Arm, on the N side of Breidnes Peninsula, in the Vestfold Hills. Photographed aerially during OpHJ 1946-47, and again by SovAE 1956. The Russians named it Bukhta Shirokaja. ANARE aircraft photographed it in 1957 and 1958, and ANCA translated the name as Shirokaya Bay.

Skaly Shirotnye. 73°12' S, 62°03' E. A group of rocks E of Seavers Nunataks, in the southern Prince Charles Mountains. Named by the Russians.

Shirreff *see* **Cape Shirreff Field Station** (under **C**)

Cabo Shirreff *see* **Cape Shirreff**

Caleta Shirreff *see* **Shirreff Cove**

Cape Shirreff. 62°28' S, 60°48' W. A prominent cape at the N end of the rocky peninsula which forms the W entrance point of Hero Bay, separating that bay from Barclay Bay. In short, it is the northernmost point of Livingston Island, in the South Shetlands. Roughly charted by Bransfield on Jan. 17, 1820, and named by him as Shirreffs Cape, for William Henry Shirreff (1785-1847), the senior British naval officer on the Pacific coast of South America in the early

19th century (he became a rear admiral on Nov. 9, 1846). It was Shirreff who sent Bransfield to verify Capt. William Smith's discovery of the South Shetlands. Nat Palmer's log entry of Nov. 30, 1820, spells it Shireff Cape, but his entry for Dec. 15 has it as Shireffs Cape. In 1821, Fildes spells it variously as Cape Sherif, Cape Sheriff, Cape Sherriff, Sheriff Cape, and Sherriffs Cape, while Bone, on his 1821 chart, uses Cape Shireff. Burdick's log entry of Jan. 25, 1821, spells it Sheriffs Cape. Capt. Davis's log entry of Dec. 24, 1821, spells it Sherifs Cape, while his entry of Dec. 31, 1821 has Sheriff's Cape. Powell's chart published in 1822 has the correct spelling, Cape Shirreff. Weddell uses Cape Sheriff on his map published in 1825, and in Biscoe's log of March 3, 1832, it appears as Cape Shiriff. It appears as Cape Sherriff on an 1839 British chart, and that spelling also appears on the 1931 Discovery Investigations chart (they re-surveyed it in 1930-31). However, on a 1901 British chart it appears correctly as Cape Shirreff, and again on a 1937 British chart, and that was the spelling accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1968. On an 1861 Spanish chart it appears as Cabo Shirreff, and on an Argentine map of 1908 it appears as Cabo Chirreff. It was re-surveyed by ArgAE 1952-53, and appears on their 1953 chart as Cabo Giralt. However, on an Argentine chart of 1957, it appears as Cabo General Alvarado, named for General Rudecindo Alvarado (1792-1872), fighter for Argentine independence. In 1956 the Argentines officially named it (for themselves only) as Cabo Alvarado, and that was the name accepted by the 1970 Argentine gazetteer. The name accepted by the Chilean gazetteer of 1974 was Cabo Shirreff. The cape was photographed aerially by FIDASE in 1956-57. In 1967, the ice-free area in the vicinity of the cape was designated a specially protected area (SPA #11). Last plotted by the UK, in late 2008.

Shirreff Cove. 62°28' S, 60°49' W. A small cove, or anchorage, immediately SW of Cape Shirreff, between that cape and Telmo Island, along the N side of Livingston Island, in the South Shetlands. A cove in this vicinity was roughly charted by Bransfield on Jan. 17, 1820, and named by him as Shireff's Cove (sic), for William Shirreff (*see* **Cape Shirreff**). On Fildes's 1821 chart it appears as Sherriff's Cove, and on Powell's 1822 chart as Shirreff's Cove. This is presumably the one seen by Bransfield. On a British chart of 1930 it appears as Shirreff Cove, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. On a 1943 U.S. Hydrographic Office chart it appears as Sheriff's Cove. On a 1962 Chilean chart it appears translated as Caleta Shirreff, and that name was accepted by the 1974 Chilean gazetteer. One of the Argentine Antarctic expeditions named it Caleta Noto, for Juan Noto (*see* **Deaths**, Sept. 15, 1976), and it has been appearing that way since 1978. Last plotted by the UK, in late 2008.

Shirreff Refugio *see* **Punta Spring Refugio**

Shirreffs Cape *see* **Cape Shirreff**

Shirreff's Cove *see* **Shirreff Cove**

Mount Shirshov. 66°51' S, 51°37' E. A small mountain, about 5.5 km NE of Mount Selwood, in the Tula Mountains of Enderby Land. Visited by geologists of SovAE 1961-62, and named by them as Gora Shirshova, for Pyotr Petrovich Shirshov (1905-1953), Soviet oceanographer and polar explorer (North Pole). ANCA accepted the translated name Mount Shirshov on Oct. 22, 1968, and US-ACAN followed suit in 1971.

Gora Shirshova *see* **Mount Shirshov**

Shirtcliffe, Lionel James "Jim." b. Oct. 23, 1931, Hendon, Mdsx, son of Cecil Shirtcliffe and his wife Maisie Valerie (Valerie was her surname). A meteorologist, trained by the Air Ministry, he joined FIDS in 1954, as a met man and general assistant. He left Dover on a Swedish commercial vessel, bound for Port Stanley, in the Falkland Islands, and from there took the *Bigbury Bay* down to Base B (Deception Island). He arrived after Arthur Farrant shot himself, but helped bury the unfortunate Fid two weeks later. He wintered-over at Base B for the winter of 1954, and at Signy Island in 1955. He lived in the Falklands for a little while, then worked in Uruguay, and then Harry Dollman asked him if he wanted go back to Base E for the 1956 winter. The two of them tried, but couldn't get in because of the ice, and so they spent a year together in the Falklands, at the end of which Dollman went to Canada and Shirtcliffe went back to the UK. He again wintered-over, this time as a builder, at Signy in 1961, and in 1962 Johnny Green asked him if he wanted to be general assistant and officer-in-charge of Fossil Bluff Station, which he did, for that winter. He was a builder and general assistant for the winter of 1963, at Base T, and then spent a couple of years at Port Stanley, being back at Halley Bay Station for the summer fo 1964-65. He was back at Halley for the winter of 1967. That last season he worked on the construction of Halley II (Grillage Village). In 1969 he married Catherine Gregory. He was back at Halley Station in the summer of 1973-74, and then retired to Chelmsford, Essex.

Shishkoff's Island *see* **Clarence Island**

Shishman Peak. 62°39' S, 60°00' W. A rounded peak rising to over 800 m, in the E extremity of Levski Ridge, in the Tangra Mountains, next W of Devin Saddle, 900 m NE of Plovdiv Peak, 1.9 km W of Ruse Peak, and 3.5 km SSW of Rila Point, it overlooks Iskar Glacier and Bruix Cove to the NNE, and Magura Glacier to the S, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for Czar Ivan Shishman of Bulgaria, 1371-95.

Pik Shishmarëva *see* **Gruvletindane Crags**

Punta Shiver *see* **Shiver Point**

Shiver Point. 65°03' S, 61°22' W. A point marking the E side of the terminus of Hektoria Glacier, and the N side of the entrance to Evans Inlet (which is not an inlet at all, and has since been renamed Evans Glacier), 13 km W of Cape Fairweather, on the Oscar II Coast, on the E coast of Graham Land. There is a peak on it, rising to 670 m (the Chileans say 640 m). Surveyed and charted by Fids from Base D in Feb. 1949, and named descriptively by them for the cold here. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1952, in the British gazetteer of 1955, and on a British chart of 1962. It was re-surveyed by Fids from Base D in Sept. 1955. It appears on an Argentine chart of 1957 as Punta Shiver, and that was the name accepted by the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974.

Mount Shivling. 70°47' S, 11°37' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

Shleif Island. 68°50' S, 77°48' E. An irregular-shaped island, with an elevation of 41 m above sea level, due S of, and parallel to, Flag Island, its easternmost point is about 300 m due S of the southwesternmost point of Filla Island, in the Rauer Islands, in the SE part of Prydz Bay. Charted by SovAE 1956, and named by the Russians as Ostrov Shlejf. ANCA translated it as Shleif Island.

Ostrov Shlejf *see* **Shleif Island**

Cape Shmidt *see* **Shmidt Point**

Punta Shmidt *see* **Shmidt Point**

Shmidt Point. 66°55' S, 67°02' W. Marks the N extremity of Arrowsmith Peninsula, which separates Hanusse Bay from Lallemand Fjord, on the W coast of Graham Land. Discovered, roughly surveyed, but not named in Feb. 1909, by FrAE 1908-10, it appears on Charcot's chart of 1912. It was sketched from the air on Feb. 13, 1937, by BGLE 1934-37, and appears on Rymill's map of 1938. Since 1947 it has featured on Chilean maps as Punta Allipén, named after the river of that name in Temuco, Chile, the name "allipén" paradoxically meaning "burning." For example, it appears on a 1962 Chilean chart, and it was the name accepted by the Chilean gazetteer of 1974. It was named Cape Shmidt by UK-APC on March 31, 1955, for Prof. Otto Yulievich Shmidt (or, indeed, Schmidt) (1891-1956), Soviet Arctic explorer and director of the Arctic Institute at Leningrad, 1930-32. US-ACAN accepted that name in 1956. After aerial photography by FIDASE in 1956-57, and ground surveys by Fids from Base W in 1957-58, UK-APC redefined it on July 7, 1959, as Shmidt Point, and US-ACAN accepted that in 1960. It appears as such on a British chart of 1961, but, in the 1974 British gazetteer, it appears as Schmidt Point. The Argentines call it Punta Shmidt.

Shmidt Subglacial Basin. 72°00' S, 106°00' E. A large subglacial basin southward of the Knox Coast, in East Antarctica. Named by SovAE 1957 as Podlënaja Ravnina Shmidta, for Prof. Otto Shmidt (*see* **Shmidt Point**). US-ACAN accepted the translated name Shmidt Subglacial Basin in 1975.

Podlënaja Ravnina Shmidta *see* **Shmidt Subglacial Basin**

Shoals. *See* **Banks**, for definition. The main Antarctic shoals are: Carstens, Entrance, Franklin

Shoals, Kirkby, Maipó, Maldifassi, Molholm, Newman, Scott.

Shockey Peak. 77°36' S, 86°47' W. Rising to 2010 m, 3 km SE of Allen Peak, near the N extremity of the main ridge of the Sentinel Range. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for Charles C. Shockey, of USGS's Branch of Special Maps, which prepared the 1962 map of the Sentinel Range.

Shockley, William E. A lieutenant commander, USN, from Lakehurst, NJ. He was with VX-6 in 1955-56, for OpDF I, and piloted the Sikorsky helo (with Lt. Leroy Barton, and with Cdr. Gordon Ebbe and Seabee chief Herb Whitney on board), looking for alternate sites for what became known later as Williams Field, the first landing strip at McMurdo Sound. He was VX-6 officer in charge at McMurdo in the winter of 1966.

Shockley Bluff. 73°22' S, 164°56' E. A very steep bluff forming the S end of Deception Plateau, in Victoria Land, and overlooking the point where Pilot Glacier joins the larger Aviator Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for William Shockley.

Shoe Island. Unidentified island somewhere in the South Shetlands. Mentioned only twice, both times in Harris Pendleton's log book of the *Hero*, 1821-22. Could well be Snow Island, or Low Island.

Shoe Land Hill *see* **Tower Hill**

Shoemake Nunatak. 75°33' S, 140°05' W. Immediately W of Billey Bluff, at the SW end of the Ickes Mountains, on the coast of Marie Byrd Land. Photographed aerially (but not named) by USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for John L. Shoemake, USN, aerographer and weather observer at Brockton Station in 1968-69 and 1969-70.

Shoemaker Glacier. 73°47' S, 164°45' E. A tributary glacier in the Southern Cross Mountains of Victoria Land, it flows E along the S side of the Daley Hills into Aviator Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. (later Capt.) Brian Hall Shoemaker (b. July 4, 1937, Quebec), who joined the U.S. Navy in April 1960, and who was a VX-6 helicopter pilot at McMurdo in 1967. He retired from the Navy in April 1988.

Shoemaker Peak. 79°51' S, 82°19' W. On the E side of Ahrnsbrak Glacier, 5 km ESE of Sutton Peak, in the Enterprise Hills of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Dawaine A. Shoemaker (b. Oct. 10, 1932), meteorologist at Little America in 1958.

Shoesmith Glacier. 67°51' S, 67°12' W. The largest glacier on Horseshoe Island, on the Fallières Coast, it flows westward into Lystad Bay and northward into Gaul Cove, on the W coast of Graham Land. Surveyed by FIDS between 1955 and 1957, and named by them in association with the island. UK-APC accepted the name on July 7, 1959, and it appears on a British chart of 1960. US-ACAN accepted the name in 1964. The Argentines call it Glaciar Este.

Shogren, Gustave "Gus." Of course, his real name was Sjögren, and he was born in 1900, in Gottland, Sweden. He was a crewman on the *Jacob Ruppert* during ByrdAE 1933-35.

Shokalski Strait *see* **Schokalsky Bay**

Gora Sholohova. 80°39' S, 23°55' W. A nunatak, NE of Nicol Crags, in the Read Mountains of the Shackleton Range. Named by the Russians.

Shomo Rock. 75°35' S, 159°09' E. A nunatak between the Ricker Hills and Pape Rock, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1967, for Barry C. Shomo (b. Nov. 23, 1942, Pa. d. Sept. 16, 1994), equipment operator who wintered-over at Pole Station in 1966. ANCA accepted the name on Sept. 26, 1978.

The *Shonan Maru*. A 56.3-meter Japanese whale scouting vessel with 10 officers, 13 crew, and the capacity to take 2 scientists. She was loaned to the International Whaling Commission expeditions (q.v.), and, as such, was in Antarctic waters in 1981-82 (Capt. Sanji Nakanishi), 1982-83 (Capt. Kazuhiko Yamashita; 2nd officer was Norikatsu Yasunaga), 1983-84 (Capt. Shigeru Suzuki; chief officer was Tokuya Sumihara), 1984-85 (Capt. Yamashita), 1985-86 (Capt. Yamashita), 1986-87 (Capt. Suzuki), 1987-88 (Capt. Yamashita), 1988-89 (Capt. Nakanishi), 1989-90 (Capt. Masatoshi Kira; chief officer was Norikatsu Yasunaga), 1990-91 (Capt. Nakanishi; chief officer was Katsuji Gomi), 1991-92 (Capt. Kira), 1992-93 (Capt. Kira; 2nd officer was Hiroyuki Komiya), 1993-94 (Capt. Norikatsu Yasunaga; 2nd officer was Toshiyuki Miura), 1994-95 (Capt. Tetsuo Hara; 2nd officer was still Mr. Miura), 1995-96 (Capt. Tokuya Sumihara), 1996-97 (Capt. Hara), 1997-98 (Capt. Toshinori Tsurui), 1998-99 (Capt. Kazushi Sakai), 1999-2000 (Capt. Toshiyuki Miura), 2000-01 (Capt. Sakai). She has been in Antarctic waters every season since then.

The *Shonan Maru 2*. A 52.3-meter Japanese whale scouting vessel with 16 officers, a crew of 9, and capacity for 50 scientists. She was loaned to the International Whaling Commission expeditions (q.v.), and, as such, was in Antarctic waters in 1981-82 (Capt. Shigeru Suzuki; chief officer was Tokuya Sumihara), 1982-83 (Capt. Ikuo Uchiike), 1983-84 (Capt. Sanji Nakanishi), 1984-85 (Capt. Suzuki; chief officer was Testuo Hara), 1985-86 (Capt. Uchiike), 1986-87 (Capt. Fumio Yokota; chief officer was Norikatsu Yasunaga), 1987-88 (Capt. Nakanishi; Mr. Yasunaga was still chief officer), 1988-89 (Capt. Atsushi Owada), 1989-90 (Capt. Tetsuo Hara), 1990-91 (Capt. Toshinori Tsurui), 1991-92 (Capt. Eigo Onodera), 1992-93 (Capt. Owada), 1993-94 (Capt. Katsuji Gomi), 1994-95 (Capt. Gomi; chief officer was Hidenori Narita), 1995-96 (Capt. Hidenori Narita), 1996-97 (Capt. Tsurui), 1997-98 (Capt. Kazushi Sakai; chief officer was Hiroyuki Komiya), 1998-99 (Capt. Narita), 1999-2000 (Capt. Hiroyuki Komiya), 2000-01 (Capt. Toshiyuki Miura). She returned every year since.

Shopksi Cove. 62°31' S, 59°49' W. A cove, 2.6 km wide, indenting the SW coast of Greenwich Island for 1.5 km between Triangle Point and the westernmost extremity of the moraine spit protecting Yankee Harbor, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the Shoppe region in western Bulgaria.

Shor, Thomas *see* **USEE 1838-42**

Isla Short *see* **Short Island**

Mount Short. 72°50' S, 162°13' E. Rising to 2110 m, 1.5 km E of Sculpture Mountain, in the upper part of Rennick Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. Cdr. (later Cdr.) John Sutter Short, USN, LC-130F aircraft commander during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68).

Short Island. 63°57' S, 60°24' W. An island, about 4 km SW of Cape Page, just off the Wright Ice Piedmont, on the Davis Coast, on the W coast of Graham Land. Shown (but apparently not named) on an Argentine chart of 1952. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Short Brothers (more commonly known as Shorts), founded in 1908, the first manufacturers of aircraft in the world by virtue of the fact that, in 1909, the Wright Brothers placed an order with them for 6 planes. There were three brothers, Eustace, Oswald, and Horace. US-ACAN accepted the name later in 1960. It appears on a 1962 British chart. The Argentines call it Isla Short.

Shortcut Col. 64°16' S, 59°20' W. A wide col rising to over 460 m (the British say about 650 m), immediately S of Mount Hornsby, and N of Mount Brading, on Trinity Peninsula. Surveyed by Fids from Base D in 1960-61, and mapped by FIDS cartographers from that effort. Named descriptively by UK-APC on Feb. 12, 1964. It is a useful sledging shortcut from the Prince Gustav Channel to Larsen Inlet via Sjögren Glacier, avoiding the long detour through Longing Gap to the south. US-ACAN accepted the name later in 1964. In those days it was plotted in 64°14' S, 59°14' W. It was then replotted in 64°16' S, 59°13' W, and then replotted again.

Shortcut Island. 64°47' S, 64°07' W. A crescent-shaped island, about 0.7 km long, and with 3 prominent indentations of the N shore, 1.1 km SSE of Gamage Point (where Palmer Station is), along the SW coast of Anvers Island, in the Palmer Archipelago. So named by personnel at Palmer Station because they could get to Biscoe Bay quickly by using the narrow, deep channel separating this island from Anvers Island. UK-APC accepted the name on Dec. 20, 1974, and US-ACAN followed suit in 1975. It appears in the 1976 British gazetteer.

Shostakovich Peninsula. 72°11' S, 71°20' W. An ice-covered peninsula, it extends into the Bach Ice Shelf, N of Stravinsky Inlet, between that inlet and Williams Inlet, in southern Alexander Island. Roughly mapped by FIDS cartographers in 1959 from air photos taken in late 1947 by RARE 1947-48. Mapped in greater detail by the (British) Directorate of Overseas Survey, from U.S. Landsat images taken in Jan. 1973. Named by UK-APC on Dec. 20, 1974, for the Russian composer Dmitri Dmitriyevich Shostakovich (1906-1975). US-ACAN accepted the name in 1975.

Shotton Snowfield. 80°35' S, 23°15' W. A large snowfield bounded to the N by the Herbert Mountains and the Pioneers Escarpment and to the S by the Read Mountains, and extending from the the Gordon Glacier to the E end of the Shackleton Range (the E end of the range lying in Queen Maud Land), where it is known as Shottonfonna. It extends between 80°30' S and 80°40' S, and between 19°00' W (used to be 20°00' W, but was later restricted) and 26°30' W. Mapped by USGS in 1974 from 1966-67 USN air photos, and from ground surveys conducted by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Frederick William Shotton (1906-1990), British Quaternary geologist, and professor of geology at the University of Birmingham, 1949-74, in which capacity he did much to further the interests of BAS. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Shottonfonna *see* **Shotton Snowfield**

Shoulder Mountain. 76°38' S, 162°07' E. A prominent buttress, rising to over 1000 m, on the N side of the lower Fry Glacier, close S of Mount Creak, in Victoria Land. A triangular, south-facing rock wall rises steeply from the glacier level to the summit. Mapped, and named descriptively by the NZ Northern Survey Party of BCTAE in 1957, who, on Oct. 28 of that year established a survey station on the summit. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

The *Showa* *see* **The *Soya***

Showa Flat. 69°01' S, 39°34' E. A small, flattish area along the NW shore of Lake O-ike, in the E part of Ongul Island. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962 as Showa-taira, or Syowa-daira (i.e., "the flat of the Emperor Hirohito's era"), in association with Showa Station. US-ACAN accepted the name Showa Flat in 1968.

Showa Station. 69°00' S, 39°35' E. Also called Sjowa Station. Year-round Japanese scientific station on the N end of East Ongul Island, on the E fringe of Lützow-Holm Bay, off the Prince Olav Coast of East Antarctica. Established by JARE I (the first Japanese Antarctic Research Expedition) during the 1956-57 summer season, under the leadership of Professor Takeshi Nagata, and inaugurated on Feb. 14, 1957. Dr. Eizaburo Nishibori led the first wintering-over party, of 11 men, in 1957, when the station comprised 3 buildings (by 1990 it would have 47). The 1957-58 expedition had to be abandoned due to the severity of the pack-ice that year, the *Soya* being unable to approach the station in Jan. 1958. Men and equipment were ferried to the *Soya* by helicopter, and the station went to the dogs — literally, when the Japanese abandoned it on Feb. 11, 1958. When they returned for JARE III in Jan. 1959, only two huskies, Taro and Jiro (q.v.) were left manning (actually, dogging) the station. It was occupied for the winters of 1959 (leader Masayoshi Murayama), 1960 (leader Tetsuya Torii), and 1961 (leader Masayoshi Muramama), and then closed between Feb. 1962 and Jan. 15, 1966, when it was re-opened. Since then it has been occupied continuously. **1966 winter**: Akira Muto (leader). **1967 winter**: Testuya Torii (leader). **1968 winter**: Masayoshi Murayama (leader). **1969 winter**: Kou Kusunoki (leader). **1970 winter**: Tatsuro Matsuda (leader). **1971 winter**: Takashi Oguchi (leader). **1972 winter**: Sadao Kawaguchi (leader). **1973 winter**: Kou Kusunoki (leader). **1974 winter**: Nozomi Murakushi (leader). **1975 winter**: Takao Hoshiai (leader). **1976 winter**: Takeo Yoshino (leader). **1977 winter**: Kou Kusunoki (leader). **1978 winter**: Takeo Hirasawa (leader). **1979 winter**: Michio Yamazaki (leader). **1980 winter**: Sadao Kawaguchi (leader). **1981 winter**: Yoshio Yoshida (leader). **1982 winter**: Takao Hoshiai (leader). **1983 winter**: Shinji Mae (leader). **1984 winter**: Takeo Hirasawa (leader). **1985 winter**: Hiroshi Fukunishi (leader). **1986 winter**: Yasuhiko Naito (leader). **1987 winter**: Yoshikuni Okyama (leader). **1987-88 summer**: Natsuo Sato (leader). **1988 winter**: Okitsugu Watanabe (leader). **1989 winter**: Masaki Ejiri (leader). **1990 winter**: Yasuhiko Naito (leader). **1991 winter**: Yoshiyuki Fuji (leader). **1992 winter**: Masanori Saito (leader). **1993 winter**: Natsuko Sato (leader). A Chinese scientist wintered-over. **1994 winter**: Kotaro Yokoyama (leader). **1995 winter**: Shigemi Meshida (leader). **1996 winter**: Kunio Kawada (leader). **1997 winter**: Takashi Yamanouchi (leader). **1998 winter**: Kazuo Shibuya (leader). **1999 winter**: Hiroshi Miyaoka (leader). **2000 winter**: Kentaro Watanabe (leader). It has been open every winter since then. It can accommodate 60 persons in summer and 20 in winter, has a mess, radio operations building, a power plant, a Japanese-style bath, laboratories, vehicle maintenance area, and the Lakeside Hotel. The bar is called the "Maria" Bar, for Maria Kazanowska (q.v.). There are also social areas, and a library. Each man has a private room in the living quarters. The main building is 3 stories high, with a domed skylight on top. A weekly newspaper is produced. It has a temporary sea-ice runway only, and two planes — a Cessna 185 and a Pilatus Porter PC6/BZ-HZ. All equipment at Showa is made in Japan. The first live TV transmission was from this station in 1979.

Showa-taira *see* **Showa Flat**

Mount Showers. 71°44' S, 61°24' W. Rising to about 1050 m on Condor Peninsula, 22 km SW of Cape MacDonald, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN in 1976, for William James Showers, USARP marine biologist who wintered-over at Palmer Station in 1975. From Oct. 1977 to March 1978 he was involved in the Ross Ice Shelf Project. He was later a professor at North Carolina State University. UK-APC accepted the name on July 21, 1976.

Nunatak Shpil'. 68°11' S, 62°25' E. In the S part of the Sørtindane Peaks, at the S end of the David Range, in the Framnes Mountains. Named by the Russians.

Shrimpton, Harry Neville. Known as Neville. b. 1908, Nelson, NZ. Dunedin electrical engineer and one of the world's most famous amateur radiomen, who on Jan. 2, 1929 joined the *Eleanor Bolling* at Dunedin, to become 2nd radio operator during ByrdAE 1928-30. He was awarded American citizenship.

Shristi Automatic Weather Station. 74°42' S, 161°40' E. American AWS at an elevation of 1200 m. Began operating on Dec. 28, 1987. It continued until Sept. 1992, when it was removed. Named for a daughter of Mr. Rabindra, a former graduate student of Dr. Charles Stearns, the founder of the AWS project. *See also* **Sushila AWS**.

Shropshire, Ralph F. Jr. Known as "Shrop." b. Jan. 12, 1903, NYC, son of Georgia-born magazine editor Ralph F. Shropshire and his wife Sophie Steele. He was in both the Army and the Navy in 1922-23, being ranked as a 2nd lieutenant. On March 22, 1924, in Manhattan, he married Ruth Van Ness. He was hydrographer and oceanographer, as well as a naval lieutenant, on the *City of New York* during ByrdAE 1928-30, but didn't get to winter-over because he was considered unreliable, as well as being unpopular. However, he did obtain many sea specimens while in Antarctica. He left Little America for NZ on the *City of New York* on Feb. 22, 1929, and returned for the 2nd half of the expedition. He died on March 12, 1968, in Martinsburg, W. Va.

Shrove Cove. 63°59' S, 57°50' W. A small cove off the W side of Croft Bay, about 6 km S of St. Martha Cove, on James Ross Island. Surveyed by the *John Biscoe* on Shrove Tuesday, Feb. 7, 1989. Named by UK-APC on Dec. 2, 1993.

Nunatak Shternberga. 70°56' S, 66°58' E. A nunatak in the group the Russians call Nunataki Fesenkova, just to the NW of Mount Beck, in the Prince Charles Mountains. Named by the Russians.

Nunatak Shtyk. 69°37' S, 64°52' E. A nunatak, N of Summers Peak, in the Stinear Nunataks, in Mac. Robertson Land. Named by the Russians.

Shuangfeng Dao. 62°14' S, 58°57' W. An island off Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

[1]**Shuangfeng Shan**. 69°22' S, 76°22' E. A hill in the Larsemann Hills. Named by the Chinese.

[2]**Shuangfeng Shan**. 73°22' S, 75°39' E. A very isolated hill in Mac. Robertson Land. Named by the Chinese.

Shuga. Lumps of sea ice a few centimeters in diameter, formed by agitation within grease ice or slush.

Mount Shuhova. 70°23' S, 66°06' E. Close N by NW of Whitworth Ridge, in the Porthos Range of the Prince Charles Mountains. Named by the Russians (presumably as Gora Shuhova). There is a slim chance that this is the Russian name for Mount Leckie.

Islotes Shull *see* **Shull Rocks**

Shull Rocks. 66°27' S, 66°40' W. A group of low, snow-covered rocks in water; actually one small island and a chain of rocks, in Crystal Sound, about 16 km NW of Cape Rey, on the Loubet Coast, on the W coast of Graham Land, E of the Barcroft Islands. Photographed aerially by RARE 1947-48, and again by FIDASE in 1956-57, they were also surveyed from the ground by Fids from Base W in 1958-59, and mapped by FIDS cartographers in 1959-60, from all these efforts. Named by UK-APC on Sept. 23, 1960, for Clifford Glenwood Shull (1915-2001), U.S. Nobel Prize-winning (1994) physicist specializing in ice. The feature appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call this feature Islotes Shull.

Shulman Peak. 77°19' S, 161°23' E. Rising to 1400 m, about 1 km SW of Sponsors Peak, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for Leonard M. Shulman, electrical and electronics engineer with the Bartol Research Foundation, at the University of Delaware, who maintained, calibrated, and upgraded neutron monitors at Pole Station and McMurdo, for 13 field seasons between 1991 and 2005. He also worked in Antarctica beyond that time period. His first trip to the South Pole, however, was in 1985, in company with Martin Pomerantz, who had hired him in 1980 to be part of Bartol. NZ-APC accepted the name on Sept. 12, 2005.

Shults Peninsula. 78°52' S, 162°39' E. A bold, mainly ice-covered peninsula, 16 km long and 8 km wide, at the NE side of the mouth of Skelton Glacier, it forms the W boundary of Moore Bay, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos. Named by US-ACAN in 1963, for Capt. Roy Gail Shults, USN, chief of staff to the commander, U.S. Naval Support Force, Antarctica, 1962 and 1963. NZ-APC accepted the name.

Shultz Peak. 76°10' S, 160°51' E. A sharp peak, 11 km S of Mount Armytage, it overlooks the N flank of Mawson Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos. Named by US-ACAN in 1965, for Lt. Willard E. Shultz, USN, supply officer at McMurdo in 1962. NZ-APC accepted the name.

Shuman Glacier. 75°15' S, 139°30' W. About 10 km long, it flows through the Ruppert Coast of Marie Byrd Land, N of Strauss Glacier. Named by US-ACAN in 2003, for Christopher A. Shuman, from the University of Maryland, field and theoretical researcher in the area of the West Antarctic ice streams from the 1990s on.

Shumen Peak. 62°44' S, 60°15' W. Rising to 770 m in Friesland Ridge, 1.5 km S of St. Methodius Peak, 640 m S of Chepelare Peak, and 1.6 km SE of Tervel Peak, in the Tangra Mountains, surmounting Charity Glacier to the W, Tarnovo Ice Piedmont to the S, and Prespa Glacier to the SE, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for the Bulgarian town of Shumen.

Caleta Shumskiy *see* **Shumskiy Cove**

Shumskiy Cove. 67°04' S, 67°21' W. In the SE end of Hanusse Bay, it indents the the NW side of Arrowsmith Peninsula, on the Loubet Coast, E of Bagnold Point, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by FIDS between 1957 and 1959, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Pyotr Aleksandrovich Shumskiy (1915-1988), Soviet geologist and glaciologist of the 1950s. He was chief glaciologist at Mirnyy Station for the winter of 1956, and was the author of a (then) definitive study of the petrology of ice, *Osnovy Strukturnogo Ledovednija*. It appears on a British chart of 1961, but in the 1961 British gazetteer it appears spelled as Shumsky Cove. US-ACAN accepted the name in 1965. The Argentines call it Caleta Shumskiy.

Shupe Peak. 78°10' S, 161°55' E. A prominent peak, rising to 2910 m, on Rampart Ridge, 6 km ESE of The Spire, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1995, for Gordon H. Shupe, USGS cartographic technician, who conducted geodetic operations in Antarctica during 3 field seasons between 1990 and 1994; for example, he was the USGS team leader for the International GPS campaign, 1991-92, at McMurdo, Byrd Station, Pole Station, and in the Pine Island Bay area. The team established the first continuous-tracking GPS reference station in Antarctica.

Shurley Ridge. 84°54' S, 65°23' W. A partly snow-covered ridge running NE-SW at an elevation of about 1900 m above sea level, and projecting from the SW side of the Mackin Table, 10 km SE of Snake Ridge, in the Patuxent Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Jay Talmadge Shurley (b. Dec. 20, 1917, Schleicher Co., Tex. d. Feb. 24, 2004, Oklahoma City), a medical doctor working in psychiatry and specializing in sleep disorders, at Pole Station, 1966-67. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mount Shute. 71°50' S, 165°47' E. Rising to 2070 m, 22 km SE of Austin Peak, in the Mirabito Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Larry R. Shute, USARP meteorologist at Hallett Station in 1963-64.

Skala Shvede. 72°02' S, 13°11' E. A peak upon Snøskalkhausen Peak, in the W part of the Weyprecht Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians as Skala Shvede. The Norwegians accepted the translated name Shvedenuten.

Shvedenuten *see* **Skala Shvede**

Cape Sibbald. 73°54' S, 165°23' E. A bare, sheer, cliffed cape, rising to a height of about 600 m at the SW margin of Lady Newnes Bay, on the coast of Victoria Land, it marks the SW extremity of the Mountaineers Range at the terminus of Aviator Glacier. Discovered in Feb. 1841 by Ross, and named by him for John Sibbald. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Sibbald, John James A. b. 1809. He joined the RN, and became a lieutenant on Jan. 10, 1836. On Aug. 13, 1839 he joined the *Erebus* for RossAE 1839-43, as the senior lieutenant. Later a captain, he died on Dec. 24, 1868, at West Brompton, London. His wife, Matilda Lucretia, survived him.

Sibelius Glacier. 69°55' S, 70°00' W. About 20 km long and 10 km wide, it flows S into Haydn Inlet, 16 km SW of Mount Stephenson, in the N part of Alexander Island. Discovered aerially on Feb. 1, 1937, by BGLE 1934-37, and roughly mapped by them. It appears on Stephenson's 1940 map of the expedition. Mapped by Searle of the FIDS in 1959-60 from air photos taken by RARE 1947-48. He plotted it in 69°52' S, 70°05' W, and showed it flowing into Mozart Ice Piedmont. Named by UK-APC on March 2, 1961, for the Finnish composer Jean Sibelius (1865-1957). US-ACAN accepted the name later in 1961. It appears on a British chart of 1961. The coordinates were corrected by U.S. Landsat images taken in Jan. 1974, and, with the new coordinates, the feature appears in the 1977 British gazetteer. U.S. Landsat images of Feb. 1979 not only re-defined the Mozart Ice Piedmont, they showed this glacier flowing into Haydn Inlet.

Siberian ponies *see* **Ponies**

Bukhta Sibirjachka *see* **Sibiryachka Bay**

Gora Sibirjakov *see* **Mount Sibiryakov**

Sibiryachka Bay. 67°42' S, 45°44' E. A small bay S of Cape Kosistyy, on the E side of Freeth Bay, Enderby Land. Photographed aerially by ANARE in 1956 and by SovAE 1957. Named by the Russians as Bukhta Sibirjachka (i.e., "Siberian bay"). ANCA translated the name on July 31, 1972.

Mount Sibiryakov. 67°56' S, 49°35' E. An isolated mountain, about 26 km S by SE of Mount Humble (which is in the Raggatt Mountains), in Enderby Land. These outcrops were investigated by geologists of SovAE 1961-62, who named them as Gora Sibirjakova (or Gora Sibiryakova), for the icebreaker *Sibiryakov*. ANCA translated the name on Oct. 22, 1968, and US-ACAN accepted that naming in 1971.

Lake Sibthorpe. 69°24' S, 76°23' E. A very shallow round lake to the NW of Progress Station, about 0.7 km SE of Law-Racovitza Station, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Richard "Dick" Sibthorpe, who wintered-over as radio technical officer at Davis Station in 1986, and who prepared all the radio equipment for (what was then known as)

Law Base. He had also wintered-over at Davis in 1983.

Sicaud, Pierre-René-Jean. b. March 14, 1911, Le Mans. A fervent colonialist from an early age, he earned his bachelor's degree at the age of 15 and went into the colonial service. After a tour in the Comoros, he was in Madagascar when World War II broke out, fought with his colonial infantry regiment in the Ardennes, was taken prisoner, but swam his way to freedom across the Loire, rejoining his regiment, and making his way back to Madagascar as an administrator. Following the appeal from De Gaulle, he went to Somalia, joined the Free French, and got to England, where he joined the SAS, leading a parachute brigade of that regiment. He dropped into Brittany at the head of his men, after the Normandy landings, to get ready for the re-taking of Brest, and finished the war fighting in Holland. He led the French Polar expeditions to Antarctica from 1948 to 1950, arriving at the Kerguélen Islands on Dec. 11, 1949, to scout out the possibilities of building a meteorological station there. He left with his men on April 8, 1950, having begun building. From Jan. 3 to May 4, 1951 he was back at Kerguélen, and was in Antarctica each year on the *Commandant Charcot*, but never wintered-over, although he did lead the 1953 wintering-over party at the Kerguélens. From 1955 to 1958 he was governor of St. Pierre et Miquelon, and in Oct. 1958 became governor of French Polynesia (until 1961). He retired to Nice with his English wife, and then to Île de Groix (in Brittany), where he died on Jan. 15, 1998.

Sicheleishöcker *see* **Sichelryggane**

Sichelryggane. 70°38' S, 7°30' W. Ice rumples at the front of the Ekström Ice Shelf, on the E side of Atka Iceport, on the Princess Martha Coast. Named by the Norwegians. The Germans call it Sicheleishöcker.

Nunatak Siches. 66°20' S, 61°39' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Montaña Sickle *see* **Sickle Mountain**

Mount Sickle *see* **Sickle Mountain**

Sickle Mountain. 68°53' S, 66°47' W. Rising to 1250 m, at the base of Rasmussen Peninsula, on the S side of Clarke Glacier, and 22 km E of Cape Berteaux, on the Fallières Coast, on the W coast of Graham Land, between the Wordie Ice Shelf and the Larsen Ice Shelf. Roughly surveyed from a distance in 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Visited in Jan. 1941 and named for its shape by Finn Ronne during USAS 1939-41. US-ACAN accepted the name in 1947. It was further surveyed by Fids from Base E in 1948-49. UK-APC accepted the name on March 31, 1955. Fids from Base E surveyed it yet again in 1958, and it appears on a British chart of 1961. The Argentines call it Montaña Sickle.

Sickle Nunatak. 71°32' S, 161°57' E. At the N side of the entrance to Jupiter Valley, on the E side of the Morozumi Range. Named for its shape by NZGSAE 1967-68. NZ-APC accepted the name on July 4, 1968, and US-ACAN followed suit in 1969.

Sickle Ridge. 78°01' S, 162°10' E. A ridge, 8 km long, and shaped distinctly like a sickle, immediately S of Platform Spur, between Bindschadler Glacier and Jezek Glacier, in the NW part of the Royal Society Range, in Victoria Land. Named descriptively by NZ-APC on June 29, 1989. US-ACAN accepted the name in 1994.

Sickles, John Frederick. b. 1813. Known as Frederick, or "J.F." He joined the U.S. Navy on Feb. 28, 1833, as an assistant surgeon, and took part in USEE 1838-42, joining the *Relief* at Callao, and later transferring to the *Peacock*. He was promoted to surgeon on Sept. 8, 1841. After the expedition, he transferred to the sloop of war *Fairfield*. On April 18, 1848, in New York Harbor, while surgeon on the receiving ship *North Carolina*, he was engaged in conversation with one of the ship's lieutenants, when he had a sudden heart attack and died instantly. Apparently he had contracted something during the Wilkes expedition.

Islotes Sidders *see* **Pi Islands**

Punta Siddons *see* **Siddons Point**

Siddons, Richard. Last name also seen as Siddins and Siddens. b. 1770, Britain. Sealing captain and traveler, an early explorer of Fiji, and who would hold missionary services aboard his ships in Sydney Harbor. He first came to NSW in May 1804, as a whaler aboard the *Alexander*, and for many years thereafter plied between Sydney and Calcutta and the South Pacific islands, on various ships, becoming skipper of the *Mercury* by 1809, and of the *Endeavour* in 1811. In 1812 he was skipper of the sealer *Campbell Macquarie*, which sank that year. He subsequently skippered the *Elizabeth and Mary* and the new *Campbell Macquarie*. He fathered two children in Sydney, one by Kate Keenan and the other by Eleanor Cooper, and in 1816 he married Jane Powell in Sydney. In 1818 he became captain and part owner of the *Lynx*, took her out of Sydney and down to the South Shetlands for the 1820-21 season, then wintered-over in the Falklands in 1821, returning to the South Shetlands for the 1821-22 season. In 1822 he visited Macquarie Island on his return to Australia, selling the *Lynx* in 1823, and becoming a Port Jackson pilot (in Sydney). In Aug. 1824 he was awarded 600 acres on the Williams River, and in 1832, due to failing health, he had to stop being a pilot, and became superintendent of the South Head lighthouse. In Sept. 1834 he was awarded 3½ acres in Watson's Bay, where he built the house that later became the Vaucluse Hotel. He died on July 2, 1846, and his wife died on Feb. 9, 1883, after having 2 sons and 9 daughters. One of their sons, Joseph Richard (1823-1891), succeeded him at the lighthouse.

Siddons Point. 62°33' S, 60°26' W. A point projecting into the middle of the head of (i.e., at the S side of) Hero Bay, on the N coast of Livingston Island, in the South Shetlands. Charted by the Discovery Investigations in 1933-34, photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. Named by UK-APC on July 7, 1959, for Richard Siddons. US-ACAN accepted the name in 1960. It appears on a British chart of 1962. The Argentines call it Punta Siddons.

Side Crater. 77°32' S, 167°09' E. A nearly circular crater, at an elevation of nearly 3700 m, at the summit of Mount Erebus, near the SW crater rim, on Ross Island. Named by US-ACAN in 2000, for its location on the side of the main summit cone of Erebus. NZ-APC accepted the name on Feb. 20, 2001.

Sidell Spur. 64°22' S, 62°33' W. A prominent spur, 2.5 km long, projecting W from the main mountain range of Brabant Island, in the Palmer Archipelago. The spur, which has a narrow crest, abuts the N side of Rush Glacier, and terminates in a bold rock face at Dallmann Bay. Named by US-ACAN on Feb. 17, 2009, for Bruce David Sidell (b. March 20, 1948), director of marine sciences at the University of Maine, 1996-2001, who, from 1987 conducted research on the physiology of Antarctic ice fish in 15 field seasons at Palmer Station and aboard research vessels in the Palmer Archipelago and in the South Shetlands. The spur overlooks the Dallmann Bay fishing area frequented by Dr. Sidell when obtaining fish for his research. UK-APC accepted the name on March 17, 2010.

Siders Bluff. 73°13' S, 162°40' E. A bold, north-facing rock bluff forming the NE end of the Tobin Mesa, in the Mesa Range of Victoria Land. The bluff exposes an easily accessible section of Jurassic basalt, and was studied by Ohio State University geological parties in 1981-82 and 1982-83. Named jointly in 1982 by US-ACAN and NZ-APC, for Mary A. Siders, a geologist with those parties.

Mount Sidley. 77°02' S, 126°06' W. A massive, mainly snow-covered mountain rising to 4285 m, NE of Mount Waesche, it is the highest and most imposing of the 5 extinct volcanoes that go to make up the Executive Committee Range of Marie Byrd Land (it is in the S part of the range). It is marked by a spectacular caldera on the S side, and is still steaming. Lichens are to be found here. Discovered aerially on Nov. 18, 1934, by Byrd, during ByrdAE 1933-35, and named by Byrd as Mount Mabelle Sidley, or Mount Mabelle Horlick Sidley, for Mabelle Emma Sidley (1877-1938), daughter of sponsor William Horlick. The name was also seen as Mount Maybelle Sidley, Mount Maybelle Horlick Sibley, and even Mount Maybelle Horlick Sibley. US-ACAN accepted the name Mount Mabelle Sidley in 1947, but in 1956, they shortened it to Mount Sidley. Curiously, 3 days after Mabelle died, her mother died.

Canal Sidney Herbert *see* **Herbert Sound**

Sidney Herbert Sound *see* **Herbert Sound**

Roca Siebert *see* **Siebert Rock**

Siebert Rock. 64°49' S, 63°02' W. A black rock point, sometimes covered with snow, off the SW point of Lemaire Island, in the entrance to Lientur Channel, on the Danco Coast, on the W coast of Graham Land. Charted by ChilAE 1950-51, and named by them as Roca Siebert, for Capitán de corbeta Ernest Siebert, engineer officer on the *Angamos* during that expedition. The Chilean gazetteer of 1974 accepted that

name. It appears on a 1954 Argentine chart as Islote Negro, a descriptive name. On a 1957 Argentine chart it appears as Islote Black, but the Argentine gazetteer of 1970 accepted the name Islote Negro. Surveyed by Fids from Base O in 1957-58. UK-APC accepted the name Siebert Rock on Feb. 7, 1978, and US-ACAN followed suit. It appears as such in the 1980 British gazetteer.

Siefker Ridge. 79°09' S, 85°19' W. A rugged ridge, 10 km long, extending NW from the W part of the Anderson Massif, in the Heritage Range. Named by the University of Minnesota Geological Party here in 1963-64, for Dennis R. Siefker, USN, electronics technician in charge of the automatic weather station at the party's base at Camp Hills. US-ACAN accepted the name in 1966.

Siege Dome. 84°16' S, 172°22' E. A small ice-covered prominence, or snow dome, rising to 2100 m, to the S of the head of Hood Glacier, close SE of Mount Patrick, in the Commonwealth Range. Named by the NZ Alpine Club Antarctic Expedition of 1959-60, who climbed it on Christmas Day 1959, and while trying to set up an important survey station here, they ran into an 8-day snow storm, which necessitated their retreat down the glacier when the weather cleared on Jan. 1, 1960. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Siegfried Glacier. 69°33' S, 72°28' W. Flows ESE into Lazarev Bay, S of Mirnyy Peak, on Rothschild Island. Surveyed by BAS between 1975 and 1977. In association with Wagner Ice Piedmont, it was named by UK-APC on June 11, 1980, for Siegfried, the character in Wagner's festival play *Der Ring des Niebelungen* (1876). US-ACAN accepted the name in 2006.

Siegfried Peak. 77°34' S, 161°46' E. Forms a saddle with its immediate S neighbor, Siegmund Peak, on the E side of the entrance to Odin Valley, in the Asgard Range of Victoria Land. Named by NZ-APC for the Teutonic hero. US-ACAN accepted the name in 1976.

Siegmund Peak. 77°35' S, 161°46' E. Forms a saddle with its immediate N neighbor, Siegfried Peak, on the E side of the entrance to Odin Valley, in the Asgard Range of Victoria Land. Named by NZ-APC for the father of Siegfried in Teutonic myth. US-ACAN accepted the name in 1976.

Siemiatkowski Glacier. 75°54' S, 144°12' W. About 40 km long, it flows NW into the Nickerson Ice Shelf, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Edmond R. Siemiatkowski (b. May 19, 1941. d. Dec. 24, 1970, Hartford, Conn.), aurora physicist at Byrd Station in 1964. He had closed the Byrd Aurora Substation, in 1963-64.

Cerro Siempre Nevado *see* **Cerro Schlatter**

Baia Siena. 74°19' S, 165°06' E. A small bay, about 2 km wide, oriented eastward, and located between Edmonson Point and the foothills the Italians call Colline Ippolito, 12.5 km from the summit of Mount Melbourne. Named by the Italians on May 30, 2006, for the city of Siena, the home town of many of the Italian researchers in Antarctica.

Isla Sierra *see* **Sierra Island**

Sierra Island. 62°25' S, 59°48' W. An island with irregular relief (it has some rock pinnacles on it), ice-free in summer, it is the most southwesterly of the Aitcho Islands, 0.8 km NW of Dee Island, on the W coast of English Strait, in the South Shetlands. Named by ChilAE 1950-51, as Isla Sierra, for Sgt. 2nd class Victor Sierra, of the Chilean Air Force, sick bay attendant on the *Lientur*. It appears as such on a 1961 Chilean chart, and was the name accepted by the 1974 Chilean gazetteer. On Nov. 3, 1971, UK-APC translated the name as Serrated Island, and it appears that way in the 1974 British gazetteer. However, the British admitted their mistake, and it appears as Sierra Island in the 1980 British gazetteer. Last plotted by the UK, in late 2008.

Sievwright, William Munro. Known as Munro Sievwright, but also called "Aggie." b. Aug. 31, 1941. He joined BAS on July 8, 1963, and wintered-over as a physicist at Halley Bay Station in 1964 and 1965. He spent several summers in Antarctica between 1974 and 1990, and until 1998 was BAS personnel officer, retiring due to ill health. He was secretary of the Antarctic Club from 1996 to 1998.

Siewert, Heinz. b. 1911, Germany. On April 2, 1937, at Bremerhaven, he went to sea for the first time, as an engineer's assistant on the *Europa*, plying the Atlantic between Germany and New York. His last such trip was on the *Berlin* in Oct. 1938, and then he went straight onto the *Schwabenland,* as assistant engineer, for GermAE 1938-39.

Cabo Siffrey *see* **Prime Head**

Cap Siffrey *see* **Siffrey Point**

Cape Siffrey *see* **Prime Head**

Siffrey Point. 63°13' S, 57°13' W. A low, rocky point projecting from the N coast of Trinity Peninsula, 10 km WNW of Cape Dubouzet, and ESE of Prime Head. Roughly charted in Feb. 1838, during FrAE 1837-40, and named by Dumont d'Urville as Cap Siffrey for M. Sifray (sic), proviseur (headmaster) of the Collège de Toulon, where Dumont d'Urville's son Jules was a student. M. Sifray, born in Cahors, and died in 1865, was also director of the School on Mines. When the Dumont d'Urvilles were killed in a train crash in 1842, M. Sifray wrote a touching eulogy. It appears as such in Vincendon-Dumoulin's 1847 atlas. Following a survey by Fids from Base D in Oct. 1946, the name Cape Siffrey was wrongly applied to Prime Head (q.v.), and that situation was accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. Following air photos taken by FIDASE in 1956-57, FIDS cartographers were able to identify Dumont d'Urville's cape (and it wasn't Prime Head), and the correct feature appears as Cape Siffrey in a 1957 British reference, and also on a 1962 British chart. On Feb. 12, 1964, UK-APC accepted the name Siffrey Point, and US-ACAN followed suit that year. On two Argentine charts is appears variously as Punta Black and Punta Negra, but on a 1958 Argentine chart it appears as Cabo Negro, and that was the name accepted by the 1970 Argentine gazetteer. The Chilean gazetteer of 1974 accepted the name Punta Negra.

Sigaren *see* **Sigaren Islands**

Sigaren Islands. 69°10' S, 39°28' E. Two islands in the E part of Lützow-Holm Bay, 5.5 km W of Langhovde-kita Point, on the Prince Olav Coast. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named them Sigaren (i.e., "the cigar"), for their shape. US-ACAN accepted the name Sigaren Islands in 1968. The two islands are not individually named.

Sigdøy *see* [1]**Fisher Island**

The *Sigfra*. FY 324. A 336-ton, 141-foot 6-inch British whale catcher, 26 feet 4 inches wide, and with 163 nhp, built by Kaldnes Mekaniske Vaerksted, in Tønsberg, Norway, in 1937, for Christian Salvesen's South Georgia Company. She was launched on July 29, 1937, completed on Dec. 21, 1937, the sister vessel of the *Simbra*, and registered at Middlesbrough. She was in Antarctic waters in 1938-39 (catching for the *New Sevilla*), 1939-40 (catching for the *Sourabaya*), and 1940-41 (catching for the *Svend Foyn*). In Dec. 1941 she was catching for the shore station at Leith, South Georgia, when she was commissioned into the British Navy as a naval trawler. In March 1946 she was returned to Salvesen's, and in 1946-47, 1947-48, and 1948-49 was back in Antarctica, catching for the *Southern Venturer*. From 1949-50 for several seasons she was catching for the shore station at Leith again, and in her last seasons, in the late 1950s, acted as a buoy boat for the *Southern Harvester*. In 1961 she was laid up in Norway, and sold in April 1964, for breaking up in Masnedo, Denmark.

Siggessen, Einar. Norwegian manager of the *Thorshammer*, 1933-34. Hjalmar Bråvold was the ship's captain.

Sighing Peak. 67°24' S, 67°58' W. A prominent and isolated rocky peak, rising to 640 m, at Punta Cholchol, on Wright Peninsula, at the S side of the entrance to Stonehouse Bay, on the E side of Adelaide Island. Discovered and surveyed in 1909 by FrAE 1908-10, and re-surveyed by Fids from Base E in Oct. 1948. FIDS so named it for the persistent sighing of wind from the summit of this peak, even when apparently calm at sea level. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Siglin Rocks. 74°11' S, 115°06' W. A somewhat isolated cluster of rock outcrops, midway between Schneider Rock and the Binder Rocks, on the W side of Martin Peninsula, on the Bakutis Coast of Marie Byrd Land. Lichens, mosses, and petrels are to be found here. First photographed aerially in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for CWO Daniel Francis Siglin, USN, maintenance coordinator at Williams Field in 1967. Originally plotted in 74°09' S, 114°54' W, the feature has since been replotted.

Islotes Sigma *see* **Sigma Islands**

Sigma Islands. 64°16' S, 62°55' W. Group of small, low, compact black rock islands and rocks, about 5 km N of Eta Island, they mark the N limit of the Melchior Islands. They were surveyed by ArgAE 1942 and ArgAE 1943, and the name Islotes Sigma first appears on an Argentine chart of 1946, sigma being the Greek alphabetical letter. The Chileans immediately began calling them Islotes Sigma too, so ArgAE 1946-47 renamed them Islotes Avión, for the spectacle they present when seen from an avión (airplane). UK-APC accepted the name Sigma Islands on Sept. 20, 1955, and US-ACAN followed suit in 1963. None of the islands or rocks wthin the group is named individually.

Sigma Point. 68°40' S, 78°02' E. An oblong-shaped rock outcrop on the N margin of the Sørsdal Glacier, on the fringe of the Vestfold Hills. Named by ANCA on July 26, 1983, for the shape of the erosion seen here, roughly like the Greek letter Sigma.

Sigmen Glacier. 64°01' S, 61°56' W, A glacier, 2.5 km long and 2 km wide, flowing NW from the NW slopes of the Brugmann Mountains, to enter Palakariya Cove S of Bebresh Point, on Liège Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Sigmen, in southeastern Bulgaria.

Le Signal *see under* **L**

Signal Corps Antarctic Research Team. Known as SCART. A 9-man team led by Bud Waite, that traveled to Antarctica from Monmouth, NJ, either by plane to NZ and from there on to Antarctica, or by the *Atka* and the *Private Joseph F. Merrell* direct from Davisville, RI to Antarctica, as part of OpDF II (1956-57). The other members of the team were: Pvt. Walter S. Hoffman, of Valley Cottage, NY; pfc James D. Scott, of Winnetka, Ill.; pfc John W. Newman, of Grafton, W. Va.; Pvt. Armen Gechijian, of Belmont, Mass.; pfc George A. Paybins, of Brockton, Mass.; Pvt. John V. Denero, of Syracuse, NY; pfc John E. Barron, of Detroit; and SP3 Truel E. Niswonger, of Las Animas, Colo.

Isla Signy *see* **Signy Island**

Signy Island. 60°43' S, 45°38' W. A very important island, 6 km long and 4.5 km wide, to the immediate S of the central part of Coronation Island (separated from that island by Normanna Strait), in the South Orkneys. Roughly charted by Matthew Brisbane in 1823, it appears on Weddell's map published in 1825. Surveyed by Petter Sørlle in 1912-13, and named by him as Signy Ø, for his wife Signy (see Sørlle for more on his wife). It appears as such on his 1912 chart, and on his and Hans Borge's 1913 chart as "Signy Isl." On Sørlle's chart of 1913 it appears as Signy Island, as it does also on a British chart of 1917. It appears as "Signy Is." on a 1913 chart prepared by Capt. Moe. It appears on a 1930 Argentine chart as Isla Signy, and that was the name accepted by the 1970 Argentine gazetteer. It was re-surveyed by the Discovery Investigations in Jan. 1933, and appears on their charts of 1934 and 1935 as providing the best anchorages for whalers in the South Orkneys. Re-surveyed by FIDS between 1947 and 1950. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. Re-surveyed by FIDS in 1957-58. In Feb. 1968, it was photographed from a helicopter off the *Endurance*. The British Base H was here (*see* **Signy Island Station**, below).

Signy Island Station. 60°43' S, 45°38' W. Also called Signy Station, or Base H. British scientific station on Factory Cove, in Borge Bay, on Signy Island, in the South Orkneys. The original plan was to build a base on Signy Island in 1944, but nothing came of it. **March 18, 1947**: The base on Signy Island was finally established by FIDS, as Base H, and with Gordon Robin as leader of a party of four. The original building was erected on Berntsen Point, 72 feet above sea level, overlooking Factory Cove, and named Clifford House, for Miles Clifford, Governor of the Falkland Islands (1947-54). **1947 winter**: Gordon Robin (meteorologist and leader), Bill Roberts (radioman), John Anderson and Pat Biggs (handymen). **Feb. 10, 1948**: The *John Biscoe* arrived in the evening, with supplies and new FIDS. **Feb. 12, 1948**: At 3.30 A.M. the *John Biscoe* left. A laboratory was added at the base, built from bits and pieces of the old whaling station. **1948 winter**: Dick Laws (zoologist and leader), Derek Maling (meteorologist), and Ralph Lenton (radioman). Dick Laws got to choose who he wanted on the base. He and Derek Maling had climbed together in the Lake District, so they knew one another. Charlie Skilling, a Falkland Islander, was meant to come in as the 4th man, but never made it (not until the next season, anyway). **Dec. 3, 1948**: The *Sparrow* relieved the base. **1949 winter**: Dick Laws (zoologist and leader), Derek Maling (meteorologist), John Kendall (radioman), Charlie Skilling (handyman). **Feb. 25 1950**: A building was brought over from Admiralty Bay (Base G) and re-sited at Signy Island as an extension of the current main building. **1950 winter**: Bill Sladen (leader, zoologist, and medical officer), John Cheal, Eric Salmon, and Ron Worswick (meteorologists), and David Duke (radioman). **1951 winter**: John Cheal (meteorologist and leader), Norman Thyer, Tony Vernum, and Ron Worswick (meteorologists), and John Brown (radioman). **1952 winter**: Arthur Mansfield (zoologist, meteorologist, and leader), Fred Johnson and Phil Mander (meteorologists), Tony Wilson (radioman), John O'Hare (diesel electric mechanic). This was not a happy camp, the rivalry between Wilson and O'Hare leading to fights and Wilson being ostracized for 2 months. There are always two sides to a story, at least. **1953 winter**: Alan Tritton (meteorologist and leader), Ray Berry and Derek Parsons (meteorologists), Gwilym Owen (radioman), Ray Tanton (diesel electric mechanic). **1954 winter**: Harold Smith (meteorologist and leader), Pete Cordall and Alan Smith (meteorologists), Graham Davis (radioman), John Pearce (diesel electric mechanic). **Feb. 3, 1955**: A new main building was completed, and called Tønsberg House, after the old whaling company Tønsbergs Hvalfangeri, the site being that of that company's old whaling station at Factory Cove (60°43' S, 45°36' W). **1955 winter**: Harry Dollman (leader and general assistant), Pete Cordall, Jim Shirtcliffe and Lance Tickell (meteorologists), Len Tyson (radioman), John Bull (diesel electric mechanic), and Ron Napier (general assistant). **1956 winter**: Lance Tickell (meteorologist and leader), Joe Axtell, Sandy Hall, and Phil Mander (meteorologists), Drummond Matthews (geologist), Doug Bridger (surveyor), Staff Ward (radioman), and Alan Grant (diesel electric mechanic). **1957 winter**: Cecil Scotland (meteorologist and leader), Mac McDowell, Stan Black, and Dave Statham (meteorologists), Doug Bridger and Robin Sherman (surveyors), Gene Donnelly (radioman), and Derek Skilling (diesel electric mechanic). **1957-58**: During IGY the station conducted meteorology studies. **1958 winter**: Pete Richards (meteorologist and leader), Brian Beck, Alan Sharman, and Jim Stammers (meteorologists), Gordon Mallinson (radioman), George White (diesel electric mechanic). **1959 winter**: Jim Stammers (meteorologist and leader), Bernard Harrison and Jim Young (meteorologists), Fergus O'Gorman (zoologist), Ron Pinder (radioman), George White and Bill Mitchell (diesel electric mechanics), and Kenny Kenyon (general assistant). **1960 winter**: Bernard Harrison (meteorologist and leader), Roger Filer, Phil Mander, and Paddy White (meteorologists), Ron Pinder (radioman), Derek Clarke (diesel electric mechanic). **1961 winter**: Russell Thompson (meteorologist and leader), Nev Jones and Brian Westlake (meteorologists), Ron Pinder (radioman), Derek Clarke (diesel electric mechanic). **1962 winter**: Peter Tilbrook (zoologist and leader), John Chambers, Terry Mason, and Fred Topliffe (meteorologists), Barry Heywood (zoologist), Pete Hobbs (radioman), Tom Rodger (diesel electric mechanic), Peter Cawson (carpenter). **1963 winter**: Peter Tilbrook (zoologist and leader), John Chambers, Fred Topliffe, and Walter Townsend (meteorologists), Andy Bailey (botanist), Barry Heywood (zoologist), Pete Hobbs (radioman), Alf Amphlett (diesel electric mechanic), **Dec. 8, 1963**: They began building a plastic hut containing living accommodations and labs. **1964 winter**: Andy Bailey (botanist and leader), Bob Burton, Barry Goodman, and Michael Northover (meteorologists), Pete Redfearn and Tony Walker (zoologists), Paul Pilkington (radioman), Walt Dawson (diesel electric mechanic), Joe Sutherland (carpenter), Dick Stocks (general assistant and builder), and John Noble (cook). **1965 winter**: Michael Northover (meteorologist and leader), Bob Burton, Barry Goodman, and Charles Howie (meteorologists), Inigo Everson, Colin Herbert, and Tony Walker (zoologists), Paul Pilkington (radioman), Walt Dawson (diesel electric mechanic), Michael Purbrick (carpenter), and Nigel Bacon (cook). **1966 winter**: John Brotherhood (physiologist, medical officer, and leader), John Baker and Denis Lindsay (botanists and meterologists), David Salter (meteorologist), Martin White (zoologist and meteorologist), Ron Smith (botanist), Inigo

Everson and Roger Beck (zoologists), Steve O'Shanohun (radioman), Mike Burgin (general assistant and physiologist), Ernie Thornley (diesel electric mechanic), and Nigel Bacon (cook). **1967 winter**: Edward Hillier (physiologist, medical officer, and base commander), Doug Brown and Len Mole (meteorologists), Martin White (zoologist and meteorologist), John Baker (botanist and meteorologist), Robert Smith (zoologist), Steve O'Shanohun (radioman), David Bravington (diesel electric mechanic), Gerald Pearce (general assistant and diver), Doug Bone (biology assistant), and David Spencer (cook). **1968 winter**: Doug Brown (meteorologist and base commander), Paul Finigan, Les Graves, and Bill Taylor (meteorologists), Peter Rowe (geologist), John Ball (physiologist and medical officer), Paul Bregazzi, Jim Conroy, and Vaughan Spaull (zoologists), Harry Taylor (radioman), Roger Liddall (diesel electric mechanic), Doug Bone (biology assistant), Andy Losh (general assistant and diver), and David Spencer (cook). **1969 winter**: Vaughan Spaull (zoologist and base commander), Paul Finigan, Les Graves, and Edwin Mickleburgh (meteorologists), Peter Hardy and Eric Twelves (zoologists), Eliot Wright and John Edwards (botanists), John Howarth (radioman), Owen Darling (biology assistant), Dave Rinning (general assistant and tractorman), Andy Losh (general assistant and diver), and Martin Pinder (cook). **1970 winter**: Eric Twelves (zoologist and base commander), Peter Hardy, Jeremy Light, Ian Rabarts, and Humphrey Smith (zoologists), Owen Darling (biology assistant), Tony Feenan (radioman), Adrian Gilmour (diesel electric mechanic), Ray Townley-Malyon (general assistant and diver), and Robert Cook (cook). **1971 winter**: Jeremy Light (zoologist and base commander), Peter Jennings, Ian Rabarts, and Mike Richardson (zoologists), Martin McManmon and Richard Webb (botanists), Harry Taylor (radioman), John Hyde-Clark (diesel electric mechanic), Brian Grantham (biology assistant), Paul Skilling (general assistant and diver), and Mervyn Langford (cook). **1972 winter**: Mike Richardson (zoologist and base commander), Paul Broady, Don Goddard, Peter Jennings, Brian Kellett, David Weller, and Terry Whitaker (zoologists), Tim Hooker (botanist), Jay Rushby (radioman), John Hyde-Clark (diesel electric mechanic), David Tomlinson (electrician), Chris Amos, Ian Collinge, and Jan Hoogesteger (biology assistants), and Clive Palfrey (cook). **1973 winter**: Dave Fletcher (base commander), Paul Broady, Don Goddard, Robin Hastings, Brian Kellett, David Weller, and Terry Whitaker (zoologists), Tim Hooker (botanist), Mike Hinchliffe (radioman), Peter Vane (diesel electric mechanic), Peter Fuller (builder), Jan Hoogesteger, Chris Amos, and Ian Collinge (biology assistants), Peter Bissell (general assistant and diver), and Alan Cooper (cook). **1974 winter**: Eric Back (base commander), Neil Tappin and John Bottomley (assistant biologists), Herbert Dartnall and Robin Hastings (zoologists), James Fenton (botanist), David Friese-Green (biotechnician), Paul Thorpe (radioman), Andy Turner (builder), Peter Vane (diesel electric mechanic), Peter Bissell (diver). **1974-75 summer**: Dave Fletcher (base commander). **1975 winter**: Herbert Dartnall (biologist and base commander), David Wynn-Williams (biologist), Peter Ward (marine biologist), Jonathan Brook and Richard Anthony (assistant biologists), Gordon Picken and Julian Priddle (zoologists), Paul Thorpe (radioman), William Hanks (diesel mechanic), Don Mackay (builder), Colin Maiden (electrician), David Marsh (diver), and Dave Ball (cook). **1975-76 summer**: Dave Fletcher (base commander). **1976 winter**: Colin Maiden (electrician and base commander), John Caldwell, Alun Tanner, David Wynn-Williams, and John Ellis-Evans (biologists), Jonathan Brook and Richard Anthony (assistant biologists), Peter Ward (marine biologist), Gordon Picken and Julian Priddle (zoologists), Simon Kightley (botanist), Daniel Downey (radioman), Peter Witty (diesel mechanic), Nick Cox (builder), Doug Allan (diver), and John Cullimore (cook). **1976-77 summer**: Dave Fletcher (base commander). **1977 winter**: John Ellis-Evans (biologist and base commander), John Caldwell, Alun Tanner, and Richard Luxmoore (biologists), John Bell, Ian Reston, and Dave Rootes (assistant biologists), Malcolm Dry (radioman), Brian Lee (diesel mechanic), Nick Cox (builder), William Rogers (electrician), Peter Riley (diver), and John Cullimore (cook). **Aug. 15, 1977**: After being known as Base H, then Station H, and then Signy Island Station, its name officially became Station H — Signy. **1977-78 summer**: John Hall (base commander). **1978 winter**: Dave Rootes (assistant biologist and base commander), George Hawthorn, Richard Luxmoore, and Pete Christie (biologists), Ian Reston and Stephen Hutchinson (assistant biologists), Michael Peacock (radioman), James Boyle (diesel mechanic), Raymond Bainton (electrician), Leslie Irvine (boatman and builder), Kenneth Cameron (diver), and Michael Gardiner (cook). **1978-79 summer**: John Hall (base commander). **1979 winter**: George Hawthorn (biologist and base commander), Pete Christie and Ian Hawes (biologists), Paul Drummond, Rick Price, and Ken Richard (assistant biologists), Nigel Hart (radioman), Kevin Gilbert (diesel mechanic), Kev Corbin (electrican), Mark Redpath (general assistant and boatman), Doug Allan (diver), and Bill McKie (cook). **March 27, 1980**: The *Bransfield*, which was due to relieve Signy, struck a rock, and so 7 men had to spend an additional winter at the station. **1980 winter**: Dave Rootes (base commander), Tom Lachlan-Cope (meteorologist and physicist), Alistair Burn, Pete Christie, Neil Fitch, Ian Hawes, George Hawthorn, Andrew Lister, and Phil Shaw (biologists), Paul Drummond, Rick Price, and Ken Richard (assistant biologists), Denis McCrohan (radioman), Phil Sharples (diesel mechanic), Kev Corbin (electrician), Mark Redpath (boatman and general assistant), Doug Allan (diver), and David Walton (cook). **Dec. 1980**: Sørlle House, named after Petter Sørlle, was built, to house diving and lab facilities. **1981 winter**: Neil Fitch (base commander and biologist), John Gallagher and Gavin Lishman (biologists), Paul Harrisson (terrestrial biologist), Robert Forster, Ali Malik, and Alan Hemmings (assistant biologists), Bob Handley (medical officer), Denis McCrohan (radioman), John Fleming and James Snelling (builders), Ray Stirton (electrician), Phil Sharples (diesel mechanic), Adrian Overbury (boatman), Damien Sanders (diver), and John Mudie (cook). **1981-82 summer**: Dave Rootes (base commander). **1982 winter**: Alan Hemmings (assistant biologist and base commander), John Gallagher and Alan Wootton (biologists), Paul Harrisson (terrestrial biologist), Ali Malik (assistant biologist), Stephen Bridgman (medical officer), Roland Lewis (radioman), Barry Hickinbottom (builder), Stephen Vincent (electrician), Nicholas Morris (diesel mechanic), Michael Brothers (boatman), Kenneth Cameron (diver), and John Mudie (cook). **1982-83 summer**: Dave Rootes (base commander). **1983 winter**: Alan Wootton (biologist and base commander), Ray Cannon and Edward Lemon (biologists), Mark Sanders (assistant biologist), Richard Parker (medical officer), Roland Lewis (radioman), Barry Hickinbottom (builder), Mark Robson (electrician), Pete Hizzett (boatman), Kenneth Cameron (diver), Clive Dunham (cook). **1983-84 summer**: Dave Rootes (base commander). **1984 winter**: Edward Lemon (biologist and base commander), Paul Tearle and Ian Hawes (biologists), Paul Harrison (marine biologist), Geoff Collett, Andrew Coupar, Mark Sanders, and Richard Price (assistant biologists), Alistair Fraser (medical officer), Steve Clark (radioman), Barry Green (diesel mechanic), Myles Plant (builder), Stephen Vincent (electrician), Pete Hizzett (boatman), Eric Rigg (diver), and Clive Dunham (cook). **1984-85 summer**: Dave Rootes (base commander). **1985 winter**: Richard Price (assistant biologist and base commander), Paul Ward (marine biologist), Geoff Collett, and Neil Rose (assistant biologist), Paul Burren (assistant marine biologist), Alan McPherson (medical officer), Bradley Spiers (radioman), Myles Plant (builder), Andy Tucker (electrician), Barry Green (diesel mechanic), Pete Macko (boatman), and Simon Cook (cook). **1985-86 summer**: Ian Lovegrove (base commander). **1986 winter**: Neil Rose (freshwater assistant and base commander), Neil Gilbert (algal physiologist), Paul Ward (marine biologists), John Pickup (terrestrial biologist), Norman Cobley (ornithologist and zoological field assistant), Steve Tucker (medical officer), Bradley Spiers (radioman), Greg Wilkinson (diving officer), Paul Burren (assistant marine assistant), Dave Wright (terrestrial assistant), Rob Day (diesel mechanic), Andy Tucker (electrician), Pete Macko (boatman), and Simon Cook (cook). **1986-87 summer**: Ian Lovegrove (base commander). **1987 winter**: Richard Price (boatman and base commander), Julian Ashford (assistant marine biologist), Norman Cobley (assistant biologist), John Pickup (terrestrial biologist), Dave Wright (assistant terrestrial biologist), Neil Gilbert (algal physiologist), Martin

Davey (algal ecologist), Yoav Tzabar (medical officer), Mike Tracey (radioman), Douglas Allan (ATV cameraman), Michael Sargeant (diesel mechanic), Michael Abbott (builder), Phil Smith (electrician), Greg Wilkinson (diver), Rupert Wedgewood (freshwater field assistant), and Kevin Puttock (cook). **1987-88 summer**: Ian Lovegrove (base commander). **1988 winter**: Phil Smith (electrician and base commander), Conor Nolan (marine biologist), Julian Ashford (assistant marine biologist), Hector MacAlister (assistant terrestrial biologist), Christopher Fenton (medical officer), Andrew Bond (radioman), Michael Sargeant (diesel mechanic), Michael Abbott (builder), Peter Stirling (boatman), Stephen Bancroft (diver), Rupert Wedgewood (freshwater field assistant), and Kevin Puttock (cook). **1988-89 summer**: Ian Lovegrove (base commander). **1989 winter**: Stephen Bancroft (diver and base commander), Jeremy Colman (marine biologist), Nicholas Forsyth (assistant marine biologist), Hector MacAlister (assistant terrestrial biologist), Peter Bayliss (microbial biologist), Nicholas Johnstone (medical officer), Andrew Bond (radioman), Andrew Wormald (diesel mechanic), Carl Milner (tractor mechanic), James Hurley (builder), Paul Chatfield (electrician), Peter Stirling (boatman), Paul Brazier (freshwater field assistant), and Dewi Edwards (cook). **1989-90 summer**: Ian Lovegrove (base commander). **1990 winter**: Jeremy Colman (marine biologist and base commander), Roger Coggan (marine biologist), Nicholas Forsyth (assistant marine biologist), Pete Convey (terrestrial biologist), Rodney Arnold and Peter Bayliss (microbial ecologists), Gifford Kerr (medical officer), James Hurley (builder), Paul Chatfield (electrician), Andrew Wormald (diesel mechanic), Pete Macko (boatman), Greg Wilkinson (diver), Paul Brazier (freshwater field assistant), Matthew Smithers (terrestrial field assistant), and Dewi Edwards (cook). **1990-91 summer**: Nick Cox (base commander). **1991 winter**: Greg Wilkinson (diver and base commander), David Barnes (marine biologist), Luke Bullough (assistant marine biologist), John Fowbert (terrestrial biologist), Matthew Smithers (terrestrial field assistant), John Scott (medical officer), Roy Glover (radio operator), Adam Hodges (diesel mechanic), David Hilton (builder), Brian Mallon (electrician), Pete Macko (boatman), Tony Walker (student), Martin Barber (cook). **1991-92 summer**: Neil Gilbert (base commander). **1992 winter**: Brian Mallon (electrician and base commander), Matt Chalmers (assistant biologist), David Barnes (marine biologist), Luke Bullough (assistant marine biologist), Andrew Caulkett (freshwater geochemist), Krishna Rawal (medical officer), Roy Glover (radio operator), Nicholas Turner (diesel mechanic), Ian Smart (builder), Russ Manning (boatman), Derek Gittins (diver), Martin Barber (cook). **1992-93 summer**: Neil Gilbert (base commander). **1993 winter**: Russ Manning (boatman and base commander), Matt Chalmers (assistant biologist), Patricia Brouwer and Damon Stanwell-Smith (marine biologists), Simon Brockington (assistant marine biologist), William Marshall (ecologist), Martin Davey (plant physiologist), Lesley Thomson (medical officer), Clare McGarry (communications manager), Nicholas Turner (diesel mechanic), Tim Hill (builder), Thomas Walsingham (electrician), Robert Wood (diver), Nigel Milius (cook). **1993-94 summer**: Neil Gilbert (base commander). **1994 winter**: Martin Davey (plant physiologist and base commander), Liz Protheroe-Thomas and Damon Stanwell-Smith (marine biologists), Simon Brockington (assistant marine biologist), Matthew Edworthy (terrestrial field assistant), Gwen Campbell (medical officer), Clare McGarry (communications manager), Philip Bramham (diesel mechanic), Tim Hill (builder), James Masson (electrician), Andrew Owen (boatman), Robert Wood (diver), Nigel Milius (cook). **1994-95 summer**: Neil Gilbert (base commander). **March 1995**: Sørlle House was demolished. **1995 winter**: Helen Butler (freshwater microbiologist), Lisa Ford (medical officer), Matthew Edworthy (terrestrial field assistant), Pete Lens (communications manager), Philip Bramham (diesel mechanic), Ian Smart and Matt Tallents (builders), John Everett (builder and carpenter), James Masson (electrician), Russ Manning (boatman), and Richard Schofield (cook). **1995-96**: A new Sørlle House was erected on the foundations of the old one, with living accommodations, labs and offices. **April 13, 1996**: Signy, after being occupied continuously for 49 years and 27 days as a year-round station, and being the main British biology station, studying vegetation and lakes of the eco-system, was finally closed, and its biology functions given to Rothera Station. **Jan. 1997**: The plastic hut was deemed unsafe as such and since then has been used as a storehouse. Since the 1996-97 season it has been a summer-only station. Matt Jobson was base commander from 2006 to 2009. Field huts and hides associated with Signy Island Station over the years include: Foca Cove, Gourlay Peninsula, Three Lakes Valley, Cummings Cove, Jane Col, Factory Bluffs, Moraine Valley, Shagnasty Island, and North Point. *See also* **Shingle Hut**.

Signy Ø *see* **Signy Island**

Islotes Sigrid. 64°15' S, 64°14' W. A group of 2 small islands off the E side of Lecointe Island, off the NE coast of Brabant Island, in the Palmer Archipelago. Named by ChilAE 1946-47. The 2 islands in question are Guesalaga Island and Isla Viola (the latter not being individually named until 1963).

Sigritsa Point. 62°28' S, 60°07' W. An ice-free point on the NE coast of Varna Peninsula, 1.1 km SSE of Williams Point, 750 m NE of Sayer Nunatak, and 800 m WNW of Ficheto Point, it forms the NW side of the entrance to Dragon Cove, on Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for Teodor Sigritsa, kavhan under the 9th-10th-century Bulgarian ruler Czar Simeon the Great.

Sigurd Knolls. 71°21' S, 7°38' E. Isolated rock knolls at the N end of Otter Plain, about 30 km NW of the Drygalski Mountains, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sigurdsvodene, for Sigurd Helle (*see* **Helle Slope**). US-ACAN accepted the translated name Sigurd Knolls in 1967. The Russians call them Nunataki Mramornye.

Sigurdsvodene *see* **Sigurd Knolls**

Sigyn Glacier. 71°52' S, 8°36' E. A broad glacier flowing N between the Drygalski Mountains and the Kurze Mountains, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sigynbreen, after Sigyn, the wife of Loki in old Norse mythology. US-ACAN accepted the name Sigyn Glacier in 1967.

Sigynbreen *see* **Sigyn Glacier**

Siklawa. 62°09' S, 58°08' W. A waterfall about 200 m high, in Chopin Ridge, at Polonez Cove, King George Island, at the Bransfield Strait, in the South Shetlands. So named by the Poles in 1980, because it reminded them of a large waterfall of that name in the Tatra Mountains of Poland.

Cordón Sikorski. 74°46' S, 63°27' W. A mountainous chain rising near the W coast of Gardiner Inlet, E of the Latady Mountains, on the E coast of the Antarctic Peninsula. Named by the Chileans for the Vought Sikorski monoplane 022U3 Kingfisher No. 308, belonging to the Chilean Air Force, that was taken aboard the *Angamos* during ChilAE 1946-47, and in which Lt. Arturo Parodi Alister made the first Chilean Antarctic flight. The Argentines call it Cordón Namuncura.

Sikorski Glacier. 71°49' S, 98°24' W. A small glacier in the NE part of Noville Peninsula, on Thurston Island, it flows NE into the Bellingshausen Sea between Mount Palmer and Mount Feury. First roughly delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1960, for Stephen Sikorski, electronics technician on the *Glacier*, 1959-60. Originally plotted in 71°44' S, 98°30' W, it has since been replotted.

Glaciar Sikorsky *see* **Sikorsky Glacier**

Sikorsky Glacier. 64°13' S, 60°46' W. Flows W and WSW into Hughes Bay N of Charles Point, and E of Sterneck Island, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed by Fids from Portal Point between 1957 and 1959, and mapped by FIDS cartographers from these efforts. They plotted it in 64°12' S, 60°53' W. Named by UK-APC on Sept. 23, 1960, for Igor Ivan Sikorsky (1889-1972), Russian-born American helicopter pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Sikorsky. It has since been replotted.

The *Silas Richards*. New Bedford whaler, under the command of Capt. Wilcox, which, on Dec. 26, 1852, sailed from the Falklands for the South Shetlands, in company with two other

New Bedford whalers — the *Fanny* and the *Congress*. They saw their first iceberg in 61°S, and then passed Clarence Island within 5 or 6 miles of its eastern shore. 70 miles south of Clarence Island they encountered the pack-ice. The *Silas Richards* and the *Fanny* traveled west along the fringe of the pack, while the *Congress* headed north and out of Antarctica. The two remaining vessels could see Joinville Island, across the ice, but couldn't get to it, so they decided to head north, after a totally unsuccessful voyage.

Bahía Silbido *see* **Whistling Bay**

Silent Valley. 64°13' S, 56°38' W. A broad valley trending E-W between Elliot Ridge and Sadler Stacks, on Seymour Island. It is protected from winds, and remote from open sea and sea animals, hence the name given by the Poles on Sept. 1, 1999.

Silicoflagellates. Planktonic protozoa with a flagellum, yellow or greenish-brown chromatophores, and a skeleton of hollow ciliceous rods. These are found both living and fossilized.

Silistra Knoll. 62°41' S, 60°06' W. A peak rising to over 700 m in Levski Ridge, 1.85 km WSW of Serdica Peak, 2.8 km S of Levski Peak, and 1.95 km NE of the summit of Peshev Ridge, it is bounded by Macy Glacier to the N and Boyana Glacier to the S, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for the Bulgarian town of Silistra.

Silk Glacier. 81°09' S, 158°55' E. A glacier, 16 km long (the Australians say about 22 km), flowing from the E slopes of the Churchill Mountains, eastward between Mount Frost and Mount Zinkovich, into Nursery Glacier. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Cdr. Peter R.H. Silk, RNZN, commander of the *Endeavour II*, in Antarctic waters, 1962-64. ANCA accepted the name on Aug. 27, 1975.

Île(s) Sillard *see* **Sillard Islands**

Isla Sillard *see* **Sillard Islands**

Islotes Sillard *see* **Sillard Islands**

Sillard Island *see* **Sillard Islands**

Sillard Islands. 66°37' S, 67°35' W. A group of small, ice-covered islands close to Cape Mascart (the NE extremity of Adelaide Island). Discovered by FrAE 1908-10, and named by Charcot as Îles Sillard, for French engineer Jean Sillard of the French Montevideo Company, in charge of the harbor works at Montevideo. His company made repairs to the *Pourquoi Pas?* The islands appear on Charcot's 1912 map, plotted in 66°41' S, 67°46' W. In 1914, they appear on a British chart as Sillard Island, and that same year Bongrain referred to the largest of the group as Île Sillard, as a consequence of which it appears on a 1943 U.S. Hydrographic Office chart as Sillard Island, and on a 1949 Argentine chart as Isla Sillard. However, the group appears on an Argentine chart of 1949 as Islotes Sillard, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, on certain 1947 Chilean charts, they appeared variously as Islas Aconcagua and Islas Cauquenes. They were photographed aerially by RARE 1947-48. On a British chart of 1948, they appear as Sillard Islets, plotted in 66°40' S, 67°45' W, and that was how the feature was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. They were re-photographed aerially, by FIDASE in 1956-57. By error, the group appears on a 1957 Argentine chart as Islotes Sillar. UK-APC renamed them Sillard Islands on July 7, 1959, and corrected the coordinates, and US-ACAN followed suit in 1963. It appears as such on a British chart of 1961.

Sillard Islets *see* **Sillard Islands**

[1]**The *Silva***. A 126-ton, 94 foot 8-inch British whale catcher, built at Hawthorn, Leith, for Salvesens, and with the *Scapa* and the *Sonja* was one of the first 3 whale catchers built in a British shipyard. Salvesens sent her to Iceland for the 1910 summer, and then on to Leith Harbor, in South Georgia, whence she worked for the 1910-11 and 1911-12 seasons. She seems to have worked for the *Neko* in South Shetlands waters in the latter season, but was definitely catching for the *Neko* every season in Antarctic waters from 1912-13 to 1922-23. In 1923 she was sold to H.M. Wrangell's Larvik Whaling Company, and renamed the *Klem II*. In 1926 she was sold to Wrangell's Sociedad Española, in Madrid, renamed the *Corona III*, and registered in Vigo. In 1928 she was sold back to Larvik, and her name changed back to the *Silva*. She was converted into a fishing vessel just before World War II, and over the next several decades was sold and re-sold repeatedly, eventually disappearing from view by 1992.

[2]**The *Silva***. A 221-ton, 110-foot 4-inch British whale catcher, built at Smith's Dock, in Middlesbrough, in 1923, for Salvesen's, and launched there on Jan. 8, 1924, being finished the following month. She was sent to Leith Harbor, in South Georgia, and was catching for the shore station there in the 1924-25 season. She then caught for the *Saragossa* in 1925-26, 1926-27, 1927-28, and 1928-29. In that last season she also caught for the *Sevilla*. She was the world's first whale catcher equipped with a gunner's bridge. In Nov. 1929 she was sold to the Sevilla Whaling Company, of Tønsberg, Norway, and in 1929-30 was catching for the *Strombus*. In 1930 she was bought by the Polar Whaling Company, of Leith, Scotland, and in 1933 Salvesen's bought not only her but the Polar Company. She spent the next several years catching off Newfoundland, and worked for the Royal Navy during World War II. In 1946 she was laid up, and in 1949 was sold to Fosnavåg, in Ålesund, Norway, lengthened by about 20 feet, and converted into the motorized fishing vessel *Fosnavåg*. In 1958 she was sold to Johan Hareide, and renamed *Hareidingen*. In 1968 she was renamed *Nordingen*, and in Feb. 1970 was sold to Anda Brothers of Stavanger, for scrap.

Bahía Silva. 65°57' S, 65°50' W. A bay on the NW coast of Dodman Island, in the Biscoe Islands. Named by the Chileans for Óscar Geraldo Silva S., a non-commissioned officer who made emergency repairs to the *Piloto Pardo*'s alternators during ChilAE 1961-62. The Argentines call it Bahía Calma (i.e., "calm bay").

[1]**Islote Silva** *see* **Silva Island**

[2]**Islote Silva**. 64°07' S, 60°56' W. A bare rock island, rising to an elevation of 42 m above sea level, 1.5 km NW of Mount Pénaud, which is on the NE coast of Cierva Cove, 8 km SE of Cape Sterneck, at Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1946-47. The Argentines call it Islote Kay.

Silva Island. 62°29' S, 59°41' W. A small island, E of Canales Island, and N of Ensenada Montesinos, off Ferrar Point, on the E coast of Discovery Bay, Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946-47, who named it Islote Silva, for Major Raúl Silva Maturana (*see* **Cerro Raúl**, under **R**). It appears as such on a Chilean chart of 1951. UK-APC accepted the translated name on May 11, 2005. Plotted by the UK in late 2008.

Silva Ridge. 72°59' S, 162°17' E. Leads to the top of Sheehan Mesa, on the NE side of that feature. So named by the Northern Party of NZGSAE 1962-63 because, halfway up the ridge, Tobin and Pain found large silicified tree stumps found here. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Silver-gray fulmars *see* **Fulmars**

Silver Ridge. 82°16' S, 161°40' E. A long, snow-covered ridge, at an elevation of about 580 m, W of the mouth of Algie Glacier, it is a prominent landmark on the N side of the Nimrod Glacier, on the W side of Mount Angier. So named by the Southern Party of NZGSAE 1960-61, because of the absence of rock on this steep-sided feature. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Silverfish Bay. 74°37' S, 164°38' E. A body of water, roughly triangular, and almost completely covered by pack-ice, within the N part of Terra Nova Bay, along the Scott Coast of Victoria Land. It is bounded to the N by the Vacchi Ice Piedmont; to the W by the Campbell Glacier Tongue; to the SE by a line bearing NE from the tip of the Campbell Glacier Tongue to Oscar Point. So named by NZ-APC on May 15, 2006, for the abundance of silverfish (*Pleuragramma antarcticum*) eggs here. The Italians accepted the name on Oct. 3, 2006, and US-ACAN followed suit on July 17, 2007.

Silverstein Peak. 78°33' S, 85°39' W. A prominent high peak, rising to 4790 m, on the summit plateau of the Vinson Massif, 2.1 km SW of Mount Vinson. Named by US-ACAN in 2006, for Samuel "Sam" Silverstein, a member of the 1966-67 American Antarctic Mountaineering Expedition that made the first ascent of the Vinson Massif and other high mountains in the Sentinel Range.

Silvesterberg. 70°31' S, 162°07' E. A peak on the S side of Mount Belolikov, in the Bowers Mountains. Named by the Germans.

Islas Silveyra *see* **Omicron Islands**

Islote Silvia *see* **Silvia Rock**, **Vidal Rock**

Silvia Automatic Weather Station. 73°31' S, 169°45' E. An Italian AWS, at an elevation of

536.43 m, installed in Dec. 1990, on Coulman Island, in the Ross Sea.

Silvia Rock. 63°18' S, 57°54' W. Just SE of Agurto Rock, in the Duroch Islands, and 0.5 km N of Cape Legoupil, Trinity Peninsula. Named by ChilAE 1948 as Islote Silvia, for a daughter of President Gabriel González Videla. US-ACAN accepted the name Silvia Rock in 1964. *See also* **Vidal Rock**.

Roca Simbad *see* **Sinbad Rock**

The *Simbra*. A 336-ton, 141-foot 6-inch British whale catcher built in 1937, by Kaldnaes Mek., in Tønsberg, Norway, for Salvesen's South Georgia Company, she was the twin of the *Sigfra*. In 1937-38 she was in Antarctic waters, catching for the *Salvestria*, and was back in 1938-39, catching for the *New Sevilla*, and in 1939-40 catching for the *Salvestria* again. In 1940 she was catching for the shore station at Leith Harbor, in South Georgia, and in 1940-41 was catching for the *Svend Foyn*. However, in December 1941, she was requisitioned by the Royal Navy, who converted her into an anti-submarine vessel. In 1946 she was returned to Salvesen's, who refitted her as a catcher, and sent her to Antarctica as a catcher for the *Southern Harvester*, during the 1946-47 whaling season. On Jan. 11, 1947, in 61°S, 21°W, in the Weddell Sea, she turned over while doing a sharp maneuver during a high-speed chase in a storm, and sank. Stanley McLeery, an ordinary seaman from Edinburgh, and 14 Norwegians were lost. The only survivor was John Leask, of Scalloway, Shetlands, who had been in the crow's nest. He was picked up the next day by a catcher from the *Southern Harvester*.

Simensen, Erik. Photographer on LCE 1936-37.

Simensen Peak. 71°55' S, 25°31' E. Rising to 2215 m, on the N side of Glitrefonna Glacier, between that glacier and Nipe Glacier, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken by OpHJ 1946-47, and named by them as Simensentoppen, after Erik Simensen. US-ACAN accepted the name Simensen Peak in 1966.

Simensentoppen *see* **Simensen Peak**

Simeon Peak. 62°42' S, 60°13' W. Rising to 1576 m, on Friesland Ridge, 2.67 km SSW of Mount Friesland, and 2 km SSW of St. Boris Peak, it surmounts Huntress Glacier to the NW, Ruen Icefall to the SW, and Macy Glacier to the E, in the Tangra Mountains of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 1995-96, and named by them on March 15, 2002, for Czar Simeon the Great of Bulgaria, 893-927.

Simitli Point. 62°37' S, 61°15' W. A point forming the E side of the entrance to Timok Cove, on the N coast of Rugged Island, 380 m W of Ivan Vladislav Point, and 2.9 km ESE of Cape Sheffield, off the W coast of Byers Peninsula (which is on Livingston Island), in the South Shetlands. Mapped by the British in 1968 and by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for the town of Simitli, in southwestern Bulgaria.

Hielos Simler *see* **Simler Snowfield**

Simler Snowfield. 66°03' S, 65°05' W. A snowfield, at an elevation of about 1200 m above sea level, NE of Holtedahl Bay, between that bay and Hoek Glacier, and bounded to the NW by Miller Heights and to the SE by Mount Zdarsky, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Josias Simler (1530-1576), who wrote the first precautionary advice on glacier travel, in 1574. It appears on a British chart of 1961. US-ACAN accepted the name in 1971. The Argentines call it Hielos Simler.

Simmers, Ritchie Gibson. b. 1905, Timaru, NZ. He graduated in physics from Canterbury University College in 1928, went to work for the NZ government, and was meteorologist on both halves of BANZARE 1929-31. He joined the Meteorological Service, in the aviation section, and between 1936 and 1938 was at MIT in the USA, earning his doctorate in meteorology. In 1940, back in NZ, he became assistant director of the Met Service, and was involved in hush-hush work in the sub-Antarctic regions, remaining so until the 1960s, and being involved in the planning of BCTAE 1955-58. In 1963 he became director of the Met Service, and retired in 1965. He was one of the founding members of the NZ Antarctic Society, and died in 1984.

Simmers Peaks. 66°06' S, 52°48' E. A group of 3 peaks (the Australians say 4), the highest of which is 840 m, rising above the icecap 21 km SE of Cape Close, and 17.5 km N of Mount Codrington, in Enderby Land. Discovered by BANZARE on Jan. 13, 1930, and named by Mawson for Ritchie Simmers. US-ACAN accepted the name in 1947, and ANCA followed suit.

Mount Simmonds. 70°20' S, 159°34' E. Rising to 1885 m, standing higher and next westward of Mount Theaker, along the N side of Robilliard Glacier, 15 km W of Mount Harrison, in the N part of the Usarp Mountains. Photographed aerially by USN between 1960 and 1962, surveyed by USGS in 1962-63, and by NZGSAE in 1963-64, and mapped by USGS from these efforts. Named by NZ-APC for Miss G.A.E. Simmonds, NZ cartographer in the drafting section of the Head Office of the Department of Lands & Survey, in Wellington, who, from 1961, was engaged in the final drawings of Antarctic maps. US-ACAN accepted the name in 1968, and ANCA followed suit.

Simmonds Peak. 85°58' S, 158°32' W. A prominent rock peak, rising to 1940 m, 6 km S of Mount Dort, on the E side of Amundsen Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Willard I. Simmonds, biologist who wintered-over at McMurdo in 1964.

Mount Simmons. 80°22' S, 81°45' W. Rising to 1590 m, it forms the N end of the Independence Hills of the Heritage Range. Named by US-ACAN in 1966, for Richard S. "Dick" Simmons, USN, aviation electronics technician and radioman at McMurdo in 1966 (*see* **Deaths**, 1966).

Simmons, David Alan. b. March 31, 1933, Sutton, Surrey, son of Francis Simmons, an engineer with the London County Council. Seeing an ad in the *Daily Telegraph* for FIDS, and being interested anyway by BCTAE 1955-58, he applied, was accepted, and left Southampton in 1956 on the maiden voyage of the new *John Biscoe*, bound for Montevideo, then Port Stanley, and on to the Antarctic. After stops at Anvers Island and Detaille Island, and another to allow the Duke of Edinburgh on board to visit, he wintered-over at Base F as a geophysicist in 1957 and 1958. In 1959 he left Base F on the *Protector*, for Port Stanley, and then back to the UK. After writing up his reports with Joe Farman, he became a schoolmaster for a while, teaching physics, married Jean, and then went back to work for BAS for 12 years or so. He retired in 1993, and lives at Bottisham, near Cambridge.

Simmons, John. b. NY. Crew member on the *Wasp*, 1822-24.

Simmons Basin. 77°46' S, 161°18' E. An ice-free basin, or valley, trending SE between Solitary Rocks and the Friis Hills, marginal to the N side of the bend of Taylor Glacier, in Victoria Land. The lower E end of the basin is occupied by Simmons Lake and a lobe of ice from Taylor Glacier. Named by US-ACAN in 1992, for George M. Simmons, Jr., biologist at Virginia Polytechnic Institute and State University, who, in the 10 years or so from 1977, led several USARP teams in the study of lakes in this area.

Simmons Glacier. 75°00' S, 113°36' W. Flows N between Mount Isherwood and Mount Strange, in the E part of the Kohler Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Harry S. Simmons, assistant to the USARP representative in Christchurch, NZ, for the summers between 1969-70 and 1972-73. He was in Antarctica in 1971 and 1973.

Simmons Lake. 77°46' S, 161°20' E. A lake, 2.5 km long, in the E part of Simmons Basin, in Victoria Land. Named by US-ACAN in 1992, in association with the basin.

Simo-kama. 69°16' S, 39°45' E. A semicircular depression indenting the W side of the S part of the Langhovde Hills. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on June 22, 1972 (name means "lower kettle"). For "upper kettle," *see* **Kami-kama**.

Simon, Félix-Balthasar. b. Jan. 6, 1788, Saint-Tropez. Chief pilot on the *Astrolabe* during FrAE 1837-40. He died in Hobart on Dec. 23, 1839, just before the expedition went south to Antarctica for a 2nd time.

Simon, Jean-Baptiste-Dominique. b. Nov. 21, 1821, Saint-Tropez, son of Félix-Balthasar Simon (see above). He was taken on as a cabin boy aboard the *Astrolabe*, with his father, for FrAE 1837-40. On his 16th birthday he became

an apprentice seaman, and on his 18th birthday he became a junior seaman.

Simon, Wilhelm. 2nd engineer on the *Deutschland*, during GermAE 1911-12.

Simon Peak. 69°16' S, 71°53' W. A mountain rising to about 1000 m on the W side of the Havre Mountains, in the NW part of Alexander Island, NE of Umber Island. It may have been discovered in Jan. 1909, during FrAE 1908-10. Surveyed by BAS personnel from Fossil Bluff in 1975-76. Named by UK-APC on June 11, 1980, for Alex Edward Simon (b. 1947), BAS aircraft mechanic at Base T in the summers between 1972 and 1976. US-ACAN accepted the name in 1995.

Simon Ridge. 71°03' S, 65°31' E. An arc-shaped rock ridge, about 14 km SE of Husky Massif, and about 30 km NE of Mount Hicks, in the Prince Charles Mountains. Plotted by Australian cartographers from 1960 ANARE air photos. Named by ANCA for Maxime Jean "Max" Simon, radio officer at Wilkes Station in 1962. US-ACAN accepted the name in 1967.

Simonet, Charles. b. Oct. 4, 1802, Perols, France. On Oct. 9, 1838, at Vavao, in the South Seas, he emabarked on the *Astrolabe* as a junior seaman for FrAE 1837-40. He did the Antarctic tour of 1839-40, and left the expedition in NZ on May 3, 1840.

Cape Simonov. 66°48' S, 116°55' E. Just E of Totten Glacier, on the Sabrina Coast of Wilkes Land. Photographed aerially in 1947 during OpHJ 1946-47, and first plotted from these photos, by U.S. cartographer Gard Blodgett, in 1955. Re-photographed aerially in 1956, by SovAE, and named by them as Mys Simonova, for Ivan Simonov. ANCA accepted the translated name Cape Simonov.

Simonov, Ivan Mikhaylovich. Name also seen as Simonoff. b. 1794, Kazan. Lieutenant and professor, seconded from Kazan University to von Bellingshausen's 1819-21 Antarctic expedition. He was the astronomer who, with Lt. Dimitri Demidov landed on an iceberg on their way south, on Jan. 17, 1820, to capture penguins. In 1846 he became rector of Kazan University, and died in 1855.

Holmy Simonova. 66°39' S, 99°37' E. A hill between the Obruchev Hills and Denman Glacier, in Queen Mary Land. Named by the Russians.

Mys Simonova *see* **Cape Simonov**

Zaliv Simonova *see* **George VI Sound**

Simonovbreen. 68°47' S, 90°34' W. A glacier, about 7 km long, between the bay called Ranvika to the S and the cove called Kvalvika to the N, it divides the coast called Mirnij Küste from the the coast called Von Bellingshausenkysten, in the NE part of the island called Peter I Island. Named by the Norwegians for Ivan Mikhaylovich Simonov.

Simonow Hukk. 68°43' S, 90°30' W. A small cape in the area of Simonovbreen, on Peter I Island. Named by the Russians.

Simons, Allen *see* **USEE 1838-42**

Simoom Hill. 69°28' S, 67°56' W. Rising to 640 m in the Relay Hills, 5 km E of Mount Edgell, on the W coast of the Antarctic Peninsula. Surveyed by BAS personnel from Base E between 1970 and 1973. Named by UK-APC on Dec. 8, 1977, after the simoom, the warm south wind that blows off the Arabian Desert. Severeal features in this area are named after famous winds of the world. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Ostrov Simor *see* **Seymour Island**

Simplicity Hill. 85°06' S, 174°38' W. A small, ice-free hill, 1.5 km W of Crilly Hill, at the N side of McGregor Glacier, in the Queen Maud Mountains. So named by the Texas Tech Shackleton Glacier Expedition of 1964-65, for the ease with which they could approach the hill, and for the relative simplicity of its geologic nature. US-ACAN accepted the name in 1966.

The *Simpson*. Chilean submarine, commanded by Capt. Carlos Toledo de la Maza, which took part in ChilAE 1979-80, on an experimental operation with the *Piloto Pardo*, and assisting a Japanese film crew working on the movie *Virus*, in the Antarctic Peninsula.

Cape Simpson. 67°28' S, 61°08' E. A high, rocky bluff at the N end of Ufs Island, it forms the E side of the entrance to Howard Bay, about 19 km E of Cape Bruce, on the coast of Mac. Robertson land. Discovered on Feb. 18, 1931 by BANZARE, and named by Mawson for Frederick Neighbour Simpson (1877-1954), director of A. Simpson & Son, Ltd., who, aside from donating £85 to the expedition himself, used his weight as president of the Adelaide Chamber of Manufacturers to secure more backing. Even better, his brother, Alfred Alan Simpson, was president of the Australian Associated Chambers of Commerce, and a former mayor of Adelaide. US-ACAN accepted the name in 1947, and ANCA followed suit on Nov. 28, 1955.

Île(s) Simpson *see* **Simpson Rocks**

[1]**Mount Simpson**. 72°08' S, 100°32' W. In the Walker Mountains, just W of the head of Hale Glacier, on Thurston Island. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1960, for Lt. B.L. Simpson, Jr., VX-6 pilot of the P2V Neptune which took additional air photos in the area in Jan. 1960. Originally plotted in 72°06' S, 100°45' W, it has since been replotted.

[2]**Mount Simpson** *see* **Simpson Peak**

Roca(s) Simpson *see* **Simpson Rocks**

Simpson, Blemiah. b. 1799 (or 1795) in Aquinnah (later called Gay Head), near Martha's Vineyard, Mass. A black crewman on the *Charles Adams*, in Antarctic waters in 1831-32.

Simpson, George Clarke "Sunny Jim." b. Sept. 2, 1878, Derby, England, son of department store owner Arthur Simpson and his wife Alice Lambton Clarke. He got his nickname from the boy on the trademark on the popular breakfast cereal called Force. An atmospheric physicist, he worked at the Met Office, and in 1905 became the first person to lecture on meteorology at a British university, when he did so at Manchester. In 1906 he went to the Met Office in India. Scott invited him to be meteorologist on BAE 1910-13, and he went. Scott found him cocksure and supercilious, but overall a good and friendly companion. In Aug. 1912, he was recalled to India. On Sept. 23, 1914, in India, he married Dorothy Stephen, in 1920 he became director of the Met Office in Britain, and was knighted in 1935. He retired in 1938, but from 1939 to 1946 was superintendent of Kew Observatory. He died in Bristol on Jan. 1, 1965.

Simpson, Hugh Walter. b. April 4, 1931, Glasgow. After graduating from Edinburgh in 1954, he joined FIDS in 1955, as medical officer, and left Southampton on the *John Biscoe* in Oct. 1955, bound for Port Stanley, wintering-over at Base D in 1956 and 1957. In the summer of 1957-58 he led a surveying and geological team to Livingston Island, in the South Shetlands, and after his tour made his way through South America to Callao, where he caught the *Reina del Pacifico*, bound for Liverpool, where he arrived on Oct. 18, 1958. In 1965 he led the Scottish Trans-Greenland Expedition. In 1969, while professor of pathology at the University of Minnesota, he led an unsuccessful ski-trek to the North Pole, with his wife Myrtle Lillias Emslie (well known explorer, mountain climber, skier, and writer in her own right), and Roger Tufft. He now lives at Farleiter, Kingussie, Inverness, and is still a champion skier.

Simpson, Ian Harron "Sandy." b. Sept. 14, 1930, Hastings, Sussex. Harron was his mother's maiden name. He went into the Met Office as a very young man, and was posted to their radiosond office in Port Stanley, where he served for 3 years. A big fellow, he belonged to the Kendal Climbing Club, and in 1953 joined FIDS, as a meteorologist, wintering-over at Base F in 1954. He married his girl friend Hilda in the Falklands, and they went back to the UK, from Montevideo, on the *Andes*. They arrived in Southampton on Feb. 24, 1955, and went to live at The Pheasantries, Edenhall. He died in Milom, Cumbria, in Jan. 1984, of a heart attack.

Simpson, William. b. 1888, Lochee, Dundee, son of William Simpson. Bosun's assistant on the *Discovery* during the first half of BANZARE 1929-31. After his part in the expedition, he took the *Bendigo* out of Melbourne, heading for London, where he arrived on June 5, 1930.

Simpson Bluff. 72°27' S, 96°06' W. A broad, ice-covered bluff at the E end of Thurston Island, it stands out between Levko Glacier and Savage Glacier, where they enter Seraph Bay. Named by US-ACAN in 2003, for Photographer's Mate R.M. Simpson, USN, air crewman in the Eastern Group of OpHJ 1946-47.

Simpson Crags. 74°24' S, 162°45' E. A series of rugged crags descending SE in a line from Mount Baxter of the Eisenhower Range, and forming the S wall of O'Kane Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Lt. Cdr. William A. Simpson, Jr., USN, VX-6 aircraft commander during OpDF 67 (i.e., 1966-67).

Simpson Glacier. 71°17' S, 168°38' E. A glacier, 10 km long, in the Admiralty Mountains,

it flows northward to the coast between Nelson Cliff and Mount Cherry-Garrard, where it forms Simpson Glacier Tongue, in association with which it was named by US-ACAN in 1970. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963.

Simpson Glacier Tongue. 71°15' S, 168°45' E. A small floating glacier tongue fed by Simpson Glacier and Fendley Glacier as it extends into the sea for about 4 km between Nelson Cliff and the Atkinson Cliffs, along the N coast of Victoria Land. Charted by Campbell's Northern Party during BAE 1910-13, and named by them for George Simpson. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Simpson Head. 73°21' S, 60°59' W. A conspicuous promontory, rising to 1065 m, and projecting S into the N side of New Bedford Inlet 6 km NW of Cape Kidson, on the Lassister Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, during USAS 1939-41. It appears on two U.S. Hydrographic Office photos of 1943. Rephotographed aerially on Nov. 21, 1947, during RARE 1947-48, and surveyed in Dec. 1947 by a joint sledging team of RARE personnel and Fids from Base E. Named by those Fids in 1948, for George C. Simpson. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also on the 1969 USGS sketch map of Ellsworth Land-Palmer Land.

Simpson Hills. 71°47' S, 63°25' W. A cluster of ridges and nunataks, rising to an elevation of about 1700 m, at the head of Gruening Glacier, 10 km NW of Owen Peak, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Visited by a joint USGS-BAS field party in 1986-87. Named by UK-APC on May 13, 1991, for Anthony Russell Simpson (b. 1961), BAS general assistant who wintered-over at Rothera Station in 1985 and 1986, and who was with that visiting party. US-ACAN accepted the name later in 1991.

Simpson Island(s) *see* **Simpson Rocks**

Simpson Nunatak. 63°58' S, 58°54' W. Rising to 1165 m (the British say 650 m), 4 km NW of Mount Roberts, on the S margin of Aitkenhead Glacier, on Trinity Peninsula. Surveyed by Fids from Base D in Dec. 1946, and again in Feb. 1957, and yet again in 1960-61. Named by UK-APC on Feb. 12, 1964, for Hugh Simpson (q.v.), a member of the Detroit Plateau reconnaissance party from Hope Bay in 1957. US-ACAN accepted the name later in 1964.

Simpson Peak. 67°43' S, 50°07' E. Rising to 1720 m, just E of Mount George, in the SW end of the Scott Mountains of Enderby Land. Discovered on Jan. 14, 1930 by BANZARE, and named by Mawson for George Simpson. Its position was fixed by Chris Armstrong, of ANARE, in 1959. ANCA accepted the name, and ANCA followed suit in 1961.

Simpson Ridge. 68°06' S, 62°23' E. An isolated, sharp, serrated ridge, 1.5 km S of Mount Twintop, in the Framnes Mountains of Mac. Robertson land. Mapped by Australian cartographers from ANARE surveys conducted between 1954 and 1962. Named by ANCA on Oct. 22, 1968, for Christopher R. "Chris" Simpson, electronics engineer at Mawson Station in 1967. US-ACAN accepted the name in 1971.

Simpson Rock *see* **Simpson Rocks**

Simpson Rocks. 61°58' S, 57°25' W. A group of rocks in water, 8 km NE of Cape Melville, King George Island, in the South Shetlands. Actually the feature comprises a rock of 9 m in height, and sunken rocks surrounding it. Weddell called them Simpson's Islands in 1823 (at least, they appear that way on his chart published in Aug. 1825). The main rock appears on Dumont d'Urville's 1838 chart as Île Simpson, and on an 1861 Spanish chart as Isla Simpson. On Charcot's 1912 map (reflecting his FrAE 1908-10) the group appears as Îles Simpson. In 1927 they were surveyed by the Discovery Investigations, and appear on their 1929 chart as "Simpson Rocks (Isle)." On a 1930 U.S. Hydrographic Office chart the main rock appears as Simpson Island, and on a 1932 DI chart as Simpson Rock. The group was re-surveyed by DI in Jan. 1937, and appears on their charts of that year as both the way they appeared on the 1927 chart and as Simson Rocks. They appear on a 1939 Argentine chart as Rocas Simpson, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer, despite the fact that on a Chilean chart of 1951 the main rock is shown as Roca Simpson. US-ACAN accepted the name Simpson Rocks in 1952, and UK-APC followed suit on Sept. 8, 1953. They appear that way in the 1955 British gazetteer. They were photographed aerially by FIDASE in 1956-57. In the 1974 British gazetteer of 1974, the main rock appears as Simpson Rock, and that was the name seen on a 1976 British chart. In the 1977 British gazetteer, the group appears as Simpson Rocks. Last plotted by the UK, in late 2008.

Simpson's Islands *see* **Simpson Rocks**

Isla Sims *see* **Sims Island**

Sims, Lewis Sterling, Jr. b. July 4, 1913, Carrollton, Ga., son of bank cashier Lewis Sterling Sims and his wife Susan E. "Sue" Fincher. After becoming a doctor, he joined the U.S. Navy, as a lieutenant (jg), and was medical officer at East Base during USAS 1939-41. He married Mary Frances Mims, and they lived in Lincolnton, Ga., and in Florida. He died in Coronado, San Diego, on April 22, 1972, of undifferentiated carcinoma. Mary Frances died in 1987. They are both buried in Lincolnton.

Sims Island. 73°21' S, 78°19' W. A small but conspicuous island, W of Case Island, between that island and Rydberg Peninsula, in the S part of Carroll Inlet, off the English Coast of Ellsworth Land. Discovered aerially on Dec. 22, 1940, by Ashley Snow, during USAS 1939-41, and named for Lewis Sims. It appears on a 1942 USAAF chart, plotted in 73°15' S, 78°45' W. US-ACAN accepted the name Sims Island, and those coordinates, in 1947. It appears on a 1946 Argentine chart as Isla Sims, and that is what the Argentines call it today. It was photographed aerially again by USN in 1965-66, and appears, with the corrected coordinates, on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted the name on Dec. 20, 1974. The Chilean gazetteer of 1964 accepted the name Isla Sims.

Mount Simsarian. 86°06' S, 132°50' W. A large mountain projecting from the E side of Michigan Plateau just S of the head of Gardiner Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for James Simsarian, chief of the Division of International Scientific and Technical Affairs, Department of State.

Simson *see* **Simpson**

Simundson, Kenneth L. b. Jan. 20, 1910, Seattle, son of city cop Sigurjon Simundson (an immigrant from Iceland) and his wife Julia K. Bracklin. He lied about his age and went to sea, as an able seaman at 16, on the *President Madison*, on the Seattle to Hong Kong route. He worked his way up to being bosun on the *North Star* during USAS 1939-41. As the war ended he was chief mate on the *William A. Henry*, on her run from San Francisco to Guam. In 1956 he was 2nd mate on the *W.L. McCormick*, plying between the Canal Zone and New York, and finally made commander. He died in 1957. His widow, Virginia, on the night of Dec. 6, 1959, was drinking heavily at her home in Seattle with two gentlemen visitors, and the following morning was found dead, either from a fall or a blow. The gentlemen, both named Campbell, declined to remember the event [Seattle press, Dec. 16, 1959].

Bahía Sin Nombre *see* **Security Bay**

Roca Sinbad *see* **Sinbad Rock**

Sinbad Rock. 62°09' S, 59°02' W. An isolated, low-lying rock, rising to about 3 m above sea level, and upon which the sea breaks with considerable force, 2 km WNW of Square End Island, off Fildes Peninsula, on the the W end of King George Island, in the South Shetlands. Charted and named in 1935 by personnel on the *Discovery II*. It first seems to appear on a 1948 British Admiralty chart based on the Discovery Investigations. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also on a 1968 British chart. It appears on a 1953 Argentine chart as Roca Simbad (which is an equally valid spelling), and that name was accepted by the Argentine gazetteer of 1970. The Chilean gazetteer of 1974 accepted Roca Sinbad. Last plotted by the UK, in late 2008.

Isla Sinclair *see* **Sinclair Island**

Sinclair, Alexander. b. 1874, Arbroath. Ordinary seaman on the *Polar Star*, during DWE 1892-93.

Sinclair, George Tarry. b. Sept. 29, 1816, Norfolk, Va., son of Capt. Arthur Sinclair and his wife Sarah Skipwith Kennon. He joined the U.S. Navy and, on April 23, 1831, was promoted to midshipman, and on June 15, 1837 to passed midshipman (the equivalent of today's ensign). In that rank, he was acting ship's master on USEE 1838-42. From Dec. 19, 1838 to June 15,

1839, he was on the *Relief*; then from Aug. 13, 1839 to Sept. 6, 1839, he was on the *Porpoise*; and from Sept. 15, 1839 to Sept. 25, 1840 he was on the *Flying Fish*. In Nov. 1840 he joined the *Porpoise* again, at Honolulu. On Sept. 8, 1841, he was promoted lieutenant, and on May 2, 1843, married Mary Thompson. He was dismissed from the U.S. Navy on April 16, 1861, and went south. On May 14, 1863, he was appointed a commander in the Confederate States Navy, and commanded a cruiser during the Civil War. He died on July 25, 1885.

[1]**Sinclair, Thomas** *see* **USEE 1838-42**

[2]**Sinclair, Thomas**. b. Waas, Shetlands, Scotland. He went to sea as a lad, going to Greenland. In 1908-09 he skippered the *Coronda*, in the South Shetlands, and the *Neko*, probably in 1911-12. He was torpedoed in March 1917, on the *Coronda*, but survived, and continued to work for Salvesen's. He was skipper of the *Sevilla* in 1922-23. He recruited Shetlanders for Antarctic whaling work, until an argument with the Colonial Office forced him out.

Sinclair Island. 64°55' S, 63°53' W. An island, about 1.7 km long, 2.5 km NE of Reeve Island, in the Wauwermans Islands, in the Bismarck Strait, in the Wilhelm Archipelago. Surveyed by ArgAE 1949-50, it appears on their 1950 chart as Isla Alberto. It re-appears as such on a 1954 Argentine chart, but in 1956 it was renamed by the Argentines as Isla Sinclair, for Capitán de navío Enrique Sinclair (1805-1904), New York-born Argentine hero who, as a child, emigrated to Río de la Plata, and later fought with Almirante Brown in the war against Brazil. It appears as such on a 1957 Argentine chart. In 1956-57 it was re-charted by an RN Hydrographic Survey unit on the *Protector*, and on July 7, 1959, UK-APC named it (for themselves only) as Chaucer Island, for the English poet Geoffrey Chaucer (ca. 1340-1400). It appears as such on a British chart of 1960. US-ACAN accepted the name Sinclair Island in 1965. Many features in this area are named after characters in Chaucer's great work, *Canterbury Tales*.

Sindel Point. 62°35' S, 60°05' W. A low, ice-free point projecting 250 into Moon Bay, and separating the termini of Kaliakra Glacier to the N and Struma Glacier to the S, 2.9 km NE of Sliven Peak and 5.6 km SW of Edinburgh Hill, on the E coast of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 23, 2009, for the settlement of Sindel, in northeastern Bulgaria.

Sinemorets Hill. 62°38' S, 60°22' W. A hill, snow-free in summer, it actually comprises twin heights, 64 m and 62 m above sea level, the former ovelooking the St. Kliment Ohridski Station to the W, 820 m (the Americans say 750 m) ENE of Hespérides Point, at South Bay, on Livingston Island, in the South Shetlands. Named by the Bulgarians on March 16, 1994, for the Black Sea Bulgarian settlement of Sinemorets. UK-APC accepted the name on Dec. 7, 1994, and US-ACAN followed suit in 1995. Last plotted by the UK, in late 2008.

Singer Glacier. 74°16' S, 113°57' W. Flows ENE from Martin Peninsula, between Slichter Foreland and Smythe Shoulder, to enter the Dotson Ice Shelf, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967, and also from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN in 1977, for Howard Singer, geophysicist at the University of California, at Los Angeles, who wintered-over as a usarp at Pole Station in 1973.

Single Island. 69°48' S, 68°36' E. A high, ice-covered island on the W side of the Amery Ice Shelf, about 22 km S of Landon Promontory. First plotted by Australian cartographers from ANARE air photos taken in 1956, but incorrectly shown as a promontory, which they named Single Promontory, for Mark Single, senior diesel mechanic at Mawson Station in 1962, and a member of the ANARE field party which visited this area in Dec. 1962, when Dave Carstens obtained an astrofix at Trost Rocks, a rock outcrop on the NE side of the island. US-ACAN accepted the name in 1966. In 1971, an ANARE Prince Charles Mountains survey party found the feature to be an island, and it was accordingly renamed by ANCA. US-ACAN accepted the new name.

Single Promontory *see* **Single Island**

Singleton Nunatak. 71°15' S, 61°36' W. Rising to about 1250 m, directly W of the head of Kauffman Glacier, at Palmer Inlet, on the Black Coast, on the E side of Palmer Land. Mapped by USGS from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by UK-APC on July 21, 1976, for David Gordon "Dave" Singleton (b. Sept. 6, 1950), BAS geologist who worked here while wintering-over at Base E in 1972 and 1973. He was with BAS from July 5, 1971 to Dec. 31, 1976. US-ACAN accepted the name later in 1976.

Mount Sinha. 75°04' S, 136°09' W. Rising to 990 m, at the SE extremity of Erickson Bluffs, in the S part of McDonald Heights, in Marie Byrd Land, it overlooks the lower part of Kirkpatrick Glacier from the north. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for A.A. Sinha, biologist here in 1971-72.

Sinicintoppen *see* **Gora Sinicyna**

Gora Sinicyna. 71°30' S, 12°56' E. A peak in Ødegaardhøgda, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians ("blue-tit mountain"). The Norwegians call it Sinicintoppen.

Siniff Bay. 74°40' S, 135°50' W. A bay, 21 km wide, between Verleger Pint and Melville Point, along the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Donald B. Siniff, USARP biologist at McMurdo, 1968-69, 1969-70, 1970-71, and 1971-72, in that last season leader of a team studying population dynamics and behavior of Weddell seals. He was also part of the International Weddell Sea Oceanographic Expedition of 1967-68.

Siniger Nunatak. 63°43' S, 58°25' W. A rocky hill rising to over 500 m in the upper course of Russell East Glacier, 2.97 km NE of Morava Peak (in Trakiya Heights), 4.65 km E of Mount Canicula, and 3.85 km S of Gigen Peak, and 3.08 km SW of Huma Nunatak (the last 2 features being in Erul Heights), on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the the settlement of Siniger, in southern Bulgaria.

Bukhta Sinjaja. 70°00' S, 11°40' E. A bay on the Princess Astrid Coast. Named by the Russians.

Sinker Rock. 64°49' S, 63°30' W. A rock in water, off the N tip of Goudier Island, near the center of the harbor of Port Lockroy, Wiencke Island, in the Palmer Archipelago. FrAE 1903-05 charted rocks in this position, but did not name them. So named by personnel from Port Lockroy Station in 1944, during Operation Tabarin, because a sinker was laid near this rock for a boat mooring. UK-APC accepted the name on Nov. 21, 1949, and it appears on a British chart of 1950. It was re-charted in 1951, by an RN Hydrographic Survey unit on the *John Biscoe*. US-ACAN accepted the name in 1952. It appears in the 1955 British gazetteer, and on a British chart of 1960.

Sinnan Rocks *see* **Shinnan Rocks**

Sinnan-ike. 67°57' S, 44°32' E. The largest pond in the Shinnan Rocks, at the W side of Shinnan Glacier, in Queen Maud Land. Mapped by Japanese cartographers from 1962 JARE air photos and 1974 JARE ground surveys, and named by them on March 12, 1977.

Sinnan-iwa *see* **Shinnan Rocks**

Sinobi Rock *see* **Shinobi Rock**

SIO *see* **Scripps Institute of Oceanography**

Siodlo. 62°12' S, 58°27' W. A nunatak in the middle of the lower part of Baranowski Glacier, at Admiralty Bay, King George Island, in the South Shetlands. Named for its shape by the Poles in 1980 (the name means "saddle").

Mount Siple. 73°15' S, 126°06' W. A massive, conical, snow-covered volcano rising to 3110 m (10,200 feet), and dominating the NW part of Siple Island, in Pine Island Bay, in the Getz Ice Shelf, off the Bakutis Coast of Marie Byrd Land. Discovered aerially in 1940 by Paul Siple during USAS, who estimated its height at close to 4570 m. At the suggestion of Byrd, Paul Siple named it Mount Ruth Siple, for his (Siple's) wife, the former Ruth Ida Johannesmeyer (1912-2004). It appears as such on a 1943 U.S. Hydrographic Office chart, and was the name accepted by US-ACAN in 1947 (after they had rejected the name Mount Walker; one does not know why Mount Walker even entered the equation). In 1966, US-ACAN shortened the name to Mount Siple. When it was first visited, on Feb. 22, 1984, it was found to have been cartographically misplaced by 30 miles, and much smaller than originally thought. In 1992 the Americans installed an automatic weather station here, at an elevation of 230 m.

Siple, Paul Allman. b. Dec. 18, 1908, Mont-

pelier, Ohio, son of Clyde L. Siple and his wife Fannie Hope Allman. When Paul was 10, the family moved to Erie, Pa., and at 12 he joined the Boy Scouts, with whom, by the age of 18, he had earned an incredible 60 merit badges. He worked as an assistant draftsman for a year to save up enough money to go to Allegheny College, where he studied biology. He would have gone back for his second year, but he won a national competition sponsored by (the future admiral) Byrd, and was picked by the explorer to go on his 1928-30 expedition to Antarctica. Paul was dog handler and naturalist on that first expedition. He went back to Allegheny, did the next three years in two, and graduated in 1932, when he wasn't on the lecture circuit, either with or without Byrd. Or, when he wasn't writing books—*A Boy Scout with Byrd* came out in the winter of 1931, and *Exploring at Home* came out in Sept. 1932. He was still only 23. He had also met Ruth Ida Johannesmeyer in 1930. After his second book was published, he set out on a trip through Europe, Russia, and Turkey, and was in Egypt when word reached him that Byrd wanted him back in the States for another Antarctic expedition. On ByrdAE 1933-35 he was chief biologist and led a 77-day sledge journey of exploration across Marie Byrd Land. On Dec. 29, 1936, he married Ruth, and in 1939 got a PhD in geography. That year he went south yet again with Byrd for USAS 1939-41, during which he was chief supply officer, and leader of West Base, actually building West Base for the operation. Just after Pearl Harbor, Paul was in there, as a captain, retiring at the end of the war as a lieutenant colonel. He then became a scientist with the Army Chief of Staff's Office of Research and Development, flew over the North Pole, and took part in OpHJ 1946-47, again with Byrd. During the expedition his third daughter was born. He was in Korea, and on Oct. 4, 1956 he left Boston for Antarctica, to take part in OpDF I and IGY, as director of scientific projects, flying in from NZ to McMurdo on Oct. 19, 1956, as a passenger in an R4D. He was scientific leader at Pole Station where he and 17 other men and a dog wintered-over. He handed over to Palle Morgensen on Nov. 30, 1957. He developed a wind-chill index as a measure of cold in different wind and temperature conditions. In 1959 his book *90 Degrees South* came out. In 1966, he suffered a partially paralyzing stroke, while in NZ, and died of a heart attack, while at his desk, on Nov. 25, 1968, in Arlington, Va. He was not yet 60. *See also* Bibliography.

Siple Automatic Weather Station. An American AWS, installed on Dec. 31, 1981, at an elevation of 1054 m, at Siple Dome. It was removed in April 1992, and eventually replaced with Siple Dome AWS (see below).

Siple Coast. 82°00' S, 152°00' W. The middle portion of the relatively ill-defined coast along the E side of the Ross Ice Shelf, between the N end of the Gould Coast (83°30' S, 153°W) and the S end of the Shirase Coast (80°10' S, 151°W). Named by NZ-APC in 1961 for Paul Siple. US-ACAN accepted the name in 1964.

Siple Dome. 81°40' S, 148°50' W. An ice dome, about 100 km wide and 100 km long, at the W end of Raymond Ice Ridge, between Bindschadler Ice Stream and Kamb Ice Stream, about 130 km E of the Siple Coast, in Marie Byrd Land. In 1973-74 Charlie Bentley and Robert Thomas established a "strain rosette" on this feature in order to determine ice movement. They referred to this feature as Siple Dome, in association with the coast. US-ACAN accepted the name in 1998, and NZ-APC followed suit.

Siple Dome Automatic Weather Station. An American automatic weather station, installed at Siple Dome, Marie Byrd Land, at an elevation of 668 m, in Jan. 1997, as a replacement for the old Siple AWS (see above). It was visited on Jan. 14, 2006, and the site was raised.

Siple Dome Camp. 81°39' S, 149°04' W. An American camp established in 1996-97 at Siple Dome. It was winterized in 2003-04. One Jamesway hut remained standing.

Siple Island. 73°39' S, 125°00' W. A large, massive, snow-covered island, 110 km long, mainly within the Getz Ice Shelf, to the E of Wrigley Gulf, on the Bakutis Coast of Marie Byrd Land. Although observed by earlier expeditions, it was first defined as an island on USGS maps compiled from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1967, in association with Mount Siple, the dominant feature in the NW part of the island.

Siple Ridge. 77°56' S, 160°08' E. A high ridge, rising to 2570 m above sea level, 5 km long and 0.8 km wide, it is the more northerly of 2 ridges that extend W from the Mount Feather block, in the Quartermain Mountains of Victoria Land. The narrow upper surface is capped by ice, but rock is exposed at many points along abrupt cliffs. Named by US-ACAN in 1992, for Ruth Siple (*see* **Mount Siple**, and *also see* **Women in Antarctica**, 1975).

Siple Sea *see* **Amundsen Sea**

Siple Station. 75°56' S, 84°15' W. U.S. scientific, station in Ellsworth Land. Opened in Nov.-Dec. 1969 in 75°55' S, 83°55' W, and named for Paul Siple. It studied upper atmospheric physics, and was the best location in the Southern Hemisphere for controlled VLF wave investigations in the upper atmosphere. At that time it was only a summer station. Its transmitter (until 1978) was known as Zeus. Jupiter replaced Zeus. **1973 winter**: William J. "Bill" Trabucco (leader). **1974 winter**: John Bowers ((leader). **1975 winter**: Dale Merrick (leader). The station was closed after the 1975-76 summer season, after hepatitis broke out there, but it re-opened the following summer (1976-77). **1977 winter**: John H. Doolittle (leader). **1978 winter**: J. Harding (leader). **Jan. 14, 1979**: A new Siple Station was opened at a new location (75°56' 23.668" S, 84°14' 55.705" W, to be precise), not far away from the original station, and had 24 building modules. This would sometimes be referred to as Siple II. **1979 winter**: B. Berry (leader). **1980 winter**: unknown leader. The station was closed after the 1980-81 summer, but re-opened the following summer (1981-82). **1982 winter**: Philip Oakley (leader). **1983 winter**: Jay C. Klinck (leader). **Jan. 1984**: The station was closed for one season. **1986 winter**: This was the last winter operation. **1987-88 summer**: Jon Martinson, of ITT, was station manager. **Feb. 1988**: The station was closed for good. **1988-89**: The station was cleaned up. Old Siple was by now underground and unsafe.

Siple Station Automatic Weather Station. 75°54' S, 84° 18' W. American AWS at an elevation of approximately 3500 feet, in the area of Siple Station. A climate monitoring site, it began operating on Jan. 1, 1982.

Siple II *see* **Siple Station**

Sir George Newnes Glacier *see* **Newnes Glacier**

The *Sir Hubert Wilkins*. A 36-meter ice-strengthened Finnish state launch, bought in 2000 by Ocean Frontiers, the Australian company owned by Don and Margie McIntyre. Based out of Hobart, she hired out to private individuals and to governments for Antarctic logistics work. She could take 12 passengers, and was equipped with a helicopter.

[1]**The *Sir James Clark Ross***. Built in 1905 by Harland & Wolff, of Belfast, as the Brocklebank Line steam merchant *Mahronda*. She later changed her name to the *Custodian*. In 1923, for £30,500, Carl Anton Larsen bought her in England for his boss Magnus Konow (Konow and Johan Rasmussen owned the Rosshavet Company), who re-named her *Sir James Clark Ross*, after the great British navigator, and, under Larsen's direction, Framnaes Mek. converted her, at a cost of £100,000, into the famous and enormous, fast, Norwegian factory whaling ship. She was the largest whaling ship in the world at that time, 8223 tons. **1923-24**: On her first expedition she had 5 whale catchers: *Star I*, *Star II*, *Star III*, *Star IV*, and *Star V*. These small vessels were commanded by experienced Norwegian harpoon captains, respectively Pettersen, Iversen, Hartvigsen, Nielsen, and Moewik. **Nov. 30, 1923**: The 6 vessels left Hobart, for their first Antarctic voyage. On board were Alan J. Villiers, Willem van der Does, H.O.P. McEacharn-Summerlees, Harold Wells, Paddy McGeever, Thomas Spratt, Gregory A. McGogger, Herford Simple, and Lasman Young, although some of these names are very suspicious; some may be pseudonyms. For example, McGogger may really be McGeever. No one has a name like Herford Simple, and certainly there has never been a man as unfortunate to have the name Gregory Archibald McGogger. Even Paddy McGeever stretches the imagination. Lasman Young seems much less probable than Tasman Young. One even has to look askance at a name like Thomas Spratt, and certainly at McEacharn-Summerlees. However, Messrs van der Does and Villiers seem to be unimpeachable. With the exception of the Dutchman, they are all reputed to be Tasmanian whaling laborers, all aged between 18 and 24. Alan Villiers, although not a Tasmanian, is a well-documented figure (see his entry in this book). Also on board were Captain George

Hooper, nautical adviser to the NZ government, and Dr. S.A. Vallin, Swedish naturalist, there on behalf of the Swedish government. Capt. Hjalmar Frederick Gjertsen was the ice pilot. Capt. Alf Kaldager was sailing master of the big ship. Ludwig Kohl-Larsen was the surgeon. Varld was the chief engineer; and Drygalski was an engine room crewman. Altogether there were over 180 men on this expedition led by Carl Anton Larsen. **Dec. 12, 1923**: The *Sir James Clark Ross* was in 63°S, 180'. **Dec. 13, 1923**: The fleet broke into the pack-ice at 65°10' S, 178°16' E. **Dec. 17, 1923**: They crossed the Antarctic Circle, the largest vessel to have done so up to that time. **Dec. 21, 1923**: They arrived in the Ross Sea. **Dec. 25, 1923**: They arrived at the Bay of Whales. **Dec. 31, 1923**: They moored in Discovery Inlet. **Early 1924**: *Star I* went exploring along the coast of Victoria Land. **March 7, 1924**: The *Sir James Clark Ross* left Discovery Inlet. **March 14, 1924**: They all crossed the Antarctic Circle, heading north. **April 9, 1924**: They arrived at Otago, NZ, the big ship having left the 5 whale catchers at Stewart Island, NZ. The expedition had taken a disappointing 17,500 barrels of oil, but not one man or limb had been lost. This was the first whaling done in the Ross Sea. **1924-25**: They set out for their second expedition to the Antarctic. **Dec. 8, 1924**: Larsen died at the edge of the pack-ice, Oscar Nilsen took over, and the expedition took 32,000 barrels of oil. She was back in 1926-27 and 1927-28. **1928-30**: While pelagic whaling in the area of the Ross Sea, she helped ByrdAE 1928-30. Her skipper during this period was Gunder Thorstensen. Kristian B. Jakobsen was chief officer; Anders M. Berntsen was 2nd mate; Knut Jensen was 3rd mate; and Bjarne Hansen was 4th mate. The gunners were: Ernst Meyer, K.O. Stene, Ole Andersen, and Ludvik Mikalsen. **1930**: The ship was sold to the ad hoc Danish company Fraternitas, and re-named *Fraternitas*. **1937**: Sold to the Union Whaling Company, of Durban, and re-named *Uniwaleco*. **1937-38**: She became South Africa's first whaling ship to Antarctica. **1939**: She was requisitioned by the Navy. **March 7, 1942**: She was torpedoed by U-161, and sank, off Trinidad.

[2]**The *Sir James Clark Ross***. Huge (14,362 tons) Norwegian whaling factory ship, built in 1930 by Swan Hunter, in the north of England, for the Rosshavet Company (Johan Rasmussen and Magnus Konow), to replace the old *Sir James Clark Ross* (see above). The new one was in Antarctic waters in 1930-31, in which season, under the command of Oscar Nilsen, she transferred coal to the BANZARE's *Discovery*. She was back in 1932-33 (again under Capt. Nilsen). Then she was back every season from 1933-34 until 1939-40. She returned in 1944-45, and again in 1945-46, and was back every season until her last, 1965-66.

Sir John Murray Glacier *see* **Murray Glacier**

Sirasuso-yama. 69°29' S, 39°43' E. A round-topped hill, rising to 361.8 m, in the E part of Skarvsnes Foreland, in the E part of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped more accurately by Japanese cartographers from JARE ground surveys and air photos, 1959-73, and named by them on Nov. 22, 1975 (name means "white foot mountain").

Siren Bay. 71°22' S, 169°15' E. A small bay formed by the configuration of the ice at the terminus of Shipley Glacier and the NW side of Flat Island, between that island and Turret Island, along the N coast of Victoria Land. Charted on Oct. 6, 1911, by Campbell's Northern Party during BAE 1910-13, and named by them for a noise like a ship's siren which they heard while mapping the area. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Siren Rock. 74°33' S, 98°24' W. A fairly isolated rock on land, about 20 km E of Mount Moses, in the E part of the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Jan. C. Siren, radio scientist at Byrd Station in 1967.

Sirinuten. 74°41' S, 11°19' W. A mountain on the W side of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for student Sigrid "Siri" Steinnes (b. 1918), Norwegian Resistance leader during World War II.

The *Sirius*. Polish Fisheries vessel, skipper Tadeusz Brzezinski, in the South Orkneys in 1977-78, in company with the *Gemini*.

Mount Sirius. 84°08' S, 163°15' E. A small nunatak, rising to 2300 m above sea level, at the top of the Bowden Névé, it surmounts a prominent, wedge-shaped, ice-free spur between that névé and Walcott Névé, 5.5 km N of Bauhs Nunatak, opposite the lower end of Law Glacier, in the SW sector of the Queen Alexandra Mountains. Named by the Northern Party of NZGSAE 1961-62 for the star which they used to fix the baseline here. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Sirius Cliffs. 70°33' S, 66°53' W. A conspicuous isolated nunatak rising to about 900 m, with steep rock cliffs all along its N face, between Mount Lepus and Procyon Peaks, on the S side of Millett Glacier, between the head of that glacier and the head of Bertram Glacier, in Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. In keeping with the practice of naming several features in this area after famous stars, this one was named by UK-APC on July 21, 1976, for the star in Canis Major. US-ACAN accepted the name later in 1976.

Sirius Formation. A geologic formation in the Transantarctic Mountains which took place between 3 and 4 million years ago. Discovered and named by John H. Mercer (*see* **Mercer Ridge**), after Mount Sirius, which exhibits this formation is a most classic way.

Sirius Islands. 66°57' S, 57°27' E. A chain of islands in the N part of the Øygarden Group. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who called them Nordøyane (i.e., "the north islands"). Visited by an ANARE party in 1954, and renamed by ANCA for the star Sirius, this star being used for an astrofix by the ANARE party. US-ACAN accepted the name in 1965. None of the islands in this group are individually named.

Sirius Knoll. 63°43' S, 58°36' W. A conspicuous, ice-covered knoll, rising to 1010 m on the S side of Russell West Glacier, and marking the NE end of the Detroit Plateau, in the central part of Trinity Peninsula. Charted by Fids from Base D in Aug. 1946. It was in the vicinity of this knoll that a FIDS sledging party first saw the return of the sun in the spring of 1948, and, in association with Mount Canicula, they named it for the dog star. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also on a British chart of 1962. Further surveyed by Fids from Base D in 1959-60.

Sirma Glacier. 78°47' S, 85°05' W. A glacier, 7 km long and 4 km wide, S of Bolgrad Glacier, it flows WSW from Mount Southwick, Mount Milton, and Mount Inderbitzen, to join the Nimitz Glacier, on the W side of the S part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS in 1988. Named by the Bulgarians on Sept. 14, 2010, for the Bulgarian woman rebel leader Sirma Voyvoda (1773-1858).

Sirocco Glacier. 69°25' S, 68°31' W. A glacier, about 5 km long, flowing NNE into West Bay, at Marguerite Bay, E of Brindle Cliffs, between those cliffs and Mount Edgell, on the Fallières Coast, on the W coast of Graham Land. Surveyed by BAS personnel from Base E in 1971-72. In keeping with the practice of naming several features in this area after famous winds of the world, this glacier was named by UK-APC on Dec. 8, 1977, for the hot wind that blows off the Sahara. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Sirohi Point. 83°57' S, 170°06' E. A rock point on the N side of the terminus of Alice Glacier, where that glacier enters the Beardmore Glacier. Named by US-ACAN in 1966, for Girraj S. Sirohi, Indian USARP biologist at McMurdo in 1960-61.

Sirube-zima. 68°58' S, 39°35' E. An islet midway between Showa Station and Tottsuki Point, on the N side of the Flatvaer Islands, in the NE part of Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who, however, did not name it. Re-mapped by Japanese cartographers from 1957 JARE surveys, and named by them on Feb. 26, 1988 (name means "signpost island"). The Norwegians translated it as Vegvisaren.

Sisco Mesa. 85°50' S, 127°48' W. An ice-capped mesa with steep rock walls, and whose summit area, 3 km long and 3 km wide, rises to 3350 m, just N of Haworth Mesa, between the heads of Norfolk Glacier and Olentangy Glacier, in the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken

between 1960 and 1964. Named by US-ACAN in 1967, for diplomat Joseph John Sisco (1919-2004), assistant secretary of State for International Organization Affairs, chairman of the Antarctic Policy Group in 1966.

Sisi-iwa. 68°33' S, 41°10' E. A small coastal rock, rising to about 110 m above sea level, immediately W of Daruma Rock, at the W side of Nishi-naga-iwa Glacier, 8 km E of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-59, and named by them on Nov. 24, 1981 (name means "lion rock").

Sissons, James Guy. b. July 7, 1897. NZ. Radio operator loaned to Byrd by the NZ government for ByrdAE 1933-35. He was on the *Jacob Ruppert* for both parts of the expedition, the only New Zealander to do this. He became a chief postmaster, married Phyllis Morrison (known as "Morrie"), and died on Jan. 8, 1988, in North Palmerston, NZ.

Sistefjell *see* **Sistefjell Mountain**

Sistefjell Mountain. 73°23' S, 0°44' W. A bluff-like mountain, 16 km NE of Neumayer Cliffs, between those cliffs and the upper part of Jutulstraumen Glacier, at the NE end of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Sistefjell (i.e., "last mountain"). US-ACAN accepted the name Sistefjell Mountain in 1966.

Sistenup *see* **Sistenup Peak**

Sistenup Peak. 73°17' S, 0°44' W. A low peak at the NE end of the Kirwan Escarpment, about 8 km N of Sistefjell Mountain, between Neumayer Cliffs and the upper part of Jultulstraumen Glacier, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Sistenup (i.e., "last peak"). US-ACAN accepted the name Sistenup Peak in 1966.

Sisterabben *see* **Sisterabben Hill**

Sisterabben Hill. 73°21' S, 0°44' W. A hill, about 3 km N of Sistefjell Mountain, between Neumayer Cliffs and the upper part of Jutulstraumen Glacier, at the NE end of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Sisterabben (i.e., "the last hill"). US-ACAN accepted the name Sisterabben Hill in 1966.

[1]**The Sisters** *see* **Søstrene Islands**

[2]**The Sisters**. 71°17' S, 170°14' E. Also called Sisters Rocks. Two pillarlike rocks, or stacks, standing together just N of Cape Adare, at the NE end of Victoria Land. Charted and named by Borchgrevink, 1898-1900. In 1910-13 Campbell's Northern Party of Scott's BAE named the N pillar Gertrude Rock, and the S one Rose Rock (see both of those entries). US-ACAN accepted the name in 1947, and NZ-APC followed suit. With the collapse and disappearance of Gertrude between 2003 and 2006, the name The Sisters became irrelevant, and was discontinued by US-ACAN on July 17, 2007.

Sisters Rock *see* [2]**The Sisters**

The *Sistra*. A 368-ton, 140 foot 9 inch whale catcher, built as the *Gos IX*, in 1937 at Kaldnes Mek., in Tønsberg, for the Pelagos Company. In 1940 she was requisitioned by the Norwegian Navy, renamed the *Narvik*, and based out of Liverpool as an escort vessel for World War II. In 1945, she was returned to Pelagos, her name was changed back to the *Gos IX*, and she was fitted out at Kaldnes Mek. She caught for the *Pelagos* from the 1946-47 season until the 1953-54 season, and was then sold to Salvesen's in Oct. 1954, and renamed the *Sistra*. She was used as a buoy boat for the *Southern Venturer*, in Antarctic waters each season from 1954-55 until 1958-59, and was then laid up in Leith Harbor, South Georgia. In 1961 she was leased for summer whaling off the South African coast, and later that year was laid up in Melsomvik, Norway. In 1962 she was sold to Ole Edvartsen, and was converted into a motor fishing vessel, lengthened by 20 feet, and renamed the *Langvin*. In 1987 she was scrapped.

Sitalk Peak. 62°39' S, 60°04' W. A rocky peak, rising to 600 m in Levski Ridge, 570 m N of Tutrakan Peak, 2.1 km NE of Plana Peak, 1.3 km W of Intuition Peak, and 1.9 km SE of Kukeri Nunataks, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the old Thracian king Sitalk, 431-424 B.C.

Sites of Special Scientific Interest. More commonly known as SSSIs, these were places where a scientific investigation might suffer from interference unless protected by a specific management plan. It was an idea that came out of the 1972 Antarctic Treaty Consultative Meeting (ATCM) at Wellington in 1972. *See also* **Historic sites**, and **Specially Protected Areas**. Most of the SSSIs were given a renewable expiration date, although some were adopted for an indefinite period. All SSSIs adopted after 1997 were for an indefinite period. The first 7 were adopted at the 8th ATCM, at Oslo in 1975; #8 at the 10th ATCM in 1979 at Washington, DC; numbers 9 through 21 at the 13th ATCM at Brussels in 1985; numbers 22 through 28 at the 14th ATCM at Rio in 1987; numbers 29 through 32 at the 15th ATCM in Paris in 1989; numbers 33 through 36 at the 16th ATCM at Bonn in 1991; and #37 at the 21st ATCM at Christchurch, NZ, in 1997. In 2002 all these SSSIs and all the Specially Protected Areas were grouped together and the overall name became Antarctic Specially Protected Areas (q.v.). The original 37 SSSIs were (and each one has its own entry in this book): **1**. Cape Royds; **2**. Arrival Heights; **3**. Barwick Valley; **4**. Cape Crozier (formerly SPA #6); **5**. Fildes Peninsula (until 1975 it had been designated SPA #12); **6**. Byers Peninsula (until 1975 it had been designated SPA #10); **7**. Haswell Island; **8**. the W shore of Admiralty Bay; **9**. Rothera Point; **10**. Caughley Beach (in 2000 it was incorporated into SPA #20); **11**. Tramway Ridge; **12**. Canada Glacier; **13**. Potter Peninsula; **14**. Harmony Point; **15**. Sierra Point and nearby islands; **16**. Bailey Peninsula; **17**. Clark Peninsula; **18**. White Island; **19**. Linnaeus Terrace; **20**. Biscoe Point; **21**. the shores of Port Foster; **22**. Yukidori Valley; **23**. Svarthamaren Mountain; **24**. the summit of Mount Melbourne; **25**. Marine Plain; **26**. Discovery Bay; **27**. Port Foster; **28**. South Bay, Doumer Island; **29**. Ablation Point and Ganymede Heights; **30**. Avian Island (re-designated SPA #21 in 1991); **31**. Mount Flora; **32**. Cape Shirreff (until 1989 it was designated SPA #11); **33**. Ardley Island; **34.** Lions Rump; **35**. the W sector of Bransfield Strait, off Low Island; **36**. the E part of Dallmann Bay; **37**. Botany Bay.

The *Sitka*. A 192-ton, 106 foot 5 inch whale catcher built in 1912 at Smith's Dock, Middlesbrough, for Salvesen's. From the 1912-13 season until the 1919-20 season, she caught for the shore station at Leith Harbor, in South Georgia, then operated for 3 years off the coast of South Africa. She was in Antarctic waters in 1923-24 and 1924-25, catching for the *Sevilla*. In 1929 she was sold to the Antarctic Company (Bruun & von der Lippe), re-registered in Tønsberg, and caught for the *Antarctic* in Antarctic waters in 1929-30 and 1930-31. In 1935 she was sold to Nippon Hogei, of Tokyo, and her name was changed to the *Etrohu Maru*. She was broken up in 1949.

Point Sitry *see* **Sitry Station**

Sitry Station. 71°39' S, 148°39' E. A very isolated Italian refugio and fuel depot, sometimes called Sitry Point, between Mario Zucchelli Station (at Terra Nova Bay) and Dumont d'Urville Station. It is usually completely snow-covered. Irene Automatic Weather Station is here. The name Sitry is a coruption of Point C-3, its original name.

Sivjee Glacier. 81°57' S, 159°23' E. A glacier, 16 km long, draining the NE slopes of Hunt Mountain, and flowing n along the W side of Stark Ridge to enter Starshot Glacier S of Mount Hoskins, in the Churchill Mountains. Named by US-ACAN in 2003, for Gulambas G. Sivjee, USAP principal investigator for spectroscopic and interferometric studies of airglow and auroral processes in the upper atmospher above the South Pole, 1991-2001. NZ-APC accepted the name on Feb. 27, 2003.

Sivorgfjella. 74°41' S, 11°20' W. The central division of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Sivorg (Civil Organization), the Resistance organization during World War II in Norway.

Sixto, Leyva *see* **Órcadas Station**, 1947

Sjiktberge *see* **Mount Schicht**

Sjøbotnen *see* **Sjøbotnen Cirque**

Sjøbotnen Cirque. 71°22' S, 13°25' E. The

prominent cirque indenting the N face of the main massif of the Gruber Mountains, immediately E of Mount Zimmerman, between that mountain and Mount Mentzel, in the Wohlthat Mountains of Fimbulheimen, in the central part of Queen Maud Land. Its S part is occupied by Lake Unter-See. Discovered and photographed aerially during GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named descriptively by them as Sjøbotnen (i.e., "the lake cirque"). US-ACAN accepted the name Sjøbotnen Cirque in 1970.

Glaciar Sjögren *see* **Sjögren Glacier**

Sjögren, Gottfrid Georg. Known as George. b. March 13, 1895, Lundby, Vastra Götaland, Sweden, son of Max Sjögren. He went to sea as a teenager, served in the Swedish Navy, 1915-16, and for a time between ships was living in Cardiff toward the end of World War I. A tough and wiry little man, with the strength of a giant, he would come up from the stoke hole, covered in black, singing "If I had the wings of an angel." The archetypal "Swede," as represented by Eugene O'Neill in his seafaring plays, in Feb. 1918 George signed on at Liverpool as a fireman on the *New York*, bound west for New York. In 1922, while living in Pittsburgh, he took out U.S. citizenship papers, and was a fireman on the *Eleanor Bolling* during ByrdAE 1928-30. Midway through the expedition, he went back to NZ on the *City of New York* on Feb. 22, 1929, and, rather than stay in NZ for 6 months, he took the *Tahiti*, with 11 others, to San Francisco, where they arrived on April 12, 1929. He was still sailing at the outbreak of World War II.

Sjögren Fjord *see* **Sjögren Glacier**

Sjögren Glacier. 64°14' S, 59°00' W. About 24 km long, in the S part of Trinity Peninsula, it flows SE from the Detroit Plateau, to the S side of Mount Wild, where it enters Prince Gustav Channel, and forms Sjögren Glacier Tongue. Discovered and roughly mapped in its lower reaches in Oct. 1903, as an ice-filled fjord, during SwedAE 1901-04, and named by Nordenskjöld as Hj. Sjögrens Fjord, for Hjalmar Sjögren (1856-1922), professor of geology at the University of Uppsala, 1888-94, who assisted the expedition. All those countries with a vested interest in the area translated this name accordingly. It appears on Charcot's 1912 map as Fiord Sjögren, on a British map of 1921 it appears as Sjogren Fiord (sic), and on a British chart of 1937 as Sjögren Fiord. In Aug. 1945, Fids from Base D surveyed it in its lower part as a glacier, not as a fjord, and UK-APC accepted the name Sjögren Glacier on Nov. 21, 1949, with US-ACAN following suit in 1952. It appears as such in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57, and further surveyed from the ground, by Fids from Base D in 1960-61. On an Argentine chart of 1957, it appears as Fiordo Sjögren. On a Chilean chart of 1962 it appears as Glaciar Sjögren, and that name was accepted by the Chilean gazetteer of 1974. Today, the Argentines also call it Glaciar Sjögren.

Sjögren Glacier Tongue. 64°14' S, 58°40' W. A tongue of ice between 8 and 11 km wide, it was the seaward (mainly floating) extension of Sjögren Glacier, and extended 24 km across Prince Gustav Channel from Sjögren Glacier toward Persson Island, at Trinity Peninsula. Surveyed by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, in association with the glacier. US-ACAN accepted the name later that year. In Feb. 1994, it was reported to have disappeared, and U.S. Landsat images taken in Feb. 2000 confirmed this. It is now covered by the Prince Gustav Channel. On July 17, 2007, the name was taken off the books.

Sjögren Inlet. 64°14' S, 59°00' W. An inlet that was exposed following the retreat of the Sjögren Glacier, it runs ESE for about 17 km from the base of the glacier into the Prince Gustav Channel, N of Longing Peninsula, on Trinity Peninsula. Named by UK-APC on Nov. 15, 2006, in association with the glacier. US-ACAN accepted the name on July 17, 2007.

Sjöhausen *see* **Mount Seekopf**

Sjøneset *see* **Sjøneset Spur**

Sjøneset Spur. 71°17' S, 13°35' E. A prominet rock spur from the Gruber Mountains, it extends N along the E side of Anuchin Glacier, to Lake Ober-See, between that lake and Lake Unter-See, in the Wohlthat Mountains of Fimbulheimen, in the central part of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sjøneset (i.e., "the lake ness"). US-ACAN accepted the name Sjøneset Spur in 1970.

Sjövold, Carl. Commander of the *Bouvet III* in 1930-31.

Sjövold, Harald. b. Dec. 26, 1878, Asker, Norway, but raised in Tjøme, near Tønsberg, son of fishmonger/farmer Niels Sjøvold and his wife Karen Olsen. He was skipper and gunner of the *Hanka*, in the South Shetlands for the 1918-19 season, assigned to the factory ship *Neko*. On March 19, 1919, he fell overboard into the icy seas while shooting a whale. They picked him up soon afterwards — stiff as a board, and buried him in the Whalers Bay Cemetery on Deception Island.

Sjøvold Mountains *see* **Munro Kerr Mountains**

The *Sjowa* *see* **The *Soya***

Skaar Ridge. 84°49' S, 163°15' E. On the SE side of Mount Augusta, in the Queen Alexandra Range, it trends SE for 3 km to the Beardmore Glacier. The area was discovered by Shackleton's party as it made its way to the Pole in 1908, during BAE 1907-09. James M. Schopf, here in 1969-70 with the Ohio State University Geological Expedition, discovered on this ridge the only known Permian peat deposit of Gondwanaland. Named by US-ACAN in 1972, for Lt. Gerhard E. "Gary" Skaar (b. Jan. 1943), USN, Schopf's helicopter pilot.

Skagen *see* **Mount Saint Michael**

Skagen Point. 67°09' S, 58°25' E. A prominent rocky point at the NW extremity of Bell Bay, in Kemp Land, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Skagen. ANCA accepted the name Skagen Point on July 31, 1972. As you pass through the Sgaggerrak, having left Oslo, Skagen is on your left, Denmark's northernmost point.

Skakavitsa Peak. 63°49' S, 58°35' W. Rising to 1119 m, 3 km NW of Mount Reece, 8.94 km SW of Mount Daimler, and 9.93 km SSE of Mount Schuyler, in Kondofrey Heights, it surmounts Victory Glacier to the N and E, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the Skakavitsa Nature Reserve in Rila Mountain, in Bulgaria.

Skakktoppen. 72°23' S, 27°06' E. A nunatak, 1.5 km SE of Devoldnuten, in the upper part of Byrdbreen, in the E part of the Sør Rondane Mountains. Named by the Norwegians ("the crooked top").

Skålebreen. 72°06' S, 3°52' E. A glacier flowing N between Festninga Mountain and Mount Hochlin, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them ("the shed glacier"), in association with nearby Vedskålen Ridge. US-ACAN accepted the name without modification in 1966.

Skålebrehalsen *see* **Skålebrehalsen Terrace**

Skålebrehalsen Terrace. 72°16' S, 4°10' E. A high, ice-covered terrace (or ridge) at the S side of the glacier the Norwegians call Skålebreen, and connecting Festninga Mountain with Mount Hochlin, in the area of inland ice the Norwegians call Wegenerisen, in the W part of the Mühlig-Hofmann Mountains, in the S part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skålebrehalsen (i.e., "the Skålebreen saddle"), in association with the glacier. US-ACAN accepted the name Skålebrehalsen Terrace in 1966.

[1]**Gora Skalistaja**. 73°24' S, 61°52' E. A nunatak, on Massif Drakon, N of Mount Menzies, in the Prince Charles Mountains. Named by the Russians.

[2]**Gora Skalistaja**. 79°01' S, 28°02' W. A nunatak on the NE side of Jeffries Glacier, in the Theron Mountains of Coats Land. Named by the Russians.

Nunataki Skalistye *see* **Sullivan Nunataks**

Dolina Skalistye Vorota. 73°32' S, 64°48' E. A valley, NE of Mount Ruker and NE of Mount Bird, in the southern Prince Charles Mountains. Named by the Russians.

Otrog Skalistyj. 73°09' S, 68°16' E. A spur of the Mawson Escarpment, extending into the Manning Glacier. Named by the Russians.

Poluostrov Skalistyj *see* **Countess Peninsula**

Ustup Skalistyj. 70°35' S, 72°00' E. A ledge in the N part of the group of nunataks the Russians call Nunataki Oblomki, on the Amery Ice Shelf. Named by the Russians.

Skallebreen *see* **Skallen Glacier**

Skallen *see* **Skallen Hills**

Skallen Glacier. 69°40' S, 39°33' E. Flows into Lützow-Holm Bay to the E of the Skallen Hills. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on May 1, 1963, as Skallenhyoga, in association with the nearby hills. US-ACAN accepted the translated name Skallen Glacier in 1964. The Norwegians call it Skallebreen.

Skallen Hills. 69°39' S, 39°25' E. An area of bare rock coastal hills projecting into the E part of Lützow-Holm Bay, between Skallevika and Skallen Glacier. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who descriptively named this feature Skallen (i.e., "the skull"; outline on map). US-ACAN accepted the name Skallen Hills in 1964.

Skallen-hyoga *see* **Skallen Glacier**

Skallen-oike. 69°40' S, 39°25' E. A lake in the central part of the Skallen Hills. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-69, and named by them on June 22, 1972 ("Skallen big pond").

Skallevik Point. 69°41' S, 39°15' E. A point marking the NW end of the Skallevikhalsen Hills, along the SE shore of Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Skalleviksodden (i.e., "the skull bay point"), in association with nearby Skallevika. US-ACAN accepted the name Skallevik Point in 1966.

Skallevika. 69°41' S, 39°23' E. A bay on the SW side of the Skallen Hills, on the SE shore of Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it ("the skull bay"), in association with the hills. US-ACAN accepted the name without modification in 1968.

Skallevikhalsen *see* **Skallevikhalsen Hills**

Skallevikhalsen Hills. 69°41' S, 39°18' E. A line of bare rock hills fringing the SE shore of Lützow-Holm Bay for 6 km just W of Skallevika, on the Prince Olav Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Skallevikhalsen (i.e., "the skull bay neck"), in association with Skallevika. US-ACAN accepted the name Skallevikhalsen Hills in 1968.

Skallevikshalsen. 69°41' S, 39°20' E. A bare rock mountain on the SW side of Skallevika, on the SW side of the Skallen Hills, in the E part of Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Named by the Norwegians in association with Skallevika. Name means "the skull bay's neck").

Skalleviksodden *see* **Skallevik Point**

Mys Skal'nyj. 67°38' S, 62°25' E. A cape, just NE of Forbes Glacier, on the Mawson Coast, to the N of the Casey Range, in the Framnes Mountains of Mac. Robertson Land. Named by the Russians.

Massif Skal'nyj Nos *see* **Mount Willing**

Skane Nunatak. 64°43' S, 64°17' W. A distinctive nunatak rising to 130 m, 600 m E of Cape Monaco, Anvers Island, in the Palmer Archipelago. Named by US-ACAN on July 17, 2007, for Richard J. Skane, carpenter foreman in support of USAP at McMurdo for 4 field seasons from 1979, and at Palmer Station for 10 field seasons, 1986-96, including two winterings-over.

Skansen. 73°43' S, 14°42' W. A mountain in the S part of the Kraul Mountains, in the W part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the entrenchment").

Skanseryggen. 72°11' S, 25°10' E. A mountain ridge at the S side of Mefjell Mountain, in the south-central part of the Sør Rondane Mountains. Named by the Norwegians ("the entrenchment ridge").

Skappel, Helge Sommerfelt. b. Sept. 5, 1907, Ringsaker, Norway, son of banker Halvdan Skappel and his wife Dagny Sommerfelt. He joined the Norwegian Army, and became a pilot. He became part owner of an aviation company that flew a Gipsy Moth, and then went to work as Viggo Widerøe's director of aerial photography. He and Widerøe were part of the Norwegian Resistance movement during World War II, and were imprisoned together by the Nazis. He was air surveyor on NBSAE 1949-52. He retired in 1975, and died on Oct. 17, 2001.

Skappelnabben *see* **Skappelnabben Spur**

Skappelnabben Spur. 73°43' S, 4°33' W. At the E side of Urfjelldokka Valley, between that valley and Utråkket Valley, in the SW part of the Kirwan Escarpment, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Skappelnabben (i.e., "Skappel spur"), for Helge Skappel. US-ACAN accepted the name Skappelnabben Spur in 1966.

Skaptopara Cove. 62°27' S, 59°51' W. A cove, 1.8 km wide, indenting the N coast of Greenwich Island for 600 m NW of Mount Plymouth and NE of Sevtopolis Peak, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the ancient Thracian town of Skaptopara, ancestor of the present day Bulgarian town of Blagoevgrad.

Skaret *see* **Skaret Pass**

Skaret Pass. 72°33' S, 0°23' E. A mountain pass at the E side of Skarsnuten Peak, between that peak and the Roots Heights, in the S part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Skaret (i.e., "the gap"). US-ACAN accepted the name Skaret Pass in 1966.

Rocas Skármeta *see* **Skarmeta Rocks**

Skarmeta Rocks. 62°30' S, 59°41' W. Partly submerged rocks, W of Fuente Rock, Discovery Bay, Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946-47, and named by them as Rocas Subtte Jorge Skármeta, after Sub Lt. Jorge Skármeta S., who took part in this expedition. On a Chilean chart of 1951, the feature appears with the shortened name Rocas Subteniente Skármeta (which was the year the Chileans decided to avoid compound names). Surveyed again in 1964, by an RN Hydrographic Survey unit on the *Protector*. The 1974 Chilean gazetteer accepted the name Rocas Skármeta. On March 31, 2004, UK-APC accepted the name Skarmeta Rocks (without the accent mark). Plotted by the UK, in late 2008.

Skarsbrotet *see* **Skarsbrotet Glacier**

Skarsbrotet Glacier. 71°50' S, 11°45' E. A cirque-type glacier (the Norwegians call it an ice slope) flowing from the E slopes of the Skarshaugane Peaks, in the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skarsbrotet (the word "brot" signifies "broken"; "skar" means "gap"). US-ACAN accepted the name Skarsbrotet Glacier in 1970.

Skarsdalen *see* **Skarsdalen Valley**

Skarsdalen Valley. 72°33' S, 0°30' E. An ice-filled valley between Roots Heights and Hamrane Heights, in the S part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Skarsdalen (i.e., "the gap valley"). US-ACAN accepted the name Skarsdalen Valley in 1966.

Skarshaugane *see* **Skarshaugane Peaks**

Skarshaugane Peaks. 71°49' S, 11°37' E. A group of peaks including Mount Skarshovden, they extend S for 5 km from Hovdeskar Gap, in the N part of the Betekhtin Range, in the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skarshaugane (i.e., "the gap peaks"). US-ACAN accepted the name Skarshaugane Peaks in 1970.

Skarsholen. 71°47' S, 11°30' E. A mountain SE of Botnfjellet Mountain, in the central part

of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the gap hills").

Skarshovden *see* **Mount Skarshovden**

Mount Skarshovden. 71°47' S, 11°38' E. A rounded mountain, rising to 2830 m, it is one of the Skarshaugane Peaks, and surmounts the W side of Hovdeskar Gap, in the northernmost part of the Betekhtin Range, in the SE part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skarshovden (i.e., "the gap mountain"). US-ACAN accepted the name Mount Skarshovden in 1970.

Skarsvervet *see* **Skarsvervet Glacier**

Skarskvervet Glacier. 71°45' S, 11°30' E. A small cirque-type glacier at the E side of Botnfjellet Mountain, in the Humboldt Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skarskvervet (i.e., "whirl pass"). US-ACAN accepted the name Skarskvervet Glacier in 1970.

Skarsnuten *see* **Skarsnuten Peak**

Skarsnuten Peak. 72°32' S, 0°22' E. In the N part of Roots Heights, in the S part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Skarsnuten (i.e., "the gap peak"). US-ACAN accepted the name Skarsnuten Peak in 1966.

Skarvet *see* **Skarvet Nunatak**

Skarvet Nunatak. 66°26' S, 53°45' E. Rising to about 1300 m above sea level, about 7.4 km W of Skorefjell (i.e., what the Australians call Mount Bride), in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Skarvet (i.e., "the bare rock"). ANCA accepted the name Skarvet Nunatak on July 31, 1972.

Skarvhalsen *see* **Skarvhalsen Saddle**

Skarvhalsen Saddle. 72°30' S, 1°39' W. An ice-saddle just S of Neumayer Cliffs, connecting those cliffs with Amundsenisen, between Peter Glacier and Swithinbank Slope, in the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Skarvhalsen (i.e., "the barren mountain neck"). US-ACAN accepted the name Skarvhalsen Saddle in 1966.

Skarvsnes *see* **Skarvsnes Foreland**

Skarvsnes Foreland. 69°28' S, 39°39' E. An extensive foreland surmounted by bare rock peaks and indented by several coves, it projects into the E part of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Skarvsnes (i.e., "barren mountain headland"). US-ACAN accepted the name Skarvsnes Foreland in 1964.

Skate. Non-bony fish found in Antarctica.

Skavlhø *see* **Skavlhø Mountain**

Skavlhø Mountain. 72°02' S, 14°30' E. Rising to 2610 m, N of Ormeryggen, in the W part of the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skavlhø (i.e., "snow-drift heights"). US-ACAN accepted the name Skavlhø Heights in 1966. The Russians call it Gora Majakovskogo.

Skavlrimen *see* **Skavlrimen Ridge**

Skavlrimen Ridge. 71°58' S, 13°32' E. A largely snow-covered, about 5 km long, and surmounted in the N by Vyatskyaya Peak, 2.5 km E of Dekefjellet Mountain, in the Weyprecht Mountains, in the W part of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skavlrimen (i.e., "the snow-drift frost"). US-ACAN accepted the name Skavlrimen Ridge in 1970.

Skavsletta *see* **Skavsletta Flat**

Skavsletta Flat. 73°26' S, 3°42' W. A small, ice-covered area between Svartbandufsa Bluff and Tverregga Spur, in the N part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Skavsletta (i.e., "the snow-drift plain"). US-ACAN accepted the name Skavsletta Flat in 1966.

Skedsmo, Sverre. Name also seen (erroneously) as Skidsmo. b. Aug. 25, 1889, Eidsvold, Sandar, Norway, son of farmer Martin Skedsmo and his wife Maren. Whaling captain from whom Shackleton requested aid during BITE 1914-17. Commander of the *Graham*, 1921-22. In 1932-33, he was back in Antarctic waters, as skipper of the *Vestfold*. He married Else Marie Gothe, and died in 1938. Else died in 1959.

Skeen Rocks. 67°47' S, 68°54' W. Two rocks in water S of Avian Island, off the S end of Adelaide Island. Named on Feb. 12, 1964, by UK-APC, for Lt. Michael George C. Skeen, RN, (b. July 4, 1933, Battersea, London. d. May 1994, Norwich), officer-in-charge of the helicopter flight from the *Protector* while charting the area in 1960-61. US-ACAN accepted the name later in 1964.

Skeidsberget *see* **Skeidsberget Hill**

Skeidsberget Hill. 72°06' S, 11°25' E. A small nunatak, about 3 km NW of the summit of Skeidshovden Mountain, in the SW part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skeidsberget. US-ACAN accepted the name Skeidsberget Hill in 1966. The Russians call it Gora Levanevskogo.

Skeidshornet *see* **Skeidshornet Peak**

Skeidshornet Peak. 71°50' S, 12°01' E. Rising to 2725 m, 8 km WSW of Mount Valikhanov, between the Humboldt Graben and the ice-covered area the Norwegians call Austre Høgskeidet, in the Pieck Range of the Petermann Ranges, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skeidshornet. US-ACAN accepted the name Skeidshornet Peak in 1970.

Skeidshovden *see* **Skeidshoven Mountain**

Skeidshovden Mountain. 72°08' S, 11°31' E. Rising to 2730 m, at the SW end of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skeidshovden. US-ACAN accepted the name Skeidshovden Mountain in 1966. The Russians call this feature Gory Miheeva.

Skeidskar *see* **Skeidskar Gap**

Skeidskar Gap. 71°46' S, 11°33' E. A narrow gap in the ridge along the SE side of Skarskvervet Glacier, in the central part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skeidskar. US-ACAN accepted the name Skeidskar Gap in 1970.

Skeidskneet *see* **Mount Skeidskneet**

Mount Skeidskneet. 71°53' S, 11°57' E. Rising to 2600 m, it surmounts the E side of the head of Humboldt Graben, between that feature and the ice area the Norwegians call Austre Høgskeidet, at the SW extremity of the Petermann Ranges, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by

GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skeidskneet, in association with Austre Høgskeidet. US-ACAN accepted the name Mount Skeidskneet in 1970.

Skeidsnutane *see* **Skeidsnutane Peaks**

Skeidsnutane Peaks. 71°53' S, 11°35' E. A group of peaks extending S for about 10 km from the Skarshaugane Peaks, in the Betekhtin Range (the S arm of the Humboldt Mountains), in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skeidsnutane. US-ACAN accepted the name Skeidsnutane Peaks in 1970.

Skeidsrinden. 71°49' S, 11°30' E. A small mountain ridge in Vestre Høgskeidet, in the S part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians.

Skellerup Glacier. 81°38' S, 155°42' E. A glacier flowing WNW between the All-Blacks Nunataks and the Wilhoite Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Peter Jensen Skellerup (1918-2006), chairman of the Canterbury Museum Trust, who sponsored the Antarctic wing at the museum. US-ACAN accepted the name later in 2003.

Skelly Peak. 79°22' S, 85°19' W. Rising to 1450 m on the end of a spur, it marks the NE limit of the Watlack Hills, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Donald J. Skelly, USN, hospital corpsman and chief petty officer in charge of Palmer Station in 1966.

Skelton, James. b. NZ. Able seaman on the *Terra Nova*, during BAE 1910-13. He served in the Royal Navy during World War I, then got a job at the docks in Cardiff (with Stoker Lashly).

Skelton, Reginald William "Skellie." b. June 3, 1872, 3rd son of William Skelton, of Long Sutton, Lincs. He entered the RN in 1887, as an engineering student at Keyham. He was in China, 1894-97, on the *Centurion*, and on the *Majestic*, as part of the Channel Squadron, 1898-99. He was a lieutenant, chief engineer, and photographer on BNAE 1901-04. He had assisted in the supervision of the construction of the *Discovery* in Dundee, and would also design the motor sledges for Scott's later, BAE 1910-13 (which Skelton did not go on). In 1905 he married Sybil Devenish-Meares, of NZ, and from 1906 to 1912 was in the Submarine Service. He was chief engineer on the *Agincourt* during the Battle Of Jutland in 1914, and also served again in submarines, and in the White Sea. He was promoted to rear admiral in 1923, in 1928 became engineer-in-chief of the fleet, was knighted in 1931, and retired as a much-decorated vice admiral in 1932. He died on Sept. 5, 1956, at Aldingbourne, Sussex.

Skelton Depot. 79°01' S, 162°17' E. On the Skelton Glacier, it was one of the depots used by Hillary on his depot-laying expediton to the South Pole, during BCTAE 1956-58.

Skelton Glacier. 78°35' S, 161°30' E. A large glacier flowing from the Polar Plateau, to feed the Ross Ice Shelf at Skelton Inlet, it marks the southernmost point of Victoria Land. Hillary pioneered it as a route to the Pole in 1957, and named it in association with the inlet. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Skelton Icefalls. 78°14' S, 158°19' E. Prominent icefalls extending in an arc about 24 km from Portal Mountain to the N end of the Warren Range, in Victoria Land. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, in association with Skelton Névé and Skelton Glacier. ANCA accepted the name.

Skelton Inlet. 78°54' S, 162°15' E. An ice-filled re-entrant at the terminus of Skelton Glacier, in the NW part of Moore Bay, between Mount Cocks and the Worcester Range, along the W edge of the Ross Ice Shelf, it is about 16 km wide at its entrance between Cape Timberlake and Fishtail Point. Discovered by BAE 1910-13, and named by them for Reginald Skelton. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Skelton Névé. 78°20' S, 160°00' E. The immense névé on the E side of Skelton Glacier (it feeds that glacier), it is bounded on the E by the W ridges of the Royal Society Range; on the S by the Worcester Range, Escalade Peak, the N end of the Boomerange Range, and by the outlet of Skelton Glacier; on the W by low nunataks and a continuous low ridge mostly inundated by ice moving into the névé; and on the N by Mount Feather, the source of the Ferrar Glacier, and Pivot Peak. Almost circular in outline, and 60 km in diameter, it has an area of 1300 sq miles. Surveyed by NZ parties from Jan. 1957 onwards, during BCTAE 1957-58, and named by them for its relationship to the glacier. NZ-APC accepted the name, ANCA followed suit, and US-ACAN accepted the name in 1961.

Punta Skep *see* **Skep Point**

Skep Point. 64°03' S, 57°18' W. A high, ice-free point, 8 km WNW of Ula Point, on the NE coast of James Ross Island. Roughly surveyed by Fids from Base D in 1945, and re-surveyed by FIDS in Aug. 1953. Named descriptively by UK-APC on Sept. 4, 1957. A skep is a beehive, and, when viewed from the seaward, that is what this feature resembles. US-ACAN accepted the name in 1963. It appears on an Argentine chart of 1959 as Cabo Wild, however, today, the Argentines tend to call it Punta Skep.

Skew Peak. 77°13' S, 160°42' E. A very high mountain, rising to 2535 m, just W of the head of Frazier Glacier, and S of the upper Mackay Glacier, on the N side of the extensive area of dry valleys stretching N from the Wright Valley, in the Clare Range of Victoria Land. Used as a reference point in Nov.-Dec. 1957, by the Northern Survey Party of BCTAE, who so named it because the summit is notably asymmetrical from all directions. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Ski-Doos. Snowmobile motor toboggans, produced by the Bombardier Company. Originally called Ski-Dog, a painter painted the wrong name and it stuck. The Ski-Doo Alpine 640-ER, much used by the U.S. field parties in Antarctica throughout the 1970s and 1980s, had a 640 c.c. engine. The Trans-Globe Expedition used them during their trek across Antarctica in 1980-81, to haul sledges.

Ski Slope. In the vicinity of McMurdo Station, it is a slope descriptively named.

Mount Skidmore. 80°18' S, 28°56°W. Rising to 865 m, on the E side of the mouth of Stratton Glacier, in the NW part of the Shackleton Range. Roughly surveyed and first mapped in Oct. 1957, by BCTAE. Named by UK-APC on Aug. 31, 1962, as Mount Lagrange (sic), for J.J. la Grange (sic and q.v.). US-ACAN accepted the name later in 1962. Photographed aerially by USN in 1967, surveyed by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. Re-named by UK-APC on Jan. 5, 1972, for Michael J. "Mike" Skidmore, BAS geologist who wintered-over at Halley Bay Station in 1967 and 1968. He was in the Shackleton Range in 1968-69. He was with BAS from June 14, 1966 to Nov. 30, 1971. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Skidmore Bay *see* **Spilhaus Inlet**

Skidmore Cliff. 83°24' S, 49°30' W. An irregular, east-facing cliff, 6 km long, and rising to an elevation of 1185 m above sea level at the extremity of a spur trending ESE from the Saratoga Table, in the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Donald D. Skidmore, USARP ionosphere scientist who wintered-over at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Skidoo Nunatak. 64°23' S, 59°45' W. Rising to 935 m, 2.2 km SSE of Nodwell Peaks, on the Nordenskjöld Coast of Graham Land. Surveyed by Fids from Base D in 1960-61. BAS did geological work here in 1978-79. Named by UK-APC on April 3, 1984, for the Bombardier Skidoo snowmobile used extensively by BAS since 1976. US-ACAN accepted the name. It appears in the 1986 British gazetteer. *See* **Ski-Doos**.

Skidsmo *see* **Skedsmo**

Skigarden *see* **Skigarden Ridge**

Skigarden Ridge. 71°54' S, 4°32' E. A ridge with several conspicuous peaks, about 3 km NE of Mount Gritøyr, in the westernmost part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52,

and named by them as Skigarden (i.e., "the rail fence"; the word "gard" means "fence," and the suffix "-en" denotes the definite article). US-ACAN accepted the name Skigarden Ridge in 1967. *See* **Mount Grytøyr** for more details on the original naming of this feature.

Skilift Col. 86°11' S, 148°36' W. In the mountain wall between Griffith Glacier and Howe Glacier, on the W side of the Watson Escarpment, 3 km NE of Mount Meeks. It provides a shortcut for field parties. So named by NZGSAE 1969-70 because some members of the party used a motor toboggan here in a way similar to that of a skilift. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Islote Skilling *see* **Skilling Island**

Skilling, Charles John "Charlie." b. July 2, 1930, Stanley, Falkland Islands, son of laborer Charles John Skilling and his wife Jessie Jane Faria. He joined FIDS in 1948, as a handyman, and wintered-over at Signy Island Station in 1949, being a member of the sledge party that visited the Robertson Islands that year. In 1952 he was a member of the RN Survey party, under Cdr. David Penfold, and came down with pneumonia while on the *John Biscoe,* dying on April 17, 1952 just a few hours out of Port Stanley.

Skilling, Derek. b. 1932, Dumfries, son of railwayman George Skilling and his wife Ina Bell, and older brother of John Skilling. At 14 he began an apprenticeship as a vehicle mechanic, and in that capacity did his 2 years national service, mostly in Jordan and Egypt. He saw an ad for FIDS diesel electric mechanics, and joined as such in 1955, leaving Southampton on the maiden voyage of the *Shackleton*, Dec. 29, 1955, bound for Port Stanley, where he was kitted out. He then caught the *John Biscoe* on her final FIDS voyage, wintering-over at Base F in 1956, and at Signy Island Station in 1957, in the latter year also assisting surveyors and getting a lot of boating and winter sledging in. There was little work for a diesel mechanic at Signy that year, and so, encouraged by base leader Cecil Scotland, he also got to study and band birds, and as a result became a keen bird watcher. A few years after returning to Scotland, he married, and worked as an engineering technician in a plastic film manufacturing plant owned by ICI. He lives in downtown Dumfries, and has just (2008) finished a new census of Dumfriesshire's breeding rooks.

Skilling, John. b. Dec. 3, 1935, Carlisle, but raised in Dumfries, son of railwayman George Skilling and his wife Ina Bell, and brother of Derek Skilling. After school he became an apprentice joiner, which was interrupted by 2 years national service in the Catering Corps, as a hospital cook. Inspired by his brother, he joined FIDS in 1960, as a builder, and left Southampton on Dec. 3, 1960, on the *Kista Dan*, and arrived in Montevideo on Dec. 28, 1960. He helped load an Otter aircraft in a crate, onto the well deck, and left Uruguay on Dec. 30, 1960, arriving at Port Stanley on Jan. 2, 1961. He was kitted out and, on Jan. 7, 1961, left Port Stanley, exhausted from partying. He arrived at Deception Island (Base B) on Jan. 11, 1961, they offloaded the Otter, and pressed on to Admiralty Bay (Base G), where, on Jan. 12, 1961, they picked up dogs. They arrived at Halley Bay Station on Jan. 29, 1961. He wintered-over here as carpenter and general assistant in 1961. On Feb. 4, 1962 he left Halley Bay on the *Kista Dan*, and arrived back in Southampton on March 26, 1962. Back in the UK, he continued to work for his old building firm, becoming branch manager, married in Oct. 1963, and in 1978 left to work for the local authority. In 1981 he got his university degree, and retired as senior clerk of works in 1996. He lives in Castle Douglas, in Scotland.

Skilling Island. 60°47' S, 45°09' W. A small island, immediately N of Atriceps Island, in the Robertson Islands, off the SE coast of Coronation Island, in the South Orkneys. Roughly charted in the 1820s, it was first surveyed by the Discovery Investigations personnel in 1933. Surveyed by Fids from Signy Island Station in 1948-49. Named by UK-APC on March 31, 1955, as Skilling Islet, for Charlie Skilling (q.v.), a member of the sledging party that traveled to the Robertson Islands in July-Aug. 1949. US-ACAN accepted the name in 1956. The term islet went out of fashion very soon thereafter, and on July 7, 1959 UK-APC renamed it Skilling Island, and US-ACAN followed suit in 1963. The Argentines call it Islote Skilling.

Skilling Islet *see* **Skilling Island**

Skilly Peak. 64°59' S, 61°16' W. A conspicuous rock peak rising to about 1050 m, 6 km NE of Shiver Point, and WNW of Cape Fairweather, on the Nordenskjöld Coast, at the N of the Antarctic Peninsula. Surveyed by Fids from Base D in Nov. 1947, resurveyed by FIDS in Sept. 1955, and named by them in the latter year for the skilly (thin soup, often served in prisons) they were forced to live off when their rations ran short during the return to base in October. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963.

Skilton Ledge. 79°56' S, 156°22' E. A relatively flat, rectangular rock platform at the SE margin of the Midnight Plateau, in the Darwin Mountains. The upper surface (2070 m) is ice-covered, but a rock cliff forms the S end. Named by US-ACAN in 2001, for Larry F. Skilton, of South Windsor, Conn., ham radio operator (K1IED) patching through to Palmer Station, McMurdo, Byrd Station, and particularly Pole Station, from 1990 onwards. *See also* **Polarmail Ledge**, which lies 1.5 km to the W.

Skiltvakta. 80°30' S, 19°15' W. A nunatak in the easternmost part of the Shackleton Range (the part in Queen Maud Land). Named by the Norwegians ("the sentry"). *See* **Pioneers Escarpment**.

Skimten *see* **Skimten Hill**

Skimten Hill. 72°13' S, 0°17' E. A small rock hill, or nunatak, in Nils Plain, 8 km N of Mount Roer, on the edge of the Sverdrup Mountains of Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Skimten (i.e., "the glimpse"). Only a glimpse of it can be caught protruding through the ice. US-ACAN accepted the name Skimten Hill in 1966.

Mount Skinner. 84°46' S, 171°10' W. A flattish, mainly ice-free mesa, rising to 1060 m, 5 km long and 3 km wide, at the NE corner of an elongated mountain block immediately S of the Bravo Hills, between Gough Glacier and Le Couteur Glacier, about 10 km WSW of Mount Mason, in the foothills of the Prince Olav Mountains, near the edge of the Ross Ice Shelf. Discovered, surveyed, and photographed by Albert P. Crary in 1957-58 during the U.S. Ross Ice Shelf Traverse of that season, and named by him for Bernard Skinner. US-ACAN accepted the name, and NZ-APC followed suit.

Skinner, Bernard Walter. b. 1911, Washington, Maine, but raised partly in Boston, son of saw-mill worker turned milkman Louis E. Skinner and his wife Minnie. He was living in Winthrop, Maine when he began parachuting from airplanes, barnstorming, setting records, and founding the Winthrop Aero Club. In Dec. 1931, he joined the U.S. Army Air Service, as a parachute rigger in Panama, and it was at Balboa that he joined the *Bear of Oakland* as aviation and tractor mechanic for ByrdAE 1933-35. Byrd wanted a parachutist, and, with clearance from President Roosevelt, Skinner went. He was a member of the shore party of ByrdAE 1933-35, wintering-over at Little America in 1934. He had charge of all the chutes taken on flights, and jumped out of the *William Horlick* on Nov. 3, 1934, 4000 feet over Little America. He settled in Papanui, Christchurch, NZ, teaching parachute jumping at Wigram Field. In March 1943, he became the first American resident of Christchurch to be called up for the U.S. forces during World War II. He drowned in Otago on April 23, 1951.

Skinner Glacier. 70°14' S, 68°00' W. On the W edge of Palmer Land, it flows SSW between Mount Dixey and Mount Flower to enter George VI Sound just E of Carse Point. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for Alexander Cumming Skinner (b. 1947), BAS geologist who summered-over at Fossil Bluff Station, 1968-69, and wintered over at Base E in 1969 and 1970. He was with BAS from July 9, 1968 to June 1972. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Skinner Nunatak. 72°57' S, 61°02' E. A rock outcrop marked by a crenellated ice summit, in the Goodspeed Nunataks, in the southern Prince Charles Mountains. Discovered by an ANARE seismic traverse party in 1957. Plotted by Australian cartographers from ANARE air photos taken in 1958 and 1960. Named by ANCA on Nov. 27, 1973, for Mick J. Skinner, technical officer with the ANARE Prince Charles Mountains survey of 1972. *See also* [1]**Gora Zanetnaja**.

Skinner Peak. 84°46' S, 112°53' W. Rising to over 2600 m, and mainly snow-covered, on a

spur that descends NE from Mount Schopf, in the Ohio Range of the Horlick Mountains. Named by US-ACAN in 1962, for Courtney J. Skinner, geological assistant and camp manager with the Ohio State University Expedition to the Horlick Mountains in 1961-62. Skinner was back in Antarctica again in 1962-63, 1963-64, 1964-65, 1965-66, and 1966-67.

Skinner Ridge. 74°24' S, 161°45' E. A ridge, 20 km long, descending southwestward from the W side of the Eisenhower Range, in Victoria Land. Mount Fenton and Mount Mackintosh lie astride the N portion of the ridge. Visited by the Southern Party of NZGSAE 1962-63, and named by them for David Norman Bryant Skinner (b. May 31, 1938), Auckland geologist who was with the expedition. He had also been in the Northern Party of NZGSAE 1960-61. He was back in Oct, and Nov. 1975, mapping in the area of Koettlitz Glacier. In 1977-78 he was with the Germans in northern Victoria Land, and in 1982-83 was in the area of Terra Nova Bay and Inexpressible Island. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Skinner Saddle. 80°58' S, 159°24' E. A high, broad, snow-covered saddle, at an elevation of 114 m above sea level, between the N part of the Darley Hills and that part of the Churchill Mountains E of Mount Durnford. Mapped by the Northern Party of NZGSAE 1960-61, and named by them for D.N.B. Skinner (*see* **Skinner Ridge**). NZ-APC accepted the name, and ANCA followed suit on Nov. 24, 1961. US-ACAN accepted the name in 1965.

Skinskolten. 70°04' S, 9°58' E. An ice dome in the W part of Nivlisen, on the Princess Astrid Coast. Named by the Norwegians ("the shiny head").

Skirfonna. 72°23' S, 26°35' E. An ice area about 30 km long and about 7 km wide, S of Isachsen Mountain, in the E part of the Sør Rondane Mountains. Named by the Norwegians ("the clean ice-area").

Skis. Plural was "ski" in the old days, when the word was still often pronounced "she," as in the Norwegian manner. Amundsen was the first man ever to ski in Antarctica, which he did on Two Hummock Island, on Jan. 26, 1898, while he was 2nd mate on the *Belgica* during BelgAE 1897-99.

Skiway Col. 67°32' S, 68°12' W. A large col at the NW extremity of Reptile Ridge, on Wright Peninsula, Adelaide Island. So named by UK-APC on Sept. 29, 2004, because it marks the end of an aircraft skiway used by Rothera Station.

Skjegget *see* **Skjegget Peak**

Skjegget Peak. 69°26' S, 39°37' E. A peak rising to 360 m, and forming a peninsula surmounting the NW end of Skarvsnes Foreland, on the E side of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Skjegget (i.e., "the barb"). US-ACAN accepted the name Skjegget Peak in 1968.

Skjelpadda *see* **Kame Island**

The *Skjold*. An 87-ton Norwegian whale catcher, built in 1882 for Skjold og Vaerge, in Finnmark. In 1907 she was sold to Chris Christensen's Nor Company, and was in at Deception Island in 1909-10 and 1910-11. In 1911 she was bought by August Christensen's Pacific Company, and worked out of San Pedro, Chile. She was later bought by Bethlehem Steel, re-named *Corcovado*, and wound up working for them as a tow boat out of Valparaíso.

Skoddemedet *see* **Skoddemedet Peak**

Skoddemedet Peak. 72°50' S, 3°51' W. A rock peak, 8 km SW of Høgfonna Mountain, on the N side of Frostlendet Valley, in the S side of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Skoddemedet (i.e., "the fog landmark"). US-ACAN accepted the name Skoddemedet Peak in 1966.

Baie du Skodern *see under* **D**

Pointe du Skodern *see under* **D**

Skog, Cecilie. b. Aug. 8, 1974, Ålesund, Norway. A nurse, she was married to Rolf Bae. In 1996, at the age of 21, she climbed Mont Blanc. She climbed Everest in 2004, and Mount Vinson (in Antarctica) in 2006. She has done the seven summits (i.e., climbed the highest mountain in each continent), and has been to both Poles. In 2009-10 she and Ryan Waters (b. 1973, Georgia) skied from Berkner Island to the South Pole, arriving there on Dec. 31, 2009. Then they pressed on to the Ross Sea. It took them 70 days. They were pulling 300 pounds apiece. No dogs. No machines. Just a cell phone.

Skog Passage. 63°18' S, 56°29' W. A narrow channel, 0.3 km wide, between Madder Cliffs (on the W end of Joinville Island) and an unnamed island, it connects Suspiros Bay and an unnamed body of water. Named by US-ACAN on April 16, 2002, for Peter Skog, who had been on Antarctic cruise ships since 1973, all the time taking soundings of poorly charted areas of water that might pose threats to shipping. His findings have been much used by the British Admiralty. In 1998, as skipper of the *Explorer*, he was the first to navigate through this passage.

Cap Skollsberg *see* **Skottsberg Point**

Skolten. 72°01' S, 26°01' E. One of the 5 nunataks that go to make up the feature that the Norwegians collectively call Horna, in the Sør Rondane Mountains. Named by the Norwegians (name means "the skull").

Skomlya Hill. 63°33' S, 57°30' W. A rocky hill rising to 354 m at the base of a promontory projecting from Trinity Peninsula 5.5 km eastward into Prince Gustav Channel and ending in View Point (View Point itself, the actual point, is 6.79 km from the center of Skomlya Hill), 9.98 km E of Abel Nunatak, and 8.95 km SE of Theodolite Hill. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Skomlya, in northwestern Bulgaria.

Skontorp, Alfred I. "Alf." b. May 12, 1895, Onsøy, Norway, as Alfred I. Olavesen, son of whaling gunner Olaves Olsen (he later took the name Olaves Skontorp) and his wife Mina O. Andreasdatter. The family moved to Tønsberg in 1903. Alf began whaling at 15, on the *Roald Amundsen*, and 6 years later was a gunner, becoming quite legendary, accounting for 8000 whales. He commanded the *Neko* for Salvesen & Co., out of Scotland, in the 1915-16 season. In 1922-23 he was gunner on the catcher *Barrowby*, working for the *Southern Queen*. In 1925-26, he was gunner on the whale catcher *Odd III*, working for the *Pythia* in Antarctic waters, and in 1928-29 was on the *Orwell*. In the 1939-40 season he was manager of the British-Norwegian floating factory whaler *Vestfold*, in Antarctic waters. He served during World War II as 5th officer on the *Hektoria*, and was still gunning on the *Star I*, 1956-60, working for the *Sir James Clark Ross*. Alf had 6 brothers who were also gunners. Arnt was the oldest, born in 1881 (he was on the *Neko*, in 1912-13). Then came Nils (1883-1932; from 1907 he spent years as a Japanese gunner), Edvard M. (b. 1885; he spent years in South Georgia), Ole Martin (1889-1928; also on the *Neko* in 1912-13), Karl (b. 1893), and Anton (b. 1897). Nils' son, also Nils, was gunner on the *Kosmos III*, in 1948-49. Ole's son Reidar, was with the *Pelagos*. Edvard's son Arne was on the *Kosmos*, and Alf's 3 sons — Sverre, Willy, and Per — were also gunners.

Skontorp Cove. 64°54' S, 62°52' W. Between Coughtrey Peninsula and Garzón Point, S of Paradise Harbor, 3 km SE of Bryde Island, along the Danco Coast, on the W coast of Graham Land. Roughly charted in Feb. 1898, by BelgAE 1897-99, it appears on Lecointe's 1903 map of that expedition. Further charted by whalers in the area from 1913, and used for several seasons as an anchorage by Salvesen's whalers. On David Ferguson's 1919 chart it appears as Skontorp Harbour, named for Edvard M. Skontorp (see the entry above, **Skontorp, Alf**), but on Ferguson's 1921 chart it appears as Skontorp Cove, which was the name accepted by US-ACAN in 1947. The temptation to misspell it as Skontrop Cove is overwhelming, and a 1943 U.S. Hydrographic Office chart of 1943 fell prey to that, as did a 1949 Argentine chart (as Caleta Skontrop). It was re-charted by ArgAE 1949-50, and appears as Caleta Skontorp on an Argentine chart of 1952, and also in the 1970 Argentine gazetteer, a well as in the 1974 Chilean gazetteer. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. UK-APC accepted the name Skontorp Cove on Sept. 23, 1960, and it appears as such on a British chart of 1961.

Skontorp Harbour *see* **Skontorp Cove**

The *Skookum*. Canadian yacht, in at the South Shetlands and the Antarctic Peninsula in 1991-92, skippered by Geoffrey Payne.

Skoparnik Bluff. 63°46' S, 58°40' W. A partly ice-free bluff rising to over 700 m in the NE foothills of the Detroit Plateau, 3.56 km S of Mount Schuyler, 4.88 km SW of Antonov Peak, and 6.83 W of Bozveli Peak (the last 2 features being in Trakiya Heights), 6.89 km NW

of Bezbog Peak in Kondofrey Heights, and 6.74 km N of Darzalas Peak, it surmounts Victory Glacier to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for Skoparnik Peak, on Vitosha Mountain, in western Bulgaria.

Skorefjell. 66°27' S, 53°57' E. A mountain, rising to 1520 m above sea level, 14 km NE of Stor Hånakken Mountain, in the Napier Mountains of Enderby Land, and 22 km E of Armstrong Peak. The Napier Mountains were discovered in Jan. 1930 by BANZARE, and photographed aerially by LCE 1936-37. Norwegian cartographers plotted this mountain from those photos in 1946, and named it Skorefjell. US-ACAN accepted the name without modification in 1966. The Russians also call it that, or rather Scorefjell. An ANARE dog-sledge party led by Syd Kirkby passed close to here in 1960, and ANCA re-named it (for themselves) on Dec. 7, 1976, as Mount Bride, for Thomas Francis Bride (1849-1927), Irish-born librarian in Melbourne, a member of the first Australian Antarctic Exploration Committee, in 1886.

Skorpil Glacier. 66°38' S, 66°16' W. A glacier 12 km long and 10 km wide, on Pernik Peninsula, NE of the Stefan Ice Piedmont and W of Solun Glacier, it flows northward from the N slopes of Protector Heights into Darbel Bay, E of Madell Point, on the Loubet Coast, on the W coast of Graham Land. Mapped by the British in 1976. Named by the Bulgarians on Sept. 14, 2010, for the Czech-Bulgarian archeologist Karel Skorpil (1859-1944).

Skorvebradden. 72°07' S, 5°33' E. A heavily-crevassed ice slope extending about 21 km ESE from Hamarskorvene Bluff, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them ("the bare cliff bank"). US-ACAN accepted the name without modification, in 1966.

Skorvehallet *see* **Skorvehallet Slope**

Skorvehallet Slope. 71°59' S, 9°12' E. A snow-covered slope with numerous rock outcrops, S of Skorvestallen, just W of the Gagarin Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skorvehallet (i.e., "the bare cliff slope"). US-ACAN accepted the name Skorvehallet Slope in 1971.

Skorvehalsen *see* **Skorvehalsen Saddle**

Skorvehalsen Saddle. 72°04' S, 6°11' E. An ice saddle immediately S of Huldreskorvene Peaks, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skorvehalsen (i.e., "the bare cliff saddle"). US-ACAN accepted the name Skorvehalsen Saddle in 1966.

Skorveriset. 72°04' S, 9°30' E. An ice fall in the S part of the Gagarin Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the bare cliff rise").

Skorvestallen. 71°55' S, 9°05' E. A mountain in the easternmost part of the Holtedahl Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the bare cliff elevation"). The Russians call it Hrebet Popovicha, implying that it is a ridge.

Skorvetangen *see* **Skorvetangen Spur**

Skorvetangen Spur. 72°03' S, 5°20' E. A rock spur, 3 km SE of Hamarskorvene Bluff, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skorvetangen (i.e., "the bare cliff tongue"). US-ACAN accepted the name Skorvetangen Spur in 1966.

Cap Skottsberg *see* **Skottsberg Point**

Cape Skottsberg *see* **Skottsberg Point**

Kap Skottsberg *see* **Skottsberg Point**

Point Skottsberg *see* **Skottsberg Point**

Punta Skottsberg *see* **Skottsberg Point**

Skottsberg, Carl Johan Fredrik. b. Dec. 1, 1880, Karlshamn, Sweden, son of the headmaster of the secondary school Carl Adolf Skottsberg and his wife Maria Lovia Pfeiffer. Botanist, long associated with Uppsala University, he was one of the Paulet Island party off the crushed *Antarctic* during Nordesnkjöld's SwedAE 1901-04. In 1907-08 he led the Swedish Magellan Expedition to Patagonia and South Georgia (54°S). In 1919 he was appointed director of the Göteborg Botanical Garden, which he had been instrumental in creating, and from 1931 to 1948 was professor of botany at the University of Göteborg. He retired in 1948, and died on June 14, 1963.

Skottsberg Point. 63°55' S, 60°49' W. It forms the S end of Trinity Island, and the W entrance point of Mikkelsen Harbor, in the Palmer Archipelago. First charted in 1902, by SwedAE 1901-04, and named by Nordenskjöld as Kap Skottsberg, for Carl Skottsberg. FrAE 1908-10 surveyed it, and it appears on Charcot's 1912 map as Cap Skottsberg. Hans Borge, on his 1915 chart, has it as Michelsen Point, presumably named in association with Michelsen Harbor (see the name Michelsen). It appears on a British chart of 1921 as Cape Skottsberg, on a British chart of 1949 as Cape Scottsberg, and on a 1951 French chart as Cap Skollsberg. The name Cape Skottsberg was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. In those days it was plotted in 63°53' S, 63°47' W. Photographed aerially by FIDASE in 1956. On Sept. 23, 1960, UK-APC redefined it as Skottsberg Point, with new coordinates, and US-ACAN followed suit that year. It appears as such on a British chart of 1961. It appears on a 1963 U.S. Hydrographic Office chart as Point Skottsberg, and the British gazetteer of 1966 accepted it with the misspelling Skottesberg Point (something that was subsequently corrected). Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Cabo Skottsberg (the Chileans rejected the proposed name Punta Farias, meaning "lighthouse point"), but, today, while the Argentines still call it that, the Chileans call it Punta Skottsberg.

Skotvika *see* **Stack Bay**

Skravena Cove. 62°34' S, 60°36' W. A cove, 2.1 km wide, indenting the N coast of Livingston Island for 1 km between Avitohol Point and Kuklen Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Skravena, in northern Bulgaria.

Skredbotnen *see* **Skredbotnen Cirque**

Skredbotnen Cirque. 71°59' S, 4°27' E. A small cirque (or corrie) indenting the W side of Mount Grytøyr, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skredbotnen (i.e., "the avalanche cirque"). US-ACAN accepted the name Skredbotnen Cirque in 1967.

Skrino Rocks. 62°23' S, 59°20' W. A chain of rocks, extending 570 m in an E-W direction, off the E coast of Robert Island, with their central point 0.13 km ENE of Kitchen Point and 3.4 km SSE of Salient Rock, in the South Shetlands. Mapped by the British in 1968, and again by the Bulgarians in 2009. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Skrino, in western Bulgaria.

Mys Skrjabina. 72°40' S, 72°30' W. A cape projecting into the S part of Britten Inlet, in the SW part of Alexander Island. Named by the Russians.

Skrott. The remains of a whale carcass after flensing, etc.

Skruvestikka *see* **Skruvestikka Nunatak**

Skruvestikka Nunatak. 72°11' S, 14°27' E. A partly snow-covered nunatak, just eastward of Filsponen Nunatak, at the S end of the Payer Mountains, in the E part of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Skruvestikka (i.e., "the screw driver"). US-ACAN accepted the name Skruvestikka Nunatak in 1966.

Morena Skrytaja. 72°10' S, 66°52' E. A moraine, S of the Shaw Massif, in the Prince Charles Mountains. Named by the Russians.

Lednik Skrytyj. 67°11' S, 100°00' E. A glacier, NW of Mount Amundsen, in Queen Mary Land. Named by the Russians.

Canal Skúa *see* **Skua Creek**

Estero Skúa *see* **Skua Creek**

Isla Skúa *see* **Skua Island**

[1]**Islote Skúa**. 64°21' S, 62°57' W. The most westerly of the Omicron Islands, about 700 m S of the SW extremity of Omega Island, in the

Melchior Islands. Named by the Chileans for the quantity of skuas on the island. Note: The Spanish need an accent on this word, otherwise it would sound like "skwa."

[2]**Islote Skúa** *see* **Skua Island**

Lago degli Skua *see under* **D**

Playa Skúa *see* **President Beaches**

Skua Cliff. 62°09' S, 58°29' W. A cliff, at an elevation of 106 m above sea level, above Petrified Forest Creek, W of Arctowski Station, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

Skua Creek. 65°15' S, 64°16' W. A narrow marine channel running WNW-ESE between Skua Island to the SSW and Winter Island to the NNE, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham land. Charted in March 1935 by BGLE 1934-37, and named by them as Skua Creek, in association with the island. It appears as such on Rymill's 1938 map of that expedition. On British charts of 1948 and 1952 it appears as Skua Inlet. UK-APC accepted the name Skua Creek on Sept. 22, 1954, and it appears as such in the 1955 British gazetteer, and also on a 1956 British chart. US-ACAN accepted that name in 1955. On an Argentine chart of 1958 it appears as Canal Skúa, and that was the name accepted by the 1970 Argentine gazetteer. It appears on a 1962 Chilean chart as Estero Skúa, but today the Chileans call it Canal Skúa.

Skua Glacier. 82°57' S, 157°40' E. A small tributary glacier, about 22 km long, flowing N into Astro Glacier, in the N part of the Miller Range. Discovered by the Northern Party of NZGSAE 1961-62, and named by them for the skuas seen in its lower part in Dec. 1961. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1966.

Skua Gull Islands *see* **Garnet Rocks**

Skua Gull Peak. 76°51' S, 145°25' W. A peak, 3 km NE of Saunders Mountain, and 0.8 km S of Mount Stancliff, in the Ford Ranges of Marie Byrd Land, it has a small lake enclosed near the summit. Discovered in Nov. 1934 by a sledging party of ByrdAE 1933-35, and named by them for the skua gull rookery here. US-ACAN accepted the name in 1952.

Skua Inlet *see* **Skua Creek**

Skua Island. 65°15' S, 64°16' W. A roughly triangular island, 1.1 km long, between Black Island to the SW, and Winter Island and Galíndez Island to the N and NE, in the SW part of the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. It is actually separated from Winter Island to the NNE by Skua Creek, and from Galíndez Ialand by Cornice Channel. Charted on Feb. 18, 1935, by BGLE 1934-37, and named by them for the many McCormick's skuas nesting there. It appears as such on Rymill's 1938 map of the expedition, as well as on a 1947 British chart, and it was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Isla Skúa, but today, while the Chileans still use that name, the Argentine call it Islote Skúa.

Skua Lake. 77°38' S, 166°25' E. A little lake, close NW of Island Lake, behind Home Beach on North Bay, in the area of Cape Evans, on the W coast of Ross Island. In the summer a stream flows down to Home Beach from here, and into North Bay. Named by BAE 1910-13, for its nearness to a skua rookery. US-ACAN accepted the name in 1968, and NZ-APC followed suit.

Skua Terrace. 60°41' S, 45°38' W. In the NW part of Signy Island, extending N-S from the vicinity of Spindrift Rocks to the vicinity of Express Cove, in the South Orkneys. Named by UK-APC on May 13, 1991, for the numerous pairs of brown skuas nesting in the area. US-ACAN accepted the name.

Skuabach. 62°11' S, 58°59' W. A little stream that flows into Skuabucht, on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Skuabucht. 62°11' S, 58°59' W. A little bay on the coast of Fildes Peninsula, King George Island, in the South Shetlands.

Skuafjellet. 73°54' S, 15°37' W. A mountain in the rock crags the Norwegians call Utpostane, in the southernmost part of the Kraul Mountains, in the W part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians, for the Great Skua (*Stercorarius skua*) of Norway.

The Skuary *see* **Cape Evans**

Skuas. Large, fearless, gull-like birds of the North and South Poles. There are two types in Antarctica, both of which prey on Adélie penguins. The South Polar skua, or McCormick's skua, breeds exclusively on the continent. This is *Catharacta mcCormicki*, (formerly *Megalestris mcCormicki*), which flies over the South Pole and travels to Greenland. The Brown skua, also known as the Great skua or the Antarctic skua, breeds in the South Shetlands and South Orkneys. This one is *Catharacta lonnbergi*. The world's most southerly skua rookery is at Cape Evans, on Ross Island. Herbert Ponting called skuas "the buccaneers of the south." They will attack humans.

The *Skudd 2*. A 247-ton, 124 foot 4-inch whale catcher built by Kaldnes Mek., in Tønsberg, for the Skytteren Company. She was in Antarctic waters in 1929-30 and 1930-31, catching for the *Skytteren*. In 1936 she was sold to the Finnhval Company (Yngvar Hvistendahl, manager), of Tønsberg, but continued to catch for the *Skytteren*. In 1939 she was chartered by the Norwegian Navy, as a patrol vessel, and in 1940 was taken by the Germans, who renamed her the *Dar-es-Salaam*. In 1945 the Norwegian government got her back, refitted her at Fredrikstad, and renamed her the *Skudd 2*, sending her to Antarctica as a catcher for the *Antarctic*, during the 1945-46 whaling season. In Oct. 1946 she was sold to the Blomvaag Whaling Company, in Bergen, and worked for them off the coast of Norway between 1946 and 1952. In 1955 she was converted into a coaster, and in 1957 became the *Loanna*. In 1970 she was renamed the *Bertil Nilsen*, in 1982 the *Minus*, and in 1983 the *Seihav*. She is still afloat.

Skuggekammen *see* **Skuggekammen Ridge**

Skuggekammen Ridge. 71°23' S, 13°40' E. A long, jagged rock ridge extending southeastward from Mount Mentzel, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Skuggekammen (i.e., "the shade ridge"). US-ACAN accepted the name Skuggekammen Ridge in 1970.

Skutenes. Approximately 66°53' S, 56°44' E. On the W side of Edward VIII Bay. Discovered and photographed aerially by LCE 1936-37, and mapped by Norwegian cartographers in 1946 from these photos, along with nearby Skutenesmulen (i.e., "Skutenes snout"). Skutenes (i.e., "barge point") was considered to be a point, and Skutenesmulen a nearby part of it. ANARE later mapped Skutenes as two snow-covered islands, thus the two Norwegian names became redundant. Cape Dalton (q.v.) is on one of these islands.

Skutenesmulen *see* **Skutenes**

Skvarca Inlet *see* **Hanza Inlet**

Dolina Skvoznaja. 70°40' S, 67°14' E. A valley on the NE side of Murray Dome, in the Amery Peaks, in the Prince Charles Mountains. Named by the Russians.

Sky-Blu Camp. 74°51' S, 71°34' W. A British camp on a flat area of blue ice S of the summits of Mount Mende and Mount Lanzerotti, two nunataks which form part of the Sky-Hi Nunataks, where Ellsworth Land meets southern Palmer Land. Built in 1993, and occupied since 1995, the field was first commissioned as a runway for use by DHC-7 (DASH) aircraft in 1995, and the camp became fully operational in 1997-98. BAS installed an automatic weather station here in Feb. 1999, at an elevation of 1510 m. That season (1998-99) the runway handled 158 aircraft movements. Named in association with the Sky-Hi Nunataks. UK-APC accepted the name on June 15, 1999. *See also* **Buckley Nunataks**.

Sky-Blu Runway. 74°51' S, 71°34' W. An ice runway, 1.2 km long and 50 m wide, close to Sky-Blu Camp, in Ellsworth Land.

Camp Sky-Hi *see* **Eights Station**

Sky-Hi Nunataks. 74°52' S, 71°30' W. A group of nunataks rising to 1770 m, and extending over 13 km from Doppler Nunatak in the W to Arnold Nunatak in the E, about 16 km NE of the Merrick Mountains, and about 17 km E of the Grossman Nunataks, in eastern Ellsworth Land. They also include Mount Mende, Mount Lanzerotti, Mount Carrara, and Mount Cahill. Discovered and photographed aerially by RARE 1947-48. Named by US-ACAN in 1966, for Project Sky-Hi (*see* **Eights Station**). Mapped in detail by USGS from ground surveys conducted during the Antarctic Peninsula Traverse of 1961-62, from USN air photos taken in 1965-66, and from U.S. Landsat images taken in 1973-74. The feature appears on the 1969 USGS sketch map

of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Skytrain Ice Rise. 79°40' S, 78°30' W. A large, flattish peninsula-like ice rise extending for about 80 km from the vicinity of the Meyer Hills, eastward into the Heritage Range, between Constellation Inlet and Hercules Inlet, into the SW side of the Ronne Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for the LC-47 Douglas "Skytrain" airplanes, otherwise known as R4Ds or Dakotas, much used by the Americans in Antarctica from the time of OpHJ 1946-47 until the late 1960s, when the Hercules took over. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

The *Skytteren*. A group of Norwegian whale gunners (Hvistendahl, Sørlle, & Co.) got together, and started the Skytteren Company, in 1929 buying the White Star liner *Suevic* (built by Harland & Wolff, of Belfast, in 1901), converting her into a 12,358-ton factory whaling ship, renaming her *Skytteren* (name means "the shooter," or "the gunner," in Norwegian), and sending her into West Antarctica waters in 1929-30 and 1930-31, to do pelagic whaling. She was back in 1932-33, under the command of Hans Jespersen. The *Skudd 2* was one of her catchers. She was in Antarctic waters again in 1933-34, 1934-35, and 1935-36, then the company sold her in 1936, to Yngvar Hvistendahl's Tønsberg company Finnhval. She was back in Antarctic waters in 1936-37, 1937-38, and 1938-39, and she was sunk during World War II, in the Skagerak, on April 1, 1942.

SL-ryggen *see as if it were all one word*

Slab Island. 69°42' S, 72°18' W. In the Wilkins Ice Shelf, off the E end of the Wagner Ice Piedmont, on Rothschild Island. Mapped by British cartographers from BAS surveys conducted in 1970-71, and from U.S. Landsat images taken in Jan. 1974. Named descriptively by UK-APC on June 11, 1980, as the island is a granite outcrop with horizontal foliation and rough jointing giving rise to broad, flat rocks.

Slab Point. 62°29' S, 60°10' W. A rocky point rising to 7 m above sea level, at the S side of Charybdis Cove, Hero Bay, Livingston Island, in the South Shetlands. Noted for its crude sheet-like geometry, the point is formed by a geological sill dipping gently to the N (the British say to the S), and forming the S margin of Gargoyle Bastion, bound to the NE and S by ice cliffs, suggesting the name Slab Point given by UK-APC on Dec. 12, 1997. US-ACAN accepted the name in 1998. Plotted by the UK in late 2008.

Slabotnen *see* **Slabotnen Cirque**

Slabotnen Cirque. 71°46' S, 10°27' E. Between the E slopes of Mount Dallmann and the Shcherbakov Range, in the E part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Slabotnen (i.e., "the sloping cirque"). US-ACAN accepted the name Slabotnen Cirque in 1970.

Slackwater Cirque. 76°38' S, 160°45' E. The westernmost cirque on Eastwind Ridge which is connected to the "dead" W terminus of Towle Glacier, in the Convoy Range of Victoria Land. So little ice from Eastwind Ridge enters the cirque that it barely makes any contribution to the W end of the Towle, and arcuate supraglacial moraines remain drifting within the cirque. So named by a 1989-90 NZARP field party to describe the sluggish ice flow of this cirque. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Mount Sladen. 60°41' S, 45°17' W. A conspicuous pyramid-shaped mountain rising to 890 m, 2.5 km NE of Saunders Point, in the E part of Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948-49. Named by UK-APC on March 31, 1955, for Bill Sladen. US-ACAN accepted the name in 1956. It was further surveyed by Fids from Signy in 1956-58.

Sladen, William Joseph Lambart "Bill." b. Dec. 19, 1920, Newport, Wales, son of Major (later Colonel, and then Commissioner) Hugh Sladen, chief of the Salvation Army Life-Saving Scouts (himself grandson of the 8th Earl of Cavan), and his wife Motee Booth-Tucker (granddaughter of General William Booth, founder of the Salvation Army). His uncle, Sir Samuel Sladen, was chief of the London Fire Brigade. Another uncle, Francis James Sladen, was appointed medical officer at Port Stanley, in 1945. After Christ's Hospital and Oxford, he was a champion mile runner while at Middlesex Hospital. In 1947 he joined FIDS as medical officer and biologist, and left Tilbury on the *John Biscoe* on Dec. 19, 1947, bound for Port Stanley, and then on to Hope Bay, where he wintered-over in 1948, at Base D, being there essentially to research penguins (for example, he discovered that penguins recognize one another individually). He was also medical adviser to Miles Clifford, governor of the Falkland Islands. He was due to winter-over at Base K in 1949, but when that base failed to open, he shipped back to the UK in April 1949. That year he was awarded the MBE, for his heroic behavior during the fire at Base D. Later in 1949 he sailed south again, and in 1950 was zoologist, medical officer, and base leader for the winter-over at Signy Island Station. In 1953 he was in Iceland with Peter Scott studying pinkfoot geese. On May 31, 1955, at Tonbridge, he married Brenda Kathleen Macpherson. He moved to the USA on a Rockefeller Scholarship in 1956, and in 1957 became professor at Johns Hopkins School of Hygiene and Public Health. He was back in Antarctica on the *Staten Island*, in 1958, during the latter stages of IGY, and helped start the USARP medical program. An authority on the Adélie penguin, during the 1960s and 1970s he was chief USARP investigator concerned with the studies of penguins at Cape Crozier, and started the USARP penguin-banding program. He wrote *The Biology of the Pygoscelid Penguin* (1954), and co-wrote many other books. He retired from Johns Hopkins in 1985, became director of environmental studies for the Swan Research Program at the Airlie Center, in Warrenton, Va., and also founded the Wildfowl Trust, at Horsehead. He was back in Antarctica in 2006. His second wife is Jocelyn Alexander, whom he married in NZ.

Sladen Summit. 78°07' S, 162°23' E. A prominent peak rising to 3395 m, at the intersection of John Hopkins Ridge with Rampart Ridge, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1965, for Bill Sladen.

Slagle, Thomas Dick. Known as Dick. b. March 27, 1905, Franklin, NC, son of farmer Jesse Henry Slagle and his wife Margaret Gillespie. After Piedmont College Academy (in Demorest, Ga.), the University of North Carolina at Chapel Hill, and Cornell, he became a doctor. He tried, but failed to get on ByrdAE 1928-30. He did his graduate work at the Graduate School of Medicine, at the University of Pennsylvania, and then worked in hospitals in Brooklyn, Syracuse, Manhattan, and Puerto Rico. During World War II he served with the U.S. Naval Reserve, in the European and Pacific theatres, and in 1946 moved to Sylva, NC, where he founded a cancer clinic. He married Helen Field. He was a USNR captain when he wintered-over in Antarctica as chief medical officer at Little America in 1958. He died in Sylva, of a heart attack, on Nov. 2, 1971. Helen died in 1983, aged 73.

Slagle Ridge. 71°55' S, 169°50' E. A high, massive snow-covered ridge between Slone Glacier and Burnette Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Dick Slagle. *See also* **Scouts**.

Slalåma *see* **Slalåma Slope**

Slalåma Slope. 72°31' S, 3°25' W. A steep ice slope on the S side of Kvasstind Peak, on the NE side of Borg Mountain, in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Slalåma (i.e., "the slalom"). US-ACAN accepted the name Slalåma Slope in 1966.

Slalom Lake. 62°12' S, 58°57' W. A small lake, 0.4 km N of Ardley Cove, near Bellingshausen Station, on Fildes Peninsula, King George Island, in the South Shetlands. Surveyed by the Russians from 1968, and named by them as Ozero Slalomnoye (i.e., "slalom lake"). It appears as such, and as Lake Slalomnoye, on Simonov's chart of 1973. UK-APC accepted the translated name on Feb. 7, 1978, and US-ACAN followed suit. It appears as such in the 1980 British gazetteer. Plotted by the UK in late 2008.

Ozero Slalomnoye *see* **Slalom Lake**

Slate, Charles Jeremiah "Jerry." b. Jan. 2, 1845, New London, son of whaling skipper Jeremiah Slate and his wife Sophia Holt. He shipped as a cabin boy at 11, with Joshua Lyon

(a relative) on the *Isabella* out of New London. He went twice to the South Shetlands, first as 1st mate on the *Lizzie P. Simmons*, in 1872-73, and then, in 1876-77, as 2nd mate on the *Mary Chilton*. He later became a diver in New York Harbor, and finally settled in New London, as a fisherman, in the family house on Pequot Avenue, with his two younger brothers Tom and Sam, both painters. None of them ever married.

Slater Rocks. 75°05' S, 113°53' W. A cluster of rock outcrops or low rock hills, 6 km N of Leister Peak, in the Kohler Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1971. Named by US-ACAN in 1976, for Robert T. Slater, USN, equipment operator 2nd class at Pole Station in 1974.

Slatina Peak. 62°58' S, 62°29' W. Rising to 1750 m, 2 km NE of Antim Peak, and 1.9 km S of Drinov Peak, it overlooks Chuprene Glacier to the NW and Krivodol Glacier to the SW and S, in the Imeon Range, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the settlements named Slatina, in various parts of Bulgaria.

Slaton, Charles Mathson "Slats." b. Sept. 1, 1918, Cedartown, Ga., son of chicken farmer and Baptist preacher Gaines Barry Slaton and his wife Mary Pauline Purser, who was from Alabama. He grew up in Georgia, Alabama, and Florida, and joined the Navy in 1936. In 1938 he married Florence L. "Sally" Worland, and they would have 3 children. In 1939 his 3-year Navy term was up and he left for Florida with his family, going into plumbing and steamfitting in Miami with his brother Dub (William Franklin Slaton). He re-joined the Navy after Pearl Harbor and went to divers' school in NY, helping to raise the sunk *Normandy*. He did the same with the French fleet in the Mediterranean, harbor-clearing in North Africa, France, and Sicily, but contracted an ear infection, and transferred to the Seabees, as a mechanic. During the Korean War he went to Point Barrow, Alaska, doing cold weather equipment evaluation, and he was an instructor at Port Hueneme when Admiral Byrd's chief of staff offered him a South Pole job. Then it was off to Davisville, RI, where he and Dick Bowers put together the equipment lists. He sailed from Norfolk, Va., on the *Wyandot*, and, in the pack-ice, on Dec. 24, 1955, Father Condit converted him to Catholicism aboard ship (Slaton's wife and children were already Catholic). At McMurdo Sound he helped build the base, and even flew back to NZ for repair parts. He named one of the tractors the *Willam Joseph*, for his younger son. He wintered-over at McMurdo, and on Nov. 25-26, 1956, was one of the 2nd party of Seabees flown out to the Pole, as chief construction mechanic, to build the station there. He was one of the 2nd party to leave the Pole, on Dec. 29, 1956, and flew back to McMurdo. He retired from the Navy in 1965, and until the early 1970s worked in overhauling equipment, notably in Guam in 1970-71. For 12 years he worked as a maintenanance man for magnate Martin D. Smith in Ventura Co., Calif., and died on Aug. 4, 2001, at Port Hueneme, Calif., and was buried in Ivy Lawn Cemetery, Ventura, Calif.

Slattery, Leo Bernard. b. 1933, NZ. A postmaster at Leeston, near Christchurch, when he went to Scott Base for the 1973-74 summer, as post office clerk, and again in 1979-80 and for the winter of 1980. In 1981-82 he was not only postmaster, but officer-in-charge. He was back at Scott Base as postmaster for 1984-85, and for the winter of 1985.

Slattery Peak. 77°34' S, 168°59' E. A somewhat islated rock peak, rising to about 600 m above the ice mantle SE of Mount Terror, 9 km SW of The Knoll, and about 6 km ENE of the Rohnke Crests, on Ross Island. Named by NZ-APC on Nov. 4, 1999, for Leo Slattery. US-ACAN accepted the name in 2000.

Mount Slaughter. 78°37' S, 85°38' W. An ice-free peak, rising to 3600 m on a spur trending SW from the Vinson Massif, in the Sentinel Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1960. Named by US-ACAN for electrical engineer John Brooks Slaughter (b. March 16, 1934, Topeka, Kans.), director of the NSF, 1980-82.

The *Slava*. This was the old *Empire Venture* (and before that the *Vikingen*), aquired by the Russians in 1946, and converted into a 14,772-ton whaling factory ship out of Odessa. She was in Antarctic waters for the first time (under her new name) in 1946-47, with eight fast 350-ton whale catchers. Capt. Voronin commanded the expedition. The factory had sufficient hold-space for 15,000 tons of whale oil, and had the capability of preparing canned whale meat. By March 1947 they were as far south as 70°S, and had harpooned 256 whales. The *Slava* was back in Antarctic waters in 1947-48, under the command of Capt. Aleksey Nikolayevich Solyanik. A notable event occurred on board the *Slava*, on Jan. 6, 1948, while the ship was in 61°S, when a waitress on board, Aleksandra Akimovna Leonova, gave birth to a son named Antarktyk (*see* **Births in Antarctica**). The vessel was back every season between then and 1965-66, in 1959-60 and 1960-61 in company with the *Sovietskaya Ukraina*. In 1971 she was sold to the Japanese, and became the *Fuji Maru*.

Zaliv Slava *see* **Slava Ice Shelf**

Slava Bay *see* **Slava Ice Shelf**

Slava Ice Shelf. 68°49' S, 154°44' E. Between Mawson Peninsula and Cape Andreyev, between George V Land and Oates Land. The area was photographed aerially during OpHJ 1946-47, and again by SovAE 1958, who applied the name Zaliv Slava to the wide open bay which fronts this ice shelf. Named for the Soviet whaling flotilla *Slava*. US-ACAN accepted the name Slava Bay in 1961. On May 18, 1971, ANCA decided that the name Slava should be applied to the entire ice shelf, rather than to the bay, and US-ACAN accepted this.

Slaveykov Peak. 63°01' S, 62°35' W. A sharp peak, rising to 1760 m, 2 km SW of the summit of Mount Foster to which the peak is linked by Zavet Saddle, 1.12 km NNE of Neofit Peak, 2.4 km E of Lakatnik Point, and 3.45 km NW of Ivan Asen Point, it surmounts Armira Glacier to the SE, and and Bistra Glacier to the N, in the Imeon Range, on Smith Island, in the South Shetlands. Named by the Bulgarians on Dec. 15, 2006, for the Bulgarian poet Petko Slaveykov (1827-1895). The Bulgarians mapped it in 2009.

Slavonski, Max. b. 1885, Russia. A whaler working with the Norwegians in the South Shetlands in the 1914-15 season. He fell overboard the same day his good friend Karl Moe Johansen died of blood poisoning, on Jan. 7, 1915. He was the only Russian ever buried in the Whalers Bay Cemetery, on Deception Island.

Sledgemeters. Devices used for measuring distances covered by sledges. Usually it was a bicycle wheel with a revolution counter attached to the back of the last sledge in a party. Someone was always getting off the sledge to clean the thing free of snow.

Sledgers Glacier. 71°26' S, 162°48' E. A long tributary glacier in the S part of the Bowers Mountains, flowing NW from Husky Pass, along the N flank of the Lanterman Range, between that range and the S limits of the Explorers Range, to enter Rennick Glacier between Carnes Crag and Mount Gow. It was traveled in arduous conditions by the Northern Party of NZGSAE 1963-64, and they named it for all sledgers. NZ-APC accepted the name in 1964, and US-ACAN followed suit that year.

Sledgers Icefall. 71°28' S, 163°12' E. A heavily crevassed icefall midway up Sledgers Glacier, in the Bowers Mountains, just N of the tip of Reilly Ridge. Named by NZGSAE 1967-68, in association with the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Sledges. Sledges, or sleds, were used, and still are, to transport equipment and personnel across the ice and snow of Antarctica. They can be pulled by a variety of mechanisms: dogs (q.v.), ponies (q.v.), motors, or men. The most practical method over long distances is dogs, otherwise it can be a disaster. Ponies are not efficient, as their feet get stuck, and they require too much feeding. Motorized sledges find it hard going, while manhauling is sure, steady, but enormously draining on the men. All four methods have been used extensively in Antarctica. The first sledge in Antarctica was used by the team of de Gerlache, Amundsen, Frederick Cook, Arctowski, and Danco, on Brabant Island, on Jan. 31, 1898, during BelgAE 1897-99. Borchgrevink was next, in 1899, during BAE 1898-1900. Then came von Drygalski, Nordenskjöld (SwedAE 1901-04) and Scott (BAE 1901-04), all in 1902. When one discusses Antarctic sledging, one thinks of Scott and Amundsen, and the different theories these men held. Amundsen had only one theory — dogs — and he practiced it exclusively, and proved its worth by being the first to reach the South Pole. He used lightweight sledges and a lot of dogs to share the load. He always gave the dogs a target to strive for. He understood dogs and how to get the best out of them. He realized

that huskies need to work, they need a challenge and tough conditions to overcome. He did not anthropomorphize them, as Scott and his men tended to do. Scott was not comfortable with dogs — or with sledges, for the matter of that — and, although he pioneered the use of the sledge in Antarctica, he had no real choice. On his first expedition, Scott took nine Nansen sledges. A Nansen was 10 feet long, 20 inches wide, and weighed 31 pounds. made of ash, it was raised at both ends, with runners one-third of an inch wide, slightly convex, with narrow blades, and made of German silver. It was developed by Arctic explorer Fridtjof Nansen. Shackleton took 30 Norwegian sledges on BAE 1907-09. Ten of these were 12-footers, 18 were 11-footers, and two were 7-footers. He used ponies to pull them, and the animals proved inadequate. When Scott heard that Shackleton had reached a point only 97 miles from the Pole, and had used ponies in the effort, he inaccurately ascribed Shackleton's success to the ponies, and determined to take ponies with him on his next expedition, which turned out to be BAE 1910-13. He also took motor sledges with him, as a safeguard, but they failed in the field (Skelton had invented these). The ponies, of course, proved as inadequate with Scott as they had with Shackleton, and it wasn't long before Scott and his companions were manhauling their sledges to the Pole and (almost) back. It is more than suspected by some researchers that this was the way these particular British explorers wished it. There seemed to be something heroic and self-contained in pulling one's own sledge, and possibly something suspiciously weak — possibly Continental — in having animals (i.e., someone else) pull it for one. Amundsen regarded this method as criminally backward, and he was very vocal in his opposition to manhauling. For this reason, perhaps, each of Scott's sledges was designed for a crew of 3. It carried their tent, full equipment, and stores. The weight of a tent alone was 33 pounds. Also on each tightly-packed sledge was a Nansen cooker and a Primus stove. The total weight of each sledge was 660 pounds, or 220 pounds per man, that is if all were able to pull. They were all able in the early stages of the expedition, but usually toward the end, one or more of the men was in a desperately ill state due to scurvy, frostbite, starvation, or a combination of all three, and had to be pulled by the others, thus adding geometrically to the weight. Above and beyond that, it was not unknown for sick dogs to be pulled on the sledges (mind you, this practice was not, by any means, limited to Scott, or even to the British). All of this, of course, made the job of the remaining haulers increasingly and impossibly difficult. This load, then, in one form or another as previously described, they manhauled hundreds of miles across the ice, snow, glaciers, and crevasses, over ice shelves, up mountains, never knowing when their sledge was going to disappear down a hidden crevasse, taking dogs, tent, equipment, and food with it. Since the 1920s motor sledges have been used more and more. E.L. Pitman, of Byfleet, Surrey, made the sledges for BGLE 1934-37, and introduced important new elements into the design of the Nansen sledge (*see* **Mount Pitman**). The Eliason motor sledge, invented in Sweden in 1942, and later made in Canada, was in use in Antarctica from 1960 onwards. The Polaris motor sledge, made by Polaris Industries, of Roseau, Minn., was also in use in Antarctica from 1960. Today, it is reckoned by some that Roger Daynes makes the best sledges in Europe.

Sledging biscuits. Biscuits taken by the old explorers on sledging traverses, as a staple item of food. Plasmon was often an ingredient.

Sledging Col. 85°51' S, 154°48' W. Between Mount Griffith and a very low peak on its NE side, in the Hays Mountains of the Queen Maud Mountains. It provides a sledging route from Scott Glacier to the head of Koerwitz Glacier and thence northward. Named by NZGSAE 1969-70, who used it when the W side of the lower reaches of Scott Glacier proved impassable. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Sleds *see* **Sledges**

Sleek Spur. 81°19' S, 160°12' E. A tapered, ice-covered coastal spur at the E end of the Kelly Plateau, in the Churchill Mountains, it is about 14 km SW of Cape Parr, where the confluent Nursery Glacier, Jorda Glacier, and Starshot Glacier enter the Ross Ice Shelf. Named descriptively by US-ACAN in 2003. NZ-APC accepted the name on Feb. 27, 2003.

Sleeping bags. Have always been used in land traverses in Antarctica. Scott used reindeer skin bags during BNAE 1901-04, and in fact had gone to Norway to buy them. BITE 1914-17 used both skin and wool bags.

Glaciar Sleipnir *see* **Sleipnir Glacier**

Sleipnir Glacier. 66°29' S, 63°59' W. A glacier, 16 km long, flowing E into the W side of Cabinet Inlet between Balder Point and Spur Point, at the Larsen Ice Shelf, on the Foyn Coast, on the E coast of Graham Land. Charted in Nov. 1947 by Fids from Base D, and, in association with nearby Mount Odin, it was named by them for Sleipnir, the horse of the Norse god, Odin. It was photographed aerially by RARE 1947-48. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on an Argentine chart of 1957 as Glaciar Sleipnir, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Pico Slessor *see* **Slessor Peak**

Slessor, Robert Stewart. Known as Stewart Slessor, or "Robbie." b. Nov. 2, 1912, Fraserburgh, Abderdeenshire, son of Dr. R.A. Slessor and his wife Margaret. In 1935 he qualified as a doctor at Aberdeen University Medical School, and was assistant master at the Rotunda Women's Hosital, in Dublin. In 1941 he became a surgeon lieutenant with the RNVR, and served on the *Wanderer*, in the North Atlantic, during World War II. He left the *Wanderer* in April 1943, and went to work under Ted Bingham, in London. In 1945, when the first batch of FIDS were being recruited (as distinct from the Operation Tabarin boys who had become FIDS by default, as it were, in July 1945, when Tabarin became the FIDS), he was the first to be be enlisted by Bingham (who got to pick his own team), as the medical officer who wintered-over at Stonington Island (Base E) in 1946, also as 2nd-in-command. But first, he and Tom O'Sullivan sailed on the *Trepassey* for Labrador, to pick up huskies for the trip south. He arrived at Port Lockroy on the *Trepassey*, on Feb. 10, 1947, with Bingham and James Wordie. After his tour he returned to Port Stanley, and from there to Montevideo, where he caught the *Chinese Prince* bound for Liverpool, arriving at that port on Sept. 22, 1947. Shortly after this, on Dec. 19, 1947, he sailed from Tilbury on the *John Biscoe*, his purpose being to accompany Fuchs on a tour of FIDS bases in the austral summer of 1947-48. In 1948, when he retired from the Navy, to his home in Fraserburgh, he became senior medical officer of the Falkland Islands, and acted as deputy governor. He married Sheila Margaret Brough, who died in the late 1950s. In 1968 he retired to Alicante, Spain, and died on July 8, 1985, at Arbroath, Scotland, and his ashes were buried in his wife's grave in Stanley.

Slessor Glacier. 79°50' S, 28°30' W. A glacier, 120 km or more long, and 80 km wide, flowing W into the Filchner Ice Shelf to the N of the Shackleton Range, between that range and the Theron Mountains. Discovered aerially by BCTAE on Dec. 7, 1956, roughly mapped by them, and named by them for Air Marshal Sir John Cotesworth Slessor (1897-1979), chief of the Air Staff, 1950-52, and chairman of the expedition's committee of management. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. The Norwegians call it Slessorbreen (which means the same thing).

Slessor Peak. 66°31' S, 64°58' W. A mainly ice-covered peak, rising to 2370 m (the British say 2330 m, and the Chileans say 2317 m), at the SW end of the Bruce Plateau, just NW of Gould Glacier, near the head of Byway Glacier, on the Loubet Coast, on the W coast of Graham Land. It rises 305 m above the general level of the plateau ice sheet, and has a steep rock face on its N side. First surveyed in 1946-47 by a FIDS sledging party from Base E led by Stewart Slessor, and named for him by UK-APC on Sept. 22, 1954. It appears in the 1955 British gazetteer. US-ACAN accepted the name in 1956. It appears on a Chilean chart of 1963 as Pico Slessor, and that name was accepted by the 1974 Chilean gazetteer, and also by the Argentines.

Slessorbreen *see* **Slessor Glacier**

Slettefjellet. 71°45' S, 6°55' E. A peak, 1.5 km N of Gessner Peak, at the NE end of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them (the name means "the smooth peak"). US-ACAN accepted the name without modification in 1967.

Mount Sletten. 85°47' S, 153°30' W. Also spelled (erroneously) as Mount Sletton. A conspicuous rock peak surmounting Taylor Ridge on the W side of Scott Glacier, 6 km NE of Mount Pulitzer. Discovered and roughly mapped (but not named) during ByrdAE 1928-30. Named by US-ACAN in 1967, for Robert S. Sletten, satellite geodesist at McMurdo in 1965.

Slettfjell. 72°08' S, 3°19' W. A low, flattish mountain, about 1.5 km W of Aurhø Peak, in the S part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them (name means "level mountain"). US-ACAN accepted the name without modification in 1966.

Slettfjellklumpen *see* **Slettfjellklumpen Spur**

Slettfjellklumpen Spur. 72°08' S, 3°18' W. A rock spur forming the N end of Slettfjell, W of Aurhø Heights, on the Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Slettfjellklumpen (i.e., "the level mountain lump"), in association with Slettfjell. US-ACAN accepted the name Slettfjellklumpen Spur in 1966.

Slettfjellnutane *see* **Slettfjellnutane Peaks**

Slettfjellnutane Peaks. 72°05' S, 3°18' W. Two small rock peaks, 3 km N of Slettfjell, on Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NorAE 1956-60, and named by them as Slettfjellnutane (i.e., "the level mountain peaks"), in association with Slettfjell. US-ACAN accepted the name Slettfjellnutane Peaks in 1966.

Mount Sletton *see* **Mount Sletten**

Slichter Foreland. 74°08' S, 113°50' W. A high, ice-covered peninsula, 24 km long and 16 km wide, it forms the NE arm of Martin Peninsula, on the coast of Marie Byrd Land. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN for Louis B. Slichter, professor emeritus of physics at UCLA, who trained geophysicists for the South Pole and who planned scientific programs for Antarctica.

Slickenside Face. 77°40' S, 106°44' E. A face on the sheer cliffs of Turks Head, in Erebus Bay, Ross Island, at McMurdo Sound. A slickenside is a slippery face of a fault, here exposed high up on the cliffs. Named in 1912 by Frank Debenham during BAE 1910-13. The name appears in the NZ Provisional Gazetteer.

Slithallet *see* **Slithallet Slope**

Slithallet Slope. 72°03' S, 2°57' E. An ice slope between Jutulsessen Mountain and Rismedet Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Slithallet (i.e., "the drudgery slope"). US-ACAN accepted the name Slithallet Slope in 1966.

Sliven Peak. 62°36' S, 60°08' W. Rising to 530 m in the E extremity of Melnik Ridge, 4.1 km ENE of Mount Bowles, and 1.6 km NNW of Atanasoff Nunatak, it overlooks Kaliakra Glacier to the N and Huron Glacier to the SE, on Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for the Bulgarian town of Sliven.

Sloket *see* **Sloket Glacier**

Sloket Glacier. 71°59' S, 4°54' E. Flows N between Slokstallen Mountain and Petrellfjellet, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sloket (i.e., "the millrace"). US-ACAN accepted the name Sloket Glacier in 1966.

Sloknuten *see* **Sloknuten Peak**

Sloknuten Peak. 72°02' S, 4°52' E. Rising to 2765 m, just SW of Slokstallen Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sloknuten (i.e., "the millrace peak"). US-ACAN accepted the name Sloknuten Peak in 1966.

Slokstallen *see* **Slokstallen Mountain**

Slokstallen Mountain. 72°00' S, 4°55' E. A mountain, 1.5 km E of Petrellfjellet, and W of Kvithamaren Cliff, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Slokstellen (i.e., "the millrace barn"), in association with Sloket Glacier. US-ACAN accepted the name Slokstallen Mountain in 1966.

Sloman Glacier. 67°40' S, 68°35' W. Flows SE into Marguerite Bay, NE of Mount Ditte, between that mountain and Mount Liotard, on the SE coast of Adelaide Island. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base T in 1961-62. Named by UK-APC on Feb. 12, 1964, for William Owen "Bill" Sloman (b. July 13, 1921, Bangor, Wales. d. March 1999, Cambridge), BAS personnel and administrative officer for many years beginning in 1956 (when BAS was still FIDS). He recruited many FIDS and BAS lads. He left that position to become secretary of BAS, 1976-78. US-ACAN accepted the name later in 1964.

Slomer Cove. 63°47' S, 59°24' W. A cove, 11.2 km wide, indenting the NW coast of Trinity Peninsula for 5.9 km, S of Cape Kjellman, and N of Auster Point. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for Slomer, the settlement in northern Bulgaria.

Massif Slon *see* **Mount McCauley**

Ostrov Slon *see* **Slon Island**

Slon Island. 68°47' S, 77°52' E. A low-lying, irregular-shaped island, with a maximum elevation of about 20 m above sea level, immediately N of Filla Island, in the Rauer Islands, and separated from it by 100 m of water in some places. Charted by SovAE 1956, and named by the Russians as Ostrov Slon, a name translated by ANCA on March 7, 1991.

Slone Glacier. 71°56' S, 170°03' E. A steep glacier descending E along the N side of Slagle Ridge, between De Angelo Glacier and Burnette Glacier, in the Admiralty Mountains, to enter the W side of Moubray Glacier, at the base of Adare Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Airman 2nd Class Kelly Slone (*see* **Deaths**, 1958). NZ-APC accepted the name. Originally plotted in 72°00' S, 170°00' E, it has since been replotted.

Sløret *see* **Sløret Rocks**

Sløret Rocks. 73°43' S, 4°17' W. A small group of rocks (the Norwegians call them crags) high along the ice slope of the central part of the Kirwan Escarpment, on the S side of Utråkket Valley, about 8 km S of Enden Point, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Sløret (i.e., "the veil"). US-ACAN accepted the name Sløret Rocks in 1966.

Slossarczyk, Walter. b. 1888. 3rd officer and communications officer on the *Deutschland* during GermAE 1911-12, under Filchner. On Nov. 26, 1911, on their return from the South Sandwich Islands, and while their ship was anchored in King Edward Cove, in South Georgia (54°S), Slossarczyk set out in an open boat and was never seen again. The whale catcher *Fortuna* found the boat well out in Cumberland Bay, but no Walter. Suicide, they said. A cross was erected at Grytviken Cemetery. They named Slossarczyk Bay after him, but this was later re-named Doubtful Bay. However, all is not lost for the drowned man. They later named the crag on the E side of the bay as Slossarczyk Crag. So, Slossarczyk never actually made Antarctica proper.

The Slot. 82°40' S, 155°05' E. A small, swift glacier descending from the Polar Plateau, between Mount Ronca and Mount Summerson, or between Endurance Nunatak and Quest Nunatak, in the Geologists Range. Discovered by pilots of BCTAE 1956-58. Named by the Northern Party of NZGSAE 1961-62, for its narrowness and its crevassed nature. NZ-APC accepted the name, as did ANCA, and (in 1966) US-ACAN.

Slotviktangen *see* **Hoseason Glacier**

Gora Slozhnaja *see* **Klevekampen Mountain**

SL-ryggen. 74°24' S, 9°32' W. An ice ridge between Milorgfjella and Amundsenisen, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians. SL was an abbreviation for Sentralledelse, the executive staff of Milorg, during the Norwegian Resistance to the Nazi menace during World War II.

Slumkey Island. 65°30' S, 65°28' W. Largest island of the group E of Tupman Island, in the SE portion of the Pitt Islands, in the Biscoe Islands. Photographed aerially by FIDASE in 1956. First accurately shown (but not named) on a 1957 Argentine chart. Named by UK-APC on July 7, 1959, for the Dickens character in *Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The name Isla Contramaestre González appears in the 1970 Argentine gazetteer, named after the 2nd bosun on the *Uruguay*, 1904-05. This is probably the same as Slumkey Island.

Slump Mountain. 77°52' S, 160°43' E. A peak rising to 2195 m, 1.1 km SW of University Peak, between Beacon Valley and Arena Valley, or between the heads of University Valley and Farnell Valley, in the Quartermain Mountains of southern Victoria Land. Geological work was carried out here in 1980-81, by Cliff McElroy (*see* **McElroy Glacier**), Toby Rose (*see* **Rose Crest**), and K.J. Whitby. The face of the peak exhibits large-scale slump structures in the Metschel Tillite zone, hence the name given by NZ-APC. US-ACAN accepted the name.

Slusher Nunatak. 74°27' S, 99°06' W. A nunatak, 8 km N of Mount Moses, in the Hudson Mountains. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1968, for Harold E. Slusher, meteorologist at Byrd Station in 1967.

Småhausane *see* **Småhausane Nunataks**

Småhausane Nunataks. 71°33' S, 25°18' E. A group of 3 small nunataks, rising to 1180 m, S of Nordtoppen Nunatak, between that nunatak and Mount Fidjeland, in the north-central part of the Sør Rondane Mountains. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Remapped by the Norwegians from air photos taken by OpHJ 1946-47, and named by them as Småhausane (i.e., "the small crags"). US-ACAN accepted the name Småhausane Nunataks in 1966.

Småknoltane *see* **Småknoltane Peaks**

Småknoltane Peaks. 72°07' S, 8°03' E. A chain of small nunataks, 6 km long, on the E side of the mouth of Snuggerud Glacier, in southernmost part of the the Filchner Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Småknoltane (i.e., "the small knolls"). US-ACAN accepted the name Småknoltane Peaks in 1966.

Småkovane *see* **Småkovane Cirques**

Småkovane Cirques. 71°54' S, 5°32' E. Two partially ice-filled cirques separated by a narrow ridge, indenting the NE side of Breplogen Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Småkovane (i.e., "the small closets"; "små" meaning "small"). US-ACAN accepted the name Småkovane Peaks in 1967.

Smalegga *see* **Smalegga Ridge**, **Smalegga Spur**

Smalegga Ridge. 72°01' S, 24°04' E. A ridge, 6 km (the Norwegians say 11 km) long, extending NW from Mount Walnum to the W of Gillock Glacier, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by OpHJ 1946-47, and named by them as Smalegga (i.e., "the narrow ridge"; "smal" meaning "narrow"). US-ACAN accepted the name Smalegga Ridge in 1966.

Smalegga Spur. 71°55' S, 10°37' E. A small, narrow rock spur (the Norwegians call it a mountain crest), 5 km SSE of Mørkenatten Peak, between Småskeidrista and Gjeruldsenhøgda, in the Shcherbakov Range, in the easternmost part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Smalegga (i.e., "the narrow ridge"; "smal" meaning "narrow"). US-ACAN accepted the name Smalegga Spur in 1970.

Isla(s) Small *see* **Small Island**

Mount Small. 70°30' S, 64°42' E. A partly snow-covered peak, 3 km (the Australians say about 9 km) SW of the Crohn Massif, in the Porthos Range of the Prince Charles Mountains. Reccorded on terrestrial photos taken by Syd Kirkby in 1956, and on 1965 ANARE air photos. Named by ANCA for Graeme R. Small, geophysicist at Wilkes Station in 1964. US-ACAN accepted the name in 1970.

Small, John *see* **USEE 1838-42**

Small, Stuart Hopton "Sam." b. March 9, 1923, Camberwell, London, son of Civil Service clerk Walter Thomas Hopton Small and his wife Edith Bacon, a nurse. He was a lieutenant in the Royal Canadian Signals, and after World War II was posted to Norway, where he met his future wife. In 1945 he joined FIDS, as a radioman, and wintered-over at Base D in 1946 and 1947. He slipped two intervertebral discs in his back, and was laid up for 8 weeks. The discs had to be removed on the journey back from Port Stanley to England, on the *Lafonia*. He arrived back in London on April 21, 1948. He returned to Norway, married, and lived there basically until he died in Dec. 2007.

Small Island. 64°01' S, 61°27' W. An island, 1.5 km long, 5 km S of Intercurrence Island, it is the southernmost of the Christiania Islands, in the Palmer Archipelago. Roughly charted by Hoseason in 1824, and named (presumably by him) for (presumably) its size. It appears on Powell's 1828 chart, and again on British charts of 1839 and 1937. It appears as Isla Small on an 1861 Spanish chart, on Charcot's map of 1906 it appears as Île Small, on a Chilean chart of 1947 it has been translated all the way as Isla Pequeña, and on an Argentine chart of 1954 it appears as Isla Christiania. US-ACAN accepted the name, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, plotted in 63°57' S, 61°24' W. It was photographed aerially and triangulated by FIDASE in 1956. The correct coordinates appear on a British chart of 1961, and in the 1977 British gazetteer. The Argentine gazetteer of 1970 accepted the name Isla Pequeña, and the Chilean gazetteer of 1974 accepted Isla Small. There is a small island off the NW end of the island, called Gulch Island, and these two islands have, over the years, been seen collectively named; on Friederichsen's 1895 map they appear as Small Inseln, and on a 1961 Chilean chart as Islas Small. However, *see also* **Gulch Island**.

Small Razorback Island *see* **Little Razorback Island**

Small Rock. 60°43' S, 45°36' W. A small rock, awash, 330 m NE of Berntsen Point, in the entrance to Borge Bay, on the E side of Signy Island, in the South Orkneys. Surveyed by the Discovery Investigations in 1927, and named descriptively by them. It appears on their charts of 1929 and 1933. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer.

Smalryggen. 72°25' S, 27°34' E. A nunatak at the E side of the upper part of Byrdbreen, in the easternmost portion of the Sør Rondane Mountains. Named by the Norwegians (name means "the narrow ridge").

Mount Smart. 75°16' S, 70°14' W. A mountain, rising to about 1500 m, 6 km SW of Mount Ballard, in the SW part of the Sweeney Mountains, on the Orville Coast of Ellsworth Land. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Robert G. Smart (b. Sept. 1, 1930. d. Feb. 17, 2008, Green Cove Springs, Fla.), who wintered-over as cook at Eights Station in 1965. UK-APC accepted the name on Dec. 20, 1974.

Smart, Robert Arthur "Robin." b. April 29, 1914, Aberdeen. He graduated from Aberdeen University in 1936, in medicine, joined the RAMC, fought in World War II in Palestine, Egypt, the Western Desert, Ethiopia, and Europe, being deputy assistant director of medical services in the Middle East, 1942-44. In 1948 he was an instructor at the Army School of Hygiene, and between 1948 and 1950 was in Ottawa, with the Army Liaison Office, spending some time in the Arctic. He was in Africa in the 1950s, as an army health director, and, as a temporary colonel, was leader of the 2nd part (1956-58) of the British Royal Society Expedition, to Antarctica, and as such (and as medical officer), wintered-over at Halley Bay in 1957. He was succeeded at Halley leader for the final season of the expedition by Joe MacDowall. Colonel Smart, after his part in the expedition, left Las Palmas on the *City of Port Elizabeth*, and returned to Plymouth on Feb. 20, 1958. He continued his

army career as a medical director, and retired in 1972, as a major general. He died in 1986.

Småskeidet. 71°52' S, 10°32' E. The glacier W of Mørkenatten Peak, in Småskeidrista, in the Shcherbakov Range, in the easternmost part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians.

Småskeidrista. 71°48' S, 10°30' E. A mountain area W of the glacier the Norwegians call Somoveken, between the Orvin Mountains and the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians, in association with Småskeidet.

Småsponen *see* **Småsponen Nunatak**

Småsponen Nunatak. 72°00' S, 3°55' E. Just NW of Storsponen Nunatak, at the N side of Mount Hochlin, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Småsponen ("the little chip"), in association with Storpsonen ("the big chip"). US-ACAN accepted the name Småsponen Nunatak in 1967. The Russians call it Gora Parus.

Småtind *see* **Småtind Peak**

Småtind Peak. 72°33' S, 2°57' W. A small peak close SE of Fasettfjellet, near the NE end of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Småtind (i.e., "the small peak"). US-ACAN accepted the name Småtind Peak in 1966.

Småtufsane. 72°21' S, 24°44' E. A group of small nunataks S of a similar group called Tufsane, in the south-central part of the Sør Rondane Mountains. Named by the Norwegians ("små" means "small," and "tufsane" means "the insignificant ones").

Smedley, Frank Albert. Chief cook on the *Discovery II*, 1934-39.

Cerro Smellie. 62°39' S, 61°09' W. A hill, rising to 46 m above sea level, standing on, and dominating, Point Smellie, Livingston Island, in the South Shetlands. Named by the Spanish in association with the point.

Point Smellie. 62°39' S, 61°09' W. A small, steep-sided headland, extending out from President Beaches, on the SW coast of Byers Peninsula, Livingston Island, in the South Shetlands. It is dominated by a hill that stands on it, the hill having been named Cerro Smellie. Named by UK-APC on Feb. 7, 1978, for John Smellie (q.v.), who took part in BAS field investigations here in 1975-76. It appears in the 1980 British gazetteer.

Smellie, John Laidlaw. b. May 12, 1953. Geologist who joined BAS on July 1, 1974, and worked on geological mapping of the South Shetlands and in the Antarctic Peninsula between Jan. and April 1975, from the *John Biscoe*, and again between Nov. 1975 and Feb. 1976, this time at Faraday Station. He left FIDS in May 1979, but re-joined on Oct. 1, 1983, on secondment from the Institute of Geological Sciences, where he was working then. From Nov. 1983 to Jan. 1984 he was on a boat survey in the western part of Graham Land, and from Nov. 1984 to Jan. 1985 was in the northern part of Trinity Peninsula. On June 1, 1986 he went to work for BAS permanently, and became senior vulcanologist and project leader within the geological sciences division. He took part in 17 summer programs in Antarctica, including 5 international projects to Marie Byrd Land and the Ross Dependency.

Smellie Peak. 63°56' S, 57°55' W. An isolated, triangular peak, rising to about 695 m, with a conspicuous, deep-red pyroclastic unit on its N face, 2 km NE of Stickle Ridge, and 2.8 km S of San José Pass, on James Ross Island. Named by UK-APC on Nov. 15, 2006, for John Smellie.

Gora Smelyh. 70°41' S, 67°04' E. A nunatak just NE of Francey Hill, in the Aramis Range of the Prince Charles Mountains . Named by the Russians.

Ostrov Smelyh *see* **Smelykh Island**

Smelykh Island. 66°06' S, 101°04' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Smelyh. ANCA translated the name on April 29, 1994.

Mount Smethurst. 66°50' S, 52°36' E. A prominent mountain, 3 km SSW of Church Nunataks, 5 km NW of Mount Torckler, and 47 km SW of Stor Hånakken Mountain, in Enderby Land. Plotted by Australian cartographers from 1957 ANARE air photos. Named by ANCA for Capt. Neville Robert "Nev" Smethurst (later a major general) (b. Sept. 20, 1935), Australian Army, officer-in-charge of Wilkes Station in 1961. US-ACAN accepted the name in 1965.

Isla Smiggers *see* **Smiggers Island**

Smiggers Island. 65°27' S, 65°21' W. An island, 1.5 km SE of Weller Island, E of Johannessen Harbor, in the Pitt Islands, in the Biscoe Islands. Mapped by FIDS cartographers from 1956 air photos taken by FIDASE. Named by UK-APC on July 7, 1959, for the Dickens character in *Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The Argentines call it Isla Smiggers.

Cape Smiley *see* **Smyley Island**

Smin Peak. 63°38' S, 58°19' W. A partly ice-free peak rising to 850 m, in the SE foothills of the Louis Philippe Plateau, 2.69 km S by W of Hochstetter Peak, 10.06 km WNW of Levassor Nunatak, 3.87 km N of Chochoveni Nunatak, and 6.61 km NE of Drenta Bluff, it surmounts Cugnot Ice Piedmont to the E and S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Smin, in northeastern Bulgaria.

Smirnenski Point. 62°22' S, 59°23' W. A point, 1.2 km NW of Perelik Point, on the E coast of Robert Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for Bulgarian poet Hristo Smirnenski (1898-1923).

Smirnov Peak. 71°43' S, 10°38' E. A sharp peak, rising to 2105 m, it is the northernmost peak in the mountain area the Norwegians call Småskeidrista, 4 km S of Ristkalvane Nunataks, in the northern Shcherbakov Range, in the E part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the USSR in 1966, as Pik Smirnova, for Aleksandr A. Smirnov, a member of the mapping expedition. US-ACAN accepted the name Smirnov Peak in 1970. The Norwegians call it Smirnovtinden.

Mys Smirnova. 66°32' S, 127°10' E. A cape named by the Russians. Its coordinates, as given by the Russians, place it SW of Cape Spieden, on the Banzare Coast, but, as many (if not most) of the Russian coordinates in Antarctica are at (sometimes wild) variance with those of other nations, this cape may well be Cape Spieden.

Pik Smirnova *see* **Smirnov Peak**

Smirnovtinden *see* **Smirnov Peak**

Smitch Point. 75°04' S, 163°45' E. Due N of Relief Inlet, at Terra Nova Bay, in Victoria Land. It appears in the NZ gazeetteer, but is rather mysterious.

The *Smith*. Whale catcher in Antarctic waters in 1924-25. That season it was the *Smith* that found the stricken whale catcher *Ross*.

Cabo Smith *see* **Delyan Point**, [1]**Cape Smith**

[1]**Cape Smith**. 62°52' S, 62°18' W. The northernmost point on Smith Island, in the South Shetlands. Discovered and roughly charted by William Smith, on the *Williams*, in Oct. 1819, and named by him and for him (he discovered the South Shetlands). It appears on his 1819 chart as Smith's Cape, as it does on Foster's chart of 1820, and also on a British chart of 1822. Weddell's chart, published in 1825, has the name Smiths Cape applied to a cape to the W of this one. However, the one named by Weddell does not exist. The real Cape Smith appears on Weddell's chart as South Cape. The 1829 chart prepared by Foster and Kendall in 1829, during the *Chanticleer* Expedition of 1828-31, has it as Cape Christi, or Cape Christie (*see* **Mount Christi**). On a British chart of 1839 it appears as Smith Cape. In Vincendon-Dumoulin's 1847 atlas it appears as Cap Smyth, and, consequently, on an 1861 Spanish chart as Cabo Smyth. It appears as Cape Smith on a U.S. Hydrographic Office chart of 1894, as well as on a British chart of 1901. On an Argentine map of 1908 it appears as Cabo Smith. It is Cape Smith on a British chart of 1937, but plotted in 62°51' S, 62°20' W. ArgAE 1947-48 surveyed it, and named it Cabo Granville, for the *Granville*. It appears as such on their 1948 chart, and was the name accepted by the 1970 Argentine gazetteer (with the coordinates 62°55' S, 62°16' W). However, on a 1948 Argentine chart Cabo Smith appears, but refers to a point 3 km to the W (this point was later named Delyan Point by the Bulgarians). This situation was picked up by the 1970 Argentine

gazetteer. So, in effect, the Argentines recognize both Cabo Smith and Cabo Granville, but as 2 separate features. Charted by an RN Hydrographic Survey unit on the *John Biscoe*, in 1951-52, and the coordinates corrected. US-ACAN accepted the name Cape Smith (and the new coordinates) in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. The Chilean gazetteer of 1974 accepted the name Cabo Smith (with the same coordinates the Argentines have for their Cabo Granville). Last plotted by the UK, in late 2008.

[2]**Cape Smith** *see* **Cape Irwyn**

Ensenada Smith *see* [1]**Smith Inlet**

Isla Smith *see* [2]**Smith Island**

Lake Smith *see* **Smith Lake**

[1]**Mount Smith** *see* **Mount Christi**

[2]**Mount Smith**. 76°03' S, 161°42' E. Rising to over 1400 m, N of Mawson Glacier, 11 km NNW of Mount Murray, in Victoria Land. Discovered by BNAE 1901-04, and named by Scott as Smith Mountains, for William Edward "W.E." Smith (b. April 4, 1850, Portsmouth. d. Sept. 16, 1930, Herne Bay, Kent; knighted in 1911). He began work at the age of 11, in the rope-house at Portsmouth Dockyard, apprenticed as a shipwright, joined the Royal Corps of Naval Constructors, and wound up as a chief constructor to the Admiralty. He designed and supervised the building of the *Discovery*. Later re-defined as a single mountain. US-ACAN accepted the name in 1949.

Península Smith *see* **Smith Peninsula**

Punta Smith *see* **Smith Point**

Smith. Unknown first name. 2nd mate on the *Huntress*, 1820-21. He was probably one of the first to make a landing on the Antarctic continent (*see* **Landings**).

Smith, Capt. Skipper and co-owner of the *Parana*, in South Shetlands waters in 1853-54 and 1854-55, and (perhaps in 1855-56). On his return to Sag Harbor, he took over command of the schooner *Susan*, taking her to the South Shetlands for the 1856-57 season, and perhaps also for the 1857-58 season.

Smith, Alan "Big Al." b. Aug. 11, 1935, Leeds. He left school at 14, did a 7-year apprenticeship in joinery, and, after further education, became a building inspector at the age of 28. In 1961 in Hunslett, Leeds, he married Kathleen Price, but even before that, he had started to apply for FIDS. 6 foot 3 and stocky, a rugby player, a mountain climber (he already had the Matterhorn and Mont Blanc to his credit; Everest remained forever elusive, however), and the fact that he had always had the dream of going to Antarctica, made him a sure bet for FIDS, but it took several annual applications before the interviewing board of Vivien Fuchs, Eric Salmon, and Bill Sloman finally took him on, in 1966 (FIDS had become BAS by that stage). He left Southampton on the *John Biscoe* that year, spent some time assisting geologists at Base F, then took the *Perla Dan* to Halley Bay Station, where he wintered-over in 1967 as BAS general assistant, builder, and project officer. Between 1967 and 1992 he spent a further 114 months at Antarctic bases (28 summers), on various building missions, including the re-building of Halley. He was called Big Al because there were two other Alans at Halley in 1967 — Mad Al Johnston and Alan "Dad" Etchells. From 1968 to 1970 he was working in the Aldabra Islands (a far cry from Antarctica), and in the 1970s began full-time with BAS as projects officer, designing and procuring Antarctic stations, as head of the building services program. He retired in 1994, left Cambridge, and moved to North Yorkshire.

Smith, Alan Arthur. b. Jul 8, 1930, Nottingham, son of carpenter Arthur Smith and his wife Gladys. He left school in 1948, and did his national service in the RAF from Oct. 1948 to May 1950. He joined the UK weather service, trained in London, and went to work in Caithness. He joined FIDS as a meteorologist, flew from London to Montevideo in Sept. 1953, then by Argentine whaling supply ship to South Georgia, which he left in Dec. 1953, bound for the Falkland Islands. He left there in Jan. 1954, on the *John Biscoe*, for Signy Island Station, where he wintered-over in 1954. He left Signy for the Falklands on April 12, 1955, and then worked at the Met Office in Port Stanley until August, when he sailed on the *Alcantara*, bound for Southampton, where he arrived on Sept. 19, 1955. After a brief stint back at the UK weather service, he quit to become a cinema manager. He moved to Australia in Dec. 1957, and went to work for the Meterological Bureau, in Adelaide, Alice Springs, Maralinga (atom bombs), and Willis Island (in the Coral Sea). In June 1959, in South Australia, he married Joyce Ruzius, who was also from Nottingham. He became a technical instructor in the Central Training School in Melbourne, and in Jan. 1971 moved to Australia Post head office, where he worked in human resources until he retired in July 1988, to Mulgrave, Vic. He continued his education through university, and has written a memoir of his year in Antarctica, "A Working Holiday," lodged with BAS.

Smith, Alexander, Jr. b. 1884, Aberdeen. He apprenticed as an engineer, but was carpenter's mate on the *Terra Nova*, during the 1903-04 relief of BNAE 1901-04. Son of the carpenter aboard, Alexander Smith, Sr.

Smith, Alexander, Sr. b. 1848, Aberdeen. On June 28, 1872, he married Mary Ann Scott in Aberdeen. Carpenter on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04. Father of Alexander Smith, Jr.

Smith, Alexander John. b. Dec. 21, 1812, Greenwich, son of Lord Henry Smith ("Lord" was his name, not a title"), of Cottingham, Yorks, and his wife Mary Jane Voase, of Hull. He entered the RN on Dec. 18, 1826, as a midshipman on the *Thetis*, on the South American station, and then served on the *Harrier*, in the East Indies, putting down piracy. He gained his mate's certificate in Aug. 1835, and in December of that year became 2nd officer on the *Cove*, and was in the Arctic, under Sir James Clark Ross, and then 1st officer on the *Erebus*, during RossAE 1839-43, being promoted to lieutenant on Aug. 16, 1841. In Sept. 1843 the expedition arrived back in England, and in 1844 Smith was appointed head of the observatory at Hobart, and as soon as he got there he married Sarah Aubrey Read, on Oct. 12, 1844, at Newtown. In 1853 he was sent to Castlemaine, Victoria, as gold commissioner in the newly-discovered goldfields, and was twice elected to represent that town in the Victorian parliament. He died on Sept. 7, 1872, at his son-in-law's house, in Sandhurst, Vic., and was buried in Castlemaine. Among his children was a daughter who died as late as 1946.

Smith, Andrew James "Andy." b. July 3, 1945, Birmingham, but raised in nearby Sutton Coldfield, son of engineer Albert Thomas Smith and his wife Joan Elizabeth Price. All of his tertiary education was at Oxford, where he got his PhD in theoretical solid state physics. He joined BAS as a geophysicist, went to Antarctica on the *Bransfield* in Jan. 1971, and wintered-over at Halley Bay Station in 1971 and 1972, the second time as base commander. He returned to the UK in March 1973, on the same ship. He was back at Halley for the summers of 1976-77 and 1982-83 (coming in on the *Polarstern*). In 1984 he married Rosemary Perkins, and was back at Halley in 1986-87, at Faraday Station in 1989-90, then back at Halley for the summers of 1991-92, 1994-95, and 1998-99 (came in by air via Rothera Station). He was at the Australians' Casey Station in 2001-02, and then back at Halley for 2002-03 and 2004-05. He retired from BAS in 2005, and is reponsible for a phenomenally good web page on Halley.

Smith, Andrew Mark. BAS glacier geophysicist, and noted mountain climber. He spent several summers at Rothera Station between 1983 and 1987, then 1987-88 at Halley Bay Station, then several more summer months at Rothera between 1987 and 1992.

Smith, C.E. An officer of the Royal Mail Steamship Company. 2nd engineer on the *Quest*, 1921-22.

Smith, Charles "Charlie." b. Oct. 13, 1911. Cook at Base B during the summer of 1943-44, and again in the winter of 1944, then the summer of 1944-45, all during Operation Tabarin. He was then FIDS cook at the same base in the winter of 1945. He died in March 1985, in Chatham, Kent.

Smith, Cyril Martin. Known as Martin. b. Feb. 13, 1935, Middlesbrough, nephew of concert pianist Cyril Smith. He joined FIDS in 1957, as a meteorologist, and wintered over at Base F in 1958 and 1959, with his piano. He returned to the UK in 1960, and while a post-grad student at Imperial College, London, went on an expedition to the Arctic, and was drowned when their boat capsized off the coast of Jan Mayen Island, in the Arctic, early in the morning of June 25, 1961.

Smith, David *see* **USEE 1838-42**

Smith, David M. *see* **USEE 1838-42**

Smith, Dean Cullom "Babe." b. Sept. 27, 1889, Cove, Oreg. He was a flyer during World War I, and a pioneer pilot in the mail service,

which he had joined in 1920, being one of the 32 who opened the mail line between New York and Cleveland, and was pilot on the Antarctic shore party of ByrdAE 1928-30, the biggest man on the expedition. After the expedition he continued to set air mail flight records. On Jan. 3, 1931 he married Elizabeth Schuyler, at Harrison, NY, and died on March 4, 1987, in Maryland.

Smith, Dorothy. b. 1918. One of the mountain climbers on David Lewis's 1977-78 *Solo* expedition. She was back again with Smith on the *Dick Smith Explorer* expedition of 1981-82.

Smith, Frederick Peter "Pete." b. Manchester. He joined FIDS in 1959, as a meteorologist, and wintered-over at Base F in 1960 and 1961.

Smith, Frank *see* **USEE 1838-42**

Smith, Geoff "Abdul." He joined BAS in 1966, as an electrician, and wintered-over three successive years at Halley Bay Station—1967, 1968, and 1969. He also wintered-over at South Georgia in 1972 and 1973.

Smith, Geoffrey Denys Probyn. b. Oct. 31, 1920. Innovative carpenter at Mawson Station in 1961. He also became a dog expert, and led some notable sledging trips. He died in 1991.

Smith, Ian Flavell *see under* **Flavell-Smith**

Smith, George *see* **USEE 1838-42**

Smith, Graham K. Technical officer who wintered-over at Casey Station in 1978 and 1981, at Davis Station in 1994, and at Casey again in 1996.

Smith, Harold "Smudger." b. April 15, 1926, Hull, Yorks, but raised in Marsden, near Huddersfield, and later Blackpool, son of Edmund "Eddie" Smith and his wife Elsie Beardsall (who was part of her family's catering business in Huddersfield). Harold was working in the biology department at Oxford University when he joined FIDS in 1952, as a meteorologist, and wintered-over at Base F in 1953. His project was Weddell seal skins, but there were not enough of the seals at Base F, so he transferred, for the winter of 1954, to Signy Island Station, where he was also base leader. In 1969, at Amounderness, he married Joan M.M. Sayner, sister of a friend of his. He worked at Preston Polytechnic, as senior technician in the biology lab, and died on Nov. 3, 1999, in Hambleton, Lancs.

Smith, Hendrick *see* **USEE 1838-42**

Smith, Isaac. He was on Cook's voyage of 1772-75. He later became lieutenant on the *Weasel*.

[1]**Smith, James** *see* **USEE 1838-42**

[2]**Smith, James** *see* **USEE 1838-42**

Smith, James "Jim." b. 1875, Dundee. Able seaman and carpenter's mate on the *Scotia* during ScotNAE 1902-04. He lived at 1 Middle Street, Dundee.

Smith, James Muir "Jim." The name is sometimes seen (erroneously) as James Muir-Smith. There is no hyphen. Muir is is middle name, pure and simple. He joined FIDS in 1956, as an ionosphere physicist, and wintered-over at Port Lockroy Station in 1957 and 1958, the second year also as base leader. He later lived in Beachamwell, Norfolk.

Smith, James Terence "Jimmy." b. Jan. 3, 1927, Stanley, Falkland Islands, son of Scottish-born stoker (also cook, laborer, shepherd) James Archibald Smith (he worked on the whaler *Falkland*) and his wife Edivie Lena Anderson. In 1941 he began a five-year stint with the agricultural department (his first job there was as a messenger), and in 1946 he answered an ad for FIDS, interviewed with Miles Clifford, the governor of the Falklands, and then with John Huckle, and then with the governor and Huckle together. He was taken on as handyman. He boarded the *Fitzroy* at Port Stanley, along with Dave Jones, Frank Buse, and Pat Biggs. He went to Laurie Island first, in Jan. 1947, to help unload stores, then on to Signy Island, then on to Base G and then Base B, then on to Port Lockroy, where he summered at the moribund Port Lockroy Station in early 1947, with John Huckle. He did the cooking. Then he moved on to winter-over at Base D in 1947 (he was there for 14 months). He left Antarctica in March 1948. He was later on the *John Biscoe* for 2½ seasons, and subsequently worked at various jobs in the Falklands. In 1952 he married Freda Evelyn Hansen, and in 1955-57 was working at Leith Harbour, in South Georgia. He then joined the *Shackleton*, and subsequently the *Bransfield*, and in the 1960s and 1970s was based out of Britain for 20 years. In 1971 he returned to Antarctica on the *Bransfield*. He returned to the Falklands at the time of the war with Argentina, and with his brother Owen bought a small boat and carried tourists and cargo around the Falklands. He now lives in Stanley.

[1]**Smith, John** *see* **USEE 1838-42**

[2]**Smith, John** *see* **USEE 1838-42**

[3]**Smith, John** *see* **USEE 1838-42**

[4]**Smith, John** *see* **USEE 1838-42**

Smith, John "Shetland Johnny." b. 1881, Lerwick, Shetland Islands, Scotland. Ordinary seaman on the *Scotia* during ScotNAE 1902-04.

Smith, John Appleton. b. June 7, 1927, Tynemouth, son of James F. Smith and his wife Elizabeth E. Appleton. Meteorologist with the Met Office, who wintered-over at Halley Bay Station, first in 1958, with the 3rd part (i.e., 1957-59) of the British Royal Society Expedition, and again in 1959 with FIDS. After the expedition he left Cape Town on the *Athlone Castle*, arriving back in Southampton on March 18, 1960.

Smith, John Edward. b. 1924, Birmingham. Known by himself (ironically) as "Smith the Good Looking," and is still remembered by that name. He joined FIDS in 1953, as a diesel electric mechanic (one of the most inspired) who wintered-over at Base B in 1954, and at Port Lockroy Station in 1955. After Antarctica he and Bob Whittock were going to go on a tour of South America for a while before returning to England, but bureaucracy got in the way, and they left Port Lockroy, along with Bernard Taylor, on the *Shackleton* on Feb. 27, 1956. He joined Decca Navigating Company, and worked on engineering jobs all over the world, then came back to the UK to work for British Gas. In the mid-1960s he decided to go to university (Leicester), then to Wolverhampton College, got his teaching certificate, and became a teacher at Birmingham Polytechnic.

Smith, John Michael "Mike." FIDS meteorological assistant and general assistant who wintered-over at Base D in 1960, 1961, and 1963. He moved to Spain.

Smith, John Philip. b. March 3, 1934, Blackheath, London, son of draper Harold Smith and his wife Ena. He left school at 16, went to art school for 2 years, and then did his national service for 2 years in the RAF. He worked for a year in forestry, then saw an ad in the *News Chronicle* for FIDS, and in Oct. 1955 set out from Southampton in the *John Biscoe*, for Montevideo, Port Stanley, and then to South Georgia, before arriving in Antarctica. The ship stopped at Signy Island Station, then Base D, and finally Base B, where he wintered-over as meteorological assistant in 1956, and at Base W in 1957. Back in the UK he and John Thorne were about to go to northern Iraq as snow surveyors when their trip was canceled due to a revolt in that country, and instead Smith went into teaching, and married Frances Macpherson in 1960. Then he headed down on the new *John Biscoe*, to Adelaide Island, and was flown in from there to Fossil Bluff Station, where he wintered-over in 1961. Then back to teaching in England, not only in schools but in prisons too, and he retired in 1998.

Smith, Moses J. *see* **USEE 1838-42**

Smith, Philip Meek "Phil." b. May 18, 1932, Springfield, Ohio, son of iron worker Clarence Mitchell Smith and his wife Lois Ellen Meek. In 1950, he went to Ohio State University, finally leaving in 1955, as a geologist with a masters degree, and a focus on the Arctic. As an Army lieutenant, he developed crevasse-crossing techniques in Greenland, and, in Antarctica, his skills (and his crevasse detector) were vital in establishing the trail from Little America to the new Byrd Station in 1956-57. He left Antarctica on the *Curtiss*, but was back the following season, 1957-58, during OpDF III, on the Ross Ice Shelf. He later lived in Santa Fe, NM.

Smith, Ralph W. Assistant pilot on the *Jacob Ruppert*, during ByrdAE 1933-35. He fell into a crevasse, aggravating an old spinal injury, and this incapacitated him for a while. After the expedition, he became personal piot to James Middleton Cox, the Ohio newspaper publisher who had once run for president. Smith was also a champion trapshooter. He lived in Vandalia and Frederickstown.

Smith, Stanley Roy. b. 1900, 26 Eyre St., Roath, Cardiff, son of bread baker William Smith and his wife Lillian Elver. He joined the Merchant Navy as a fireman. On Jan. 3, 1929, in London, he signed on to the *Port Adelaide*, for her trip to New York, and made it back to England in time to join the *Discovery* for the first half of BANZARE 1929-31. After his part in the expedition, he took the *Bendigo* out of Melbourne, arriving in London on June 25, 1930.

Smith, T. Fireman on the *Aurora*, 1917, during BITE 1914-17.

Smith, Thomas George. He joined the U.S.

Navy and was a machinist's mate 1st class on the *Bear*, during USAS 1939–41.

Smith, Walter Henry "Smitty." b. Sept. 26, 1923, St. Louis, Mo. Ex-Coast Guard. Navigator and 2nd mate on the *Port of Beaumont, Texas*, during RARE 1947–48. He also acted as trail man. In 1956 he moved from Hampton, Va., to Tampa, and started Acme Glass and Mirror. He died in Tampa on May 14, 2007.

[1]**Smith, William**. b. Oct. 11, 1790, Seaton Sluice, Northumberland, but raised in nearby Bedlington and Blythe, son of joiner William Smith and his wife Mary Sharp. In a way the most important man in Antarctic history, he was skippering the sealer *Williams* on a commercial trip from Buenos Aires around Patagonia to Valparaíso (this is known as Smith's 1st voyage) when he got blown off course in the Drake Passage, and sighted the South Shetlands, on Feb. 19, 1819. He made two sightings on the same day, in 62°40' S, 60°00' W, and named the land New South Britain. He was not believed when he arrived at Chile. He tried returning to prove it in June 1819, got as far south as 61°12' S on June 15, 1819, but was too far to the west to see the islands again. This is known as Smith's 2nd voyage. He then returned to Montevideo. On Oct. 14, 1819, he returned to the South Shetlands (Smith's 3rd voyage), and on Oct. 16, 1819 he landed near North Foreland, on King George Island, and took possession of the islands for Britain. This is the first recorded landfall made south of 60°S. He explored the islands, and partially surveyed them, and re-named them New South Shetland (a name that stuck until about 1822). These sightings were believed, and started a seal rush. The Navy placed Bransfield in charge of the *Williams*, and, with Smith as pilot, the ship returned to the area for the 1819–20 season. This is Smith's 4th voyage. On Jan. 30, 1820, Smith and Bransfield were perhaps the first to sight the actual Antarctic continent, when they saw the peaks of Trinity Land (although, *see* **von Bellingshausen** and **Palmer**). Smith was in the South Shetlands again for the 1820–21 season (Smith's 5th voyage), as leader of an expedition which consisted of himself skippering the *Williams*, and another vessel. He took a reported 60,000 fur seal skins, which sounds excessive. He arrived back in London on Sept. 17, 1821, after a most eventful three years, and died in 1847. There was another William Smith, skipper of the London sealer *Norfolk*, in at South Georgia in the 1820–21 season. This is not the same man.

[2]**Smith, William** *see* **USEE 1838–42**

[3]**Smith, William** *see* **USEE 1838–42**

[4]**Smith, William** *see* **USEE 1838–42**

[5]**Smith, William**. 2nd engineer on the *Terra Nova* during the 1903–04 relief of BNAE 1901–04.

[6]**Smith, William "Bill."** 2nd steward on the *Scotia* during ScotNAE 1902–04. He and Mossman stayed on after the expedition, to man Órcadas Station with three Argentines. He lived at 2 Matthew St., Dundee.

Smith, William G. Of Providence, R.I. Crewman on the *Bear of Oakland* during ByrdAE 1933–35.

Smith, William J. *see* **USEE 1838–42**

Smith Bay *see* [1]**Smith Inlet**

Smith Bluff. 82°05' S, 162°20' E. A steep, rounded bluff overlooking Algie Glacier, to the W of Ricker Dome, on the W side of the Nash Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Harold Theodore Uhr "H.T.U." Smith (b. July 4, 1908, Castle Shannon, Pa.), of the University of Massachusetts (and formerly with USGS), USARP geologist at McMurdo, 1963–64.

Smith Bluffs. 72°32' S, 94°56' W. A line of ice-covered bluffs with many rock exposures, it marks the N side of Dustin Island, and the S limit of Seraph Bay. Discovered aerially in 1960 by helicopters on the USN Bellingshausen Sea Expedition of that month. Named by US-ACAN in 1960, for Lt. Philip Meek "Phil" Smith (b. May 18, 1932, Springfield, O.), NSF official and USARP representative on this expedition (*see also* **Smith Glacier**). He was many times in Antarctica between 1956 and 1961. In 1956–1957 he headed the team that filled in crevasses for the tractor train that went out to establish Byrd Station. In 1957–58 he conducted research into ice deformation on the Ross Ice Shelf. In 1958–59 he helped conduct IGY programs at McMurdo.

Smith Cliff. 71°59' S, 100°08' W. A rock cliff midway along the ice-covered N shore of Tinglof Peninsula, on Thurston Island. Named by US-ACAN in 2003, for Aviation radioman William F. Smith, air crewman in the Eastern Group of OpHJ 1946–47.

Smith Estrada, Enrique de los Sagrados Corazones. Argentine Air Force aviator and first lieutenant, who led the 1950 wintering-over party at Órcadas Station.

Smith Glacier. 75°03' S, 111°12' W. A low-gradient glacier, over 150 km long, it flows ENE from Toney Mountain to the Amundsen Sea. A northern distributary, Kohler Glacier, flows to the Dotson Ice Shelf, but the main flow of the Smith passes to the sea between Bear Peninsula and Mount Murphy, terminating at the Crosson Ice Shelf. Named by US-ACAN in 1967, for Phil Smith (*see* **Smith Bluffs**).

Smith Heights. 79°52' S, 157°07' E. The highest part of the jumble of peaks between Kennett Ridge and Junction Spur, in the E part of the Darwin Mountains. Mapped by VUWAE 1962–63, and named by them for chemist G.J. Smith, of Wairoa, a member of the expedition. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1968.

[1]**Smith Inlet**. 70°24' S, 62°05' W. A Larsen Ice Shelf inlet indenting for about 24 km the E coast of the Antarctic Peninsula, between the Wilkins Coast and the Black Coast, or, more specifically, between Cape Boggs and Cape Collier. In 1939, it was erroneously mapped as Stefansson Inlet, this error coming about from a misinterpretation of the map drawn up by U.S. cartographer W.L.G. Joerg in 1936–37. Discovered, surveyed, and charted in Nov.–Dec. 1940, during USAS 1939–41, and, from the results of this expedition, the error was later discovered. However, still, on Ronne's map of 1945 it appears as Stefanson Inlet (sic). There are 1948 Argentine references to it as Ensenada Clemencia. It was photographed aerially by RARE 1947–48, and surveyed from the ground that same season by a combined sledging team of RARE personnel and Fids from Base E. Named by Ronne as Smith Bay, for Rear Admiral Edward Hanson Smith (1889–1961), U.S. Coast Guard, oceanographer, Arctic explorer of the 1920s, and later (1950–56) director of the Woods Hole Oceanographic Institute. He assisted Ronne's expedition. It appears as such on Ronne's 1949 map as Smith Bay, and on an Argentine chart of 1952 as Bahía Smith. On Jan. 28, 1953, UK-APC accepted the name Smith Inlet, and US-ACAN followed suit that year. It appears as such on a 1954 British chart. In the 1955 British gazetteer it appears as Smith Inlet, but plotted in 71°31' S, 61°59' W (which was an error, later corrected). It appears on a 1957 Argentine chart as Ensenada Smith, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (after the Chileans had rejected the proposed name Estrecho Stefansson). It was re-photographed aerially in 1966, by USN.

[2]**Smith Inlet**. 70°59' S, 167°52' E. Also spelled (erroneously) as Smyth Inlet. A bay, 6 km wide, and partially filled with the ice tongue of Barnett Glacier, between Cape Moore and Cape Oakeley, along the coast of nothern Victoria Land. Discovered by Ross in 1841, and named by him on Feb. 21, 1841, for Alexander Smith (q.v.), 1st officer on the *Erebus*. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

[1]**Smith Island** *see* **Zed Islands**

[2]**Smith Island**. 62°59' S, 62°31' W. Also called Smith's Island, Smith's Isle, Île Smyth, James Island, and Borodino Island. About 72 km W of Deception Island, it is the most southwesterly of the South Shetlands, but separated by Boyd Strait from (to the NE) Snow Hill Island and the majority of the group. It is 29 km long and 8 km wide at its greatest extent. Its highest peaks are Mount Foster and Mount Pisgah. In Oct. 1819, William Smith was here, at Cape Smith, in the *Williams*, and he roughly charted that cape. It was sighted again on Jan. 18, 1820, by the *Hersilia*, and named Mount Pisgah Island by Capt. Sheffield in 1820, in association with the mountain. Weddell made a landing near Cape James, at about this time. It appears on a British chart of 1839, as Smith Island, plotted in 62°56' S, 62°28' W. By the time of the U.S. Civil War (1861–65), everyone was calling it Smith Island, in honor of William Smith, the above mentioned discoverer of the South Shetlands. US-ACAN accepted the name in 1947, with the corrected coordinates of 63°00' S, 62°30' W, and UK-APC followed suit on Sept. 8, 1953. Both the Chileans and the Argentines call it Isla Smith. Last plotted by the UK, in late 2008.

Smith Islands. 66°18' S, 110°27' E. Two is-

lands (not individually named), close to Tracy Point (the W end of Beall Island), and hard by Denison Island and Beall Reefs, in the Windmill Islands. First mapped from aerial photos taken by OpHJ 1946–47 and OpW 1947–48, and named by US-ACAN in 1963, for aerographer's mate Roger E. Smith, USN, who wintered-over at Wilkes Station in 1958.

Smith Knob. 85°25' S, 87°15' W. A partly snow-covered knob (or rock peak), 1.5 km SSE of Mendenhall Peak, in the E part of the Thiel Mountains. Named by Bermel and Ford, leaders of the USGS Thiel Mountains Party here in 1960–61, for geologist George Otis Smith (1871–1944), 4th director of USGS, 1907–30. US-ACAN accepted the name in 1962.

Smith Lake. 66°07' S, 101°17' E. A small lake, 1.5 km long, occupying the E half of the rocky peninsula between Booth Peninsula and Countess Peninsula, in the NE part of the Bunger Hills. First mapped from air photos taken during OpHJ 1946–47. The name Smith Ridge was given by US-ACAN in 1956, to the peninsula on which the lake lies, named for Kenneth R. Smith, of Bellingham, Wash., radioman on David Bunger's flight over here during OpHJ 1946–47. However, in 1961, US-ACAN dropped that name, and reapplied Mr. Smith (so to speak) to the lake. ANCA accepted that situation on Oct. 22, 1968, but they use the name Lake Smith. If the old Smith Ridge has been renamed by another country, it is hard to determine which feature it might be.

Smith Mountains *see* **Mount Smith**

Smith Nunatak. 70°13' S, 64°35' E. Just SE of Mount Starlight, and just E of Mount Béchervaise, in the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. The nunatak is marked by a trail of moraine that extends about 3.5 km N from it. Plotted by Australian cartographers from 1965 ANARE air photos. Named by ANCA for James C. "Jim" Smith, diesel mechanic at Wilkes Station in 1960. US-ACAN accepted the name in 1971.

Smith Nunataks. 74°48' S, 73°06' W. Two nunataks close together, and rising to about 1450 m, 8 km NNE of Whitmill Nunatak, in the NW part of the Grossman Nunataks, E of the Lyon Nunataks, where Ellsworth Land meets southern Palmer Land. Surveyed from the ground by USGS in 1961–62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1988, for Thomas T. Smith, USGS cartographic technician, a member of the party on Byrd Glacier and Darwin Glacier, 1978–79 (the British say 1977–78). UK-APC accepted the name on Feb. 15, 1988.

Smith Peak. 72°10' S, 99°18' W. A prominent peak, SE of the head of Potaka Inlet, and 10 km ENE of Mount Hubbard, in the Walker Mountains of Thurston Island. Delineated from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1960, for Dean C. Smith. Originally plotted in 72°05' S, 99°28' W, it has since been replotted.

Smith Peaks. 67°57' S, 62°29' E. A group of peaks connected by a snow and rock ridge, close S of Mount Hordern, in the David Range of the Framnes Mountains. Photographed aerially by LCE 1936–37, and mapped (but not named) from these photos in 1946 by Norwegian cartographers. Re-mapped by Australian cartographers between 1957 and 1960, and named by ANCA on July 22, 1959, for Frank Aswell Smith (b. Jan. 23, 1920, Bendigo, Vic.), diesel mechanic who wintered-over at Mawson Station in 1958. He had served in both the RAAF and the RAF, in the Middle East and Italy, during World War II. Later, for about 11 years, he was editor of *Aurora*, the ANARE magazine. He made 17 Antarctic trips, mostly relief voyages. US-ACAN accepted the name in 1961.

Smith Peninsula. 74°27' S, 61°22' W. An ice-covered, "dog-legged" peninsula, about 40 km long and 16 km wide, extending in an easterly direction between Keller Inlet and Nantucket Inlet, and terminating in Cape Fiske, at the S end of the Lassiter Coast, on the E coast of Palmer Land. Photographed aerially in Dec. 1940, during USAS 1939–41. Re-photographed aerially on Nov. 21, 1947, during RARE 1947–48, and in Dec. 1947 it was surveyed from the ground by a joint sledging team of RARE personnel and Fids from Base E. In 1948, Finn Ronne gave the name Cape Smitty to the S entrance point of Nantucket Inlet, named after Walter H. Smith. It appears as such (in outline) on the 1948 American Geographical Society map, and also (as Cabo Smitty) on an Argentine chart of 1952. The name was later dropped, and Mr. Smith's name was transferred to the peninsula, as Smith Peninsula, a name accepted by UK-APC on Jan. 20, 1953, and by US-ACAN later that year. It appears as such on a British chart of 1954 and in the 1955 British gazetteer. In those days, it was plotted in 74°25' S, 61°15' W, but, after being re-photographed aerially by USN between 1965 and 1967, it appears with the corrected coordinates on the 1969 USGS sketch map of Ellsworth Land–Palmer Land. It appears on an Argentine chart of 1957 as Península Smith, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. For the complex history of the naming of two of the capes on this peninsula, viz. Cape Fiske and Cape Light, *see* **Cape Fiske**.

Smith Point. 64°49' S, 63°29' W. A small point, with snow-covered sides, 150 m NE of Besnard Point, and NE of Alice Creek, on the SE side of the harbor of Port Lockroy, Wiencke Island, in the Palmer Archipelago. Discovered by FrAE 1903–05. Surveyed in 1927 by the Discovery Investigations, it first seems to appear on their 1929 chart of that survey, and, although it may have been named by them, it may equally represent an earlier naming by whalers in the area. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on the ChilAE 1946–47 chart (of 1947) as Punta Smith, and that name was accepted by the 1974 Chilean gazetteer.

[1]**Smith Ridge** *see* **Smith Lake**

[2]**Smith Ridge**. 70°02' S, 72°50' E. A prominent ridge in the Mistichelli Hills, at the E margin of the Amery Ice Shelf. ANARE used it as a survey station in 1968, during a tellurometer traverse from the Larsemann Hills to the Reinbolt Hills. Named by ANCA on Oct. 22, 1968, for Ronald S. "Ron" Smith, geophysicist at Mawson Station in 1968, and a member of the survey. US-ACAN accepted the name in 1971.

[3]**Smith Ridge** *see* **Ghent Ridge**

[4]**Smith Ridge**. 79°07' S, 86°32' W. A ridge, 6 km long, 1.5 km W of Frazier Ridge, in the Founders Peaks of the Heritage Range. Named by the University of Minnesota Geological Party here in 1963–64, for Carl W. Smith, helicopter engine technical representative with the 62nd Transportation Detachment here that year. US-ACAN accepted the name in 1966.

Smith Rocks. 67°31' S, 63°01' E. A group of 9 small islands, or rocks, 0.8 km NE of the Canopus Islands, in the E part of Holme Bay, Mac. Robertson Land, about 11 km NE of Mawson Station. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers who named this feature Spjotøyholmane. Renamed by ANCA on Nov. 21, 1960, for Capt. Victor C.Y. "Vic" Smith, RAASC, dukw driver who took part in ANARE changeover operations at Mawson and Davis stations in 1958–59, and 1959–60. US-ACAN accepted the Australian naming in 1965.

Smiths Bench. 72°10' S, 163°08' E. A distinctive, bench-like elevation, 8 km NW of Mount Baldwin, in the Freyberg Mountains, in northern Victoria Land. Named by US-ACAN in 1964, for William M. Smith, psychologist on the U.S. Victoria Land Traverse Party of 1959–60. NZ-APC accepted the name.

Smiths Cape *see* **Cape Smith**, **Start Point**

Smiths Island *see* **Livingston Island**

Smith's Island *see* **Smith Island**, **Zed Islands**

Smiths Islands *see* **Zed Islands**

Mount Smithson. 84°59' S, 172°10' W. Rising to over 3000 m, along the N escarpment of the Prince Olav Mountains, 5 km E of Mount Sellery, between the heads of Krout Glacier and Harwell Glacier. Named by US-ACAN in 1966, for James Smithson (1764–1829), British mineralogist, chemist, and philanthropist, whose will funded the Smithsonian Institution in Washington, DC. Smithson's life is the stuff of 19th-century novels.

Smithson Glacier. 71°15' S, 163°52' E. A tributary glacier in the Bowers Mountains, draining the slopes near Mount Verhage, and flowing N along the W side of the Posey Range, to enter Graveson Glacier adjacent to Mount Draeger. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Scott B. Smithson, geologist at McMurdo, 1967–68.

Cabo Smitty *see* **Smith Peninsula**

Cape Smitty *see* **Smith Peninsula**

Smokinya Cove. 63°44' S, 58°16' W. A cove, 3.5 km wide, indenting the SE coast of Trinity Peninsula for 2.2 km N of Azimuth Hill.

Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the seaside locality of Smokinya, in southeasteren Bulgaria.

Smolensk Island *see* **Livingston Island**

Gora Smolenskaja *see* **Smolenskaya Mountain**

Smolenskajatoppen *see* **Smolenskaya Mountain**

Smolenskaya Mountain. 71°52' S, 12°21' E. A small mountain, rising to 2890 m, 4 km ESE of Mount Neustruyev, in the E part of the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the USSR in 1966 as Gora Smolenskaja, for the city of Smolensk. US-ACAN accepted the translated name in 1970. The Norwegians now call it Smolenskajatoppen.

Smolyan Point. 62°37' S, 60°26' W. A cape (or point) on the NW coast of South Bay, 3.57 km NW of Hespérides Point, and 1.92 km NE of Ereby Point, on Livingston Island, in the South Shetlands. This point, which only emerged in a recent glacial retreat, terminates in a rock 25 m wide and 4 m high, and has conspicuous radial crevasses spreading inland from it. Named by the Bulgarians on July 28, 1997, for the Bulgarian town of Smolyan.

Smoot Rock. 75°15' S, 135°24' W. An isolated rock, eastward of the head of Hull Glacier, and about 11 km ESE of Mount Steinfeld, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1969. Named by US-ACAN in 1974, for Henry T. Smoot, meteorologist at Byrd Station, 1969-70.

Smooth Island. 65°13' S, 64°16' W. The most northeasterly of the Forge Islands, in the Argentine Islands of the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Surveyed by Fids from the Argentine Islands station in 1960. Named by UK-APC on Aug. 31, 1962, for its smooth, ice-free surface, which is a useful navigational mark for vessel approaching Bloor Passage from the N. US-ACAN accepted the name later in 1962.

Smoothy, Francis Wallace. b. 1908, Milton, NZ. Crewman on the *Jacob Ruppert*, 1934-35, i.e., during the 2nd half of ByrdAE 1933-35. When the expedition arrived back in NY he and Cecil Melrose got stranded (*see* Melrose for details).

Smørstabben *see* **Smørstabben Nunatak**

Smørstabben Nunatak. 71°30' S, 10°52' E. An isolated nunatak, 16 km W of Eckhörner Peaks, W of the N part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Smørstabben. The word does means "the churnstaff" in Norwegian, but the reference is to the Smørstabb Massif in Norway. US-ACAN accepted the name Smørstabben Nunatak in 1970.

Smyadovo Cove. 62°37' S, 61°18' W. A cove, 500 m wide, indenting the W coast of Rugged Island for 850 m, off the W coast of Byers Peninsula (on Livingston Island), next S of Cape Sheffield, in the South Shetlands. The Smyadovo Islets lie within it. Mapped by the British in 1968, and by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for the town of Smyadovo, in northeastern Bulgaria.

Smyadovo Islets. 62°37' S, 61°18' W. A group of tiny islands occupying Smyadovo Cove, on the W coast of Rugged Island, in the South Shetlands. Named by the Bulgarians on Dec. 15, 2006, in association with the cove.

Cabo Smyley *see* **Smyley Island**

Cape Smyley *see* **Smyley Island**

Smyley, William Horton. b. 1792, Providence, RI. Sealing captain and one of the great sailors of his day. Wilkes spelled his name as Smiley, and therefore all subsequent writers did so until the middle of the 20th century. He first ventured down to the River Plate in 1808, and served with distinction under Admiral Brown (the famous Almirante Brown) during the Argentine War of Independence. He spent much time in the South Shetlands, first as captain of the *Sailor's Return*, in 1834-35 and 1836-37. A 3rd voyage left Newport, RI, in 1838, but the ship foundered off the coast of Africa, at Cape St. Roque. He was in the South Shetlands on the sealer *Benjamin de Wolf*, in 1839-40. His next trip was on the *Ohio*, 1841-42, during which, in Feb. 1842, he recovered Foster's thermometers from Deception Island. He wrote a short account of the harbor there. He also visited the Palmer Archipelago. He then bought the *Ohio* (he was part owner of at least 5 ships), which was subsequently wrecked off the South American coast in 1843. He also owned the *America*, which he was captain of, taking her (and her tender, the *Catherine*) down to the Falklands and the South Shetlands in the period 1845-47, in 1846 the *Catherine* being wrecked against an iceberg in the South Shetlands, when Smyley was aboard her. He last went sealing in 1849-50, and in 1850 became U.S. commercial agent in the Falkland Islands, dying in office on Feb. 13, 1868, of cholera, in Montevideo.

Smyley Island. 72°55' S, 78°00' W. An ice-covered island, about 63 km long, and between 13 and 33 km wide, just NE of Rydberg Peninsula, it forms the SW side of Ronne Entrance, on the English Coast, between Carroll Inlet and Stange Sound. It is almost wholly surrounded by an ice shelf, which makes it look as if the island is joined to Ellsworth Land. Smyley Island forms the W end of what the British named the Trathan Coast. The NW end of this large mass was viewed aerially in Dec. 1940, by USAS 1939-41, not recognized as an island, and named by them as Cape Ashley Snow, after Ashley Snow. It appears as such on a USAAF chart of 1942. However, this name was changed to Cape Smiley (sic), for William H. Smyley, and appears as such on a USAAF chart of 1943, and was the name accepted by US-ACAN in 1947. It appears as such on a 1949 U.S. chart. There is a globe, in the Academy of Natural Sciences, in Philadelphia, that was made by Gilman Joslin of Boston, and copyrighted by Charles Copley, in Washington, in 1852. On this globe appears Smilies Island, in 72°S, i.e., S of Alexander Island (which does not necessarily indicate that Capt. Smyley sailed as far S as this). This cannot possibly be the same island, but it is worth noting here, as a matter of interest. The feature of this article appears as Cape Snow on Ronne's 1945 map, and on an Argentine chart of 1946 it appears as Cabo Smiley. In the U.S. gazetteer of 1956, and on a *National Geographic* map of 1957, it appears as Cape Smyley. On a Chilean chart of 1962 it appears as Cabo Smyley, and that was the name accepted by the 1974 Chilean gazetteer. Following the production of the 1968 USGS map based on air photos taken by USN in 1965-66, US-ACAN in 1968, dropped the name Cape Smyley, and applied the name (Smyley) to this island, which had been delineated on that USGS map. UK-APC accepted that on Dec. 20, 1974. There is a 1973 reference to it as Ashley Snow Island, but that was in error.

Cape Smyth. 67°37' S, 164°40' E. The S extremity of Sturge Island, in the Balleny Islands. In 1841 Ross, viewing Sturge Island from a distance, thought it to be 3 islands, and named the southernmost one Smyth Island, for Admiral William Henry Smyth (1788-1865), first president of the Royal Astronomical Society, and father of famous astronomer Charles Piazzi Smyth. In 1904 Scott re-defined it. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Île Smyth *see* **Smith Island**

Smyth Inlet *see* **Smith Inlet**

Smythe, William "Willie." b. May 13, 1877, Portsmouth, son of dockyard laborer William Smythe and his wife Ellen Ashley. RN petty officer, on the *St Vincent*, when he transferred to the *Discovery* for BNAE 1901-04. On the way down, in Christchurch, he went AWOL and Scott reduced him to able seaman. However, at the end of the season he was re-instated. He wintered-over in 1902. In 1906 he disappeared and was never heard of again. Fascinatingly, on Scott's last expedition, BAE 1910-13, a Scottish sail maker named William Smythe (whose actual name was Smith; born May 13, 1881) sailed as far as NZ on the *Terra Nova*. He never made it south of 60°S, but he was technically part of the expedition. He later moved to the USA, married, had a family, and died in Long Beach, Calif., on Sept. 23, 1952.

Smythe Shoulder. 74°18' S, 113°53' W. An ice-covered promontory rising to about 450 m, between Singer Glacier and Rydelek Icefalls, on Martin Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from

ground surveys, and USN air photos taken between 1959 and 1967, as well as U.S. Landsat images taken in Jan. 1973. Named by US-ACAN in 1978, for William Smythe, geophysicist at the University of California, at Los Angeles, a member of the USARP wintering-over party at Pole Station in 1975.

Snag Rocks. 65°08' S, 64°27' W. A cluster of rocks, rising to 2 m above sea level, at the NW end of French Passage, between the Roca Islands and the Myriad Islands, in the Wilhelm Archipelago. Photographed from an RN Hydrographic Survey unit's helicopter off the *Protector* in March 1958. So named by UK-APC on July 7, 1959, because the rocks, lying as they do near the middle of the channel, present a hazard to shipping. The feature appears on a British chart of 1960. US-ACAN accepted the name in 1965. ChilAE 1960-61 named them Rocas Bravo, for Capitán de fragata Eugenio Bravo Crawley-Boevey, operations officer on the expedition. It appears as such on a Chilean chart of 1962, and was the name accepted by the 1974 Chilean gazetteer. The 1974 British gazetteer has the feature as Stag Rocks, which was simply a mistake. Capt. Bravo was the great-great grandson of the 4th Baronet Crawley-Boevey.

Snails *see* **Sea snails**

Snake Lake. 68°36' S, 78°05' E. In the Vestfold Hills. It has a prominent snake-shaped moraine on its N side, hence the name given by ANCA on July 26, 1983.

Snake Ridge. 84°49' S, 66°30' W. A ridge, 6 km long, rising to about 1690 m, and running in a NW-SE direction, it adjoins the NW extremity of the Mackin Table, in the Patuxent Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed from the air by USN in 1964, and mapped by USGS from these efforts. Named descriptively by Dwight L. Schmidt, USGS geologist here during the years 1962-66, for its serpentine shape. US-ACAN accepted the name in 1968, and UK-APC followed suit on Nov. 3, 1971. It appears in the 1974 British gazetteer.

Snakeskin Glacier. 84°57' S, 170°40' E. A tributary glacier, about 24 km long, flowing NW to enter Keltie Glacier at the E side of the Supporters Range. Named descriptively by NZGSAE 1961-62, for the ice and snow patterns on its surface which remind one of snakeskin. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Snarby, John. b. May 12, 1922, Tromsø, Norway. He was chief steward on the *Norsel*, when John Giaever, leader of NSBAE 1949-52 made him an offer. If he would leave the *Norsel*, and be the cook for the 1950-51 wintering-party in Antarctica during the expedition, he would be free to leave after a year — if a ship were to come by. He gave Snarby half an hour to make his decision, which was, of course, a yes. And a ship did come by, it was the *Norsel*, on Jan. 6, 1951, and he was replaced on Giaever's expedition by Bjarne Lorentzen. He died in Tromsø.

Snarby Peak. 72°02' S, 1°37' E. Isolated and partly snow-capped, 10 km NE of Brattskarvet Mountain, at the NE end of the Sverdrup Mountains, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and also from air photos taken by NorAE 1956-58, and named by them as Snarbynuten, for John Snarby. US-ACAN accepted the name Snarby Peak in 1966.

Snarbynuten *see* **Snarby Peak**

The *Snark*. Amphibious Walrus aircraft which went to Antarctica on the *Balaena* in 1946-47. *See* **The *Balaena*** and **The *Boojum*** for more details.

Snaureset. 72°08' S, 27°30' E. A low mountain ridge in the W part of Berrheia, in Balchen Mountain, in the Sør Rondane Mountains. Named by the Norwegians ("the bare ridge").

Sneddon Nunataks. 77°17' S, 153°46' W. A group of coastal nunataks on the N side of Edward VII Peninsula, overlooking the Swinburne Ice Shelf and Sulzberger Bay, 17.5 km ESE of Scott's Nunataks, in the N part of the Alexandra Mountains. They appear on the map drawn up by ByrdAE 1928-30. Named by US-ACAN in 1970, for Donald L. Sneddon, USN, electronics technician who wintered-over at Byrd Station in 1967.

Snedeker Glacier. 66°27' S, 106°48' E. A channel glacier flowing to the Knox Coast, 14 km (the Australians say 19 km) W of Merritt Island, in Wilkes Land. Mapped by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Robert H. Snedeker (b. April 5, 1922, Northford, Conn. d. March 18, 2007, Winter Park, Fla.), photo interpreter on the *Edisto* during OpW 1947-48. ANCA accepted the name on Oct. 22, 1968.

Snegotin Ridge. 63°34' S, 58°28' W. An ice-covered ridge, 4 km wide, rising to over 1200 m on the NW side of the Louis Philippe Plateau, it extends 6.5 km in a SW-NE direction, and is linked to the S with the Louis Philippe Plateau by Huhla Col, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Snegotin, in southern Bulgaria.

Mount Snell. 70°20' S, 71°33' W. Rising to about 500 m, it is the southwesternmost and highest of the 3 peaks on Dorsey Island, in the Wilkins Ice Shelf, off the NW coast of Alexander Island. It appears on 1966 USN air photos, and was delineated from images taken by U.S. Landsat in Feb. 1975. Named by US-ACAN for Lt. Alfred W. Snell, USN, staff meteorologist on OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). UK-APC accepted the name on June 11, 1980.

Dolina Snezhnaja. 73°39' S, 68°30' E. A valley running N-S at the S end of the Mawson Escarpment. It contains a lake at its N end, Ozero Mezhgornoe. Named by the Russians ("snowy valley").

Gora Snezhnaja. 70°48' S, 67°34' E. A somewhat isolated nunatak due W of Glukhoy Glacier, in the Aramis Range of the Prince Charles Mountains. Named by the Russians ("snowy nunatak").

Kar Snezhnyj. 74°25' S, 67°30' E. A pass on the SW side of Mount Borland, at the S end of the Lambert Glacier. Named by the Russians ("snowy pass").

Zaliv Snezhnyj *see* **Snezhnyy Bay**

Gora Snezhnyj Kupol. 70°40' S, 67°43' E. A nunatak just SW of McKinnon Glacier, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians ("snowy dome mountain").

Snezhnyy Bay. 68°26' S, 78°27' E. A bay with a very narrow entrance, in the N part of the Vestfold Hills. Photographed aerially during OpHJ 1946-47, and again by SovAE 1956, and by ANARE in 1957 and 1958. Named by the Russians in 1956, as Zaliv Snezhnyj (i.e., "snowy bay"). ANCA translated this on Nov. 27, 1973.

Snick Pass. 70°41' S, 69°15' W. A narrow pass, running NW-SE at an elevation of about 900 m above sea level, between the Douglas Range and the LeMay Range, leading from Grotto Glacier to Purcell Snowfield, in the north-central part of Alexander Island. First mapped in 1960 by Searle of the FIDS, working from aerial photos taken by RARE 1947-48. He plotted it in 70°41' S, 69°25' W. Named descriptively by UK-APC on March 2, 1961 (a snick is a small cut). US-ACAN accepted the name later in 1961. It has since been replotted from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, it appears in the 1977 British gazetteer.

The *Snipe*. A 1350-ton Royal Navy steel sloop, launched on Dec. 20, 1945, at Denny's Shipyard, at Dumbarton. While part of the America and West Indies Squadron, she was in Antarctic waters periodically from the 1947-48 season on. Captain that season was Cdr. John Graham Forbes, RN. **Jan. 13, 1948**: the *Snipe* left Port Stanley, with Governor Clifford aboard, for a 15-day visit to the FIDS bases. Her first port of call was meant to be the Argentine Islands, but heavy ice in 64°50' S, near Victor Hugo Island, prevented her getting through. So, she set sail for Admiralty Bay. **Jan. 18, 1948**: the *Snipe* arrived at Admiralty Bay, where they found that a recently deserted 13-foot-square Argentine hut had been built only 80 feet from the British base. The *Snipe* dropped 2 men off to man their base, and then set out again, almost immediately encountering the Argentine vessel *Seaver* and, a little later, the *Charrúa*, with both of which territorial protests were exchanged. She then passed the Argentine station on Gamma Island, where there were no signs of life, then on through Gerlache Strait and Neumayer Channel, heading for Port Lockroy. **Jan. 21, 1948**: after 3 attempts to get through to Port Lockroy, it was decided to try the southern approach, through Bismarck Strait, but they couldn't get in that way either. **Jan. 22, 1948**: another try through Neumayer channel was successful. **Jan. 23, 1948**: the *Snipe* got in as close as she could to the harbor at Port Lockroy, and using whale boats, got two men ashore — the advance FIDS party of Johnny Blyth and Bill Richards, and the base was reopened. The governor also got out to inspect the base. After 3 hours the *Snipe* left, back through

Neumayer Channel and Gerlache Strait, to Admiralty Bay. The *Seaver* was there, at anchor, and the captain came aboard to join Governor Clifford for a drink. The *Charrúa* arrived, and everyone had a party. **Jan. 28, 1948**: the *Snipe* returned to Port Stanley. **Feb. 1, 1948**: the *Snipe* turned around, and went south again, accompanying the *John Biscoe*. Gov. Clifford was aboard again **Feb. 4, 1948**: the *Snipe* arrived at Deception Island. **March 1, 1948**: the *Snipe* and the *Nigeria* left Port Stanley, to give the governor a 9-day tour of the "illegal" Argentine and Chilean bases in the "British" sector of Antarctica. **March 5, 1948**: the *Snipe* and the *Nigeria* left Deception Island. **March 7, 1948**: the *Snipe* and the *Nigeria* were at the Chilean base on Greenwich Island, made a protest (without landing), then headed back to Deception Island. The *Nigeria* stayed outside the harbor, but the *Snipe* went in, found the Argentine minesweeper *Parker* already moored there, and lodged a protest. In turn the Argentines lodged a protest, and then there was another party. **March 10, 1948**: the *Snipe* and the *Nigeria* arrived back in Port Stanley. **April 1948**: the *Snipe* spent 4 days in Rio, the officers partying, and the ratings being given an interesting tour by their Brazilian counterparts of the pleasures that only Rio could offer (presumably tourist attractions). The *Snipe* then went on to Trinidad and Bermuda. **1953**: the *Snipe* was back in Antarctica, under the command of Denis Guy Douglas Hall-Wright, to help 4 FIDS from Base G who were marooned at Point Hennequin. **Feb. 1953**: the *Snipe* supported the British removal of Argentine and Chilean refugio huts from Deception Island, in the South Shetlands (*see* **Wars**), and deported 2 Argentines from Deception Island to South Georgia. She remained on patrol until mid-April 1953, having been joined in March by the *Bigbury Bay*. The *Snipe* was scrapped in 1960.

Snipe Peak. 60°44' S, 45°39' W. A peak rising to 225 m, it is the main peak and highest point on Moe Island, close SW of Signy Island, in the South Orkneys. Surveyed in 1933 by the personnel on the *Discovery II*, and again by Gordon Robin of FIDS in 1947. He named it to commemorate the first visit of the *Snipe* to Signy Island on Feb. 7, 1948. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears in the 1966 British gazetteer.

Sno-cats. Caterpillar tractors made by Tucker, and used by the French and British during IGY. Fuchs took one with him on BCTAE 1957-58.

Snøbjørga *see* **Snøbjørga Bluff**

Snøbjørga Bluff. 72°05' S, 4°39' E. A rock and ice bluff at the E side of the head of Stuttflog Glacier, S of Mount Grytøyr, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Snøbjørga (i.e., "the snow mountain"). US-ACAN accepted the name Snøbjørga Bluff in 1966.

Snodgrass Island. 65°26' S, 65°28' W. An island, 4 km long, NE of Pickwick Island, in the Pitt Islands, in the Biscoe Islands. Charted by ArgAE 1954-55, and named by them as Isla Ingeniero Pereira, for an engineer named Pereira, who was on the *Uruguay* in 1904-05. It appears as such on their chart of 1955, as well as on Argentine charts of 1957 and 1964, and was the name accepted by the 1970 Argentine gazetteer. Photographed aerially by FIDASE in 1956. Named by UK-APC on July 7, 1959, as Snodgrass Island, for the Dickens character in *The Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965.

Snøfuglborga *see* **Yukidori-toride-yama**

Snøfugldalen *see* **Yukidori Valley**

Snøhetta *see* **Snøhetta Dome**

Snøhetta Dome. 72°11' S, 2°48' W. A dome-shaped elevation (the Norwegians describe it as a mountain), snow-covered except for a few rock exposures, 5 km E of Hornet Peak, on Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Snøhetta (i.e., "the snow cap"). US-ACAN accepted the name Snøhetta Dome in 1966.

Snøkallen *see* **Snøkallen Hill**

Snøkallen Hill. 71°42' S, 1°32' W. A hill (the Norwegians describe it as a small nunatak) 5 km SSE of Snøkjerringa Hill, on the E side (the Norwegians say the N part) of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Snøkallen (i.e., "the snow man"). US-ACAN accepted the name Snøkallen Hill in 1966. *See also* **Snøkjerringa Hill** (which means "the snow woman").

Snøkjerringa *see* **Snøkjerringa Hill**

Snøkjerringa Hill. 71°39' S, 1°35' W. A hill (the Norwegians describe it as a nunatak), 5 km NNW of Snøkallen Hill, on the E side (the Norwegians say the N part) of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Snøkjerringa (i.e., "the snow woman"). US-ACAN accepted the name Snøkjerringa Hill in 1966. *See also* **Snøkallen Hill** (which means "snowman").

Snønutane *see* **Snønutane Peaks**

Snønutane Peaks. 72°05' S, 4°48' E. A group of rock peaks (the Norwegians describe them as nunataks) rising above the elevated snow surface just E of Snøbjørga Bluff, in the SW part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Snønutane (i.e., "the snow peaks"). US-ACAN accepted the name Snønutane Peaks in 1966. Not to be confused with Mount Hädrich.

Snønutryggen. 72°14' S, 5°20' E. A broad, ice-covered ridge, SE of Snønutane Peaks, in the passage between Wegenerisen and the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them ("the snow peak ridge"). US-ACAN accepted the name without modification in 1966.

Snøskalkegga *see* **Snøskalkegga Ridge**

Snøskalkegga Ridge. 71°59' S, 13°13' E. A small, mostly snow-covered mountain ridge, 5 km long, 3 km W of Dekefjellet Mountain, in the W part of the Weyprecht Mountains, in the W part of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. It is surmounted at the N end by Kazanskaya Mountain. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Remapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Snøskalkegga. US-ACAN accepted the name Snøskalkegga Ridge in 1970. The word "snø" means "snow"; "skalk" signifies the first cut, as of a cake (i.e., the cut made from the outside); and "egga" means "the ridge."

Snøskalkhausen *see* **Snøskalkhausen Peak**

Snøskalkhausen Peak. 72°02' S, 13°12' E. A partly snow-covered peak rising to 2650 m, S of Snøskalkegga Ridge, it marks the SW end of the Weyprecht Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Snøskalkhausen. US-ACAN accepted the name Snøskalkhausen Peak in 1966. "Snø" means "snow"; "skalk" means first cut (*see* **Snøskalkegga Ridge** for a more complete definition of this word); and "hausen" means "the skull" or "the head").

Snøtoa *see* **Snøtoa Terrace**

Snøtoa Terrace. 71°57' S, 4°35' E. A flattish, ice-covered terrace on the NE side of Mount Grytøyr, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Snøtoa (i.e., "the snow patch"). US-ACAN accepted the name Snøtoa Terrace in 1967.

Snout. A glacier's lower extremity.

Snow. When water vapor precipitates and crystallizes, it becomes snow. At temperatures above -5°F, crystals form snowflakes. Very little snow falls in Antarctica (*see* **Snowfall**, **Rain**, and **Atmosphere**), even at the coast, and practically all of the snow on the ground has been accumulated over the millenia.

Cape Snow *see* **Smyley Island**

Isla Snow *see* [1]**Snow Island**

Snow, Ashley Clinton, Jr. b. March 23, 1906, Meridian, Miss., son of South Carolinian lumber dealer Ashley Clinton Snow and his wife Laura Granberry (who wrote the book *Music and the Out-of-Doors*). He joined the U.S. Navy as a sailor in 1927, got his wings in 1930, and in the 1930s married Norma Bayless, but they had no children. He was aviation chief machinist's mate and chief pilot at East Base during USAS 1939-41. During World War II he and Norma divorced, and he married again, in 1944, to Mildred Bowe (née Larson; Amundsen had visited her house when she was a child; her first husband had been killed in an accident when she was 6 months pregnant with their 2nd child), by whom he had a family, including Ashley Clinton Snow III (b. 1945; a daughter), Elizabeth, and Laura Granberry. He died on April 10, 1975, in Pensacola.

Snow Berg *see* **Snow Hill Island**

Snow bridges. Areas of snow forming the roofs of crevasses. Caused by drifting snow, they often hide the dangers of a crevasse.

Snow cats *see* **Sno-cats**

Snow Cruiser *see* **Snowcruiser**

The Snow Dome *see* **Pearce Dome**

Snow Hill *see* **Snow Hills**, **Snow Hill Island**

Snow Hill Island. 64°27' S, 57°12' W. More or less totally snow-capped, 30 km long and 10 km wide, SE of James Ross Island, from which it is separated by Admiralty Sound, and immediately SW of Seymour Island, from which it is separated by Picnic Passage, off the NE coast of the Antarctic Peninsula. Discovered and roughly mapped on Jan. 6, 1843, during RossAE 1839-43, and named by Ross as "Snow Hill" because, with no bare rock visible, it stood out against the contrast of the bare rock of Seymour Island [he thought it might be part of both (or either) Seymour Island or Trinity Peninsula]. It appears as such on Ross's chart of 1847, and on a British charts of 1893 and 1916. On Friederichsen's 1895 map, the highest part of the ice-cap is shown as Snow Berg, and the general area is referred to as Snow Land. On March 10, 1902, its insularity was determined by SwedAE 1901-04, and they established a winter station on the NW shore of the island, near Haslum Crag. They occupied this station from Feb. 12, 1902 to Nov. 11, 1903. Nordenskjöld named the island Snow Hill Ön (i.e., "snow hill island"). Every country with a vested interest in this part of Antarctica named it Snow Hill Island, or a variation thereof, for example, Charcot's 1912 map shows it as Île Snow Hill. It appears on a 1921 British chart as Snow Hill Island. In 1934-35, Ellsworth visited the old Swedish station on the *Wyatt Earp*, and, from there, made a flight SW over the Antarctic Peninsula in his airplane *Polar Star*, with Bernt Balchen as the pilot. The island appears as Snowhill Island on the 1936 map drawn up by U.S. cartographer W.L.G. Joerg. On Aug. 27-28, a FIDS sledging party from Base D visited the Swedish station. On a Chilean chart of 1947, the name has been translated as Isla Cerro Nevado, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The island was surveyed by Fids from Base D between 1952 and 1954. Snow Hill Island was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The Argentine refugios Suecia and Betbeder were established here.

Snow Hillnunatak *see* **Station Nunatak**

Snow Hills. 60°42' S, 45°38' W. Two snow-covered hills, one 240 m high, the other, rising to 265 m, about 400 m away to the W. They stand about 330 m W of Cemetery Bay, in the east-central part of Signy Island. The lower, eastern, hill was surveyed by personnel on the *Discovery II* in 1933, and charted by them as Snow Hill, and it appears as such on a 1942 British chart. It was also the name accepted by US-ACAN in 1953, and by UK-APC on Sept. 20, 1955. On a 1967 British map the higher of the two bears the name Snow Hill, but, following re-surveying by FIDS between 1947 and 1950, and in 1957-58, the name came to encompass both hills, and was pluralized. There is a 1948 Argentine reference to it as Colina Nevada (which means the same thing). UK-APC accepted the name Snow Hills on Dec. 20, 1974, and US-ACAN followed suit in 1975.

[1]**Snow Island**. 62°47' S, 61°23' W. A completely ice-covered island, 16 km long, and an average of 8 km wide, with an elevation of 975 feet. It lies 6 km SW of Livingston Island, separated from that island by Morton Strait, and NE of Smith Island, being separated from that island by Boyd Strait, in the South Shetlands. Discovered by William Smith on Feb. 19, 1819, and, over the course of the next few years it was charted by sealers. Its original name seems to have been Monroe Island, named probably for the *James Monroe*, Palmer's ship (although it may well have been named for the president of the USA). Palmer refers to it as that in 1820-21. On Jan. 24, 1821, it was re-charted by von Bellingshausen's expedition (he would name it later, in hindsight). Capt. Pendleton's log dated Nov. 9, 1821, refers to it as Monroe Island, Capt. Davis's log of Feb. 1, 1821, as Presidents Island, and Capt. Burdick's log of Feb. 18, 1821, as President Island. In 1821 Capt. Fildes refers to it as Monroe Island, or Monroe's Island. On Powell's chart published in 1822, it appears as Snow Isle. Weddell's map published in 1825 shows it as both Basil Halls Island and Hall Island, for Capt. Basil Hall (*see* **Hall Peninsula**). Fildes' 1827 chart shows it as Snow Island, and on Powell's 1828 chart it appears as "Snow Island or Basil Hall's Island." Between Jan. and March 1829, Foster checked its position quite thoughly during the *Chanticleer* Expedition of 1828-31, and his charts show it as both Basil Hall Island and "Basil Hall or Snow Island." On von Bellingshausen's chart, drawn up finally in 1831, he calls it Malyy Yaroslavets (i.e., "little Yaroslavets"), named for a town NW of Moscow. Morrell, in 1832, refers to it as Monroe Island, or Monroe's Island. Note: Over the years, the name Monroe has been variously misspelled. An 1839 British chart has it as Snow Island, and an 1861 Spanish chart has it as Isla Snow. Everyone with a vested interest in this part of Antarctica translated it according to their own language. For example, there is a 1907 Argentine reference to it as Isla Nieve. Re-surveyed by the Discovery Investigations in 1930-31 and 1934-35. It appears erroneously on their 1935 chart as Snow Islands, but on their 1937 chart it appears as Snow Island. It appears as Monroe Island on a 1943 USAAF chart, and on a U.S. Hydrographic Office chart of that year as "Monroe Island (Snow Island)." An Argentine chart of 1946 has it as Isla de la Nieve. US-ACAN accepted the name Snow Island in 1947. It was further surveyed by an RN Hydrographic Office Survey unit on the *John Biscoe*, in 1951-52, under Frank Hunt, and appears on their chart as Snow Island. UK-APC accepted that name on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1962 British chart. On an Argentine chart of 1953 it appears as Isla Nevada, and that name was accepted by the 1970 Argentine gazetteer. Photographed aerially by FIDASE in 1956. The Chilean gazetteer of 1974 accepted the name Isla Snow. Last plotted by the UK, in late 2008.

[2]**Snow Island** *see* **Chionis Island**

Snow Land *see* **Snow Hill Island**

Snow melters. Large cabinets into which snow is shoveled. They are then lighted, melting the snow for drinking water, etc. It requires much snow to be shoveled to make a little water, and the whole process takes an inordinate amount of time and energy. The *Belgica* had one, during BelgAE 1897-99, a converted condenser from the engine room.

Snow Nunataks. 73°35' S, 77°06' W. A line of 4 widely separated nunataks rising through the ice-cap to about 700 m, southward of Case Island and the Ronne Entrance, and SE of Carroll Inlet, and trending E-W for 30 km, just to the W of the English Coast of Ellsworth Land. The 4 are (from W to E) Espenschied Nunatak, Mount McCann, Mount Thornton, and Mount Benkert. Discovered from the ground and from the air in Dec. 1940, by USAS 1939-41, roughly mapped by them in 73°15' S, 76°00' W, and named by them as Norma Snow Nunatak (i.e., in the singular), for Ashley Snow's wife at the time, Norma Bayless Snow (*see* **Snow, Ashley**). They appear as such on a 1942 USAAF chart. However, on 3 separate USAAF charts of 1943, the feature appears as Ashley Snow Nunatak (i.e., in the singular), Ashley Snow Nunataks, and Ashley Snow Nunaticks (sic). Finn Ronne's 1945 map shows the feature as the Norma Snow Nunataks. On a 1946 Argentine chart they appear as Picos Nevados Ashley (i.e., "Ashley snow peaks"), which just goes to show that the Argentines can be fooled as well as anyone else. US-ACAN accepted the name Ashley Snow Nunataks in 1947, and UK-APC followed suit on Sept. 8, 1953. Only 3 nunataks comprised the group at that time. On Dec. 23, 1947, the feature was seen again, aerially, by RARE 1947-48. Whereas most of the other compound names in Antarctica were abbreviated in the late 1940s and early 1950s, this one was left as it was, i.e.,

Ashley Snow Nunataks, for fear that its honoree might suffer that fate already dealt him by the Argentines. For example, it appears with the long name on *National Geographic*'s 1957 map, whereas the other honorees of USAS all have the abbreviated name. Still at that stage, it was thought that there were only 3 nunataks in this group. Photographed aerially by USN between 1965 and 1966. US-ACAN finally accepted the shortened name (and an additional nunatak) in 1966, and ANCA followed suit on Dec. 20, 1974. It appears on the 1968 USGS sketch map of Bryan Coast–Ellsworth Land.

Snow Peak. 62°35' S, 60°40' W. Rising to 430 m, SW of Hero Bay, Livingston Island, in the South Shetlands. Charted by the Discovery Investigations in 1935, and named descriptively by them. It appears on a 1948 British chart, and was the name accepted by UK-APC on Sept. 8, 1953. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by FIDS between 1957 and 1959. Last plotted by the UK, in late 2008. The Americans have yet to make a comment on this feature.

Snow Petrel Peak. 78°32' S, 164°38' E. A sharp rock peak rising to 605 m, and marking the easternmost summit of Mason Spur, at the S end of the Scott Coast of Victoria Land. The name appears on a 1987 sketch map and report by geologist Anne Wright-Grassham (later Anne C. Wright), who had been a member of the 1983–84 New Mexico Institute of Mining and Technology field party to Mason Spur. Named for the pair of snow petrels that flew over this peak many times in Nov. 1983. It was concluded that they were nesting there. US-ACAN accepted the name in 1999, and NZ-APC followed suit on Nov. 4, 1999.

Snow tunnels. Tunnels cut out by people under the surface of the snow in order to connect the station (or base) to the housing for scientific instruments. They are usually 6 feet deep and 1000 feet long. Hallett Station was the only U.S. scientific station without one during IGY.

Snow Valley. 77°33' S, 166°09' E. A valley forming the Backdoor Bay end of the usual overland route from Cape Royds to Cape Evans, in Victoria Land. Named descriptively by NZ-APC.

Snow White Hill. 61°58' S, 58°10' W. A snow-covered mountain rising to between 300 and 400 m above sea level, between Drake Glacier and Eldred Glacier, S of Corsair Bight, on King George Island, in the South Shetlands. Named by the Poles in 1984, for the character in the fairy tale.

The Snowcruiser. Also known as the Antarctic Snowcruiser, or Snow Cruiser, and known, affectionately, as the Penguin. A mammoth vehicle, looking somewhat like a monstrous Bluebird (Malcolm Campbell's car used for land speed records) designed and built by Thomas Poulter (q.v.) over a 2-year period, at a cost of $150,000. Poulter had witnessed first-hand the frustration of being unable to rescue Admiral Byrd when he (Byrd) had been all alone in Antarctica, during ByrdAE 1933-35, and determined to devise a vehicle that would overcome this problem. While working at the Research Foundation of the Armour Institute of Technology, in Chicago, Poulter presented his design to director Harold Vagtborg and the rest of the Foundation. Between 1937 and 1939, under Poulter's direction, Project #I-69 went ahead. On April 29, 1939 they presented their work so far to USAS, and got their approval to move ahead. They would loan it to the expedition, provided it was returned afterwards. Work began on construction on Aug. 8, 1939, at the Pullman shops in Chicago. They had 11 weeks to build, test, and deliver the Snowcruiser to Boston for onloading for the trip to Antarctica. It was meant to be able to travel anywhere on the Antarctic surface, under any conditions. It was 55 feet 8 inches long, 19 feet 10½ inches wide, between 12 and 16 feet high, and weighed 75,000 pounds, loaded. There were 4 individually-powered and steered wheels, each 10 feet in diameter and weighing 3 tons apiece, and the wheel base was 20 feet. The tires were Goodyear 12-ply, 120 by 66 by 33½. No skids. No tracks. It had two 6-cylinder Cummins diesel engines, each with 150 hp, and four General Electric drive motors, 75 hp each. It had a maximum speed of 30 mph, and a range of 5000 miles. A light airplane was on the roof, and the vehicle carried a year's provisions. There was a control cabin up front, a galley, crew's quarters for between 3 and 6 personnel, ideally 4, and of course, radio. On Oct. 24, 1939, after a few tests on nearby sand dunes, the Snowcruiser left Chicago, being driven on the roads, and reached the *North Star*, in Boston, on Nov. 12, 1939. Its tail section had to be temporarily removed so it would fit aboard, and at high tide, Dr. Poulter drove the Snowcruiser on to the *North Star*. On Nov. 15, 1939 the *North Star* left Boston, with the Snowcruiser lashed to her deck. After some hairy moments on the way down, everyone and everything arrived safely in Antarctica, on Jan. 11, 1940. On Jan. 15, 1940, Poulter drove the Snowcruiser down a timber ramp at the Bay of Whales, and midway down the ramp, the wood started to crack, and only by heavy throttling was Poulter able to make it to the ice (the motion pictures taken by *Bear* seaman Tony Wayne are fantastic). It was operated out of West Base, and was placed under the command of Al Wade, and his 3 men, Ferranto, Griffith, and Petras. It was a failure, being too heavy for the snow, the tires spinning and the machine sinking into the snow. Despite the addition of a couple of wheels to the front, and chains on the back, smooth, tires, it was abandoned. Even unladen, the vehicle would have been as much as 5 times too heavy. It was rediscovered under the snow by members of Little America V many years later, during IGY.

Snowfall. Rather light in Antarctica, only 4 inches falling over the Polar Plateau every year, and maybe 20 inches over the coastal regions. There is virtually no rain (*see* **Rain**, **Snow**, and **Atmosphere**). In Dec. 1969 McMurdo had 25 inches of snow, a record since 1911.

Mount Snowman. 61°51' S, 58°01' W. A steep, ugly mountain on Ridley Island, in the South Shetlands. Rising to over 200 m above sea level, its glacier-hat reminded the Poles of the yeti, or abominable snowman of myth, legend, and outright lies. The Poles accepted the name in 1984.

Snowmobiles. Motorized passenger vehicles on skis. The Bombardier Alpines were much used in Antarctica by USAP. These are Canadian machines, rugged utility models.

Snowplume Peak. 73°32' S, 94°27' W. A small pyramidal peak along the N front of the Jones Mountains, 1.2 km WSW of Rightangle Peak, and 3 km WSW of Pillsbury Tower. Mapped by the University of Minnesota Jones Mountains Party of 1960–61, and named by them for the continual plume of wind-blown snow which trails off the peak whenever the wind blows. US-ACAN accepted the name in 1963.

Snowshoe Glacier. 68°19' S, 66°35' W. A glacier, 13 km long, it flows W from a col in the SW flank of Neny Glacier, into Providence Cove, at Neny Fjord, on the Fallières Coast, on the W coast of Graham Land. BGLE 1934-37 roughly surveyed it from the ground in 1936 and photographed it aerially on Feb. 1, 1937. It was re-photographed aerially on Dec. 23, 1947, by RARE 1947-48, and re-surveyed from the ground by Fids from Base E in Dec. 1949, Oct. 1958, and Nov. 1960. Named by FIDS leader Ken Butler, in 1948, for its shape. Its narrow head and wide mouth resembles the shape of a snowshoe. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Snowshoe Pass. 83°03' S, 157°36' E. A snow saddle, about 427 m high, 6 km NE of Aurora Heights, between Argosy Glacier and Skua Glacier, or, to put it another way, between Aurora Glacier and Astro Glacier, in the Miller Range. Discovered by the Northern Party of NZGSAE 1961-62, and named by them for the best form of travel here in the deep, soft snow. NZ-APC accepted the name, and ANCA followed suit, as did US-ACAN in 1966.

Snowy petrels *see* **Petrels**

Snowy Point. 74°37' S, 163°45' E. A gently sloping point marking the N side of the W portal of Browning Pass, it also forms the SE end of the small plateau W of Campbell Glacier, in the Deep Freeze Range of Victoria Land. Explored and named descriptively by Campbell's Northern Party of 1910-13. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Snowy sheathbill *see* **Sheathbills**

Snubbin Island. 65°29' S, 65°50' W. An island, 3 km W of Pickwick Island, at the W end of the Pitt Islands, in the Biscoe Islands. Photographed aerially by FIDASE in 1956, it first appears (unnamed) on an Argentine government chart of 1957. Named by UK-APC on July 7, 1959, for the Dickens character in *The Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965.

Snug Cove. 65°30' S, 64°26' W. A small cove along the E side of the second largest of the Lippmann Islands (none of these islands have been named individually), off the W coast of Graham

Land. Charted by an RN Hydrographic Survey unit in 1957-58, and first used by the unit's motor launch. So named by UK-APC on July 7, 1959, because it provides a good enclosed anchorage for small boats. US-ACAN accepted the name in 1971.

Snuggerud Glacier. 72°07' S, 7°52' E. Flows NNE between Klevekåpa Mountain and Småknoltane Peaks, in the Filchner Mountains of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during rhe same long expedition, and named by them as Snuggerudbreen, for John Snuggerud, who wintered-over as radio mechanic at Norway Station in 1958, during the expedition. They plotted it in 72°11' S, 7°45' E. US-ACAN accepted the name Snuggerud Glacier in 1966. It has since been replotted.

Snuggerudbreen *see* **Snuggerud Glacier**

Snyder, Earle. He was on the 2nd half of USAS 1939-41, as a crew member on the *North Star*.

Snyder Peak. 73°31' S, 93°56' W. A low, ice-covered peak, 1.5 km SW of Anderson Dome, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61. Named by US-ACAN in 1963, for David Snyder, VX-6 aviation electronics technician, crew member on Dakota flights from Byrd Station to the Eights Coast in Nov. 1961.

Snyder Peninsula. 71°25' S, 61°26' W. A high, ice-covered peninsula terminating in Cape Howard, on the S side of Lamplugh Inlet, between that inlet and Odom Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Rear Admiral Joseph Edward Snyder, Jr., USN, Antarctic project officer for the assistant secretary of the Navy for research and development, 1967-69. His job immediately prior to that was, as a captain, commanding the *New Jersey* in Vietnam. From 1974 to 1976 he was the Navy Department's sponsor for U.S. Naval Support Force, Antarctica. UK-APC accepted the name on July 21, 1976.

Snyder Rocks. 66°34' S, 107°46' E. A small group of rocks projecting above the continental ice, about 5 km W of the terminus of Underwood Glacier, on the Knox Coast of Wilkes Land. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Mark G. Snyder, a member of OpW 1947-48. ANCA accepted the name on July 22, 1959.

Sobek Expeditions, Inc. In 1973 three young men, Richard Bangs, Lewis Greenwald, and John Yost founded Sobek (the Egyptian god of crocodiles; their first tour was in a crocodile-infested river in Africa). The company, based out of Angels Camp, Calif., conducted tours of the Antarctic Peninsula on the *Bahía Paraíso*. They also did an Antarctic Adventure, for 11 days. Lew Greenwald died in an accident on the Blue Nile in 1975. In 1991 the company merged with Mountain Travel (q.v.) to become Mountain Travel Sobek (q.v.).

Bahía Sobenes *see* **Malmgren Bay**

Bahía (de) Soberanía *see* **Discovery Bay**

Puerto Soberanía. 62°29' S, 59°38' W. A natural harbor, ice-free in summer, and well-protected from the E winds, it offers the best anchorage in Discovery Bay, being situated more or less in the central part of the E coast of that bay, on Greenwich Island, in the South Shetlands. Named by ChilAE 1946-47 in association with Soberanía Station, which was built here that season ("soberanía" meaning "sovereignty," something the Chileans were somewhat concerned about).

Soberanía Station *see* **Capitán Arturo Prat Station**

The *Sobkra*. FY 331. A 433-ton British whale catcher, launched on Sept. 21, 1937 by Smiths Dock Co., South Bank on Tees, and finished in Oct. 1937. 148 feet long, 27 feet 6 inches wide, and with 148 nhp, she was owned by Christian Salvesen's South Georgia Company, and registered in Middlesbrough. She was in Antarctic waters in 1940-41. In Oct. 1941 she was commisioned by the British Navy as a naval trawler, and after the war, in Sept. 1946, returned to Salvesen.

Cape Sobral. 64°33' S, 59°34' W. A high, mainly snow-covered elevation, surmounting the SE end of Sobral Peninsula, at the very N of the Larsen Ice Shelf, just S of Prince Gustav Channel, on the Nordenskjöld Coast, on the E coast of Graham Land. Discovered in Oct. 1902, by SwedAE 1901-04, and named by Nordenskjöld as Kap Sobral, for José M. Sobral. For a more detailed hisry of this cape, *see* **Sobral Peninsula**. There are occasional references to this feature being plotted in 78°12' S, 68°10' W, but this would place it in a very lonely position on the Ronne Ice Shelf.

Isla Sobral *see* **Omega Island**

Kap Sobral *see* **Cape Sobral**, **Sobral Peninsula**

Península Sobral *see* **Sobral Peninsula**

Sobral, José María. b. April 14, 1880, Gualeguaychú, Entre Ríos, Argentina, son of legal clerk Enrique Sobral and his wife María Luisa Iturrioz, both immigrants from Spain. Joining the Navy in 1898, he was a naval ensign who, at Buenos Aires, was seconded to SwedAE 1901-04 as an observer-assistant physicist-meteorologist in exchange for the Argentine government giving the expedition free food, equipment and help. He was with Nordenskjöld in the main party at Snow Hill House, and thus was the first recorded Argentine to set foot on Antarctica proper. Immediately after the expedition he quit the Navy, went to Uppsala to study geology, and did not return from Sweden until 1913, with a doctorate. He entered the Mines and Hydrography Service, becoming director general in 1924. In 1930 he was appointed Argentine consul general in Oslo, was a commercial geologist in the 1930s, and died on April 14, 1961.

Sobral Peninsula. 64°31' S, 59°40' W. A high, mainly ice-covered peninsula, 17.5 km long and 8 km wide, it projects southward from Muskeg Gap into the N part of the Larsen Ice Shelf, W of Larsen Inlet, on the Nordenskjöld Coast, in northern Graham Land. Roughly mapped in Oct. 1902, by SwedAE 1901-04, when Nordenskjöld named its S tip as Kap Sobral, for José Sobral. Ellsworth flew over in 1935, photographing, and on maps of his expedition it was erroneously shown as an island separated from the mainland coast by a channel about 6 km wide. That was the beginning of the myth that this was an island, a myth that, despite overwhelming evidence to the contrary, has been perpetuated in some quarters to the present day. A Nov. 1947 survey by Fids from Base D failed to discover the truth, and so, on Jan. 22, 1951, UK-APC accepted Cape Sobral as the S end of what they still thought was an island. That situation appears in the 1955 British gazetteer. It was only after surveys by Fids from Base D between 1958 and 1961 that the true, peninsular, status of this feature was determined, and it was shown to be joined to mainland coast at Muskeg Gap. UK-APC accepted the name Sobral Peninsula on Feb. 12, 1964, and US-ACAN followed suit that year. They kept the name Cape Sobral for the cape. On a 1964 Chilean chart the peninsula still appears as an island, Isla Chandler, named for Alberto Chandler Baunen (*see under* **C**), with the name Cabo Sobral retained for the cape at the S part of the "island"). We are led to believe that the Chileans still call it Isla Chandler; after all these years of its peninsular status being well-known, that report hardly seems credible. The Argentines call it Península Sobral. Following the break up of the Larsen Ice Shelf, the peninsula (and the cape) became navigable to shipping, and on Aug. 27, 2009, UK-APC reinstated the name Cape Sobral (which they had discarded in 1964 when the whole peninsula was named Sobral). They, of course, retained the name Sobral Peninsula as well.

Sobral Station. 81°04' S, 40°36' W. Properly called Base Avanzada Científica de Ejército Alférez de Navío José María Sobral, or (in slightly shorter form), Base Alférez Sobral, or a combination or slight variation of these (i.e., it was an Argentine Army scientific station, or, more properly, a field station). Known popularly as Sobral. **April 2, 1965**: The station was opened by ArgAE 1964-65, on the Filchner Ice Shelf. Named for Ensign José María Sobral. **1965 winter**: Communications Lt. Alfredo Eugenio Goetz (leader). **1966 winter**: Cavalry Lt. Julio César Veronelli (leader). **1967 winter**: Infantry Lt. Hugo Emiliano Copertari (leader). **1968 winter**: Cavalry 1st Lt. Héctor Fructuoso Funés (leader). **1969 winter**: Ricardo Carlos Lemme (leader). The station was closed after the 1969 winter, but was used as a temporary base in 1970-71 and 1971-72, then closed altogether. Buried by the ice, it was unfindable when they came to look for it in 1997.

The *Sobraon*. A freighter, built at Sunderland in 1889, and belonging to the Gordon Steam Shipping Company of London. She was bought

by the Newfoundland Steam Whaling Company in 1907, and converted at Sandefjord, Norway, into the 2385-ton whaling factory ship *Sobraon*, capable of 12 knots. In Oct. 1907 she left Norway, with Einar Egenes as skipper, and Nokard Davidsen as manager, bound for London and then on to Newfoundland, with a 41-man crew. She arrived in St. John's in early Nov. 1907, took on 6000 oil barrels, and then sailed to NZ, where she picked up two of the company's whale catchers already operating out of NZ in 1907, the *Lynx* and the *Puma*. The *Sobraon* and the catchers left NZ on Nov. 20, 1907, and were in the South Orkneys for the 1907-08 whaling season. Alexander McDougall was aboard too. They had obtained licenses from the British government. In fact, the *Sobraon* secured the first ever such license for the South Orkneys, and the second one ever for the South Shetlands, and, indeed, was the first whaler to work in the South Orkneys at all, regardless of license. The three vessels arrived at Port Stanley on Jan. 4, 1908. Finding it difficult to catch whales in South Orkneys waters, they moved on to Deception Island, arriving there on Jan. 14, 1908, and operated out of Whalers Bay for the rest of the season. It was from the *Lynx* that Nokard Davidsen was drowned on Jan. 22, 1908. The *Sobraon* was back again in 1908-09, and 1909-10, and in 1910 she was sold to Haldor Virik's Odd Company for £8250, but continued to work Antarctic waters in 1910-11 (Albert Newing was the Falkland Islands customs officer aboard that season), 1911-12, and 1912-13. In 1913 the Odd Company replaced her with the *Guvernøren*, and sold her to Adolf Amandus Andresen (q.v.), who changed her name to the *Orion*, and she became a Chilean whaler off the coast of Chile, 1913-15.

Sobraon Cove *see* **Gouvernøren Harbor, Pendulum Cove**

Sociedad Ballenera Corral. Also called the Sociedad Ballenera de Corral. Chilean whaling company. It had three distinct incarnations. The first was the Sociedad Ballenera Christensen y Cía, founded in the fall of 1908 by Chris Christensen's three sons, August, Søren, and Lars, with a not inconsiderable capital of 500,000 kr. The company started off with two whale catchers, the *Noruega* and the *Germania*. In 1910 they acquired the factory whaler *Tioga* and the new catcher *Ballena*. In 1911 they sold the company to Wilhelm Jebsen, of Bergen, who renamed it the Corral Company (AS Corral), still based out of Corral (in Chile), and flying the Chilean flag. This company ran the *Tioga* until the death of that vessel, and then the company was sold in the fall of 1913 to Jorge Anwandter, of Valparaíso, who opened up the new Sociedad Ballenera Corral, out of Corral. This company began with two catchers, gradually adding more and more, for example the *Penguin* (in 1925, bought from the defunct and short-lived Sociedad Pescadora Chile-Noruego, out of Valdivia), and the *Scott 1* in 1932 (from the Sociedad Ballenera Corral de Valdivia, which that year had ceased operations after 5 years). The Sociedad closed in 1936.

Sociedad Ballenera de Magallanes. In English known as the Magellan Whaling Company. Chilean whaling company started (with a working capital of £100,000) in 1905 by Adolf Amandus Andresen and Pedro A. de Bruyne (and others), based out of Punta Arenas, and run by managing director de Bruyne with the aid of Chilean government backing. Mauricio Braun was president. They had a brand new 56-ton whale catcher, the *Almirante Montt*, built for them in Norway that year, but they needed more. Their first resolution was to send Andresen to Norway, and he returned on Nov. 28, 1906, with the factory whaler *Gobernador Bories*, as well as the transport sailing ship *Cornelia Jacoba*, and the whale catchers *Almirante Valenzuela* and *Almirante Uribe*. The company ran the *Gobernador Bories* in the South Shetlands between 1906 and 1910, and then Andresen left to form another whaling company. On Jan. 14, 1911, the company was re-constituted, with Ernest Hobbs as chairman, and Augustus Henkes as new manager. Braun and de Bruyne stayed on as directors. The first initiative of the new company was to order two new whale catchers from Norway, the *Almirante Goni* and the *Almirante Señoret*. The *Gobernador Bories* was laid up after the 1913-14 season, and condemned, and in 1914 the company bought another ship, the Harrison Line ship *Senator*, and had her converted in Europe into a whaling factory ship. But then World War I broke out, and they were unable to proceed with the new ship, so they chartered the *Normanna* from Haldor Virik, for the 1914-15 Antarctic season. After a series of misfortunes, the company wound up in 1916, the new *Gobernador Bories* was bought by an American company, and her catchers sold to a company in Europe.

Society Expeditions Cruises, Inc. Probably the best known of the tour operators serving Antarctica in the 1980s, perhaps better known even than Lindblad at one time. Out of Seattle, they were formed in 1974 "for the traveler who wants to be part of the adventure, versus being just an observer." A member of Cruise Lines International Association, their Antarctic expeditions began in 1976, with the *World Discoverer* as their flagship. Thus began a variety of tours with expert guides and authorities in various disciplines. In 1985 the company added the *Society Explorer*, and in July 1987 the company was sold to West German shipowner Heiko Klein, and 30-year-old Patrick Kirkpatrick became president. The company planned a third vessel in 1990. Society Expeditions also used its ships for some scientific work. Before one went on a cruise, one was given notebooks, books, maps, charts, a reading list, a rucksack, and a special parka. On their ships one was given an outside cabin (an ordinary cabin which one could look out of and see things), excellent food and service, a swimming pool, sundeck, library, fitness center, beauty salon, and gift shop. Included in the price were accommodations, meals, lectures, tipping, and shore excursions. The cost of the trip depended on which tour was chosen, whether one went ordinary or deluxe, and on which deck, and on whether one was in a suite or an "owner's suite." Price range per person in 1989 figures was $US4900 to 14,490. Air fare was additional. They offered 15- to 26-day tours; only 5 to 7 days were spent in latitudes higher than 60°S. Only a taste of the continent was offered, the ships touching Anvers Island, Nelson Island, and King George Island, and, if possible, Deception Island, Paradise Bay, Iceberg Alley, Lemaire Channel, the South Orkneys, maybe some of the other South Shetland Islands, Port Lockroy and some other scientific stations (all depending on the trip). These destinations were all maybes, depending on the weather and other conditions. A land traverse to the Pole, à la Scott, was not available — that was the province of Mountain Travel. Society Expeditions went bust in 2004.

The *Society Explorer* *see* **The *Lindblad Explorer***

Socks. In Antarctica it is a good idea to wear one thin pair of wool socks beneath, and then one or two heavier wool pairs on top. Rag wool high-knees are recommended for the outer pair(s).

Socks Glacier. 83°42' S, 170°05' E. A small glacier flowing from the E slopes of the Queen Alexandra Range, just N of the Owen Hills, to enter the W side of the Beardmore Glacier, about 28 km up the glacier from the Ross Ice Shelf. Discovered by Shackleton on his trip to the Pole in 1908, during BAE 1907-09, and named by him for Socks, the last (and most famous) pony to die on the expedition, who fell into a crevasse near here on Dec. 7, 1908. The party was relying on Socks as a food supply, and the loss of this noble animal probably cost Shackleton the Pole. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Sodabread Slope *see* **Northeast Glacier**

Söderström, Gustaf Adolf *see* **Órcadas Station**, 1912

Gory Sodruzhestva. 73°36' S, 64°30' E. A group of nunataks on the S side of Mount Ruker, in the S part of the Prince Charles Mountains. Named by the Russians.

More Sodruzhestva. 67°00' S, 70°00' E. A sea off the coast of Mac. Robertson Land. Named by the Russians.

Sodruzhestvo Station. 69°43' S, 73°44' E. Soviet summer station established in the summer of 1971-72 on the Amery Ice Shelf to conduct geophysical and geological surveys for the summers of 1971-72, 1972-73, and 1973-74, after which it was closed.

Soerge, Harald. b. 1903, Norway. He went to sea in 1927, as an engineer on Norwegian merchant ships, and on Aug. 1, 1935, at Ålerund, signed on as 2nd engineer on the *Wyatt Earp* for Ellsworth's 3rd Antarctic expedition, 1935-36.

SOFeX. Jan. 5-Feb. 26, 2002. An NSF program of "iron seeding," i.e., throwing iron into the oceans and seeing how it affected plankton. There were three ships involved (in Antarcic waters) — the *Polar Star*, the *Melville*, and the *Roger Revelle*.

[1]**Punta Soffia**. 63°19' S, 57°53' W. A point on Covadonga Harbor, between Punta Figueroa and Ross Point, just S of Cape Legoupil, Trinity

Peninsula. Named by ChilAE 1950-51, for Sub Lt. Gustavo Soffia A., on the *Angamos* during that expedition. Also see the entry immediately below.

[2]Punta Soffia. 64°54' S, 62°56' W. A point which forms the extreme SE of Bryde Island, in Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1950-51, for Gustavo Soffia [*see* **[1]Punta Soffia**]. Why there should be two features in the same general area, with exactly the same name, named by exactly the same people, at the same time, for the same man, remains a mystery.

Sofia Automatic Weather Station. 74°48' S, 163°19' E. An Italian AWS, installed in Feb. 1987, at an elevation of 40 m, in the Eisenhower Range of Victoria Land. It stopped transmitting in Nov. 2002, and was replaced with Sofia B.

Sofia Mountains. 69°27' S, 71°23' W. A cluster of 4 small mountains rising to about 1500 m, extending for 21 km in a NE-SW direction, 13 km wide, and bounded to the N by Palestrina Glacier, to the E by Landers Peaks (rising to about 1000 m), to the E and S by the Nichols Snowfield, and to the W by McManus Glacier (a tributary of the Palestrina) and the N part of the Lassus Mountains, in the N part of Alexander Island. The E and north-central part of the group is formed by a nameless ridge about 5 km long, separated by Poste Valley. The NW part is formed by Mount Braun (at about 900 m), and the SW part is formed by Mount Ohridsky. Apparently the group was mapped by the British in 1960, but not named. The name derives from a Feb. 1988 visit by a geological field party comprising BAS personnel and the 1st Bulgarian Antarctic Expedition, and commemorates the centennial of the founding of the University of Sofia, in Bulgaria. Bulgaria named the feature on Oct. 5, 1989, as Sofia University Mountains. This was too much for UK-APC, who renamed it Sofia Mountains on May 13, 1991. US-ACAN accepted the name British naming.

Sofia University Mountains *see* **Sofia Mountains**

Sofietoppen. 72°00' S, 2°31' E. A peak, close SE of Nonshøgda, in the Gjelsvik Mountains, in the W part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, for the main character in a novel by Jostein Gaarder.

Soft Snow Pass. 72°37' S, 166°34' E. A snow pass at an elevation of about 2000 m, at the head of Osuga Glacier (which is a tributary of Trafalgar Glacier), in the Victory Mountains of Victoria Land. Named by Malcolm Laird's 1981-82 NZARP party, for the unusually soft snow encountered in the pass. NZ-APC accepted the name, and US-ACAN followed suit.

Softbed Nunataks *see* **Softbed Ridges**

Softbed Ridges. 83°03' S, 163°45' E. Also called Softbed Nunataks. A series of parallel rock ridges interspaced by small, snow-covered valleys, the whole trending N-S for about 24 km, and forming a portion of the divide between Robb Glacier and Lowery Glacier. Named by NZGSAE 1959-60. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Île Sögen *see* **Sögen Island**

Sögen Island. 65°04' S, 64°02' W. Forms the E side of Français Cove, in the SW extremity of Port Charcot (which indents the N part of Booth Island), in the Wilhelm Archipelago. Discovered by FrAE 1903-05, and named by Charcot as Île Sögen, for Sögen, one of his dogs who died and was buried here during that expedition. US-ACAN accepted the name Sögen Island in 1952.

Ostrova Soglasija *see* **Tryne Islands**

Ozero Soglasija *see* **Soglasija Lake**

Soglasija Lake. 66°16' S, 100°59' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ozero Soglasija. ANCA translated the name on Jan. 19, 1989.

Glaciar Sohm *see* **Sohm Glacier**

Sohm Glacier. 66°07' S, 64°49' W. Flows NNW into Bilgeri Glacier, S of Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956-57 it was photographed aerially by FIDASE, and that same season surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959, for Victor Sohm, Austrian skiing pioneer. US-ACAN accepted the name in 1971. The Argentines call it Glaciar Sohm.

Soholt Peaks. 79°43' S, 84°12' W. A group of rugged, ice-free peaks, between Gifford Peaks and Drake Icefall, in the Heritage Range of the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party 1962-63, for Donald E. Soholt (b. July 1932), geologist with the party. US-ACAN accepted the name in 1964.

Soiza Reilly, Juan José de *see under* **De Soiza Reilly**

Nunataki Sojuz. 74°28' S, 8°10' W. A group of nunataks immediately NE of the mountain the Norwegians call Sembberget, in the SE part of Milorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Russians.

Skala Sojuz-13 *see* **Soyuz-13 Rock**

Utës Sojuz-17 *see* **Soyuz-17 Cliff**

Nunatak Sojuz-18. 73°13' S, 61°54' E. A nunatak SW of the Seavers Nunataks, near the head of Fisher Glacier, in the Prince Charles Mountains of Mac. Robertson Land. Named by the Russians. Not to be confused with Soyuz-18 Rock (which in Russian is known as Skala Sojuz-18).

Skala Sojuz-18 *see* **Soyuz-18 Rock**

Gora Sojuz-21 *see* **Mount Lugg**

Utës Sojuz-28. 79°34' S, 160°00' E. A bluff, due W of Cape Murray, at Carlyon Glacier, on the W edge of the Ross Ice Shelf. Named by the Russians. This may be Cheney Bluff, but, given the difference in coordinates, it is unlikely.

Sökkhornet *see* **Graben Horn**

Nunatak Sokolina *see* **Watts Summit**

The *Sol*. Australian yacht, skippered by Christopher Elliot and Tracey Brown, which visited the South Shetlands and the Antarctic Peninsula in 1989-90. The vessel was back in 1990-91, same places, under the command of Keith Clement.

Caleta Solberg *see* **Solberg Inlet**

Ensenada Solberg *see* **Solberg Inlet**

Solberg Inlet. 68°18' S, 65°13' W. An ice-filled inlet, between 8 and 16 km wide, it recedes W for 22 km between (on the one hand) Rock Pile Peaks and Periphery Point, and (on the other) the SE point of Joerg Peninsula, on the Bowman Coast, on the E coast of Graham Land, at the Larsen Ice Shelf. Photographed aerially by Ellsworth on Nov. 21, 1935, and, using these photos, and the 1928 aerial photos taken by Wilkins, U.S. cartographer W.L.G. Joerg roughly outlined and identified this inlet. Re-discovered in 1940 by USAS 1939-41, and they photographed it aerially and roughly surveyed it from the ground. It appears on a 1943 U.S. Hydrographic Office chart. In 1947 it was photographed aerially by RARE 1947-49, and surveyed from the ground by Fids from Base E. Named by Finn Ronne for Rear Admiral Thorvald Arthur Solberg (1894-1964), USN, who, as chief of naval research, authorized the assistance given to Ronne by the Office of Naval Research. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1962 as Ensenada Solberg, and that was the name accepted by the Chilean gazetteer of 1974. The Argentines also use that name, as well as Caleta Solberg. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Sölch Glacier. 67°04' S, 66°23' W. Flows WSW into Salmon Cove, on the E side of Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Johann Sölch (1883-1951), Austrian glaciologist. US-ACAN accepted the name in 1965.

Punta Soldaditos. 64°19' S, 62°53' W. A point on Islote Atalaya (what the Chileans call Islote Colin), in the Pi Islands, in the Melchior Islands, off the coast of Graham Land. Named by the Argentines.

Islotes Soldado Catalán *see* **Islotes Catalán**

Ostrov Soldat *see* **Soldat Island**

Soldat Island. 68°31' S, 78°10' E. An elongated, rocky islet, 4 km long, S of Partizan Island, in the S part of the entrance to Langnes Fjord, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and plotted on subsequent maps as a peninsula. John Roscoe, the U.S. cartographer, working off air photos taken during OpHJ 1946-47, re-defined it as an island in 1952. ANARE re-photographed it aerially in 1954, and the Russians did the same in 1956. The USSR named it in 1956 as Ostrov Soldat (i.e., "soldier island"). ANARE re-photographed it in 1957 and 1958. US-ACAN accepted the name Soldat Island in 1970, and ANCA followed suit.

Solem Ridge. 71°12' S, 63°15' W. An arc-shaped, mostly snow-covered ridge, 6 km long, and rising to about 1800 m, 16 km NNE of Mount Jackson, and also NNE of Mount Van Buren, in the central part of Palmer Land. Pho-

tographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972–73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Lt. Lynn D. Solem, USN, medical officer at Pole Station in 1972. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Solemark Point *see* **Henry Bluff**

Cabo Soler *see* **Rho Islands**

Islotes Soler *see* **Rho Islands**

The *Solglimt*. There had been a whaler named *Solglimt*, in southern waters (although not Antarctica), which was wrecked on Oct. 16, 1908, at Marion Island (Capt. Anders Harboe Ree). The new *Solglimt*, formerly the *Potsdam*, owned by the Holland America Line, and launched on Dec. 15, 1899, made her first trip to New York from Rotterdam in 1900. In 1915 she was bought by the Swedish American Line, and renamed the *Stockholm*, plying the Atlantic between then and 1928. In Nov. 1929 Chris Nielsen's Norwegian whaling company Atlas bought her, renamed her *Solglimt*, and converted her into a huge whaling supply ship (12,975 tons, 550 feet long, she could carry over 2000 persons, and was capable of 15 knots). As such she conducted pelagic whaling in West Antarctica waters in 1929–31. In 1931 the Atlas Company merged with the Odd Company, and so Lars Christensen became the vessel's owner (although technically his father-in-law, Thor Dahl, owned her). She was in Antarctic waters in 1932–33, was off the coast of Mac. Robertson Land during the 1933–34 season, and was back in Antarctic waters in 1934–35, 1935–36, 1936–37, 1937–38, 1938–39, and 1939–40. In 1941, for the 1940–41 season, the *Solglimt* was in the area of Queen Maud Land, having just come in from New York with supplies for the *Ole Wegger* and the *Pelagos*. Her armaments included four 100 mm guns, not adequate for defense against the Nazi raider *Pinguin*, which took the *Solglimt* on Jan. 13, 1941. Crew: Jørgen Norman Andersen (captain; 40); Edvard Andersen (secretary; 48); Hans Oluf Abrahamsen (1st mate; 59; tattoo on left hand); Hans Christian Paulsen (2nd mate; 55); Julius Waldemar Andersen (3rd mate; 47; tattoo on both arms); Johan Holberg Andersen (4th mate; 38); Karl Anton Svendsen (bosun; 53); Kristian Fredrik Sletsjøe (1st wireless operator; 27; tattoo on right arm); Trygve Kynsveen (2nd wireless operator; 40); André Louis Larsen (carpenter; 40; he had lost the tip off his right hand ring finger); Karl Oskar Kruge (mechanic; 56); Asbjørn M. Haugen (electrician; 40; scar on hand); Anders Marius Standal (31; he had no left hand), Ole Kristian Børresen (30; tattoo on right arm), Johannes J. Bjørndal (54; tattoo on right arm), Carl Severin Hansen (53; tattoo on both arms), Henry Johan Bach (28), Knut Ove Arvesen (24), Edvard Jacobsen (59), Georg Martin Andersen (37; tattoo on right arm); Sigurd Erigen Martinsen (36), Roald Storm Jacobsen (27; had "Mother" tattooed on his left hand); Olav Gulliksen (25), William Kåre Olafsen (22), Henrik Alfred Kristiansen (23), Erling Freng (35), Konrad Olai Hauge (18), and Arne Eggen (22) (ordinary seamen); Conrad Edvard Eversen (chief engineer; 48); Sofus K. Larsen (2nd engineer; 51); Haldor Amandus Sundsby (3rd engineer; 52; tattoo on left arm); Hans Mathaus Mathisen (4th engineer; 49); Håkon Nilsen (50; tattoo on both arms), Karl Ludvig Larsen Bakke (38; tattoo on left arm), and Ingvald M. Hansen Kihle (48 (engineer's assistants); Thorstein Larsen (38; right leg shorter than the other), Thor Kristian Thorsen (37; tattoo on right arm) and Harald Hansen (36) (pump men); Ludvik Marthinius Eriksen (40), Johannes Kristiansen Rodbol (28), Karl Thorstein (26), Per Kristian Moen Berger (30; scar on back of right ear), Karl Johan Johansen (25), Johan Adolf Ekeli (30), Thorbjørn Henriksen (28), Anton Kristian Holm (36; tattoo on both arms), Lars Arne Ingebretsen 935), Einar Andersen (27; scar on right side of neck), and Olaf Børresen (38) (stokers); Einar Ånerød (steward; 42); Einar Kaupang (1st cook; 28); Ivar Christansen (2nd cook; 36); Alf Sørensen Lingelem (galley boy; 21); Olav Kristiansen (16; he weighed only 92 pounds) and Kjell Ragnar Andersen (16) (mess boys); Paul Marinius Nilsen (deck boy; 20); and Åge Pedersen (boy; 19; scar on left arm). The Germans took the vessel to Bordeaux, changed her name to the *Sonderburg*, and later that year she was taken over by the First German Whaling Company. She was sunk by allied planes in Cherbourg Harbor on Sept. 15, 1942.

Solhøgdene *see* **Solhøgdene Heights**

Solhøgdene Heights. 71°22' S, 13°42' E. A small ridge (or heights), 1.5 km SE of Mount Mentzel, overlooking the N side of Asimutbreen Glacier, in the E part of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and named by them as Solhøgdene (i.e., "the sun heights"). US-ACAN accepted the name Solhøgdene Heights in 1970.

Glaciar Solis *see* **Solis Glacier**

Solis Glacier. 62°31' S, 59°43' W. A glacier flowing W into Yankee Harbor, it occupies the coast to the N and E of that harbor, in Greenwich Island, in the South Shetlands. Named by ChilAE 1952–53, as Glaciar Solís, for a member of the expedition, and it appears on their 1953 expedition chart. On July 8, 2003, UK-APC accepted the name Solis Glacier (i.e., without the accent mark, thus rendering it a different name to the one used by the Chileans), and US-ACAN followed suit that year. Plotted by the UK in late 2008.

Île Solitaire *see* **Solitario Island**

Roca Solitaria *see* [1]**Lone Rock**, **Lonely Rock**

Rocas Solitarias *see* **Lonely Rock**

Islote Solitario *see* **Ponton Island**, **Solitario Island**

Solitario Island. 67°52' S, 68°26' W. A small island, 5 km S of the Guébriant Islands, SSE of Cape Alexandra on the S end of Adelaide Island, and E of the Dion Islands. Surveyed (but not named, it seems) by Fids from Base E in 1948. It appears on a 1957 Argentine government chart as Islote Solitario, named for its solitary position. UK-APC could not quite bring itself to use such a flagrantly Argentine name, so, on Sept. 23, 1960, they settled for Solus Island ("solus" meaning "lonely" in Latin). It appears as such on British charts of 1961 and 1964. Surveyed by an RN Hydrographic Survey unit on the *John Biscoe* in 1963. US-ACAN accepted the name Solitario Island in 1965. There is a mysterious mention in the 1966 British gazetteer of an Île Solitaire, referring to a feature in this location.

Solitary Island *see* **Uksen Island**

Solitary Nunatak. 67°28' S, 58°46' E. A small, isolated nunatak, elongated in a NW-SE direction, about 22 km (the Australians say about 26 km) SE of Svart Peak, in Kemp Land, in Enderby Land. Plotted in 67°25' S, 58°46' E by Australian cartographers working from air photos taken between 1954 and 1965. First visisted by Ian McLeod's ANARE party on Feb. 25, 1965. Named descriptively by ANCA on July 29, 1965. US-ACAN accepted the name in 1970, but with different coordinates.

Solitary Peak. 83°14' S, 161°40' E. Rising to 2810 m, 7.5 km SE of Mount Rabot, in the Queen Elizabeth Range. An important geologic section was measured on this feature by the Ohio State University Geological Party of 1967–68, who so named it because of its relative isolation. US-ACAN accepted the name in 1970.

Solitary Rocks. 77°47' S, 161°12' E. A mass of rocks on land, immediately NW of Cavendish Icefalls, on the N side of the major bend in Taylor Glacier, in Victoria Land. Named descriptively by BNAE 1901–04. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Sollas Glacier. 77°43' S, 162°36' E. A small glacier, flowing between Marr Glacier and Hughes Glacier, from the Kukri Hills toward the E end of Lake Bonney in Taylor Valley, between that valley and the lower Ferrar Glacier, in southern Victoria Land. Charted by BAE 1910–13, and named by Grif Taylor of that expedition, for the eccentric William Johnson Sollas (1849–1936), professor of geology at Oxford. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Sollienabben. 74°32' S, 11°26' W. A small nunatak between the nunatak the Norwegians call Ustvedthorten and the hill they call Furubotnnaben, in the most northwesterly part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Communist steel worker Ragnar Armand Sollie (1912–1987), Norwegian Resistance leader during World War II.

Solnik Point. 63°16' S, 62°15' W. A rocky point projecting for 550 m from the NW coast of Low Island, 4.1 km SW of Cape Wallace and 11.15 km N of Cape Garry, it forms the S side of the entrance to Kazichene Cove, in the South Shetlands. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Solnik in northeastern Bulgaria.

The *Solo*. Vic Meyers' famous steel, 100 hp diesel racing yacht, 55 feet long, purchased in Oct. 1977 by David Lewis's brand new company, Oceanic Research Foundation. On Dec. 15, 1977, they left Sydney with 8 persons on board, financed by ORF, to prove that a small, well-designed expedition could do an Antarctic expedition at low cost, and bring back scientific data. The crew were: David Lewis (leader and skipper), Lars Larsen (2nd-in-command), Pieter Arriens (geologist), Peter Donaldson (botanist), Jack Pittar (electronics man), Dorothy "Dot" Smith and Fritz Schaumberg (mountain climbers), and Ted Rayment (movie photographer). On Jan. 9, 1978, they crossed the Antarctic Circle. They then sighted Buckle Island in the Balleny, and anchored there, in Solo Harbor, the first vessel ever to anchor in this island group. They spent 20 hours here. They went on to land at Cape Adare. They sustained hull damage and had to head home. On March 4, 1979, they were back in Sydney, having used only 353 gallons of diesel fuel. In 1979 the book came out, *Voyage to the Ice*, by David Lewis. ORF financed several later expeditions to Antarctica, but not in the *Solo*, which was considered unsuitable. For David Lewis's next adventure, *see* **The *Dick Smith Explorer***.

Solo Harbor. Unofficial name for a small, natural harbor in Sturge Island, in the Balleny Islands. Named for the *Solo*, which put in here in 1978. As this harbor does not have an official name, this may well become accepted in time.

Solo Nunatak. 72°50' S, 163°35' E. A small isolated nunatak, 10 km NE of Intention Nunataks (but set apart from them, hence the name given by the Northern Party of NZGSAE 1962-63), at the SW side of Evans Névé, in Oates Land. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Solomon Glacier. 78°23' S, 162°30' E. On the S side of Fisher Bastion, it flows W from Solomon Saddle to enter Potter Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1995, for Susan Solomon (b. Jan. 19, 1956, Chicago), photochemist working on the chemistry of the ozone hole. She was head project scientist of NOZE, at McMurdo, 1986-87.

Solomon Island. 69°23' S, 76°10' E. The larger and eastern of 2 islands about 1.25 km NE of Donovan Promontory, in the Larsemann Hills. Discovered and photographed aerially by LCE 1936-37, and plotted from these photos. Named by ANCA on Sept. 29, 1988, for David Solomon, Australian Army officer in command of the dukw which landed the ANARE party on Jesson Island, in the Larsemann Hills, in Feb. 1958.

Solomon Saddle. 78°23' S, 162°39' E. A snow saddle, at an elevation of about 1850 m above sea level, between the heads of Solomon Glacier and Foster Glacier, to the S of Fisher Bastion, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1995, in association with the glacier.

Solorina Valley. 63°53' S, 57°48' W. A long valley rising NE from the pass between Lachmann Crags and 2 unnamed (as of June 2010) hills W of Andreassen Point, on James Ross Island. It contains 2 clearwater ponds on the upper area, while the lower section is a flat plain 2 km wide. Named by UK-APC on Dec. 2, 1993, for the lichen *Solorina spongiosa*, found here and at nearby St. Martha Cove.

Solov'ëtoppen *see* **Mount Solov'yev**

Gora Solov'ëva *see* **Mount Solov'yev**

Nunataki Solov'ëva. 80°16' S, 27°00' W. A group of nunataks, W of Gordon Glacier, in the Shackleton Range. Named by the Russians.

Mount Solov'yev. 74°41' S, 12°19' E. A peak, rising to 2715 m, in the S part of Gråkammen Ridge, in the Westliche Petermann Range of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but not named) by Norwegian cartographers, from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that long expedition. Re-mapped again by SovAE 1960-61, and named by the USSR in 1966 as Gora Solov'ëva, for cartographer M.D. Solov'yev. US-ACAN accepted the translated name Mount Solov'yev in 1970.

Solsprettodden *see* **Cape Hinode**

The *Solstreif*. Norwegian whaler of 4637 tons, owned by the Norge Company, she was in the South Shetlands and Graham Land in 1910-11 (with her two catchers, the *Eik* and the *Bøk*), under the command of legendary gunner Thorvald Andersen. After the *Guvernøren* and the *Hektoria*, she was the largest factory whaling ship in the South Shetlands in pre-World War I days. She was back in the same Antarctic waters every season from 1911-12. On April 27, 1916, she pulled into Falmouth, in England, on her way back to Norway from the South Shetlands, with a crew of 45. In the 1917-18 season she was commanded by Capt. Thorstensen, and ran aground. She was rescued by the tug *Alejandro*. The Swede, Herbert Høgberg, died on board, on Dec. 31, 1917. In 1918-19 Carl Andersen was her captain. She was back for the 1919-20 season, again commanded by Thorstensen. In the 1920-21 season she was commanded by Capt. G. Johnsen, and in the 1921-22 season by Capt. Ole Andersen, in the South Shetlands. She was badly damaged off Cape Melville, King George Island, but everyone survived, and the ship floated again. She continued to go to Antarctic waters every season until 1930-31. Her skipper in 1925 was Harald Bjønnes-Hansen. Gustav Gulliksen was 1st officer, and Alf A. Knudsen was 2nd officer. In 1927-28 the skipper was Carl Hansen, who died of uremia aboard ship on Nov. 16, 1927. Years later, she finally did go down, and was salvaged by La Compañía Chilena de Salvatajes, of Punta Arenas.

Solstreif Island. 64°33' S, 62°00' W. The most southerly of the small group of islands at the E side of Foyn Harbor, in Wilhelmina Bay, S of Thor Island, off the Danco Coast, on the W coast of Graham Land. Named by the whalers in the area, for the *Solstreif*, which was moored here in the 1921-22 season, and probably other seasons as well. It was charted as such by the British Imperial Antarctic Expedition of 1920-22. However, the same expedition refers to the Solstreif Islands, meaning this island, Thor Island, and nearby small islands and rocks. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Solstreif Island on Sept. 23, 1960, and it appears as such in the British gazetteer of 1961. US-ACAN accepted the name in 1965.

Solun Glacier. 66°39' S, 66°03' W. A glacier on Pernik Peninsula, 9.3 km long and 4 km wide, E of Skorpil Glacier and W of McCance Glacier, flowing northward from the N slopes of Protector Heights to enter Darbel Bay, on the Danco Coast, on the W coast of Graham Land. Mapped by the British in 1976. Named by the Bulgarians on Sept. 14, 2010, after Sts. Cyril and Methodius Bulgarian Men's High School (known as Solun), the first Bulgarian high school in Macedonia (it lasted from 1880 to 1913, when it was moved to Gorna Dzhumaya), in southwestern Bulgaria.

Mount Solus. 68°50' S, 65°33' W. A conspicuous, isolated mountain, with steep rock sides meeting in a sharp summit ridge that rises to an elevation of 1290 m above sea level, in the west-central part of (and near the mouth of) Weyerhaeuser Glacier, on the Bowman Coast, on the SE coast of Graham Land. Photographed aerially by FIDS in Aug. 1947, and again in Dec. 1947 by RARE 1947-48. Surveyed by Fids from Base E in Dec. 1958, and named by UK-APC on Aug. 31, 1962, for its position ("solus" means "lonely" in Latin). US-ACAN accepted the name later in 1962.

Solus Island *see* **Solitario Island**

Mont Solvay *see* **Mount Solvay**

Montes Solvay *see* **Solvay Mountains**

Monts Solvay *see* **Solvay Mountains**

Mount Solvay. 72°34' S, 31°23' E. Rising to 2560 m, just N of Mount Gillet, in the Belgica Mountains. Discovered by BelgAE 1957-58, and named by expedition leader Gaston de Gerlache as Mont Solvay, for Belgian banker Count Ernest-John Solvay (1895-1972), a supporter and grandson of Ernest Solvay (*see* **Solvay Mountains**). US-ACAN accepted the name Mount Solvay in 1966.

Solvay Mountains. 64°25' S, 62°32' W. Also called Monts Solway. A group of snow-covered mountains, rising to about 1520 m (in Galen Peak), and running in an ENE-WSW direction in the S part of Brabant Island, in the Palmer Archipelago. Their sides falling away steeply toward the sea, they are bounded to the N by a line joining Fleming Point with the head of Hippocrates Glacier, and to the S by the isthmus of Duperré Bay. They also include Mount Ehrlich, Celsus Peak, Cook Summit, and Mount Imhotep. The E coast of Brabant Island was roughly charted between Jan. 24 and 29, 1898, by BelgAE 1897-99, when de Gerlache applied the name Monts Solvay to mountains along the whole length of this coast, the name honoring Belgian chemist Count Ernest Solvay (1838-

1922), the first patron of the expedition. It appears as such on Lecointe's map of 1899. However, there are not any mountains in the N which could belong to this group, so, US-ACAN accepted the name Solvay Mountains in 1952, but with its present limits, and UK-APC followed suit on Sept. 23, 1960. The Chileans and Argentines call them Montes Solvay.

Monts Solway *see* **Solvay Mountains**

Sombre Lake. 60°41' S, 45°37' W. The largest and most northeasterly of the 3 lakes in Paternoster Valley, in the N part of Signy Island, in the South Orkneys. BAS personnel from Signy Island Station did geological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for its sombre setting, and in association with nearby Stygian Cove. US-ACAN accepted the name in 1975.

Islote Sombrío *see* **Dismal Island**

Somerndyke, Benjamin *see* **USEE 1838-42**

Somero Glacier. 85°00' S, 167°12' W. A tributary glacier, 11 km long, flowing NW from Mount Fairweather to enter the Liv Glacier just S of the W end of the Duncan Mountains. Named by US-ACAN in 1966, for George N. Somero, USARP biologist at McMurdo in 1963-64, and who also wintered-over there in 1965.

Somers, Geoffrey Usher "Geoff." b. Feb. 19, 1950, Khartoum, son of country doctor Raoul Usher Somers and his wife Maurine Pope. Educated in England, in 1972 he became an instructor at Outward Bound, doing 7 years of that between then and 1986. He was a BAS general assistant and mountain guide who wintered-over at Rothera Station in 1979 and 1980, and between 1984 and 1986 was in Borneo. He summered in Antarctica in 1986-87, as a field guide, and from July 1989 to March 1990 was part of the International Transantarctic Expedition, completing the only traverse ever made of Antarctica by its longest axis, a 4000-mile journey that took 7 months, with huskies pulling the sledges. In training for this, he and his team had made the first unsupported Arctic journey (1400 miles across Greenland). After an expedition in the desert of Australia, and working in Oman, he was back in Antarctica, as field operations manager for Adventure Network. Later in 1996 he was at the North Magnetic Pole, and since then has been several times in the Arctic. In 1996-97 he, Crispin Day, and Robert Swan, skied 1000 miles from the South Pole to the Orville Coast, and in 1998-99 he was Zodiac driver and lecturer on the *Marco Polo*, in Antarctic waters. He set up a program for polar expeditions for the inexperienced, and in 1999-2000 trained and led a group of novices on a 700-mile, 60-day trek to the South Pole, with them hauling their own supplies. He was back as lecturer and driver in Antarctic waters, in 2001-02, and in 2003 guided a small group on skis from the South Pole to the Ronne Ice Shelf. In 2004 he was lecturer on a cruise liner to Antarctica, and in 2005 guided two people the last 2 degrees of latitude to the South Pole. In Dec. 2005-Jan. 2006 he guided 4 men on a re-enactment of the last 200 miles of Scott's fateful 1911-12 trip to the South Pole. His trips to Antarctica as a lecturer on tourist ships are ongoing. He was awarded the MBE.

Somers, Henri. b. Feb. 21, 1863, Lille, France. Chief engineer on the *Belgica*, 1897-99.

Somers Glacier. 65°22' S, 63°31' W. Flows NW into Trooz Glacier, on the Graham Coast, on the W coast of Graham Land. First charted by BGLE 1934-37. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Henri Somers. US-ACAN accepted the name in 1971.

Somers Nunatak. 67°28' S, 67°16' W. Rising to about 600 m on the W edge of Reid Glacier, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of the Antarctic Peninsula. It provides a useful vantage point near several geological localities. BAS did geological work here in 1980-81. Named by UK-APC on April 3, 1984, for Geoff Somers (q.v.), who assisted in the work. US-ACAN accepted the name. It appears in the 1986 British gazetteer.

Islas Somerville *see* **Somerville Island**

Islote(s) Somerville *see* **Somerville Island**

Somerville, Frederick Lewis Maitland. b. 1885, Christiania, Norway, son of Irish teacher and journalist David Maitland Makgill Crichton Somerville, instructor to Prince Oscar of Norway and Sweden, and British proconsul in Christiania, by his Scottish wife Alison Clephane, and grandson of Admiral Philip Horatio Townshend Somerville. After a spell under head Hugh Rennie Brown, at Merton House School, in Southwick, near Brighton, with his younger brother, Thomas Townshend Somerville, he joined the Merchant Navy, and was 15 years old, when, in Norway, he met William Colbeck, and asked for a position on his ship, the *Morning*, during the relief of BNAE 1901-04. He was given the rank of midshipman. His father, the proconsul, was of great help to Charcot in procuring polar equipment for FrAE 1908-10 (*see* **Somerville Island**). In Dec. 1910, still a sailor, he sailed from Southampton to New York on the *St. Louis*.

Somerville Island. 65°22' S, 64°19' W. The more southwesterly of a pair of islets 6 km SW of the Berthelot Islands, 4 km NW of Darboux Island, on the SE side of Grandidier Channel, in the Wilhelm Archipelago, off the Graham Coast on the W coast of Graham Land. Discovered and roughly charted in 1909, by FrAE 1908-10, and named by Charcot as Îlot Sommerville (sic), for David Maitland Makgill Crichton Somerville, of Christiania (later Oslo), who selected and supervised the making of much of the polar clothing and equipment for the expedition. He was the father of F.L.M. Somerville (see the entry above). It appears as such on Charcot's 1912 map, and, taken from that, on Rymill's 1938 map, as Sommerville Island. On a 1946 Argentine chart, this island and surrounding rocks appear as Islas Somerville, but on one of their 1949 charts as Islotes Sommerville, and on one of their 1957 charts as Islotes Somerville. It appears as Sommerville Islet on a 1948 British chart, and that was the name accepted by UK-APC on Nov. 21, 1949. It appears as Somerville Islet on a 1952 British chart, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It was photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC redefined it as Somerville Island, and US-ACAN accepted that name in 1963. Meanwhile, it appeared (singularized) as Islote Somerville on a 1953 Argentine chart, but on one of their 1957 charts as Islote Sommerville, and that latter name was the one chosen by the 1970 Argentine gazetteer. However, today, the Argentines call it Islote Somerville, and that was the name also accepted by the 1974 Chilean gazetteer.

Somigliana Glacier. 67°02' S, 67°09' W. Flows N into Langmuir Cove, on the N part of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by FIDS in 1957-58, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Carlo Somigliana (1859-1955), Italian mathematician and physicist who studied glacier flow in the 1920s. US-ACAN accepted the name in 1965.

Sømmemorenen. 74°19' S, 9°49' W. A moraine on the W side of Milorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for zoologist Iacob Dybwad Sømme (1898-1944), Norwegian Resistance leader with the Milorg group, executed by the Nazis.

Punta Sommers *see* **[2]Punta Martín**

Îlot Sommerville *see* **Somerville Island**

Islotes Sommerville *see* **Somerville Island**

Sommerville Island *see* **Somerville Island**

Sommerville Islet *see* **Somerville Island**

Somosa, Carlos S. b. Argentina. Captain of the *Uruguay* from Dec. 2, 1908 to June 15, 1909.

Somov, Mikhail Mikhaylovich. b. April 7, 1908, Moscow. Oceanographer, and senior researcher at the Arctic and Antarctic Research Institute. He fought the Nazis in Arctic waters in World War II, led a station at the North Pole, 1950-51, and was leader of SovAE 1955-57 (the first Soviet Antarctic Expedition), and led the wintering-over party at Mirnyy Station in 1956. He was the first Soviet delegate to SCAR, and also led SovAE 1962-63 and SovAE 1963-64. He died on Dec. 30, 1973, at Leningrad.

Somov Canyon. 65°00' S, 143°00' E. A submarine feature off Adélie Land. Named for Mikhail Somov. This feature has not made it into the gazetteers, for the very good reason that it does not exist.

Lednik Somova. 71°26' S, 12°35' E. A small glacier flowing on the SW side of Vitnesteinen Rock, along the W side of the Östliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

More Somova. 68°45' S, 162°30' E. A sea off the coast of Oates Land. Named by the Russians.

Somoveken. 71°50' S, 10°55' E. A glacier, 60 km long, between the Orvin Mountains and the Wohlthat Mountains, in Fimbulheimen. Named by the Norwegians for Mikhail Somov (the name means "the Somov spoke"). It seems odd that

such a large glacier should not also have an American name, but there is definitely a glacier here. The Russians call it Lednik Gornogo Instituta.

Somovit Point. 62°24' S, 59°21' W. A point about 900 m NNW of Batuliya Point, and 1.1 km SSW of Kitchen Point, it projects for about 500 m into the Bransfield Strait from the E coast of Robert Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Somovit, in northern Bulgaria.

Mount Sones. 67°02' S, 51°30' E. On the N side of Beaver Glacier, 3 km W of Mount Reed, in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA in 1962 for Fred Sones. US-ACAN accepted the name in 1965.

Sones, Frederick John "Fred." b. 1886, Halesworth, Suffolk, son of marble laborer William Sones and his wife Alice Forster. He joined the Merchant Navy, as a 3rd baker, in 1908, and as such voyaged all over the world, mostly on the Australian run. He later lived in West Ham, London, where he married Ellen C. Boyles in 1916. He graduated to cook, and was chief cook on the Atlantic Transport Line's ship *Manhattan*, in 1917, running between London and New York. He was the cook on the *Discovery* during the first half of BANZARE 1929-31, and after the expedition (or rather, his part of it), he took the *Bendigo* from Melbourne to London, where he arrived on June 25, 1930. During World War II he was still a chief cook, working for the British Tanker Company, plying the Atlantic on their ships *British Resolution* and *British Glory*. He died in London in 1967.

Song Shan *see* **Gneiss Peak**

The *Songra*. A whale catcher belonging to the *Southern Harvester*, in Antarctic waters in 1956-57. This was the catcher which, using a 50-foot sperm whale as a fender, came alongside the royal yacht *Britannia*, and basketed aboard the Duke of Edinburgh for his visit to the *Southern Harvester* (in time for tea).

Pointe Sonia *see* **Sonia Point**

Punta Sonia *see* **Sonia Point**

Sonia Point. 65°05' S, 63°30' W. About 10 km W of Rahir Point, on the S side of Flandres Bay, it forms the W entrance point of Lauzanne Cove, on the Danco Coast, on the W coast of Graham Land. Probably discovered (but certainly not named) in Feb. 1898, by BelgAE 1897-99. Charted in 1904 by FrAE 1903-05, and named by Charcot as Pointe Sonia, for Madame Sonia Bunau-Varilla (née Brunhoff), a supporter of the expedition, and wife of Philippe-Jean Bunau-Varilla (1859-1940), one of the leading exponents and propellers of the Panama Canal and Panamanian independence. Monsieur Bunau-Varilla is vividly portrayed in David McCullough's book about the canal, *The Path Between the Seas*. It appears as such on maps prepared by the Charcot expedition. The feature appears as Sonia Point on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by UK-APC on Sept. 23, 1960, and by US-ACAN in 1965. It appears as such on a British chart of 1974. It appears on a 1949 Argentine chart, as Punta Sonia, and on a 1954 Argentine chart as Punta Alta (i.e., "high point"). However, the Argentine gazetteer of 1970 accpted the name Punta Sonia. The feature was photographed aerially by FIDASE in 1956-57.

Sonic Lake. 67°48' S, 62°48' E. A crescent-shaped, permanently frozen lake in a large bay in the Framnes Mountains, at the SW corner of the North Masson Range. So named by ANCA on July 26, 1983, because when investigators were standing on the lake the cracking ice sounded like a sonic boom.

The *Sonja*. A 127-ton British steel whale catcher, built in 1910, by Hawthorn, in Leith, Scotland, owned by Salvesen's, which worked for the *Neko* in the South Shetlands, 1911-12. With the *Scapa* and the *Silva*, she was one of the first 3 whale catchers built in a British shipyard. She was sold in 1923 to the Danes, who operated her in the Arctic until 1949.

Sonntag Nunatak. 84°53' S, 86°42' W. A solitary nunatak, 30 km ENE of Hamilton Cliff, in the Ford Massif, in the Thiel Mountains. Discovered on Dec. 13, 1959, by Ed Thiel and Cam Craddock, who named it for Wayne Sonntag, operations director at the Geophysical Institute, at the University of Wisconsin, 1959-61, and logistics officer for the airlifted geophysical traverse (which included Thiel and Craddock) along the 88th Meridian West that year. US-ACAN accepted the name in 1962.

Sønstebynuten. 70°55' S, 12°14' E. A nunatak in the easternmost part of Lingetoppane, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Gunnar Fridtjof Thurmann Sønsteby (b. 1918), Norwegian Resistance leader during World War II. He may be (he was still alive at time of writing) the most decorated man in Norway. The Russians pluralize this outcrop as Skaly Mihaila Belova (i.e., "Mikhail Belov rocks"), named for Prof. Mikhail Ivanovich Belov (1916-1981), Arctic explorer.

Mount Soond. 75°00' S, 134°13' W. A peak, 1.5 km N of Bleclic Peaks, in the Perry Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Robert T. Soond, geomagnetist at Plateau Station in 1968.

Sooty Rock. 65°14' S, 65°09' W. A rock rising to 18 m above sea level, midway between Lumus Rock on the E and the Betbeder Islands on the W, at the SW end of the Wilhelm Archipelago. Discovered and charted in Feb. 1936, by BGLE 1934-37, and named by them as Black Reef. It appears, translated, as Arrecife Negro, on a 1946 Argentine chart, but on one from the following year it is shown as Arrecife Black. ChilAE 1946-47 named it Isla Tucapel, perhaps after a member of the expedition, and it appears as such on their chart of 1947. It appears as Black Reef on a 1948 British chart, plotted in 65°16' S, 65°08' W, and that was the name accepted by UK-APC on Sept. 20, 1955, and also by US-ACAN. Re-surveyed by an RN Hydrographic Survey unit on the *Endurance* in Feb. 1969, and described as a rock about 20 m high. Arrecife Negro was the name accepted by the 1970 Argentine gazetteer. On Nov. 3, 1971, UK-APC renamed it Sooty Rock, in order to avoid confusion with Black Rock, and US-ACAN accepted the new name in 1972. It appears as such in the British gazetteer of 1974, and on a British chart of the same year. The Chilean gazetteer of 1974 accepted Arrecife Black. It has since been replotted.

The *Sophia Thornton*. A 424-ton New Bedford sealer and whaler, built in Bath, Maine, at the yard of Trufant, Drummond & Co., and launched there on April 16, 1851. Owned by John R. Thornton, she left New Bedford on July 9, 1851, under the command of Capt. John M. Young, bound for the South Pacific and the South Shetlands. Using Hawaii as her base, she whaled in an out of Antarctic waters until early 1855. On March 10, 1855, almost home after her extended trip, she ran into a severe tempest off the New Jersey coast, and was quite damaged. After a refit, she left New Bedford again, on June 26, 1855, bound for the Pacific (but not Antarctica), this time under Capt. Nichols. In 1860-64 she was under the command of William Briggs (but not in Antarctica), and, on June 22, 1865, while in the Bering Sea, under the command of Capt. Moses G. Tucker, she was captured and burned by the notorious Confederate rogue *Shenandoah*.

Roches Sophie *see* **Sophie Rocks**

Sophie Cliff. 64°44' S, 62°15' W. A conspicuous granite cliff rising to about 200 m at the E side of the entrance to Piccard Cove, Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, presumably in association with Sopie Rocks, and US-ACAN followed suit in 1965.

Sophie Rocks. 64°39' S, 62°33' W. A small group of land rocks midway between Spigot Peak and Zeiss Needle, overlooking Selvick Cove to the W and Orne Harbor to the E, on Arctowski Peninsula, on the Danco Coast, on the W coast of the Antarctic Peninsula. Charted on Feb. 7, 1898, by BelgAE 1897-99, when a landing was made in this vicinity. Named by de Gerlache as Roches Sophie. On Dr. Frederick Cook's English language version of the expedition's maps, it appears as Sophie Rocks, that name seeming to take in not only the rocks themselves but also Spigot Peak and Zeiss Needle. On April 23, 1998, UK-APC re-applied the name just to this feature, and US-ACAN followed suit in 1999.

Gora Sopka. 70°45' S, 67°58' E. A nunatak on the SE side of the McLeod Massif, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians ("hill nunatak").

Sopot Ice Piedmond. 62°37' S, 59°53' W. Between Rila Point and Renier Point, on the SE side of Moon Bay, Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for their town of Sopot. UK-APC accepted the name on July 8, 2003, and

US-ACAN followed suit that year. Plotted by the UK in late 2008.

Sopot Peak. 62°10' S, 58°34' W. Rising to 205 m, it is the highest peak on Dufayel Island, in Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for their health resort on the Baltic Sea, in Poland.

Sør Rondane *see* **Sør Rondane Mountains**

Sør Rondane Mountains. 72°00' S, 25°00' E. Also called Southern Escarpments. A group of mountains and ice areas, about 160 km long, and rising to about 3400 m, between the Queen Fabiola Mountains and the Wohlthat Mountains, or, to put it another way, between Borchgrevinkisen to the W and (to the E) the depression to the W of the Belgica Mountains, in Queen Maud Land. This group has 2 high mountains: Isachsen and Widerøe. Discovered by LCE 1936-37, and photographed aerially by them on Feb. 6, 1937. The name means "the Southern Rondane Mountains" in Norwegian. The Rondanes form a massif in Norway. Mapped in greater detail in 1957 by Norwegian cartographers working from air photos taken by OpHJ 1946-47. US-ACAN accepted the name Sør Rondane Mountains in 1953. Originally the longitudinal extent of the mountains was between 21°15' E and 27°30' E, but in 1973 the Norwegians modified that slightly. The Russians call them Gory Paustovskogo.

Søråsen *see* **Søråsen Ridge**

Søråsen Ridge. 71°25' S, 10°00' W. A broad, snow-covered ridge (the Norwegians call it an ice dome) that separates the Quar Ice Shelf from the Ekström Ice Shelf, on the Princess Martha Coast of Queen Maud Land. First mapped by NBSAE 1949-52, and named by them as Søråsen (i.e., "the south ridge"). They plotted it in 71°30' S, 9°40' W. US-ACAN accepted the name Søråsen Ridge in 1970. It has since been replotted.

Sørbukta. 68°55' S, 90°33' W. A small bay, 4 km E of the glacier the Norwegians call Zavadovskijbreen, on the coast they call Vostokkysten, at the SW corner of Peter I Island. Named by the Norwegians ("the south bay").

Sore Thumb. 76°40' S, 161°06' E. A notable rock spire, rising to about 1400 m above sea level, 50 m above a crest of Elkhorn Ridge, to the E of Topside Glacier, in the Convoy Range of Victoria Land. Though not the highest point on the ridge, it stands out like a "sore thumb," and is an excellent reference point. New Zealand geologist Christopher J. Burgess, who visited the area in 1976-77, suggested the name Sore Thumb Stack, but NZ-APC went with the name Sore Thumb. US-ACAN accepted the name in 1993.

Sore Thumb Stack *see* **Sore Thumb**

Sørensen, Arne Jacob *see* **Sørensen Bluff**

Sørensen, Bernt. b. April 12, 1858, Nøtterøy, Norway. Brother of Søren Sørensen. He married a Tønsberg girl named Kristine Andersen, and they lived in Sem, with their large family. He was a famous whaling gunner, when he commanded the whale catcher *Ørnen* in Antarctic waters in 1905-06, as part of the *Admiralen* fleet. He harpooned the first whale in the South Shetlands. He died in 1924.

Sørensen, Gustav. b. Sept. 4, 1871, Sandefjord, Norway, son of Hans Martin Sørensen and his wife Margrete. He went to sea, working his way up through the mate ranks, in the mid 1890s married Inga, and raised a family in Sandefjord. In 1917 he was in Antarctica as 1st mate on the *Thor I*, and in 1918-19 was skipper of the same ship.

Sørensen, Hans Winge. b. Sept. 21, 1890. Skipper of the *Sacra*, 1922-23. He died on Oct. 25, 1968.

Sorensen, J.W. Crewman on the *Bear of Oakland*, 1934-35, during the 2nd half of ByrdAE 1933-35.

Sørensen, Nils. b. 1890, Norway. Whaler in the South Shetlands in the 1913-14 season, who died of acute peritonitis in Admiralty Bay, King George Island, on Feb. 16, 1914, and was buried in the Whalers Bay Cemetery on Deception Island.

Sørensen, Søren. b. May 15, 1863, Nøtterøy, Norway. Brother of Bernt Sørensen. The two brothers had learned harpooning in Finnmark, Iceland, and Spitsbergen. Like his brother, Søren married a girl named Kristine (Kristoffersen) and had a large family, and they lived in Tønsberg. When Chris Christensen asked the brothers if they would go to Antarctica, they said, "Chris, wherever you want to go, even to the end of the world." Søren was gunner on the *Hauken*, and would probably have been skipper, but he didn't have his master's license. In 1907, when Tønsbergs Hvalfangeri was established, the brothers became the leading gunners for that company, at Husvik Harbor, in South Georgia. Søren died in 1925. His son, also a gunner (in the Arctic) died in 1950.

Sørensen Anchorage. 60°44' S, 65°40' W. An old whaler's anchorage, at the S entrance of Fyr Channel, W of Moyes Point, on Signy Island. Named for Bert Sørensen and his brother Søren. The name does not seem to be used anymore, not officially anyway.

Sørensen Bluff. 69°23' S, 76°21' E. An imposing bluff headland, about 75 m high, projecting into Nella Fjord, about 1.3 km NW of Law-Racovitza Station, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Arne Jacob Sørensen, chief officer on the *Nella Dan*, 1978-82, and skipper from 1982 to 1987. The Chinese call it Niuzui Jiao.

Sorensen Glacier. 74°28' S, 111°22' W. Between Moore Dome and Rogers Spur, on Bear Peninsula, flowing W into the Dotson Ice Shelf, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967. Named by US-ACAN in 1978, as Sorrenson Glacier (sic), for Jon E. Sorensen, civil engineer with USGS, who wintered-over at Pole Station in 1975, as a member of the satellite surveying team. The name was later corrected.

Sørensen Nunataks. 71°41' S, 7°57' E. A group of about 15 nunataks (including Stein Nunatak), which extend over 10 km, and which form the NW part of the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and first plotted from these photos. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sørensenskjera (i.e., "the Sørensen rocks"), for Stein S. Sørensen (b. 1921), who wintered-over as chief radio operator at Norway Station in 1957 and 1958, during NorAE 1956-60. US-ACAN accepted the name Sørensen Nunataks in 1967.

Sorensen Peak. 71°43' S, 167°48' E. Rising to 2640 m, between Church Ridge and the base of the Lyttelton Range, it surmounts the divide between Dennistoun Glacier and Leander Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Douglas J. Sorensen, field assistant at McMurdo in 1965-66.

Sørensenskjera *see* **Sørensen Nunataks**

Sørfløya. 74°11' S, 6°26' W. The most southeasterly mountain on the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the south wing").

Isla Sorge *see* **Sorge Island**

Sorge Island. 67°11' S, 67°43' W. Just S of The Gullet, between that feature and Barlas Channel, close E of Adelaide Island. Surveyed by Fids from Base E in 1948. Named by UK-APC on Sept. 23, 1960, for German glaciologist Ernst Friedrich Wilhelm Sorge (1899-1946), who, as a member of the German expeditions in Greenland in 1929 and 1930, made the first seismic soundings of the Greenland ice sheet and developed a theory for the densification of firn. In 1935 he led an expedition to Svalbard. US-ACAN accepted the name in 1965. The Argentines call it Isla Sorge. Not to be confused with Islote Tigre.

Sørhaugen *see* **Sørhaugen Hill**

Sørhaugen Hill. 71°48' S, 25°37' E. The most southerly of a group at the E side of Kamp Glacier, on the W side of Byrdbreen, in the N part of the Sør Rondane Mountains. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who re-mapped this feature in 1957 from air photos taken during OpHJ 1946-47, naming it Sørhaugen (i.e., "the south hill"). US-ACAN accepted the name Sørhaugen Hill in 1966.

Sørhausane *see* **Sørhausane Peaks**

Sørhausane Peaks. 72°47' S, 0°15' E. A small cluster of peaks 3 km S of Nupskåpa Peak, at the very S end of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Sørhausane (i.e., "the south peaks"). US-ACAN accepted the name Sørhausane Peaks in 1966.

Sørhjelmen *see* **Sørhjelmen Peak**

Sørhjelmen Peak. 71°48' S, 26°28' E. Rising to 2030 m, at the head of Hette Glacier, at the S end of the group of peaks just E of the mouth of Byrdbreen, in the Sør Rondane Mountains. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who further mapped this feature in 1957, from air photos taken during OpHJ 1946–47, and named it Sørhjelmen (i.e., "the south helmet"), for its position at the S end of the group of peaks mentioned above. US-ACAN accepted the name Sørhjelmen Peak in 1966.

Sørhøfjell. 66°44' S, 54°07' E. The SCAR Composite Gazetteer says the Russians named it, but it is very definitely a Norwegian name ("southern high mountain"). This feature seems to be one of the Young Nunataks, S of Mount Elkins, in the Napier Mountains of Enderby Land.

Sørhortane. 72°02' S, 12°35' E. A group of rock crags along the NE edge of Horteriset Dome, southward of the Petermann Ranges, in the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them. US-ACAN accepted the name without modification in 1966. The Russians call them Gory Voejkova.

Sörkammen *see* **South Masson Range**

Sörkammen Crest *see* **South Masson Range**

Sørknausen. 72°11' S, 27°45' E. The southernmost rock in Berrheia, in Balchen Mountain, in the Sør Rondane Mountains. Named by the Norwegians ("the southern crag").

Sörkollen *see* **Onley Hill**

Cabo Sørlle *see* **Cape Sørlle**

Cape Sørlle. 60°46' S, 44°59' W. A rocky bluff marking the S end of Fredriksen Island, in the South Orkneys. Discovered and charted by Powell and Palmer in Dec. 1821. Re-surveyed in 1933 by the personnel on the *Discovery II*, and named by them for Petter Sørlle. It appears as such on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 and 1961 British gazetteers. It appears on an Argentine chart of 1953 as Cabo Sørlle, and that is the name used by the Argentines today. Again the Norwegian accent marks have varied over the years (*see* **Sørlle Rocks** for a brief dissertation on this subject).

Rocas Sørlle *see* **Sørlle Rocks**

Sørlle, Petter Martin Mattias Koch. b. Feb. 16, 1884, at Thune, near Tønsberg, Norway. He went to sea at 14, and was a whaling captain out of Sandefjord, a close associate of Carl Anton Larsen's. In April 1909, in Christiania, he married Signy (or Signe) Therese Gulbraar, who was then only 16 (b. May 30, 1892). He was the first manager of the United Whalers station at Stromness, in South Georgia, and nephew of later manager Thorold Sørlle. In 1911–12 he investigated anchorages in the South Orkneys, while aboard the *Paal*, for the Rethval Whaling Company of Oslo, and he was back in the South Orkneys in 1912–13, doing a running survey of the islands, again aboard the *Paal*, on which he had been hired by Capt. Melsom of the Thule Whaling Company, as a gunner. He invented the stern slipway in 1922 (put into effect in 1925), which enabled whales to be dragged more easily aboard a floating factory instead of being pulled up through a large hole. He died on May 29, 1933, at Tønsberg, where he is buried. Signy died on Jan. 9, 1988, in Tønsberg.

Sørlle, Thoralf. b. 1875, Tjølling, Norway. He married Anna, and they lived in Sandar. He was whaling manager for the Sydhavet Company, in 1908, and of the Sandefjord Whaling Company, 1913–31. Uncle of Petter Sørlle.

Sørlle Rocks. 60°37' S, 46°15' W. A group of rocks in water, the highest rising to an elevation of about 20 m above sea level, WSW of the Larsen Islands, 11 km W of Moreton Peak (the W extremity of Coronation Island), in the South Orkneys. Petter Sørlle charted them in 1912–13, and they appear on his and Borge's chart of 1913 as Tre Sten (i.e., "three stones"). On a British chart of 1916, they appear as Sørlle Rocks. The Discovery Invesigations re-surveyed them, and they appear on their 1927 and 1930 charts as Three Stones. On a 1930 Argentine chart they appear as Rocas Sørlle, but on Sørlle's 1930 chart they appear as Trestein. They were re-surveyed by the DI in 1933, and appear on their 1934 chart as Sørlle Rocks, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The name Sørlle is inevitably going to be mangled, as it was by the Argentines in the 1930s and also by others. A 1943 U.S. Hydrographic Office chart, for example, spells it as Sorlle Rocks, as does the 1974 British gazetteer. The 1970 Argentine gazetteer accepted the name Rocas Sørlle. Incidentally, this name is, and often has been, seen as Sörlle Rocks, or Rocas Sörlle. In Norwegian ö and ø are the same thing, it's just that in type it tends to be ø, and in handwriting ö.

Sorna Bluff. 83°18' S, 50°40' W. A prominent rock bluff, rising to about 2020 m, overlooking the head of May Valley, on the N side of the Saratoga Table, in the Forrestal Range of the Pensacola Mountains. Photographed from the air by USN in 1964, surveyed from the ground by USGS in 1965–66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Lt. Cdr. Ronald E. Sorna, USN, pilot on photographic flights in the Pensacola Mountains. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Sörnuten *see* **Fischer Nunatak**

Gora Sorokina. 74°08' S, 6°13' W. A nunatak, NE of Sørflya, in the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Named by the Russians.

Ostrov Sorokina. 70°13' S, 161°40' E. An island to the W of Znamenskiy Island, in Rennick Bay, on the coast of Oates Land. Named by the Russians.

Söröya *see* **Shaula Island**

Grupo Sorpresa *see* **Sorpresa Rock**

Isla Sorpresa *see* **Brewster Island**

Islote Sorpresa *see* **Brewster Island**

Islotito Sorpresa *see* **Brewster Island**

Roca(s) Sorpresa *see* **Sorpresa Rock**

Sorpresa Rock. 67°51' S, 69°34' W. An exposed rock in water, rising to an elevation of about 5 m above sea level, SW of Cavalier Rock, off Cape Adriasola (the S end of Adelaide Island). Roughly surveyed by ChilAE 1946–47, it appears on their 1947 chart as Roca Sorpresa (sorpresa means "surprise"). On a 1953 Argentine chart this rock and its offliers were collectively called both Grupo Sorpresa and Rocas Sorpresa. Recharted in 1963, by an RN Hydrographic Survey unit on the *Protector.*, and named by them as Surprise Rock, or Surprise Island. UK-APC accepted the name Surprise Island on Feb. 12, 1964, and, later that year, US-ACAN accepted the name Sorpresa Rock. Today, the Argentines call it Roca Sorpresa, as, presumably, do the Chileans.

Sorrenson Glacier *see* **Sorensen Glacier**

Sørsdal, Leif. Norwegian dentist on the *Thorshavn*, 1934–35. A member of the party which landed at the N end of the Vestfold Hills.

Sørsdal Glacier. 68°41' S, 78°10' E. Heavily crevassed, it flows WNW for 24 km along the S side of Krok Fjord and the Vestfold Hills, forms the N extremity of Prydz Bay, and terminates in Sørsdal Glacier Tongue. Discovered and charted in Feb. 1935 by Klarius Mikklesen, in the *Thorshavn*, and named by him as Sørsdalbreen, for Leif Sørsdal. US-ACAN accepted the translated name Sørsdal Glacier in 1947, and ANCA followed suit.

Sørsdal Glacier Tongue. 68°42' S, 78°00' E. The prominent seaward extension of Sørsdal Glacier (in association with which it was named), at Prydz Bay, in East Antarctica. Discovered in Feb. 1935 by Mikklesen, in the *Thorshavn*. US-ACAN accepted the name in 1956.

Sørsdal Knoll. 68°39' S, 78°13' E. A knoll, rising to 82.1 m, it is the most conspicuous of several in this area of the Vestfold Hills, and is conspicuously silhouetted against the Sørsdal Glacier when viewed from the vicinities of Tarbuck Crag, Boulder Hill, and the survey station on Mule Peninsula, in Princess Elizabeth Land. In Jan. 1979 (another) survey station was established on this knoll. Named by ANCA on July 26, 1983, in association with the glacier.

Sørsdalbreen *see* **Sørsdal Glacier**

Sørskeidet *see* **Sørskeidet Valley**

Sørskeidet Valley. 72°03' S, 11°30' E. An ice-filled valley, N of Skeidshovden Mountain, near the SW end of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Sørskeidet (i.e., "south glaciated area"). US-ACAN accepted the name Sørskeidet Valley in 1966.

Sørsteinen. 72°21' S, 15°58' E. A nunatak S

of Steingarden, in the southeasternmost part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the southern stone").

Sørsundet *see* **Minamino-seto Strait**

Sørtindane *see* **Brown Range**, [1]**Gordon Peak**, **Sørtindane Peaks**

Sørtindane Peaks. 68°08' S, 62°24' E. A group of 2 peaks about 4 km S of Mount Twintop, at the S end of the David Range of the Framnes Mountains. The two peaks were mapped by Norwegian cartographers in 1946, from aerial photographs taken by LCE 1936-37, plotted by them in 68°06' S, 62°23' E, and named by them as Sørtindane (i.e., "the south mountain peaks"). However, there were 5 others in the group that the Norwegians missed, and on July 22, 1959, ANCA named those 5 collectively (but only one individually, and that was Gordon Peak) as the Brown Range. US-ACAN accepted the name Sørtindane Peaks in 1965. This feature is not synonymous with the Brown Range, despite a provocative preponderance of seeming evidence to the contrary.

Sørtoppen *see* **Sørtoppen Nunatak**

Sørtoppen Nunatak. 66°40' S, 53°28' E. Rising to about 1900 m above sea level, about 11.1 km SW of Mount Breckinridge, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Sørtoppen (i.e., "the south peak"). ANCA accepted the name Sørtoppen Nunatak on July 31, 1972.

Sosa, Elías Reynoso *see* **Órcadas Station**, 1921

Sosa Bluff. 82°32' S, 42°53' W. A rock bluff, rising to about 700 m, 1.5 km S of Lisignoli Bluff, in the Schneider Hills of the Argentine Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for 1st Lt. (later Col.) Óscar Roberto Sosa, Argentine officer-in-charge of General Belgrano Station in 1966. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Sosa Icefalls *see* **Soza Icefalls**

Søstrene *see* **Søstrene Islands**

Søstrene Islands. 69°33' S, 75°30' E. Also called The Sisters. A group of small islands and rocks that rise above the general level of the N part of the Publications Ice Shelf, at the head of Prydz Bay, on the Ingrid Christensen Coast. Discovered and charted by Klarius Mikkelsen in Feb. 1935, while aboard the *Thorshavn*. He named them Søstrene, after the islands of the same name in the entrance to Oslo Fjord, Norway. US-ACAN accepted the name Søstrene Islands in 1947, and ANCA followed suit on May 18, 1971. The southernmost of this group is Debutante Island. None of the other islands in this group are named.

Soto, Reynaldo *see* **Órcadas Station**, 1948, 1950

Soto Glacier. 71°28' S, 61°53' W. About 20 km long, it flows SSE along the SW side of Strømme Ridge, into Odom Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Luis R. Soto, Argentine oceanographer on the International Weddell Sea Oceanographic Expeditions of 1968 and 1970. UK-APC accepted the name on July 21, 1976. Originally plotted in 71°31' S, 61°46' W, it has since been replotted.

Soto Refugio *see* **Observador Walter Soto Refugio**

Isla Sotomayor *see* **Sotomayor Island**

Islote Sotomayor *see* **Sotomayor Island**

Sotomayor Island. 63°20' S, 57°55' W. Just S of the entrance to Unwin Cove, Trinity Peninsula. Surveyed by ChilAE 1950-51, and named by them as Isla Sotomayor, for 2nd Lt. Victor Sotomayor L., cargo officer of the *Lientur* during that expedition. It appears as such on their 1951 chart. However, it appears on a 1959 Chilean chart as Islote Sotomayor, and that is the name the Chileans use today. US-ACAN accepted the name Sotomayor Island in 1964, and UK-APC followed suit on Dec. 15, 1982. It appears as such in the 1986 British gazetteer. There is a 1965 Chilean reference to it as Isla Pingüinera.

Punta Sotos *see* **Sotos Point**

Sotos Point. 62°30' S, 59°40' W. A point, ENE of Ferrer Point, between that point and Mancilla Point, on the E coast of Discovery Bay, Greenwich Island, in the South Shetlands. Named by ChilAE 1949-50 as Punta Sotos, for various members of the expedition whose last name was Soto. It appears as such on a Chilean chart of 1951. UK-APC accepted the translated name on May 11, 2005. Plotted by the UK in late 2008.

Poluostrov Sotovyj *see* **Mitchell Peninsula**

Mount Soucek. 66°49' S, 50°58' E. Between Mount Hardy and Peacock Ridge, about 13 km ESE of Mount Riiser-Larsen, in the NW part of the Tula Mountains of Enderby Land. It was photographed aerially in 1956 by ANARE, and plotted from these photos by Australian cartographers. Named by ANCA for Zdenek "Frank" Soucek (b. 1917), medical officer at Wilkes Station in 1960 and 1962, in the latter year also being 2nd-in-command. He had also wintered-over in 1952 at Macquarie Island, and that is where he died (of natural causes), on Dec. 24, 1967, while 2nd-in-command of the base there. US-ACAN accepted the name in 1965.

Soucek Ravine. 66°23' S, 110°27' E. A small ravine, 90 m long and 5 m wide, W of Penney Ravine, on Ardery Island, in the Windmill Islands, on the Budd Coast. Discovered in Feb. 1960 by a biological field party from Wilkes Station. Named by ANCA for Frank Soucek (*see* **Mount Soucek**). US-ACAN accepted the name in 1963.

Souchez Glacier. 86°17' S, 154°00' W. A tributary glacier, 28 km long, it flows S from Mount Crockett, along the E side of Faulkner Escarpment, and then turns SE to parallel the SW side of the Hays Mountains, and joins Bartlett Glacier just S of Mount Dietz, in the Queen Maud Mountains. Named by US-ACAN in 1967, for Roland A. Souchez, Belgian geologist at McMurdo, 1965-66.

Le Souffleur *see under* **L**

Soule, William *see* **USEE 1838-42**

The Sound. 64°19' S, 62°58' W. A marine passage in the Palmer Archipelago, 5 km long and 0.8 km wide, and running in a N-S direction through the Melchior Islands, splitting that group into the West Melchior Islands and the East Melchior Islands, off the W coast of the Antarctic Peninsula. Roughly charted by FrAE 1903-05, and probably named by personnel on the *Discovery* in 1927, when they roughly surveyed the area. It was surveyed in more detail by ArgAE 1942, ArgAE 1943, and ArgAE 1948. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit in 1956. The Chileans call it Canal Sound, and the Argentines call it Canal Principal.

Canal Sound *see* **The Sound**

The *Sourabaya*. The former liner *Carmarthenshire*, built in 1915, by Workman, Clark, of Belfast, she was bought by Salvesen's South Georgia Company in 1929, converted into a 10,107-ton, 470-foot 2-inch whaling factory ship capable of 12 knots, registered in Port Stanley, in the Falkland Islands (and later in Dublin), and conducted pelagic whaling in West Antarctica waters in 1929-30 and 1930-31. She was whaling in the Antarctic in 1931-32, 1933-34, 1934-35, 1935-36, 1936-37, 1937-38, 1938-39, and 1939-40. Her catchers over the years included the *Sigfra*, the *Shera*, the *Stina*, the *Sarka* and the *Sukha*. In 1939 she was registered in Jersey, in the Channel Islands. During World War II she was used as a tanker, and was torpedoed in the North Atlantic, on Oct. 27, 1942, while en route from New York to Glasgow. 77 men died.

Île Sourrieu *see* **Lambda Island**

Souter, Christopher David "Chris." b. 1933, Tonbridge, Kent, son of Edmund J. Souter and his wife Minnie Thompson. He joined FIDS in 1957, as a diesel electric mechanic, and wintered-over at Base G in 1958, and at Base D in 1959. On his return to England in 1960, he married Stella A. Bogg, in Bedford, and they moved to Nuneaton.

Souter, William Clark. b. Feb. 24, 1880, Perth, son of hatter and clothier Alexander Souter. After graduating from Aberdeen University in 1903, he went, at the request of Sir Alexander Orgston, as surgeon on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04. 2nd mate Elms had some bad things to say about him in his diary. In 1906 he was awarded his master's degree for his work on the excretion of purine bodies. He joined the RAMC in 1912, and served at home during World War I, with the 1st Scottish Hospital. He went into ophthalmology, gaining his diploma from Oxford in 1919. He married Caroline Hunter Wilson. He worked at the Royal London Ophthalmic Hospital, and then at the Aberdeen Royal Infirmary, from which he retired in 1946. He died on March 1, 1959, in Elgin.

Bahía South *see* [2]**South Bay**

Pointe South *see* [2]**South Point**

South Africa. South African whalers were in Antarctica from 1937, in the ship *Uniwaleco* (the former *Sir James Clark Ross*), owned by the Union Whaling Company out of Durban. From 1949 to 1956 the Durban whaler *Abraham Larsen* (formerly the British whaler *Empire Victory*) sailed each season to the Antarctic. Ray Adie was South Africa's first scientist in Antarctica, when he went with FIDS just after World War II. South Africa's first real exposure to Antarctica was during IGY, 1957-58, when J.J. la Grange, a member of the South African Weather Bureau, was invited by Vivian Fuchs to be part of BCTAE, and Harry Van Loon, also of the Weather Bureau, was loaned to Little America. South Africa, which does not claim any land south of 60°S, was one of the 12 original signatories of the Antarctic Treaty in 1959, and that year sent its first expedition to Antarctica (*see* **South African National Antarctic Expedition I**). The SANAE, as these expeditions are called, have been going down every year since. South Africa acquired Norway's scientific station, Norway Station (q.v.), when that country pulled out of Antarctica on Jan. 8, 1960. In 1959-60 Gordon Artz and Johan Bothma, both also from the Weather Bureau, were loaned to FIDS at Halley Bay Station. In 1962-63 the South Africans built a new station 20 km inland from Norway Station, and called it Sanae Station. South African bases/stations include: Sanae, Sanae II, Sanae III, Sanae IV, Sarie Marais, Grunehogna, and Borga. The South African National Antarctic Program is called SANAP, and the bases are managed by the Department of Environmental Affairs and Tourism.

South African Antarctic Association. Established in Sept. 1961. The first edition of *Antarktiese Bulletin* was published in 1964.

South African National Antarctic Expeditions. These are the expeditions, more commonly known by their acronym SANAE. **SANAE 1.** 1959-61. Organized by SANCAR (the South African National Committee for Antarctic Research), it left Table Bay on Dec. 3, 1959, on the Norwegian sealer *Polarbjörn*. There were observers, and an American, Rear Admiral Steve Mandarich. The very first night out of South Africa the chief steward was lost overboard. At Bouvet Island, approaching Antarctica, the ship's 2nd officer, Reidulf Kwien, was killed by dynamite. On Dec. 31, 1959, the *Polarbjörn* was beset, but in a short while freed by the *General San Martín*. On Jan. 8, 1960 the ship arrived in Polar Circle Bight, and, by prior arrangement with Norway, the expedition took over the Norwegians' Norway Station. On early Jan. 15, 1960 the *Polarbjörn* left for home. **SANAE 2**. 1960-62. Went down to Antarctica in the *Polarhav*, arriving at Norway Station on Dec. 26, 1960. This expedition took over from the first one on Jan. 9, 1961. It was relieved in early 1962 by SANAE 3 (see below). **SANAE 3**. 1961-63. This expedition was transported to Antarctica from South Africa by the recently-commissioned *R.S.A.* **SANAE 4**. 1962-64. This was the expedition that built the new Sanae Station, 20 km inland from Norway station. From now on, this would be South Africa's station. The *R.S.A.* was the ship. **SANAE 5**. 1963-65. The *R.S.A.* was the ship. **SANAE 6**. 1964-66. The *R.S.A.* was the ship. **SANAE 7**. 1965-67. The *R.S.A.* was the ship. **SANAE 8**. 1966-68. The *R.S.A.* visited Roi Baudoin Station, and took on dogs for Sanae Station. **SANAE 9**. 1967-69. The ship was the *R.S.A.* **SANAE 10**. 1968-70. The ship was the *R.S.A.* Borga Station was established. Eight Belgian geologists, led by Tony van Autenboer, accompanied this expedition. **SANAE 11**. 1969-71. The ship was the *R.S.A.* Borga Station was unoccupied in the winter of 1970, due to bad weather conditions. A modified Volkswagen was used at Sanae for running around in. In the winter of 1970 preparations began for Sanae II Station. Tony van Autenboer's team of 8 Belgian geologists, again accompanied the expedition. **SANAE 12**. 1970-72. The ship was the *R.S.A.* Grunehogna Base was established, and men wintered-over at Borga Station. **SANAE 13**. 1971-73. The ship was the *R.S.A.* **SANAE 14**. 1972-74. The ship was the *R.S.A.* **SANAE 15**. 1973-75. The ship was the *R.S.A.* **SANAE 16**. 1974-76. The ship was the *R.S.A.* **SANAE 17**. 1975-77. The ship was the *R.S.A.* **SANAE 18.** 1976-78. The ship was the *R.S.A.* **SANAE 19**. 1977-79. This was the last time the *R.S.A.* was used, and the first time the *Agulhas* was used. **SANAE 20**. 1978-80. **SANAE 21**. 1979-81. In Feb. and March, 1980, Sanae II Station was built. **SANAE 22**. 1980-82. **SANAE 23**. 1981-83. **SANAE 24**. 1982-84. Sarie Marais geological field station was opened. **SANAE 25**. 1983-85. The *Agulhas* took German personnel to Georg von Neumayer Station as well. **SANAE 26**. 1984-86. The *Agulhas* also relieved Georg von Neumayer Station. **SANAE 27**. 1985-87. The *Agulhas* also relieved Georg von Neumayer Station. **SANAE 28**. 1986-88. **SANAE 29**. 1987-89. **SANAE 30**. 1988-90. **SANAE 31**. 1989-91. The Agulhas was the ship. **SANAE 32**. 1990-92. The *Agulhas* and the *Drakensburg* were used. **SANAE 33**. 1991-93. **SANAE 34**. 1992-94. **SANAE 35**. 1993-95. **SANAE 36**. 1996-98. Two years had been missed. **SANAE 37**. 1997-99. There has been a SANAE every year since then.

South America Glacier. 77°49' S, 161°47' E. A small glacier near the SW corner of the Kukri Hills, in Victoria Land. The ice hangs down a cliff 600 m high, and resembles South America in shape, hence the name given it in Jan. 1911, by Grif Taylor, on his Western Journey during BAE 1910-13. US-ACAN accepted the name in 1964.

South Angle Lake. 68°39' S, 77°55' E. A meromictic, highly saline lake, 400 m by 150 m, and a number of meters below sea level, at the W end of Mule Peninsula, in the Vestfold Hills, on the Ingrid Christensen Coast. Named by ANCA for the long axis which forms a right angle with North Angle Lake.

South Antillean Arc *see* **Scotia Ridge**

South Aris Expedition. 1996-97. This was an Irish expedition which attempted to recreate Shackleton's trip from Elephant Island in the *James Caird*. However, as no one could ever recreate that trip, it was doomed from the start. The Irishmen's boat was the *Tom Crean*. The members of the expedition were: Dublin mountain climber Frank Nugent (the "Shackleton" of the expedition), Cork civil engineer and sailor Paddy Barry (the "Worsley" of the expediton), Mayo boatman Jaralath Cunnane (the builder of the expedition's boat); John Bourke, Dublin sailor and mountain climber; Mike Barry, Tralee restaurateur and mountain climber; and Jamie Young, Antrim sailor. They failed when a force 10 storm capsized the *Tom Crean* three times in 30 hours. The *Pelagic* was accompanying them — fortunately.

South Arm *see* **Ferrar Glacier**

South Atlantic Arc *see* **Scotia Ridge**

[1]**South Bay**. 62°40' S, 60°28' W. A large bay, 4 km wide, NW of False Bay, it indents the S side of Livingston Island for 10 km between Hannah Point and Miers Bluff, in the South Shetlands. In the 1820-21 sealing season, Palmer called it Freesland Bay in his log book, in association with the original name for Livingston Island, and Burdick referred to it in his log book of Feb. 28, 1821, as Captain Bys Bay, probably named after Capt. Byers (*see* **Byers Peninsula**). Fildes charted it in 1821. The descriptive name South Bay first appears in Davis's log book of March 16, 1821, and again on Powell's chart published in 1822. In Davis's log book of Dec. 11, 1821, he uses the name Elephant Bays to signify this bay, together with Walker Bay and False Bay. On Weddell's 1825 and 1827 maps South Bay appears as Erebys Bay, and on Fildes' chart of 1829 as Erebus Bay. The *Chanticleer* Expedition in 1829 mapped it as "Ereby's or South Bay." It appears as South Bay on an 1839 British chart, and on a 1902 map from BelgAE 1897-99 it appears as Baie South. It was re-charted by the Discovery Investigations in 1930-31, and appears as South Bay on a 1937 British chart. US-ACAN accepted the name South Bay in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. The Argentines had been calling it Bahía Sur (which means the same thing) since 1908, at least, and, although it appears on a 1948 Argentine chart as Bahía South, that (i.e., Bahía Sur) was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

[2]**South Bay**. 64°52' S, 63°35' W. A bay about 700 m wide, it indents the SW side of Doumer Island for about 1.8 km, 1.5 km E of Cape Kemp, in the Palmer Archipelago. It is blocked off to the S by a narrow peninsula that terminates to the W in Py Point. The N and E coasts of the bay are formed by ice cliffs, and the S coast is a rocky beach. It was charted in Feb. 1935 by BGLE 1934-37, and named by them for its position on the island. It appears on a British chart

of 1950, and was the name accepted by UK-APC on Sept. 8, 1953, and which appears in the 1955 British gazetteer. ArgAE 1948–49 named it Bahía del Faro (i.e., "lighthouse bay"), for the light built on Py Point by the Argentines in 1947, and that was the name accepted by the Argentine gazetteer of 1970. Yelcho Station was built here by the Chileans in 1962, and the bay appears on a Chilean chart of 1955 as Bahía South, and that name was accepted by the 1974 Chilean gazetteer. Part of the bay's waters were designated SSI #28, its interest being marine ecology. Scuba divers started this study in 1972, and since 1981 advanced studies have been made of the relationships of marine life here. Weddell seals and killer whales come here. Note: The Americans seem to have made no comment on this bay.

[3]**South Bay** *see* **Oscar Cove**

[4]**South Bay**. 77°38' S, 166°25' E. A small bay on the S side of Cape Evans, between that cape and Turks Head, in the W part of Ross Island. Named by BAE 1910–13. US-ACAN accepted the name in 1964.

South Beach. 71°18' S, 170°13' E. At the westernmost part of Ridley Beach, Robertson Bay, 1.5 km S of Cape Adare, in Victoria Land, separated from North Beach by Spit. Named by NZ-APC.

South Beaches. 62°39' S, 61°03' W. The beaches along the S side of Byers Peninsula, on the extreme W coast of Livingston Island, in the South Shetlands. Named descriptively and charted by George Powell in 1822. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. Last plotted by the UK, in late 2008.

South Beacon. 77°51' S, 160°47' E. The summit of a bold, flat-topped ridge, rising to 2210 m in the S part of Beacon Heights, in the Quartermain Mountains of Victoria Land. A ridge system connects this feature with West Beacon, 2.5 km to the N, and with East Beacon, 2.5 km to the NE. Geological work was done here in 1980–81, by C.T. McElroy, G. Rose, and K.J. Whitby, and NZ-APC named it. US-ACAN accepted the name.

South Cape. 60°48' S, 45°09' W. It marks the S extremity of Atriceps island, and also therefore of the Robertson Islands, S of the E end of Coronation Island, in the South Orkneys. Discovered by Powell and Palmer on Dec. 13, 1821, charted by Powell, and named descriptively by him as the southernmost projection of land in the area. It appears as South Point on the Discovery Investigations charts of 1930 and 1933, and in the latter year they re-charted it. On a 1930 Argentine chart the name got misapplied to the SE point of Coronation Island, and they called it Cabo Sud, an error they repeated on a 1945 chart (but as Cabo Sur). This error was perpetuated on French charts of 1937 and 1947 (as Cap Sud). The real South Cape appears on a British chart of 1938, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It was correctly shown on a 1952 Argentine chart, as Cabo Sur, and that was the name accepted by the Argentine gazetteer of 1970.

South Coronation Island. 60°42' S, 45°19' W. A tiny island to the S of Coronation Island, in the South Orkneys.

[1]**South Cove**. 64°54' S, 62°52' W. A small cove in the S part of Coughtrey Peninsula, at the N side of the entrance to Skontorp Cove, E of Almirante Brown Station, Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named descriptively by the Poles on Sept. 1, 1999.

[2]**South Cove**. 67°34' S, 68°08' W. A cove, SW of Rothera Station, on the SE coast of Adelaide Island. Following the establishment of the base there, it was used as an anchorage for ships, with a jetty on its E side. Charted by BAS personnel on the *Endurance* in 1976–77. Named by UK-APC on May 21, 1979, in contrast to North Cove. It appears on a British chart of 1980. Last plotted by the UK, in late 2008.

South Crest *see* **South Masson Range**

South Dip Pole *see* **South Magnetic Pole**

South Dome *see* **Thyssenhöhe**

South Doodle. 67°46' S, 62°50' E. A mountain peak, rising to 877 m, 1.5 km S of Rumdoodle Peak, and 20 km S of Mawson Station, in the North Masson Range, in the Framnes Mountains of Mac. Robertson Land. Named by ANCA on Sept. 27, 2006, in association with Mount Rumdoodle (*see* **Rumdoodle Air Strip**), for North Doodle, the peak climbed in error by the climbers in Bowman's novel.

South East Point. 62°59' S, 60°31' W. The SE point of Deception Island, 1.5 km ENE of Neptunes Bellows and Fildes Point, in the South Shetlands. It was known to sealers in the 1820s, and was charted by Foster in 1829, during the *Chanticleer* expedition, 1828–31. Surveyed by David Penfold from the *John Biscoe* in 1948–49. In 1949, the descriptive name was proposed by the British Hydrographic Department of the Admiralty, and that year it appeared on Penfold's chart. The name was accepted by UK-APC on Nov. 15, 1951, and US-ACAN followed suit in 1953. It appears on a 1953 Argentine chart with the translated name of Punta Sudeste, and that was the name accepted by the 1970 Argentine gazetteer. It appears on a Chilean chart of 1953, as Punta Sur Este (which, again, means the same thing), and that was the name accepted by the 1974 Chilean gazetteer.

South Eastern Mountains *see* **Grove Mountains**

South Foreland *see* **Cape Melville**

South Fork. 77°34' S, 161°15' E. The S arm of Wright Valley, in Victoria Land, and separated from North Fork by The Dais. Named by VUWAE 1958–59. The name was accepted by US-ACAN in 1976.

South Geographic Pole *see* **South Pole**

South Geomagnetic Pole. Also called the Geomagnetic South Pole. The theoretical pole of the Earth's magnetic field, where the lines of the earth's magnetic field converge. It is always moving. In 1956 it was located about 790 miles from the South Pole itself (i.e., the geographic South Pole), in 78°S, 110°E. It was first reached on Dec. 16, 1957 by a Soviet IGY tractor traverse. It was located at that time in 78°28' S, 106°48' E. In 2005 it was close to 80°S, 108°E, near Vostok Station.

South Georgia. Not in Antarctica proper, lying as it does as far north as 54°S, yet it must be discussed here nevertheless, albeit briefly, if for no other reason than it is mentioned so many times in this book. Captain Cook discovered it, and claimed it for Britain, but the UK never pressed a claim until 1905, considering it useless. That is, until Carl Anton Larsen opened up the first whaling station there in 1904–05, and the British saw the chance of revenue from licenses and whaling royalties. The station at Grytviken closed in 1962, and the one at Leith Harbor in 1961. In 1963 the Japanese leased both stations, but Leith Harbor closed again in 1965 and Grytviken in 1966.

South Georgia Company. British firm owned by Salvesen's. It ran a total of 61 whalers. The *Sourabaya* and the *Salvestria* did pelagic whaling in Antarctic waters between 1929 and 1931.

South Gneiss. 60°44' S, 45°39' W. The more southerly of the two flat-topped hills that go to make up the Gneiss Hills, at the W side of McLeod Glacier, in the S part of Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004.

South Ice. 81°57' S, 28°52' W. Advance depot, at an elevation of 1350 m above sea level, 6 km SE of Omega Nunatak, in Coats Land, used by Fuchs on his way to the Pole during BCTAE 1957–58. Equipment and food were air freighted in, in Jan. and Feb. 1957, building began on Feb. 4, 1957, and the depot was ready by Feb. 22, 1957. The hut was built in a 5-foot-deep pit to protect it with snow during the winter. In March 1957 three winterers were installed. Hal Lister led this little group of himself, Ken Blaiklock and Jon Stephenson. Every four hours they conducted glaciological and meteorological studies. They were relieved on Oct. 8, 1957. On Dec. 21, 1957 the main Fuchs party of BCTAE went through the depot en route to the South Pole and the other side of the continent. South Ice was abandoned on Jan. 6, 1958.

South Indian Basin. Submarine feature centering on 60° S, 120°E. Also called Australian Antarctic Basin, Eastern-Indian Antarctic Basin, Indian-Antarctic Basin, Knox Basin, South Indian Ocean Basin. Named by US-ACAN in July 1963.

South Indian Ocean Basin *see* **South Indian Basin**

South Island *see* **Wyatt Island**

South Korea. In 1978–79, for the first time of many, the South Korean Fisheries sent down a ship to Antarctica. This was the *Nambuk*, and she plied the coasts of Enderby Land and Wilkes Land, taking 511 tons of krill. In 1981–82 there was another South Korean Fisheries voyage to Enderby Land and Wilkes Land. It took 1429 tons of krill. There was a similar expedition in 1982–83, same places, which took 1959 tons of krill. And again in 1983–84, from Pusan (this

was the 4th such expedition), to Enderby Land, Wilkes Land, and Queen Maud Land. The ship was the *Daeko 707*, and the expedition was led by Lee-Som Seok. In 1985-86, a Korean party led by Seok-Som Yoon came in by air to Teniente Rodolfo Marsh Station. One party stayed on King George Island, and the other flew south to climb Vinson Massif. South Korea was ratified as the 33rd signatory of the Antarctic treaty, on Nov. 28, 1986. In 1986-87 the next fisheries expedition, out of Seoul, went to Antarctica, led by Ki-Bong Lim, aboard the *Dong Bang 115* (skipper: Hong-Bae Jhoo). They took 1527 tons of krill. The next fisheries voyage was in 1987-88, on the *Dong Bang 115*, between Dec. 1987 and Feb. 1988. Biology and oceanography were the disciplines conducted. That was the season, 1987-88, that the first South Korean Antarctic Expedition went south (see below, **South Korean Antarctic Expeditions**), the first real one, conducted by the Korean Ocean Research and Development Institute (KORDI; founded in 1973, at the Korean Institute of Science and Technology — KIST). A scientific station on King George Island — King Sejong Station — was built by Feb. 17, 1988, as part of the Korean Antarctic Research Program (KARP). The *Dong Bang 115* was back, for the next Seoul Fisheries Expedition, in 1988-89, skippered by Hui-Kook Oh, and doing oceanography and biology work in the Scotia Sea. In 1990 KORDI was separated from KIST, and became an independent oceanic research organization. South Korea has sent an expedition to Antarctica every year since the first one. In the 2000s the *In Sung Ho* was a trawler working in the South Orkneys.

South Korean Antarctic Expeditions (KARP). These were the expeditions: **KARP 1. 1987-88**. Byong-Kwon Park led the expedition on the *Hyundai 1200*. King Sejong Station was opened on Feb. 17, 1988. **KARP 2. 1988-89**. Byong-Kwon Park led the expedition, on the *Cruz de Forward*. **KARP 3. 1989-90**. Soon-Keun Chang led the expedition on the *Eastella*. **KARP 4. 1990-91**. Soon-Keun Chang led the expedition on the *Eastella*. Chilean aircraft assisted in the relief of King Sejong Station. **KARP 5. 1991-92**. Dong-Yup Kim led the expedition on the *Erebus*. **KARP 6. 1992-93**. This was the first expedition to use the new ship *Onnuri*. The *Erebus* was also used again. Soon-Keun Chang led the expedition. **KARP 7. 1993-94**. Soon-Keun Chang led the expedition on the *Erebus*. Two Czech scientists died (*see* **Deaths**, 1994). **KARP 8. 1994-95**. Dong-Yup Kim led the expedition on the *Yuzhmorgeologiy*, chartered from the Russians. **KARP 9. 1995-96**. Dong-Yup Kim led the expedition on the *Yuzhmorgeologiy*, again chartered from the Russians. **KARP 10. 1996-97**. Dong-Yup Kim led the expedition on the *Yuzhmorgeologiy*, again chartered from the Russians. **KARP 11. 1997-98**. Sang-Heon Nam led the expedition on the *Yuzhmorgeologiy*, again chartered by the Russians. **KARP 12. 1998-99**. Sang-Heon Nam led the expedition on the *Yuzhmorgeologiy*, again chartered by the Russians. **KARP 13. 1999-2000**. Sang-Heon Nam led the expedition on the *Onnuri*. There has been a KARP every year since.

South Magnetic Pole. Also called the South Dip Pole. This is the precise spot toward which all magnetic compass needles point, or the point of vertical orientation of a magnetic dip needle, in other words, the point where the compass needle points straight down. Like the North Magnetic Pole, it is constantly changing position, and moves about 8 miles to the NW each year. It was predicted by German physicist Carl Gauss to lie in 66°S, 146°E, and was unsuccessfully sought in 1840 by both FrAE 1837-40 and USEE 1838-42. Ross, who was the third leader to try it, put it in 75°30' S, 154°E, in 1841. It was first reached on Jan. 16, 1909, in 72°24' S, 155°18' E, on the high ice plateau of Victoria Land, after a sledge journey from Cape Royds, by David, Mawson, and Mackay, three members of BAE 1907-09. They marked the spot with a British flag. Bage, Webb, and Hurley got to within 50 miles of it on Dec. 21, 1912, during AAE 1911-14, and in 1952 Mayaud led a French party there, locating it in 68°07' S, 148°E. On Jan. 7, 1956 a Skymaster flew over it for the first time. It was then in 71°S, 140°E, no longer on the mainland. In 1971 it was in 60°05' S, 139°05' E. On Jan. 6, 1986 the *Icebird* reached it, this time in 65°18' S, 140°02' E. This was only the fourth time in history that the general area of the South Magnetic Pole had been reached. In 2005 it was in 64°32' S, 137°52' E.

South Masson Range. 67°53' S, 62°47' E. The S part of the Masson Range, it extends 3 km in an arc from NE to SW, and rises to a height of 1070 m. The Masson Range (as a whole) was discovered by BANZARE 1929-31, and named by Mawson. This particular range was photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Sørkammen (i.e., "the south crest"). This name has also been seen as Sørkammen Crest, and South Crest. The name South Masson Range was accepted by ANCA on July 22, 1959, and by US-ACAN in 1965.

South Orkney Islands. Also called the South Orkneys, which is how this major Antarctic island group — the most northerly island group in Antarctica — is generally referred to in this book, although the Argentines call them Isla Órcadas del Sur. They center on 60°35' S, 45°30' W, and actually lie between 60°20' S and 60°50' S, and between 44°20' W and 46°45' W, or in more geographic terms, between the Scotia Sea to the N and the Weddell Sea to the S, in the South Atlantic Ocean, to the E of the South Shetlands, and NE of the Antarctic Peninsula. There are two larger islands — Coronation Island and Laurie Island — and several smaller ones, the main ones in this second tier being Signy Island and Powell Island. There are also many rocky islets. They are all barren and uninhabited, except for scientific station personnel, the total land area being about 240 sq miles, and they form part of the British Antarctic Territory. They were discovered on Dec. 6, 1821 by Nat Palmer and George Powell, who were out from the South Shetlands looking for new fur sealing grounds. They were subsequently named Powells Group (later Powell Group, or Powell Islands). Weddell came across them in Feb. 1822 and, not knowing of their previous discovery, called them the South Orkneys, because they are in roughly the same degree of latitude as the Orkney Islands in Scotland are in the northern hemisphere. Weddell claimed them for Great Britain. Over the next 75 years they were hardly visited at all: Dumont d'Urville was there in 1838, Dallmann in 1874, Lynch in 1880, and Larsen in 1892, but it was Bruce who first surveyed them, in 1903, and set up his base there for ScotNAE 1902-04. Working south, the islands are: Karlsen Rock, Governor Islands, Coronation Island, Melsom Rocks, Despair Rocks, Nicolas Rocks, Lay-Brother Rock, Inaccessible Islands, Spine Island, Larsen Islands, Mainsail Rock, The Twins, Sphinx Rock, Sørlle Rocks, Saddle Island, Powell Island, Weddell Islands, Lynch Island, Gosling Islands, Mabel Island, Gerd Island, Monk Islands, Hart Rock, Laurie Island, Bruce Islands, South Coronation Island, Reid Island, Signy Island, Herdman Rocks, Rudmose Rocks, Eillium Island, Whale Skerries, Powell Rock, Balin Rocks, Thule Islands, Spindrift Rocks, Flensing Islands, Expedition Rock, Nigg Rock, Fredriksen Island, Outer Island, Bare Rock, Small Rock, Billie Rocks, Cam Rock, Jebsen Rocks, Baldred Rock, Graptolite Island, Michelsen Island, Christoffersen Island, Confusion Island, Shagnasty Island, Moe Island, Grey Island, Robertson Islands, Oliphant Islands, Mariholm, Valette Island, Acuña Island, Murray Islands, Florence Rock, and Ailsa Craig.

South Orkney Ridge. 60°00' S, 40°00' W. Submarine feature in the area of the South Orkneys.

South Orkney Trough. 60°00' S, 45°00' W. A submarine trough, in the area of the South Orkneys. Discovered by the *Ob',* in 1968, and named by US-ACAN in Oct. 1977.

South Orkneys *see* **South Orkney Islands**

South Pacific Cordillera *see* **Albatross Cordillera**

South Pacific Ridge *see* **Pacific-Antarctic Ridge**

South Pacific Rise *see* **Pacific-Antarctic Ridge**

[1]**South Point**. 60°45' S, 45°41' W. Marks the S end of Moe island, off Signy Island, in the South Orkneys. Named descriptively by personnel on the *Discovery II* in 1933, it appears on the Discovery Investigations charts of 1933 and 1934. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. Last plotted by the UK, in late 2008.

[2]**South Point**. 63°01' S, 60°36' W. A point, 2.7 km SW of Entrance Point, it marks the southernmost point on Deception Island, in the South Shetlands. Known to early sealers, this point was charted in 1829 by Kendall and Foster, during the *Chanticleer* Expedition, 1828-31. David Penfold surveyed the area from the *John*

Biscoe, in 1948–49, and the name was proposed by the Hydrographic Department of the Admiralty, in 1949. It appears on an Admiralty chart of 1949. UK-APC accepted the name on Nov. 15, 1951, and US-ACAN followed suit in 1953. It appears in the British gazetteer of 1955. It appears on a Chilean chart of 1953, as Punta Sur (which means the same thing), and in the Chilean gazetteer of 1974 (with the same name). The French were calling it Pointe South as early as 1954. It was last plotted by the UK, in late 2008.

South Polar skua *see* **Skuas**

South Polar Station *see* **South Pole Station**

South Polar Times. The first periodical produced in Antarctica. It was a monthly magazine, edited and printed by Shackleton during the winter months at base during the first year of BNAE 1901–04. He put out 5 issues, in April, May, June, July, and August of 1902. Wilson illustrated, and the periodicals contained puzzles, caricatures, humor, articles, and how-to pieces. When Shackleton was invalided home in March 1903, the magazine did not continue. It was, in a way, revived by Shackleton during his own BAE 1907–09 (*see* ***Aurora Australis***). In 1907, Smith, Elder & Co., of London published a limited edition of 250 copies of the *South Polar Times*, for private circulation. This was a facsimile of the original. It was definitely revived during BAE 1910–13, with Cherry-Garrard as the editor (see also **The *Blizzard***).

South Pole. The bottom of the world, the point where all the Earth's lines of longitude come together, the point where there is no South, East, or West — only North (*see also* **Time**, **Direction**). This is the Geographic South Pole. Unlike the North Pole, the South Pole is on land, or rather, on ice (*see* **Depth of ice**, **Bedrock**). About 300 miles (500 km) from the Ross Ice Shelf, the Pole is at 90°S, and does not coincide with the South Magnetic Pole, the South Geomagnetic Pole, or the Pole of Relative Inaccessibility. Its altitude is 9301 feet above sea level, and the thickness of the ice at this point is 8850 feet. Winter comes March 23, and summer Sept. 23. Midwinter here is June 21, and winds are light, 9–17 mph generally, although they can get heavier. There are basically 6 months of night, and 6 months of day. Nothing lives here (that is, nothing indigenous), but humans sport a growing population. The nearest mountains are 200 miles (300 km) away. Mount Howe is the nearest nunatak, 181 miles away, and this nunatak also has the nearest indigenous life form (bacteria and yeast colony). The Pole is located on the Polar Plateau. Scott said of the South Pole, "Great God! This is an awful place," but then, he had just been beaten to it by Amundsen. In Dec. 1956 Paul Siple placed a silvered glass ball on top of an orange and black striped bamboo pole, and this became the symbolic South Pole of the Americans at Pole Station, which was built in the summer months of 1956–57 (*see* **South Pole Station**). Siple had bought the ball in NZ, on the way down to Antarctica. In Nov. 1957, when leaving Pole Station, Siple took it home with him as a souvenir, and replaced it with a spare, which still stands. Ruth Siple, Paul's widow, donated the original ball to Canterbury Museum, Christchurch, NZ, in Jan. 1975. There is a sign at the South Pole, saying, "Elevation 9,186 feet. Population 21." (The height above sea level at the Pole is constantly being calculated). The average temperature at the Pole is -56 F. The old record of -113.3 was set in July 1956, and was not broken until June 23, 1982, when -117.4 F was recorded. The aim of many explorers, of course, the South Pole's history can be summarized in many ways, one way being a series of salient dates: **1773**: Cook was the first navigator to try for the Pole. He reached only 71°10' S, which was nevertheless a southing record for its day (*see* **Southing records**). **Dec. 30, 1902:** Scott was the first explorer to try to get there by land, during BNAE 1901–04. He reached 82°16' 33" S (500 miles short). **Dec. 14, 1911**: The first 5 men to stand at the Pole: Amundsen, Bjaaland, Hassel, Hanssen, and Wisting, as the exhilarating culmination of NorAE 1910–12. **Jan. 17, 1912**: The first British explorers to stand at the South Pole: Scott, Wilson, Bowers, Evans, Oates, as the dismal culmination of BAE 1910–13. **Nov. 29, 1929**: The first men to fly over the Pole: Byrd, Balchen, June, McKinley, in the *Floyd Bennett*. They did not land. **Feb. 15–16, 1947**: The first flight to the Pole since 1929: Byrd again, this time during OpHJ 1946–47. There were 2 planes, both U.S. Navy twin-engine R4Ds. In Plane V1 were Lt. George H. Anderson, pilot; Lt. Cdr. J.C. McCoy, co-pilot; Byrd himself; K.C. Swain; Robert P. Heekin, navigator; and J.E. Valinski. In Plane V6 were Maj. Robert Weir, pilot; Capt. Eugene C. McIntyre, co-pilot; George E. Baldwin; Raymond J. Butters; Cdr. Clifford M. Campbell; and A.V. Mincey. They took off from Little America IV at 11 P.M. on Feb. 15, 1947. V1 reached the Pole at 5 a.m, the next day, and got back to base just before noon. **Jan. 3, 1956**: Hal Kolp (a Marine colonel) was assigned to fly a Navy R5D transport out of McMurdo to do an aerial exploration of Wilkes Land, but hit a whiteout and changed his plans, heading for the Pole. This was the third time man had flown over the Pole, and the 4th plane to do so. Col. Kolp circled the Pole at 500 feet for 30 minutes, and recorded the surface as 9700 feet above sea level, and flat. Also on that flight were a combined crew of Marines and Navy men: Lt. Cdr. H.G. Hanson, Maj. F.J. Helling, Lt. R.R. Mackell (2nd pilot and navigator), W.C. Asklin (chief photographer), Chief Aviation Machinist's Mate J.K. Wheeler, J.J. Riley (aviation electronics technician 2nd class, and radioman), and Photographer's Mate 1st class T.R. Kiley. **Jan. 8–9, 1956**: Byrd flew over the Pole for the 3rd time in his life. He was in a Skymaster that circled the Pole for 15 minutes, and dropped a U.S. flag. Hank Jorda was pilot. Cdr. Gordon Ebbe was also aboard. They had been aiming for the Pole of Inaccessibility, but bad weather changed their plans, and they flew back to McMurdo, via the actual South Pole, circling it 3 times. **Jan. 13, 1956**: Hal Kolp flew a Skymaster over the Pole, with 9 other fliers and Saul Pett, AP correspondent. Benny Goodman was playing on their tape. **Oct. 26, 1956**: A Globemaster, flown by Maj. Gen. Chester McCarty of the Air Force Reserve, dropped 5 tons of fuel and a Grasshopper at the Pole, the first ever airdrop at the South Pole. There were 43 men on this flight, including Trigger Hawkes and Paul Siple, and most of the correspondents there at that time (Walter Sullivan, Bill Hartigan, Don Guy, Leverett Richards, Ansel Talbert, Bob Barger). The weather was so bad they had to climb to 15,000 above sea level, and with the unpressurized cabin, they had to wear oxygen masks. They spent one hour and 4 minutes over the Pole. "Doesn't look like we would have any neighbors to bother us down there," said Siple. **Oct. 31, 1956**: The first men to fly to the Pole and land. Three planes took off from McMurdo, with the intention of one of them landing at the Pole. One of them could only make it as far as the foot of Liv Glacier (*National Geographic* photographer Dave Boyer was aboard that one), but the other two, an R4D and a Globemaster, carried on, up on to the Polar Plateau and to 90°S. It was the R4D, a Skytrain (Dakota) which was to make the landing. This plane was called the *Que Sera Sera*, and was piloted by Lt. Cdr. Conrad S. "Gus" Shinn, already a legendary flyer. He was carrying aboard 6 other men — Hawkes (co-pilot), Cumbie (radioman), Swadener (navigator), Strider (crew chief), Cordiner (observer), and Admiral Dufek. Dufek had offered the pilot's seat to Hawkes, but he had demurred. However, he and Shinn picked their crew. Dufek's mission was to scout out the Pole, see if it was suitable for an IGY base. Accompanying the *Que Sera Sera* was the Globemaster *City of Peoria* (not allowed to land unless the *Que Sera Sera* got into trouble), commanded by Maj. C.J. Ellen, USAF, and containing among others, Paul Siple, and the press, which included Walt Sullivan (science editor of the *New York Times*), Leverett G. Richards (of NANA — the North American Newspaper Alliance), and 18-year-old Australian Maurice Cutler, for UP. The Globemaster, after going over the Pole first, weaving contrails to mark the spot for Cdr. Shinn, circled overhead, the press boys watching carefully and eagerly, professional ears and eyes and antennae open wide for all and every piece of information, as they typed their report. Gus made 3 passes over the Pole, looking for a safe place to avoid sastrugi, and finally, at 8.30 A.M. (GMT) he set the *Que Sera Sera* down in a perfect landing. Although certain inaccurate history reports have stated that Dufek was the first out of the *Que Sera Sera*, that is patently ridiculous. Strider had to be the first, as the mechanic, and he jumped down onto the ice, put the pins in the landing gear, and ran the ladder up to the cabin door so that the admiral (next out) and the rest could follow. Gus was last out, as he was at that moment involved in valuable scientific investigation,

testing the Coriolis effect (which way does water go down a container at the South Pole? According to Gus, it went straight down, no circular motion, which indicated that they were at the Pole). For 49 minutes the boys stood on the ice in -58°F temperature. Strider tried taking motion pictures with the camera the Disney stringers had given him, but the camera froze. Gus got the only shot, on his $2 Brownie, the famous black and white photo. Dufek planted a U.S. flag, and the men set up a makeshift radar deflector, and then Dufek said "Let's get the hell out of here" (*see* **South Pole Station** for much more detail of this visit). Overhead, in the Globemaster, Maurice Cutler became the first Australian to fly over the Pole. **Nov. 20, 1956**: Gus Shinn and Roy Curtis flew in tandem to the Pole. Gus landed his plane 8 miles from the Pole, and Dick Bowers and his Seabees and dogs got out. Bowers thus became the first leader ever to land at the Pole with the intention of setting up a base. A Weasel was parachuted as well. The Seabees were Bowers, Bristol, Montgomery, Nolen, Powell, Randall, Tuck, and Woody. **Nov. 21, 1956**: Spare parts were dropped to the 8 men at the Pole for minor repairs to the broken Weasel. **Nov. 22, 1956**: Bowers, Tuck, Powell, and Bristol, sledged to the Pole. That day 3 ski-equipped transport planes set out for the Pole with 17 more men aboard, but they had to turn back because of the weather. **Nov. 25, 1956**: The other 4 Seabees from 8 miles out, arrived at the Pole in the Weasel they had been fixing — Randall, Nolen, Montgomery, and Woody, along with Sgt. Patton, who had parachuted in that day, in -17°F. This was a first. A Globemaster, piloted by Capt. Marvin Besch, dropped supplies to the men at the Pole. The Seabees made up tents on the plateau snow. **Nov. 26, 1956**: Just after midnight, the two DC3 transports (piloted by Gus Shinn and Harvey Speed) landed, 5 minutes apart, carrying the next 10 Seabees — Slaton, Prescott, Hisey, Bevilacqua, Goodwin, Scott, Hubel, Spiers, Wagner, and Wlliamson. 30 minutes later the planes left. There were now 18 men at the Pole. **Nov. 27, 1956**: A mail drop was made, at which the plane landed. Strider got out and went to the Pole, the first man ever to make a second trip to the Pole and stand there. **Dec. 1, 1956**: The 3rd batch of Seabees flew in — McCrillis, Roberts, McCormick, Chaudoin, and Tyler. And Paul Siple in another plane at the same time. The elevation of the Pole was considered then to be 9370 feet above sea level. Siple and Tuck led the first wintering-over party at the Pole in 1957, 18 men and a dog. **Oct. 26, 1957**: Vernon Coley landed a plane at the Pole, but it couldn't get off the ice for the return journey, and the 6 men were stranded there. They were (aside from Coley), Cdr. Roger Witherell, Rolla J. Crick (the reporter, from Portland, Oreg.), Tom Abercrombie (the *National Geographic Magazine* writer), Lt. Howard C. Taylor (doctor), and Richard Conger (USN photographer). Earl Johnson (*see* **Johnson Col**) came along for the ride. On Nov. 17, 1957, the third rescue mission finally succeeded, when a Neptune, piloted by Lt. Cdr. Donald C. Miller (of Seattle), arrived to take them off. **Nov. 16, 1957**: the first U.S. congressman to fly over the Pole was John P. Saylor (*see* **Distinguished visitors**). The first British person to reach the Pole since Scott was Noel Barber, the journalist, who flew in on a U.S. plane to Pole Station, to await the arrival of Fuchs. Barber was covering the story of the first ever Transantarctic land traverse. **Nov. 25, 1957**: A bunch of U.S. congressmen flew over the Pole (*see* **Distinguished visitors**). **Jan. 14, 1958**: Hillary became the first leader to reach the Pole by land traverse since Scott, during BCTAE 1957-58. **Jan. 20, 1958**: Fuchs became the first leader to arrive at the Pole during a Transantarctic crossing, during BCTAE. **Dec. 26, 1959**: A Russian tractor train, led by Aleksandr Gavrilovich Dralkin, reached the Pole, from Mirnyy Station, via Komsomolskaya Station and Vostok Station. This was only the 5th overland party ever to reach the Pole, and the first from East Antarctica. **Jan. 8, 1960**: Naval chaplain Edwin Weidler conducted the first-ever Protestant communion service at the Pole. **Jan. 11, 1961**: The first American group to land traverse to the Pole was the Byrd-South Pole Overland Trek, of Chief Walter Davis and Maj. Antero Havola. **Jan. 28, 1960**: A 62-ton, prop-jet cargo-carrying ski-equipped C130 landed at the Pole, the largest plane ever to do so. Lt. Col. Wilbert Turk, USAF, was pilot. **Feb. 12, 1961**: Bert Crary arrived at the Pole, after leading a 63-day traverse from McMurdo to the Pole. His 8-man team included Sven Evteev, the Soviet exchange scientist. Crary became the first man ever to stand at both poles (North Pole and South Pole). **Jan. 6, 1962**: The first Argentine planes flew to the Pole (*see* **Argentine Antarctic Expedition 1961-62** for further details). **Feb. 4, 1963**: The first helicopters reached the South Pole. Frank Radspinner led a trio of Army Iroquois (UH-1B) helos the 182 miles from Mount Weaver to the Pole. The two other pilots were Neal Earley and Charlie Beaman. **Dec. 10, 1965**: The first Argentine land traverse reached the Pole. They called this expedition Operación 90 (q.v.). The 10-man team led by Jorge Edgard Léal, had set out from General Belgrano Station on Oct. 26, 1965. **Dec. 19, 1968**: A Japanese traverse, led by station leader Masayoshi Murayama, out of Showa Station (they had left there on Sept. 28, 1968), arrived at the Pole, returning to Showa on Feb. 16, 1969, after 5180 km. **Nov. 11, 1969:** The first women to reach the Pole by plane (*see* **Women in Antarctica**). **Dec. 26, 1969**: Josef Sekyra became the first Czech to stand at the South Pole. **Dec. 1971**: Mrs. Louise Hutchinson, correspondent with the *Chicago Tribune*, became the first woman to spend the night at the Pole, when weather delayed a return flight to McMurdo. **1973**: Nan Scott and Donna Muchmore became the first women to work at the Pole. **1974-75**: Elena Marty and Jan Boyd worked at the Pole. **1979**: Michele Raney became the first woman to winter-over at the Pole. **Dec. 15, 1980**: The first group to arrive at the Pole, as part of a Transantarctic land traverse, since Fuchs, was the Trans-Globe Expedition. This was also the first time a cricket match had been played at the Pole. **Nov. 30, 1984**: The first Chilean flight arrived, from Punta Arenas, Chile. Claudio Sanhueza Corvalán flew the plane. **1985**: The first international cricket match at the Pole. **Feb. 20, 1985**: The first marriage at the Pole: Randall Chambers and Patricia Manuel, who had met at McMurdo, were married by the chaplain from McMurdo. **Jan. 11, 1988:** The first commercial flight to the Pole, by Adventure Network. **Jan. 7, 1989**: At noon the first tourists ever to reach the Pole after a land traverse from the edge of the continent. This unbelievable feat was achieved by the group from Mountain Travel (q.v. for further details). **Dec. 29, 1993**: A British boy, Robert Schumann, reached the Pole, aged 11. He had been to the North Pole at the age of 10. **Jan. 1994**: The first man to walk to the South Pole — alone: Erling Kagge arrived at the Pole, after having walked there, with no radio. **1994**: Liv Arnesen walked alone to the Pole in 50 days. What next? Walking backwards to the Pole? Hopping to the Pole? Running naked to the Pole? Well, actually, we know what came next. *See* 2007. **Oct. 16, 1999**: Dr. Jerri Nielsen was evacuated from Pole Station by Herc. **June 13, 2001**: The first plane ever to land at the Pole during the winter, was an 8-seater Twin Otter with skis, from Rothera Station, sent to pick up sick Dr. Ronald Shemenski. His replacement, Betty Carlisle, was aboard. **Dec. 2002**: Tom Avery, 27, became the youngest Briton ever to walk to the South Pole. **Jan. 1, 2003**: Andrew Cooney, 23, walked to the South Pole. **Jan. 2004**: Fiona Thornewill skied solo to the Pole in 44 days. She beat Rosie Stancer who was doing the same thing. **Jan. 21, 2004**: Mike Barry became the first Irishman to reach the Pole. **Dec. 2006**: Hannah McKeand, 33, from Newbury, Berks, skied alone to the Pole in 39 days. She relaxed to the dulcet tones of Stephen Fry reading *Harry Potter* on her iPod. Scott and Amundsen would be stunned. **2007**: The new road built from McMurdo to the Pole? Well, there is a tour company called Drive Around the World. **Jan. 2009**: The Amundsen Omega 3 South Pole Race. **Dec. 31, 2009**: Cecilie Skog and Ryan Waters (*see under* **Skog, Cecilie**). The rest is history.

South Pole Highway *see* **Roads**, **South Pole Traverse Project**

South Pole-Queen Maud Land traverses. A series of 3 USARP exploration and geological land traverses undertaken by U.S. scientists from the South Pole to the interior of Queen Maud Land, and more commonly referred to (at one time, anyway) as SPQMLT. A Navy air reconnaissance scouted the route for each expedition, and 3 diesel-powered Sno-cats were used for transportation. **SPQMLT I**: 1964-65 summer. Edgard Picciotto, John Albright, Henry Scott Kane, John Beitzel, Olav Dybvadskog, Bruce Redpath, Edward N. Parrish, and James Gliozzi went from the South Pole to the Pole of Relative Inaccessibility (82°06' S, 54°58' E), where there was a small, but unoccupied station built by the

Russians. **SPQMLT II**: 1965-66 summer. 11 men, led by Edgard Picciotto, and including Henry Scott Kane, Edward N. Parrish, Douglas J. Elvers, Bob Behling, Olav Orheim, John W. Clough, Bill Isherwood, and John Beitzel. They had the advantage of having Plateau Station built in that summer. They were airlifted from Pole Station to the Pole of Relative Inaccessibilty, and dug out their vehicles from SPQMLT I. After 23 days of re-fitting, they set out on their trip to Plateau Station that would last 715 miles and 45 days, arriving late at Plateau Station on Jan. 29, 1966. **SPQMLT III**: 1967-68 summer. Norman W. Peddie led a 10-man party of 8 scientists and 2 engineers, including Philip J. Tenney, Carl Poster, and Michael P. Galan. They left from Plateau Station on Dec. 5, 1967, but on Dec. 8, 1967, 50 miles and 3 days out of Plateau, one of the scientists became ill and had to return to base. By Jan. 29, 1968 the expedition had covered 815 miles and had reached 78°42' S, 6°52' W, or 200 miles NE of the Shackleton Range. That was the end of the expedition, and 2 days later, on Jan. 31, 1968, the personnel and much of their equipment, were airlifted to McMurdo.

South Pole Station. This is the American station at the South Pole. At least, from the time it was conceived, in 1954, until the summer of 1961-62, it was called that (i.e., South Pole Station), and since then it has been called Amundsen-Scott South Pole Station. It has always been called Pole Station for short. Between 1957 (the first year men wintered-over) and 2008, 1221 persons wintered-over at Pole Station, several of them more than once (making a total of 1461 berths, as it were). 152 women wintered-over in that same time frame. Old Pole Station (the pre-1975 station) is now crushed and buried. There is nothing there. The geodesic dome of the new station has gone too. There is now an even newer Pole Station, a two-story elevated complex, the third-generation Pole Station. Its construction was led by the NSF's Jerry Marty and Raytheon's Carlton Walker. Pole Station remains the only scientific station ever at 90°S. There are now 3 ice airstrips, ATM machines, a bowling alley, and stop lights on the streets. **1955-56:** In the spring of 1955, the U.S. Navy put out a call for volunteers to go to Antarctica. Men answered the call from all over. For example, several Seabees — Reggie Wagner, Don Scott, CB Bevilacqua, Ed Hubel, and Squirrely McCrillis — came from their post in Korea. First to Rhode Island, for cold-weather training, then they shipped out on the *Wyandot*, along with Howard Hisey, out of Norfolk, Va., through the Panama Canal, to Christchurch, NZ, arriving at McMurdo Sound in the austral summer of 1955-56. Tom Montgomery read the Navy notice while serving on the *Benham* in the Atlantic, reported back to Washington, DC, and was trained as part of Task Force 43. He sailed down on the *Atka*, with Dick Prescott, Ed Hubel, and a dog team. Colon Roberts was sorting mail in the personnel office at Port Hueneme when he saw the notice. He went to Rhode Island, then on to Camp Lejeune for specialized oiler training, going down on the *Glacier* with his ship *YOG-34* in tow. John Tuck was on the *Glacier* too (he would lead the first wintering-over party at the Pole, in 1957). They would all winter at McMurdo Sound in 1956, building the air operating facility there (which later became McMurdo Station) and undergoing more training. When spring came they drew names out of a hat for those boys who would go to Christchurch for a short furlough. Roberts, Tyler, and Hisey (now known as Al, to distinguish him from the 3 other Howards there) were 3 of the ones who went. **Oct. 26, 1956**: A Globemaster (C-124) flew over the Pole. Over 40 men were aboard, including Maj. Gen. Chester McCarty, Paul Siple, and 8 reporters. It made the first ever airdrop at the Pole —10,000 pounds of fuel and a grasshopper. **Oct. 30, 1956**: A Globemaster dropped supplies to Beardmore Glacier Camp then went on to reconnoiter the Pole. **Oct. 31, 1956**: At 8.34 GMT, after a few passes over the Pole, Lt. Cdr. Gus Shinn landed the *Que Sera Sera*, his 25-ton R4D (the twin-engine Navy version of the Douglas DC-3), the first time a plane had landed at the South Pole. Also aboard were: Admiral Dufek himself, Trigger Hawkes (co-pilot who, it is rumored, was meant to have flown the plane, but chickened out), Lt. John Swadener (navigator), John Strider (aviation mechanic 2nd class), William Cumbie (aviation electronics technician 2nd class), and Capt. Doug Cordiner. As a Globemaster circled 1000 feet overhead, piloted by Maj. Ellen, USAF, and with newspaper reporters in it (including UP man Maurice Cutler, who took the dramatic picture of the *Que Sera Sera* landing), Strider got out, crawled under the plane to put the pins in the landing gear. He was the 11th man ever to stand at the Pole, the first in 44 years, and the first American. He then ran a ladder to the cabin door, and Dufek stepped out, the 12th man ever to stand at the Pole. Then the rest got out — the 13th, 14th, 15th, 16th, and 17th men to stand at the South Pole (Gus Shinn being the 17th). Strider took movies with the camera that NBC had given him, until the camera froze, and Gus Shinn got the only photos, with his Brownie. Dufek walked away from the plane's slipstream, and planted a U.S. flag in the snow (Gus Shinn, being a Southern boy, had a Confederate flag with him). Dufek was there to inspect the terrain and see if it was suitable for an IGY base. It was, but the temperature was so low (-58°F) that plans for the Seabees to go to the Pole would have to be postponed until the weather got better. Dufek said, "Let's get the hell out of here," and they took off again, just. The plane's landing skis had become frozen to the snow, the windshield was completely frosted over, and engine oil was leaking badly. Using instruments only, it was only after repeated use of JATO (jet assisted take off) that Shinn was finally able to get the plane off the ground at 9.23 A.M. First Gus fired 4 JATO bottles, then another 4, then another 4, and finally the last 3. The plane then flew to Beardmore Glacier Camp to refuel. **Nov. 15, 1956**: The first party of Seabees was scheduled to go to the Pole, but the trip was postponed. **Nov. 19, 1956**: A Globemaster circled over the Pole, and reported fair weather on the Polar Plateau. Also that day, 5 planes left McMurdo, one going to Beardmore Glacier Camp, and the other 4 heading for the Pole (it took 5 hours from McMurdo to the Pole on a good day). A Globemaster and a Skymaster were carrying supplies to be parachuted in (the Air Force were the ones who dropped supplies). Two R4Ds — one, the *Que Sera Sera*, piloted by Gus Shinn, and with Doug Cordiner as co-pilot, and the other, piloted by Lt. Cdr. Roy Curtis — were carrying the Seabee advance party of Lt. (jg) Dick Bowers (leader), John Randall, Tom Montgomery, Bill Bristol (photographer), Jerry Nolen, Dale Powell, Floyd Woody (medic), and Lt. John Tuck (dog handler). Also that day, Paul Siple made the first of several unsuccessful attempts to fly to the Pole. **Nov. 20, 1956**: About 12.15 A.M. Curtis reported that the 4 planes were over the Pole. The R4Ds landed at 12.45 A.M., dropped the 8 boys and 11 dogs off 8 miles from the Pole, and an hour and half later were in the air heading home. By 8.20 A.M. they were back at McMurdo. Among the 30-days supplies that had been dropped was a Weasel, which got broken on impact. The temperature at the Pole was -29°F, and the men rapidly erected tents on the plateau, 8 miles from the Pole. By 6.30 A.M. they had pitched 3 trail tents, retrieved most of the drops, secured the equipment, and got the dogs settled. Bowers radioed McMurdo asking for a new transmission and batteries for the Weasel. At 7 A.M. the men went to sleep. **Nov. 21, 1956**: The planes arrived with the spare parts. The men were asleep, so the planes had to buzz them a few times to wake them up. The parts were dropped to the men so they could effect minor repairs to the Weasel, but, although the new transmission landed safely (albeit 2½ miles from the tents), the batteries broke on impact. **Nov. 21, 1956**: At 8 A.M. they experienced a snow quake. **Nov. 22, 1956**: Three ski-equipped transport planes took off from McMurdo for the Pole with 17 more men aboard, but they had to turn back at Beardmore Glacier Camp due to the weather. Bowers, Tuck, Bristol, and Powell dog-sledged the 8 miles to the Pole, where lumber and other supplies had been dropped. They moved at 2 mph, and by the time they reached the Pole, as the 18th, 19th, 20th, and 21st men ever to reach the South Pole, Globemasters were dropping more supplies. Many things went wrong with the air drops, many chutes didn't open, and about a quarter of all the supplies dropped were rendered useless. The other 4 men stayed behind with the broken Weasel. **Nov. 23, 1956**: The second Seabee party tried flying out of McMurdo again, for the Pole, but again, weather conditions forced them back at Beardmore. **Nov. 24, 1956**: Again, bad weather forced the 2nd party back to McMurdo. **Nov. 25, 1956**: Over Dick Bowers' objection that it was an unnecessary stunt, Sgt. Dick Patton, USAF, in-17°F, dropped in (not the first parachute jump in Antarctica, but the first at the Pole itself) from a Globemaster (pilot was Col. Crosswell; co-

pilot was Maj. Levack), to help co-ordinate the airdrop operation at the Pole. He also brought in the new batteries for the Weasel, which was then fixed and the men then drove it to the Pole, where they arrived just before midnight. Thus, Randall, Montgomery, Nolen, Woody, and Patton, became the 22nd, 23rd, 24th, 25th, and 26th men ever to stand at the Pole. That same day, a Globemaster, piloted by Capt. Marvin E. Besch, dropped supplies, and two of the Navy R4Ds, piloted by Gus Shinn and Lt. Cdr. Harvey G. Speed, took off yet again from McMurdo with the 2nd party of 10 Seabees. **Nov. 26, 1956**: Just after midnight the two R4Ds, commanded by Gus Shinn and Harvey Speed respectively, landed at the Pole 5 minutes apart, dropped off the 10 Seabees, and 30 minutes later were gone. A Skymaster accompanied them, not landing, commanded by Ed Ward. The new Seabees were: Charles Slaton, Dick Prescott, Al Hisey, CB Bevilacqua, Bill Goodwin, Don Scott, Ed Hubel, Ray Spiers, Reggie Wagner, and Willie Williamson. They were the 27th to the 36th men ever to stand at the South Pole. Spiers, the cook, had brought with him 3 hams as a delayed Thanksgiving present for the lads already there. **Nov. 27, 1956**: USAF completed its 9th drop at the Pole, including a D-2 Caterpillar tractor, and the first ever mail drop at 90°S. Another 500 tons would be flown in and dropped at regular intervals 3 times a day. Also that day Tuck was offered the job of military leader for the 1957 winter at the Pole. By 8 A.M., after the boys had worked all night in-25°F, the first Jamesway hut was erected at the Pole, 32 x 16 feet, insulated, and 8 feet high. **Nov. 29, 1956**: Early in the morning, a Globemaster flying back from a cargo drop at the Pole crashed at McMurdo. The plane caught fire, but a crash crew got the 17 boys out, and no one was hurt except the pilot, who fell 20 feet from the cockpit and broke a leg. This was the 3rd Globemaster mishap (a Globemaster retailed at $1,800,000). Another Globemaster was coming in at the same time, but that one went smoothly. **Dec. 1, 1956**: Two planes arrived at the Pole, one carrying the remaining 5 Seabees — Bob Chaudoin, Rediron McCormick, Squirrely McCrillis, Robbie Roberts, and Tiny Tyler — and the other carrying Paul Siple, who would be the first scientific leader for the winter of 1957. They were the 37th to the 42nd men ever to stand at the South Pole. On that day Tuck flew back to McMurdo. **Dec. 7, 1956**: Bevilacqua's builders began work constructing the mess hall. A P2V-7 Neptune landed at the Pole with scientific equipment, but couldn't take off again, having trouble with one of its jet engines. Lt. Cdr. Jack Torbert was the pilot, and Doug Cordiner and Maj. Stan A. Antos (of Buffalo, NY) were co-pilots. Also aboard were: T.Sgt. David J. Sullivan (navigator); aviation machinist's mates Emmet H. Gann (from Soddy, Tenn.), Frank Owen Snyder (from Memphis), and James D. Crisp (from Dawson Springs, Ky.); aviation electronics mate Daniel Rello (from Detroit); electronics mate Clair F. Jones, Jr. (from Carmi, Ill.); and aviation electrician Minor B. McDaniel (from Pharr, Tex.). After 2 days they got away, but only just. Just like on Gus Shinn's record-breaking flight, Torbert couldn't free the plane from the ice, and it took 16 JATO bottles to help him. Even then, despite the 7000-foot run, the plane was still so low off the ground it picked up one of the red flags marking the runway, and carried it back all the way to McMurdo. **Dec. 8, 1956**: Chief Bevilacqua's building crew finished the mess hall late that night. **Dec. 9, 1956**: Bevilacqua's building crew began work on the science building, on the other end of Pole Station from the mess hall (200 feet away). **Dec. 12, 1956**: Bevilacqua's building crew completed the walls and floor of the inflation shelter (for balloons and the manufacture of hydrogen), 50 feet beyond the science building. This shelter measured 24 × 20 × 12 feet. **Dec. 13, 1956**: Bevilacqua's building crew completed the science building. The South Pole boys were informed that due to a lack of aviation gas at McMurdo, there would be no more drops until Dec. 27. What was even more disturbing was the rumor that the McMurdo Seabees were going to be flown back to the States before the Pole Seabees were flown back to McMurdo, thus necessitating a trip back to the States by ship, as all the planes would have gone. This caused a drop in morale among this most elite of the elite Seabees. **Dec. 14, 1956**: On the garage roof, Siple planted his famous bamboo South Pole with the glass ball on the top. **Dec. 15, 1956**: Drops came earlier than expected. An Oregon fir Christmas tree was dropped, complete with ornaments. Also 9 bags of mail. Bob Chaudoin, the postmaster, canceled the stamps, and imprinted each cover with "Pole Station, Antarctica." The Seabees began construction of the tunnels that would encircle the base, all the time also finishing work on the buildings. **Dec. 18, 1956**: Paul Siple had his birthday. **Dec. 20, 1956**: At midnight Spiers and Williamson, because they had the longest beards, were given the honor of raising the Stars and Stripes on the new bamboo pole. **Dec. 23, 1956**: Tom Montgomery spoke to his wife, Lois, in the States, for 15 minutes, courtesy of schoolboy ham radio operator Jules Madey, of Clark, New Jersey. Such calls had been made from McMurdo and Little America, but never from the Pole. The Pole's radio station was KC4USN short wave. Also that day the first 8 Seabees prepared to leave on the next plane to come in. The job was pretty much done. They celebrated Christmas that night, putting the tree in the science building. **Dec. 24, 1956**: A wild party ended about 8 A.M. That afternoon 3 planes landed. Two R4Ds and and a P2V-7, piloted by Doug Cordiner and Jack Torbert (this last one had got lost and was an hour late). Those Seabees who left were Prescott, Chaudoin, Scott, Tyler, Hisey, Goodwin, Williamson, and Roberts. **Dec. 25, 1956**: McCrillis finished all the basic wiring. The tunnels were covered. The meteorological Rawin Tower was basically finished on top of the mess hall. **Dec. 26, 1956**: All the boys spoke to their families in the States, via the ham radio operator. **Dec. 28, 1956**: The P2V failed to arrive from McMurdo. **Dec. 29, 1956**: At 6 A.M. (3 hours late) Tuck returned to the Pole, with 7 other winterers (all Tuck's crew except his builder), 600 pounds of scientific equipment and Bravo, Tuck's Malemute husky, all arrived on the Neptune. Bravo had been born at Dogheim, at McMurdo, on Aug. 14, 1956, the only survivor of a litter of 7. He would become the spoiled mascot at Pole Station. 8 men flew back to McMurdo — Slaton, Woody, Nolen, Powell, McCormick, Wagner, McCrillis, and Patton. The 7 new Navy support crew were: Lt. Howard Taylor (medical officer), William McPherson (radioman), Ken Waldron (electrician), Earl Johnson (utilitiesman), Martin L. Brown (mechanic), Cliff Dickey (electronics), and Chet Segers (cook). **Jan. 1, 1957**: They secreted a time capsule. **Jan. 4, 1957**: Bowers, with the last 6 of his boys — Hubel, Spiers, Bevilacqua, Randall, Bristol, and Montgomery, flew out from the Pole, and landed at McMurdo. 9 men now remained at the Pole. They would winter over. More would join them soon. **Jan. 23, 1957**: the South Pole Station was officially dedicated. Strictly a Navy base, it was a dark hole under ground, buried by the snow, and consisted of 6 tunnels, a radio and meteorology shack, barracks for 12 men, a recreation room and quarters for 6 men, an inflation shelter, an astronomical observatory, a weather balloon, a garage, a power house and water supply unit, a Rawin tower, a snow-filled fire-break, a science building and the scientific leader's office, a galley and mess hall, an Aurora tower, a photo lab, a latrine, a radio antenna, as well as meteorological instruments connected to the base by a snow tunnel. **Feb. 17, 1957**: Admiral Wright's flight over the Pole (*see* **Wright Island**). **1957 winter:** The 18 men who wintered-over in 1957 (or 20 if one includes replacements) were the first men ever to do so at the Pole. They were: Navy personnel: John Tuck (q.v.) (leader), Howard Taylor (doctor; *see* **Taylor Spur**), Cliff Dickey (electronics; *see* **Dickey Peak**), Melvin Havener (*see* **Mount Havener**), Earl Johnson (utilitiesman; *see* **Johnson Col**), William McPherson (*see* **McPherson Peak**), Tom Osborne (*see* **Mount Osborne**), Ken Waldron (q.v.), and Chet Segers (cook; *see* **Mount Segers**). Scientists: Paul Siple (q.v.) (leader), Herbert Hansen (q.v.), William Johnson (*see* **Johnson Spur**), John Guerrero (*see* **Guerrero Glacier**), and Edwin Flowers (*see* **Flowers Hills**) (meteorologists), Willi Hough (ionosphere physicist; *see* **Hough Glacier**), Ed Remington (glaciologist; *see* **Remington Glacier**), Bob Benson (geomagnetist and seismologist; *see* **Mount Benson**), and Arlo U. Landolt (aurora physicist; *see* **Mount Landolt**). **May 12, 1957**: The temperature reached -100°F. **1957-58 summer**: In Oct. 1957 Tom Abercrombie, of *National Geographic*, became the first civilian reporter at the Pole. **Nov. 9, 1957**: Vernon Houk came in to replace Jack Tuck as military leader. **Nov. 30, 1957**: Palle Mogensen replaced Paul Siple as scientific leader. **Jan. 4, 1958**: Ed Hillary arrived. **1958 winter:** 18 men. Navy personnel: Vern Houk (q.v.) (medical officer and officer-in-

charge), Stanley C. "Stan" Greenwood, Jr. and John D. Hasty (radiomen), Gerald R. Du Bois (mechanic), Ronald E. Mozetic (electronics), Donald Norman (electrician), Edward L. White (utilitiesman), and Louis B. de Wit (cook). IGY personnel: Palle Mogensen (q.v.) (scientific leader), Kirby Hanson (*see* **Hanson Ridge**), Arthur Jorgensen (*see* **Jorgensen Nunataks**), Stephen Fazekas (*see* **Fazekas Hills**), meteorologists Paul Dalrymple (q.v.), and DeeWitt Baulch (*see* **Baulch Peak**), Mario B. Giovinetto (q.v.) (Argentine glaciologist), ionosphere physicists Charles R. Greene, Jr. (*see* **Greene Ridge**) and Jim Burnham [*see* [1]**Mount Burnham**], and John Dawson (aurora scientist; *see* **Dawson Peak**). **1958-59 summer**: Chapel of Our Faith built. **1959 winter:** 17 men. Navy personnel: Sid Tolchin (q.v.) (military leader), Donald A. Finlayson and Norman E. Owens (radiomen), Jack Stroud (mechanic), Thomas E. Smith (electronics), Jerry W. King (electrician), Clarence N. Engel, Jr. (builder), Nello A. Bambini (utilitiesman), and Donald A. Kitchen (cook). US-IGY/USARP personnel: there were 5 meteorologists from the U.S. Weather Bureau — Julian Posey (q.v.) (scientific leader), Fred Mayeda (the first Japanese-American to winter-over at Pole Station; *see* **Mayeda Peak**), Benjamin Remington (*see* **Mount Remington**), Howard Redifer (*see* **Mount Redifer**), and Clarence McKenny (*see* **Mount McKenny**). There were also Willis Jacobs, seismologist from the U.S. Coast and Geodetic Survey (*see* **Jacobs Nunatak**); Red Bauhs, ionosphere physicist with the National Bureau of Standards (*see* **Bauhs Nunatak**); and Edward Fremouw, aurora physicist with the U.S. Air Force Cambridge Research Center (*see* **Fremouw Peak**). **Sept. 23, 1959**: A temperature was recorded of -110°F. **Dec. 23, 1959**: Appendectomy performed. Subject — E.H. Bibbie, USN. Doctor: Lt. Clarence Dumais. **1960 winter:** 19 men. Navy personnel: Clarence Dumais (leader and doctor; *see* **Mount Dumais**), Bryan W. Wilcox and E.C. "Al" Allison (radiomen), Bryant Lekander (mechanic; *see* **Lekander Nunatak**), W.D. O'Quinn, Joseph Blake (construction electrician; *see* **Blake Rock**), Frank T. Dodd (builder), Charles S. Bell (utilitiesman), W.H. Sheldon (equipment operator), and Ted J. Miller (cook). Scientists: 6 men from the U.S. Weather Bureau — Edwin Flowers (meteorologist and scientific leader; *see* **Flowers Hills**), John Maloney (*see* **Mount Maloney**), Harry Thomas (physicist; *see* **Thomas Spur**), and 3 met techs — Arthur J. Anderson, Charles G. Haas, and Allen Wallace (*see* **Mount Wallace**). There were also: aurora physicist Henry Morozumi, from the Arctic Institute (the first Japanese citizen to winter-over at the Pole; *see* **Morozumi Range**), ionosphere physicist Oliver Morse, from the National Bureau of Standards (*see* **Morse Nunataks**), and geomagnetist Mike Goodwin, from the U.S. Coast and Geodetic Survey (*see* **Goodwin Nunataks**). **1961 winter**: 20 men. Navy personnel: Phil Swartz (leader and doctor; *see* **Swartz Nunataks**), radiomen Joseph R. "Joe" Cornely (*see* **Cape Cornely**) and James B.B. Jones, José M. Gomez (mechanic; the first Hispanic-American ever to winter-over at the Pole; *see* **Gomez Nunatak**), Robert Joseph "Joe" Boll (electronics), James W. Brown (electrician), James C. Peterson (equipment operator), Edward S. Palaszewski (builder), Carson Walker (utilitiesman; *see* **Walker Rocks**), and Charles N. "Charlie" Wegner (cook). USARP personnel: Most of the men were from the U.S. Weather Bureau — Ben Harlin (scientific leader; *see* **Harlin Glacier**), Clarence McKenny (*see* **Mount McKenny**), Wesley Morris (*see* **Mount Morris**), Jack Steagall (*see* **Steagall Glacier**), Raymond Whitney (*see* **Whitney Glacier**), Hank Eckins (*see* **Eckins Nunatak**), and Ron Witalis (*see* **Witalis Peak**). There were also ionosphere physicist Jim Burnham (*see* [1]**Mount Burnham**), David W. Sylwester (aurora physicist; *see* **Sylwester Glacier**), and John Lamping (seismologist and geomagnetist; *see* **Lamping Peak**). **1961-62 summer**: The station was renamed Amundsen-Scott South Pole Station, for the first two leaders to reach this spot. **1962 winter:** 22 men. Navy personnel: Lt. Malcolm W. Lentz (officer-in-charge and medical officer; *see* **Lentz Buttress**), Lawrence H. Draper (hospital corpsman), radiomen Claud Craig and Roland J. Lott, Harold D.K. Crain (utilitiesman; *see* **Crain Ridge**), James L. DeKeyser (builder), Wayne M. Zulick (construction electrician), Keith D. Kellum (electronics), Gerald C. Ranne (construction mechanic), Robert E. Jones (equipment operator), and Henry Navarrette (cook). USARP personnel: From the U.S. Weather Bureau were meteorologists Luis Aldaz (scientific leader; *see* **Mount Aldaz**), and Lester Gillespie (*see* **Gillespie Glacier**), and (also from the Bureau) met techs Rod Mallory (supervisor; *see* **Mallory Bluff**), Jesse Dean (*see* **Mount Dean**), Dan Belecz (*see* **Mount Belecz**), and Richard Rutkowski (*see* **Rutkowski Glacier**), and electronics tech John Harrington (*see* **Mount Harrington**). From the National Bureau of Standards were ionosphere physicists Charles Vandament (*see* **Vandament Glacier**) and John McDonough (*see* **McDonough Nunataks**). Also present were Michael Phelan (geomagnetist and seismologist; *see* **Mount Phelan**), and William Aitken, aurora scientist from the Arctic Institute (*see* **Aitken Nunatak**). **1963 winter:** 22 men. Navy personnel: Don Bessinger (medical officer and officer-in-charge; *see* **Bessinger Nunatak**), W.H. "Doc" Jenkins (hospital corpsman), Tom Osborne (carpenter; *see* **Mount Osborne**), Kenneth E. "Tom" Thomas and Gary W. Larsen (radiomen), Dave G. Peterson (electronics technician; *see* **Peterson Hills**), Matty Matthews (engineman; *see* **Matthews Glacier**), W.T. "Henry" Aaron (electrician; *see* **Mount Aaron**), Gene Cunnningham (q.v.) (machinist), Gordon Ballard (equipment operator; *see* **Mount Ballard**), Stanley L. Povilaitis (cook), Mac McKibben (power plant shopfitter; *see* **Mount McKibben**). USARP personnel: Charlie Roberts (q.v.; of the U.S. Weather Bureau; scientific leader); there were 4 other men from the U.S. Weather Bureau — meteorological technicians Harry Spohn (*see* **Mount Spohn**) and Kenard Jensen (*see* **Jensen Glacier**), Jack Falkenhof (electronics technician; *see* **Falkenhof Glacier**), and Craig W. Brown (ozone specialist). There were 3 men from the National Bureau of Standards — Bill Burgess (ionosphere physicist; *see* **Burgess Glacier**), Ron Davis (seismologist and geomagnetist; *see* **Davis Nunataks**), and Jim Petlock (VLF scientist; *see* **Mount Petlock**). There was also Bob Fries (*see* **Mount Fries**), of the aurora program. **1964 winter:** 22 men. Navy personnel: William McLean (medical officer and officer-in-charge; *see* **McLean Peak**), Doc Strange (hospital corpsman; *see* **Strange Glacier**), radiomen Larry Cox (*see* **Cape Cox**) and Paul Lamboley (*see* **Lamboley Peak**), Alan Frost Kane (construction mechanic; *see* **Mount Kane**), Ron Lampert (storekeeper; *see* **Mount Lampert**), Squirrely McCrillis (q.v.) (construction electrician), Robert McLaughlin (engineman; *see* **McLaughlin Peak**), James Carl Peterson (equipment operator), Arthur Rath (*see* **Mount Rath**), Richard Sage (builder; *see* **Sage Nunataks**), and Joe Sumner (utilitiesman; *see* **Mount Sumner**), and William Mull (cook; *see* **Mount Mull**). USARP personnel: scientific leader was R.G. Tate (geomagnetician and seismologist), from the U.S. Coast and Geodetic Survey (*see* **Tate Glacier**). There were 4 meteorologists from the U.S. Weather Bureau — Harold Gatlin (*see* **Gatlin Glacier**), Robert Grass (*see* **Grass Bluff**), Henry Schroeder (*see* **Schroeder Hill**), and Robert Judd (*see* **Mount Judd**). There were 2 ionosphere physicists from the National Bureau of Standards — Tad Sargent (*see* **Sargent Glacier**) and Chip Wiest (*see* **Wiest Bluff**). Also present were Henry Scott Kane (cosmic radiation) from the Bartol Research Foundation (*see* **Kane Rocks**), and Henn Oona, aurora specialist with the Arctic Institute (*see* **Mount Oona**), and probably the first Estonian to winter-over at the Pole (his brother, Hain, would do so in 1968). **1965 winter:** 21 men. Navy personnel: Robert Beazley (medical officer and officer-in-charge; *see* **Mount Beazley**), Dominic Cantello (electrician; *see* **Mount Cantello**), Franklin Ford (construction mechanic; *see* **Ford Nunataks**), Talley V. George III (replaced by Gary F. Martin), Thomas Johnston (equipment operator; *see* **Johnston Spur**), John Keith (builder; *see* **Mount Keith**), Donald Lugering (utilitiesman; *see* **Mount Lugering**), Ron Markisenis (radioman; *see* **Markinsenis Peak**— sic), Darrell Rosenau (electronics technician; *see* **Rosenau Head**), Clifton Sapp (hospital corpsman; *see* **Sapp Rocks**), John Spanley (cook; *see* **Spanley Rocks**), Jim Wallace (chief utililitiesman; *see* **Wallace Rock**), and Courtland Weeder (storekeeper; *see* **Weeder Rock**). USARP personnel: Luis Aldaz (station scientific leader; *see* **Mount Aldaz**), Richard Blood (ionospheric physicist; *see* **Mount Blood**), Leopoldo Garcia (*see* **Garcia Point**) and Edward Landry (*see* **Landry Bluff**) (meteorologists), Terry Hardiman (geomagentician and seismologist; *see* **Hardiman Peak**), James Mercik (aurora specialist; *see* **Mercik Peak**), and Douglas Thompson (cosmic ray specialist; *see* **Thompson Peaks**). Dog: Madeira.

July 22, 1965: They recorded a new South Pole record low temperature of -113.2 F. **Summer 1965-66**: Peter Scott arrived with a BBC film crew from McMurdo. **Feb. 13, 1966**: Andrew B. Moulder died (*see* **Deaths**, 1966). **1966 winter:** 18 men. Navy personnel: Lt. William Griffin (medical officer and officer-in-charge; *see* **Griffin Nunatak**), Cesar Ambalada (electrician; *see* **Ambalada Peak**), Tony Benson (hospital corpsman; *see* **Benson Knob**), Don Tomovick (utilitiesman; *see* **Tomovick Nunatak**), Ken Thomas (radioman; *see* **Thomas Rock**), Bobby J. Davis (commissaryman; *see* **Bobby Rocks**), Roy Burrage (construction mechanic; *see* **Burrage Dome**), Robert C. "Bob" Smith (electronics technician), Danny L. Shepard (construction electrician; *see* **Shepard Cliff**), Bernie Pape (builder; *see* **Pape Rock**), Barry Shomo (equipment operator; *see* **Shomo Rock**), Paul Sheppard (storekeeper; *see* **Sheppard Rocks**). USARP personnel: Dick Przywitowski (ionosphere physicist and station scientific leader; *see* **Mount Przywitowski**), Bob Mallis (geomagnetist and seismologist; *see* **Mount Mallis**), Jerry Hollingsworth (meteorologist; *see* **Hollingsworth Glacier**), Lars Andersson (cosmic ray researcher; *see* **Andersson Ridge**), Ronnie Stephen (meteorologist; *see* **Mount Stephen**), and Barry D. Woodberry (ionosphere physicist; the first Australian to winter-over at Pole Station; *see* **Woodberry Glacier**). **1967 winter**: 21 men. Navy personnel: Lt. Craig Sullivan (officer-in-charge and physician; *see* **Sullivan Peaks**), Steven Terwileger (hospital corpsman; *see* **Mount Terwileger**), Noah White (radioman; *see* **[2]White Nunataks**), James Rivera (electronics technician; *see* **Rivera Peaks**), Rudy Terrazas (*see* **Mount Terrazas**) and Charles Gorham (*see* **Mount Gorham**) (builders), Howard Broome (*see* **Mount Broome**) and Larry Bean (*see* **Bean Peaks**) (electricians), Francis Macnowski (construction mechanic; *see* **Mount Macnowski**), Harold Crain (utilitiesman; *see* **Crain Ridge**), Floyd Virdin (mechanic and equipment operator; *see* **Mount Virdin**), James Wells (storekeeper; *see* **Wells Glacier**), and Harvey High (cook; *see* **Mount High**). USARP personnel: Richard B. Weininger (ionosphere physicist and scientific leader; *see* **Mount Weininger**); Weather Service men John Plankington (*see* **Plankington Bluff**), Philip Postel (*see* **Postel Nunatak**), and Joseph DesRoches (*see* **DesRoches Nunataks**); Peter F. Brazitis (geophysicist; *see* **Brazitis Nunatak**); Lt. Richard V. O'Connell (seismologist; *see* **O'Connell Nunatak**); Kirmach Natani (sleep study; *see* **Natani Nunatak**); Pyotr Astakhov (Soviet exchange ionosphere physicist; the first such at the Pole; *see* **Astakhov Glacier**). **1968 winter**: 21 men. USN personnel: Lt. (jg) John R. Hedley (officer-in-charge), Richard M. Hook (Doc), Michael L. "Mike" Howell (storekeeper), Verner J. "Vern" Jensen (mechanic), Rudolph "Tiny" Littleton (radioman), James L. "Mac" McDonald (electrician), David G. "Pete" Peterson (electronic technician), Charles E. "Charley" Ruiter and Stanley I. "Woody" Wood (equipment operators), Jack L. "Blackie" Blackwell (electrician), George A. "Duffy" Cabral, Jr. (cook), Stephen L. "Steve" Church (hospital corpsman), Douglas D. "Doug" Harwood (builder), and Lynn H. "Drifty" Hartgrave (utility technician). USARP personnel: Harold L. "Les" Coleman (meteorologist-in-charge and scientific leader), Albert T. "Al" Joern (sleep and pulmonary studies), C. Stanton "Stan" Massey (met tech), Hain Oona (upper atmosphere; brother of Henn Oona, *see* 1965 winter), Fred W. Walton (seismologist), Dan M. Chadwick (meteorologist), John R. Bower (ionosphere physicist). **1969 winter:** USN personnel: Lt. Bradley J. "Jay" Bowman (officer-in-charge), Lt. Richard J. Worley (Doc), Jim Wallace (chief utiltiesman; *see* **Wallace Rock**), Carey E. Allen (mechanic), Maurice E. "Pete" Disselhorst and Roderick H. "Henri" Miles (radiomen; Miles was probably the first black man to winter-over at the Pole), Robert A. "Butch" Davie (electronics technician), Dale R. Britt (carpenter), William E. "Will" Runyon (construction electrician), Robert A. "Bob" Endres (equipment operator), Lucien A. Grondin (electrician's mate), Ronald R. "Ron" Russell (hospital corpsman), Cletus E. "Pete" Cronrath (storekeeper), and Francis A. "Frank" Feeney, Jr. (cook). USARP personnel: Arthur Alexander "Alex" Kennel (ionosphere physicist and scientific leader), meteorologists Carl E. Hall, Roger E. White, and James R. "Jim" Kroth; geomagnetist and seismologist William "Bill" van Steveninck; and ionosphere physicist Robert L. Holbrook. **1970 winter**: USN personnel: Lt. Dean E. Fadden (officer-in-charge), Lt. Joseph M. Ryan (Doc), Roger E. Boyd (hospital corpsman), Noah D. White (chief radioman; his 2nd time at the Pole), Robert J. Little (radioman), Buddie E. Berryhill (electronics technician), Robert C. Rosa and Henry C. Brooks (carpenters), Gary G. Wayne (storekeeper), Allen R. Ekola (electrician), Donald E.K. Kennon (utilitiesman), Walter J. Polskoy (construction electrician), Patrick B. Pullar (equipment operator), Jackson L. Sheadel (mechanic), David V. Sauseda (cook). USARP personnel: Frank H. Merrem, Jr. (atmospheric physicist and scientific leader), Kenneth J. Heaps and Dennis S. Walts (meteorologists), Charles R. Hutt (geomagnetist and seismologist), James E. Starbuck and Erik Syrstad (ionosphere physicists). **1970-71 summer**: Built at an altitude of 9370 feet, and 820 miles from McMurdo, the station had drifted with the ice cap 27-30 feet per year in the direction of 43°S, until it was no longer at the Pole. So, it was decided to build a new station. It was begun this season. **1971 winter**: ASA personnel: Lt. (jg) Kevin P. Gallen (officer-in-charge), Lt. James A. Maners (Doc), Fred J. Burns, Jack T. Aldrich, Harry W. Heverley, Mac L. Jones, Gerald P. Kealey, Lawrence E. McGuire, Bobbie D. Netherland, Bruce A. Sorrell, Peter G. Stohlbom, Jack Treadway, and Kenneth D. Wyland. Scientific personnel: Bernard V. Jackson (geophysicist and scientific leader), meteorologists Charles T. Gadsden, Jr., Hilario L. Hernandez, Jr., and Richard L. Urbanak; Gary W. Brougham (geomagnetist and seismologist), George C. Siegner and Kellogg S. Stelle (ionosphere physicists). **1972 winter**: ASA personnel: Lt. William R. Talutis (officer-in-charge), Lt. Lynn D. Solem (Doc), Larry P. Bjerke, Warren L. Bogard, Steven D. Ball, Vincent J. Ciccarelli, Steven T. Current, Lawrence R. Gunn, Donald E. Lussier, Charles J. Moran, Colbert Munson, Robert W. Pearcy, Ernest E. Strickland, and Ralph Wade. Scientific personnel: Walter A. Zurn (geophysicist and scientific leader; the first German national to winter-over at Pole Station), Harold G. Hoots and Edward A. Jessup (meteorologists), Larry Minter (geomagnetist and seismologist); ionosphere physicists Russell Mumm, Vernon T. Rumble, and Edward J. Weber; and geophysicist Keith D. Ritala. **1973 winter**: NSFA personnel: Lt. Fred P. Walcott (officer-in-charge), Lt. Ronald J. Swarsen (Doc), Charles H. Butler, Gerald W. Davis, Roy T. Dickenson, George L. Gugert, Perry E. Harris, Charles E. Hopkins, Hugh K. Huffman, Roy W. Kline, Stephen D. Ramella, Kenneth E. Saxman, and Daniel F. Tripp. Scientific personnel: Charles Klinger (aurora photometrist and scientific leader), Gary Adair (geomagnetist), Dave Bennett and Robin Worcester (doppler research), James Craig (cosmic ray researcher), Marvin Kempton and Bruce Webster (meteorologists), Russell Wertz (ionosphere physicist), and Howard Singer (geophysicist). **1974 winter**: NSFA personnel: Lt. Robert L. "Bob" Braddock (officer-in-charge), Lt. Winston L. Cope (Doc), Ronald L. Bowers, Frank L. Burk, Richard D. "Rich" Gillett, Nick Knezevich, Jr., Paul W. Morrison, Charles Nicholson, John H. Roberts III, William E. "Will" Runyon (his 2nd time at the Pole), William C. "Bill" Simons, Robert T. "Bob" Slater, Ralph L. Snyder. Scientific personnel: Charles Jenkins (geophysicist and scientific leader), geophysicists William "Bill" Bochicchio, Donald "Don" Nelson, and Paul Rydelek; geomagnetist Jeffrey "Jeff" Galebrough; doppler researchers Melvin Y. Ellis and Tony K. Meunier; and upper atmosphere scientist Arthur "Dusty" Miller. **1974-75 summer**: The new station was completed. It was dedicated on Jan. 9, 1975, and was really space-age, covered by a huge aluminum geodesic dome, big enough (48 meters in diameter, and 16 meters high) to enclose 3 two-story buildings if it needed to. Over the entrance the sign said "The United States Welcomes You to the South Pole." It was permanently inhabited and in the summer housed 80-100 people. It had all the facilities of home. Sometimes only a handful wintered-over, sometimes the number was in the 20s, or anywhere in between. This was the season the Navy relinquished control to civilian management. **1975 winter**: Holmes & Narver personnel: Richard J. "Dick" Wolak (station manager), Michael G. "Mike" Hummer (Doc), Carliss R. Nunn (station engineer), Joseph R. "Joe" Parr (communications), Larry C. Duckett (cook; aged 20), Stuart E. "Stu" Rawlinson (supplyman), Cy Thomas "Tom" Plyler (power plant mechanic). Scientific personnel: Robert "Rob" Hamilton (meteorologist and scientific leader), William D. "Bill" Smythe (geophysicist);

Stephen J. "Steve" Kott and George A. Engeman (geophysical monitoring); meteorologists Bruce W. Fitch, Kenton A. "Ken" Martinsson, Richard A. "Dick" Maestas, and Bruce M. Morley; doppler researchers Ralph G. Boschert and Jon E. Sorenson. **1976 winter**: Holmes & Narver personnel: Daniel H. "Dan" Morton III (manager; a last minute replacement), Todd A. McConnell (Doc), Bernard S. McEwen, Dennis E. Seeley, Donald P. Holloway, Ronald B. Fesler, Timothy C. Jones, and Mark A. Lemieux. Scientific personnel: C. Michael Jefferson (geophysicist and scientific leader), met observers Barry J. Porter and Bernard V. "Bernie" Maguire (the first New Zealanders to winter-over at the Pole); doppler researchers William F. Graser and John A. Hinely; meteorologists Bruce S. Jackson, Robert W. Jackson, James R. Jordan, and Valentine S. Szwarc. **1976-77 summer**: Bill Spindler (manager). **1977 winter**: Holmes & Narver personnel: Bill Spindler (station manager), Fritz Koerner (Doc; this is not the Fid of the same name), Dennis Boucher, Dave Thelander, Lee Sundblad, Bill Koleto, Al Nelson, Jerry Gastil, John Heg, Ken Gibson. Scientific personnel: Tadashi Yogi (gravity man and scientific leader); two New Zealanders, Simon Norman (met observer) and Lloyd Anderson (met tech); Ken Barker and Jim Fletcher (seismologists); Stu Harris (cosmic ray scientist); Alex Zaitzev (Russian geomagnetist); Craig Whan and Marshall Soares (micrometeorologists); Gary Rosenberger (NOAA tech), and Brad Halter (NOAA observer). **1978 winter**: Holmes & Narver pesonnel: Mike Pavlak (station manager), Doug McIntosh (Doc), Charlie Abner, Doug Carlson, Ron Demers, John Keegan, Warren Lincoln, John Raleigh, and Fred Rohe. Scientific personnel: John Osborn (chief scientist); two New Zealanders, John Waller (meteorologist), and Kevin Bisset (met tech); Urik Gaulkin (Russian scientist); Cary McGregor (air sampling for trace elements); Steve Barnard (surface aerosol observations); Gary Foltz and Mike Metzgar (SAT-TRACK); Dennis Regan (cosmic ray scientist); Joe Humphries (respiratory virus studies); John Waller (meteorologist); Kevin Bisset (met tech); Bob Countryman (gravity man); Hans Ramm (of NOAA); Larry Smith (NOAA electronic technician). **1979 winter**: Support personnel: Ron Peck (station manager), Noah D. White (radioman; a civilian this time; this was his 3rd winter at the Pole), Bob Meyer, Andy Cameron, Neil McDowell, Don Winburn, Larry Oswald, Daryl Leed, Bob Wilkinson, Brian O'Hanlon. Women have been wintering-over since Michele Raney did so as physician this winter. Scientific personnel: John Bortniak, Chuck Smythe, Tom Edmonson, Mike Newman, John Towle, and Rick Morris. **1980 winter**: Support personnel: Bruce Gaylord (station manager), Steve Glenn (Doc), Larry Arave, Mark Kennedy, Paul Klaus, Neil McDowell, Jay Morrison, Howard Evans, Jim Remick, and John Villemez. Scientific personnel: Greg Arnold, Bill Hiscox, Eric Kramer, Joe Roman, G. Mike Siedelberg, and Martha Kane (cosmic ray observer; the 2nd woman to winter-over at the Pole). **1981 winter**: Tom Plyler (station manager), Charles Huss (Doc), Pat Mosier, Mike Kilborn, Graeme Currie (a met tech with ITT, he was the 2nd Australian ever to winter-over at Pole Station), Dan McKenna, Mark Weinand, Ed Green, Paul Campbell, Cindy McFee (science leader), Al Tinkham, Mike Gilbert, Bill Gail, Charles Hessom, Ken Murphy, Pat Cornelius, Tim Lestico. **1982 winter**: George Patrick "Pat" Kraker (station manager), John Roseburg (Doc), Tom Henderson, Yuri Latov (Russian scientist), Mark Vanderiet, Jimmy Hopper, John Dalton, Arliss Thompson, Mark Levesque, Phil Sandburg, Kathy Covert (with USGS; seismic and satellites), Robert Williscroft, Ed Zawlocki, Mike Nelson, Larry Antonuk, Merrianne Bell (cook), Robert John "R.J." Bragg, and Eric Siefka. **1983 winter**: Richard P. "Rich" Wiik (station manager; last-minute replacement), Hans-Albert Dalheim (geophysicist; the second German to winter-over at Pole Station), Nick Barrett, Rusty Brainard, Bill Dietz, Steve Fahnenstiel, Glen Gerhard, Rob Giliuto, Jim Hetrick, Don Kirman, Jim Lewis, Glen Liston, John MacMillan, Ken Mighell, Dan Parkin, Brian Peterson, Loreen Utz, Mary Lynne Vickers, and Joe Wall. **1984 winter**: Robert Hurtig (station manager), Steve Barry, Charles C. "Chris" Baumann, Michale Beller (Doc), Richard Byrnes, George Cameron, David Clements, Lawrence Cruz, Connie Deady (cook), Rick Dyson, Gary Foltz, Frank Gilpatrick, Dave Heimke, George Krieg, Frank Migaiolo, Francisco "Paco" Navarro, Robert Platzer, Jr., Dale Sparks, Kent Welcker. **1985 winter**: Edward J. "Ed" Duplak (station manager), Nancy Sachs (Doc), Bill Anderson, Tom Brace, Vincent "Vinnie" Cascio, Bill Coughran, Peter Furtado, Buel "Rusty" Gore, Laura Kay, Cyril Lance, Scott Lawson, Mark Mihalic, Marc Miller, Steven Morris, Eric Siefka, Tom Smith, Robert Stern, Tim Vogler, James Waddell. **1986 winter**: Leon "Lee" Schoen (station manager), Brad Craig (Doc), Paul McNerney, Joe Beaulieu, Florence Georges, Clifford Wilson, Brad Halter, Susan Monaco, Hank Koch, Sharon King, Kitt Hughes, Dave Maki, Jim Cole, Larry Mjolsness, Sasha Zemenak, Matt Myers, Dennis Rittenhouse. **1987 winter**: Steven J. Bonine (station manager), Nancee L. Schaffner (Doc), Martin L. Foss, Barry Goldberg, Richard W. Hyatt, James E. Keller, Scott E. Kuester, Lyle L. Lawbaugh, Kevin A. Linn, Greg R. Littin, Eric B. Merriam, Kenneth W. Murphy, Jr., Glenn A. Nielsen, Patrick J. Reitelbach, Peter F. Vossenberg, Aaron R. Walters, and Stanley P. Wisneski. **1988 winter**: Michael Constantine (scientific leader). Computer technician Hien Van Bui was the first Vietnamese ever to winter-over at Pole Station. Nigel Smith, with the University of Delaware, was British. Others in the party: John Breckinridge, Edward Burnette, Sergio Contreras, Jeffrey Down, Debra Enzenbacher, Thomas Fay, Paul Lux, Gregory Manuel, Susan Monaco, Ted Mullen, Holmes Perkins, Lt. Robert Poston, Bernard Shen, Christopher Storey, Edward Wallack, Eric Wong. **1989 winter**: William A. "Bill" Coughran (station manager), Alistair Walker, from the University of Delaware, was British. Others in the party: David "Dave" Bieganski, Raymond E. "Ray" Brudie, Doug Chichester (science leader), Dwight E. Olyear, Jordan L. Dickens, Elizabeth "Betsy" Crozier, Daniel K. "Dan" Durick, Daniel L. "Dan" Frank, John F. Gress, John B. Gushwa, Rodney A. "Rod" Jensen, J. Brent Jones, Steve J. Midlam, Glenn A. Nielsen, Dennis D. O'Neill, Mark J. Parent, Patricia K. Schaefer, and Mark Winey. **1990**: By this time the station was about 150 yards west of the South Pole, due to the movement of the ice cap (see above). **1990 winter**: Thomas "Tom" Fay (station manager). Michael Finnemore, from the University of Delaware, was British. Rest of party: David "Dave" Ayres, Jon Kelly Barber, Roger Carr, Richard Collins, Leigh Crabtree, Michael H. "Mike" Finnemore, Laura Folger, Carl R. Groenevelt, Kathryn "Kit" Hughes, Sanford "Sandy" Kauffman, Tim Knebel, Jean Moreau, Ronald "Ron" Nugent, Michelle R. Rogan, Frderick J. "Fred" Schrom, Ray Sliter, Ian Sterling, Robert "Bob" Sulyma, and Frank Thomison. **1991 winter**: Dennis O'Neill (station manager; last-minute replacement), John Kai Chan was British, with the University of Leeds. Others in the party: Jerome Cook, James "Jim" Hancock, Matthew "Matt" Houseal (Doc), Terrence "Terry" Isert, Brian D. Jacoby, Rodney A. "Rod" Jensen, John F. Lowell, Joseph "Pete" Massey, Steve Midlam, William L. "Bill" Norton, James L. "Jim" Notchey, Michael S. "Mike" O'Neill, John T. "J.P." Parlin, Karen A. Peterson, Jerome S. "Jerry" Pratt, Kathryn L. Price, Suzanne Redick, Keith Schallenkamp, Kurt Sobanja, and David A. "Dave" Zulejkic. **1992 winter**: Gary Freeman (station manager), Betty Carlisle (Doc), Jerilyn Johnson, John Vonesh, Joe Migliore, Paul Mahoney, Bill Getz, Martha Stathis, Darrell Doran, Drew Logan, Jim Meis, Jeff Thompson, Bob Koney, Kitt Hughes, Jarvis Belinne, Dan Ledoux, Dale Tysor, David Gaines, Michael Starbuck, Roger Barlow, Peter Surrey, Steve Warren. **1993 winter**: Stanley Wisneski (station manager), Alan Ward (science leader), Danya Dilley (Doc), Steve Bruce, Robert Carlson, Jerome Cook, Joe Crane, Jordan Dickens, Darrell Doran, Bettie K. Grant, Rodney Jensen, Peggy Kleindienst, Paul Lux, Joseph "Pete" Massey, Bill McAfee, Paula McNerney, Randall Noring, Kari Noring, John Parlin, Kathryn Price, Larry White, Andy Coulthard, Ray Dunn, Carl Groeneveld, Cathleen McDermott, Kate McNitt, Kathie Sharp, Curt Trimble. **1994 winter**: Janet Phillips (the first woman station manager at the Pole), Hien Nguyen, the science leader, was the 2nd Vietnamese to winter-over at Pole Station. Others in the party: Ann Adams, Victoria Campbell, Terry Isert, Althea Danielski, Jim "Thumper" Porter, Jim Anderson, Kurt Sobanja, Bob Lutes (Doc), Ed Tracey, Brent Jones, Jerilyn Johnson, Michael Hancock, Abby Weeman, John Weeman, Cere Davis, John Briggs, Don Neff, Tom Jacobs, Joe Spang, John Kovak, James Stine, Carl Busser, Rob Swett, Scott Tomczyk, Kerry Vigue. **1994-95 summer**:

Construction began on the third Pole Station, the one that would eventually replace the Dome. **1995 winter**: John T. "J.P." Parlin (station manager), Johan F. Booth, Emily C. Buesser, Richard A. "Rich" Chamberlin, Paul J. Charpentier, Christopher L. "Chris" Cleavelin, Katherine A. "Kacey" Cuddy, Alton G. "Chip" Dunn III, Gary E. Freeman, Drew D. Hampton, Andrew R. Jones, David A. "Dave" Koester, Robert E. Lee, Jr., James P. Lloyd, Andrew D. Logan, Diana J. Logan, Jeffrey S. "Jeff" Lutz, Nikolai A. Makarov, Michael F. "Mike" Masterman, Billy M. McAfee, Jr., Katharine A. "Katy" McNitt, Jeffrey C. "Jeff" Otten, Albert G. "Albie" Pokrob, Kathie A.H. Sharp, Johnny Paul Smith, Martha K. Stathis, Eileen K. Sverdrup, and Thomas J. "Tom" Tatley. **1996 winter**: Tim Coffey (station manager). Simon Hart, from the University of Wisconsin, was British. Others in the party: William Arens, Simon Balm, Katharine Caesar, Betty Carlisle (Doc), Chris Bero, Jason Dorpinghaus, Tom Edwards, Bob Farrell, Jaime Gallo, Elisabeth Grillo, Dan Ireland, Jeanne Kelley, Scott Konu, Jamie Lloyd, Paul Lux, Lesley Ogden, Jeff Otten, Dan Potter, Ric Ramos, Mike Salasek, Michael Shandrick, Mike Slack, Nancy Tanner, and Kerry Vigue. **1997 winter**: Don McCreight (station manager). Gary Hill, astronomer, was the 3rd ever Australian to winter-over at Pole Station; Matthias Rumitz and Robert Schwarz (only the 3rd and 4th Germans to winter-over at Pole Station). Others in the party: Finn Barnaby, Paul J. Charpentier, Mark Boland, Chris Cleavelin, Lawrence "Cleve" Cleavelin, Sandra Collins, Mike Courtemanche, Hugh Cowan, Alton G. "Chip" Dunn, Brian Ellspermann, Robert Frederick, Drew Hampton, Gary Hill, Shawndra Holmberg, Dave Koester, Dawn LaPrete, Ken Lobe, Liza Lobe, Jerry Mayfield, Glen McConville, John Paul McMullan, Jeff Smith, Paul Sullivan, Tom Tatley, Matt Wolf. **1998 winter**: Katy Jensen (winter site manager), Will Silva (Doc). Rodney Marks was only the 4th Australian ever to winter-over at Pole Station. Robert Schwarz (2nd winter) and Steffen Richter, both Germans. Astronomer Xiaoulei Zhang was the first Chinese to winter-over at Pole Station. Others in the party: Carol Crossland, Eduardo Andres, Tom Barker, Johan Booth, Victoria Campbell, Gumby Carlson, Jon Conrad, Lis Fano, Dave Franco, Nathan Hill, Rod Jensen, Mary Lenox, Diana Logan, Paul Lux, Craig Massey, Matt Newcomb, Dave Pernic, Eric Riley, Jeff Ryan, Eric Sandberg, and Dave Zybowski. **1999 winter**: 41 persons. Mike Masterman (station manager), Jerri Nielsen (Doc). Xinhua Bai was the 2nd Chinese to winter-over at Pole Station. Roopesh Ojha was the first Indian to winter-over at Pole Station. Science technician Reza Mossadeque, was an American citizen, but of of Bengali origins. Nikolai "Nick" Starinski was from the Ukraine. **2000 winter**: 50 persons. Scott Hulse (winter site manager). Rodney Marks wintered-over again. He died that season. Darryn Schneider was the 5th Australian to winter-over at Pole Station. Egyptian laser scientist Ashraf El-Dakrouri was the first person from an Arab or Muslim country to winter-over at Pole Station. This was Jake Speed's first winter at the Pole (his right name was Joseph Gibbons). Gene Donaldson (a NZ astronomer). Bill Henriksen. **2001 winter**: 50 persons. Jerry Macala (manager). Ben Reddall was the 6th Australian to winter-over at Pole Station. Steffen Richter did a 2nd winter, and Marc Hellwig (also a German). John and Jennifer Bird were Canadians, possibly the first ever Canadians to winter-over at Pole Station. Jake Speed's 2nd conscutive winter at the Pole. Jason Medley. **2002 winter**: 51 persons. Katrin Hafner (manager). Gary Knittel and Matthias Leuthold, both Germans. Kecheng Xiao was only the 3rd Chinese ever to winter-over at the Pole. Jake Speed's 3rd consecutive winter at the Pole. Jason Medley again. Wilfred Walsk, from NZ. **2003 winter**: 58 persons. Bill Henriksen (manager). Allan Day and Miles Smith were the 7th and 8th Australians ever to winter-over at Pole Station. Robert Schwarz and Steffen Richter both did another winter. Paolo Calisse was the first Italian to winter-over at the Pole. Jake Speed's 4th consecutive winter at the Pole. Barry Horbal. Jason Medley for a 3rd consecutive winter. **2004 winter**: 75 persons. Pete Koson (manager). Allan Day wintered-over again, and Julienne "Jules" Harnett was the first Australian woman ever to winter-over at Pole Station. Xuan Ta was only the 3rd Vietnamese to winter-over at Pole Station. Jake Speed's 5th consecutive winter at the Pole (a record). Barry Horbal again. Rhys Boulton (a NZ pipefitter), Clayton Cornia, and Mike Scholz. Jarrod Southon (NZ carpenter). Kevin DuPuy and Stephen Crackel, two NZ sheetmetal workers. **2005 winter**: 86 persons. Bill Henriksen (manager; the first person to hold the job twice). Allan Day wintered-over at Pole Station for a 3rd consecutive year. Jessica Dempsey became only the 2nd Australian woman to do so. Mark Langemann, also an Australian, wintered-over as mechanic. Robert Schwarz and Steffen Richter were back for another winter. Brian Barnett. Andrea Löhr was the first German woman ever to winter-over at Pole Station. Dr. Christian Otto was the first Canadian medical officer to winter-over at the Pole. Two other Canadians there that winter were network engineer Michael Ray and production cook Eric Duncan. Heidi Lim and Kevin Shea were at Pole Station for the first of their 4 consecutive winters there. Barry Horbal yet again. Rhys Boulton, Clayton Cornia, and Mike Scholz again. There were 25 women at the base this winter, a record. Kate Batten and Vicky Ward, carpenters helpers, the first NZ women to winter-over at the Pole. Jarrod Southon back again. John Neame, Alistair McNoe, and Michael Hole (3 NZ carpenters). **2006 winter**: 64 persons. Liesl Schernthanner (manager). Allan Day wintered-over for a 4th consecutive year. Robert Schwarz was back. Denis Barkats was the first Frenchman to winter-over at Pole Station. Heidi Lim and Kevin Shea were back for their 2nd consecutive winter. Johan Booth and Michael Rehm. Brian Barnett again. Rhys Boulton, Clayton Cornia, and Mike Scholz were all back for their 3rd consecutive winter. Michael Hole, John Neame, and Alistair McNoe, all back again. Richard McHenry, a NZ carpenter. **2007 winter**: 54 persons. Andy Martinez (manager). Australian Derek Aboltins wintered-over, as did Swede Sven Lindstrom. Robert Schwarz was back for his 6th wintering-over at the Pole (a record). Karthik Soundarapandian was an Indian. Astronomer Stephen Padin was British. Heidi Lim and Kevin Shea were back for their 3rd consecutive winter. Barry Horbal for his 4th consecutive winter at Pole Station. Johan Booth and Michael Rehm were back. Brian Barnett was back for his 3rd consecutive winter. Richard McHenry was back. Scott Iremonger, a NZ VMF supervisor. Stefan Anthony, a NZ carpenter's apprentice. Paul Smith, a NZ plumber. **2007-08 summer**: Jake Speed was back. **Jan. 12, 2008**: The new Pole Station was opened. **2008 winter**: 60 persons. Katherine "Katie" Hess (manager). Todd Adams, Calee Allen, Pete Allen, Dr. Malcolm Arnold (the first Australian doctor to winter-over at Pole Station. He had his 65th birthday in Sept. 2008, while at the Pole. He is certainly the oldest person ever to winter-over at the Pole, and one of the oldest ever in Antarctic history), Nathan Bahls, Christopher "Chris" Bender, Stacy Blattner, Johan Booth, Christopher Brazelton, Will Brubaker, Philip Clark, Katie Contos, James Coppedge (lead power plant mechanic), Lt. (jg) Amy Cox, Sean Dell, Ethan Dicks, Andy "Dish" Dishneau, Nate Dyer, Teresa Eddington, Ethan Good, Timothy "Tim" Hayosh, Josiah Heiser, Weeks Heist, Jr., Jared Hicks, Barry Horbal, J. Dana Hrubes, Andy Hughes, Jeff King, Mandi Lamb, Heidi Lim, Jason McDonald, Jane Marquard (materials person), Mike McCracken, Shaun Meehan (communications technician; he had his 19th birthday on Dec. 14, 2007), Julian Mercer, John P. Miller, Edgar "Tex" Nielsen, Jon Olander, Sue O'Reilly, David Postler, Travis Puglisi, Michael Rehm, Steffen Richter, W. Lance Roth, Michael Rousseau, Derek Sargent, Jack Sharp, Kevin Shea, Paul Smith, Robin Solfisburg (cook), Bill Spindler, Michael "Mike" Symanski, Aditya "Adit" Tata, Andrew "Andy" Titterington (carpenter; had his 19th birthday on Jan. 13, 2008), Kevin Torphy, Debbie Townsend, James Travis III, Dr. Keith Vanderlinde (Canadian), Leah Webster. Messrs Booth, Horbal, and Richter were all back for their 6th wintering-over at the Pole, to equal the record set by Robert Schwarz. Heidi Lim and Kevin Shea were back for their 4th consecutive winter. Michael Rehm was back for his 3rd consecutive winter. Paul Smith was back. There were 12 women on base that winter. **2009-10 summer**: They started tearing down the old Dome. **2009 winter**: 43 persons. Logan Grover (manager). **2010 winter**: 47 persons. Mel McMahon (manager).

South Pole Traverse Project. An impossible task, yet it was achieved. The National Science Foundation funded a 1028-mile ice highway to be built of packed ice between McMurdo and the Pole. 20 feet wide and marked with green flags. Work began in the summer season of

2002-03, with John Wright as project manager, and the impossible project continued in 2003-04 and 2004-05. This was truly "opening up the continent." $5.8 million later the project had covered a remarkable 425 miles, and by Dec. 2005, it was completed, and called, naturally, the South Pole Highway. Crevasses appear, however, and have to be filled in. It now takes 10 days for a tractor to drive from McMurdo to the Pole. Antarctica is changing.

South Portal. 68°35' S, 78°08' E. The more southerly of a pair of buttresses which flank the entrance to The Corridor, on Breidnes Peninsula, in the Vestfold Hills, on the Ingrid Christensen Coast. Named descriptively by ANCA on Nov. 27, 1973. *See also* **North Portal**.

South Sandefjord Anchorage *see* **Mikkelsen Harbor**

South Sandwich Arc *see* **Scotia Ridge**

South Sandwich Fracture Zone. An undersea fracture zone, it spreads over an area between 60°30' S and 60°45' S, and between 17°30' W and 24°00' W, and centers on 60°37' S, 20°45' W. Named by international agreement in June 1987, in association with the South Sandwich Islands.

South Sandwich Islands. Very close to Antarctica, within half a degree latitude, in fact, but not one single part of the group falls above 60°S, so they are not included in this book in any more detail than this, except where they are mentioned throughout the book.

South Sandwich Trench. Extends from 55°S, 32' W to 61° S, 27°W. A submarine trench on the E side of the South Sandwich Islands, in the Atlantic-Indian Basin, it reaches a maximum depth of 27,650 feet.

South Scotia Ridge. 60°45' S, 47°52' W. Its longitudinal range is actually between 42°15' W and 53°30' W. An undersea ridge, named by international agreement as the Scotia Ridge, in association with the Scotia Sea, of which it forms the S border. In June 1987 the Scotia Ridge was divided up (name-wise, at least) into the North Scotia Ridge and the South Scotia Ridge, only the South Scotia Ridge falling within the range of this book.

South Shetland Islands. Also called the South Shetlands (and they are known as this throughout this book), a term interchangeable with the longer one, and actually preferred, even though the longer name is the one seen on maps. They center on 62°S, 58°W. A major group of islands at the N tip of the Antarctic Peninsula, N of Bransfield Strait, and actually, technically, lying in the Drake Passage. Barren, snow-covered, and uninhabited (except by scientific station personnel and some wildlife), they extend for some 480 km and cover a total area of 1800 sq miles. History and Antarctica come together at the South Shetlands. In Sept. 1599 Dirck Gerritsz may have reached a latitude of 64°S and seen them, but this is little more than a rumor (perhaps) started by Edmund Fanning a couple of centuries later. Gerritsz was on the *Blyde Bootschap*, and it is more than coincidental that another report, from Laurens Claess, bosun on the same ship in 1603, tells us that he also got to 64°S. Again, almost certainly an apocryphal tale. In 1712 Frazier may have sighted the group, and called them South Iceland, or New South Iceland. Again, this was a rumor perpetuated by Fanning, to take away from the British achievement of their actual discovery (the Americans and the British had recently been at war, and there was strong ill feeling toward the British, especially from New England sailors). This aforementioned British discovery took place on Feb. 19, 1819, when William Smith became the islands' undisputed discoverer. Who discovered America? The answer is Columbus. Who discovered the South Shetlands? The answer is William Smith. If any sealers had discovered the new sealing grounds of the South Shetlands before Williams did, as Fanning was claiming to be the case, then they kept it a secret. However, such a secret, with so much at stake, wouldn't have remained a secret for long, especially with drunken sealers bragging in South American saloons. The odd thing is, as soon as Williams reported it to his superiors, he was disbelieved. Smith named the islands New South Britain. On Oct. 14, 1819, he returned, landed on King George Island on Oct. 16, 1819, claimed the islands for Britain, and renamed them New South Shetland because they are in the same general degree of latitude as the Scottish islands, the Shetlands, are in the northern hemisphere. For more intricate details of this discovery, and of the subsequent confirmation by the British government, *see* **Bransfield, Edward; Smith, William;** and **The *Williams***. The group was also known as New Shetland for a while, but it was not long before everyone was calling them the South Shetlands. Smith explored them and roughly surveyed them. Between 1819 and 1833 there were 105 sealing vessels there (at least), all hunting fur seals, and in the 1820-21 season alone, there were 30 American vessels in the South Shetlands, not to mention the British ones and the others of different nationalities (*see* **Expeditions**). Between 1906 and 1931 the islands were used mostly for sealing and whaling bases, mostly Deception Island. Britain claimed the South Shetlands in 1908. During World War II, they began to be used for scientific bases by Britain, Argentina, Chile, and others. Working from N to S, the islands are (with the main ones highlighted as signposts): Seal Islands, Gibbous Rocks, Borceguí Island, Cornwallis Island, Gnomon Island, West Reef, Pinnacle Rock, Sugarloaf Island, **Clarence Island**, **Elephant Island**, Cruiser Rocks, Rowett Island, Gibbs Island, Aspland Island, Eadie Island, O'Brien Island, Bransfield Rocks, Ridley Island, Hole Rock, Limit Rock, Cove Rock, Jagged Island, Pyrites Island, Shearer Stack, Kellick Island, Owen Island, Tartar Island, **King George Island**, Foreland Island, Simpson Rocks, Middle Island, Trowbridge Island, Hauken Rock, Ørnen Rocks, Livonia Rock, Penola Island, Bridgeman Island, Stump Rock, O'Connors Rock, Sea Leopard Patch, **Penguin Island**, Martello Tower, Atherton Islands, Growler Rock, Caraquet Rock, Twin Pinnacles, Denais Stack, Napier Rock, Dufayel Island, Square End Island, Sinbad Rock, Syrezol Rocks, Chabrier Rock, Upton Rock, **Ardley Island**, Nancy Rock, Tu Rocks, Dart Island, Weeks Stack, Withen Island, Telefon Rocks, Two Summit Island, **Nelson Island**, Emm Rock, Folger Rock, Low Rock, Parry Patch, Mellona Rocks, The Watchkeeper, Pig Rock, Liberty Rocks, Henfield Rock, Potmess Rocks, **Robert Island**, Heywood Island, Monica Rock, Lone Rock, Cornwall Island, Turmoil Rock, Table Island, Bowler Rocks, Grace Rock, Salient Rock, Chaos Reef, Cheshire Rock, Aitcho Islands, Holmes Rock, Romeo Island, Sierra Island, Stoker Island, Dee Island, Burro Peaks, Ongley Island, Pyramid Island, Zed Island, Eliza Rocks, Cone Rock, Corner Rock, Ibar Rocks, Cave Island, Express Island, Tenorio Rock, **Greenwich Island**, Channel Rock, **Livingston Island**, Craggy Island, **Desolation Island**, San Telmo Island, González Island, Dunbar Islands, Indian Rocks, Wood Island, Fortín Rock, Fuente Rock, Honores Rock, Vidal Rock, Basso Island, Chapman Rocks, Lynx Rocks, Frederick Rocks, Window Island, Svip Rocks, Cutler Stack, The Pointers, Eddystone Rocks, Rugged Rocks, **Rugged Island**, Stewart Stacks, Astor Island, Hetty Rock, Stackpole Rocks, Vietor Rocks, Sally Rocks, Enchantress Rocks, Long Rock, Aim Rocks, **Snow Island**, Conical Rock, Castle Rock, Keep Rock, Knight Rocks, Tooth Rock, Barlow Island, **Deception Island**, **Smith Island**, Meade Islands, Sewing-Machine Needles, Ravn Rock, New Rock, Låvebrua Island, Sail Rock, Van Rocks, **Low Island**.

South Shetland Trench *see* **South Shetland Trough**

South Shetland Trough. 61°00' S, 59°30' W. A submarine feature in the area of the South Shetlands, after which it was named. It was at one time called the South Shetland Trench, but the term "trough" was deemed more acceptable. Named by US-ACAN in Oct. 1977.

South Shetlands *see* **South Shetland Islands**

South Spit. 62°13' S, 58°48' W. A rocky spit forming the S side of the entrance to Marian Cove, King George Island, in the South Shetlands. The name appears on a British Admiralty chart of waters surveyed by personnel on the *Discovery II* in 1935. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit in 1965. Last plotted by the UK, in late 2008.

South Stork. 67°31' S, 68°14' W. The SW portion and the lowest of the 3 main peaks of Stork Ridge, near Rothera Station, on Adelaide Island. It has a flat, rocky summit. Photographed aerially by FIDASE in 1957. Named by UK-APC on Sept. 29, 2004.

South Stream. 72°27' S, 163°44' E. A meltwater stream, 3 km SW of Marble Point, it issues from the front of Wilson Piedmont Glacier, and flows SE into Bernacchi Bay, on the coast of southern Victoria Land. Named by Robert L. Nichols, geologist here in 1957-58, for its position in relation to Marble Bay. US-ACAN accepted the name in 1968.

South Tail Island *see* **Tail Island**

South Thor Island *see* **Thor Island**

South Victoria Land *see* **Victoria Land**

South West Arm. 77°45' S, 160°20' E. The SW arm of Ferrar Glacier, in Victoria Land. Named descriptively by NZ.

South-West Arm *see* **Cassidy Glacier**

South-west Point. 63°01' S, 60°40' W. A rocky headland, SW of Mount Kirkwood, on the outer coast of Deception Island, in the South Shetlands. Named decriptively, certainly by 1961, the name was made official by the Bulgarians in Sept. 1999.

Cape Southard. 66°32' S, 122°04' E. An ice-covered cape on the E end of the Moscow University Ice Shelf, it separates the Banzare Coast from the Wilkes Coast, in Wilkes Land. Delineated from aerial photographs taken by OpHJ 1946–47. Named by US-ACAN in 1955, for Samuel Lewis Southard (1787–1842), secretary of the Navy, 1823–29, under President John Quincy Adams. While a senator from New Jersey (1821–23 and again 1933–42), Southard was important in getting USEE 1838–42 off the ground. He was also the 10th governor of New Jersey, 1832–33. The Australians were the latest to replot this feature, in late 2008.

Mount Southard. 72°11' S, 159°56' E. A lone, pyramid-like mountain, rising to 2400 m, 8 km NW of Welcome Mountain, in the NW extremity of the Outback Nunataks, in the S portion of the Daniels Range, in Victoria Land. Mapped by USGS from ground surveys taken between 1959 and 1964, and from USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Rupert Barron Southard, Jr. (b. April 8, 1923, St. Johnsbury, Vt. d. Sept. 23, 1999, Fairfax, Va.), chief of the Office of International Activities, USGS, who was in charge of USGS field parties that went to Antarctica in the period 1961–64. Between 1979 and 1986 he was chief of USGS's national mapping division. ANCA accepted the name on June 9, 1964.

Southard Bay *see* [1]**Table Bay**

Southard Promontory. 66°56' S, 64°50' W. A notable promontory, 10 km long and 3 km wide, bordered by steep rock cliffs rising to 1500 m to a relatively flat and snow-covered surface, it projects into the NW part of Mill Inlet, between Breitfuss Glacier and Alberts Glacier, on the Foyn Coast, on the E coast of Graham Land. In Nov. and Dec. 1947 it was photographed aerially by RARE 1947–48 and surveyed from the ground by FIDS. In keeping with the naming of other features in this area for international cartographers, it was named by UK-APC on June 11, 1980, for Rupert Southard (*see* **Mount Southard**). US-ACAN accepted the name.

Southeast Pacific Basin. Submarine feature centering on 60°S, 115°W. Also called Amundsen Basin, Bellingshausen Basin, Pacific-Antarctic Basin, Pacific South Polar Basin. US-ACAN accepted the name in July 1963.

Mount Southern. 74°12' S, 76°28' W. A small mountain, more like a nunatak, 2.5 km NE of Mount Harry, and 22 km SE of Fitz-Gerald Bluffs, in Ellsworth Land. Discovered aerially, by Ellsworth, on Nov. 23, 1935. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Merle Everett Southern (b. Oct. 1937), USGS topographic engineer in Antarctica in 1967–68. UK-APC accepted the name on Dec. 20, 1974.

The *Southern Angler*. A 438-ton, 158 foot 8-inch whale catcher, built in 1950 by Smith's Dock, Middlesbrough, for Salvesen's. She was the sister ship of the *Southern Actor* and the *Southern Author*. She was catching for the *Southern Venturer* every Antarctic season between 1950–51 and 1959–60, and then for the *Southern Harvester* in 1960–61 and 1961–62. In 1962 she was laid up in Norway, in 1964 sold to a Norwegian company, and converted into a motor fishing vessel, being renamed the *Koralen*. In 1980 she was sold again, to a Canadian company, and renamed *Pandalus*. On June 16, 1985, she foundered in ice off Newfoundland.

The *Southern Author*. A 430-ton, 158 foot 8-inch whale catcher built in 1950, at Smith's Dock, Middlesbrough, for Salvesen's South Georgia Company. She was the sister ship of the *Southern Actor* and the *Southern Angler*. She was in Antarctic waters catching for the *Southern Harvester*, in 1950–51, 1951–52, 1952–53, and 1953–54, and then for the *Southern Venturer* every season from 1954–55 to 1960–61. In 1961 she was leased to the Saldanha Whaling Company, of Cape Town, for use in catching off the South African coast. On June 18, 1961, she ran aground at Dassen Island, 50 miles from Cape Town. The wreck can be seen to this day.

Southern Barrier Depot. Scott's depot almost at the S edge of the Ross Ice Shelf, during BAE 1910–13.

Southern beaked whales *see* **Beaked whales**

Southern black-backed gull *see* **Gulls**

Southern bottlenose whales *see* **Beaked whales**

[1]**The *Southern Breeze***. Whale catcher belonging to the Southern Whaling and Sealing Company, and working in Antarctic waters for the *Southern Queen*, certainly in 1922–23.

[2]**The *Southern Breeze***. Whale catcher built in 1936, by Bremer Vulkan, Vegesack, for the Southern Whaling & Sealing Co. (owned by Unilever). In March 1940, she was requisitioned by the Royal Navy. Unilever decided not to go back into whaling when the war finished, and, in Nov. 1941 (while the *Southern Breeze* was still a Navy ship) sold its entire Southern Whaling & Sealing fleet (2 factory ships and 15 catchers) to Salvesen's. In 1945, Salvesen's rebuilt her, and in the 1945–46 Antarctic season she was catching for the *Empire Venture*. In 1946–47 and 1947–48 she was catching for the *Southern Venturer*, and then, in 1948–49 and 1949–50 was based out of Leith, South Georgia, catching for the land factory there. In May 1950, she was sold to the Australian Whaling Commission, and became the *Gascoyne*, and, between 1950 and 1955 was based at the Carnarvon Station, on Babbage Island. In 1955, she was sold to the Nor' West Whaling Company, but she stayed where she was, name unchanged. After a few more sales (no name changes, though), the *Gascoyne* was scrapped in 1970, in Fremantle.

The *Southern Briar*. A 736-ton, 205-foot whale catcher, built as the Royal Navy corvette *Cyclamen*, in 1940, by J. Lewis & Sons, of Aberdeen. In 1948 Salvesen's acquired her, and in 1949 had her converted at Grangemouth Dockyard into a towing vessel for their Antarctic whaling operations, and, complete with a new 70-foot bow section her name was changed in Sept. 1949 to the *Southern Briar*. She was a towing vessel (and subsequently a whale catcher, after yet another conversion) for the *Southern Harvester*, in Antarctic waters, every summer season between 1949–50 and 1958–59. In 1959–60 and 1960–61 she was catching for the *Southern Venturer*, and then again for the *Southern Harvester*, 1961–62 and 1962–63, after which she was laid up in Norway. She was sold in 1966, to a company in Bruges, for scrap. *See* **The *Southern Lotus*** for the fate of both vessels.

The *Southern Broom*. A whale catcher. Built as the Flower-class corvette *Starwort* (K-20), in 1941, by A. & J. Inglis, of Glasgow, she served as an escort during World War II. In 1948, she was bought by Salvesen's, and converted by James Lamont & Co., of Greenock, into a 738-ton, 205-foot whale catcher, with a new 70-foot-long bow and deck section. In Feb. 1949, she was commissioned as the *Southern Broom*, and was in Antarctic waters every season between 1949–50 and 1960–61, catching for the *Southern Venturer*. In April 1960, she suffered severe engine damage, and had to be towed by the *Southern Main* from Cape Town to Smith's Dock, in Middlesbrough, for repairs. Her last season was catching for the *Southern Harvester*, 1962–63, and, then, in May 1963, she was laid up at Melsomvik, in Norway. In 1966, she was sold for scrap to the Van Heyghes Brothers, in Belgium, and in 1967 the deed was done.

[1]**The *Southern Cross***. A 522-ton, 148-foot 6-inch Norwegian steam sealer, formerly the *Pollux*, designed and built at Arendal, Norway, in 1886, by Colin Archer (the same Scottish-Norwegian ship architect who would design the *Fram*). In 1898 Carsten Borchgrevink bought her for his BAE 1898–1900, renamed her, and registered her in London. Under the command of Capt. Jensen she carried BAE 1898–1900 to Antarctica, putting Borchgrevink and his shore party onto Cape Adare on Feb. 17, 1899. The vessel was bought by the Newfoundland Sealing Company, and sank with all hands in early April 1914, off the Newfoundland coast.

[2]**The *Southern Cross***. Launched on Jan. 1, 1962, as the *Mormactrade* (owned by the Moore-McCormack Lines). In 1980 the U.S. Navy acquired her, and put her in the Military Sealift Command, as the 5873-ton, 486-foot supply ship *Southern Cross*. As such, she was in at McMurdo in 1981–82, 1982–83, and 1983–84, all three seasons under the command of Capt. Bjørn J. Werring (b. Jan. 17, 1920, Norway. d. Feb. 21, 1990, Fremont, Calif.), the great nephew of Roald Amundsen). She was retired after this last

trip. In 2007 she was sold for scrap in Brownsville, Texas.

***Southern Cross* Expedition** *see* **British Antarctic Expedition 1898-1900**

Southern Cross Mountains. 73°40' S, 164°00' E. The group of ranges between Mariner Glacier and Priestley Glacier, in Victoria Land. They contain Stewart Heights and Mount Melbourne. Ross saw the N (i.e., the seaward) parts of them in 1841 from his ship. Further parts of the feature were observed during BAE 1898-1900, BNAE 1901-04, BAE 1907-09, BAE 1910-13, and ByrdAE 1928-30. The precise mapping of the feature was accomplished by USN air photos and from ground surveys conducted by the Americans and the New Zealanders during the 1950s and 1960s. Named by the Northern Party of NZGSAE 1965-66, for the *Southern Cross*, Borchgrevink's ship. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Southern Cross Subglacial Highlands. 71°00' S, 147°00' E. A group of subglacial highlands running NNE-SSW E of the Webb Subglacial Trench, and separating that trench from the N end of the Wilkes Subglacial Basin. Discovered and delineated by the SPRI-NSF-TUD radio airborne echo-sounding program between 1967 and 1979, and named by international agreement for Borchgrevink's ship the *Southern Cross*. ANCA accepted the name on July 26, 1983, and US-ACAN followed suit.

Southern dolphin *see* **Cammerson's dolphin**

Southern elephant seals *see* **Elephant seals**

The *Southern Empress*. A 12,398-ton British whaling service ship, formerly the former Eagle Oil Company tanker *San Jeronimo*, built by William Doxford & Sons, of Sunderland, in 1914, and bought by the Southern Whaling and Sealing Co. (Unilever), and converted, at a cost of £70,000, into the first modern British whaling factory ship with a slip stern to operate in Antarctic ice. She was 525 feet 6 inches long, 65 feet 6 inches wide, with 925 hp, and registered in the Falkland Islands. She replaced the lost *Southern Queen* in 1928, and in 1928-29 was doing pelagic whaling in West Antarctica and South Shetlands waters. She was back pelagically in the Ross Sea in 1929-30 and 1930-31. She was in Antarctic waters in 1931-32, 1933-34, 1934-35, 1935-36, 1936-37, 1937-38, 1938-39, 1939-40, and 1940-41. She was sunk by a U-boat on Oct. 14, 1942, off the coast of Newfoundland. 48 men died. *See* **The *Queen of Bermuda***.

Southern Escarpments *see* **Sør Rondane Mountains**

The *Southern Floe*. A 220-ton, 110-foot 4-inch British whale catcher built at Smith's Dock, Middlesbrough, in 1923, for the Southern Whaling and Sealing Company, and launched there on Sept. 12, 1923, at a cost of £24,000. She first operated in Antarctic waters in 1923-24, catching for the *Southern Queen*, and was back in 1924-25 and 1925-26. In 1930 she was registered in Cape Town, and in 1935 bought by Irvin & Johnson's Kerguélen Whaling and Sealing Company, her name being changed to the *Zwartberg*. In 1945 she was acquired by the South African government, and in 1954 by the Donkergat Whaling Company, of Cape Town. Her last owner was the Saldanha Whaling Company, of Cape Town, who bought her in 1954, and she sank in Saldanha Harbor on May 31, 1955.

The *Southern Flower*. A 221-ton, 110-foot 4-inch British whale catcher, built at Smith's Dock, Middlesbrough, in 1923, for the Southern Whaling and Sealing Company, at a cost of £24,000, and launched there on Dec. 10, 1923, being finished later that month. Her first season in Antarctic waters was 1923-24, working for the *Southern Queen*. She was back in 1924-25, and 1925-26. On Feb. 28, 1926, she was speeding toward Moreton Strait, looking for whales, when she hit a submerged rock. She managed to reach Deception Island, but was condemned. She was replaced by another, 328-ton, catcher, with the same name, built in 1928.

Southern Foothills *see* **Inexpressible Island**

The *Southern Foster*. A 427-ton, 154-foot whale catcher built in 1948, at Smith's Dock, Middlesbrough, for Salvesen's, sister vessel of the *Southern Flyer* (which was wrecked on Nov. 23, 1948, at Cape Verde, en route to her first Antarctic catching season). She was in Antarctic waters every season from 1948-49 until 1954-55, catching for the *Southern Venturer*, and then, from the 1955-56 season until the 1959-60 season, was based out of of Leith, South Georgia, catching for the station there. Her last season in Antarctic waters was 1960-61, when she caught for the *Southern Venturer*. She was laid up in Leith Harbor in 1961, and in June 1968 she broke free from her moorings, and drifted onto Jason Island, South Georgia.

Southern great black-backed gull *see* **Gulls**

The *Southern Guider*. A 438-ton, 158 foot 8-inch whale catcher, built in 1950 by Smith's Dock, Middlesbrough, as the *Pesca I*, for the Compañía Argentina de Pesca, but bought from them by Salvesen's, before launching, and renamed the *Southern Guider*. In 1950 she worked in Labrador, and then in South Georgia waters every season from 1950-51 to 1959-60. She was involved in pelagic whaling in 1960-61, and in 1961 was chartered by the Saldanha Company of Cape Town. In 1961-62 she was a buoy boat for the *Southern Harvester*, in Antarctic waters, and was then laid up in Norway. In 1965 she was sold to a Norwegian fishing concern, and became the *Birkeland*. She was still being used in 1992.

The *Southern Harvester*. A 15,364-ton British whaler, the sister ship of the *Southern Venturer*, built in 1946 by Furness Shipbuilding, in England and owned by Christian Salvesen of Leith. With a Norwegian skipper, and a Norwegian and British crew of 500, she was in Antarctic seas in 1946-47 (manager: Sinclair Begg), 1947-48, 1948-49, 1949-50, 1950-51, 1951-52, 1952-53, 1953-54 (C.K. Crockett, chief engineer), 1954-55, 1955-56, and 1956-57 (future Fid Eddie Dagless was on board this season). During this last season, on Jan. 1, 1957, the Duke of Edinburgh, then on the Royal yacht *Britannia* in the Antarctic, met and visited the *Southern Harvester*, which was carrying special fuel for the *Protector*. She was back in 1957-58 and 1958-59, L. Bartho being skipper on the latter expedition. This trip was bad, in many ways. They took only 1169 whales, 64,710 barrels of whale oil, and 11,790 barrels of sperm oil, 4148 tons of meat meat, 2220 cwt (hundredweight) of meat extract, and 1800 gallons of liver oil). Duncan McKay, aged 21, the ship's radio officer from Muirdykes, Glasgow, got caught in a harpoon line, and had to have his leg amputated below the knee. Two of her catchers through this entire period were the *Southern Wilcox* and the *Southern Wheeler*. The *Southern Hunter* caught for her from 1951-52 until 1956-57, during the latter season coming to grief at Deception Island. The *Harvester* was back in Antarctica in 1959-60 and 1960-61. On Aug. 24, 1961, while the vessel was berthed at Husvik, Norway, Edinburgh man John McCafferty, 56, was drowned when he fell into an oil tank. The vessel was back in Antarctic waters in 1961-62, and 1962-63. Her whale catchers over the years included the *Sigfra*, the *Simbra*, the *Southern Angler*, the *Southern Rider*, the *Southern Author*, the *Southern Lily*, the *Southern Briar*, the *Sarka*, the *Songra*, the *Southern Lotus*, and the *Southern Hunter*. In 1963, the year Salvesen's quit whaling, she was sold to the Japanese.

The *Southern Hunter*. A 438-ton, 158 foot 8 inch British whale catcher, built in 1951 at Smith's Dock, Middlesbrough, for Salvesen's. She was used as a tow boat in Labrador, before being transferred to Antarctica in October 1951. She caught for the *Southern Harvester* from 1951-52 season until the 1956-57 season, but, on Dec. 21, 1956, during that last season, while catching for the *Harvester*, she spotted an Argentine ship going into Port Foster, Deception Island, and followed her, a little too keenly, as it happened. She foundered on Ravn Rock, in Neptune's Bellows, while the skipper's eye was off the ball. They made up a story about the Argentine ship coming out as they were coming in, the Argentines forcing the catcher ashore. The stern of the wrecked ship remains to this day on the unnamed beach to the west of Entrance Point.

The *Southern Isles*. Whaling tanker owned by the Southern Whaling and Sealing Company, in at South Georgia in 1921, skippered by A.E. Sapp, and in Antarctic waters in 1923-24.

The *Southern Jester*. A whale catcher, built as the *Kvint*, in 1950, by A & J Inglis, of Greenock, for the London whaling company Falkland Shipowners. In Oct. 1951, she was sold to the Antarctic Company, of Tønsberg, and renamed *Kjapp*. In Aug. 1952, Salvesen's bought her and renamed her *Southern Jester*. She worked for the shore station at Leith Harbour, in South Georgia, every season until 1960-61, when the station closed. During that time she hosted Prince Philip on Jan. 12, 1957. In 1961-62, her last season, she caught for the *Southern Harvester*, in Antarctic waters, and was then laid up in Melsomvik, Norway. In 1964 she was sold to Thorleif Jensen, of Kristiansand, and her name reverted to *Kvint*. She went through various sales, eventually becomingt he *Strilhval*, and still catches.

The *Southern King*. Transport tanker owned by the Southern Whaling and Sealing Company, in Antarctic waters in 1923-24. She supplied the factory ship *Southern Queen*. Her skipper was William Williams.

The *Southern Larkspur*. Built in 1941, for the Royal Navy, at Marine Industries, Sorel, Canada, as the Flower-class corvette *Arrowhead* (K-145). She served as an escort during World War II, and in 1945 was transferred to the Royal Canadian Navy. In 1948 she was sold to Salvesen's, as a 754-ton, 205-foot buoy boat, and her name was changed to the *Southern Larkspur*. From 1948-49 until 1952-53 she was a buoy boat in Antarctic waters, working for the *Southern Harvester*. In 1953 she was laid up at Stromness, South Georgia, and in 1959 was towed to Melsomvik, Norway, and sold to H.J. Hansen, of Odense, Denmark, and broken up by them that year.

The *Southern Laurel*. Built in 1940, by Grangemouth Dockyard Co., as the 754-ton, 205-foot Royal Navy Flower-class corvette *Carnation*, she served as an escort during World War II, and in 1943 was transferred to the Dutch Navy, and renamed *Friso*. In 1945 she was returned to Britain, resumed her former name, and on March 31, 1948, was bought by Salvesen's, and converted for them into a buoy boat by Smith's Dock Co., of Middlesbrough, being delivered to her new owners in March 1949, as the *Southern Laurel*. In 1952, Smith's converted her again, this time into a very modern whale catcher, and, as such, she caught for the *Southern Harvester* (and occasionally for other Salvesen factory ships) in Antarctic waters, each season from 1952-53 until 1962-63. In 1963 she was laid up in Melsomvik, Norway, and in 1966 sold for scrap to Anda Bros., of Stavanger.

Southern Lights *see* **Aurora**

The *Southern Lily*. A 754-ton, 205 foot 2-inch whale catcher, originally built as the Royal Navy corvette *Ranunculus*, in 1941, by W. Simons & Co., of Renfrew, Scotland. She worked for the Free French, as the *Renoncule*, and was returned to the RN in 1947. They sold her to Salvesen's South Georgia Company, and Smith's Dock, in Middlesbrough, converted her into a buoy boat for Antarctic whaling purposes. In Jan. 1948 Salvesen's commissioned her as the *Southern Lily*, and sent her to Labrador for the summer there, and then on to South Georgia. She was in Antarctic waters in 1948-49, as buoy boat for the *Southern Venturer*. In 1952-53 she was converted into a proper whale catcher, and was back in Antarctic waters catching for the *Southern Harvester* every season between 1952-53 and 1962-63. She is perhaps most famous as being the vessel which answered the SOS put out by the holed *Shackleton* in the 1957-58 season. In 1963, when Salvesen's quit whaling, the *Southern Lily* was laid up in Norway, and sold in 1966 for scrap, the final deed taking place in 1967, in Bruges.

The *Southern Lotus*. An 851-ton, 208-foot Salvesen whale catcher in the 1950s and 1960s. Built by Henry Robb, of Leith, as the Royal Navy corvette *Phlox*, she was launched in Feb. 1942, as the *Lotus*. She later served with the Free French, as the *Commandant D'Estienne d'Orves*, and after the war went back to the RN, again as the *Lotus*. In 1947 Salvesen's bought her as a towing vessel for their Antarctic whaling industry, and in Jan. 1948 she entered their service as the *Southern Lotus*, towing for the *Southern Venturer* in Antarctic waters for the 1948-49, 1949-50, 1951-52, and 1952-53 seasons. In 1953 she was converted into a whale catcher, by Smith's Dock, of Middlesbrough, and spent every summer season between 1953-54 and 1962-63 in Antarctica, catching for the *Southern Harvester*. In the 1956-57 season, she salvaged the remains of the wrecked *Southern Hunter*, at Deception Island (Eddie Dagless was aboard the *Lotus*, on loan from FIDS). At the end of the last season (Salvesen's last in the whaling business), she was towed by the *Southern Harvester* to Norway, where she was laid up until 1966, when, with the *Southern Briar*, she was towed down to Bruges to be scrapped. However, they didn't make it to Bruges. Off the coast of Jutland, the two ex-catchers were separated from their tug in a storm, and foundered.

The *Southern Lupin*. A 754-ton, 205 foot 2 inch buoy boat, built for the Royal Navy in 1941 as the Flower-class corvette *Woodruff*, by William Simons & Co, of Renfrew, Scotland, and used during World War II as an escort in South Atlantic convoys. Salvesen's bought her in 1948, and had her converted into a buoy boat by Cleland, of Tynemouth. She was renamed *Southern Lupin*, and was in Antarctic waters in 1948-49, as a buoy boat for the *Southern Harvester*. She repeated that exercise in 1949-50, and was then laid up for 2 years at Stromness, in South Georgia. She came back as a buoy boat for the *Harvester* one more time, in 1953-54, and was then laid up again at Stromness. In April/May 1959 she was towed to Melsomvik, Norway, and sold to H.J. Hansen, of Odense, Denmark, who broke her up in December 1959.

The *Southern Maid*. A 224-ton, 110-foot coal-driven whale catcher built in 1921 at Smith's Dock, Middlesbrough, for the Southern Whaling and Sealing Company, and launched there on July 5, 1921. She caught for the *Southern Queen*. In 1926 she was acquired by F.W. Stead's Premier Whaling Company, out of Liverpool, was transferred to that company's operation in Port Natal in 1930, and in 1932 her name was changed to the *R.L. Goulding*. In 1941 she was requisitioned by the South African government, as a minesweeper, and renamed the *Goulding*. She was returned to her company after the war, but by 1948 she had been replaced by another catcher named *R.L. Goulding*.

The Southern Maids *see* **Theta Islands**

The *Southern Main*. A whale catcher belonging to the *Southern Venturer*, in Antarctic waters off the coast of Queen Maud Land, in Feb. 1955.

Southern Nunataks *see* **Stinear Nunataks**

Southern Ocean *see* **Antarctic Ocean**

Southern Ocean Whale and Ecosystem Research *see* **International Whaling Commission Expeditions**

The *Southern Pride*. A 220-ton, 110-foot 4-inch British whale catcher, built at Smith's Dock. Middlesbrough, in 1923, for Thor Thoresen's ad hoc Southern Queen Company, out of Oslo, at a cost of £24,000, and launched there (Middlesbrough) on Aug. 14, 1923, being finished in the September of that year. Her first Antarctic season was 1923-24, catching for the *Southern Queen*. She was back in 1924-25 and 1925-26, working for the same floating factory. In 1930 she was bought by the Southern Whaling and Sealing Company, and registered in Stanley, in the Falkland Islands. In 1936 she was bought by Irvin & Johnson's Kerguélen Whaling and Shipping Company, out of Cape Town, and renamed the *Rooiberg*, and was wrecked in Aug. 1936. Salvesen's had another whale catcher with this name, built in 1936, which does not seem to have gone to Antarctic waters.

The *Southern Princess*. Formerly an Eagle Oil Company tanker, built in 1921, she was based out of South Georgia in 1921-22, and was in the South Shetlands in 1922-23 and 1923-24. She was bought in 1929, for £125,000, by the Southern Whaling and Sealing Company (Unilever), who had her converted into a 12,156-ton factory whaling ship at Cammell Laird's yard in Birkenhead, and then registered her in Dunedin, NZ. She sailed for the south, for the 1929-30 whaling season, along with her 5 new 250-ton catchers (built at a cost of £22,000 each), and did pelagic whaling in the Ross Sea that season, and also in 1930-31. She was back in Antarctic waters in 1931-32, 1933-34, 1934-35, 1935-36, 1936-37, 1937-38, 1938-39, and 1939-40. She sank in the North Atlantic, on March 17, 1943.

The *Southern Queen*. Built in 1902, she was bought in 1922 by the Southern Whaling and Sealing Company (by that point owned by Lever Bros.), converted into a 5648-ton whaling tanker at Smith's Dock, Middlesbrough, and renamed the *Southern Queen*. She was first in South Shetlands and Graham Land waters in the 1922-23 season. She flew a Norwegian flag because she was operated by an Oslo-based subsidiary of Lever Bros., and she had a Norwegian captain and crew. Lars Andersen was manager in 1922-23, 1923-24, 1924-25, and 1925-26. In 1923-24 she was joined by 3 new catchers—*Southern Pride*, *Southern Flower*, and *Southern Floe*, and was supplied by the tanker *Southern King*. In 1925-26 she was the first whaler to to engage in pelagic whaling (open sea whaling), and the first to try ice fishing along the ice of the Weddell Sea. She was back in 1926-27 and 1927-28, in the South Orkneys, both seasons under Capt. Carl A. Hansen, and with Thor Thoresen as manager. Other catchers working for her were the *Southern Breeze* and the *Southern Maid*. She was wrecked by ice, in the Weddell Sea, east of the South Orkneys, on Feb. 24, 1928, with a full cargo of 18,000 barrels of whale oil (another 22,000 tons had already been transferred to a tanker). The *Southern Queen* was replaced by the *Southern Empress*.

The *Southern Quest*. An Icelandic trawler converted into an ice-strengthened polar ship,

139 feet long. In 1985-86, she visited Commonwealth Bay, on an expedition led by William Blunt and Ross Vining, to survey Mawson's old hut for possible renovation, but more notably, that season, she was the supply ship for the In the Footsteps of Scott Expedition (q.v.), 1985-87. As the ship stood off in the Ross Sea, 29 km from Jack Hayward Base, on Ross Island, which was the expedition headquarters, an aircraft carried by the ship was assembled in 3 days on an ice floe near the ship. Three men had gone to the Pole, and this expedition plane was to go out and pick them up from there and bring them back to the ship. During these 3 crucial days heavy ice closed in on the ship. In the early morning of Jan. 12, 1986, ice pressure split the hull, and the engine room was flooded. The vessel sank, stern first, shortly afterwards, between 12.04 A.M. and 12.30 A.M. The 14 crew and 7 passengers — men and women — got onto a nearby ice floe before the vessel sank, and were rescued by U.S. Coast Guard helicopters, which transported them to Beaufort Island, and then to McMurdo by 5 A.M. Skipper of the ship that season was Graeme Phippin.

The *Southern Rider*. A 438-ton, 158 foot 8-inch whale catcher built in 1949 by Smith's Dock, Middlesbrough, for Salvesen's South Georgia Company. She was in Antarctic waters every season between 1949-50 and 1954-55, catching for the *Southern Venturer*, and then every season between 1955-56 and 1961-62 catching for the *Southern Harvester*. In May 1962 she was laid up in Norway, and in April 1964 sold to a Danish company for breaking up, the demolition occurring in Oct. 1965.

Southern right whale dolphins. Order: Cetacea (whales); sub-order: Odontoceti (toothed whales); family: delphinidae. *Lissodelphis peronii* is an off-shore species of dolphin, and goes as far south as the Antarctic Convergence. It grows to 6 feet and 130 pounds, and has no dorsal fin.

Southern right whales. Order: Cetacea (whales); sub-order: Mysticeti (baleen whales); family: Balaenidae. *Eubalaena australis* is seen in Antarctic waters. It grows to 45 feet, and 22 tons. The female is bigger than the male. It was protected in 1935. Its northern counterpart, with which it is often confused, is *Eubalaena glacialis*, but the two were separated as species about 2 million years ago.

The *Southern Runner*. A 438-ton, 158 foot 8-inch whale catcher built in 1949 at Smith's Dock, Middlesbrough, for Salvesen's South Georgia Company. She was in Antarctic waters every season between 1949-50 and 1961-62, catching for the *Southern Venturer*, except 1954-55, when she was used as a catcher for the shore station at Leith Harbor, in South Georgia. In May 1962 she was laid up, and her subsequent fate was identical to that of the *Southern Rider* (q.v.).

The *Southern Sea*. A 344-ton whale catcher, working for the *Nielsen-Alonso* in 1929-30. She foundered on Dec. 15, 1929, in the Ross Sea. Her crew was recued.

The *Southern Setter* *see* **The *Setter***

The *Southern Sky*. An 85-ton whale catcher belonging to the Southern Whaling and Sealing Company, out of South Georgia. She was used by Shackleton on his first unsuccessful attempt to rescue his Elephant Island party in May 1916. Capt. Ingvar Thom (of the *Orwell*) agreed to act as skipper for the rescue, and the whalers provided the crew. However, she was forced by the pack-ice to retreat, 60 miles from the stranded men. She foundered on April 12, 1929. 13 men died.

The *Southern Spray*. A 319-ton, 131-foot whale catcher built in 1925 at Smith's Dock, Middlesbrough, for the Southern Whaling and Sealing Company, launched there on May 21, 1925, and finished in July of that year. In 1930 she was registered in Stanley, in the Falkland Islands, and was catching for the *Southern Princess* in the Ross Sea. She foundered, the crew was rescued, and the catcher was refloated. She was requisitioned by the Admiralty during World War II. On Feb. 22, 1961, she was stripped and scuttled at South Georgia.

The *Southern Springer* *see* **The *Setter II***

The *Southern Strife*. A 364-ton, 148-foot whale catcher built in 1945 at Smith's Dock, Middlesbrough, for Salvesen's. She was sister vessel of the *Southern Truce*. In 1945-46 she was catching for the shore station at Leith Harbour, in South Georgia, and also for the floating factory *Empire Venture*. She was at Leith Harbour from the 1946-47 season, every season, and also caught for various Salvesen floating factories in Antarctic waters. Her last season was 1955-56, when she acted as a buoy boat for the *Southern Venturer*. Then she was laid up at Leith Harbour, in 1962 being laid up in Melsomvik, Norway. In April 1964, she was sold to Atlantic Diesel, of Norway, and renamed the *Goltastein*. Later that year she was sold to a fishery company in Bergen, but her name remained, and would remain, *Goltastein*. She was sold again in 1966, updated, and finally scuttled in 1989.

The *Southern Surveyor*. Australian marine research vessel based out of Hobart, and operated by CSIRO. In Antarctic waters in 1998-99, as a temporary replacement for the *Aurora Australis*.

Southern Thule. Some people's unofficial name for Antarctica in the 1820s. The name now applies to a group in the South Sandwich Islands, in 59°26' S.

The *Southern Truce*. A 364-ton, 148-foot whale catcher, built in 1945 at Smith's Dock, Middlesbrough, for Salvesen's. She was sister vessel of the *Southern Strife*. In 1945-46 she was in Antarctic waters, catching for the new floating factory *Southern Venturer*. In 1946-47, 1947-48, and 1948-49, she caught for the shore station at Leith Harbour, in South Georgia, and from the 1949-50 season to the 1957-58 season, she was used as a catcher for various Salvesen factory ships in Antarctic waters. In 1958-59 she was used as a buoy boat for the *Southern Venturer*, and then went as a reserve vessel to Leith Harbour. In 1962 she was laid up in Melsomvik, Norway, and in May 1963 was sold to Bernt Berntsen, of Norway. In 1967, she was converted into a cargo vessel, and renamed the *Lovisa*. Over the ensuing years, she was sold and re-sold several times, with as many renamings, and finally broken up in Dunkirk in 1993.

The *Southern Venturer*. A 14,493-ton whaling factory ship, the first British whaling steamer built since World War II, was built in England by Furness Shipbuilding of Haverton Hill-on-Tees for Salvesen's Sevilla Whaling Company, a subsidiary of their South Georgia Company (*see* **The *New Sevilla***). Launched on June 11, 1945, she was the sister ship to the *Southern Harvester*, and also to the *Norhval*. She left Tyneside in a hurry on Oct. 28, 1945, Norwegian Capt. H. Nielsen in command, to get to the Antarctic, ready for the beginning of the 1945-46 whaling season, which began on Nov. 24. Three of the officers were British, and 2 Norwegian, all the engineers were British, and the 400-man crew was two-thirds British. She didn't make that date, but she got there, and was accompanied by 10 whale catchers (including the *Southern Wilcox*, the *Southern Truce*, and the *Southern Wheeler*). She was back in the Antarctic every season from 1946-47 (*see also* **Sutherland, John**) until her last, 1961-62. In 1952-53 her skipper was Harald Myhre, and that year she circumnavigated Antarctica during one whaling season, the only ship to have done that. In the later years, she had a British crew of 500, and 12 whale catchers. Her catchers over the years included the *Sigfra*, the *Southern Angler*, the *Southern Runner*, the *Southern Rider*, the *Southern Author* and the *Southern Briar*. She was sold to the Japanese in 1961, the sale to take effect after the 1961-62 whaling season in Antarctica, and in 1962 was renamed the *Southern Venturer Maru*. In 1963 she was laid up at Innoshima, and in 1965 was scrapped.

Southern Whaling and Sealing Company. In July 1911 Richard Irvin & Sons, of North Shields, England, in partnership with Irvin & Johnson, of Cape Town, obtained a whaling license for South Georgia, and built a station at Prince Olaf Harbor. That season, 1911-12, they used the whaling factory *Restitution* and the cargo tranport *Sound of Jura*, and 3 catchers. They owned 2 factory whalers and 16 catchers. Lever Brothers acquired the company in 1919, and appointed Australian-born Norman Charles Watt (known as Charles, or "N.C.") as general manager. In 1920-21 they completely re-built the Prince Olaf Station, and from then on the company focused its attentions from here. The *Southern Queen* (chartered by the company from Thor Thoresen) operated in Antarctic waters between 1922 and 1928, until she sank that last season. She was replaced by the *Southern Empress*, 1928 to 1931. Both ships also did pelagic whaling from the mid-1920s on.

The *Southern Wheeler*. A 427-ton, 149-foot whale catcher built in 1945 at Smith's Dock, Middlesbrough, for Salvesen's. She was the first of the yard's larger post-war catchers. Named for the boiler manufacturers Foster Wheeler, whose boilers were fitted into the vessel. In 1945-46, she was in Antarctic waters, catching for the

Southern Venturer. Every season from 1946-47 until 1959-60, she was in Antarctic waters again, catching for the *Southern Harvester*. In 1960-61, she was catching for the shore station at Leith Harbour, in South Georgia, and also served as a towing vessel for the *Southern Harvester* in Antarctic waters. In 1962 she was laid up at Melsomvik, Norway, and in April 1964 was sold for breaking up at Masnedø, Denmark.

The *Southern Wilcox*. A 427-ton, 155 foot 5 inch whale catcher built in 1945, at Smith's Dock, Middlesbrough, for Salvesen's, and named after the boiler manufacturer Babcock & Wilcox. In 1945-46 she was in Antarctic waters, catching for the *Southern Venturer*, and, from the 1946-47 season until the 1959-60 season, she was again in Antarctic waters, every season, catching for the *Southern Harvester*. She was catching for the shore station at Leith Harbour, in South Georgia, in 1960-61, her last season. In April/May 1961 she was taken to Melsomvik, in Norway, and in August sold to the Hvalur whaling company of Iceland, her name being changed to *Hvalur 7*. She still catches, one of the great old ladies of the whale catcher world.

Southernmost features in Antarctica. The most southerly named feature in Antarctica is, of course, the South Pole, in 90°S. Next to that, in 88°30' S, is Titan Dome. Mount Howe is the most southerly mountain in the world, in 87°22' S, and then comes Mount McIntyre, in 87°17' S. Mount Beck, a feature recognized, it seems, only by the New Zealanders, is next, in 87°15' S, and then comes Mount Early, in 87°04' S. The mountains come thick and fast after that, as one travels north. The most southerly glacier in the world is the Poulter Glacier, in 86°50' S, followed by the Klein Glacier, in 86°48°S. *See also* **Northernmost features in Antarctica**.

Southing records. The first few centuries of southing records were all achieved by ship. Highlights include: 54°S by Vespucci in 1502; 55°S by Magellan in 1520; 57°S by Drake on Sept. 7, 1578; 64°S by Gerritsz in Sept. 1597 (questionable); 66°30' S by Cook on Jan. 17, 1773 (1410 miles to the Pole); 67°15' S by Cook in 1774; 71°10' S by Cook on Jan. 30, 1774 (1130 miles to the Pole); 74°15' S by Weddell on Feb. 20, 1823 (945 miles to the Pole); 78°09' S by Ross on Jan. 22, 1841 (710 miles to the Pole). This record set by Ross was the ship record that would last for 150 years, because a ship could not physically get any farther south because of "land." However, in 2000 a massive chunk of what they used to call the Ross Ice Barrier broke away, totally reconfiguring the Bay of Whales (a natural inlet into the barrier), thus enabling the *Kapitan Khlebnikov* on Jan. 11, 2001 to penetrate farther south than any ship had done before — to 78°37' S. Meanwhile, back in the last part of the 19th century, the first expeditions landed on the continent with a view to, among other things, establishing southing records by dog sledge (over the ice). The goal was the South Pole, at 90°S, the ultimate southing record. 78°50' S by Borchgrevink on Feb. 16, 1900 (670 miles to the Pole); 79°03' S by Armitage on Feb. 4, 1902; 80°01' S by Scott on Nov. 25, 1902; 80°20' S by Scott on Dec. 3, 1902; 80°32' S by Scott on Dec. 16, 1902; 81°33' S by Scott on Dec. 24, 1902; 82°11' S by Scott on Dec. 28, 1902; 82°17' S by Scott on Dec. 30, 1902 (500 miles to the Pole); 82°18' S by Shackleton on Nov. 26, 1908; 83°16' S by Shackleton on Dec. 1, 1908; 84°50' S by Shackleton on Dec. 16, 1908; 85° 05' S by Shackleton on Dec. 19, 1908; 85°17' S by Shackleton on Dec. 20, 1908; 86°19' S by Shackleton on Dec. 27, 1908; 86°54' S by Shackleton on Dec. 31, 1908; 88°07' S by Shackleton on Jan. 6, 1909; 88°23' S by Shackleton on Jan. 9, 1909 (97 miles to the Pole); 88°24' S by Amundsen on Dec. 8, 1911 (95 miles to the Pole); 90°00' S by Amundsen on Dec. 14, 1911 (the Pole itself).

Southtrap Rock. 62°58' S, 56°37' W. An isolated rock in water, W of Cape Juncal, d'Urville Island, in the Joinville Island group. Photographed aerially by FIDASE in 1956-57. So named by UK-APC on Feb. 12, 1964, because it is the southern of 2 features to be avoided by shipping in Antarctic Sound (cf. **Northtrap Rocks**). US-ACAN accepted the name later in 1964.

Mount Southwick. 78°46' S, 84°55' W. Rising to 3280 m, near the S end of the Sentinel Range, 14 km SSE of Mount Craddock, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Technical Sgt. Thomas E. Southwick, U.S. Marines, navigator on a Navy R4D reconnaissance flight here on Jan. 28, 1958.

The *Southwind* *see* **The *Atka***

Southwind Channel *see* **Southwind Passage**

Southwind Passage. 65°18' S, 65°20' W. A navigable passage running WNW-ESE between (to the NNE) Lumus Rock, Sooty Rock, and the Betbeder Islands, in the Wilhelm Archipelago, and (to the SSE) the Dickens Rocks and the Pitt Islands, at the N extremity of the Biscoe Islands. Named by Capt. Sumner R. Dolber in 1967-68, skipper of the *Southwind* (formerly the *Atka*), that traversed this passage that season. US-ACAN accepted the name in 1970. However, Capt. Peter Buchanan took the *Endurance* through this passage in Feb. 1969, and UK-APC, on Nov. 3, 1971, named it Buchanan Passage. This name appears in the 1974 British gazetteer, and also on a British chart of that year. It was also seen as Buchanan Channel. But, on Dec. 20, 1974, they changed the name to Southwind Passage, to correspond with the American naming. It appears as such on a British chart of 1984. However, it appears (erroneously) as Southwind Channel on a 1976 British chart, and on another from that year as "Southwind Passage (Buchanan Passage)." On Dec. 20, 1974, UK-APC re-applied the name Buchanan Passage to another feature.

Soviet Antarctic Expeditions. These were the expeditions (abbreviated to SovAE). They took place every year until 1991-93, and after that they became Russian Antarctic Expeditions (q.v.). **SovAE 1955-57**. Led by Mikhail Somov, this was the first Soviet Antarctic Expedition (although the expeditions were not actually called that until the 4th one; they were the First, Second, and Third Complex Antarctic Expeditions — or CAE — of the USSR Academy of Science, the body that ran the first 3 expeditions). Its missions were to establish the year-round Mirnyy Station, Pionerskaya Station, and Oazis Station, to conduct limited scientific research, to conduct oceanography in the Indian Ocean, and to scout out sites for the future bases Vostok and Sovietskaya. On July 13, 1955 the decision to go was made by the Soviet government. The ships were the icebreakers *Ob'* and *Lena*, and the refrigerator ship *No. 7* (Capt. Mikhail Alekseyevich Tsygonkov). On Nov. 30, 1955 the flagship *Ob'* was the first to leave Kaliningrad, carrying the 127 expedition members and 75 ship's crew, as well as 3782 tons of cargo, including two LI-2 airplanes, an AN-2 airplane, and an MI-4 helicopter. On Jan. 5, 1956 the *Ob'* moored at Farr Bay, and Soviet citizens stood on the actual Antarctic continent for the first time. On Jan. 14, 1956 they found the site for Mirnyy Station, and on Jan. 15, 1956 they began unloading the *Ob'*. On Jan. 20, 1956 the *Lena* arrived, and unloading began of that ship. On Feb. 8, 1956 *Refrigerator No. 7* arrived, but weather and ice problems delayed the completion of unloading from all three ships until Feb. 13, 1956, on which date Mirnyy was inaugurated. From that day, regular meteorological observations and weather forecasts were made. On Feb. 26, 1956 the *Ob'* left to do oceanographic studies along the coast as far as the Balleny Islands. V.G. Kort, deputy scientific leader, led this part of the expedition. On April 2, 1956, a convoy of sledges and tractors began a horrendously difficult land traverse out of Mirnyy, in order to conduct scientific work and to set up Pionerskaya Station, which they did 375 km inland from Mirnyy, on May 27, 1956 (they had arrived at the spot on May 4, and begun building). They returned in 1957, when the *Ob'* and *Lena* came to pick them up after dropping off SovAE 1956-58. In Oct. 1956, Oazis Station was established entirely by air. **SovAE 1956-58**. Led by Aleksei Trëshnikov. The *Ob'* left Kaliningrad on Nov. 7, 1956. The other two ships were the *Lena* and the *Kooperatsiya*. The missions were to relieve SovAE 1955-57, to do full-scale research for IGY, to set up Vostok 1 Station and Komsomol'skaya Stations, to undertake an inland tractor-sledge traverse to study glaciology, and oceanography. **SovAE 1957-59**. Led by Yevgeniy Ivanovich Tolstikov. The ships were the *Ob'* and the *Kooperatsiya*. Its missions were to relieve SovAE 1956-58, to set up Sovietskaya Station, and to carry on IGY work. Czech scientist Antonin Mrkos was on this expedition. **SovAE 1958-60**. Led by Aleksandr Gavrilovich Dralkin. This was the first Soviet expedition planned and executed by the Soviet

Arctic and Antarctic Institute (which until then had been the Soviet Arctic Institute). The ships were the *Ob'* and the *Mikhail Kalinin*. Lazarev Station was established. Czech scientist Antonin Mrkos was on this expedition. **SovAE 1959-61**. Led by Yevgeny Sergeyevich Korotkevich. The ships were the *Ob'* and the *Kooperatsiya*. Three new temporary stations were established — Druzhba, Mir, and Pobeda. On March 9, 1960 they landed on Peter I Island. Czech scientist Oldrich Kostka was on this expedition. He would not return (*see* **Deaths**, 1960). **SovAE 1960-62**. Led by Valentin Mikhaylovich Driatskiy. Lazarev Station was closed, and Novolzarevskaya Station was established. The *Ob'* was the ship. **SovAE 1961-63**. Led by Aleksandr Gavrilovich Dralkin (summer) and Viktor Ivanovich Venedicktov (winter). The *Ob'* sailed from Leningrad on Nov. 14, 1961, and the *Kooperatsiya* left Leningrad on Nov. 29, 1961, arriving at Mirnyy Station on Jan. 21, 1962. Komsomol'skaya Station was opened for the summer, Molodezhnaya Station was open for three months, and Vostok Station was closed temporarily. Two aircraft flew from Moscow to Mirnyy Station and Vostok Station, and back. Astronomer Antonin Mrkos led the 4-man guest Czech group. **SovAE 1962-64**. Led by Mikhail Mikhaylovich Somov (summer) and Nikolay Ivanovich Tyabin (winter). The *Ob'* and the *Estoniya* were the ships. Molodezhnaya Station was opened permanently; Vostok Station was reopened by air. The *Ob'* surveyed Peter I Island, and the area around it. **SovAE 1963-65**. Led by Mikhail Mikhaylovich Somov (summer) and Pavel Kononovich Sen'ko (winter). Ships were the *Ob'* and the *Estoniya*. A joint French and Soviet expedition examined ice sheets between Mirnyy Station and Vostok Station. **SovAE 1964-66**. Led by Mikhail Yemel'yanovich Ostrekin (summer) and Ivan Grigor'yevich Petrov (winter). Ships were the *Ob'* and the *Estoniya*. The massive reconstruction of Molodezhnaya Station began, in preparation for its succeeding Mirnyy as the main Russian station. **SovAE 1965-67**. Led by Dmitriy Dmitriyevich Maksutov (summer) and Leonid Ivanovich Dubrovin (winter). The ships were the *Ob'* and the *Friedrich Engels*. **SovAE 1966-68**. Led by Pavel Kononovich Sen'ko (summer) and Vladislav Iosifovich Gerbovich (winter). The ship was the *Ob.'* Josef Sekyra was the guest Czech scientist. **SovAE 1967-69**. Led by Aleksey Federovich Trëshnikov (summer) and Vladimir Aleksandrovich Shamont'yev (winter). Bellingshausen Station was established. The ships were the *Ob',* the *Professor Vize*, the *Boris Davydov*, the *Faddey Bellingshausen*, and the *Akademik Knipovich*. **SovAE 1968-70**. Led by Dmitriy Dmitriyevich Maksutov. 368 men took part, 220 worked the entire year, and 148 during the summer season. The ships were the *Ob',* the *Professor Zubov*, the *Petr Shirshov*, and the *El'brus*. The *Zubov* relieved Mirnyy Station between Jan. and 12, 1969, and Bellingshausen Station between Jan. 27 and Feb. 9, 1969, and then headed home, arriving back in Leningrad on March 14, 1969. **SovAE 1969-71**. Led by Pavel Kononovich Sen'ko (summer) and Vladislav Iosifovich Gerbovich (winter). The ships were the *Ob'* and the *Professor Vize*. Leningradskaya Station was opened as a summer station. **SovAE 1970-72**. Led by Ivan Grigor'yevich Petrov. The ships were the *Ob',* the *Professor Vize*, the *Professor Zubov*, the *Bobruyskles*, the *El'brus*, and the *Akademik Knipovich*. Leningradskaya Station was opened for the winter. The headquarters of the Russian effort in Antarctica switched from Mirnyy Station to Molodezhnaya Station. **SovAE 1971-73**. Led by Yevgeniy Sergeyevich Korotkevich (summer) and Vyacheslav Grigor'yevich Aver'yanov (winter). The ships were the *Ob',* the *Navarin*, the *Professor Vize*, the *Nadezhda Krupskaya*, and the *Akademik Knipovich*. This was the largest Soviet Antarctic expedition to date. Sodruzhestvo was opened as a summer station. **SovAE 1972-74**. Led by Pavel Kononovich Senko. The ships were the *Ob',* the *Professor Zubov*, the *Navarin*, and the *Stanislav*. The *Zubov* left Leningrad on Nov. 6, 1972, carrying her 111 crew and 142 expeditioners. Russkaya Station was established. **SovAE 1973-75**. Led by Dmitriy Dmitriyevich Maksutov (summer) and Veniamin Stepanovich Ignatov (winter). The ships were the *Professor Vize*, the *Olenek*, the *Vasiliy Fedoseyev*, the *Nina Sagaydak*, and the *Bashkiriya*. **SovAE 1974-76**. Led by Valeriy Innokent'yevich Serdyukov (summer) and Nikolay Alakandsrovich Kornilov (winter). The ships were the *Ob',* the *Professor Zubov*, the *Professor Vize*, the *Vankarem*, and the *Gelendzhik*. **SovAE 1975-77**. Led by Oleg Konstantinovich Sedov (summer) and Gennadiy Ivanovich Bardin (winter). The ships were the *Vasiliy Fedoseyev*, the *Mikhail Somov*, the *Professor Vize*, and the *Mikhail Kalinin*. Druzhnaya Station was established as a summer station. **SovAE 1976-78**. Led by Nikolay Ivanovich Tyabin (summer) and Leonid Ivanovich Dubrovin (winter). The ships were the *Mikhail Somov*, the *Kapitan Gotskiy*, the *Penzhina*, the *Bashkiriya*, the *Professor Zubov*, the *Estoniya*, and the *Gelendzhik*. **SovAE 1977-79**. Led by Valeriy Innokent'yevich Serdyukov (summer) and Oleg Konstantinovich Sedov (winter). The ships were the *Mikhail Somov*, the *Estoniya*, the *Professor Zubov*, the *Kapitan Kondrat'yev*, the *Amguyema*, and the *Bashkiriya*. **SovAE 1978-80**. The first leader of summer operations was Yevgeniy Sergeyevich Korotkevich, but he was killed in a helo crash at Molodezhnaya on May 3, 1979, and replaced by Oleg Konstantinovich Sedov. Leader of winter operations was Aleksandr Nikitovich Artemyev. The ships were the *Mikhail Somov*, the *Professor Vize*, the *Professor Zubov*, the *BAM*, the *Bryanskles*, the *Kapitan Markov*, the *Estoniya*, and the *Bashkiriya*. **SovAE 1979-81**. Led by Nikolay Aleksandrovich Kornilov (summer) and Nikolay Ivanovich Tyabin (winter). The ships were the *Mikhail Somov*, the *Professor Vize*, the *Bashkiriya*, the *Pioner Estonii*, the *Gizhiga*, the *Estoniya*, and the *Professor Zubov*. **SovAE 1980-82**. Led by Valeriy Innokent'yevich Serdyukov (summer) and Vladmir Aleksandrovich Shamont'yev (winter). The ships were the *Mikhail Somov*, the *Professor Vize*, the *Professor Zubov*, the *BAM*, the *Estoniya*, the *Pioner Onegi*, the *Kapitan Markov*, and the *Bashkiriya*. **SovAE 1981-83**. Led by Dmitriy Dmitriyevich Maksutov (summer) and Ryurik Maksimovich Galkin (winter). The ships were the *Mikhail Somov*, the *Professor Zubov*, the *Bashkiriya*, the *Pioner Estonii*, the *Vasiliy Fedoseyev*, the *Estoniya*, and the *Urengoy*. **SovAE 1982-84**. Led by Nikolay Aleksandrovich Kornilov (summer) and Aleksandr Nikitovich Artemyev (winter). The ships were the *Professor Zubov*, the *Kapitan Myshevskiy*, the *Kapitan Markov*, the *Bashkiriya*, the *Professor Vize*, the *Pavel Korchagin*, the *BAM*, the *Admiral Vladimirskiy*, the *Faddey Bellingshausen*, and the *Mikhail Somov*. **SovAE 1983-85**. Led by Nikolay Ivanovich Tyabin (summer) and Lev Valer'yanovich Bulatov (winter). The ships were the *Baikal*, the *Kapitan Gotskiy*, the *Mikhail Somov*, the *Professor Vize*, the *Pioner Estonii*, and the *Akademik Krylov*. **SovAE 1984-86**. Led by Ryurik Maksimovich Galkin (summer) and Dmitriy Dmitriyevich Maksutov (winter). The ships were the *Pavel Korchagin*, the *Kapitan Myshevskiy*, the *Mikhail Somov*, the *Baikal*, the *Akademik Krylov*, and the *BAM*. **SovAE 1985-87**. Led by Nikolay Ivanovich Tyabin (summer) and Valeriy Fedorovich Dubovtsev (winter). The ships were the *Pioner Estonii*, the *Kapitan Bondarenko*, the *Kapitan Gotskiy*, the *Mikhail Somov*, the *Baikal*, the *Professor Vize*, and the *Professor Zubov*. Most of the personnel were flown in this season. **SovAE 1986-88**. Led by Valeriy Dmitriyevich Klokov (summer) and Valeriy Yakovlevich Vovk (winter). The ships were the *Kapitan Kondrat'yev*, the *Vasiliy Fedoseyev*, the *Mikhail Somov*, the *Baikal*, the *Professor Vize*, the *Professor Zubov*, the *Pavel Korchagin*, the *BAM*, and the *Geolog Dmitriy Nalivkin*. **SovAE 1987-89**. Led by Nikolay Aleksandrovich Kornilov (summer) and Yury A. Khabarov (winter). The ships were the *Akademik Federov*, the *Mikhail Somov*, the *Professor Vize*, the *Professor Zubov*, the *Vitus Bering*, and the *Kapitan Myshevskiy*. **SovAE 1988-90**. Led by Sergey Mikhaylovich Pryamikov and Lev Valer'yanovich Bulatov. The expeditioners were flown in from Leningrad to Enderby Land. Vladimir Skvortsov was deputy leader. The ships used during the expedition were the *Akademik Federov*, the *Mikhail Somov*, the *Professor Vize*, the *Vitus Bering*, the *Berezovo*, the *Geolog Dimitriy Nalivkin*, and the *Professor Zubov*. Progress Station was partly dismantled. **SovAE 1989-91**. Led by V.M. Piguzov. The ships were the *Akademik Federov*, the *Mikhail Somov*, the *Professor Zubov*, the *Vladimir Arsen'yev*, and the *Geolog Dimitriy Nalivkin*. One man died on the *Zubov*, and another at Mirnyy Station. **SovAE 1990-92**. Led by Lev Savatyugin. The ships were the *Akademik Federov*, the *Mikhail Somov*, the *Professor Zubov*, the *Professor Vize*, the *Navarin*, and the *Berezovo*. Russkaya Station and Leningradksya Station were closed. Vlad Stepanov was fatally injured on Jan. 17, 1991, in a motor vehicle accident. A man died at Progress II Station. **SovAE 1991-93**. This was the 36th and last Soviet Antarctic Expedition, led by Nikolay Aleksandrovich Kornilov. The ships were the

Akademik Federov, the *Mikhail Somov*, the *Professor Zubov*, the *Professor Vize*, the *Professor Multanovskiy*, and the *Professor Zubov*. *See* **Russian Antarctic Expeditions**.

Sovietskaya Station. 78°24' S, 87°35' E. A Soviet tractor train was headed for the Pole of Inaccessibility, to open up an IGY station there — Polyus Nedostupnosti Station, but they only got as far as 360 km inland, at 3662 m altitude, between Vostok Station and the Pole of Inaccessibility Station, before they were forced to stop, and open a temporary station, Sovietskaya, on Feb. 16, 1958. 6 men wintered-over at Sovietskaya in 1958, under leader Vitaliy Kuz'mich Barbarykin. On Jan. 3, 1959 they closed the station. Polyus Station was built, but lasted only 2 weeks.

The *Sovietskaya Rossiya*. Name also seen as Sovëtskaya Rossiya. Soviet whaler, sister ship of the *Sovietskaya Ukraina*, in Antarctic waters every season between 1962-63 and 1979-80.

The *Sovietskaya Ukraina*. A 713-foot 6-inch Soviet whaling factory ship, capable of 16 knots, built by the Nikolayev Shipyard in 1957-58, and delivered to her owners, Black Sea Fisheries, in March 1959. She was named after the famous Soviet World War II battleship. At 22,891 tons, she (and her sister ship the *Sovietskaya Rossiya*) were the two largest whaling factory ships ever built. She was in Antarctic waters in 1959-60, with 25 catchers, and in company with the factory ship *Slava*, the two ships took almost 13,000 humpback whales that season. The two ships were back together in 1960-61. Then the *Ukraina* operated in Antarctic waters every season between 1961-62 and 1986-87, usually with the *Sovietskaya Rossiya*. She was beached in early Aug. 1995, at Aliaga, Turkey, in order to be scrapped.

Sowers Glacier. 78°37' S, 84°59' W. Flows from the prominent cirque on the E side of the Craddock Massif, and continues between Willis Ridge and Mount Osborne into Thomas Glacier, in the Sentinel Range of the Ellsworth Mountains. Named by US-ACAN in 2006, for Todd A. Sowers, of the Environment Institute, department of geosciences, at Penn State, USAP investigator of climate change, in Antarctica from 1991 to 2006.

Sowle Nunatak. 84°03' S, 66°05' W. Rising to 675 m, it is one of the Rambo Nunataks, 9 km SE of Wagner Nunatak, on the W side of Foundation Ice Stream, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Melvin L. Sowle, construction mechanic at Plateau Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

The *Soya*. Name also seen as *Showa*, *Syowa*, *Sjowa*, the ship's name was more correctly the *Soya Maru*. A reconstructed 4200-ton ice-strengthened lighthouse tender and patrol ship provided by the Japanese Maritime Safety Board as the first Japanese icebreaker used during IGY. Re-fitted before the expedition, she had only a 4800 hp engine, not powerful enough to plow through ice more than a yard thick. She helped set up Showa Station as the ship used by JARE I (1956-58) (the station was named after the ship). Her captain that year (and for the next two seasons) was Mitsuji Matsumoto. The *Soya* went to Antarctica on the abortive JARE II (1957-58), and on JARE III (1958-60), JARE IV (1959-61; Captain Sueichiro Akita), JARE V (1960-62; Captain Akita), JARE VI (1961-63; Captain Akita), and then was succeeded by the *Fuji*.

Soya Coast. That stretch of coast, in the area of Lützow-Holm Bay, in Enderby Land. A term no longer used.

Soya-kaigan *see* **Soya Coast**

Soya Rahyogen. 69°30' S, 40°00' E. A bare and vast ice field on the marginal slope of the ice sheet, on the coast of Queen Maud Land. Mapped by JARE from Landsat images, and named by the Japanese on Nov. 24, 1981 ("the Soya bare ice field").

Soyakysten *see* **Soya Coast**

Mount Soyat. 85°52' S, 130°46' W. A prominent mountain, rising to 2150 m, in the western Wisconsin Range, on the E side of Reedy Glacier, just N of the junction of Norfolk Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Cdr. David Soyat, USN, air operations manager with VX-6 at McMurdo in the winter of 1962.

Søyla *see* **Søyla Peak**

Søyla Peak. 72°42' S, 3°51' W. A small nunatak just N of Domen Butte, in the Seilkopf Peaks, in the W part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Søyla (i.e., "the pillar"). US-ACAN accepted the name Søyla Peak in 1966.

Soyuz *see also* **Sojus**

Soyuz Station. 70°35' S, 68°47' E. Soviet summer station and field camp, established in 1982-83 on Jetty Peninsula, on Beaver Lake, in the Prince Charles Mountains. It consisted of 10 prefabricated plywood huts (PDKO huts), and had a diesel electrical generating system, radio station, sauna, dining room/kitchen, and 2 landing strips. It was also open for the 1983-84 and 1984-85 summers.

Soyuz-13 Rock. 79°40' S, 159°08' E. A nunatak, rising to 1270 m, 3 km SE of Schoonmaker Ridge, in the Cook Mountains. Named by the Russians as Skala Sojuz-13, for the spacecraft of Dec. 18, 1973. US-ACAN accepted the name Soyuz-13 Rock in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Soyuz-17 Cliff. 79°31' S, 159°08' E. A prominent rock cliff, rising to about 500 m, 5.5 km long, 6 km WNW of Cape Murray, on the N side of Carlyon Glacier, in the Cook Mountains. Named by the Russians as Utës Sojuz-17, after the spacecrat of Jan. 17, 1975. US-ACAN accepted the name Soyuz-17 Cliff in 2000, and NZ-APC followed suit on Feb. 20, 2001 (but using the Russian coordinates of 79°31' S, 159°40' E).

Soyuz-18 Rock. 79°39' S, 159°25' E. A distinctive nunatak, pyramid-shaped (especially when viewed from the W), and rising to 1230 m, 5 km W of Cheney Bluff, in the Cook Mountains. Named by the Russians as Skala Sojuz-18, for the spacecraft of May 24, 1975. US-ACAN accepted the name Soyuz-18 Rock in 2000, and NZ-APC followed suit on Jan. 20, 2001. Not to be confused with Nunatak Sojuz-18.

Mount Soza. 71°10' S, 162°34' E. A massive mountain, rising to 2190 m, it forms the E wall of Rennick Glacier, in the Bowers Mountains, 11 km N of Carryer Glacier, between the points where Alt Glacier and Carryer Glacier flow into Rennick Glacier, in Oates Land, in Victoria Land. Named by US-ACAN in 1964, for Zeke Soza (*see* **Soza Icefalls**). NZ-APC accepted the name.

Soza Icefalls. 81°51' S, 157°48' E. A line of icefalls nearly 200 m high, at the S margin of Chapman Snowfield, they extend SW for 20 km from Mount Massam, ending near the head of Starshot Glacier, in the Churchill Mountains. Named by US-ACAN in 2003, for Ezekiel Rodriguez "Zeke" Soza (b. Sept. 23, 1915, Tempe, Arizona. d. Jan. 1983, Evanston, Wyo.), former aerial photographer during World War II, USGS topographic engineer with the Topo North-South Survey in these mountains in 1961-62. He was back for Topo East-West in 1962-63, the only man who took part in both traverses. In 1963 he was at the Pole, working on fixing its position. In 1964-65 he was in charge of a team asssesing the movement of the Antarctic ice-cap, and in 1965-66 was engineer in charge of a 4-man surveying team during the Pensacola Mountains Project. He retired from USGS in late 1973, after 27 years. NZ-APC accepted the name on Feb. 27, 2003, but, sadly, as Sosa Icefalls.

Sozopol Gap. 62°38' S, 59°22' W. A saddle, 250 m wide, and at an elevation of over 200 m, in Delchev Ridge, in the Tangra Mountains, it is bounded to the SW by Elena Peak and to the NE by Kaloyan Nunatak, and forms part of the divide between the glacial catchments of the Sopot Ice Piedmont to the NW and a nameless minor glacier draining southward into the Bransfield Strait, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Bulgarian town of Sozopol.

SPA *see* **Specially Protected Areas**

Spaatz Island. 73°12' S, 75°00' W. A high, ice-covered island, 80 km long and 40 km wide, close to the English Coast of Ellsworth Land, 50 km E of Smyley Island. The N side of the island forms a portion of the S margin of the Ronne Entrance, and the rest of the island is surrounded by the ice shelves of Stange Sound and George VI Sound. Finn Ronne and Carl Eklund sledged along the N side of this feature in Dec. 1940, during USAS 1939-41. Photographed aerially on Dec. 23, 1947, by RARE 1947-48, first defined as an island by Finn Ronne during that expedition, and named by him for Gen. Carl Andrew "Tooey" Spaatz (1891-1974; the name was originally Spatz, but he changed the spelling in

1937), commanding general of USAAF in 1946, and first chief of staff, USAF, 1947-48, who gave the expedition an airplane. It appears roughly on Ronne's 1948 map. Re-mapped by USGS from USN air photos taken in 1965-66. US-ACAN accepted the name in 1968. It appears on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land, and the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. There was later a BAS depot near the N coast of this island.

Spain. Some researchers belive that the *San Lesmes* reached 62°S, in 1525-26. In 1603 it is possible that navigator Gabriel de Castilla went as far south as 64°S. In 1756 the *León*, a Spanish ship, got as far south as 54°S, when she discovered South Georgia. In 1960, Luis Aldaz, from the Instituto Español de Meteorología, wintered-over with the Americans, as scientific leader at Byrd Station. He was also scientific leader at Pole Station in 1962 and 1965. In 1961, Manuel Puigcerver, a meteorologist from the University of Barcelona, took part in ChilAE 1961-62. In 1966-67, Antonio Ballester and José María San Feliu took part in the international expedition on the *Magga Dan*, organized by the Royal Belgian Institute of Natural Sciences. On March 31, 1982 Spain became the 26th ratified signatory of the Antarctic Treaty. The following summer (1982-83) a private voyage on the *Idus de Marzo*, led by Guillermo Crines, took aboard an officer of the Spanish navy, and it became a Spanish government-sponsored expedition, to the waters off the Antarctic Peninsula. In 1984 four Spanish scientists traveled to Antarctica on the Argentine icebreaker *Almirante Irízar*— Antonio Ballester Nolla, Josefina Castellvi Piulachs, Marta Estrada, and Juan Comas. That same year, 1984, Francisco Navarro, a Spanish researcher, spent 2 months at Pole Station, in the geophysical program. In 1986-87, under the direction of the Ministry for Agriculture, Fisheries and Food, the Spanish Fisheries vessels *Nuevo Alcocero* and *Pescapuerta IV*, leaving from Vigo bound for Ushuaia, and then on to Antarctica, took two parties to Antarctic waters. One was a scientific party from the Consejo Superior de Investigaciones Científicas, going to King George Island, under leader Antonio Ballester Nolla, to examine sites for Rey Juan Carlos I Station (this station — Spain's first — would be established as a summer station in Jan. 1988). The other was a party from the Instituto Español de Oceanografía, led by chief scientist Eduardo Balguerías Guerra. Also that year, 1986-87, Sr. Ballester led a 4-person team — Agustín Julia, Juan Rovira, and Josefina Castellvi — as guests of the Poles, at Arctowski Station. In Sept. 1988 Spain became a consultative party to the Antarctic Treaty. In 1989-90 Spain opened a refugio called Gabriel de Castilla, on Deception Island, and in 1998-99 this was converted into Spain's second Antarctic scientific station. These are the official Spanish Antarctic Expeditions (SpAE). **SpAE 1987-88**. The ships were the *Antoni Garnuszewski* and the *Río Baker*. Rey Juan Carlos I Station was opened, as a summer station. For a list of the expeditioners, *see* **Juan Carlos I Station**. **SpAE 1988-89**. The ships were the *Las Palmas* and the *Heweliusz*. Josefina Castellvi led the expedition. Gabriel de Castilla was opened as a refugio, on Deception Island. **SpAE 1989-90**: Josefina Castellvi led the expedition, on the *Las Palmas*. **SpAE 1990-91**. The last time the *Las Palmas* was used for a while. The other ship was the *Pomaire*. **SpAE 1991-92**. The first season the *Hespérides* was used. **SpAE 1997-98**: the *Hespérides*. **SpAE 1998-99**. Gabriel de Castilla was upgraded from refugio to scientific station. **SpAE 1999-2000**: the *Hespérides* and the *Las Palmas*. There have been Spanish expeditions every year since.

Spain Peak. 77°18' S, 161°42' E. Rising to 1450 m, on the W side of Deshler Valley, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 2005, for carpenter Rae Spain, who, from 1979 to 2010, completed over 25 field season deployments in various positions held for USAP support contractors at McMurdo, Siple Station, Palmer Station, and Pole Station, as well as at remote field camp stations. NZ-APC accepted the name on Sept. 12, 2005. Miss Spain was several times camp manager at Lake Hoare. With her assistant, Heidi Hausman, she had responsibility for logistical support in the McMurdo Dry Valleys.

Spalding, Tasman *see* **Spaulding**

Punta Spallanzani *see* **Spallanzani Point**

Spallanzani Point. 64°08' S, 61°59' W. On the E coast of Pasteur Peninsula, it forms the N side of the entrance to Hill Bay, and, forming the end of Albena Peninsula, it also forms the E tip of Brabant Island, as well as the SW entrance point of Croker Passage, in the Palmer Archipelago. Probably discovered on Jan. 25, 1898, by BelgAE 1897-99. ChilAE 1946-47 mistook it for Harry Island, and named it Isla Harry. It appears as such on their 1949 chart. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named Spallanzani Point by UK-APC on Sept. 23, 1960, for Lazzaro Spallanzani (1729-1799), physiologist who first interpreted the process of digestion, in 1780. US-ACAN accepted the name later in 1960. It appears as such on a British chart of 1961. It appears on a 1961 Chilean chart as Punta Harry, and that name was accepted by the Chilean gazetteer of 1974.

Spanish Antarctic Expeditions *see* **Spain**

Spanish Knoll. 62°38' S, 60°21' W. A hill rising to 48 m on Bulgarian Beach, 370 m NE by N of Sinemorets Hill, at South Bay, Livingston Island, in the South Shetlands. Named by the Bulgarians on Oct. 29, 1996, in association with Spanish Point, this point being formed from an offshoot of the knoll.

Spanish Point. 62°38' S, 60°22' W. A point on Bulgarian Beach, 1.34 km NE of Hepérides Point, it is formed by an offshoot of Spanish Knoll, on Livingston Island, in the South Shetlands. Named by the Bulgarians on March 16, 1994, in honor of the Spanish, who did so much to help the Bulgarian Antarctic expeditions. UK-APC accepted the name on Dec. 7, 1994, and US-ACAN followed suit in 1995. Plotted by the UK in late 2008.

Spanley Rocks. 82°58' S, 54°40' W. A group of about 6 rocks on land, rising to about 955 m, 16 km SW of Cordiner Peaks, and marking the N extremity of the Neptune Range, in the Pensacola Mountains. Discovered aerially during a USAF flight from Ellsworth Station in Nov. 1957, and named Becker Peaks, probably by Finn Ronne, probably for Ralph Becker (*see* **Mount Becker**). It appears as Becker Peaks on Ronne's 1961 map. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their 1965-66 Pensacola Mountains Project, and mapped by USGS from these efforts. Re-named by US-ACAN in 1968, for John A. Spanley, Jr., USN, cook who wintered over at Pole Station in 1965. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mount Spann. 82°03' S, 41°21' W. Also called Santa Fe Hill. Rising to 925 m, it marks the N extremity of the Panzarini Hills, and also of the Argentine Range, at the NE end of the Pensacola Mountains. It was discovered aerially in Dec. 1955, by the Argentines, and reported in 82°30' S, 40°00' W. They named it Nunatak Santa Fé, for the Argentine province. It appears as such on an Argentine map of 1959, but on a 1966 Argentine chart it appears as Pico Santa Fé, plotted in 82°30' S, 40°00' W. The name accepted by the Argentine gazetteer of 1970 was Nunatak Santa Fé, but, apparently, today, the Argentines call it Pico Santa Fé. It was seen again on Jan. 13, 1956, during a non-stop flight from McMurdo to the Weddell Sea and back (for that flight, see that date under **Operation Deep Freeze I**). Named by US-ACAN in 1957, as Mount Spann, for Staff Sgt. Robert C. Spann, U.S. Marine Corps, of Eggertsown, NY, navigator during that flight, and one of the men injured in the Neptune plane crash of 1956 (*see* **Deaths**, 1956). It appears as such on the 1959 American Geographical Society map, but plotted in 81°45' S, 39°00' W. That is how it was accepted by US-ACAN in 1960. On Ronne's 1961 map, the feature appears as Santa Fé Nunataks. The coordinates were corrected by 1968, and everyone altered them accordingly. UK-APC accepted the name Mount Spann on Nov. 3, 1971.

Spano Island. 66°24' S, 110°36' E. A small, rocky island, 0.75 km N of the W end of Herring Island, in the Windmill Islands. First mapped from air photos taken in 1947 by OpHJ 1946-47 and in 1948 by OpW 1947-48. Named by US-ACAN in 1963, for Angelo F. Spano, meteorologist at Wilkes Station in 1960.

Sparadok Point. 62°37' S, 61°00' W. A sharp, ice-free point projecting 200 m from the coast of Byers Peninsula, with a chain of rocks extending a further 270 m northward into Barclay Bay, 1.6 km SW of Nedelya Point, and 2.2 SW of Lair Point, on Livingston Island, in the South Shetlands. Mapped by the British in 1968. Name by the Bulgarians on Dec. 15, 2006, for the Thracian king Sparadok, 445-435 B.C.

The *Spark*. A sealing schooner, tender to the *Clothier*, in Antarctic waters during the 1820-21 season.

Spark Point *see* **Canto Point**

Sparke, Brian Richard. b. June 11, 1934, Cardiff, Wales, son of Lionel Frank Sparke and his wife Eileen G. Baker. He joined FIDS in 1959, as a medical officer, and wintered-over at Base F in 1960, and at Base E in 1961. He died in Aug. 1989, in Kidderminster, Worcs.

Sparkes Bay. 66°22' S, 110°32' E. A bay, 1.5 km wide, indenting the Budd Coast for 4 km between Mitchell Peninsula on the N, and Robinson Ridge and Odbert Island on the S, in the Windmill Islands. First plotted by air photos taken in 1947 by OpHJ 1946-47 and in 1948 by OpW 1947-48. Named by US-ACAN in 1963, for Lt. Robert S. Sparkes, USN, who took over from Donald Burnett as military leader at Wilkes Station on Jan. 30, 1958. He later practised at UC Hospital, Los Angeles. ANCA accepted the name. The Russians call it Bukhta Nebesnaja.

Sparrman, Anders Erikson. b. Feb. 27, 1748, Uppland, Sweden, son of a clergyman. He became a doctor, and one of Linnaeus's most famous pupils, and in 1765 went on an expedition to China. In Jan. 1772 he sailed for Cape Town to become a tutor, and on Nov. 19, 1772 he joined Cook's expedition on the *Resolution*, as assistant to the naturalists, the Forsters, and was, almost certainly, the first Swede in Antarctica. Shortly after his return to Cape Town on March 23, 1775, he undertook a journey into the interior of South Africa, and in 1776 returned to Sweden. In 1780 he became keeper of the natural history collections at the Academy of Sciences. In 1787 he was in West Africa. In 1789 his book about the Cook voyage was published. Also known as an abolitionist, he died on Aug. 9, 1820.

The *Sparrow*. Royal Navy steel sloop, laid down on Oct. 30, 1944, at Denny's Shipyard, in Dumbarton, launched on Feb. 18, 1946, and completed on Dec. 16, 1946. In 1948-49, under Capt. John Valentine Waterhouse, she came down from Trinidad, and, via Montevideo, to the Falklands. **Nov. 27, 1948**: The *Sparrow* reached Port Stanley. From there, in company with the *Glasgow*, and sometimes with the *John Biscoe*, she set out on a visit to FIDS and foreign scientific bases in the South Shetlands, South Orkneys, and the Antarctic Peninsula. **Dec. 3, 1948**: The *Sparrow* reached the South Orkneys, the earliest date in the season for a ship to have reached those waters. Signy Island Station was relieved. **Dec. 4, 1948**: The *Sparrow* sailed for Admiralty Bay. **Dec. 7, 1948**: The *Sparrow* (with the *John Biscoe*) took soundings in Prince Charles Strait. **Dec. 8, 1948**: The *Sparrow* reached Admiralty Island in the morning, but a northeaster blew up, and prevented any communication with Base G for two complete days. **Dec. 10, 1948**: The station was relieved. **Dec. 11, 1948**: The *Sparrow* left for Deception Island. **Dec. 15, 1948**: Due to so much ice around Deception Island, it wasn't until this date that the *Sparrow* was able even to approach the island, and then only the *John Biscoe* could get into harbor, while the *Sparrow* stood off outside. **Dec. 17, 1948**: The *Sparrow* had to leave for Port Stanley, her fuel running low. **Jan. 27, 1949**: The *Sparrow* arrived at Admiralty Bay. She would be trapped in the pack ice for 14 days, and it looked as if she might well have to be wintered-over, until the *John Biscoe* came in and freed her. **March 10, 1949**: The *Sparrow* arrived at Mar del Plata, Argentina, from Port Stanley, for a 5-day goodwill visit. **April 29, 1949**: The *Sparrow* arrived back in Devonport, England. She was broken up in May 1958, at Rosyth.

Spartacus Peak. 62°38' S, 59°55' W. Rising to about 650 m in Delchev Ridge, SW of Kiten Gap, 900 m ENE of Delchev Peak, 800 m SW of Yavorov Peak, and 1.3 km S of Rodopi Peak, it overlooks Sopot Ice Piedmont to the N and Strandzha Glacier to the E and SE, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the old Thracian warrior Spartacus (ca. 109-71 B.C.), probably born in what is now the Sardanski region of southwestern Bulgaria.

Spartan Glacier. 71°03' S, 68°20' W. A short valley glacier flowing NE into George VI Sound N of Tombaugh Cliffs, between those cliffs and Callisto Cliffs, on the E side of Alexander Island. Between 1969 and 1975 BAS personnel from Fossil Bluff conducted detailed glaciological investigations here, and between 1973 and 1975 it was the site of their 2-man wintering-over parties. Mapped by the (British) Directorate of Overseas Surveys, from satellite images provided by NASA and USGS. Named by UK-APC on Dec. 20, 1974, for the "Spartans," a dog team used to ascend the glacier for the first time in 1969. BAS opened a summer field camp there in 1972-73. US-ACAN accepted the name in 1975.

Gora Spasskogo. 80°55' S, 160°15' E. A nunatak, NE of Abercrombie Crests, in the Churchill Mountains. Named by the Russians.

Lake Spate. 69°25' S, 76°06' E. About 0.9 km N of Blundell Peak, on Stornes Peninsula, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Andrew Spate, limnologist with the NSW National Parks and Wildlife Service, who was a member of the 1987 ANARE summer field party at Law Base. The Chinese call it Chang'e Hu.

Spath Crest. 80°39' S, 26°12' W. Summit rocks rising to about 1450 m, and marking the NW end of the Du Toit Nunataks, in the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972 (and plotted in 80°39' S, 26°22' W), for Leonard Frank Spath (1882-1957), British paleontologist and stratigrapher, whose studies of ammonites made possible the correlation of Mesozoic rocks. He wrote a classic paper on ammonites from the James Ross Island area. He was with the British Museum of Natural History from 1912 until he died. US-ACAN accepted the name. It appears in the 1974 British gazetteer. By 1978, UK-APC had corrected the coordinates, and, as such, the feature appears in the 1982 British gazetteer.

Spath Peninsula. 64°20' S, 56°56' W. An ice-free peninsula, 6.5 km long, forming the NE extremity of Snow Hill Island, Named by UK-APC on Dec. 11, 1995, for Leonard Spath (*see* **Spath Crest**). US-ACAN accepted the name in 1996.

Spatulate Ridge. 73°28' S, 167°13' E. An ice-covered ridge in the Mountaineer Range, it extends SE between Suter Glacier and Ridgeway Glacier, to the coast of Victoria Land. Named descriptively by NZ-APC in 1965. US-ACAN accepted the name in 1966.

Mount Spatz. 72°41' S, 160°33' E. Rising to 2270 m, 16 km WSW of Mount Weihaupt, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Richard Spatz, station engineer at McMurdo in 1968.

Spaulding, Richard Lee "Dick." b. Sept. 11, 1938, Concordia, Kans., but grew up in Phillipsburg, Kans., son of insurance man Laverne George "L.G." Spaulding and his wife Wilda Tucker. In 1957, in Lincoln, Neb., he joined the U.S. Navy, and after boot camp went into aviation, as a parachute rigger, which meant handling all the life support equipment for pilot and crew of a plane. He made his first (mandatory) freefall jump in July 1958, at the training camp at Lakehurst, NJ, and graduated the following month, being transferred to the operations department at the Naval Air station in Norfolk. In June 1959 he volunteered for VX-6 (all volunteers, at that point), but spent OpDF 60 at Quonset, as a parachute rigger. In 1960 he married Ann Hogendoubler. He made his first trip to McMurdo in 1960-61, as parachute rigger 2nd class, working in the shop there. He and Marv Bishop were thought to have been consumed by the fire that broke out in the shop in 1961, but they had made a hasty exit. That year he made 8 or 9 training jumps at McMurdo, as part of the VX-6 para-rescue team. He was back at McMurdo in 1961-62, and then left VX-6 in 1962, but was back again for 1966-67, 1967-68, and 1968-69 (VX-6 became VXE-6 on Jan. 1, 1969), assisting in the training of jumpers. On Dec. 20, 1968 he and Jim Thomann set an Antarctic altitude record for parachutists at 10,500 feet, when they jumped out of an H-34. On Jan. 19, 1969 he set a new record, of 12,500 feet, from an LC-130. In June 1969 he left VXE-6, and became an instructor at Lakehurst. In 1974-75, 1975-76, and 1976-77 he was back in Antarctica with VXE-6, as senior parachute rigger and parachute-rescue team leader, again at McMurdo. On Jan. 19, 1977, over Pole Station, he made his 1000th career jump (he had wanted to do it over Vostok Station, but his commanding officer nixed the idea). Altogether he made 110 jumps on the continent, and his final career total came to 1111. In 1978, after 6 months at Army school in Texas, he was stationed in Hawaii, as parachute instructor with the Special Warfare Group, and in 1980 to Oceana, Va., as command master

chief with VA-176 (attack squadron), being stationed on the *Independence*, and at Lakehurst from 1983 to Dec. 1986, when he retired from the Navy. He worked in Naval aviation as a civilian, as logistics manager for the support equpment arm of the Osprey program, and finally retired in 1998, to Florida. *See also* **Parachutes**.

Spaulding, Tasman James. b. 1880, Sorrell, Tasmania, son of Henry James Spaulding and his wife Annie Longmore. Able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04. His name is also seen as Spalding, and he himself entered his name on the ship's log as "S. Tasman." He remained a seaman, and lived at Dunalley, in Tasmania, until he died in 1939.

Spaulding Peninsula. 74°26' S, 116°00' W. A low, ice-covered peninsula, in the NW part of Martin Peninsula, extending 11 km into the Getz Ice Shelf, between Brennan Inlet and Sweeny Inlet, on the Bakutis Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and aerial photos taken between 1959 and 1967. Named by US-ACAN in 1977, for Dick Spaulding.

Spaulding Pond. 77°39' S, 163°07' E. A pond, 0.5 km NE of the terminal ice cliff of Howard Glacier, in the Taylor Valley, in Victoria Land. named by Diane McKnight, USGS hydrologist here. US-ACAN accepted the name in 1992. Sarah Ann Spaulding was a member of Miss McKnight's 1988-89 and 1991-92 field teams, which, among other things, studied this pond.

Spaulding Rocks. 77°00' S, 143°16' W. A somewhat isolated group of rocks, 17.5 km NE of Mount Warner, in the Ford Ranges of Marie Byrd Land. Mapped (but not named) by USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Howard R. Spaulding, USN, builder at Byrd Station in 1966.

Spaull Point. 60°44' S, 45°41' W. The N point on Moe Island, off Signy Island, in the South Orkneys. It appears on Capt. Moe's 1913 chart as Mikalsen Point (*see* **Mikkelsen Harbor** for a possible explanation of this name). BAS did biological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for Vaughan William Spaull (b. 1944), BAS biologist who wintered-over at Signy Island Station in 1968 and 1969, the second year also as base commander. US-ACAN accepted the name in 1975.

Spayd Island. 70°33' S, 72°07' E. Also called Spayd Outlier. An ice-covered island, 3 km long, with prominent rock exposures, at the SE side of Gillock Island, on the E margin of the Amery Ice Shelf. Delineated by U.S. cartographer John H. Roscoe in 1952 from air photos taken during OpHJ 1946-47, and named by him for Alfred William Spayd (b. Oct. 1, 1920, Carter, Ind. d. April 6, 2004, Huntingburg, Ind.), air crewman on OpHJ flights from his ship, the *Currituck*, over this area in 1946-47. US-ACAN accepted the name in 1956, and ANCA followed suit on July 22, 1959.

Spayd Outlier *see* **Spayd Island**

Spear Glacier. 75°55' S, 68°15' W. A glacier flowing S from between the Hauberg Mountains and the Peterson Hills, to enter the Ronne Ice Shelf, at the Orville Coast, in eastern Ellsworth Land. Mapped by USGS from their own ground surveys conducted in 1961-62, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Milton B. Spear (b. Aug. 27, 1937. d. Dec. 30, 1998, West Warwick, RI), USN, construction electrician at Byrd Station in 1962, and at Eights Station in 1965. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Spear Nunatak. 86°32' S, 124°06' W. A nunatak, 5 km S of Strickland Nunatak, it is the farthest S rock outcrop along the E side of the head of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Milton B. Spear (*see* **Spear Glacier**).

Spear Spur. 82°38' S, 52°22' W. A rock spur, rising to about 1600 m, 5 km E of Clinton Spur, on the SE side of the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Albert Spear, USN (Special Detachment Bravo) who wintered-over as a builder at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer. Chief Spear later lived in Hawaii.

Spearey, Andrew George "Andy." b. Jan. 11, 1954, Chippenham, Wilts, son of Martin Spearey and his wife Anne Maundrell. BAS tractor mechanic who wintered-over at Rothera Station in 1984 and 1985, being also base commander in the 2nd year. He was back at Rothera in the summer of 1986-87. In 1996, in Marlborough, Wilts, he married Pauline Woodroff. He was engineering manager at MineTech International, and in 1999 formed Track Tractors Ltd., in Devizes, Wilts.

Spears, Robert *see* **USEE 1838-42**

Special Committee for Antarctic Research *see* **Scientific Committee on Antarctic Research**

Specially Protected Areas. Areas of outstanding scientific interest that were accorded special protection to preserve their unique natural system. The idea came about in 1964, at the Antarctic Treaty Consultatative Meeting (ATCM) at Brussels. *See also* **Historic sites**, and **Sites of Special Scientific Interest**. These were the 29 SPAs (each has its own entry in this book, and even more information about each is to be found under the entry Antarctic Specially Protected Areas): **1.** Taylor Rookery; **2.** Rookery Islands; **3.** Ardery Island and Odbert Island; **4.** Sabrina Island; **5.** Beaufort Island; **6.** Cape Crozier (in 1975 it was re-designated SSSI #4); **7.** Cape Hallett; **8.** Dion Islands; **9.** Green Island; **10.** Byers Peninsula (in 1975 it was re-designated SSSI #6); **11.** Cape Shirreff (in 1989 it was re-designated SSSI #32); **12.** Fildes Peninsula (in 1975 it was re-designated SSSI #5); **13.** Moe Island; **14.** Lynch Island; **15.** southern Powell Island and adjacent islands in the South Orkneys; **16.** Coppermine Peninsula; **17.** Litchfield Island; **18.** the northern part of Coronation Island; **19.** Lagotellerie Island; **20.** New College Valley (in 2000 Caughley Beach, formerly SSSI #10, was incorporated into this SPA); **21.** Avian Island (until 1991 it was designated SSSI #30); **22.** the summit of Mount Melbourne; **23.** Forlidas Pond and the ponds of Davis Valley; **24.** Pointe-Géologie Archipelago; **25.** Cape Evans; **26.** Lewis Bay. This was the site honoring the passengers of the champagne flight that crashed into Mount Erebus in 1979. Before it became an SPA, this site was originally Historic Site #73; after being an SPA, it became ASPA #155, then ASPA #156; **27.** Backdoor Bay; **28.** Hut Point, Ross Island; **29.** Cape Adare. In 1975 Cape Crozier, Fildes Peninsula, and Byers Peninsula were all re-designated SSSIs (when SSSIs came into being) (the same thing happened to Cape Shirreff in 1989), and this caused a considerable re-numbering in the list. In 2002 SPAs and SSSIs were discontinued (in name) and replaced by ASPAs (Antarctic Specially Protected Areas).

Specimen Nunatak. 67°59' S, 66°46' W. A small but distinctive rock pinnacle rising to about 550 m above the ice on the SW side of Swithinbank Glacier, just over 6 km S of that glacier's terminus, on the Fallières Coast, on the W coast of Graham Land. Visited and roughly mapped on Feb. 9, 1941, by Herb Dorsey and Joe Healy of USAS 1939-41, and so named by them because it is a good example of a nunatak projecting above a broad icefield. They left a record and cache here. Surveyed by BAS personnel from Base E in 1968-69, and further surveyed in May 1971, when the record and cache were recovered. US-ACAN accepted the name in 1973, and UK-APC followed suit on Feb. 7, 1978.

Spectator Nunatak. 70°37' S, 159°29' E. A small, isolated, mainly ice-covered peak consisting of hornblende, 6 km W of the Pomerantz Tableland, in the Usarp Mountains of Oates Land, in northern Victoria Land. Used as a survey station by NZGSAE 1963-64, who named it for the view from here. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

The Spectre. 86°03' S, 150°10' W. A prominent rock spire, rising to 2020 m, near the center of Organ Pipe Peaks, in the Gothic Mountains, in the Queen Maud Mountains. Discovered in Dec. 1934, on Quin Blackburn's geological expedition during ByrdAE 1933-35. Named by Ed Stump, leader of the USARP-Arizona State University geological party in the Gothic Mountains, 1980-81. US-ACAN accepted the name.

Speden Bench. 78°01' S, 167°24' E. A bench, at an elevation of about 45 m above sea level, on White Island, about 1.5 km from the N end of that island, in the Ross Archipelago. It comprises the northwesternmost moraine-covered volcanic outcrops on the island, upon which occur tuffaceous conglomerate block and shell fragments of the Scallop Hill Formation. Named by NZ-APC on June 19, 1999, for geologist Ian Gordon

Speden (b. Jan. 27, 1932, Gore, NZ), of NZGS, who, accompanied by A.C. Beck, collected fossiliferous deposits here on Dec. 22, 1958, during NZGSAE 1958–59. US-ACAN accepted the name later in 1999.

Mount Speed. 84°30' S, 176°50' W. A roughly circular, mound-shaped mountain, rising to about 1100 m, and with several low summits, at the edge of the Ross Ice Shelf, at the W side of the mouth of Shackleton Glacier, in the Bush Mountains, in the Queen Maud Mountains. Discovered and photographed on Flight C of Feb. 29–March 1, 1940, during USAS 1939–41. Surveyed by the U.S. Ross Ice Shelf Traverse Party led by Bert Crary in 1957–58, and Crary named it for Harvey Speed. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Speed, Harvey Guy "Harv." Also known as "Speedy." b. Sept. 4, 1920, in North Muskegon, Mich., son of dairyman Guy F. Speed and his wife Elizabeth. On Nov. 22, 1940, he enlisted in the USN, in Detroit, did his boot camp at Great Lakes, then went to aviation machinist school, in Jacksonville, and in 1942 married Irene Virginia Armoon. In July 1945 he graduated from flight training, the following month was commissioned, and was a lieutenant when he flew one of the four R4Ds in from NZ to McMurdo, on Oct. 18–19, 1956, for OpDF II. In Nov. 1956 he flew Otter reconnaissance for Merle Dawson's Army-Navy trail out to Byrd Station, and was with VX-6 at Little America in the winter of 1957. He made the first landing at Byrd Station, in the *Que Sera Sera*, and, in 1957–58, flew supplies in to Hallett Station. He retired on Dec. 31, 1970, with 13,000 flight hours under his belt, and died in Pensacola, on Dec. 18, 1977.

The *Speedwell*. Privately owned London ship of 24 guns, and a complement of 106 men. **Feb. 13, 1719**: During the war with Spain, an expedition, consisting of two ships, the *Success* and the *Speedwell*, left Plymouth under the overall command of Capt. John Clipperton, the skipper of the *Success*. The *Speedwell* was commanded by Lt. George Shelvocke. They were bound for South America, with the intention of capturing Spanish ships and looting Spanish ports. The point of interest is that, late in 1719, the *Speedwell* found herself south of 60°S, in Antarctic waters, and so the names of as many of the crew as possible (of that ship only, not the *Success*) are listed here in alphabetical order. In many cases it is not possible, at this remove, and with the information available, to detail the comings and goings of each and every man, or to say where and when he joined the expedition, but most of them joined in England in 1719 and served the cruise, and were thus Antarcticans (where there is no rank next to a name, it can either be assumed that he was a seaman, or better still, unknown). Adams (surgeon), John Adie, George Alderdash, Matthew Appleton, Thomas Barnett, Richard Baving, Thomas Benedict, William Betagh (Captain of Marines), Laurent Blanche, William Blew, Richard Bond, Jacob Bowden (seaman), Robert Bowman, Edward Brooks (2nd Lt.), William Camell (seaman), Henry Chapman, George Chappell (boy), William Clarke, Coldsea (officer), Cornelius Colson, John Condie, William Coon, Robert Copps, Louis Dassort, Robert Davenport (carpenter), De La Porte (Lt.), John Delly, Abraham Dittore, William Dobson, Thomas Dodd (Lt. of Marines), John Doidge (surgeon's mate), John Emlin (seaman), William Giddy, John Giles (Sgt. of Marines), Richard Gloins, David Griffith, Gilbert Hamilton (Ensign of Marines), John Hannah, Danial Hanny, Simon Hatley (2nd captain), Edmund Haveys, Thomas Hawkes (seaman), Martin Hayden, Gilbert Henderson (gunner), James Hendry, James Hopkins (mate), Henry Hudson (boatswain), William Kitching (seaman), Joseph La Fontaine, Nicholas Laming (boatswain), William Leveret, Frederick Mackenzie, Joseph Manero, Guillaume Marinier, William Morgan (surgeon's mate), Robert Morrice, William Murphy, John Nicholson, John Norris, Edward Nubely, Samuel Obridge, Edward Osting, John Panther, William Parsons, John Pearson, Andrew Pedder (1st Mate), Edmund Phillips, Richard Phillips, John Polton, John Popplestone, Christopher Preswick, Randall (3rd Lt.), John Riddleclay, John Robjohn, Robert Rollings, James Rowe (seaman), George Shelvocke (captain), George Shelvocke, Jr. (the captain's son; a passenger), John Sprake (mate), Turner Stevens (gunner), Matthew Stewart (2nd Mate), William Sutton, William Symons, William Taully, Christopher Terry, Charles Weatherly (seaman), Thomas Wilkinson, John Williams (marine), John Wilson, John Wisdom, Anthony Wood. **Feb. 20, 1719**: The two ships were parted in a gale, not to see each other again for 2 years. **March 17, 1719**: The *Speedwell* arrived at the Canaries. **March 20, 1719**: The *Speedwell* left the Canaries. **April 14, 1719**: The *Speedwell* reached Cape Verde, where Stevens was discharged for threatening to blow up the ship. Pedder was also dropped off. Haveys died at sea. **April 17, 1719**: Parsons, Chapman, Colson, and Terry deserted. **April 19, 1719**: Symons died. **April 20, 1719**: The *Speedwell* left Cape Verde, bound for Brazil. **June 23, 1719**: The *Speedwell* arrived at St. Catherine's Island, off the coast of Brazil. There was much dissension aboard. **July 7, 1719**: Hudson and 3 French sailors were transferred to the *Ruby*, another ship in port, in exchange for two Frenchmen and Morphew, an Irishman. **July 15, 1719**: After a mutiny attempt, Stewart led another mutiny attempt, over prize money. **Aug. 5, 1719**: Marinier, Blanche, Dittore, Williams, Leveret, Kitchen, and Wood all deserted. **Aug. 9, 1719**: The *Speedwell* left St. Catherine's Island. **Aug. 19, 1719**: Lt. De La Porte broke his leg on a deck-slide. **Sept. 23, 1719**: They saw Tierra del Fuego. **Oct. 1, 1719**: At 7 P.M., William Camell, seaman, fell from the mainsail and drowned, in about 60°37', 05°W. Shelvocke claimed to have got to 61°30' S. Hatley shot an albatross, and the voyage became the inspiration for Coleridge's *The Ancient Mariner*. **Nov. 14, 1719**: They sighted Chile. **Dec. 17, 1719**: Morrice deserted at the island of Chiloe. **Dec. 27, 1719**: Adie, Delly, and Alderdash were killed by the Spanish in an ambush. **Jan. 3, 1720**: La Fontaine deserted at La Concepción. **Feb. 25, 1720**: The following men were captured by the Spanish man o' war *Brillante*: Hatley, Betagh, Sprake, Hamilton, Copps, Laming, Appleton, Wilson, Panther, Preswick, Hayden, Bowman, Nubely, Dobson, Gloins, and Barnet. **March 21, 1720**: The following men were taken off the prize-ship *St David* by the crew of the *Brillante*, near Payta, Peru: Hopkins, Rollings, Wilkinson, Nicholson, Condie, Robjohn, Obridge, Polton, Weatherly, and Rowe. **March 24, 1720**: Baving deserted at Payta. **May 11, 1720**: The *Speedwell* was wrecked at Juan Fernandez Island. **May 25, 1720**: Hannah drowned. **Oct. 5, 1720**: Wisdom, Hawks, Riddleclay, Manero, Coon, Blew, Giddy, Dassort, Osting, and Boudan all refused to leave Juan Fernandez Island. **Oct. 6, 1720**: They sailed from Juan Fernandez in a 20-ton vessel, the *Recovery*, which they had cobbled together. Subsequently they captured a Spanish ship and met up with the *Success*. **Oct. 10, 1720**: Henderson was killed during the engagement with the *Margarita*. **Nov. 1720**: They captured the *Jesu María*, re-named her the *Happy Return*, and sailed to Panama, where they again met up with the *Success*. **Dec. 28, 1720**: Richard Phillips died at sea. **Aug. 18, 1721**: Now in another captured ship, they sailed for China. **Nov. 11, 1721**: They anchored at Macao. **Jan. 27, 1721**: Hendry and Dodd transferred to the *Success*. **March 14, 1721**: Murphy transferred to the *Success*. **April 5, 1721**: The following men were taken prisoner by the governor of Sonsonnate, in Mexico, under a flag of truce: Brooks, Mackenzie, Taully, Hanny, Bond, Edmund Phillips, and Sutton. **May 20, 1721**: Giles, Emlin, Williams, and Chappell were all murdered by the Spanish on the *Holy Sacramento*. En route between California and China the following men died: Davenport, Pearson, Benedict, Popplestone, Clarke, and Norris. **Dec. 1, 1721**: Griffith was imprisoned by the Chinese. **July 30, 1722**: Shelvocke arrived in Dover on the *Cadogan*, an East Indiaman, was arrested for piracy, but was acquitted. **1726**: Shelvocke wrote a book *A Voyage Round the World by Way of the Great South Sea* (see the Bibliography). Betagh also wrote a book.

Punta Speerschneider *see* **Speerschneider Point**

Speerschneider Point. 65°45' S, 66°10' W. Forms the S side of the entrance to Malmgren Bay, on the W side of Renaud Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956–57. First accurately shown (but not named) on an Argentine chart of 1957. Named by UK-APC on July 7, 1959 for Christian Julius Hansen Speerschneider (1864–1938), of the Danish Meteorological Institute, specialist in the Arctic sea ice in the early part of the 20th century. However, they misspelled it as Speershneider Point, but that was corrected by the time of a 1961 British chart. US-ACAN accepted the name in 1971. It appears on a Chilean chart of 1963 as Punta Speerschneider, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines call it the same thing.

Speiden, William. Last name often seen as Spieden. b. Dec. 25, 1797, Washington, DC, son of Robert Speiden and his wife Ann Williams. On Oct. 7, 1828, he married an English girl, Marion Coote. He was purser on the *Peacock* during USEE 1838-42. Wilkes called him "one of the most valuable officers of the expedition," and named an island after him in the Ellice Islands. Cape Spieden [sic] in Antarctica is also named for him. He was purser's clerk on the *Mississippi*, during Perry's mission to Japan in 1852-54. He kept a diary, published in 2 volumes as *Journal of a Cruise in the U.S. Steam Frigate* Mississippi. He was storekeeper at the U.S. Navy's Hong Kong depot (established to serve the East India Squadron) between March 1856 and 1861, and died on Dec. 18, 1861, in Washington, DC. His wife died in Alexandria, Va., in 1866.

Speil Point. 62°05' S, 58°25' W. A point, W of Mount Flagstaff, on the W coast of Keller Peninsula, at Mackellar Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for geophysicist Jerzy Speil, radio link with the 1978-79 geological field party out of Arctowski Station.

Caleta Speller *see* **Spiller Cove**

Spellers Cove *see* **Spillers Cove**

Baie Spence *see* **Spence Harbor**

Havre Spence *see* **Spence Harbor**

Puerto Spence *see* **Spence Harbor**

Spence Harbor. 60°41' S, 45°09' W. A small bay, 1.5 km S of The Turret, N of Petter Bay, along the E coast of Coronation Island, at the W side of Lewthwaite Strait, in the South Orkneys. Discovered and roughly charted by Powell and Palmer on Dec. 9, 1821, and named by Powell. That night the *Dove* and the *James Monroe* (their ships) anchored there together. On Powell's chart published in 1822, it appears as Spence's Harbour. On a British chart of 1839 it appears as Spence Harbour. On the 1842 charts prepared by FrAE 1837-42, it appears variously as Havre Spence and Baie Spence. On an 1894 U.S. Hydrographic Office chart it appears as "Spence Hr.," and on Friederichsen's 1895 German map it appears as Spence Hafen. It was further charted by Petter Sørlle in 1912-13, and appears on his 1930 chart as Spence Havna. It appears on a 1930 Argentine chart as Puerto Spence, and that name was accepted by the 1970 Argentine gazetteer. It was re-charted by the Discovery Investigations in 1933, and appears on their 1934 chart as Spence Harbour. On a 1943 USHO chart it appears as Spence Harbor, and that was the name accepted by US-ACAN in 1952, and which appears in the 1956 U.S. gazetteer (after they had rejected Spence's Harbor). UK-APC accepted the spelling Spence Harbour on Sept. 8, 1953, and that spelling appears in the 1955 British gazetteer. It was re-surveyed by Fids from Signy Island Station between 1956 and 1958.

Spence Havna *see* **Spence Harbor**

Cape Spencer. 68°24' S, 147°29' E. An ice-covered cape marking, on the E, the seaward end of the depression occupied by Ninnis Glacier, on the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for Sir Baldwin Spencer (1860-1929), director of the National Museum in Melbourne in 1911, and professor of biology at Melborne University from 1887 to 1919. US-ACAN accepted the name in 1947, and ANCA followed suit.

Mount Spencer. 77°17' S, 143°20' W. A peak, 1.5 km S of Mount Darling, in the Allegheny Mountains of the Ford Ranges, in Marie Byrd Land. Discovered aerially by members of West Base during USAS 1939-41, and named for Herbert Reynolds Spencer (1894-1968), of Erie, Pa., Paul Siple's Sea Scout commander in the days of ByrdAE 1928-30. US-ACAN accepted the name in 1947.

Spencer, William H. *see* **USEE 1838-42**

Spencer Bluff *see* **Santa Cruz Point**

Spencer Island. 77°09' S, 148°04' W. A small, ice-covered island in the Marshall Archipelago, 3 km off the NE part of Steventon Island, in the Sulzberger Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. Michael C. Spencer, LC-130F Hercules aircraft navigator in Antarctica during OpDF 68 (i.e., 1967-68).

Spencer Nunatak. 85°21' S, 122°11' W. A prominent nunatak, about 15 km ENE of Mount LeSchack, between the Wisconsin Range and the Long Hills, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken in 1959-60. Named by US-ACAN in 1962, for Donald J. Spencer, who wintered-over as atmospheric noise scientist at Byrd Station in 1958.

Cape Spencer-Smith. 78°00' S, 167°27' E. The most northerly cape on White Island, in the Ross Archipelago. Named by NZGSAE in 1958-59 for the Rev. A.P. Spencer-Smith. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit that year.

Spencer-Smith, Arnold Patrick "A.P." Also known as "Smithy." b. March 17, 1883, Streatham, London, son of Charles Spencer-Smith and his wife Charlotte Owen Gaze (sister of Frederick Owen Gaze, who was father of Irvine Owen Gaze). A product of Westminster and Cambridge, he became a schoolmaster, teaching French and mathematics in Edinburgh until he sailed for Antarctica. He was deaconed in the Church of Scotland in 1910, and priested just 5 days before leaving for Antarctica on the *Ionic*, the ship carrying 11 of the Ross Sea Party, which left Dover on Sept. 18, 1914, bound for Hobart. He was chaplain and photographer on Mackintosh's depot-laying party during BITE 1914-17. "The Padre" (as he was known) died on March 8, 1916, of scurvy (the worst case ever recorded) and exhaustion, and under particularly miserable circumstances, on the return journey from the Beardmore Glacier to Ross Island. He was the first clergyman to die in Antarctica. In 1981 his library went on auction in London, and was bought by the National Library of Australia. They then sold it to the Scott Polar Research Institute.

Spencers Straits *see* **English Strait, Lewthwaite Strait**

Spence's Harbor *see* **Spence Harbor**

Spera Cove. 62°08' S, 58°23' W. A cove, SE of Point Hennequin and Basalt Point, in front of Viéville Glacier, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Commodore Marian Spera, commander of sea operations during PolAE 1978-79.

Sperm Bluff. 77°05' S, 161°36' E. A prominent dark bluff, rising to over 1000 m (the New Zealanders say abour 1200 m), and 5 km long, it forms the NE extremity of the Clare Range, at the N side of Cotton Glacier, about 3 km SW of Mount Suess, between Mackay Glacier and Debenham Glacier, in Victoria Land. The bluff protrudes about 450 m above the ice, and is essentially flat in the central portion, but tapering eastward, ending in a low, rounded spur. Charted by BAE 1910-13, and so named by them because, from the E, the N face looks like the blunt head of a sperm whale. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Sperm whale. Order: Cetacea (whales); suborder: Odontoceti (toothed whales); family: Physeteridae. There are two species of sperm whale—*Physeter catodon* and *Physeter macrocephalus*. The sperm, also called a cachalot, is by far the largest of the toothed whales, and one of the largest of either type of whale (the other, generally bigger, type, being the baleen whale). At 65 feet, and at 50 tons, and with 10-inch-long teeth, this is Moby Dick. A blunt-snouted whale with an enormous, rectangular head a third of its body length, it has no teeth in its upper jaw, and in its slight, short, narrow lower jaw it has the largest teeth anywhere in the world. It is dark gray-brown, and has a wrinkled appearance, and white scarring all over from deep sea fish attacks, and has a dorsal hump rather than a dorsal fin. The males are much, much bigger than the females, and are the only ones seen in Antarctic waters (the females do not go down). Its brain weighs 20 pounds (as opposed to a human's, say, which weighs 3). It feeds primarily on squid; several specimens have been found with as many as 8000 squid beaks in their stomach.

Spermwhale Ridge. 65°47' S, 62°52' W. A sharp-crested ridge running roughly E-W for 13 km at an elevation of about 800 m, and flanking the S side of Flask Glacier, W of Bulkington Pass, on the Oscar II Coast of Graham Land. In keeping with the practice of naming several features in this area after things to do with the novel *Moby Dick*, this ridge was named by UK-APC on Feb. 15, 1988. US-ACAN accepted the name.

Sperre, Harald H. b. Feb. 5, 1909, Giske, Norway, son of fisherman Hans J. Sperre and his wife Hanna. He went to sea in 1931, and on Aug. 1, 1935, at Ålesund, signed on as 3rd engineer on the *Wyatt Earp* for Ellsworth's 1935-36 expedition to Antarctica. He was back for Ellsworth's 1938-39 expedition.

Sperring Point. 67°24' S, 59°31' E. A rocky point about midway along the W side of William Scoresby Bay, on the coast of Mac. Robertson

Land. Discovered and named by the personnel on the *William Scoresby* in Feb. 1936. US-ACAN accepted the name in 1953, and ANCA followed suit on July 22, 1959.

Isla Spert *see* **Spert Island**

Spert Island. 63°51' S, 60°57' W. A triangular little island, rising to a height of 525 feet above sea level, off the W extremity of Trinity Island, in the Palmer Archipelago. It was known to early 19th-century sealers. Charted in 1902 by SwedAE 1901-04, and named by them as Île Duse, for Lt. Duse. It appears as such on their 1904 map. On a British chart of 1917 it appears in error as Cape Charles, and on a 1946 USAAF chart it appears in error as Farewell Rock. This last error was perpetuated on a Chilean chart of 1947 (translated as Isla Despedida), on an Argentine chart of 1948 (as Roca Farewell), and on an Argentine chart of 1954 (as Roca Despedida). Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Sir Thomas Spert (d. 1541), controller of the king's ships for Henry VIII, founder and first master of the Mariners of England (which later became the corporation of Trinity House in 1514). US-ACAN accepted the name later in 1960. It appears as such on a British chart of 1961. Apparently, both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Isla Despedida, but, it seems, the Argentines (at least) call it Isla Spert these days. This is all from the gazetteers; however, *see also* **Farewell Rock**.

Mount Speyer. 78°52' S, 160°42' E. Rising to 2430 m (the New Zealanders say 2487 m), directly at the head of Kehle Glacier, SSW of Mount Harmsworth, in the Worcester Range, NE of Moore Bay, on the W side of the Ross Ice Shelf. Discovered by BNAE 1901-04, and named by Scott for New York-born Sir Edgar Speyer (1862-1932), of Speyer Brothers, the London financial firm, who donated £5000 toward the *Morning* relief expedition, during Scott's expedition. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Spheroid Hill. 77°47' S, 163°56' E. A mostly ice-free summit, rising to 1230 m, 1.5 km E of Ellipsoid Hill, on the N side of Blue Glacier, in Victoria Land. In keeping with naming several features in this area after things surveying, this hill was named by NZ-APC in 1992, for the spheroid (sometimes referred to as the ellipsoid), a mathematical figure formed by revolving an ellipse about its minor axis. US-ACAN accepted the name in 1993.

Sphinx *see* **Beehive Hill**, **Giza Peak**, **Sphinx Mountain**

[1]**The Sphinx** *see* **Sphinx Hill**

[2]**The Sphinx**. 62°40' S, 60°09' W. An amazingly-shaped, ice-covered rock formation on Catalunyan Saddle, Friesland Ridge, in the Tangra Mountains of Livingston island, in the South Shetlands. This feature, which seems to have been named by the Bulgarians, has not yet made its way into the gazetteers. It does look remarkably like a sphinx.

Mont Sphinx *see* **Mount Sphinx**

Mont du Sphinx *see under* D

Mount Sphinx. 72°21' S, 31°15' E. Rising to 2200 m, the highest peak in the Prince de Ligne Mountains, 14 km N of the Belgica Mountains. Discovered by BelgAE 1957-58, under Gaston de Gerlache, who named it Mont Sphinx, for its resemblance to a sphinx when seen from a distance. US-ACAN accepted the name Mount Sphinx in 1965.

Roca Sphinx *see* [1]**Sphinx Rock**

Sphinx Glacier. 62°11' S, 58°27' W. Between Ecology Glacier and Baranowski Glacier, SW of Sphinx Hill, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, in association with the hill.

Sphinx Hill. 62°11' S, 58°27' W. A conspicuous, isolated black hill, rising to 145 m, 2.5 km NNW of Demay Point, on the W shore of Admiralty Bay, King George Island, in the South Shetlands. First charted (but not named) by FrAE 1908-10. Surveyed by Frank Hunt's 1951-52 RN Hydrographic Survey unit on the *John Biscoe*, it appears on his 1952 chart as The Sphinx, a descriptive name. UK-APC accepted the name Sphinx Hill on Sept. 27, 1954, and it appears that way in the 1955 British gazetteer, and also on a British chart of 1962. US-ACAN acepted the name in 1956. On a 1963 U.S. chart it appears misspelled as Spinx Hill.

Sphinx Island. 65°54' S, 64°53' W. An island, 3 km long in a NW-SE direction, and 1.5 km wide, with a bare rock summit with vertical faces on all 4 sides, it lies NE of Loqui Point, in the middle of the SW entrance to Barilari Bay, along the Graham Coast, on the W coast of Graham Land. Discovered in Aug.-Sept. 1935, by BGLE 1934-37, and named by them for its shape. It appears on Rymill's 1938 map of the expedition, and also on a British chart of 1948. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It was re-surveyed by Fids from Base J in 1957-58. On an Argentine chart of 1946 it appears erroneously as Isla Férin (*see* **Ferin Head**). The name was translated fully as Isla Esfinge on a Chilean chart of 1947, and that was the name accepted not only by the Chilean gazetteer of 1974, but also by the Argentine gazetteer of 1970.

Sphinx Mountain. 71°27' S, 11°58' E. A linear mountain, rising to 1850 m, and extending in a N-S direction for 10 km, 8 km E of the Nordwestliche Insel Mountains, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and Ritscher named its northern peak Sphinxkopf (i.e., "sphinx head"). The concept of a sphinx was extended to the entire mountain by NorAE 1956-60, who called it Sfinksen (i.e., "the sphinx") and by SovAE 1961, who called it Gora Sfinks (i.e., "sphinx mountain"). They both still use those names. In 1970, US-ACAN accepted the name Sphinx Mountain. Ritscher's northern peak is, today, called Sphinxkopf Peak by the Americans, and Sfinkskolten by the Norwegians. *See* **Sphinxkopf Peak**.

Sphinx Peak. 72°17' S, 165°36' E. A prominent massive summit, rising to about 2500 m, 1.5 km S of Pyramid Peak, in the SE part of the Destination Nunataks, W of the Millen Range, on the Polar Plateau. Named descriptively by the Northern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, in association with Pyramid Peak, with which it shares the same group of peaks. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Sphinx Point. On the W shore of Admiralty Bay, on King George Island, in the South Shetlands. A term no longer used.

[1]**Sphinx Rock**. 60°37' S, 46°05' W. A rock in water, immediately off the SW end of Monroe Island, and forming the W entrance point of Sandefjord Bay, Coronation Island, in the South Orkneys. Surveyed by the personnel on the *Discovery II*, in 1933, and named descriptively by them. It appears on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1945 Argentine chart, as Roca Sphinx, but on a 1953 Argentine chart it has been translated all the way, as Roca Esfinge. That last was the name accepted by the Argentine gazetteer of 1970.

[2]**Sphinx Rock**. 71°27' S, 169°30' E. A high (50 m) rock in water (it is really a small island), in front of Islands Point, along the W side of Robertson Bay, in northern Victoria Land. Charted and named for its shape by Campbell's Northern Party during BAE 1910-13. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Sphinx Valley. 77°59' S, 162°01' E. A shallow hanging valley, 1.5 km long, running NW parallel to Columnar Valley, and terminating just W of the summit of Table Mountain, at the NW side of the Royal Society Range, in Victoria Land. So named by Alan Sherwood, NZGSAE party leader in the area in 1987-88 because of the distinctive rock formations along its NW wall, one of which is a particularly good likeness of the Egyptian Sphinx. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Sphinxkopf Peak. 71°25' S, 11°57' E. Rising to 1630 m, at the N end of Sphinx Mountain, in the N part of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named descriptively by Ritscher as Sphinx. *See* **Sphinx Mountain** for a more complete history of this feature. US-ACAN accepted the name Sphinxkopf Peak in 1970. The Norwegians call it Sfinksskolten.

Spice, Walter. b. 1863, St Leonards, Hastings, Sussex, son of coachman John Spice and his wife Ann Baxter. In July 1879, he and his older brother Alfred were sentenced to 2 years on the reformatory ship *Cornwall*, for breaking into a shop. After this, he joined the Merchant Navy, and plied for years between England and the Antipodes. He was an able seaman on the *Nimrod*, during the first half of BAE 1907-09. Or was he? He is listed among the crew, but, on Feb. 17, 1908, he arrived in Sydney as an able seaman

aboard the *Dunbar*, out of Hokianga, NZ. This date would preclude a trip to Antarctica, as the *Nimrod* was still at Cape Royds on Feb. 17, and did not arrive back in NZ from the Ice until March 1908. So, while he had undoubtedly signed onto the *Nimrod* in 1907, before she left for Antarctica, it is impossible for him to have been on the ship in Antarctic waters. He continued to ply Australian and NZ waters for some years.

Spicer, John Orrin. b. Sept. 19, 1835, Groton, New London, Conn., son of ship's captain John Grant Spicer and his wife Clarissa Kimball. On Nov. 27, 1862, he married Nancy Matilda Avery, and they lived in a fine house in Groton. They would have only one child, in 1873, but he died in infancy. 6 feet tall, Spicer was skipper of the New London whaler *S.B. Howes*, between 1864 and 1866, and commanded the *Nile*, 1874-76, several times in his career going to the Arctic, mostly Baffin's Bay, where he was known as a friend of the Eskimos. On his second voyage on the *Nile*, he was knocked overboard by a whale fluke, and almost drowned. He was captain of the *Sarah W. Hunt*, in the South Shetlands in 1889-90. He died in 1903.

Cape Spieden. 66°25' S, 126°44' E. About 6 km E of Al'bov Rocks, along the W shore of Porpoise Bay, about 27 km SE of Cape Goodenough, on the Banzare Coast. Delineated from air photos taken by OpHJ 1946-47, and named by US-ACAN in 1955, for William Speiden [sic]. *See also* **Mys Smirnova**.

Spieden, William *see* **Speiden, William**

Spiers, Raymond Reid Robert "Ray." Also known as "Sperocious." b. Feb. 24, 1927, Derby, Miss., son of farmer and engineer Randolph Spiers and his wife Olgia Fornea. He joined the Navy in 1944, and served in the Pacific as a baker-cook. After the war he served on the East Coast, married Katherien Kowalski on Jan. 27, 1947, and was at Damnett, Va., when he saw the notice for "volunteers for the South Pole." He went to Davisville, R.I., for training, and then shipped south as cook on the the *YOG-34* (q.v. for details). After helping to build McMurdo, he wintered over there, was with the second group of Seabees who flew to the Pole, on Nov. 25-26, 1956, and was cook at Pole Station in Nov. and Dec. 1956. He was the first man to stand at the South Pole with a Confederate flag (although *see* Gus Shinn). He was in the last party to fly out again, on Jan. 4, 1957, to McMurdo. He shipped out of McMurdo on the *Curtiss* (q.v. for itinerary), and was transferred to Norfolk Naval Air Station, now working mostly as a mechanic. He was initially cook at Byrd Station for the 1959 winter-over, but took over mechanic duties while there. He retired from the Navy on May 7, 1964, and became a heavy equipment mechanic in civilian life, returning to Mississippi. He married again, to Judy Ann Baughman (née Smith) in 1972.

Spiers Nunatak. 85°20' S, 125°36' W. An isolated nunatak, 13 km WNW of Mount Brecher, on the N side of Quonset Glacier, in the Wisconsin Range of the Horlick Mountains. Mapped by USGS from ground surveys, and from air photos taken by USN, 1960-64. Named by US-ACAN in 1967, for Ray Spiers.

Spiess, Fritz A. b. 1881. Hydrographer and commander of the *Meteor* during the German Atlantic Expedition, 1925-27. In fact, Spiess originated the concept of such an expedition. He succeeded Capt. Alfred Merz as scientific leader, when Merz died at sea on Aug. 25, 1925, before the ship got to Antarctica. Later a vice admiral, he died in 1959.

Spiess Glacier. 72°12' S, 61°18' W. A glacier, about 13 km long, on Merz Peninsula, flowing N into a small bay to the E of the Hjort Massif on the S side of Hilton Inlet, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken in 1968-69. Surveyed by BAS personnel from Base E in 1974-75, and named by UK-APC on Feb. 7, 1978, for Fritz Spiess. US-ACAN accepted the name, and it appears on the 1979 USGS sketch map of the N part of Palmer Land, and also in the 1980 British gazetteer.

Spiessgipfel. 72°58' S, 3°50' W. A summit on the W side of Huldreslottet Mountain, in the extreme S part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Named by the Germans, for Fritz Spiess.

Spigot Peak. 64°38' S, 62°34' W. A conspicuous black peak, equally visible from Gerlache Strait and Schollaert Channel, rising to 286 m, and marking the SW entrance point of Orne Harbor, on the Arctowski Peninsula, on the Danco Coast, on the W coast of Graham Land. ArgAE 1948-49 surveyed it, and named it Nunatak Negro. It was charted by Fids on the *Norsel* in April 1955, and named by them as Spigot Peak, from its appearance (in Britain a spigot is not so much a faucet, but a wooden peg; a faucet in the UK is invariably called a tap). UK-APC accepted that name on Sept. 4, 1957, and it appears as such on a 1959 British chart. US-ACAN followed suit with the British naming in 1963. On a 1954 Argentine chart it appears as Monte Nunatak Negro, but both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Nunatak Negro. *See also* **Sophie Rocks**.

Spika, Germán *see* **Órcadas Station**, 1933

Cape Spike *see* **Spike Cape**

Spike Cape. 77°18' S, 163°43' E. A bare, rocky point, the N flank of the Bay of Sails, 6 km (the New Zealanders say 10 km) S of Dunlop Island, and 11 km N of Gneiss Point, in the Convoy Range, along the coast of Victoria Land. Once covered by Wilson Piedmont Glacier, but now that the ice has receded, it lies in front of that feature. Named Spike Point by Robert Forde, a member of Grif Taylor's Western Journey Party, during BAE 1910-13 (which mapped it), for its likeness to Spike Island, in Plymouth, England. It was later re-defined. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ gazetteer, but as Cape Spike. Today, however, the New Zealanders also call it Spike Cape.

Spike Point *see* **Spike Cape**

Spilhaus Inlet. 80°05' S, 43°45' W. The most southerly of 3 small ice-filled inlets indenting the E side of Berkner Island, in the Filchner Ice Shelf (*see also* **Roberts Inlet** and **McCarthy Inlet**). Discovered and roughly mapped by personnel from Ellsworth Station in 1957-58, and named by them as Skidmore Bay, for Donald Skidmore (*see* **Skidmore Cliff**). Mapped by USGS from U.S. Landsat images taken in the 1970s. Re-named by US-ACAN in 1988, for South African-born meteorologist and oceanographer Athelstan Frederick Spilhaus (1911-1998), member of the U.S. National Committee for IGY, 1957-58, and of the National Science Board, 1966-72. He had invented the bathythermograph, a device used, along with sonar, to detect U-boats during World War II. UK-APC accepted the name on May 13, 1991.

Spillane Fjord. 65°20' S, 62°10' W. In front of Crane Glacier, in the W part of Exasperation Inlet, on the Oscar II Coast of Graham Land. 16 km long and 3 km wide, its greatest depth is 1250 m, at the far W end of the fjord, and its average depth is 1000 m. This fjord was created by the catastrophic retreat of Crane Glacier, which was itself caused by the break up of the N portion of the Larsen Ice Shelf in March 2002, and its creation was documented by satellite images. The new feature was first visited by ship in April 2006, when its depth and dimensions were determined by swath bathymetry. Named by US-ACAN on July 17, 2007, for Joshua John "Josh" Spillane (b. Oct. 17, 1974, Casper, Wyo.), a marine technician from Bellingham, Wash., an employee of Raytheon Polar Services who served for 10 years (and more than 30 Antarctic cruises) aboard the *Laurence M. Gould* and the *Nathaniel B. Palmer*. On April 17, 2006, Mr. Spillane was in the Drake Passage, aboard the *Gould*, headed back to Chile from Palmer Station, was last seen at 7 o'clock that morning, and by noon was declared missing.

Spiller, Ferdinand. Almost certainly born in Ireland (probably Cork, where there were Ferdinand Spillers not a-plenty but certainly in meagre abundance). He emerges as mate on the *Indian*, plying the South Seas and the African coasts until 1820, when he became skipper, and took the vessel to the South Shetlands for the 1820-21 sealing season. On his return, on July 1, 1821, he married Mary Anne Peterson in Limehouse, London, and they had a son, Ferdinand Oglethorpe Spiller, in 1825. Capt. Spiller remained as skipper of the *Indian* until 1824. He died at sea before 1836 (i.e., it was not in London), because that was when Mary Anne married William Venables, in Sept. of that year, in Islington. What became of the son is unknown.

Spiller Cove. 62°29' S, 60°43' W. A small, very open cove, which affords no protection, 5 km SSW of Black Point, between that point and Cape Shirreff, along the N coast of Livingston Island, in the South Shetlands. On the SW side of this cove is a beach where one may disembark. Roughly charted by Robert Fildes in 1820-21, and named by him as Spillers Cove, for Ferdinand Spiller. On Powell's chart published in

1822, it appears as Speller's Cove. It was further charted by the Discovery Investigations in 1935. On a 1943 U.S. Hydrographic Office chart it appears erroneously as Shirreff Cove, and, as a consequence, on a 1949 Argentine chart as Caleta Shirreff. On an Argentine chart of 1953 it appears as Caleta Garibaldi, named for Giuseppe Garibaldi (1807-1882), the great Italian patriot. That name was accepted by the 1970 Argentine gazetteer. It appears as Speller Cove on a USHO chart of 1956. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. UK-APC accepted the name Spiller Cove on July 7, 1959 and US-ACAN followed suit in 1960. It appears on a 1962 Chilean chart as Caleta Speller (sic), and that name was accepted by the Chilean gazetteer of 1974. Last plotted by the UK, in late 2008.

Spillway Icefall. 85°01' S, 166°22' W. A spectacular icefall descending northward through the central part of the Duncan Mountains, in the Queen Maud Mountains, into the Amundsen Coast. It cascades through the mountains, giving the appearance of a turbulent spillway on a dam. Named by Ed Stump, who worked in this area as part of an Arizona State University geological party, in 1974-75. US-ACAN accepted the name. Originally plotted in 85°03' S, 166°30' W, it has since been replotted.

Spin Pole. The imaginary point at which the earth's axis "protrudes." Its geographic position, as it were, would be the same as the South Pole.

Spincloud Heights. 67°50' S, 67°09' W. This feature, running in an E-W direction at a height of about 645 m, borders the NE side of Shoesmith Glacier, on Horseshoe Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed and climbed by FIDS between 1957 and 1959, and named by them for the clouds of spindrift blowing off the heights, giving warning of approaching storms. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960.

Spíndola, Ignacio *see* **Espíndola**

Spindrift Bluff. 69°35' S, 68°02' W. A bluff trending E-W at an elevation of about 700 m, close S of Mistral Ridge, on the N side of Eureka Glacier, at George VI Sound, on the W side of the Antarctic Peninsula. Surveyed by BAS personnel from Base E in 1971-72, and so named by UK-APC on Dec. 8, 1977 because a local wind blows in this area and spindrift sweeps from the bluff, when it is calm elsewhere. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Spindrift Col. 60°41' S, 45°37' W. Running NW-SE between hills at an elevation of about 100 m, between Paternoster Valley and Spindrift Rocks, in the north-central part of Signy Island, in the South Orkneys, 0.8 km SE of Spindrift Rocks, in association with which it was named by UK-APC on Dec. 20, 1974. BAS did biological work here up to 1973. US-ACAN accepted the name in 1975.

Spindrift Cove. 60°41' S, 45°39' W. A cove, S of Spindrift Rocks, Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with the rocks.

Spindrift Ridge. 60°41' S, 45°38' W. A ridge running SW, and rising to Springtail Spur, on Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with the rocks.

Spindrift Rocks. 60°41' S, 45°39' W. A group of ice-free rocks in water, rising to about 15 m above sea level, about 1.2 km SW of North Point, N of Express Cove, and close to the W of Signy Island, in the South Orkneys. Surveyed in 1947 by FIDS, and named by them for the spindrift, or sea spray, which forms over these rocks during westerly gales. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Isla Spine *see* **Spine Island**

Spine Automatic Weather Station. 67°42' S, 66°06' W. American AWS at an elevation of approximately 1600 feet, NW of Lewis Glacier, on the Bowman Coast, on the Antarctic Peninsula.

Spine Island. 60°36' S, 46°02' W. A narrow island composed of several aligned rock segments, between Monroe Island (of the Larsen Islands) and the W end of Coronation Island, in the South Orkneys. Discovered and roughly charted by Powell and Palmer in Dec. 1821. Surveyed by the personnel on the *Discovery II*, in 1933, and named by them as Spine Island, for its appearance. It appears on their 1934 chart, quadrisected by narrow E-W channels, drying at low tide. It appears on a 1948 British chart as Spine Islet, and that was the name accepted by US-ACAN in 1953, and by UK-APC on Sept. 20, 1955. It appears on an Argentine chart of 1945 as Isla Spine, and that was the name accepted by the 1970 Argentine gazetteer. However, today, the Argentine use the fully translated name Islote Espina. On July 7, 1959, UK-APC redefined it as Spine Island (its original name, that is), and US-ACAN accepted that. However, for some reason, it still appears as Spine Islet in the 1961 British gazetteer.

[1]**The Spire**. 68°18' S, 66°53' W. An isolated rock pinnacle, or peak, rising to about 150 m on the W side of Providence Cove, at the NW end of the Blackwall Mountains, on the S side of Neny Fjord, on the Fallières Coast, on the W coast of Graham Land. BGLE 1934-37 were probably the first to see it, while sledging, but if they did, they did not map it. First climbed on Jan. 17, 1948, by a combined team of RARE 1947-48 personnel and Fids from Base E. Named in 1949 as The Needle, by Bill Latady, who had been with RARE 1947-48. That same year, Dick Butson referred to it as Pinnacle, or Sanctuary Pinnacle. Surveyed by FIDS in 1948-49, and named by them as The Spire, and that was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. There is also a singular 1953 British reference to it as The Needle.

[2]**The Spire**. 78°09' S, 161°37' E. A prominent rock spire, or peak, rising to over 2600 m, surmounting the W extremity of Rampart Ridge, 13 km NE of Upper Staircase, in the area of Skelton Glacier, in Victoria Land. Surveyed and descriptively named in Feb. 1957, by the NZ party of BCTAE 1957-58. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Spiret *see* **Spiret Peak**

Spiret Peak. 72°31' S, 3°38' W. A rock peak in the NW part of Borg Mountain, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them as Spiret (i.e., "the spire"). US-ACAN accepted the name Spiret Peak in 1966.

Cape Spirit. 78°12' S, 166°45' E. The easternmost point on Black Island, in the Ross Ice Shelf. Visited by NZGSAE 1958-59, and named by them for the spirited and almost constant winds blowing through the strait between Black Island and White Island. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1963.

The *Spirit of Enderby*. A 72-meter, red and white, fully ice-strengthened cruise ship, built in 1984 in Finland as the Russian research vessel *Professor Kromov* (or *Professor Khromov*), she is the sister ship to the *Akademik Shokalskiy*. She was refurbished in Lyttelton, NZ, in 2004, and made her first southern tourist trip for Heritage Expeditions in 2004-05, but only as far south as Macquarie Island. She can take 48 passengers, and carries, among other equipment, a helicopter. Capt. Nikolay Vinogradov. She was in Antarctica in 2005-06, at Cape Denison.

The *Spirit of Sydney*. An 18.6-meter Australian sloop, built for round-the-world racing. Don and Margie McIntyre bought her, and converted her into an expedition yacht, at a cost of $300,000. **1994-95**: The *Spirit of Sydney* sailed from Sydney to Commonwealth Bay, under the command of skipper Stephen Corrigan, and deposited the McIntyres on the continent of Antarctica, where they wintered-over in their refugio called Gadget Hut, in 1995. The *Spirit of Sydney* then returned to Sydney. **1995-96**: The *Spirit of Sydney* left Sydney to relieve the McIntyres, took them back to Sydney, then sailed to Hobart. **1996**: The *Spirit of Sydney* left Hobart, bound for Commonwealth Bay again, and from there to the South Magnetic Pole, in what was called the South Magnetic Pole Expedition. That year Ian Kiernan raced her in the 1996 BOC Challenge. **1996-97**: The *Spirit of Sydney* took Alfred Winkelmyer down to Gadget Hut for the 1997 winter, and then returned to Sydney. **1997-98**: The *Spirit of Sydney* went to Commonwealth Bay, to relieve Winkelmyer and bring him back to Sydney. **1998-99**: The *Spirit of Sydney* left Sydney, bound for Commonwealth Bay, to deposit Jim and Yvonne Claypole at Gadget Hut for the 1998 winter. Then back to Sydney. **1998-99**: The *Spirit of Sydney* left Sydney, bound for Commonwealth Bay, to relieve the Claypoles. **Dec. 26-30, 2000**: The *Spirit of Sydney* came in 28th in the Telstra Sydney to Hobart race. In the week or two after this race, the vessel was

converted from racing yacht into Antarctic expedition yacht. **Jan. 11, 2001**: The *Spirit of Sydney* left Hobart, bound for Commonwealth Bay. Skipper was Chris Roberts, there were 9 crew, and the yacht was carrying the members of Expedition Ice Bound (q.v.). After he had sold the *Tulooka,* Roger Wallis bought the *Spirit of Sydney*, and sailed her to Antarctica in 2002-03.

The *Spiro*. A 450-ton, 59.35-meter Argentine ship, built as a minesweeper in 1937, at Río Santiago, at a cost of $900,000, and named for Greek-born Capt. Miguel Samuel Spiro, the hero who fought with Almirante Brown (*see* **Brown, Guillermo**). She was the sister ship of the *Bouchard*, was launched on June 7, 1937, and commissioned into the Argentine Navy on Jan. 19, 1938. She was a patrol ship at the Antarctic Peninsula (not part of an expedition, as such) in Aug. and Sept. 1947, during a special winter voyage from Ushuaia, to study ice conditions in the Drake Passage and the northern part of the Antarctic Peninsula. Captain was Fermín Eleta. She was back as a patrol ship studying ice conditions and meteorology in the Drake Passage and the northern part of the Antarctic Peninsula, in late 1948, under the command of Captain Luis A. Jaccard. In 1962 she was transferred to the Coast Guard.

Cerro Spiro *see* **Spiro Hill**

Monte Spiro *see* **Spiro Hill**

Morro Spiro *see* **Spiro Hill**

Spiro Hill. 62°16' S, 59°00' W. Rising to 125 m, at the head of Edgell Bay, Nelson Island, in the South Shetlands. Named by ArgAE 1952-53, as Monte Spiro, for Capitán Miguel Samuel Spiro, the Argentine hero who fought with Almirante Brown. Don Miguel, originally a Greek, exploded the ship's magazine rather than surrender it to the enemy. He died as a result. It appears as such on their 1953 chart, and that name was accepted by Argentina in 1956. However, it appears on two 1957 Argentine charts as Cerro Spiro (which, like Morro Spiro, means "Spiro hill") and as Monte Spiro (i.e., "mount Spiro"). It appears on a third Argentine chart of that year as Cerro Sudeste (i.e., "south east hill"). The name accepted by the Argentine gazetteer of 1970 was Cerro Spiro. However, today the Argentines tend to favor Monte Spiro. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. On Aug. 31, 1962, the British, who have always had a problem with Argentina, renamed it (for themselves only) as Strachan Hill, after John Strachan of Edinburgh, coowner of Weddell's ship, the *Jane* (*see also* **Nelson Island**). In 1965, US-ACAN (who do not have a problem with Argentina) accepted the name Spiro Hill in 1965. The Chileans (who do have a problem with Argentina) call it Cerro Ariel, after Dr. Ariel Gallardo, researcher at the University of Concepción, who conducted physical and chemical oceanographical experiments here during ChilAE 1970. Last plotted by the UK, in late 2008.

Spirogyra Lake. 60°42' S, 45°38' W. One of the group of small lakes just to the SW of Paternoster Valley, 0.4 km SE of Thulla Point, in the NW part of Signy Island, in the South Orkneys. BAS conducted freshwater biological studies here from 1970. Named by UK-APC, on Dec. 9, 1981, for the genus of algae called Spirogyra, a species of which grows abundantly in this shallow lake in the summer. US-ACAN followed suit with the naming.

Spirtle Rock. 65°13' S, 64°20' W. A rock awash in the navigable passage N of The Barchans, between that feature and the Anagram Islands, in the Argentine Islands, off the Graham Coast, on the W coast of Graham Land. Charted by an RN Hydrographic Survey unit on the *Endurance* in 1969, and named descriptively by them for the waves breaking on the rock ("spirtle" means "to cause to splash"). UK-APC accepted the name on Nov. 3, 1971, and US-ACAN followed suit in 1972. It appears on a British chart of 1974, and in the British gazetteer of that year.

Spit. 71°18' S, 170°13' E. The westernmost part of Ridley Beach, Robertson Bay, in northern Victoria Land. Named by Campbell's Northern Party, during BAE 1910-13. It appears in the 1958 NZ provisional gazetteer.

The Spit. 61°29' S, 55°29' W. Name also seen as Gibbs Spit (Chris Furse referred to it as that in 1977). An isthmus, or spit, made of shingle and boulders, 50-80 m long, 1 m above the level of the high tide, in the E part of Gibbs Island, in the South Shetlands, it connects Furse Peninsula (the narrow, eastern part of the island, this peninsula sometimes being called Narrow Isle at one time) and the main part of Gibbs Island. Charted and named descriptively by the personnel on the *Discovery II* in Jan. 1937. It appears on their chart plotted in 61°31' S, 55°30' W. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit in 1965. It was re-plotted in 61°30' S, 55°28' W, but was re-plotted again, by the UK, in late 2008. *See* **Furse Peninsula** for more on the nature of The Spit.

Punta Spit *see* **Spit Point**

Spit Point. 62°32' S, 59°47' W. The extreme N part of a long, narrow gravel spit of thick and pebbly black sand which forms a natural shelter, a mole, really, of no more than 2 m in height, and which is, in effect, the SW side of the entrance to Yankee Harbor (the British say it is the E entrance point of Yankee Harbor), on Greenwich Island, in the South Shetlands. Known to sealers from 1820, it was roughly charted on Powell's map of 1822. Re-surveyed by personnel on the *Discovery II* in 1935, and descriptively named by them. It appears on their charts, and also on a 1942 British chart, and one from 1948. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also on a British chart of 1962. It appears on an Argentine chart of 1949 as Punta Spit, but ArgAE 1952-53 renamed it Punta Lengua (i.e., "tongue point"). It appears as such on their 1953 chart, but on a 1954 Argentine chart as Punta Banco. The name Punta Lengua was the one accepted by the 1970 Argentine gazetteer. The Chilean gazetteer of 1974 accepted the name Punta Spit. Last plotted by the UK, in late 2008. The bluff at the base of the spit was named Punta Varas (q.v.) by the Chileans on a 1962 chart, and that name was accepted (as a separate feature) by the Chilean gazetteer of 1974.

Spitz Ridge. 75°49' S, 114°52' W. Prominent, and mainly ice-covered, it forms the E end of the Toney Mountain massif, E of Cox Bluff, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Armand Lawrence "Larry" Spitz (b. 1939; son of famous astronomer Armand Neustadter Spitz), ionosphere physicist who wintered-over at Byrd Station in 1966. He also spent summers at Byrd Station, and at Hallett Station.

Mount Spivey. 69°31' S, 69°50' W. A flat-topped, mainly ice-covered mountain, rising to 2135 m, on the W side of Toynbee Glacier, 14 km S of Mount Nicholas, in the N part of the Douglas Range, in the N part of Alexander Island. Photographed aerially on Feb. 1, 1937, by BGLE 1934-37, and again in late 1947, by RARE 1947-48. Surveyed from the ground in 1948 by Fids from Base E, and named by them for Bob Spivey. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a U.S. Hydrographic Office chart of 1955. In 1959 FIDS cartographers re-mapped it in 69°32' S, 69°53' W, from the RARE photos. It was later re-plotted.

Spivey, Robert Edward "Bob." In the Army they called him "Boy Spivey" ("boy" was a common nickname in those days), and in Antarctica they called him "Boy," or "Spiv." b. March 25, 1921, in Chelsea, London, son of Edward Walter Spivey and his wife Elsie Pearce. After school (the name of the school was Merton, but it was not Oxford, as has sometimes been printed), he started as a bluebutton clerk in a stockbroking firm in the City, then, just after the outbreak of World War II, joined the London Stock Exchange Cadet Corps, and, by the summer of 1940, had been commissioned into the Royal Fusiliers. He was picked by John Lander, founder of the Pathfinder Company, to be the second ever World War II British combat paratrooper (Lander being the first), with the Parachute Regiment. He served in North Africa in 1942 and Sicily in 1943, and was in the legendary Popski's Private Army for a while, in northern Italy. In 1944 he was one of the first Pathfinders to land at Arnhem, and by the age of 24 was a major. After the war he was in Palestine, and, in 1947 joined FIDS as a handyman (a term later re-designated as general assistant) who wintered-over with Fuchs at Base E (Stonington Island) in 1948 and 1949. He took part in the FIDS sledge journey to George VI Sound, in 1949. It was on his return to Stanley that he met Una Sedgwick (*see* **Una Peaks**), and he returned to London on April 16, 1950, aboard the *Andes*, from Santos, Brazil, and worked for the FIDS Scientific Bureau in London. In 1953 he was the agent at Thule for the British North Greenland

Expedition. Succeeding Ken Butler, he was magistrate on South Georgia from April 20, 1954 until April 3, 1957, and, after his term was up, left South Georgia, arriving back in England on June 3, 1957, on the *Andes*, from Montevideo. Working for the Colonial Office, he was transferred to the Solomons, and in Feb. 1960, in Dorset, England, married Una (they had kept in touch), and they went back to the Solomons. After leaving the Colonial Service in the early 1970s, he was on his way back to England when he was offered a job in Australia, and moved to Victoria, where he died on Feb. 8, 1994.

Spjotöy *see* **Canopus Island**

Spjotøyholmane *see* **Smith Rocks**

Spjotöyskjera *see* **Wiltshire Rocks**

Splettstoesser Glacier. 79°12' S, 84°09' W. About 56 km long, it flows ENE from the plateau just S of Founders Escarpment, through the Heritage Range, to the S of the Founders Peaks and the Anderson Massif, to join Minnesota Glacier. Named by the University of Minnesota Ellsworth Mountains Party 1961-62, who explored here, for John Frederick Splettstoesser (b. Oct. 17, 1933, Waconia, Minn.), geologist with the party. US-ACAN accepted the name in 1964. *See also* **Splettstoesser Pass**.

Splettstoesser Pass. 71°38' S, 167°15' E. A snow-covered pass at a height of about 2200 m above sea level, running E-W through the Findlay Range to the NW of Gadsden Peaks, in the Admiralty Mountains of Victoria Land. Named by Rob Findlay, leader of a 1981-82 NZARP field party, which used this pass in travel between Field Névé and Atkinson Glacier (a tributary to Dennistoun Glacier), for John Splettstoesser (*see also* **Splettstoesser Glacier**), of the Minnesota Geological Survey, who was field coordinator for USARP field projects during the International North Victoria Land Project of 1981-82. US-ACAN and NZ-APC accepted the name together in 1982.

The *Splint*. A whale catcher, in Antarctic waters in the 1934-35 season, along with the *Klem*. Both vessels, working for the factory ship *Pioner*, encountered a hurricane on March 26, 1935, and ran before it, into storms of sleet and thick snow. They entered a lead in the pack-ice, hoping for shelter, but instead were crushed by ice in 63°S, 53°28' W, 100 miles E of Joinville Island, on April 1, 1935.

Splinten *see* **Splinten Peak**

Splinten Peak. 72°41' S, 3°59' W. A nunatak, one of the Seilkopf Peaks, just N of Pilarryggen, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Splinten (i.e., "the splinter"). US-ACAN accepted the name Splinten Peak in 1966.

Splinter. 62°01' S, 58°08' W. A solitary rock splinter in the Mount Hopeful massif, above Gniezno Glacier, on King George Island, in the South Shetlands. Named descriptively by the Poles in 1981, as Odlupek, it appears on Tokarski's 1981 map. The name has been translated.

Split Lakes. 68°38' S, 78°11' E. An elongated lake with a split in the middle, in the Vestfold Hills. Due to the split, at times it is one lake, and at other times two. Named descriptively by ANCA on July 26, 1983.

Split Rock. 64°47' S, 64°04' W. A tiny but distinctive oval-shaped island split to the waterline in a N-S direction, about 160 m NW of Janus Island, off the SW coast of Anvers Island, not far from Palmer Station. Charted (but not named) by an RN Hydrographic Survey unit in 1956-58. Named descriptively in 1972, by USARP personnel at Palmer who had worked at this feature since 1965. UK-APC accepted the name on Dec. 20, 1974, and US-ACAN followed suit in 1975.

Splitwind Island. 65°02' S, 63°56' W. An island, 0.4 km long, off the N end of Turquet Point, Booth Island, in the Wilhelm Archipelago, of the Graham Coast, on the W coast of Graham Land. Charted in 1904 by FrAE 1903-05, and named by Charcot as Îlot de Rothschild, or Île de Rothschild, named for Alphonse de Rothschild, French banker baron and sponsor of the expedition. It appears as Rothschild Island on a 1942 USAAF chart. On a 1943 U.S. Hydrographic Office chart this island, and nearby rocks, appear as "de Rothschild Islets," and, as a consequence, also on a 1953 Argentine chart (translated as Islotes de Rothschild). Re-charted by Frank Hunt's RN Hydrographic Survey unit on the *John Biscoe*, in 1951-52, it appears on Hunt's 1952 chart as Croft Island. On an Argentine chart of 1954 it appears as Isla de Rothschild, and on one from 1957 as Islote Rothschild. Note: Spelling errors abound, but all are instantly recognizable. Renamed Splitwind Island on July 7, 1959, by UK-APC, in order to avoid confusion with Rothschild Island. The wind to the N of the island is often very different from the wind to the S of it. It appears as such on a British chart of 1960. US-ACAN accepted the British naming in 1971. The 1974 Chilean gazetteer accepted the name Islote Rothschild, and that is what the Argentines call it too.

Mount Spohn. 85°28' S, 171°59' E. A prominent peak, rising to 3420 m, it is the highest summit on the ridge bordering the W side of Burgess Glacier, on the W of the Otway Massif, in the Queen Maud Mountains. Named by US-ACAN in 1965, for Harry R. Spohn, USARP meteorologist at Pole Station in 1963.

Sponen. 72°15' S, 27°51' E. A small nunatak in the SE part of Balchen Mountain, in the E part of the Sør Rondane Mountains. Named by the Norwegians ("the shaving").

Sponges. Fauna which live on the sea bed near the coasts.

Sponholz Peak. 80°08' S, 83°00' W. A sharp peak rising to 1730 m, 4 km S of Moulder Peak, in the Liberty Hills of the Heritage Range. Named by US-ACAN in 1966, for Martin P. "Marty" Sponholz (b. Burlington, Wisc.), USARP meteorologist at Plateau Station in the winter of 1966. He wrote an account of the first year at Plateau Station, *Among the Magi*.

Sponskaftet *see* **Sponskaftet Spur**

Sponskaftet Spur. 71°39' S, 11°12' E. A spur extending W from The Altar, in the NW part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition, and named by them as Sponskaftet (i.e., "the wooden spoon handle"). US-ACAN accepted the name Sponskaftet Spur in 1970.

Sponsors Peak. 77°18' S, 161°24' E. Rising to over 1600 m, at the W side of the mouth of Victoria Upper Glacier, in Victoria Land. Named by VUWAE 1958-59, for their sponsors. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Spooner Bay. 67°36' S, 46°15' E. A bay, 10 km wide, on the coast of Enderby Land, just W of Tange Promontory, 20 km E of Freeth Bay, in Alasheyev Bight. Plotted by Australian cartographers from ANARE air photos taken in 1956. Visited by an ANARE party led by Don Styles on the *Thala Dan*, in Feb. 1961. Named by ANCA on July 4, 1961, for Senator William Henry Spooner (1897-1966; knighted in 1963), Australian minister for national development, 1951-64. US-ACAN accepted the name in 1965.

Mount Sporli. 79°33' S, 83°36' W. A prominent mountain, rising to 2255 m, at the E side of the head of Driscoll Glacier, in the Pioneer Heights of the Heritage Range. Named by the University of Minnesota Geological Party here in 1963-64, for Bernhard N. Sporli, geologist with the party. US-ACAN accepted the name in 1966.

The *Sposa*. A 316-ton, 130-foot whale catcher built in 1926, at Smith's Dock, Middlesbrough, for Salvesen's, who used her every season from 1926-27 to 1939-40 at Leith Harbour, in South Georgia. In April 1940, she was requisitioned by the Royal Navy for World War II, and returned to Salvesen's in 1945. After being refurbished, she was back at Leith Harbour for the 1945-46 season. She was catching for the *Southern Venturer*, in Antarctic waters, in 1946-47 and 1947-48, and then worked for Salvesen's in Newfoundland until 1951, when the company stopped work there. In 1956 she was sold to Johan Borgen's new Hawke Harbour Whaling Company, and was beached at Conception Harbor in 1968.

The *Sposmoker II*. Name means "the clown" in German. An 18.4-meter, 10-ton German catamaran (the first in Antarctic waters), built in 4 weeks in 1995, in Glückstadt, mostly by Gerd Engel of Oldendorf. She left Cuxhaven, and made her way to the Antarctic, visiting Deception Island, Lecointe Island, Nansen Island, Paradise Harbor, and Booth Island, skippered by Mr. Engel and Julio Verstaeten, in 1997-98. They got as far south as 65°07' S. Mr. Engel wrote a book, *Törn ins ewige Eis*. Within 4 weeks of arriving back in Cuxhaven, he was off again, this time to the Arctic. In 1999-2000, in the Atlantic, her mast broke 2400 miles from land, and

Engel drifted for 4 weeks before arriving at Ascension Island in Jan. 2000. On the last day of the month he sailed for Germany.

Spøta *see* **Spøta Spur**

Spøta Spur. 72°03' S, 4°03' E. A spur extending from the north-central part of Mount Hochlin, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Spøta (i.e., "the knitting needle"). US-ACAN accepted the name Spøta Spur in 1966.

Spouter Peak. 65°49' S, 62°23' W. A conspicuous rock peak, rising to 615 m, on the W side of Scar Inlet, 7 km SSW of Daggoo Peak, at the S side of the mouth of Flask Glacier, on the Oscar II Coast, on the E coast of Graham Land. Surveyed and partially photographed in 1947 by Fids from Base D. Named by UK-APC on Sept. 4, 1957, for the inn in New Bedford which provides the opening scene for the novel *Moby Dick*. It appears on a British chart of 1961. US-ACAN accepted the name in 1963. Re-surveyed by BAS personnel from Base E in 1964-65.

Spottiswood, John Kenneth. b. 1958. British Army lance corporal who wintered over with Chris Furse on Brabant Island during the British Joint Services Expedition of 1985. In 1994-95 he was at Smith Island, in the South Shetlands, as a major now, and 2nd-in-command of the British Joint Services Expedition of that year.

Spraglegga *see* **Spraglegga Ridge**

Spraglegga Ridge. 71°55' S, 14°45' E. A mountain ridge, divided by smaller snow passes (i.e., the ridge appears as partly rock and partly snow-covered), surmounted by Stenka Mountain, 7 km SE of Kvaevefjellet Mountain, in the easternmost part of the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition, and named by them as Spraglegga. US-ACAN accepted the name Spraglegga Ridge in 1970.

Sprake, John. Mate on the *Speedwell*, 1719, under Shelvocke.

Spreegletscher. 74°01' S, 162°42' E. A glacier flowing on the E side of Shafer Peak, in the Deep Freeze Range of Victoria Land. Named by the Germans.

Sprekkefjellet. 71°42' S, 5°37' E. An isolated hill looking like 2 low rock summits separated by a snow col, 8 km N of the mouth of Austreskorve Glacier and the main mass of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sprekkefjellet (i.e., "the split hill"). US-ACAN accepted the name without modification in 1967.

Sprekkehallet. 68°52' S, 90°41' W. An ice slope, about 6 km long, between the two glaciers Toftebreen and Zavodovskijbreen, at the W side of Peter I Island. Named by the Norwegians ("the split slope").

The *Sprightly*. A single-deck 135-ton Enderby sealer, built in Bridport in 1811. Lawrence Frazier was appointed skipper on Aug. 8, 1820, and the vessel sailed from Deal, in Kent, on Aug. 17, bound for the 1820-21 season in the South Shetlands. She was certainly in the South Shetlands on Jan. 10, 1821, and returned to London on May 30, 1821, with 9200 fur seal skins and 50 casks of oil. George Brown was appointed skipper on June 22, 1821, and the *Sprightly* left Gravesend on July 1, 1821, for the 1821-22 sealing season in the South Shetlands. This time the vessel moored at New Plymouth, but by early 1822 was in at Clothier Harbor for the season. By March 7, 1822, she had sailed for the Falklands, and on Aug. 4, 1822, she was at Rio. She was still in South American waters in 1823. Her most important voyage was in 1824-25, when she left Gravesend on July 10, 1824, bound for the South Shetlands, and explored the waters of the Antarctic Peninsula, under the command of Capt. Edward Hughes. First mate on that trip was James Hoseason. She was back in London on July 18, 1825, and in 1825-26, under Capt. George Norris, she was at Bouvetøya (not in Antarctica). In Sept. 1826 she was in the Falkland Islands.

Isla Sprightly *see* **Sprightly Island**

Sprightly Island. 64°17' S, 61°04' W. An island, 1.5 km NW of Spring Point, in Hughes Bay, on the Danco Coast, on the W coast of Graham Land. First roughly surveyed in Jan. 1898, by BelgAE 1897-99. Re-charted in April 1955 by Fids on the *Norsel*, and named by them as Sprightly Islet, for the *Sprightly*. UK-APC accepted that name on Sept. 4, 1957, and US-ACAN followed suit in 1958. However, on July 7, 1959, UK-APC redefined it as Sprightly Island, and it appears that way on a 1959 British chart. US-ACAN accepted the new name in 1963. The Argentines call it Isla Sprightly.

Cap Spring *see* **Spring Point**

Cape Spring *see* **Spring Point**

Punta Spring *see* **Spring Point**

Spring Cape *see* **Cierva Point**

Spring Glacier. 77°55' S, 163°06' E. Flows from the NE portion of the Royal Society Range between Stoner Peak and Transit Ridge, joining the Blue Glacier drainage S of Granite Knolls, in Victoria Land. Named by US-ACAN in 1992, for Thomas E. Spring, USGS civil engineer, leader of the USGS two-man astronomical surveying team to Pole Station and Byrd Station in 1969-70. They established the position of the South Pole, something not done since 1956.

Spring Point. 64°18' S, 61°03' W. It forms the S side of the entrance to Brialmont Cove, on the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted in Jan. 1898, by BelgAE 1897-99, and named by de Gerlache as Cap W. Spring, for Prof. Walthère-Victor Spring (1848-1911), chemist from the University of Liège, appointed in Dec. 1899 as a member of the *Belgica* Commission. On Dr. Frederick Cook's 1900 English language version of the expedition's map, it appears as Cape W. Spring. It appears as Cape Spring on Arctowski's 1901 version of the expedition's maps, but on a 1908 British chart it appears as Cape W. Spring. On Lecointe's 1905 map it appears as Cap Spring, and on Ferguson's 1921 chart it appears in error as Cape Murray. On an Argentine chart of 1953 it appears as Cabo Spring, and that name was accepted by the Argentine gazetteer of 1970. In April 1955, Fids on the *Norsel* re-charted this feature. UK-APC named it Spring Point on Sept. 4, 1957, and it appears as such on a British chart of 1959. US-ACAN followed suit with the British naming in 1960. However, it does appear on a 1960 U.S. Hydrographic Office chart as Point Spring. On a 1962 Chilean chart it appears as Punta Spring, and that name was accepted by the 1974 Chilean gazetteer. In 1973 Spring Refugio was established here (see the entry immediately below). *See also* **Cape Cierva** and **Primavera Station**. Note: The SCAR gazetteer insinuates that the Argentines call it Cabo Primavera. Not only did the 1970 Argentine gazetteer accept Cabo Spring (as we have seen above), but to imply that anyone would dishonor Prof. Spring by reducing his name to a season of the year is too insulting to the Argentines.

Spring Refugio. 64°18' S, 61°03' W. Chilean refuge hut built on Spring Point, Hughes Bay, in Feb. 1973.

Springer Peak. 79°24' S, 84°53' W. A rock peak rising to 1460 m, surmounting the N extremity of Webers Peaks, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Michael J. Springer, aerial photographer on USN flights over Marie Byrd Land and Ellsworth Land in 1965-66.

Springtail Bluff. 71°02' S, 165°12' E. The steep, south-facing bluff that borders the E half of Mount Hemphill, in the Anare Mountains. Named by the Northern Party of NZGSAE 1963-64, for the springtails (q.v.) found here. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Springtail Point. 77°10' S, 160°42' E. A rock point 5 km N of Skew Peak, in the Clare Rage of Victoria Land. Named by Heinz Janetschek, the biologist, in 1961-62, for springtails (q.v.) he found here. US-ACAN accepted the name in 1968.

Springtail Spur. 60°41' S, 45°38' W. A spur, trending E-W, and rising to 170 m, N of Spindrift Col, at the SW end of the Andreaea Plateau, on Signy Island, in the South Orkneys. BAS did ecological work here. Named by UK-APC on May 13, 1991 for the springtails that are abundant beneath stones and in the sparse vegetation of the spur. US-ACAN accepted the name.

Springtails. Order: Collembola. The world's most abundant insects. Small, black, primitive and wingless, they measure from 1 to 10 mm

long, and can spring forward several inches at a time by using their tails. There are 19 species inhabiting Antarctica (sometimes they are called snow fleas), non-parasitic, mostly living under rocks, and associated with spore-reproducing plants. George Meyer found the first ones under dry rocks at Hallett Station, in Dec. 1959, the first insects ever found in Antarctica.

Sprocket Glacier. 77°12' S, 160°34' E. A glacier, 5 km long, flowing N from Skew Peak, to abut against the ice of the Mackay Glacier at the Chain Moraines, in Victoria Land. Named by Trevor Chinn's bicycling team of 1992-93 (his party found such a method of transportation easiest). NZ-APC accepted the name in 1995, and US-ACAN followed suit in 1996. Note: There are several features in this area named following the bicycle motif.

Sprunk, Peter. Of Miriam Vale, Qld. He wintered-over at Davis Station in 1985, 1987, 1992, and 1994. He also wintered-over at Macquarie Island in 1996. Altogether, including Macquarie, he spent 8 years and 4 months on the ice.

Spry, William James Joseph. b. Nov. 18, 1835, Stoke Damerel, Devon, son of shoemaker James Spry and his wife Ann. In 1857, in Stoke Damerel, he married Amy Rosina Arnold, and by 1861 was serving as assistant engineer 2nd class on the *Vixen*. On July 22, 1864 he was promoted to acting engineer on the *Medea*, and on Oct. 6, 1865 to engineer, and transferred to the *Royal Adelaide*. He was engineering sub lieutenant on the *Challenger*, 1872-76, and his best-selling book about the expedition, *The Cruise of Her Majesty's Ship* Challenger, came out at the end of 1876. On May 3, 1877 he was promoted to chief engineer, later serving on the *Antelope*. He retired in 1890 as Inspector of Machinery, and he and Amy lived at their house, Therapia, in Southsea, Portsmouth, where he died on Nov. 30, 1906.

Sprytes. At one time they were the most common medium-tracked vehicles in USARP. Navy-operated vehicles, manufactured by the Logan Machine Company, in Utah, they had an enclosed cargo area, but they were also used with a crew cab and flat bed. They had wide tracks to lower the vehicle's ground pressure, and were used to get around where the snow was not packed. Noisy and uncomfortable, but reliable and low-maintenance. By 2002, with Logan out of business, they were replaced by PistenBullies (q.v.).

The *Spuma*. A 137-ton, 99 foot 1-inch whale catcher, built in 1913 by Akers Mek., of Oslo, as the *Zitzekama*, for H.M. Wrangell's whaling company in Haugesund, Norway. For three years she caught off the coast of South Africa, and in 1917 was sold to France, as the *Raie III*, serving as a naval patrol ship for the rest of the war. In 1919 Salvesen's South Georgia Company bought her, converted her into a whale catcher, renamed her the *Spica*, and used her for two years in the Shetlands, in Scotland. In 1923 she was renamed the *Spuma*, registered in Stanley, in the Falkland Islands, and in 1923-24 was catching for the *Neko*, in Antarctic waters. In 1924-25 she was catching for the Leith Harbour station, in South Georgia, and then from 1925 to 1928 was catching off the coast of South Africa. In 1929 she was back in the north of Scotland, and in 1930 was sold to Mikkelsen's Faeroske Company, in Copenhagen, becoming the *Lopra*. In 1932 she was sold again, to Amdrup, in the Faeroes, and then, in 1935, to Birck, in Denmark, and in 1947 to Samsö, in Denmark. She was renamed the *Brundby*, in 1949, and in 1954 was sold again, to Einar Onarheim, in Norway, and renamed the *Alholm*. She sank off the coast of Norway, in 1955.

Spume Island. 64°48' S, 64°07' W. A small, low, rocky island, S of Janus Island, and 3 km SW of Palmer Station, off the SW coast of Amvers Island, in the Palmer Archipelago. Surveyed by an RN Hydrographic Survey unit on the *Protector* in 1956-57. So named by UK-APC on July 7, 1959 because heavy seas break over the island in a gale, and spume (i.e., blown spray) is formed. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Punta Spur *see* **Spur Point**

Spur Point. 66°36' S, 63°48' W. A point at the E end of a black, rocky spur which extends SE into the Larsen Ice Shelf between Anderson Glacier and Sleipnir Glacier, on the W side of Cabinet Inlet, on the Foyn Coast, on the E coast of Graham Land. Photographed aerially in late 1947 by RARE 1947-48, and surveyed from the ground about that time by Fids from Base D, and named descriptively by the latter. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a 1952 British chart, and also in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Punta Spur, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Nunatak Sputnik. 70°50' S, 66°10' E. One of a group of nunataks immediately S of Mount Afflick, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Sputnik Islands. 70°22' S, 163°22' E. Two ice-covered islands, one much bigger than the other (they are not individually named, however), between Cape Cheetham and Cape Williams, in the entrance to Ob' Bay, N of the Lillie Glacier Tongue, in Oates Land, Victoria Land. Photographed aerially by OpHJ 1946-47. Surveyed by SovAE 1958, and named by them as Ostrova Sputniki, for their famous space satellite. US-ACAN accepted the translated name Sputnik Islands in 1964.

Ostrova Sputniki *see* **Sputnik Islands**

Spy. An old but good dog who wintered-over at Little America on ByrdAE 1928-30. One morning in late March 1929, with the temperature at 40°F below, Spy was found by Byrd down by the dog crates, shivering, bedraggled, and half dead with cold and exhaustion. He had been frisky until recently, but apparently the sudden drop in temperature had been too much for the big Eskimo. His brothers, Moody and Watch, were fine. All three had always been very playful and friendly, and would romp and hold their paw up to be shaken by the men. So it was a shock to Byrd to find old Spy in such a pitiable condition. He took Spy into the house, but the dog was so numb he could hardly walk, and had to force his frozen joints forward. His paws, one of which was sore, dragged on the ground, and his haunches were twisted, as if he had rheumatism. Weak and trembling, he found the warm spot in front of the stove, gently let himself down, and huddled up in front of the beneficial heat. His eyes almost closed, his fine old head drooped until it touched the floor, and then he moaned a little with pain and went to sleep. Some of the men were all for putting him out of his misery, but Byrd took him into his own room, where Spy slept on some canvas bags and Byrd gave him water and fed him. Spy began to gain strength and was finally able to stand without trembling. He would raise his paw for Byrd to take, and sit by the commander's chair with a paw on Byrd's knee. On April 2, 1929, he tried to re-join his brothers on the team he had so successfully led for so many weeks, but he was not up to it, so Byrd brought him into retirement and he became the mascot. But that wasn't the end of Spy. He got fit enough to run in harness again, and took his final run on Larry Gould's geological trip, 440 miles, but the minute they got to their goal, the Queen Maud Mountains, Spy's grand old heart gave out, and he dropped dead.

Square Bay. 67°50' S, 66°59' W. A bay, 16 km wide, and roughly square in outline, indenting the Fallières Coast between Nicholl Head and Camp Point, E of Horseshoe Island, and separating that island from the W coast of Graham Land, in the vicinity of Adelaide Island. In fact, most of the entrance to the bay is occupied by Horseshoe Island, which limits access to a narrow S strait opening onto Marguerite Bay and a narrower NW strait opening onto the mouth of Bourgeois Fjord. The bay was discovered at its entrance in Jan. 1909, by FrAE 1908-10, and included by them under the name Fiord Neny (*see* **Neny Fjord**). Surveyed and mapped by BGLE 1934-37, and named by them as Square Bay, for its outline. It appears as such on Rymill's 1938 map of the expedition, and also on Stephenson's 1940 map of the same expedition. US-ACAN accepted the name in 1947. It appears on a 1947 Chilean chart, translated as Bahía Cuadrada, and on a 1949 Argentine chart as Bahía Square. It was re-surveyed by Fids from Base E in 1948-49, and UK-APC accepted the name Square Bay on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The name Bahía Cuadrada was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Square End Island. 62°09' S, 59°00' W. A small island off the NW coast of Fildes Peninsula, or 5 km NNE of the SW tip of King George Island, and 6.5 km NNE of Flat Top Peninsula (inland a little from that tip, but still in the extreme SW of King George Island), in the South Shetlands. Charted and named descriptively by the personnel on the *Discovery II*

in 1934-35. It appears on their 1935 chart as Square-end Island, and, as a consequence, on a 1949 Argentine chart as Isla Square-end. It appears as Square End Island on a British chart of 1948, and that was the spelling accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. On a 1953 Argentine chart it appears as Isla Cuadrada (i.e., "square island"), and, in 1962, the Hydrographic Institute of the Chilean Navy adopted that name too. It appears as such in the 1970 Argentine gazetteer and also in the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. Last plotted by the UK, in late 2008. On the 1984 Brazilian chart of Fildes Peninsula, it appears as Square End Ilha. This may be what the Germans call Walinsel (q.v.).

Square Rock Point. 62°12' S, 58°57' W. Marks the S end of Ardley Cove, Maxwell Bay, on the E side of Fildes Peninsula, King George Island, in the South Shetlands. In 1958 the Chileans named it descriptively as Roca Cuadrada (i.e., "square rock"). In 1984 the Brazilians named it Pontal Cmt Camus, and in 1984 the Chileans renamed it Punta Cdte. Camus (both names being abbreviations of what would be translated into English as Comandante Camus Point). UK-APC accepted the much better name Square Rock Point, on June 6, 2007, rather than the proposed Half Point. Last plotted by the UK, in late 2008.

Squid. Marine invertebate mollusks, cephalopods, ranging in size from a few inches to over 50 feet (the latter figure probably an exaggeration based on myth). In 1981, a Russian trawler, working in the Ross Sea, caught a 13-foot "colossal squid" (*Mesonychoteuthis hamiltoni*), which lives at great depths beneath Antarctic waters (3000 to 6000 feet). In March 2003, again in the Ross Sea, another one, much bigger, was taken, virtually intact. On Feb. 22, 2007, again, in the Ross Sea, crew of the *Sea Aspiring* caught an absolutely monstrous colossal of 33 feet, and weighing in at over 1019 pounds. However, when it was taken back to New Zealand, and placed in a museum, it was found to be only 14 feet long. This does not in any way imply fraud, it's just squid tend to shrink (almost implode) when dead.

Squire, Vernon Arthur. b. July 2, 1952, London. After graduating in applied mathematics at the University College of Wales, and after a year at Cambridge, he studied for his PhD while working for the Scott Polar Research Institute. After getting his PhD in 1978, he stayed on at SPRI for 9 years, as a research associate and mathematician, working in the Arctic and in the Antarctic, at McMurdo Sound and in the Weddell Sea. One of his students was Monica Kristensen. In 1985-86 he and Pat Langhorne (whom he married) were working at Scott Base, with the New Zealanders, and he decided to move to NZ, arriving there in Oct. 1987, and becoming professor of mathematics at the University of Otago.

Squire Island. 64°55' S, 63°54' W. A small island immediately NE of Friar Island, in the central Wauwermans Islands, in the Wilhelm Archipelago. It appears (unnamed) on an Argentine government chart of 1950. Charted by an RN Hydrographic Survey unit on the *Protector* in 1956-57. Named by UK-APC on July 7, 1959, for the character in *Canterbury Tales*. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Squires, Harold W. b. 1923, St. John's, Newfoundland. He joined the Merchant Navy in 1940, and was serving on the *Moyra*, as radio operator, when he transferred to the *Eagle* as radio operator, for the 2nd phase of Operation Tabarin, 1944-45. In 1992, as the last survivor, he wrote *S.S. Eagle: The Secret Mission, 1944-45*.

Squires Glacier. 73°58' S, 62°35' W. A tributary glacier between the Playfair Mountains and the Hutton Mountains, flowing ENE into Swann Glacier, W of Wright Inlet, on the Lassiter Coast, on the SE coast of Palmer Land. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Peter L. Squires, USARP glaciologist at Byrd Station in 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Squires Peak. 73°56' S, 62°39' W. Rising to about 1400 m, it marks the E extremity of the Playfair Mountains, at the junction of Swann Glacier and Squires Glacier, on the Lassiter Coast, in the SE part of Palmer Land. Named by US-ACAN in 1968, one would assume in association with Squires Glacier, but, as a good example of the unexpected, it was for Donald Fleming Squires (b. Dec. 19, 1927, Glen Cove, NY), USARP biologist at Palmer Station and on the *Eastwind* in 1965-66. Formerly of the geology department at Cornell, he had just been appointed director of the brand new department of invertebrate zoology at the Smithsonian, and on his return would become deputy director of the National Museum (until 1967). It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Sratsimir Hill. 63°52' S, 59°54' W. Rising to 732 m at the N extremity of Korten Ridge, 8.23 km NNW of Sredorek Peak, 2.78 km N by W of Bankya Peak, 2.84 km SE of Wennersgaard Point, and 7.83 km NW of Velichkov Knoll, on the Davis Coast, on the W coast of Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Sratsimir, in northeastern Bulgaria. Apparently, this settlement was named for Czar Ivan Sratsimir, ruler of Bulgaria, 1356-96.

Srebarna Glacier *see* **Sreburna Glacier**

Sreburna Glacier. 62°41' S, 60°02' W. A glacier in the SE part of Livingston Island, flowing SE of False Aguja Point and Serdica Point to enter the Bransfield Strait between Aytos Point and M'Kean Point, in the South Shetlands. Named by the Bulgarians on March 15, 2002, as Srebarna Glacier, for Srebarna Lake, in Bulgaria. US-ACAN accepted the spelling Sreburna Glacier in 2003, and UK-APC followed suit on Dec. 16, 2003, but with Srebúrna Glacier.

Gora Sredinnaja. 70°39' S, 67°10' E. The western of 3 nunataks standing in a row running E-W, close NE of Mount McKenzie, in the Amery Peaks of the Aramis Range, in the Prince Charles Mountains of Mac. Robertson Land. Named by the Russians. *See* **Mount Razvilka**.

Sredn'aja Hill. 66°16' S, 100°46' E. A steep conical hill nearly 1.5 km due N of Dobrowolski Station (the old Oazis Station), in the Bunger Hills. It rises from the point where 2 spurs meet, one trending N-W, the other due E. There is a line of cliffs to the S, trending E-W. Charted by SovAE 1956, and named by the Russians as Sopka Srednjaja. ANCA translated this on March 7, 1991.

Holmy Srednie. 66°08' S, 100°18' E. A hill, the dominant feature on the island called Ostrov Srednij, in the Taylor Islands, in the Bunger Hills. Named by the Russians, in association with the island.

Ostrov Srednij. 66°08' S, 100°18' E. An island in the N part of the Taylor Islands, in the Bunger Hills. It is dominated by the hill called Holmy Srednie. Named by the Russians.

Sopka Srednjaja *see* **Sredn'aja Hill**

Srednogorie Heights. 63°37' S, 58°42' W. Rising to about 1220 m on Trinity Peninsula, E of Bone Bay, W of the Louis Philippe Plateau, N of Russell West Glacier, and S of Malorad Glacier, the feature extends 7.5 km in an E-W direction and 7 km in a N-S direction. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the Sredna Gora (they are mountains) in central Bulgaria.

Sredorek Peak. 63°56' S, 59°50' W. Rising to 1224 m, E of Kasabova Glacier, and W of Sabine Glacier, 6.1 km NE of Chubra Peak, 1.85 km ESE of Chanute Peak, and 5.25 km SW of Velichkov Knoll, on the Davis Coast, on the W coast of Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlements of Sredorek, in eastern and western Bulgaria.

Srem Gap. 63°43' S, 58°32' W. A flat saddle, at an elevation of about 700 m, extending about 1.3 km between Russell West Glacier to the NW and a tributary glacier to the Russell East Glacier to the SE, the gap links Irakli Peak and Trakiya Heights to the SW with Mount Canicula to the NE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Srem, in southeastern Bulgaria.

Gora Srezannaja. 73°33' S, 64°45' E. A nunatak at the SW end of the valley the Russians call Dolina Skalistye Vorota, SE of Geysen Glacier, in the Prince Charles Mountains. Named by the Russians.

Srite Glacier. 76°00' S, 69°00' W. Over 30 km long, it flows E and SE from Janke Nunatak, in the Hauberg Mountains to the Orville Coast of Ellsworth Land W of Spear Glacier and NE of Cape Zumberge. Mapped by USGS from ground surveys conducted by them in 1961-62,

and from USN air photos taken between 1965 and 1967. Visited by Peter Rowley's 1977-78 USGS geological party. Named by US-ACAN for Cdr. (later Capt.) David Alan Srite, USN, operations officer with VXE-6 and chief navigator of an LC-130 aircraft in support of Rowley's party. He was commanding officer of VXE-6, 1979-80, and commanding officer of U.S. Naval Support Force, Antarctica, 1985-87. UK-APC accepted the name on Nov. 13, 1985.

SSSI *see* **Sites of Special Scientific Interest**

St. (for Saint) *see under* **Saint**

Staack Nunatak. 74°16' S, 72°49' W. A nunatak, 1.5 km W of Horner Nunatak, one of several scattered and somewhat isolated nunataks (e.g. Gardner Nunatak, Jurassic Nunatak, Triassic Nunatak, Metzgar Nunatak, Olander Nunatak, Tollefson Nunatak, Voight Nunatak, and the Yee Nunataks) rising up about 60 km N of the Merrick Mountains, in the E part of Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Karl J. Staack, U.S. Weather Bureau meteorologist at Byrd Station in 1965-66. UK-APC accepted the name on Dec. 20, 1974, but plotted it in 74°15' S, 73°21' W (as do the Russians).

Stabben *see* **Stabben Mountain**, **Stump Mountain**

Stabben Mountain. 71°58' S, 2°52' E. In the NE part of Armlenet Ridge, in Jutulsessen Mountain, in the N part of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Surveyed from the ground and photographed from the air by NBSAE 1949-52, and photographed aerially again in 1958-59, during the long NorAE 1956-60, and mapped from these efforts by Norwegian cartographers, who called it Stabben (i.e., "the stump"). US-ACAN accepted the name Stabben Mountain in 1966.

Stabbkleiva. 71°56' S, 2°50' E. A pass on Stabben Mountain, in the area of Troll Station, in the N part of the Gjelsvik Mountains of Fimbulheimen, Queen Maud Land. Named by the Norwegians on Dec. 12, 2007, in association with nearby Stabben Mountain ("kleiva" means "the steep path").

Stabeisen. 71°57' S, 2°40' E. A small nunatak W of Armlenet Ridge, in Jutulsessen Mountain, in the Gjelsvik Mountains of Queen Maud Land. Name means "the buffer" in Norwegian.

Stäbleinsee. 67°49' S, 67°19' W. A small lake on Horseshoe Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Named by the Germans.

Staccato Peaks. 71°47' S, 70°33' W. A series of rock peaks extending for 17 km in a NW-SE direction, and rising sharply to an elevation of about 800 m above sea level out of the snowfields NE of Williams Inlet, and about 30 km S of the Walton Mountains, in the S part of Alexander Island. They include, from NW to SE, Hageman Peak, Duffy Peak, Krieger Peak, The Obelisk, Polarstar Ridge, Crotchet Nunataks, and Gilliamsen Peak. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Re-photographed aerially in late 1947 by RARE 1947-48, and mapped from those photos by Searle of the FIDS in 1959-60. He plotted it in 71°47' S, 70°39' W, and had it running N-S. So named by UK-APC in order to conform with other musical terms in the area, this one being named in reference to the precipitous and abrupt rise of the peaks from the surrounding ice cap. US-ACAN accepted the name in 1961. It appears as such in the 1961 British gazetteer, and also on a 1962 U.S. Hydrographic Office chart. On a 1963 American chart it appears as Staccato Rocks. U.S. Landsat images taken in Jan. 1973 corrected the orientation of this feature, as well as the coordinates, and this new information appears in the 1977 British gazetteer.

Staccato Rocks *see* **Staccato Peaks**

Stack Bay. 67°03' S, 58°04' E. A small bay, about 4 km wide, just W of the mouth of Hoseason Glacier, between that glacier and West Stack, in Kemp Land, in Enderby Land. Photographed aerially by LCE 1936-37, and plotted from these photos in 1946, by Norwegian cartographers, who named it Skotvika (i.e., "stack bay"), because of its proximity to West Stack (which had been named by personnel on the *William Scoresby* in 1936). The name Skotvika was translated by ANCA into English on Aug. 20, 1957, as Stack Bay, and, as such, accepted by US-ACAN in 1965.

Stackhouse, Joseph Foster *see* **British Antarctic and Oceanographical Expedition**

Stackpole Rocks. 62°41' S, 60°57' W. A group of rocks in water off the SE part of Byers Peninsula, at the E end of South Beaches, Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Edouard A. Stackpole, curator of the Marine Historical Association in Mystic, Conn. Mr. Stackpole (b. Dec. 7, 1903, Mass. d. Sept. 2, 1993, Nantucket) is also regarded as one of the major Antarctic historians (*see* the Bibliography). US-ACAN accepted the name in 1960. Last plotted by the UK, in late 2008.

Stacks. A stack, or sea stack, is a large, vertical column of rock in the sea. *See* Crab Stack, Cutler Stack, Denais Stack, East Stack, Link Stack, Sadler Stacks, Shearer Stack, Stewart Stacks, Weeks Stack, West Stack, and Zawadzki Stacks.

Banco Stacy *see* **Stanley Patch**

The Stadium. 61°07' S, 54°43' W. A bowl-shaped cirque with mountains on 3 sides but open on the east, 1.5 km N of Walker Point, on Elephant Island, in the South Shetlands. A glacier occupies the floor, hence the Argentine name for this feature — Glaciar Estadio. Mapped by the British Joint Services Expedition of 1970-71. Named descriptively by UK-APC on Nov. 3, 1971. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. Last plotted in late 2008, by the UK.

Mount Stadler. 66°55' S, 53°14' E. A mountain, about 4.5 km SSE of Mount Cordwell, and 39 km SSW of Stor Hånakken Mountain, in Enderby Land. Plotted by Australian cartographers working from 1957 ANARE air photos. Named by ANCA for Joseph "Sepp" Stadler, weather observer at Wilkes Station for the winter of 1961. US-ACAN accepted the name in 1965.

Lednik Staduhina. 77°40' S, 82°30' W. A very isolated glacier in Ellsworth Land. Named by the Russians.

Staeffler Ridge. 77°20' S, 162°48' E. A long ridge W of Hanson Ridge, it separates Victoria Lower Glacier from Greenwood Valley, in Victoria Land. Named by US-ACAN in 1964, for George R. Staeffler, USGS topographic engineer in the McMurdo Sound area in 1960-61. NZ-APC accepted the name.

Staff Ridge. 77°59' S, 161°16' E. A ridge in the area of Knobhead, in the Quartermain Mountains of Victoria Land. Named by a survey party from the NZ Department of Survey and Land Information, after a leveling staff, being part of their survey equipment. NZ-APC accepted the name in 1992.

Stafford Glacier. 72°30' S, 168°15' E. About 8 km E of Rudolph Glacier, it flows N into Trafalgar Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Sgt. 1st Class Billy D. Stafford, U.S. Army, in charge of the enlisted detachment of the helicopter group which supported USGS's Topo North-South survey of this area in 1961-62. NZ-APC accepted the name.

Stag Rocks *see* **Snag Rocks**

The Stage. 78°21' S, 163°13' E. A prominent amphitheatre, with an elevated moraine floor, on the N side of the lower Renegar Glacier. Viewed from the glacier the floor of this amphitheatre seems like a great performance stage. Named by NZ-APC in 1980, the name was accepted by US-ACAN in 1994. The amphitheatre has what look like the aisles of a stage — Central Aisle Ridge, East Aisle Ridge, and West Aisle Ridge. *See also* **Backdrop Ridge**.

Stagnant Glacier. 70°30' S, 68°33' E. SE of Ritchie Point, and due E of Jetty Peninsula, in the area of the Amery Ice Shelf, on the coast of Mac. Robertson Land. Apparently named by the Russians.

Mount Stagnaro. 77°10' S, 144°20' W. Rising to 1130 m, 5 km ENE of Mount Gonzalez, in the Sarnoff Mountains, in the Ford Ranges of Marie Byrd Land. Surveyed and mapped (but not named) by USAS 1939-41. Named by US-ACAN in 1980, for John Andrew Stagnaro (Big John; 1911-1979), of La Crescenta, Calif., who, during the 1970s carried out nightly ham radio schedules (W6MAB) with Pole Station, McMurdo, Palmer Station, and Siple Station.

Gora Stahanova. 80°43' S, 23°02' W. A nunatak, SE of Strachey Stump, in the Read Mountains, in the Shackleton Range. Named by the Russians.

Stahl Peak. 80°20' S, 155°13' E. A peak, rising to over 1800 m, 3 km E of Saburro Peak, in the Ravens Mountains of the Britannia Range. Named by US-ACAN in 2001, for Chief Master Sergeant Alfred E. Stahl, flight engineer super-

intendent with the 109 Airlift Wing during the transition of LC-130 aircraft operations from the U.S. Navy to the Air National Guard.

Mount Stahlman. 85°41' S, 151°36' W. A mountain rising to over 1000 m (the New Zealanders say about 1371 m), and with a precipitous W face, close NNE of Mount Hamilton, between that mountain and Mount Wallace, at the E side of the lower reaches of Scott Glacier, at the W end of the Tapley Mountains, in the Queen Maud Mountains. Discovered in Dec. 1929 by Larry Gould's geological party during ByrdAE 1928-30. First visited by Quin Blackburn's party in Dec. 1934, during ByrdAE 1933-35. Named by Byrd for James Geddes Stahlman (1893-1976), a Nashville newspaper publisher and supporter of ByrdAE 1933-35. US-ACAN accepted the name in 1956, and NZ-APC followed suit.

Stair Hill. 66°10' S, 65°15' W. Rising to about 1500 m on the SW side of the head of Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos. Named by UK-APC on July 7, 1959, for physicist Ralph Stair (1900-1980) of the U.S. National Bureau of Standards, a snow-goggles pioneer. US-ACAN accepted the name in 1971.

Staircase Glacier. 72°16' S, 168°43' E. About 13 km long, it flows SW between Mount Francis and Mount Titus into the N side of the Tucker Glacier, in the Admiralty Mountains. So named by NZGSAE 1957-58 because it is close E of the Staircase Survey Station established by that expedition, and the station was so named because a long line of steps were cut into the ice in order to climb it. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Stäl von Holstein, C. *see* **Órcadas Station**, 1916

Mount Staley. 72°20' S, 164°41' E. Rising to 2560 m, at the S end of the Salamander Range, in the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for University of Washington biologist James Trotter Staley (b. March 14, 1938, Brookings, S.D.), at Hallett Station in 1962-63.

Stalhandske, Carl *see* **Órcadas Station**, 1911 and 1913

Mount Stalker. 70°09' S, 65°37' E. In the N part of the Athos Range, about 8 km NW of Farley Massif, and about 13 km NW of Mount Jacklyn. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for John Francis Stalker (b. July 22, 1933. d. Oct. 1, 1994), RAN (from 1952) aircraft mechanic and pilot, and (from 1960) with the Bureau of Meteorology, who was weather observer-in-charge at Macquarie Station in 1962, at Mawson Station in 1964, and station leader at Davis Station in 1970. He was observer again at Casey Station in 1974, and was back at Macquarie in 1979. He retired due to ill health in 1984. US-ACAN accepted the name in 1967.

Stalker Hill. 68°31' S, 78°28' E. A steep, rocky hill on the N side of Lake Zvezda, in the Vestfold Hills. On the Australian map of the Vestfold Hills, it is shown to be 158 m above sea level. Named by ANCA for John Stalker (*see* **Mount Stalker**), specifically for his 1970 stint as base leader at Davis.

Stålstuten *see* **Stålstuten Ridge**

Stålstuten Ridge. 72°04' S, 4°10' E. A high ridge extending from the NE side of Mount Hochlin, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Stålstuten (i.e., "the bulldozer"). US-ACAN accepted the name Stålstuten Ridge in 1966.

Stambolov Crag. 62°41' S, 60°15' W. A peak, with a steep snow-free W slope, it rises to 820 m in Friesland Ridge, 1.75 km W of Simeon Peak, 2.1 km NW of St. Cyril Peak, and 4.4 km SSE of Willan Nunatak, and surmounts Huntress Glacier to the NW and Ruen Icefall to the S, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for Stefan Stambolov (1854-1895), Bulgarian statesman.

Stamina Glacier *see* **Highton Glacier**

Stammers, James Walter "Jim." b. May 21, 1934, Southwark, London, and raised in London, Devon, and York, son of stained-glass artist Harry James Stammers and his wife Grace C. Delamare. After the London School of Printing and Graphic Art, he did his national service in the RAF, and then had research posts at United Steel and Ilfords. He joined FIDS in 1957, as a meteorologist, took the *John Biscoe* from England to Port Stanley, and then on to Antarctica in the *Kista Dan*. He wintered-over at Signy Island Station in 1958, and again in 1959, the second time also being base leader, and returned to England on the *John Biscoe*. In 1961 he married Joan Redford, and went into a variety of research jobs in England. He lives in Kelsall, near Chester.

Stamnen *see* **Stamnen Peak**

Stamnen Peak. 72°16' S, 3°26' W. Also called Stäven. A peak, 1.5 km N of Babordsranten Ridge, and E of Basissletta, near the SW end of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Stamnen (i.e., "the prow"). US-ACAN accepted the name Stamnen Peak in 1966.

Stamp Buttress. 62°10' S, 58°10' W. An upstanding rocky headland forming the seaward termination of Dunikowski Ridge, on King George Island, in the South Shetlands. Named by UK-APC on Feb. 15, 1998, for Sir Laurence Dudley Stamp (1898-1966), British stratigrapher, professor of geology and geography at the University of Rangoon, 1923-26; professor of economic geography at the London School of Economics, 1926-45; president of the Royal Geographical Society, 1963-66; and author of *Britain's Structure and Scenery* (1949). When he died he had just realized the ambition of visiting every country in the world. US-ACAN accepted the name in 1999. Plotted by the UK, in late 2008.

Stamper Peak. 71°41' S, 169°19' E. Rising to 2180 m on the south-central part of the ridge separating Dugdale Glacier from Ommanney Glacier, 16 km ENE of Mount Gilruth, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Wilburn E. Stamper, USN, radioman at McMurdo in 1967.

Stamps. Polar stamp collecting is a major philatelic specialty. The *Polar News*, published twice yearly by the American Polar Society, always has something on philately, while the *Ice Cap News* was a journal published regularly by the American Society of Polar Philatelists. There also exists the Polar Postal History Society of Great Britain. The Internet is so full of excellent graphic and informative web pages concerned with Antarctic philately that it makes the job of this writer at once a happy visual one and an impossible one, in that one cannot begin to think of even summarizing this information, there being so much of it. The best that can be achieved is to reproduce what was in the previous edition of this book (this taking the reader up to 1988, aware that even this limited information is a mere drop in the ocean when compared to that of these web sites for the same time period), and then recommend googling "Antarctic Philately." Many, perhaps most, countries have issued Antarctic or Antarctica-related stamps. Here is an abbreviated choronology of Antarctic philately (generally only those stamps in a series that relate to Antarctica are mentioned, i.e., all individual stamps with an Antarctic motif would be, simply, too numerous to mention in this volume). **Jan. 15, 1908**: The NZ government printed 24,000 special stamps for BAE 1907-09. They were overprinted KING EDWARD VII LAND in green, for use by members of the expedition, and a postmark inscribed BRIT. ANTARCTIC EXPED. was used to cancel mail posted from the NZ base (*see also* **Post offices**). Shackleton left some at his farthest south in 1909, in a brass cylinder buried in the snow. **1933**: The USA printed a Byrd Antarctic Expedition II 3¢ stamp to commemorate ByrdAE 1933-35. In addition to the 3¢ postage charge, letters sent by the expedition ships to be canceled in Little America were subject to an extra service charge of 50¢ each. The stamp showed the world map on Van der Grinten's projection. **1933**: The Falkland Islands have put out many Antarctic stamps over the years. The first series was in this year. ½d iceberg; 1½d whale catcher; 6d blue whale. **1938-39**: France issued two semi-postals, with pictures of Charcot on them. **1938-41**: Falkland Islands series. 6d the *Discovery II*; 9d the *William Scoresby*; 2/6 gentoo penguins, 10/- Deception Island. **1944**: Throughout this year the 1938-41 Falkland Islands series were reissued with words overprinted in red, saying GRAHAM LAND, DEPENDENCY OF; SOUTH GEORGIA,

DEPENDENCY OF; SOUTH ORKNEYS, DEPENDENCY OF; and SOUTH SHETLANDS, DEPENDENCY OF. There were separate issues for those individual dependencies. These dependencies existed at most momentarily, and at least as a figment of the imagination of the British government in order to add philatelical weight to their Antarctic claim in the face of Argentine opposition. **1946**: The Falkland Islands Dependencies (a real entity, this one) began issuing stamps. **June 1946**: Norway series. 50ø Nansen and Amundsen. **May 12, 1947**: Chile. Series of 2. Showed a map with Chile's claims to Antarctica. **June 1947**: Belgian series issued to commemorate the 50th anniversary of BelgAE 1897-99. 1.35fr de Gerlache; 2.25fr the *Belgica* and explorers. **1947-49**: Argentina series. Issued to celebrate the 43rd anniversary of the first Argentine Antarctic Mail. It had a map of the Argentine Antarctic claims. **1948-49**: Argentina. Air Post stamps showing the Antarctic Peninsula as part of Argentina. **May 1950**: Argentina. 1p Antarctic claims. **1952**: Falkland Islands series. 4d Auster plane; 6d the *John Biscoe;* 1/- gentoo penguins. **Oct. 8, 1953**: Argentina. 50¢ the rescue ship *Uruguay*. Issued to commemorate the 50th anniversary of the rescue of SwedAE 1901-04. **1954**: Falkland Islands Dependencies series on ships. ½d the *John Biscoe;* 1d the *Trepassey;* 1½d the *Wyatt Earp;* 2½d the *Penola;* 3d the *Discovery II;* 4d the *William Scoresby;* 6d the *Discovery;* 9d the *Endurance*; 1/- the *Deutschland;* 2/- the *Pourquoi Pas?;* 2/6 the *Français;* 5/- the *Scotia;* 10/- the *Antarctic;* £1 the *Belgica*. **Jan. 20, 1954**: Argentina. 1.45p planting of the Argentine flag in Antarctica. Issued to commemorate the 50th anniversary of Argentina's first Antarctic post office and the establishment of the La Hoy radio-post office in the South Orkneys. **Nov. 1954**: Australia. 3½d flora and fauna map of Antarctica. Issued to publicize Australia's interest in Antarctica. **Nov. 14, 1955**: The *Wyandot* left Norfolk, Va., bound for Antarctica and OpDF I, carrying, among other things, 2500 pounds of mail to be canceled on the ice. **1955**: Terres Australes et Antarctiques Françaises began issuing stamps. The first, this year, was actually a Madagascar stamp with TERRES AUSTRALES ET ANTARCTIQUES FRANÇAISES overprinted in red. **1956**: Falkland Islands Dependencies series of 4. Issued to commemorate BCTAE 1955-58. **1956**: The first proper series from Terres Australes et Antarctiques Françaises. 10fr elephant seals; 15fr elephant seals (sic). **1956**: Terres Australes et Antarctiques Françaises. Air Post stamps series of 2, with emperor penguin and map of Antarctica. **Oct. 22, 1956**: USSR. 40k Antarctic bases. Issued to commemorate SovAE. **1957**: Ross Dependency series. 3d the *Erebus* and Mount Erebus; 4d Shackleton and Scott; 8d map showing location of the Ross Dependency; 1/6 Queen Elizabeth II. **1957**: The Australian Antarctic Territory began producing stamps. **1957**: Terres Australes et Antarctiques Françaises series of 3 celebrating IGY. **July 1957**: Norway series. 65ø a map of the South Pole, with Queen Maud Land. An IGY commemorative. **July 1, 1957**: Japan. 10 yen a penguin, the *Soya*, and IGY emblem. **Oct. 18, 1957**: Belgium. Semi-postal 5fr+2.50fr dogs and Antarctic camp. **1957-58**: During IGY the USA issued a 3¢ stamp showing two hands about to touch over Antarctica. **1957-59**: Australian Antarctic Territory series. 5d David, Mawson, and Mackay at the South Magnetic Pole in 1908-09; 8d loading a Weasel; 1/- dog team and iceberg; 2/- Australian explorers and map of Antarctica; 2/3 emperor penguins and map. **July 1958**: Argentina. 40¢ a map of Antarctica. This was an IGY commemorative. **Aug. 28, 1958**: Chile. 40p a modern map of Antarctica; 10p a map of Antarctica and the ship *La Araucana*. These were IGY commemoratives. **1959**: Terres Australes et Antarctiques Françaises. Air Post stamps. 200fr wandering albatross. **1959**: South Africa. 3d a globe showing Antarctica and South Africa. Issued to commemorate the first SANAE. **Sept. 1959**: Terres Australes et Antarctiques Françaises series. 30¢ light-mantled sooty albatross; 40¢ skua; 12fr king shag; 20fr coat of arms of Terres Australes et Antarctiques Françaises. **1960**: Falkland Islands series. 1d Dominican gull; 2d gentoo penguins; 6d black-browed albatross. **1960**: Argentina. 1p Argentina and the Argentine Antarctic claim. **1960**: Terres Australes et Antarctiques Françaises series. 2fr sheathbills; 4fr sea leopard; 25fr Weddell seal; 85fr king penguin. **Nov. 1960**: Japan. 10 yen *Shirase* and a map of Antarctica. Marked the 50th anniversary of the beginning of the First Japanese Antarctic Expedition. **1961**: Terres Australes et Antarctiques Françaises. 25fr Charcot with the *Pourquoi Pas?* in the background. **July 1961**: Australian Antarctic Territory. 5d same as in the 1957-59 series. **Aug. 19, 1961**: Argentina. 2p explorers, sledge, and dog team. Issued to commemorate the 10th anniversary of General San Martín Station. **Oct. 1961**: Australian Antarctic Territory. 5d Mawson. Issued to commemorate the 50th anniversary of AAE 1911-14. **1961**: Norway series of 2. Both showed Amundsen, in commemoration of his 50th anniversary at the Pole. **Feb. 1963**: Terres Australes et Antarctiques Françaises. 8fr elephant seals fighting. **1963**: South Georgia series. 2d sperm whale; 2½d penguins; 3d fur seals; 4d finback whale and ship; 5½d elephant seals; 6d sooty albatross; 9d whaling ship; 1/- leopard seal; 2/6 wandering albatross; 5/- elephant seals and fur seals; 10/- plankton and krill; £1 blue whale. **1963**: The first British Antarctic Territory series. ½d the *Kista Dan*; 1d skiers hauling load; 1½d muskeg; 2d skiers; 2½ Beaver seaplane; 3d the *John Biscoe*; 4d camp scene; 6d the *Protector*; 9d dog sledge; 1/- Otter seaplane; 2/- huskies and the Aurora Australis; 2/6 helicopters; 5/- Sno-cat; 10/- the *Shackleton*; £1 map of Antarctica. **1963**: Terres Australes et Antarctiques Françaises. Air Post stamps. 50fr Adélie penguins. **Sept. 16, 1963**: USSR series which had "Antarctica-Continent of Peace" as its motif. 3k map of Antarctica, penguins, research ship, southern lights; 4k map, southern lights, and Sno-cats; 6k globe, camp, and various planes; 12k whaler and whales. **1963-65**: Australia series. 7/6 Cook. **Feb. 22, 1964**: Argentina series. 2p maps of South Georgia, South Orkneys, and South Sandwich Islands; 4p map of Argentina and the Argentine Antarctic claims. Issued to commemorate the 60th anniversary of Argentina's claim to the South Orkneys. **1964**: Ross Dependency series. Same as the 1957 series. **Oct. 10, 1964**: Argentina series of Air Post stamps issued to publicize Argentina's southern colonies. 13p Teniente Matienzo Station. **Jan. 1965**: Terres Australes et Antarctiques Françaises Air Post stamps. 50fr the discovery of Adélie Land. **1965**: Argentina series of 2. 2p General Belgrano Station; 4p the icebreaker *General San Martín*. Issued to publicize Argentina's Antarctic claims. **1965**: USSR series on scientific conquests of the Poles. 10k the *Vostok* and *Mirnyy* and icebergs; 16 k Vostok Station. **Nov. 19, 1965**: Japan. 10 yen the Aurora Australis, a map of Antarctica, and the *Fuji*. Commemorated JARE which left on the *Fuji* on Nov. 20. **Feb. 19, 1966**: Argentina series of Air Post stamps. The only one in the series was a 27.50p which showed the Argentine Antarctic map and a Centaur rocket. Issued to commemorate the launchings of sonding balloons and of a Gamma Centaur rocket in Antarctica in Feb. 1965. **1966**: British Antarctic Territory series of a common design. **1966**: Terres Australes et Antarctiques Françaises Air Post stamps. 25fr an ionosphere research pylon in Adélie Land. **Aug. 27, 1966**: Belgium series of 4 semi-postals designed to publicize Belgian Antarctic expeditions. 1fr+50¢ surveyor and dog team; 3fr+1.50fr de Gerlache and the *Belgica*; 6fr+3fr surveyor, weather balloon, and ship; 10fr+5fr penguins and the *Magga Dan*. **Dec. 10, 1966**: Argentina. 10p map of Argentine Antarctica and the expedition route of the 1965 ArgAE which planted their flag at the Pole. Issued to commemorate that expedition. **1966-68**: Australian Antarctic Territory series. 1¢ Aurora Australis and camera dome; 2¢ banding penguins; 4¢ lookout and iceberg; 5¢ banding of elephant seals; 7¢ measuring snow strata; 10¢ wind gauges; 15¢ weather balloon; 20¢ helicopter; 50¢ ice compression tests; $1 "mock sun" (parhelion) and dogs. **1966-69**: Terres Australes et Antarctiques Françaises series. 5fr great whale; 10fr cape pigeons; 15fr killer whale; 20fr black-browed albatross. **1967**: Ross Dependency series. Same as for the 1957 and 1964 series, except that the denominations were now 2¢, 3¢, 7¢, and 15¢. **Jan. 1967**: Chile. 40¢ blue. Showed Luis Pardo Villalón and the *Yelcho*. Commemorated the 50th anniversary of Shackleton's Elephant Island party rescue. **1967**: Terres Australes et Antarctiques Françaises. 20fr Aurora Australis, map of Antarctica, and a rocket. Noted the launching of the first space rocket from Adélie Land, in 1967. **July 1967**: Cook Islands series. 18¢ Cook is pictured. **1967-68**: Norfolk Island series of ships. 1¢ the *Resolution* in 1774. **Jan. 1968**: Terres Australes et Antarctiques Françaises. 30fr Dumont d'Urville. **Feb. 1968**: Argentina series issued to publicize Argentine research projects in "Antártida Argentina." 6p map showing radio postal stations in 1966-67; 20p Almirante Brown Station; 40p planes over map of

Antarctica. **Sept. 1968**: Cook Islands series. ½¢ Cook; 4¢ William Hodges' painting, "The Ice Islands" (i.e., Antarctica). **Feb. 1969**: British Antarctic Territory series of 4 to commemorate 25 years of continuous scientific work in Antarctica. 3½d Lemaire Channel, iceberg, and Adélie penguins; 6d weather sonde and operator; 1/- Muskeg pulling tent equipment; 2/- surveyors with theodolite. **April 1969**: Falkland Islands series. 6d Norseman airplane; 1/- Auster plane. **June 1969**: Norfolk Island. 10¢ Cook. **1969**: British Antarctic Territory. £1 the *Endurance* and a helicopter. **1969**: Terres Australes et Antarctiques Françaises. 25fr polar camp with helicopter, plane, and Sno-cat. It noted 20 years of French polar exploration. **Oct. 9, 1969**: NZ series. 4¢ Cook. **Oct. 1969**: Cook Islands. 10¢ Cook. **1969-71**: Terres Australes et Antarctiques Françaises Air Post stamps series. 200fr Pointe Géologie. **Jan. 27, 1970**: USSR series of 2 commemorating the 150th anniversary of von Bellingshausen's expedition. 4k map of Antarctica, the *Mirnyy* and the *Vostok*; 16k camp and map of Antarctica with Soviet Antarctic bases. **April 1970**: Norfolk Island series of 2. Both showed Cook in different situations. **June 1970**: Cook Islands. 50¢ Cook. **1971**: Australian Antarctic Territory series of 2. 6¢ sastrugi snow formation; 30¢ pancake ice. Issued to celebrate the 10th anniversary of the ratification of the Antarctic Treaty. **Feb. 1971**: Argentina. 20¢ the Argentine flag, a map of Argentina and Antarctica. Marked the 5th anniversary of the Argentine South Pole Expedition. **Feb. 1971**: British Antarctic Treaty series of common design. **May 5, 1971**: Belgium. 10fr Antarctic explorer, ship, and penguins. Issued to note the 10th anniversary of the ratification of the Antarctic Treaty. **June 1971**: British Antarctic Territory series of 4 commemorating the 10th anniversary of the ratification of the Antarctic Treaty. 1½p map of Antarctica, the Aurora Australis, and explorers; 4p seagulls instead of explorers; 5p seals instead of seagulls; 10p penguins instead of seals. The map and the aurora remained constant throughout. **June 1971**: Norway. 100ø Amundsen and the Antarctic Treaty emblem. It commemorated the 10th anniversary of the ratification of the Antarctic Treaty. **June 21, 1971**: USSR. 6k a map of Antarctica and a station. It honored the 10th anniversary of the ratification of the Antarctic Treaty. **June 23, 1971**: USA. 8¢ a map of Antarctica. Issued to commemorate the 10th anniversary of the ratification of the Antarctic Treaty. **1971**: Terres Australes et Antarctiques Françaises series of Antarctic fish. 5fr icefish; 10fr–35fr various species of Antarctic cod; 135fr *Zanchlorhynchus spinifer*. **Oct. 1971**: UK. British polar explorers series. 3p Ross; 9p Scott. **Dec. 1971**: Terres Australes et Antarctiques Françaises. 75fr a map of Antarctica. Marked the 10th anniversary of the ratification of the Antarctic Treaty. **Jan. 1972**: South Georgia. Shackleton series. 1½p the *Endurance* in the Weddell Sea pack-ice; 5p launching of the *James Caird*; 10p route of the *James Caird* to South Georgia; 20p Ernest Shackleton and the *Quest*. This series commemorated the 50th anniversary of the death of Shackleton. **March 10, 1972**: Chile series of 2. Map of Antarctica and dog sledges on both. Marked the 10th anniversary of the ratification of the Antarctic Treaty (actually, the ratification was in 1961). **1972**: Australian Antarctic Territory series. 7¢ Capt. Cook, sextant, azimuth, and compass; 35¢ a chart of Cook's circumnavigation of Antarctica, and the *Resolution*. This series was issued to commemorate the bicentenary of Cook's circumnavigation. **1972**: Terres Australes et Antarctiques Françaises series of insects. 15fr *Christiansenia dreuxi*; 22fr *Phtirocoris antarcticus*; 25fr *Microzetia dreuxi*; 140fr *Pringleophaga kergeulensis*. **1972**: British Antarctic Territory silver wedding issue with a 5p and a 10p of common type showing Queen Elizabeth II, Prince Philip, seals, and emperor penguins. **July 13, 1972**: USSR. 6k Amundsen. This stamp honored his birth. **Sept. 2, 1972**: Argentina. 25¢ Almirante Brown Station and a map of Antarctica. Marked the 10th anniversary of the ratification of the Antarctic Treaty. **Sept. 1972**: Norway. Polar exploration ships series. 80ø the *Fram*. **Jan. 1973**: Norfolk Island. 35¢ the *Resolution* in Antarctica. Commemorated the first crossing of the Antarctic circle, on Jan. 17, 1773. **Jan. 1973**: Terres Australes et Antarctiques Françaises Air Post stamps. 145fr the *Astrolabe*. **Feb. 8, 1973**: Chile. 10¢ a map of Antarctica and a flag at General Bernardo O'Higgins Station. Issued to commemorate the 25th anniversary of the opening of the station. **April 1973**: Argentina. 50¢ DC3 planes over Antarctica. Noted the 10th anniversary of Argentina's first flight to the South Pole. **1973**: British Antarctic Territory series of polar explorers and their crafts. ½p Cook and the *Resolution*; 1p von Bellingshausen and the *Vostok*; 1½p Weddell and the *Jane*; 2p Biscoe and the *Tula*; 2½p Dumont d'Urville and the *Astrolabe*; 3p Ross and the *Erebus*; 4p Larsen and the *Jason*; 5p de Gerlache and the *Belgica*; 6p Nordenskjöld and the *Antarctic*; 7½p Bruce and the *Scotia*; 10p Charcot and the *Pourquoi Pas?*; 15p Shackleton and the *Endurance*; 50p Ellsworth and the airplane *Polar Star*; £1 Rymill and the *Penola*. **1973**: British Antarctic Territory series which came out later in the year. A 5p and a 15p of common design showing Princess Anne's marriage to Mark Phillips. **1973**: Tristan da Cunha series of 4 commemorating the centenary of the *Challenger*'s visit to that island during her world trip which included Antarctic waters. **1973**: Australian Antarctic Territory series of food chain and explorers' aircraft. 1¢ plankton and krill; 5¢ Mawson's D.H. Gipsy Moth 1931; 7¢ Adélie penguin feeding on krill; 8¢ Rymill's D.H. Fox Moth returning to Barry Island; 9¢ leopard seal pursuing fish; 10¢ killer whale hunting seals; 20¢ wandering albatross; 25¢ Wilkins' Lockheed Vega; 30¢ Ellsworth's Northrop Gamma; 35¢ Lars Christensen's Avro Avian and the Framnes Mountains; 50¢ Byrd's Ford Tri-Motor dropping U.S. flag over South Pole; $1 sperm whale attacking giant squid. **1973**: Australian Antarctic Territory. A later series of 2 commemorating the 44th anniversary of Byrd's flight over the Pole. 20¢ Byrd, the *Floyd Bennett*, and a map of Antarctica; 55¢ Byrd, plane, and mountains. **Oct. 1973**: Tonga. *Resolution* series. **March 1974**: Falkland Islands series. 2p fur seals. **April 1974**: the island of Aitutaki, although part of the Cook Islands, has occasionally printed its own stamps. One of this year was the 8¢ James Cook. **May 1974**: New Hebrides series. 35¢ and 1.15fr both showed Cook. **1974**: South Georgia series. 2p Cook's picture. Commemorated the bicentenary of Cook's discovery of South Georgia (his re-discovery, perhaps). **1974**: British Antarctic Territory series of 2 to commemorate Churchill's birth. 5p Churchill and a map of Churchill Peninsula; 15p Churchill and the *Trepassey* of Operation Tabarin in 1943. **1974**: Terres Australes et Antarctiques Françaises Air Post stamps. 100fr the *Français*; 200fr the *Pourquoi Pas?* **July 22, 1974**: Cook Island series of 2. Both showed Cook. **Oct. 1974**: Norfolk Island series. Commemorated the bicentenary of the discovery of the island by Cook. 7¢ Cook's portrait by Hodges; 10¢ the *Resolution* portrayed by Roberts. **Oct. 1974**: Terres Australes et Antarctiques Françaises Air Post stamps. 150fr a penguin, a map of Antarctica, and letters. Issued to commemorate the centenary of the Universal Postal Union. **Nov. 1974**: Tonga. Series of 2. 5p Cook with the *Resolution*; 25p Cook with Jamestown, St. Helena. **Dec. 1974**: Falkland Islands series. 6p the *Achilles*; 16p the *Ajax*. **1974-81**: Australian Antarctic Territory series of ships. 1¢ the *Aurora*; 2¢ the *Penola*; 5¢ the *Thala Dan*; 10¢ the *Challenger*; 15¢ the *Nimrod* (and another 15¢ showing the stern view of the *Nimrod*); 20¢ the *Discovery II*; 22¢ the *Terra Nova*; 25¢ the *Endurance*; 30¢ the *Fram*; 35¢ the *Nella Dan*; 40¢ the *Kista Dan*; 45¢ the *Astrolabe*; 50¢ the *Norvegia*; $1 the *Resolution*. **1975**: Ross Dependency series. 3¢ skua; 4¢ Hercules plane unloading at Williams Field; 5¢ Shackleton's hut at Cape Royds; 8¢ naval supply ship the *Endeavour* unloading; 10¢ Scott Base; 18¢ tabular ice floe. **June 1975**: Argentina. Series of 2p on pioneers of Antarctica. Hugo A. Acuña and Órcadas Station, Francisco P. Moreno and Lake Nahuel Huapi, Lt. Col. Luis Piedra Buena and the icebreaker *Luisito*, Ensign José M. Sobral and Snow Hill House, Capt. Carlos M. Moyano and Cerro del Toro. **Aug. 1975**: Cook Islands series of one. The $2 commemorated the completion of Cook's 2nd voyage. **Oct. 1975**: Falkland Islands series. 16p Falkland Islands Dependencies coat of arms. **Dec. 1975**: Falkland Islands series. 5½p gentoo penguins; 10p black-browed albatross. **Jan. 1976**: Terres Australes et Antarctiques Françaises series. 40¢ Antarctic tern; 50¢ Antarctic petrel; 90¢ sea lioness; 1fr Weddell seal; 1.20fr Kereguélen cormorant; 1.40fr gentoo penguin. **Jan. 1976**: Terres Australes et Antarctiques Françaises Air Post stamps. 1.20fr Dumont d'Urville Base 1956; 2.70fr the *Commandant Charcot*; 4fr Dumont d'urville Base 1976. **May 1976**: Cook Islands series of 3 show Cook and the *Resolution*. 1976: South Georgia series commemorating the 50th anniversary of the Discovery Investigations. 2p a picture of the *Discovery* and biological laboratory; 8p the *William Scoresby* and Nansen-Pet-

terson water sampling bottles; 11p the *Discovery II* and plankton net; 25p biological station and krill. **Dec. 1976**: Terres Australes et Antarctiques Françaises series of 2 commemorating James Clark Ross climbing Mount Ross on Kerguélen Island. 30¢ Ross climbing the mountain; 3fr a picture of Ross himself. **Dec. 16, 1976**: Terres Australes et Antarctiques Françaises. 70¢ Cook. **Jan. 1977**: British Antarctic Territory whale series. 2p sperm; 8p fin; 11p humpback; 25p blue. Issued to commemorate the conservation of whales. **Feb. 1977**: Terres Australes et Antarctiques Françaises. 1.10fr blue whale. **Feb. 1977**: British Antarctic Territory series commemorating the silver anniversary of Queen Elizabeth II's reign. 6p Prince Philip in Antarctica in Jan. 1957. **Sept. 1977**: Gilbert Islands series on Cook. **Dec. 1977**: Tonga. Whale protection series showing sei and fin whales. **Dec. 20, 1977**: Terres Australes et Antarctiques Françaises series. 40¢ *Macrocystis algae*; 90¢ albatross; 1fr underwater sampling and scientists; 1.20fr the *Magga Dan*; 1.40fr the *Thala Dan* and penguins. **Dec. 24, 1977**: Terres Australes et Antarctiques Françaises. 1.90fr had a cartoon noting the 30th anniversary of the French Polar Expeditions. **1978**: South Georgia series. 25p fur seal. **Jan. 1978**: Cook Islands series of 3. 50¢ Cook. **Jan. 1978**: Norfolk Island series of 3 commemorating the bicentenary of Cook's arrival in the Hawaiian Islands. 18¢ Cook portrayed by Nathaniel Dance; 25¢ Cook discovering the Hawaiian Islands. **1978**: British Antarctic Territory coronation anniversary series of 3. 25p emperor penguin. **July 1978**: Maldive Islands series on Cook. **July 30, 1978**: USSR series of Antarctic fauna. 1k crested penguin; 3k white-winged petrel; 4k emperor penguin and chick; 6k white-blooded pikes; 10k sea elephants. **Aug. 1978**: Tonga series showed the voyages of Cook. **Dec. 1978**: Aitutaki series commemorating the bicentenary of Cook's death. 50¢ Dance's portrait of Cook; 75¢ Hodges' painting of the *Resolution* and *Adventure*. **Dec. 1978**: Tonga series on the conservation of endangered species. 15¢ a whale. **Jan. 1979**: Ascension series of 4 commemorating Cook's voyages. 3p the *Resolution*; 8p Cook's chronometer; 12p a green turtle; 25p a picture of Cook. **Jan. 1, 1979**: Terres Australes et Antarctiques Françaises. 1.20fr R. Rallier du Baty. **Jan. 1, 1979**: Terres Australes et Antarctiques Françaises Air Post stamps. 2.70fr the *Challenger*; 10fr elephant seals. **April 1979**: Cook Islands series. 20¢ portrait of Cook by John Weber; 30¢ the *Resolution* by Henry Roberts; 35¢ the *Endeavour*; 50¢ the death of Capt. Cook as portrayed by George Carter. **1979**: South Georgia series. 3p the *Resolution*; 6p map of South Georgia and the South Sandwich Islands with Capt. Cook's route; 11p king penguin drawn by Foster; 25p Capt. Cook. These 4 stamps commemorate Cook's voyages. **1979**: British Antarctic Territory series of penguins. 3p macaroni; 8p gentoo; 11p Adélie; 25p emperor. **1979**: Dominica. Captain Cook series. 10¢ Cook and the *Endeavour*; 50¢ Cook and the *Resolution*; 60¢ Cook, the *Discovery*, and a map of the 3rd voyage; $2 Cook's portrait. **1979**: Terres Australes et Antarctiques Françaises. 1fr a petrel. **Feb. 1980**: Falkland Islands series. 25p killer whale. **1980**: Falkland Islands Dependencies series. 50p the *John Biscoe*; £1 the *Bransfield*; £3 the *Endurance*. **1980**: British Antarctic Territory series showed past presidents of the Royal Geographical Society. 3p John Barrow Tula; 7p Sir Clements Markham; 11p Lord Curzon; 15p William Goodenough; 22p James Wordie; 30p Raymond Priestley. **Sept. 1980**: Argentina series of 500p showed emperor penguin, bearded penguin, Adélie penguin, Papua penguins, sea elephants, the South Orkneys, Argentine base, fur seals, giant petrels, blue-eyed cormorants, stormy petrel, Antarctic doves, Puerto Soledad. All issued to commemorate Argentina's 75th anniversary in the South Orkneys. **Nov. 17, 1980**: Belgium. Series showed de Gerlache painted by F.J. Navez. **Nov. 24, 1980**: USSR. 4k the *Mikhail Somov*. **Dec. 1980**: Terres Australes et Antarctiques Françaises. Series included Adélie penguins and sea leopards. **Dec. 15, 1980**: Terres Australes et Antarctiques Françaises Air Post stamps. 7.30fr the *Norsel*. **Jan. 25, 1981**: USSR series issued to publicize 25 years of Soviet research in Antarctica. 4k Mirnyy Station; 6k earth station, rocket, 15k map, supply ship. **June 1981**: Terres Australes et Antarctiques Françaises. 1.80fr a map of Antarctica. Commemorated the 20th anniversary of the ratification of the Antarctic Treaty. **June 6, 1981**: Argentina series. 1000p Esperanza Station; 2000p cargo plane, map of Vicecomodoro Marambio Station, Marambio Island; 2000p (another one) Almirante Irízar. This series marked the 20th anniversary of the ratification of the Antarctic Treaty. **1981**: British Antarctic Territory series commemorating the 20th anniversary of the ratification of the Antarctic Treaty. 10p map of Antarctica; 13p conservation research; 25p satellite image mapping; 26p global geophysics. **1981**: Terres Australes et Antarctiques Françaises Air Post stamp series. 1.30fr glacial landscape, the Dumont d'Urville Sea; 1.50fr *Chionis*; 2fr Adèle Dumont d'Urville (1798-1842); 3.85fr Arcad III; 5fr 25th anniversary of Charcot Station; 8.40fr the *Antarès*. **June 23, 1981**: Chile. 3.50p the Capitán Arturo Prat Naval Base. Issued to commemorate the 20th anniversary of the ratification of the Antarctic Treaty. **Oct. 5, 1981**: Argentina. 1000p a map of Argentine Antarctica and South America, and a whale. Issued to protest indiscriminate whaling. **Feb. 1982**: Norfolk Island series on whales. 24¢ sperm; 55¢ southern right; 80¢ humpback. **March 1982**: British Antarctic Territory series. 3p land and water; 6p shrubs; 10p dinosaur; 13p volcano; 25p trees; 26p penguins. **1982**: Ross Dependency series commemorating the 25th anniversary of Scott Base. 5¢ Adélie penguins; 10¢ tracked vehicles; 20¢ Scott Base; 30¢ a field party in the upper Taylor Valley; 40¢ Vanda Station; 50¢ Scott's hut at Cape Evans. **1982**: Australian Antarctic Territory series of 2 commemorating Mawson. 27¢ Mawson and landscape; 75¢ Mawson and map. **July 1982**: British Antarctic Territory series of 4 of Princess Diana. **Sept. 1982**: Terres Australes et Antarctiques Françaises Air Post stamps. 5fr the *Commandant Charcot*. **Nov. 1982**: Tonga series showed the *Resolution* on the 29s stamp. **Nov. 1982**: British Antarctic Territory series on the 10th anniversary of the Convention for Conservation of Antarctic Seals. 5p leopard seal; 10p Weddell seal; 13p elephant seal; 17p fur seal; 25p Ross seal; 34p crabeater seal. **1983**: Turks and Caicos Islands series on whales. 65¢ right; 70¢ killer; 95¢ sperm; $2 blue; $2.20 humpback. **Feb. 20, 1983**: Brazil. The 150cr showed the support ship *Barão de Teffe*, and related to the Antarctic expedition that country made in 1982-83. **March 1983**: British Antarctic Territory series on marine life. **March 1983**: Falkland Islands Dependencies series. 5p *Euphausia superba*. **April 1983**: Australian Antarctic Territory series of 27¢ stamps showing local wildlife: light-mantled sooty albatross, Macquarie Island shags, elephant seals, royal penguins, Antarctic prions. **1983**: India. the 1 rupee stamp commemorated the 1st anniversary of that country's Antarctic expedition. **July 29, 1983**: Penrhyn Island series of 5 on "Save the Whales" showing various whale-hunting scenes. **Sept. 1983**: Australian Antarctic Territory. 27¢ showing the Antarctic Treaty Consultative meeting at Canberra, Sept. 13-27, 1983. **Nov. 1983**: Falkland Islands series. 17p Noorduyn Norseman airplane; 50 p Auster plane. **Dec. 1983**: British Antarctic Territory series on the manned flight bicentenary. 5p de Havilland Twin Otter; 13p de Havilland Single Otter; 17p Consolidated Canso; 50p Lockheed Vega. **Dec. 1983**: Falkland Islands Dependencies series. 50p Auster plane. **Dec. 10, 1983**: Argentina series on southern pioneers and fauna showed *Diomedia exulans*, *Diomedia melanophris*, *Eudyptes chrysolophus*, Luis Piedra Buena, Carlos María Moyano, Luis Py, Augusto Lasserre, *Phoebetria palpebrata*, *Hydrurga leptonyx*, *Lobodon carcinophagus*, *Leptonychotes weddelli*. **Jan. 1984**: Australian Antarctic Territory series of 2 commemorated the 75th anniversary of the South Magnetic Pole trip of David, Mawson, and Mackay, in 1908-09. 30¢ a prismatic compass; 85¢ an aneroid barometer. **Jan. 1, 1984**: Terres Australes et Antarctiques Françaises series showed seals and penguins. **Jan. 1, 1984**: Terres Australes et Antarctiques Françaises Air Post stamps. 2.60fr the *Erebus* off the Antarctic ice-cap. **March 1984**: Tonga series on navigators and explorers of the Pacific. 1.50pa James Cook and the *Resolution*. **June 18, 1984**: Chile series showed Antarctic colonization. 15p women's expedition; 15p (another one) Villa las Estrellas Station; 15p (yet another one) scouts, flag, Air Force base. **Sept. 1984**: Cook Islands series. 60¢ Cook's landing; $2 Weber's portrait of Cook. **Nov. 1984**: Tonga. Famous mariners series. 32s Willem Schouten. **Nov. 1984**: Terres Australes et Antarctiques Françaises Air Post stamps. 9fr the *Gauss*. **1984-87**: Australian Antarctic Territory series. 2¢ summer afternoon; 5¢ dog team at Mawson Station; 10¢ evening; 15¢ Prince Charles Mountains; 20¢ morning; 25¢ sea ice and iceberg; 30¢ Mount Coates; 33¢ Iceberg Alley, Mawson; 36¢ winter evening; 45¢ brash ice; 60¢ midwinter shadows; 75¢ coast-

line; 85¢ landing field; 90¢ pancake ice; $1 emperor penguins, Auster Rookery. **Jan. 1, 1985**: Terres Australes et Antarctiques Françaises series showed BIOMASS. **Jan. 1, 1985**: Terres Australes et Antarctiques Françaises. Another series. 1.70 fr emperor penguins; 2.80fr snowy petrel. **Jan. 1, 1985**: Terres Australes et Antarctiques Françaises. Yet another series. 2.20fr Port-Martin. **Jan. 1, 1985**: Terres Australes et Antarctiques Françaises. Still another series. 2fr Liotard. **March 1985**: British Antarctic Territory series commemorated BGLE 1934-37. 7p the *Penola* in Stella Creek; 22p Northern Base, Winter Island; 27p the D.H. Fox Moth at Southern Base, Barry Island; 54p dog team near Ablation Point, George VI Sound. **April 1985**: Norway. Series of 2 showing Antarctic mountains. **May 1985**: Falkland Islands Dependencies series on albatrosses. 7p *Diomedia chrysostoma*; 22p *Diomedia melanophris*; 27p *Diomedia exulans*; 54p *Phoebetria palpebrata*. **June 1985**: Chile series commemorating the 25th anniversary of the Antarctic Treaty. 15p krill, pack-ice, map; 25p seismological station at General Bernardo O'Higgins Station; 35p geo-reception station, dish receiver. **July 13, 1985**: Argentina series of 10¢ stamps. One of them showed the first Argentine Antarctic flight in 1952. **Nov. 1985**: Falkland Islands Dependencies series on naturalists and endangered species. 7p Dumont d'Urville and kelp; 22p John Forster and king penguin; 27p George Forster and tussock grass; 54p Sir Joseph Banks and dove prion. **Nov. 1985**: British Antarctic Territory series on naturalists, flora, and fauna. 22p Sir Joseph Dalton Hooker with *Deschampsia antarctica*; 27p Jean René C. Quoy with *Lagenorhyncus cruciger*; 54p James Weddell with *Leptonychotes weddelli*; 7p (sic) Robert McCormick with *Catharacta mcCormicki*. **Jan. 1, 1986**: Terres Australes et Antarctiques Françaises series. 1fr Antarctic fulmars; 1.70fr giant petrels. **Jan. 1, 1986**: Terres Australes et Antarctiques Françaises Air Post stamps series. 2.10fr Charcot and the *Pourquoi Pas?*; 14fr Charcot with a ship in a storm. **Jan. 1986**: British Antarctic Territory series of 4 commemorating Halley's Comet. 22p Halley Station. **May 1986**: Terres Australes et Antarctiques Françaises Air Post stamps. 8fr SPOT satellite over the Antarctic. **May 31, 1986**: Argentina series of 10¢ stamps which showed Jubany Base, *Arctocephalus gazella*, *Otaria bryonia*, General Belgrano Station, *Daption capensis*, *Diomedia melanophris*, *Aptenodytes patagonica*, *Macronectes giganteus*, Hugo Alberto Acuña (1885-1953), *Spheniscus magellanicus*, *Gallinago gallinage*, Capitán Augustín del Castillo (1855-89). This was the Antarctic bases, pioneers, and fauna series. **1986**: Australian Antarctic Territory. 36¢ commemorated the 25th anniversary of the ratification of the Antarctic Treaty and showed a mountain range in the background. **July 1986**: St. Helena series on explorers and ships. 1p Ross and the *Erebus*; £1 Cook and the *Endeavour*; £2 Dumont d'Urville and the *Astrolabe*. **July 16, 1986**: Chile series. 40p block of 4 showed Antarctic fauna: *Sterna vittata*, *Phalacrocorax atriceps*, *Aptenodytes forsteri*, *Catharacta lonnbergi*. **Oct. 10, 1986**: USSR series. 5k icebreaker, helicopters, the *Mikhail Somov* trapped in the ice; 10k the *Mikhail Somov* port side; 50k trapped in ice. **Dec. 1986**: British Antarctic Territory series commemorating the 50th anniversary of the International Glaciological Society and the 4 stamps showed different snowflakes. **Dec. 1986**: Tonga. A Dumont d'Urville series of 4. The 32s showed Dumont d'Urville and the *Astrolabe*. The others related to Tonga. **Jan. 1, 1987**: Terres Australes et Antarctiques Françaises. 2fr Marret Base, Adélie Land. **Jan. 1, 1987**: Terres Australes et Antarctiques Françaises Air Post stanps. 14.60fr Charcot. Issued to commemorate this explorer. **April 1987**: Falkland Islands series. 29p southern elephant seal; 58p leopard seal. **1987**: Falkland Islands Dependencies series on birds. 1p Dominican gull; 2p blue-eyed cormorant; 4p brown skua; 5p cape pigeon; 9p fairy prions; 10p chinstrap penguin; 250 light-mantled sooty albatross; 50p southern giant petrel; £1 wandering albatross; £3 king penguin. **1987**: British Antarctic Territory series commemorating Scott. 10p Scott; 24p the *Discovery* at Hut Point in 1902-04; 29p Cape Evans hut in 1911-13; 58p South Pole in 1912. **June 30, 1987**: Hungary. Antarctic research 75th anniversary series. 2fo Cook and ship; 2fo (another one) von Bellingshausen and seals; 2fo (yet another one) Shackleton and penguins; 4fo Amundsen at the Pole with dogs teams; 4fo (another one) Scott and ship; 6fo Byrd and the *Floyd Bennett*; 20fo helicopter landing at Mirnyy Station. **Nov. 1987**: Korea. 80w stamp commemorating the first anniversary of their signing of the Antarctic Treaty. **Dec. 2, 1987**: USSR series of 18th to 19th century naval commanders. 25k Lazarev. **Jan. 1, 1988**: Terres Australes et Antarctiques Françaises. 6.80fr Wilson's petrel. **Jan. 1, 1988**: Terres Australes et Antarctiques Françaises Air Post stamps. Commemorated the 40th anniversary of the French Polar Expedition on its 20fr stamp. **1988**: France. A semi-postal stamp featured Dumont d'Urville.

Mount Stancliff. 76°50' S, 145°24' W. A peak, 5 km NE of Saunders Mountain, on the S side of Crevasse Valley Glacier, in the Ford Ranges of Marie Byrd Land. Discovered in Nov. 1934, by a sledging party during ByrdAE 1933-35, and named by Byrd for Olin Stancliff. US-ACAN accepted the name in 1952.

Stancliff, Olin Dana. b. Jan. 3, 1905, Ohio, but raised partly in Erie, Pa., son of machinist Ray L. Stancliff and his wife Josephine. He was one of the shore party of ByrdAE 1933-35 (on the way south he had been a mess attendant on the *Jacob Ruppert*). He died on Nov. 3, 2003, in Erie, Pa.

Stancomb Cove. 62°56' S, 60°41' W. A cove, NE of Laguna Hill, on the W side of Telefon Bay, in the NW part of Port Foster, Deception Island, in the South Shetlands, formed as the result of volcanic eruptions on the island in Dec. 1967, Feb. 1969, and Aug. 1970. Surveyed from the *Endurance* in Jan. 1988, and named by UK-APC on May 13, 1991, after the survey boat, the *Stancomb-Wills*, used by this survey, the boat, in turn, having been named after Shackleton's longboat of 1914-7, which, in turn had been named for Dame Janet Stancomb-Wills (*see* **Stancomb-Wills Glacier**). US-ACAN accepted the name. Last plotted by the UK, in late 2008.

The *Stancomb-Wills*. One of the 3 longboats used by Shackleton during his abortive BITE 1914-17. He named the boat for Dame Janet Stancomb-Wills (*see* **Stancomb Wills Glacier Tongue**).

Promontorio Stancomb Wills *see* **Stancomb-Wills Glacier Tongue**

Stancomb-Wills Glacier. 75°18' S, 19°00' W. A large glacier flowing into the eastern Weddell Sea, where it forms the Stancomb-Wills Glacier Tongue, between the Brunt Ice Shelf and the Riiser-Larsen Ice Shelf, southwestward of Lyddan Island, on the Caird Coast. Discovered from a Hercules aircraft on Nov. 5, 1967, plotted by USGS from photos taken on that flight, and named by US-ACAN in 1970, in association with what was then called Stancomb-Wills Promontory (now more properly called Stancomb-Wills Glacier Tongue), which Shackleton had discovered in Jan. 1915. It appears as Stancomb-Wills Glacier on a 1970 American Geographical Society map, and also in the 1977 U.S. gazetteer. The name of this feature has not always been seen with a hyphen. The Norwegians call it Stancomb-Willsstraumen (i.e., the Stancomb-Wills stream). The British describe the Stancomb-Wills Glacier as the grounded part of what they (and they alone) call the Stancomb-Wills Ice Stream. For more, see the entry below, **Stancomb-Wills Glacier Tongue**.

Stancomb-Wills Glacier Tongue. 75°00' S, 22°00' W. The very extensive seaward projection of Stancomb-Wills Glacier into the E part of the Weddell Sea. Shackleton discovered the cliffed front of this feature on Jan. 15, 1915, roughly charted it, and named it Stancomb Wills Promontory, for Dame Janet Stancomb- Wills (1853-1932), a sponsor, and later (1923-24), the first woman mayor of Ramsgate, Kent. She was born Janet Stancomb Graham Stancomb (no hyphens), but was later adopted by her uncle, W.H. Wills, 1st Baron Winterstoke, and in 1893 changed her last name to Stancomb-Wills (with hyphen). It appears as such on Shackleton's 1919 map, and on Wordie's 1921 map, plotted in 74°00' S, 25°00' W. On a 1929 American Geographical Society map the name Stancomb-Wills Shelf Ice appears. Stancomb-Wills Promontory appears on British charts of 1930 and 1949, and that name was accepted by UK-APC, and it appears as such in the 1955 British gazetteer. On an Argentine chart of 1946 it appears as Promontorio Stancomb Wills, on a USAF chart of 1947 it appears as Stancomb-Wills Ice Tongue, and on a 1952 Argentine chart as Lengua de Hielo Stancomb-Wills. It was also seen as Hielo de Stancomb-Wills and Lengua de Stancomb-Wills. Following the voyage of the Argentine icebreaker *General San Martín*, in Jan. 1955, it was reported that the glacier tongue had calved along the line of the front of the Brunt Ice Shelf. In Jan. 1956, BCTAE reported a concentration of icebergs in the area where the seaward part of

the floating glacier tongue of this feature had disintegrated. It appears on a 1956 U.S. Hydrographic Office chart as Stancomb-Wills Ice Promontory. On Nov. 5, 1967 a Hercules flew over the area, and took photos. From these photos the relationship between this feature and the glacier was more accurately determined, and US-ACAN re-named this feature Stancomb-Wills Ice Tongue. In 1970 they redefined it yet again, more properly this time, as Stancomb-Wills Glacier Tongue, which is how it appears on a 1970 American Geographical Society map, plotted in 75°00' S, 22°00' W, and also how it appears in the 1977 U.S. gazetteer. The British refer to this as the floating, seaward part of what they (and they alone) call the Stancomb-Wills Ice Stream. On a British map of 1973 appears, somewhat anachronistically, Stancomb-Wills Promontory, plotted in 74°30' S, 23°00' W, and on the same map the grounded part (i.e., what the Americans call Stancomb-Wills Glacier) appears as Dalgliesh Ice Stream, named after Dr. David Dalgliesh. After studying U.S. Landsat images taken in Feb. 1974, the British delineated it, and named the part of it W of 20°W as Stancomb-Wills Ice Stream. This was done partly for political reasons (so that it fell within the British-claimed territory), which is why the Americans did not buy into that naming. The name of this feature has not always been seen with a hyphen.

Stancomb-Wills Ice Stream *see* **Stancomb-Wills Glacier, Stancomb-Wills Glacier Tongue**

Stancomb-Wills Ice Tongue *see* **Stancomb-Wills Glacier Tongue**

Stancomb-Wills Promontory *see* **Stancomb-Wills Glacier Tongue**

Stancomb-Wills Shelf Ice *see* **Stancomb-Wills Glacier Tongue**

Stancomb-Willsstraumen *see* **Stancomb-Wills Glacier**

Stanczyk Hill. 62°10' S, 58°13' W. Rising to about 250 m between Matejko Icefall and Stwosz Icefall, at Legru Bay, King George Island, at the Bransfield Strait, in the South Shetlands. Named by the Poles in 1980, for Stanczyk (right name probably Stanislaw Gaska; ca. 1480-1560), the famous court jester to 3 Polish kings, and who was portrayed by the painter Jan Matejko.

Standifer Bluff. 72°34' S, 94°58' W. A conspicuous rock bluff, a component of Smith Bluffs, which form the NW coast of Dustin Island, 16 km WSW of the N tip of that island. Photographed from helicopters off the *Burton Island* and the *Glacier* during the Bellingshausen Sea Expedition of Feb. 1960. Named by US-ACAN in 1968, for Jasper Newton "J.N." Standifer (b. March 14, 1928, Knoxville, Tenn. d. Dec. 1983), USGS photographic specialist in Antarctica, 1967-68.

Standring, Anthony John. Known as John Standring. b. June 12, 1927, in Exeter, but raised in Bridgwater, son of John Standring. After Bristol University, he joined FIDS in 1952, as a geologist, and later that year left Southampton for Montevideo, wintering-over at Base D in 1953 and 1954. He got a bad attack of frostbite after a sledging accident. When his tour was up, he returned to Port Stanley, then on to Montevideo, where he caught the *Argentina Star* bound for London, arriving there on Feb. 15, 1955, in company with Mike Faulkner, Ron Mottershead, and Barry Golborne. He later worked for Shell, and even later lived at Hemel Hempstead. In 1960, at Battle, Sussex, he married Joyce Annette Shortland. Other Fids say he is now dead.

Standring Inlet. 66°00' S, 61°03' W. An inlet, 14 km long, and filled with ice from the Larsen Ice Shelf, it is the most northeasterly of 3 inlets on the N coast of Jason Peninsula, in Graham Land. Surveyed by FIDS in 1953, and named by the UK on Sept. 4, 1957, for John Standring (q.v.), who visited Jason Peninsula with the survey party. US-ACAN accepted the name in 1963.

Stanford Nunatak. 76°51' S, 143°18' W. A small, somewhat isolated nunatak, 5.5 km NE of Mount Morgan, in the E part of the Gutenko Nunataks of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for Thomas H. Stanford, University of Washington ionosphere physicist at Byrd Station in 1970.

Stanford Plateau. 85°57' S, 140°00' W. An ice-capped plateau, over 3000 m above sea level, and 24 km wide, between the heads of Leverett Glacier and Kansas Glacier. The plateau unites with the interior ice sheet to the S, but terminates in the N in the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Stanford University, which has sent many researchers to Antarctica.

Stange Ice Front. 72°30' S, 76°30' W. The seaward face of the Stange Ice Shelf, on the English Coast of Ellsworth Land. Named by UK-APC on Nov. 13, 1985. By a 1973 reckoning, it extended between 72°40' S and 73°15' S, and between 76°30' W and 77°30' W, so it seems to have shifted to the NE. US-ACAN does not recognize ice fronts as a feature type.

Stange Ice Shelf. 73°15' S, 76°30' W. The ice shelf in Stange Sound, on the English Coast, where Ellsworth Land meets Palmer Land, it is bounded to the E by Spaatz Island, to the NW by Smyley Island, and to the W by fast ice in Carroll Inlet, it is separated from the George VI Ice Shelf south of Spaatz Island by a narrow ice strait containing 2 ice rumples. Named by UK-APC on Nov. 13, 1985, in association with the sound. US-ACAN accepted the name.

Stange Sound. 73°10' S, 76°40' W. About 100 km long and 40 km wide, along the English Coast of Ellsworth Land, it is occupied by an ice shelf (*see* **Stange Ice Shelf**). On the W are Smyley Island, Case Island, and the Snow Nunataks; on the E is Spaatz Island; on the N is open water in Ronne Entrance; and on the S is the mainland. Photographed aerially and roughly plotted by RARE 1947-48, and named by Finn Ronne in 1948 for Henry Stange of New York, a contributor to RARE 1947-48. Mapped by USGS from USN air photos taken in 1965-66. US-ACAN accepted the name in 1968. It appears on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted the name on Dec. 20, 1974.

The *Stanislav*. Russian ship that took part in SovAE 1972-74. Captain was Mikhail Stepanovich Rugayev.

Stanistreet, Cyrus George. b. early 1883, Everton, near Liverpool, son of bricklayer Cyrus Stanistreet and his Irish wife Bridget. He went to sea at 13. Only a little fellow, 5 foot 4, and 140 pounds, he did, however, have "Lillian" and a shamrock-based coat of arms tattooed on his left forearm, a tattooed bracelet of shamrocks on his left wrist, a star and yet another shamrock coat of arms on his right arm, as well as a shamrock on the back of his right hand. Despite the "Lillian" on his arm, he married (or maybe not) Georgina Patterson, and they lived in Liverpool until the end of their days. He was an able seaman on the *Galatea*, at Chatham Dockyard, when he transferred to the *Terra Nova* for the 1903-04 relief of BNAE 1901-04, as an able seaman. After the expedition he went back to the Merchant Navy, sailing out of Liverpool, being promoted to bosun. In the 1930s and 40s he sailed as storekeeper on the Canadian Pacific Line ship *Empress of Australia*. His son, Cyrus J., died on the *Rawalpindi* in 1939, just after World War II broke out. Cyrus Sr. died in 1961, in Liverpool.

Shel'fovyk Lednik Stanjukovicha. 69°35' S, 31°05' E. A glacier tongue SE of the bay the Norwegians call Vestvika, on the coast of East Antarctica. Named by the Russians.

Banco Stanley *see* **Stanley Patch**

Isla Stanley *see* **Stanley Island**

Mount Stanley. 84°09' S, 165°29' E. Rising to 3220 m, NE of the head of Wycoff Glacier, near the W limits of Grindley Plateau, in the Queen Alexandra Range, to the W of Beardmore Glacier, in Victoria Land. This mountain was selected by NZGSAE 1961-62 as being the one discovered in Dec. 1908 by BAE 1907-09, and named by them for Dr. Eric Marshall's immediately eldest brother, John Stead Stanley Marshall (b. 1877, Lowestoft, Suffolk. d. 1956, London), a London solicitor. US-ACAN accepted the name and the location in 1966.

Stanley Island. 66°32' S, 63°40' W. An island, 3 km long and rising to 520 m above sea level, 6 km NE of Spur Point, in the W part of Cabinet Inlet, off the Foyn Coast, on the E coast of Graham Land. Surveyed and charted by Fids from Base D in Dec. 1947, and named by them for Oliver Frederick George Stanley (1896-1951; younger son of the 17th Earl of Derby), secretary of state for war, 1940, and for the colonies, 1942-43, who helped create the forerunners of FIDS in 1943 (*see* **Operation Tabarin**). During RARE 1947-48, which photographed it aerially, Finn Ronne, unaware that the British had already named it (at almost precisely the same time), named it Bertrand Island, for Kenneth J. Bertrand (*see* **Bertrand Ice Piedmont**). It appears as such on Ronne's map of 1949. UK-APC accepted the name Stanley Island on Jan. 22, 1951,

and it appears as such on a British chart of 1952. US-ACAN accepted that name in 1952. It appears as such in the 1955 British gazetteer. It was surveyed again by ArgAE 1952-53, who named it Isla Neves, presumably for a member of that expedition (*see* **Inott Point**). It appears on their chart of 1953. However, it appears on a 1957 Argentine chart as Isla Stanley, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Stanley Kemp Peak *see* **Kemp Peak**

Stanley Patch. 62°58' S, 60°39' W. A shoal, with a least depth of 4 m, in Port Foster, NW of Collins Point, and 3 km WNW of Fildes Point, Deception Island, in the South Shetlands. Surveyed by Lt. Cdr. David Penfold, during the RN Hydrographic Survey unit's survey of the area on the *John Biscoe* in 1948-49, and named by him for Stanley, the capital of the Falkland Islands (incidentally, the name Port Stanley signifies merely the port for the town of Stanley, and is not a synonym for the town). It appears on Penfold's 1949 chart, and was the name accepted by UK-APC on Nov. 15, 1951, and by US-ACAN in 1952. It appears in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Banco Stacy, namd for Lt. Roberto Stacy, of the Argentine Navy, killed aboard the frigate *Hércules* at the battle of Martín García, in 1814. It appears on a 1957 Argentine chart as Banco Stanley, but it was Banco Stacy that was accepted by the 1970 Argentine gazetteer. The Chileans call it Banco Stanley. Last plotted by the UK, in late 2008.

Stannistreet, Cyrus *see* **Stanistreet**

Stansbury, Michael John "Mike." b. 1934, Walsall, Staffs, son of Charles Arthur Stansbury and his wife Lucy Maud Jay. In 1956 he was in Norway, where he met Jeff Stokes. He joined FIDS in 1957, as a glaciologist, and on Oct. 1, 1957, left Southampton on the *Shackleton*, bound for Montevideo. He was due to winter-over at Base G that year, but instead got shifted to South Georgia. However, he did winter-over as base leader at Base G in 1959. In 1963, in Wallingford, he married Evelyn M. Barnes.

Stansbury Peninsula. 62°14' S, 59°00' W. A large, ice-free peninsula (the Poles call it a headland) projecting from the NE coast of Nelson Island between Edgell Bay and Fildes Strait, in the South Shetlands. BAS did geological work here in 1975-76. Named by UK-APC on Feb. 7, 1978, for Mike Stansbury. US-ACAN accepted the name. In 1984, the Poles named this feature Wzgorze Helikoptera (i.e., "Helicopter Hills," this English-language translation, as well as the Polish original, being seen on Krzysztof Birkenmajer's maps of 1980), in reference to successful helo landings made here during PolAE 1980-81. The Germans call it Südberge.

Mount Stansfield. 66°41' S, 52°51' E. A mountain, 4 km ESE of Mount Berrigan, and 30 km WSW of Stor Hånakken Mountain, in Enderby Land. Plotted by Australian cartographers from 1957 ANARE air photos. Named by ANCA for Peter B. Stansfield, supervising radio technician at Wilkes Station in 1961. US-ACAN accepted the name in 1965.

Stanton, Arthur Max. b. Feb. 3, 1899, West Hampstead, London, but grew up in Clerkenwell, Bexley, Kingston, and Wimbledon, son of German immigrant surgical instrument maker Charles Otto Schneider and his American-born (but British) wife Charlotte Fisher. In 1918, the family would, like a lot of Germans during World War I, change their name, in this case to Stanton. "AMax," as he later became known, became an apprentice seaman, and on May 23, 1918 left Liverpool on the *Missnabie*, bound for New York, where he arrived on June 8, 1918. He qualified as a merchant seaman, and we pick him up leaving Newcastle, NSW, on June 15, 1921, as 2nd mate on the *William T. Lewis*. He arrived in Iquique, Chile, and from there he left on the same ship on Oct. 26, 1921, arriving in Seattle on Jan. 3, 1922, immediately applying for American citizenship. Although he had his master's ticket, he served as 1st officer on the *Discovery*, 1930-31, during the second half of BANZARE 1929-31. In 1944 he was living in Neutral Bay, Sydney, and working as a ship's captain. He died in Hong Kong in 1963.

Stanton Group. 67°32' S, 61°38' E. A group of small, rocky islands close to the coast at the E side of Utstikkar Bay, 6 km (the Australians say between 9 and 11 km) NE of Falla Bluff, in Mac. Robertson Land. They include Kamelen Island, Oldham Island, and the Hogg Islands. Discovered on Feb. 14 or Feb. 18, 1931, by BANZARE 1929-31, and named by Mawson for Arthur Stanton. US-ACAN accepted the name in 1947, and ANCA followed suit on Nov. 28, 1955.

Stanton Hills. 75°17' S, 73°12' W. A group of loosely clustered nunataks, rising to about 1300 m, and which extend over 20 km, centered 13 km W of Mount Neuner, in the W part of the Behrendt Mountains, on the Orville Coast, in eastern Ellsworth Land. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Following a visit to the area by a USGS party in 1977-78, the feature was named by US-ACAN, for Lt. Cdr. Ronald Andrew Stanton, USN, command pilot of a LC-130 Herc that supported the party. UK-APC accepted the name on Nov. 13, 1985.

Stanwix Peak. 70°43' S, 162°39' E. A distinctive peak rising to 2240 m, it surmounts the S side of the head of Astapenko Glacier, in the Bowers Mountains. It was used as a reference object by Syd Kirkby in 1962, on an an expedition from the *Thala Dan*. Named by ANCA for Capt. John Stanwix, helicopter pilot with ANARE, 1960-61 and 1961-62 (including that expedition led by Syd Kirkby). US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Stanwix Ridge. 69°20' S, 159°20' E. A broad, partly ice-covered coastal ridge or promontory in the Wilson Hills, it extends to the SW part of Davies Bay, immediately W of McLeod Glacier, in Oates Land. Photographed aerially during OpHJ 1946-47. First visited in March 1961 by an ANARE airborne field party off the *Magga Dan*, led by Phil Law. Named by ANCA on Nov. 24, 1961, for Capt. John Stanwix (*see* **Stanwix Peak**), helo pilot with the expedition. US-ACAN accepted the name in 1967.

Stapleton Glacier. 72°56' S, 102°30' W. About 10 km long, it flows E from King Peninsula, just N of Morelli Glacier, in the area of the Abbot Ice Shelf. Named by US-ACAN in 2003, for Jo Anne Stapleton, USGS, geographer and map specialist who helped produce Antarctic maps from the 1980s onwards.

[1]**The *Star I*.** American-built whale catcher made of steel, and weighing 130 tons, she had triple-expansion reciprocating engines giving 550 hp and a maximum speed of 12 knots. She had a radio and an 11-man crew, and had served 10 years in Alaska when she went down to Antarctica as one of the 5 whale catchers serving the *Sir James Clark Ross* expedition of 1923-24. Captain Pettersen (and sometimes Alf Kaldager), was in command of the catcher. In early 1924 she went exploring along the coast of Victoria Land, and left Antarctica with the rest of the fleet. In 1924-25 she was back in the Ross Sea with the *Sir James Clark Ross* expedition of that season.

[2]**The *Star I*.** This Norwegian whale catcher started life in 1941, as the German vessel *Tirol*, built in Oslo. After the war, Anders Jahre acquired her, and converted her into the 533-ton whale catcher *Kos 25*. From 1947, as the *Star I*, she caught in Antarctic waters for the *Sir James Clark Ross*. In 1955, she was sold to Tønsbergs Hvalfangeri, and renamed *Busen 6*. In 1960, she became the *R7*, and in 1968 the *Hareidingen*. She was sold again in 1971, and became the *Fløman*n, and again in 1998, becoming the *Hundvåkøy*. In 2002 she was sold again, and became the *Torbas*.

[3]**The *Star I*.** A 901-ton, 216 feet 2-inch whale catcher built in 1956 at Pusnes Mek., in Arendal, Norway, for the Rosshavet Company, and finished by Frederiksstad Mek. The sister ship of the *Nortreff*, they were the biggest whale catchers ever built in Norway, and the *Star I* was the only one with an A-form foremast. She was catching for the *Sir James Clark Ross* between 1956-57 and 1964-65. From 1956 to 1960 her gunner was Alf Skontorp, and from 1960 to 1965 it was Thorleif Karlsen. In 1965 she was hired by Anders Jahre's Kosmos Company, and in 1965-66 and 1967-67 was catching for the *Kosmos IV*. She was laid up in 1967, in Sandefjord, and sold in 1970, being renamed the *Sun Tuna*, being fully converted into a fishing vessel by Nov. 1971, and sent to West Africa for that purpose. In 1975 she was sold to Trygve Olsen, and renamed the *Garpeskjaer*, and based out of Hammerfest. In 1992 she was hired by the Norwegian Coast Guard as a patrol boat. In 2009 she was the *Tromsbas*, owned by the Chrisma Company, out of Tromsø.

The *Star II*. Whale catcher on the first two expeditions of the *Sir James Clark Ross*, 1923-24 and 1924-25. Commanded during the first one by Capt. Iversen. She was back, catching for the *C.A. Larsen*, in 1928-29, when she foundered in

the Ross Sea on Feb. 28, 1929. Her crew was rescued.

[1]**The *Star III***. A 90-ton whale catcher on the first 2 expeditions undertaken by the *Sir James Clark Ross*, in 1923-24 and 1924-25. Commanded during the first one by Capt. Hartvigsen.

[2]**The *Star III***. A 393-ton, 137 foot 8-inch whale catcher, built by Nylands, in Oslo, in 1943, for the Rosshavet Company. However, the Germans took over the contract that year, and she was completed as the *Varanger*. In 1947 she was taken over by the Norwegian government, sold to Rosshavet, converted to a whale catcher, and in 1947-48 was in Antarctic waters, catching for the *Antarctic* (the former *C.A. Larsen*). She caught for the *Sir James Clark Ross* in Antarctic waters in 1948-49, 1949-50, and 1950-51. In 1951 she was extensively altered at the Kaldnes Mek. yard, and lengthened by 18 feet. She was back catching for the *Sir James Clark Ross* in Antarctica in 1951-52 and 1952-53, and then became a buoy boat for the same factory ship, in Antarctica in 1953-54, 1954-55, 1955-56, 1956-57, 1957-58, and 1958-59. She was then laid up. She was back as a buoy boat with the *Sir James Clark Ross* for one last season, in 1960-61. In 1963 she was sold to Elling Aarseth, in Ålesund, and was catching in nothern European waters until 1971, when she was laid up. In 1975 she was sold to a whaling company in Vigo, Spain, and her name changed to the *Ibsa Tres*. In 1980, while whaling in the Atlantic, she became a target for the Greenpeace ship *Rainbow Warrior*. Her last season as a catcher was 1985, and in 1989 she was sold for scrap in Spain.

The *Star IV*. A 90-ton whale catcher on the first 2 expeditions undertaken by the *Sir James Clark Ross*, 1923-24 and 1924-25. Commanded during the first expedition by Capt. Nielsen.

The *Star V*. A 70-ton whale catcher built in 1906. She was on the first 2 expeditions undertaken by the *Sir James Clark Ross*, 1923-24 and 1924-25. Commanded during the first expedition by Capt. Moewik.

The *Star XIV*. A 247-ton, 115' 3" whale catcher, built in 1929, by Nylands, in Oslo, for the Rosshavet Company. She was working for the *Pelagos* in 1941 when she and her crew were captured by the Nazis. *See* **The *Pelagos***. The crew were: Einar Stange (1st mate; 34; he had been on the *Sir James Clark Ross* at the time of ByrdAE 1928-30); Bjarne Clausen (42; he had also been on the *Sir James Clark Ross* at the time of ByrdAE 1928-30), Jens Toldnaes, Ole Amundsen, and Sigurd Simonsen (able seamen); Oscar Theodor Eriksen (chief engineer; 56); Hans Raasles (2nd engineer; 41; tattoo on right arm); Martin Langeland (3rd engineer); Karl Lier and Thorstein Jacobsen (stokers); Laurentz Andreassen (steward); Odd Gulliksen (cabin boy; 19); Otto Olsen (whale gunner). In 1984 she was sold and renamed *Siv Linda*.

The *Star XIX*. A 249-ton, 116' 4" Norwegian whale catcher built in 1930, by Kaldnaes Mek., for the Rosshavet Company. Her 1941 Antarctic crew were: Julius Jahre (captain; aged 38; had only 4 fingers on his right hand); Henry E.M. Haugen (1st mate); Olav Ramnes Nilsen (36), Sigurd Engebretsen (42), Martin Iversen (able seamen); Henry A. Iversen (chief engineer); Hans J. Hytten (2nd engineer; 60, tattoo on right hand); Ernst Viktor Svendsen (engineer's assistant); Halfdan Kihle and Berger Johannesen (44) (stokers); Kristian Johansen (steward; 54; tattoo on right arm); Sven Russel Pedersen (mess boy); Karsten Andersen (whale gunner). That year she was seized by the Germans (*see* **The *Pelagos***, for details), and turned into a German vessel. However, in 1942, when the *Scarborough* was upon her in the Bay of Biscay, she was scuttled.

The *Star XX*. A 249-ton, 116' 4" Norwegian whale catcher built in 1930 by Kaldnaes Mek., for the Rosshavet Company. She was in Antarctic waters in 1941. Her crew were: Torger Bruun (1st mate; 36); Arne Olafsen (28), Hans Ellingsen (30; tattoo on right arm), Rolf Jonasen, Thorvald Thoresen (42; tattoo on both arms) (able seamen); Hans A. Helgesen (chief engineer; 54); Conrad K. Gulliksen (2nd engineer; 50); Karl Johan Thorsen (engineer's assistant; 28; tattoo on right arm); Hjalmar Vaal (46) and Ludvig Christensen (stokers); Rolf Gulliksen (steward; 27); Henry Hansen (mess boy); Torger Kaspersen (whale gunner; 51; tattoo on both arms). She was captured by the Germans (*see* **The *Pelagos***, for details).

The *Star XXI*. Whale catcher working for the *Pelagos* in 1941. Her crew were: Thorleif Arnesen (1st mate); Johan Eide, Haakon B. Hansen (38), Ola Kamsvaag (32), and Ole Sørensen (able seamen); Edvin Ramberg (chief engineer); Nils A. Olsen (2nd engineer; 58); Lars Larsen (3rd engineer); Arthur Gjesdal and Edvin Øvrebø (stokers); Isak Jacobsen (steward); Birger Røsvik (cabin boy); Ingemar Martinsen (whale gunner).

[1]**The *Star XXII***. Whale catcher working for the *Pelagos* in 1941. Her crew were: Håkon Christensen (1st mate; 33); Johan Johansen, Lars Larsen Kløftene (34: tattoo on both arms), Harry Jacobsen (21), Ivar Ivarsen (able seamen; 35); Wilhelm Johansen (chief engineer); Karl V. Andreassen (2nd engineer; 50; tattoo on right arm); Ole Kristiansen Stein (engineer's assistant; 44; tattoo on right arm); Ingolf Dahl (32) and Peder Karlsen (26) (stokers); Einar Jørgensen (steward; 47; tattoo on both arms); Håkon Johansen (mess boy; 18; tattoo on right arm); Nils Johansen (whale gunner; 44 tattoo on right arm).

The *Star XXIII*. Whale catcher working for the *Pelagos* in 1941. Her crew were: Mons Hansen (1st mate; 41); Arne E. Hansen (41), Andreas Aleksandersen (24), Johannes Andreassen (27), and Johan A. Paulsen (33) (able seamen); Jacob Jacobsen (chief engineer; 59); Ragnar Pettersen (2nd engineer; 31); Kolbjørn Jespersen (3rd engineer; 31); Hans Borge Kjaeran (33) and Peder Johansen (27) (stokers); Frithjof Welmer (steward; 36); Julius Juliusen (cabin boy; 26); Harald Hansen (whale gunner).

The *Star XXIV*. Whale catcher working for the *Pelagos* in 1941. Her crew were: Ludvig Jorgensen (captain); Arne Asbjorn Jorgensen (1st mate); Gert K. Jorgensen, Anton Pedersen (42; tattoo on right arm), and Karsten Pedersen (able seamen); Emil Gjertsen (chief engineer); Jens A. Olsen (2nd engineer; 53); Asbjorn Ekenes (engineer's assistant; 38); Nils H. Paulsen (22; only four fingers on right hand) and Kristian Botne Kristiansen (23) (stokers); Olav K. Ottosen (steward); Bjarne Jakobsen (mess boy). Seized by the Germans, she was made into a German vessel, and, during World War II, in the Bay of Biscay, with the *Scarborough* bearing down on her, she was scuttled.

Starbuck Cirque. 79°33' S, 157°14' E. A remarkable cirque, 6 km wide, between Mount Hughes and the base of Tentacle Ridge, in the Cook Mountains. Named by US-ACAN in 2000, for Michael J. Starbuck, USGS cartographer who, with Roger Barlow (*see* **Barlow Rocks**), operated the seismometer and Doppler satellite receiving stations at Pole Station in 1992. He was also a member of the US-NZ field team in a program to combine U.S. and NZ geodetic networks in the area of the McMurdo Dry Valleys, 1996-97. NZ-APC accepted the name on Feb. 20, 2001.

Starbuck Crater. 76°01' S, 133°11' W. A small, snow-filled crater at the base of the W slope of the Mount Bursey massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for James E. Starbuck (b. May 20, 1947. d. July 25, 2007, New Ipswich, NH), cosmic ray technician from the Bartol Research Foundation, who was at Pole Station in 1970.

Starbuck Glacier. 65°37' S, 62°25' W. A glacier, about 24 km long, it flows E into Scar Inlet, at the Larsen Ice Shelf, immediately N of Mount Queequeg, on the Oscar II Coast, on the E coast of Graham Land. Surveyed and partially photographed by Fids from Base D in Nov. 1947. The entire glacier was photographed aerially by FIDASE in 1955-56, and plotted from these photos in 1957, by FIDS cartographers, in 65°38' S, 62°09' W. Named by UK-APC on Sept. 4, 1957, for the *Moby Dick* character. It appears on a British chart of 1961. US-ACAN accepted the name in 1963. It was further surveyed by BAS personnel from Base E in 1963-64, and replotted from those efforts.

Starfish. Live on the sea bed, near the coast. In 2007-08, 2-foot-wide starfish were found in the Ross Sea. *Also see* **Sea stars**, and **Starfish Cove** (below).

Starfish Cove. 60°42' S, 45°37' W. A small cove close N of Balin Point, on the E side of Signy Island, in the South Orkneys. Roughly surveyed in 1933 by personnel on the *Discovery II*. Re-surveyed in 1947 by FIDS, and named by them for the reddish starfish (*Odontaster validus*) found here in the bottom fauna. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Starheimtind. 70°59' S, 12°01' E. The most southeasterly mountain in the group of peaks the Norwegians call Lingetoppane, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Capt. Odd Starheim

(1916–1943), Resistance leader during World War II, lost at sea while trying to take a captured coastal vessel to England.

Roca Stark *see* **Stark Rock**

Stark, Peter Radford. b. March 16, 1958. BAS meteorologist and geophysicist who wintered-over at South Georgia in 1980 and 1981, running the geophysics program there. He wintered-over at Rothera Station in 1984, and between 1986 and 1991 spent 39 months at Faraday Station as base commander.

Stark Point. 64°02' S, 57°44' W. A rocky point on the E side of Croft Bay, in the N part of James Ross Island, it is formed by almost vertical cliffs rising from the sea to a height of 285 m. Surveyed by Fids from Base D in Aug. 1953. Named descriptively by UK-APC on Sept. 4, 1957. US-ACAN accepted the name in 1963.

Stark Ridge. 81°58' S, 159°31' E. A narrow ridge extending from the E part of Hunt Mountain, in the Holyoake Range of the Churchill Mountains, and trending N for about 17.5 km (the New Zealanders say more like 20 km) to the sharp NNE turn in Starshot Glacier. Several summits rise from this ridge, which separates Sivjee Glacier and Mansergh Snowfield. Named by US-ACAN in 2003, for Antony A. Stark, of the Smithsonian Astrophysical Observatory, at Cambridge, Mass., USAP principal investigator for the Antarctic submillimeter telescope and remote observatory at Pole Station, from 1991 onwards. NZ-APC accepted the name on Feb. 27, 2003.

Stark Rock. 65°15' S, 64°33' W. A conspicuous rock in water, rising to 7 m above sea level, 3 km S of the Cruls Islands, in the Wilhelm Archipelago. On an Argentine chart of 1946, it appears (presumably in error for Black Island) as Islote Negro. Photographed aerially by FIDASE in 1956–57, roughly charted from the ground by an RN Hydrographic Survey unit in 1957–58, and and mapped by FIDS cartographers from these efforts. Named descriptively by UK-APC on July 7, 1959. It appears on a British chart of 1960. In those days it was plotted in 65°13' S, 64°25' W. Re-charted by an RN Hydrographic Survey unit on the *Endurance*, between 1969 and 1971, and, with the correct coordinates it appears on a 1974 British chart, and also in the 1977 British gazetteer. US-ACAN accepted the name in 1971. The Argentines call it Roca Stark.

Mount Starlight. 70°12' S, 64°30' E. An extensive ridge of exposed brown rock with steep sides but no sharp peaks, rising to about 2150 m above sea level, at the W end of the Athos Range, in the Prince Charles Mountains. Discovered on Nov. 27, 1955 by John Béchervaise's ANARE party, and named by ANCA for Operation Starlight, during which depots were laid for further work, and mapping and geological investigations carried out. US-ACAN accepted the name in 1961.

Starling, Peter Donald. b. March 23, 1927, Darlington, son of Frank R. Starling and his wife Nellie Fothergill. On July 9, 1943, at Glasgow, at the age of 16, he shipped aboard the merchantman *Luminetta*, as 3rd radio officer, bound for New York. This was his first voyage, and there would be more of the same. In 1949 he joined FIDS as a radio operator. Later that year he shipped out from London, bound for Montevideo, and then on to winter-over at Base F in 1950 and 1951. At the end of his tour he stayed a while in the Falkland Islands, then caught the *Highland Chieftain* from Montevideo, arriving in London in Aug. 1952. In 1953, in Darlington, he married Mary E. Bell, and they moved to Stranraer, where he died in 2000. His widow lives in the Isle of Wight.

Starosel Gate. 66°42' S, 60°07' W. A pass, 150 m wide, and running at a height of 500 m above sea level, providing overland access from Boyana Glacier to the upper part of the Macy Glacier, between St. Naum Peak and the N extremity of Balchik Ridge, on Levski Ridge, in the Tangra Mountains, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their 2004–05 Tangra survey, and named by them on Dec. 15, 2006, for the settlement of Starosel, in central Bulgaria.

Starr Lake. 77°50' S, 166°40' E. A small meltwater lake, 0.75 km N of McMurdo Station, about midway between First Crater and Crater Hill, in the area of constant snow cover on Hut Point Peninsula, Ross Island. It is a source of water for the station. Named locally in the early 1970s for James W. "Jim" Starr, USN steelworker who helped develop the lake for water supply in 1966 and 1967. US-ACAN accepted the name in 1972.

Starr Nunatak. 75°54' S, 162°35' E. A conspicuous nunatak marking the N side of the mouth of Harbord Glacier, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1962. Named by US-ACAN in 1968, for Jim Starr (*see* **Starr Lake**).

Starr Peninsula. 71°56' S, 99°46' W. About 16 km long, and ice-covered, between Wagoner Inlet and Potaka Inlet, on the N side of Thurston Island. Named by US-ACAN in 1960, for Robert Brewster Starr (b. 1925), oceanographer on the *Glacier* in Feb. 1960, during the USN Bellingshausen Sea Expedition of 1959–60. Originally plotted in 71°56' S, 99°46' W, it has since been re-plotted.

The *Stars and Stripes*. NX 8006. The Fairchild folding wing cabin monoplane built specifically for the Antarctic, the tail surfaces being enlarged, the landing gear raised, and extra (removable) fuel tanks built into the cabin and wings. The doors had plates which could open so that photos could be taken. It was the first of the 4 planes to fly on ByrdAE 1928–30. It was 32 feet 10 inches long, and had a 50-foot wing span overall, an area of 332 square feet, a cruising radius of 3000 miles, and a 425 hp Pratt and Whitney Wasp engine. The plane was abandoned at the end of the expedition, but was recovered during ByrdAE 1933–35, and brought home to the USA on board ship.

Starshot Glacier. 81°20' S, 160°20' E. Between 80 and 95 km long, and between 11 and 13 km wide, it flows from the edge of the Polar Plateau, NE through the Churchill Mountains, then N along the W side of the Surveyors Range, S of Mount Hoskins and Mount Lindley, to feed the Ross Ice Shelf just to the E of Byrd Glacier and to the S of Cape Parr. So named by the Southern Party of NZGSAE 1960–61, because the area was surveyed using star observations. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

The Start *see* **Start Point**

Cerro Start *see* **Start Hill**

Punta Start *see* **Essex Point**, **Start Point**

Start Hill. 62°36' S, 61°11' W. Rising to 270 m, it is the highest point on the ridge running ESE from Start Point, on Ray Promontory, at the W end of Livingston Island, in the South Shetlands. The Chileans named it Cerro Start in 1971, in association with nearby Start Point. BAS did geological work here in 1975–76. UK-APC, on Feb. 7, 1978, translated the Chilean name as Start Hill, and US-ACAN followed suit. It appears as such on a British map of 1980, and also in the 1980 British gazetteer. Last plotted by the UK, in late 2008.

Start Point. 62°35' S, 61°13' W. A high, mountainous point, the NW one on Ray Promontory, it rises to a height of about 265 m and forms a low tongue of rock, ice-free in the summer, which makes up not only the NE entrance point of New Plymouth but also the extreme NW end of Livingston Island, in the South Shetlands. Discovered by Bransfield on Jan. 17, 1820, and, partly because this is where he began his operations that season, it was named by him as Start, or The Start, for the point in Plymouth, Devon which it resembles. It appears on his 1820 chart, and was further charted by 19th-century sealers. On Sherratt's map of 1821 it appears as Smith's Cape, probably named for Capt. William Smith, the discoverer of the South Shetlands. It appears on an 1861 Spanish chart as Punta Start, and on a 1908 Argentine chart as Punta Estart (relecting the rather quaint inability of some Spanish persons to begin a word with "st"). On a 1937 British chart it appears as Start Point, but is plotted in 62°32' S, 61°09' W. With the coordinates 62°31' S, 61°07' W, the name Start Point was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956–57, and surveyed from the ground by FIDS between 1957 and 1959. The coordinates were corrected by the time of a British chart of 1962, and, with the new coordinates, the feature appears in the 1977 British gazetteer. The Argentines, partly missing the point (and certainly missing the sublety) of the original naming, translated it as Punta Partida on a 1954 chart, and that name was accepted by the 1970 Argentine gazetteer. Chilean maps have sometimes missed the point entirely, confusing it with Essex Point (q.v.), which they translate as Punta Start. However, the Chilean maps that do show it correctly, also refer to Start Point as Punta Start, which is etymologically more to the point, and was the name accepted by the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Staszek Cove. 62°12' S, 58°13' W. In front of Baranowski Glacier, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Stanislaw "Staszek" Baranowski (*see* **Baranowski Glacier**).

The *Staten Island*. Built by Western Pipe & Steel, in San Pedro, Calif. and launched on Dec. 28, 1942. In 1944, as part of the Lend-Lease program, she was given to the USSR, and became the *Severny Venter*. In 1951 she was handed back to the Americans, her name changed to the *Northwind* (AGB-5), and in 1952 she arrived back in the States, where her name was changed again, to the *Staten Island*, to avoid confusion with the Coast Guard cutter *Northwind* (q.v.). She served as an icebreaker in the Arctic. In Sept. 1956, she was assigned to OpDF, and on Nov. 3, 1956 left her base, Seattle, under the command of Capt. James B. Elliot, bound for the Panama Canal, where she rendezvoused with the *Wyandot*, and both ships sailed south together, arriving at the edge of the Weddell Sea pack-ice on Dec. 15, 1956. The two cutters broke through the ice on Dec. 20, 1956. She and the *Wyandot* formed Task Force 43.7, to set up Ellsworth Station in the summer of 1956-57. On Feb. 15, 1957 she left Antarctica, and on April 5, 1957 was back in Seattle. She was part of OpDF IV (1958-59; Capt. Price Lewis, Jr.). In April 1961, during OpDF 61, and under the command of Capt. Wesley L. Larsen, she picketed in 60°S while Leonid Kuperov was evacuated from Byrd Station. She was back in the Antarctic in 1962-63 (Captain John J. Metschel), and 1964-65 (Captain J. L. Erickson). In 1966 she was transferred to the Coast Guard. In between several seasons in the Arctic, she was back in Antarctica, as part of OpDF 67 (1966-67; Captain R.T. Norris) and OpDF 71 (1970-71; Captain Stanley G. Putzke). On Feb. 28, 1971, en route to Mawson Station, she was holed when she struck an uncharted pinnacle 22 km N of the station. She made her way to Melbourne, and after repairs, was escorted back to Seattle by the *Burton Island*. She was back for OpDF 72 (1971-72), again under Capt. Putzke, but this time almost capsized when a monstrous wave hit her the wrong way. She was back for OpDF 74 (1973-74), under the command of Capt. R.A. Moss, and was finally decommissioned on Nov. 15, 1974, and sold for scrap.

Staten Island Heights. 76°49' S, 160°57' E. A predominantly flat, ice-covered upland (or plateau), about 8 km long, and rising to 1800 m, between Greenville Valley and Alatna Valley, E of Merrell Valley, in the Convoy Range of Victoria Land. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1964, for the *Staten Island*. NZ-APC accepted the name.

Statham, David "Dave." b. 1938, Blaby, Lincs, but raised in Manchester, son of Matthew Statham and his wife Lily Howarth. He joined FIDS in 1956, as a meteorologist, and wintered-over at Signy Island Station in 1957, and at Horseshoe Island (Base Y) in 1958. On May 27, 1958, he, Geoff Stride, and Stan Black set out on the trail, and were never seen again.

Statham Peak. 67°41' S, 67°47' S. A prominent pointed peak rising to 1170 m, at the SW end of Perplex Ridge, on Pourquoi Pas Island, off Adelaide Island, in the NE part of Marguerite Bay, off the W coast of Graham Land. BAS personnel from Base E did geological work here in 1965 and 1970. Named by UK-APC on June 11, 1980, for Dave Statham (q.v.), who died near here on May 27, 1958 with Geoff Stride and Stan Black. US-ACAN accepted the name.

Static Nunatak. 77°55' S, 160°50' E. A nunatak, 3 km SSW of Altar Mountain, in the Quartermain Mountains of Victoria Land. In keeping with the practice of naming several features in this area after surveying terms, this one was named by NZ-APC in 1992, for the modern (i.e., "modern" at that time) survey technique involving stationary observations of survey stations, with particular relevance to GPS surveys. US-ACAN accepted the name in 1993.

Station A *see* **Port Lockroy Station**
Station B *see* **Base B**
Station C *see* **Base C**

Station Creek. 62°12' S, 58°58' W. Flows SE from Lake Kitezh into Ardley Cove, at Fildes Peninsula, Maxwell Bay, on King George Island, in the South Shetlands. Surveyed from 1968 by the Russians from Bellingshausen Station, and named by them as Ruch'ye Statsionnyy, from the proximity of their station, just E of this creek. It appears as such on their 1973 maps. On Feb. 7, 1978, UK-APC translated this as Station Creek, and US-ACAN followed suit. On the 1984 Brazilian map of Fildes Peninsula, it appears as Córrego Kitesch. Plotted by the British in late 2008.

Station D *see* **Base D**
Station E *see* **Base E**
Station F *see* **Faraday Station**
Station G *see* **Base G**
Station H *see* **Signy Island Station**
Station J *see* **Base J**
Station K *see* **Base K**
Station KG *see* **Fossil Bluff Station**
Station N *see* **Base N**

Station Nunatak. 64°23' S, 57°03' W. An isolated, ice-free nunatak, rising to 165m, 7 km SW of the NE end of Snow Hill Island, in the James Ross Island group. First surveyed in 1902 by SwedAE 1901-04, and named by them as Stations Nunatak, or Stellen Nunataks (sic), or Snow Hillnunatak, for its closeness to the expedition's station to the NE. All 3 names appear on Nordenskjöld's 1911 charts, the word "stellen" meaning "the station." Re-surveyed by Fids from Base D in Sept. 1952. US-ACAN accepted the name Station Nunatak in 1956, and UK-APC followed suit on Sept. 4, 1957.

Station O *see* **Base O**
Station P *see* **Base P**
Station R *see* **Rothera Station**
Station Route *see* **Ford Rock**
Station T *see* **Base T**

Station Tarn. 68°35' S, 77°58' E. A small freshwater pond near the W end of Breidnes Peninsula, in the Vestfold Hills, immediately N of Heidemann Bay. Discovered by the first ANARE at Davis Station (1957), and so named by them because it is 0.5 km E of the station. US-ACAN accepted the name in 1965.

Station V *see* **Base V**
Station W *see* **Base W**
Station Y *see* **Base Y**
Station Z *see* **Halley Bay Station** *and* **Halley II**, etc.
Stations *see* **Scientific stations**
Stations Nunatak *see* **Station Nunatak**

Statler Hills. 69°55' S, 73°11' E. A group of low, rocky hills just N of Rogers Glacier, on the E margin of the Amery Ice Shelf, in Princess Elizabeth Land. Delineated in 1952 by U.S. cartographer John H. Roscoe in 1952, from air photos taken during OpHJ 1946-47, and named by him for Loy R. Statler (b. Sept. 24, 1920, Sedgewickville, Mo., son of farmer Adolph Statler and his wife Ida Mae Catherine Seabaugh. d. Sept. 16, 1995, St. Charles, Mo.), chief photographer's mate on one of the OpHJ flights over here in 1946-47. US-ACAN accepted the name in 1956, and ANCA followed suit on July 22, 1959.

Statsrådsbreen. 72°05' S, 26°04' E. A glacier, about 10 km long, on Mount Bergersen, in the E part of the Sør Rondane Mountains. Named by the Norwegians (Birger Bergersen was a "statsråd," i.e., a cabinet minister; and "breen" means "glacier").

Stauffer Bluff. 76°10' S, 111°46' W. A rocky bluff at the NE extremity of Mount Takahe, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Bernhard Stauffer, Swiss USARP geologist at Byrd Station in 1968-69 and 1969-70.

Staupet. 72°00' S, 2°48' E. A depression in the area of Troll Station, in the Gjelsvik Mountains of Queen Maud Land. Named by the Norwegians on Oct. 12, 2007. The name means "the beaker" or "the depression."

Stauren *see* **Stauren Peak**

Stauren Peak. 71°51' S, 6°36' E. On Staurneset Spur, on Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Stauren (i.e., "the Pole"). US-ACAN accepted the name Stauren Peak in 1967.

Staurneset *see* **Staurneset Spur**

Staurneset Spur. 71°50' S, 6°33' E. A rock spur (the Norwegians call it a mountain ridge) extending NW from Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Stauren Peak is on this spur. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Staurneset (i.e., "the Pole point"). US-ACAN accepted the name Staurneset Spur in 1967.

Stäven *see* **Stamnen Peak**

Stayaway Skerries. 64°44' S, 64°18' W. A

group of rocks and low-lying reefs awash, 2.5 km S of Cape Monaco, off the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed by an RN Hydrographic Survey unit in 1956-57. Named by UK-APC on July 7, 1959, as a caution to sailors; the group has patches of shoal water extending for some distance from it, and should be given a wide berth. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Steagall Glacier. 85°38' S, 161°54' W. A tributary glacier, 24 km long, it flows N from the E slopes of the Rawson Plateau, between Mount Alice Gade and Mount Deardorff, into Bowman Glacier, in the Queen Maud Mountains. First mapped by ByrdAE 1928-30. Named by US-ACAN in 1967, for Jack T. Steagall, meteorologist who wintered-over at Pole Station in 1961.

Mount Stearns. 78°19' S, 162°49' E. A mountain rising to 2670 m, 2 km E of Mount Kempe, between the head of Kempe Glacier and Renegar Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1994, for Charles R. Stearns (b. 1925. d. June 22, 2010), of the department of meteorology at the University of Wisconsin, principal investigator of the AWS system in Antarctica from 1980 to 2008. He was in Antarctica 17 times.

Stearns, Simeon *see* **USEE 1838-42**

Stecherwand. 73°48' S, 165°42' E. An escarpment, 5 km long and rising to an elevation of 800 m, at the NE margin of Parker Glacier, in the Mountaineer Range. Named by the Germans on Oct. 20, 1998, for Robert Stecher (1959-1993), mountain guide on GANOVEX VIII.

Stedet Island. 67°33' S, 61°27' E. The western of 2 small islands at the head of Utstikkar Bay, just N of Falla Bluff, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946, by Norwegian cartographers, who named it Stedet (name means "the place"). ANCA named it Nora Island, on July 22, 1959, for Alf Bolza's wife. US-ACAN accepted the name Stedet Island in 1970.

Steel Peak. 70°54' S, 63°27' W. A high peak, rising to about 2500 m, 2.5 km N of Mount Nordhill, in the NE ridge of the Welch Mountains of central Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Capt. Henry E. Steel, U.S. Coast Guard, commander of the *Edisto*, during OpDF 69 (i.e., 1968-69) and OpDF 70 (i.e., 1969-70), also being commander of the Antarctic Peninsula Ship Group that first year. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Isla Steele *see* **Steele Island**

Mount Steele. 69°50' S, 159°40' E. Rising to 1050 m, 5.6 km N of Mount Ellery, and 7 km ENE of Stevenson Bluff, on the divide between Suvorov Glacier and Manna Glacier, in the Wilson Hills, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Carlett D. Steele (b. July 6, 1924, W. Va. d. Jan. 11, 1990), chief aviation machinist's mate with VX-6. Between 1957 and 1968 he was in Antarctica several times as a helicopter crew member and maintenance supervisor.

Steele, Clarence E. "Bob." b. Nov. 8, 1912, Dalton, Mass., son of teamster William C. Steele and his wife Ida. Tractor and tank driver at East Base during USAS 1939-41. In Aug. 1940, while doing some mechanical work, he almost amputated one of his fingers. On Nov. 20, 1945, at Springfield, Mass., he enlisted in the Army Air Corps, as a staff sergeant. He died on March 22, 1974.

Steele Island. 71°00' S, 60°40' W. A completely snow-covered island (really an ice rise), 20 km long from E to W, and 16 km wide, rising above the Larsen Ice Front 20 km SE of Cape Sharbonneau, off Imshaug Peninsula, on the Black Coast, on the E coast of the Antarctic Peninsula, S of Dolleman Island. The steeply-sloping sides of the island are crevassed, but no rock is exposed. Discovered and surveyed in Dec. 1940 by members of East Base during USAS 1939-41, and named for Bob Steele. It appears on a USAAF chart of 1942. It appears on an Argentine chart of 1946 as Isla Steele, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Steele Island in 1947. Re-surveyed by Fids from Base E in Nov. 1947, it appears as Steele Island on Dougie Mason's 1950 FIDS map. UK-APC accepted that name on Jan. 28, 1953, and it appears as such on a British chart of 1954, and also in the 1955 British gazetteer. In Feb. 1975, a BAS radio echo-sounding flight was made over this feature, and its height of 350 m was ascertained. However, the Chileans put its height at 488 m.

Steenstruphorten. 74°26' S, 10°06' W. A nunatak in the W part of Milorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for insurance agent Hjalmar Steenstrup (1890-1945), Resistance leader during World War II. He died in a plane crash while helping to set up the Nuremberg Trials.

Mount Steep. 78°03' S, 163°51' E. Rising to 871 m immediately W of Mount Pams, it is the W summit of a small hill complex in Victoria Land. The name was suggested by the steep climb up the W side of the mountain. Named by NZ-APC on Feb. 1, 1994. US-ACAN accepted the name later in 1994.

Steepholm. 60°47' S, 45°09' W. The largest and most southerly of the N group of the Robertson Islands, close N of Skilling Island, in the South Orkneys, it forms the N side of the navigable channel through the Robertsons. The Robertsons were discovered by Powell and Palmer in Dec. 1821. In 1912-13 Petter Sørlle named the N group (except Matthews Island, which he thought to be part of Coronation Island) as Bratholm (i.e., "steep island"). On Sørlle's map of 1930, this became Bratholmene (i.e., "steep islands") when it was found that there was more than one island. Surveyed by Fids from Signy Island Station in 1948-49. When each individual island was named, this particular one was named Bratholm, and in English this became Steepholm (UK-APC, March 31, 1955). US-ACAN accepted this name in 1956.

The Steeple. 63°26' S, 57°03' W. A rocky ridge, rising to 465 m (the Americans say 1525 m, and the British say about 500 m), and running in a NNE-SSW direction, it forms the NW arm of the horseshoe-shaped Mount Carroll, on the E side of Depot Glacier (i.e., it is between those 2 features), 2.5 km S of the head of Hope Bay, at the Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered by SwedAE 1901-04. Surveyed by FIDS in 1945, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, US-ACAN followed suit in 1952, and it appears in the 1955 British gazetteer. It was re-surveyed by FIDS in 1954-56.

Steeple Peaks. 71°38' S, 67°03' W. A group of 5 peaks in a line, running NNE-SSW from Mount Ward (the northeastermost of these peaks) to Sandau Nunatak, and rising to about 800 m, S of Conchie Glacier, between that glacier and Goodenough Glacier, at George VI Sound, on the W edge of Palmer Land. Surveyed by BAS personnel from Base E and from the Fossil Bluff station, between 1962 and 1972. So named descriptively by UK-APC on July 21, 1976, because of a number of steeple-like features visible among the peaks. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Steeple Point. 71°43' S, 67°19' W. A low, ice-covered point, 3 km W of Sandau Nunatak (which is in the Steeple Peaks), on the W coast of Palmer Land, at George VI Sound. Surveyed by BAS personnel from Base E and the Fossil Bluff station between 1962 and 1972. Named by UK-APC on July 21, 1976, in association with Steeple Peaks. US-ACAN accepted the name later in 1976.

Steeple Rock *see* **Sail Rock**

Mount Steere. 76°44' S, 117°49' W. A prominent mountain, rising to 3500 m, 6 km NNW of Mount Frakes, in the Crary Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for famous botanist William Campbell Steere (b. Nov. 4, 1907, Muskegon, Mich. d. Feb. 7, 1989), at McMurdo, 1964-65. He had been chair of botany at the University of Michigan since 1947 when, in 1958, he became director of the New York Botanical Garden (until 1973).

Steershead Crevasses. 81°10' S, 164°00' W. A large and distinctive area of crevasses in the E part of the Ross Ice Shelf, 110 km S of Roosevelt Island. Distorted by the glacial outflow from Marie Byrd Land, they resemble the head of a huge steer when seen in outline from the air, as U.S. cartographers Kenneth Bertrand and Fred Alberts did in Nov. 1962, when they named it. It is an excellent and unique landmark for fliers from McMurdo to Byrd Station. US-ACAN accepted the name in 1966.

The *Stefa*. A 251-ton, 116-foot whale catcher

built at Smith's Dock, Middlesbrough, in 1928, for Salvesen's South Georgia Company, and launched on Feb. 23, 1929. She was in Antarctic waters in 1929-30, catching for the *Salvestria* and the *Saragossa*. In 1930 she was catching off the coast of South Africa, and then was back in Antarctic waters in 1930-31 and 1931-32, catching for the *Saragossa*. In 1932-33 she was catching for the *Salvestria*, and then for the *New Sevilla* in the seasons 1933-34, 1934-35, 1935-36, and 1936-37. From then on she was an Arctic vessel, and in 1940 was requisitioned by the Royal Navy. In 1942 she was transferred to the Russians, and after the war was laid up for years, being sold to a Norwegian fishing outfit in 1952, and renamed the *Halgrim*. She was sold again in 1953, became the *Reidun*, and in 1985 was broken up in Norway.

Hielos Stefan *see* **Stefan Ice Piedmont**

Stefan Ice Piedmont. 66°40' S, 66°30' W. A small ice piedmont overlying the coast between Cape Rey and Holdfast Point, on the Loubet Coast, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base W. FIDS cartographers mapped it from these efforts. Named by UK-APC on Sept. 23, 1960, for Josef Stefan (1835-1893), Austrian physicist specializing in ice. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines translated it as Hielos Stefan.

Estrecho Stefansson *see* **Stefansson Strait**

Glaciar Stefansson *see* **Clifford Glacier**

Stefansson Bay. 67°20' S, 59°10' E. The extreme W end of the Mawson Coast of Mac. Robertson Land, it lies at the foot of the Hansen Mountains, and indents the coast for 16 km between Law Promontory and Fold Island, in Kemp Land. Mawson applied the name to a sweep of the coast W of Cape Wilkins, which he observed on or around Feb. 18, 1931, during BANZARE 1929-31, for Vilhjalmur Stefansson (1879-1962), Arctic explorer. The bay was defined more accurately by the personnel on the *William Scoresby* in 1936. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. US-ACAN accepted the name in 1947, and ANCA followed suit.

Stefansson Glacier *see* **Clifford Glacier**

[1]**Stefansson Inlet** *see* **Stefansson Strait**

[2]**Stefansson Inlet** *see* **Smith Inlet**

Stefansson Sound *see* **Stefansson Strait**

Stefansson Strait. 69°26' S, 62°25' W. Also called Stefansson Inlet. An ice-filled channel, 56 km long in a N-S direction, and between 5 and 16 km wide, it separates Hearst Island from the Wilkins Coast, on the E coast of the Antarctic Peninsula. When Wilkins flew over this area on Dec. 20, 1928, he saw what he thought was a wide channel in about 70°40' S, trending SW and then W from the Weddell Sea into the Bellingshausen Sea, and thus bisecting the Antarctic Peninsula from E to W, and separating the Antarctic Peninsula from the mainland of Antarctica. He named it Stefansson Strait, for Vilhjalmur Stefansson (*see* **Stefansson Bay**). He thus concluded that the Antarctic Peninsula was not part of the Antarctic mainland. In 1940, USAS 1939-41 found Wilkins to have been in error, and re-applied the name he used to where it is now. What Wilkins had called Stefansson Strait, the USAS personnel now renamed Boggs Strait, for S.W. Boggs (*see* **Cape Boggs**). However, in 1947, US-ACAN accepted the name Stefansson Strait, and it appears as such on an American chart of that year. In late 1947, the feature was clearly defined during a survey conducted by personnel from RARE 1947-48 and Fids from Base E. On Sept. 8, 1953 UK-APC accepted the name Stefansson Sound. The Chileans and Argentines both call it Estrecho Stefansson.

Steger, Will *see* **International Trans-Antarctic Expedition**

Stegmann, D. South African able seaman on the *William Scoresby*, 1929-30, and on the *Discovery II*, 1932-33.

Stehr, Albert. b. July 3, 1874, Hamburg. Chief engineer on the *Gauss* during GermAE 1901-03.

Stein, Willy. Bosun on the *Schwabenland* during GermAE 1938-39.

Stein Islands. 69°39' S, 75°47' E. Two rock islands (not individually named) in the E part of the Publications Ice Shelf, about 13 km SE of the Søstrene Islands, on the Ingrid Christensen Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Steinane (i.e., "the stones"). They plotted the islands in 69°41' S, 75°45' S, but they have since been re-plotted. US-ACAN accepted the name Stein Islands in 1973.

Stein Nunatak. 71°42' S, 7°58' E. The largest of the Sørensen Nunataks, in the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Steinsteinen, for Stein Sørensen (*see* **Sørensen Nunataks**). US-ACAN accepted the translated name Stein Nunatak in 1967.

Stein Nunataks. 71°36' S, 1°15' W. A group of nunataks, about 24 km E of the Witte Peaks, in the NE part of Ahlmann Ridge, on the W side of the lower part of Jutulstraumen Mountain, in the easternmost part of Maudheimvidda, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Steinkuppen, for Willy Stein. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them as Straumsnutane, in association with Jutulstraumen Mountain. US-ACAN (with, perhaps, less reason to be as unforgiving of the Nazis as the Norwegians — and, besides, a good number of years had gone by since the Norwegians named it) accepted the translated name Stein Nunataks in 1966.

Steinane *see* **Stein Islands**

Steinbach. 62°12' S, 58°56' W. A little stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Steinbotnen *see* **Steinbotnen Cirque**

Steinbotnen Cirque. 71°18' S, 13°21' E. A cirque (or corrie) in the W wall of Steinmulen Shoulder, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Steinbotnen (i.e., "the stone cirque"). US-ACAN accepted the name Steinbotnen Cirque in 1970.

Islotes Steinemann *see* **Steinemann Island**

Steinemann Island. 66°52' S, 67°55' W. An island, about 16 km SW of Mount Vélain, off the NE coast of Adelaide Island, it forms the SW entrance point of Buchanan Passage. Mapped by FIDS cartographers from air photos taken by RARE 1947-48, and by FIDASE in 1956-57, and also from ground surveys conducted by Fids from Base W in 1958. Named by UK-APC on Sept. 23, 1960, for Samuel Steinemann (b. 1923), Swiss physicist specializing in ice. It appears in the 1961 British gazetteer. US-ACAN accepted the name in 1965. The Argentines have pluralized this feature, as Islotes Steinemann.

Steinen *see* **Bypass Nunatak**

Mount Steinfeld. 75°12' S, 135°51' W. Rising to 685 m, at the W end of an ice-covered ridge overlooking the confluence of Hull Glacier and Kirkpatrick Glacier, near the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Edward F. Steinfeld, Jr., USARP meteorologist at Byrd Station in 1962.

Steinfila *see* **Steinfila Nunatak**

Steinfila Nunatak. 72°12' S, 14°23' E. The most westerly of a small group of nunataks which mark the SW extremity of the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Steinfila (i.e., "the stone file"). US-ACAN accepted the name Steinfila Nunatak in 1966.

Steingarden. 72°10' S, 16°06°E. A group of nunataks in the southeasternmost part of Fimbulheimen, in Queen Maud Land. They include the nunataks called Bautasteinane in the N, and the small nunatak called Dommarringen in the south. Named by the Norwegians ("the stone guard").

Steingardsøkket. 72°20' S, 15°35' E. A flat valley in the ice, SW of Steingarden, in the easternmost part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians in association with Steingarden (the word "søkk" means "trough" or "depression," and the suffix "-et" indicates the definite article).

Punta Steinheil *see* **Steinheil Point**

Steinheil Point. 64°51' S, 62°41' W. A point, 8 km SE of Duthiers Point, on the W side of Andvord Bay, it forms the W entrance point of Lester Cove, on the W coast of Graham Land. First roughly charted by BelgAE 1897-99. In 1956-57 it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for Adolf Steinheil (1832-1893), German pioneer of the telephoto lens, in 1891. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Punta Steinheil.

Steinkjeften. 73°47' S, 15°01' W. A mountain W of Kjakebeinet, in the S part of the Kraul Mountains, in the W part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the stone jaw").

Steinkuppen *see* **Stein Nunataks**

Steinmulen *see* **Steinmulen Shoulder**

Steinmulen Shoulder. 71°18' S, 13°25' E. A rock shoulder (the Norwegians call it a mountain ridge) extending N from Mount Zimmermann, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Steinmulen (i.e., "the stone snout"). US-ACAN accepted the name Steinmulen Shoulder in 1970.

Steinnabben. 74°33' S, 11°15' W. A small nunatak at the N side of Boyesennuten, in the most northwesterly part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Kristian Stein (b. 1901), post office clerk and early Resistance leader on the W coast of Norway, executed by the Gestapo in 1941.

Steinnes. 69°21' S, 76°36' E. A rock outcrop in the form of a point, on the SE shore of Prydz Bay, about 6 km ENE of the Larsemann Hills, and about 11 km SW of Cowell Island, on the Ingrid Christensen Coast, in East Antarctica. Photographed aerially by LCE 1936-37, and first mapped from these photos in 1946 by Norwegian cartographers, who named it (name means "stone point"). US-ACAN accepted the name without modification in 1970, and ANCA followed suit on May 18, 1971.

Steinskaregga *see* **Steinskaregga Ridge**

Steinskaregga Ridge. 71°49' S, 8°54' E. A bare rock mountain ridge, just N of Steinskaret Gap, and W of Vinten-Johansen Ridge, in the Kurze Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Steinskaregga (i.e., "the stone gap ridge"). US-ACAN accepted the name Steinskaregga Ridge in 1967. There is a Russian-named feature, Pik Kuchina, in precisely these coordinates, named after Aleksandr Kutchin. This is almost certainly the Russian name for Steinskaregga.

Steinskaret *see* **Steinskaret Gap**

Steinskaret Gap. 71°51' S, 8°57' E. An ice-filled gap in the central Kurze Mountains, between Vinten-Johansen Ridge and Saether Crags, just S of Steinskaregga Ridge, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Steinskaret (i.e., "the stone gap"). US-ACAN accepted the name Steinskaret Gap in 1967.

Steinsteinen *see* **Stein Nunatak**

Gora Stekljannaja. 83°49' S, 56°29' W. A nunatak, SE of Hudson Ridge, in the SW part of the Neptune Range, in the Pensacola Mountains. Named by the Russians.

The *Stella*. The motor boat of BGLE 1934-37. While the dories were used for local work among the islands during the expedition's stay on Winter Island, the *Stella* made longer journeys. The boat had been in the Arctic with Rymill on his last season there. It was 19 feet long with a beam of 7 feet. Its 9 hp engines gave it a speed of 6 knots, and it also had a small sail. At the end of the 1934-35 summer it was beached and repaired while the party wintered-over.

Canal Stella *see* **Stella Creek**

Stella Creek. 65°15' S, 64°16' W. A narrow and winding marine passage, with depths of between 5 and 15 m, it extends from Thumb Rock to the SE end of Winter Island, between that island and Galíndez Island, in the Argentine Islands of the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted on Jan. 30, 1935, by BGLE 1934-37, and named by Rymill for the BGLE motorboat *Stella*. It appears on his 1938 map of the expedition, as well as on a 1948 British chart, and was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. Also on Rymill's 1938 map appears Stella Inlet, signifying the W coast of Galíndez Island, and that name appears also on a 1947 British chart (the name Stella Inlet was discontinued). Stella Creek appears in the 1955 British gazetteeer. It appears on a 1953 Argentine chart as Canal Stella, and that was the name accepted by the 1970 Argentine gazetteer. It appears on a 1962 Chilean chart as Estero Stella, and that name was accepted by the 1974 Chilean gazetteer.

Stella Inlet *see* **Stella Creek**

Stellar Crests. 71°05' S, 69°04' W. Four prominent snow-covered peaks running in a NNW-SSE line, rising to about 2100 m, they surmount the LeMay Range W of the N part of Planet Heights, in the central part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 by RARE 1947-48, and plotted by him in 71°05' S, 69°15' W. So named by UK-APC on March 2, 1961, for their proximity to features named for planets and their satellites. US-ACAN accepted the name later in 1961. Its coordinates were corrected from U.S. Landsat images taken in Jan. 1973. With the new coordinates, it appears in the 1977 British gazetteer.

Stellen Nunataks *see* **Station Nunatak**

Steller, F. b. Germany. Seaman who had lived in Norway for years, and spoke Norwegian like a native. He was taken on the *Fram* at Buenos Aires in Sept. 1911, for the 2nd half of NorAE 1910-12.

The *Stena Arctica*. The ship that took down SwedAE 1988-89 and FinAE 1988-89. She also relieved the Germans' Georg Neumayer Station. Captain that season was Olof Norman. In 1989 she became the *Columbia Land*, and was in Antarctic waters in 1989-90, under the command of Capt. Goran Tidholm. She was used that season to transport men and equipment to Rothera Station.

The *Stena Seaspread*. A 6061-ton, 112.02-meter diving and maintenance vessel, built for the Stena Atlantic Line, of London, and launched in 1979. She was used in the Falkland Islands War. She was later in Antarctic waters, in 1988-89. On Feb. 7, 1989, she assisted the damaged *Endurance*, and 3 weeks later, on Feb. 27, 1989, rescued the crew of the grounded *Humboldt*. In 1992 she became just the *Seaspread*, and in 2002 she was sold to Cal Dive International, in the USA, being renamed *Eclipse*.

Punta Stene *see* **Stene Point**

Stene, Karl O. "K.O." b. 1875, Norway. Captain of the *Normanna*, 1912-15. On Feb. 27, 1928, at Stewart Island, NZ, he signed on to the *Sir James Clark Ross*, as a gunner, for the trip to NY, where he was discharged when the ship landed, on April 6, 1928. His son, Johan, then 16, a youngman (as they called it) made the trip with him. He then made his way back to Norway. On Sept. 4, 1928, at Sandefjord, he signed on again to the *Sir James Clark Ross*, as one of the gunners. On Aug. 10, 1929, at Sandefjord, he shipped on to the whaler *C.A. Larsen*, as a gunner, pulling in to NY on April 25, 1930.

Stene Point. 60°39' S, 45°42' W. A point, 2.5 km W of Cape Vik, between that cape and Mansfield Point, on the S coast of Coronation Island, in the South Orkneys. Sureveyed by the personnel on the *Discovery II* in 1933, and again by Fids from Signy Island Station in 1948-49. Named by UK-APC on March 31, 1955, for K.O. Stene. US-ACAN accepted the name in 1956. Further surveyed by FIDS between 1956 and 1958. The Argentines call it Punta Stene.

Stenersenknatten. 70°53' S, 11°31' E. A nunatak in the NW part of the nunatak the Norwegians call Lingetoppane, in the S part of the Schirmacher Hills, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Lt. Tor Greiner Stenersen (b. 1917), of the "Oslo Gang," the group of Linge soldiers who resisted the Nazis. He was killed in 1944.

Morro Stenhouse *see* **Stenhouse Bluff**

Promontorio Stenhouse *see* **Stenhouse Bluff**

Punta Stenhouse *see* **Stenhouse Bluff**

Stenhouse, Joseph Russel. b. Nov. 15, 1887, Dumbarton, Scotland, son of Andrew and Janet

Stenhouse. His family owned Birrell, Stenhouse, & Co., shipbuilders of Dumbarton. He went to sea in 1903, as an apprentice on the *Springbank*, and was promoted to sub lieutenant, RNR, on Aug. 1, 1914. He was in command of the 11 men who left Dover on the *Ionic* on Sept. 18, 1914, heading south to join the *Aurora*, on which he was chief officer. The *Aurora* was the ship that took down to Antarctica the Ross Island party of BITE 1914-17. He became captain of that ship, 1915-16, and served heroically on mystery ships and Q ships for the rest of World War I, being highly decorated. After spending some time in Russia, with RN special services (with Shackleton), he intended to go with Shackleton on the *Quest* expedition to Antarctica, 1921-22, but in the end he didn't go. He married Aeneas Mackintosh's widow, Gladys, in 1923, and was captain of the *Discovery* during the first Discovery Investigations cruise of 1925-27, and continued in command of the ship until 1930. In the 1930s he was involved in trying (unsuccessfully) to get Antarctic tourism off the ground. He served in World War II, and was a commander, RNR, when he was lost on the *Sheba* on Sept. 12, 1941, in the Red Sea. Stephen Haddelsey wrote a book, *Ice Captain: the Life of J.R. Stenhouse*.

Stenhouse Bluff. 62°04' S, 58°22' W. The S face of a rocky knoll at the head of Visca Anchorage, it projects from King George Island into Martel Inlet, between Keller Peninsula and Ullman Spur, at Admiralty Bay, in the South Shetlands. First charted in Dec. 1909, by FrAE 1908-10. It appears on Charcot's 1912 map. Re-surveyed by the Discovery Investigations in 1927, named by them as Stenhouse Bluff, for J.R. Stenhouse, and that name appears on their 1929 chart. It appears on a Chilean chart of 1947 as Promontorio Stenhouse, and on a 1949 Argentine chart as Morro Stenhouse. US-ACAN accepted the name Stenhouse Bluff in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It appears on a 1957 Chilean chart as Punta Stenhouse, and that name was accepted by the 1974 Chilean gazetteer. The 1970 Argentine gazetteer accepted Morro Stenhouse. Last plotted by the UK, in late 2008.

Stenhouse Glacier. 62°04' S, 58°23' W. A small glacier flowing S into the head of Visca Anchorage, immediately W of Stenhouse Bluff, between that bluff and Keller Peninsula, Martel Inlet, on King George Island, in the South Shetlands. Charted by FrAE 1908-10, but not named by them. Named West Stenhouse Glacier (in association with the bluff) by FIDS in or around 1958, as they did glaciological work during IGY. The shortened name was accepted by UK-APC on Sept. 23, 1960, and by US-ACAN later that year. It appears as such on a British chart of 1962. Last plotted by the UK, in late 2008.

Stenhouse Nunatak *see* **Mount Pratt**

Stenhouse Nunatak. One of the five Aurora Nunataks (q.v.), in the Grosvenor Mountains, in the Queen Maud Mountains. Named by NZ in 1960, for Joseph Stenhouse, the nunatak seems never to have existed.

Gora Stenka *see* **Stenka Mountain**

Stenka Mountain. 71°55' S, 14°46' E. Rising to 2350 m, it forms the central part of (and is the highest peak on) Spraglegga Ridge, in the easternmost part of the Payer Mountains, in the Hoel Mountains, in the easternmost part of Maudheimvidda, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers (but, apparently, not named by them) from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the Russians in 1963, as Gora Stenka ("stenka" means "little wall"). US-ACAN accepted the name Stenka Mountain in 1970. The Norwegians call it Stenkatoppen.

Stenkatoppen *see* **Stenka Mountain**

Mount Stent. 81°15' S, 156°20' E. Rising to 2010 m at the S extremity of the Wallabies Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Norman Errol "Norm" Stent, who wintered-over at Hallett Station in 1961, as a technician on the geomagnetic project. US-ACAN accepted the name later in 2003.

The *Stepan Krasheninnikov*. Ship named for Stepan Petrovich Krasheninnikov, 18th-century Russian explorer. She was in Antarctic waters in 1991-92 (unknown skipper), chartered by the Australians to relieve Mawson Station. She took the 13th Indian Antarctic Expedition down in 1992-93. Captain Sainigadinoff was skipper that season. She was back in Antarctic waters in 1993-94.

Mys Stepana Murav'ëva. 69°51' S, 10°30' E. A cape, NE of the ice tongue the Norwegians call Dvergetunga, on the Princess Astrid Coast. Named by the Russians for 18th-century Russian Arctic explorer, Stepan Muravyev.

Gora Stepanova. 73°33' S, 64°37' E. A nunatak, just S of Geysen Glacier, in the Prince Charles Mountains. Named by the Russians.

Stepaside Knoll. 78°13' S, 161°24' E. Due N of Stepaside Spur (in association with which it was named by US-ACAN in 1994), in Victoria Land.

Stepaside Spur. 78°18' S, 161°25' E. A prominent spur, rising to 1750 m (the New Zealanders say 1481 m), on the E side of the upper Skelton Glacier, and 6 km SE of the Upper Staircase, in Victoria Land. Surveyed and named descriptively in Feb. 1957 by the NZ party of BCTAE. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Mount Stephen. 75°42' S, 161°43' E. Rising to 810 m, 10 km E of Mount Howard, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Ronald R. "Ronnie" Stephen, meteorologist who wintered-over at Pole Station in 1966.

Mount Stephen Austin *see* **Mount Austin**

Stephen Island. 75°50' S, 146°54' W. An ice-covered island, about 6 km long, at the W side of the Nickerson Ice Shelf, off the coast of Marie Byrd Land. it is the the smallest and westernmost of the 3 grounded islands in that ice shelf. Actually, most of it is in the Ross Sea, only the E part of it touching the W portion of the ice shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Alexander Stephen (1795-1875), Scottish shipbuilder of Alexander Stephen and Sons, whose company built the *Nimrod* in 1866, the *Bear* in 1874, and the *Terra Nova* in 1884.

Mount Stephens. 83°23' S, 51°27' W. A prominent mountain, rising to 2065 m, it surmounts the SW extremity of the Saratoga Table, in the Forrestal Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Lt. Cdr. Henry E. "Hank" Stephens, USN, engineer chief who led the Seabees in building Ellsworth Station in 1956-57. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Stephens, David Robin Kimber. Known as Robin. b. May 11, 1934, Ealing, London, son of wealthy real estate man Walter Edward "Kim" Kimber Stephens and his wife Marjorie Datlen ("Steve," as she became known, with her pipe and trousers). Kimber Stephens (unhyphenated) was actually the surname, but Robin (named for a bird which alighted on his parents' windowsill) used only Stephens. After St Paul's School in Hammersmith, he did his national service in the Cavalry, eventually leading a tank platoon in Germany. Back on Civvy Street, he joined Lloyd's of London, for a brief while (bowler, tie, umbrella, the *Times*), then became a trainee metal-window manufacturer, with Crittall-Hope's, in Birmingham, and was doing the *Daily Telegraph* crossword one day in 1956 when he saw an ad for FIDS meteorologists. Despite a threat from his company that if he did go, he'd be fired ("forget this nonsense"), he went, and, after 3 months meteorological training at Bracknell, he sailed from the UK on the *Shackleton*, and was a meteorologist who wintered-over at Base G in 1957 and 1958, the second year also as base leader. The *John Biscoe* came to pick him up in early 1959, and he returned home, via the Falklands, South Georgia, Tristan da Cunha, and Ascension. On his return to the UK he went climbing and skiing in Scotland, and worked holidays in Aviemore with Georgie McLeod. He tried a geology degree at Swansea (under Derek Maling), but walked out one day and never went back, instead going to Norway, achieving high honors there in cross-country skiing. On July 4, 1964, in Aberdeen, he married Kathleen "Kath" Burns, and that year, with his wife, began the sailing school in Tignabruaich, in Scotland, that became famous. He also instructed skiiing. He died in Nov. 2007, at Tighnabruaich.

Cabo Stephenson *see* **Stephenson Nunatak**

Cape Stephenson *see* **Stephenson Nunatak**

Monte Stephenson *see* [1]**Mount Stephenson**

[1]**Mount Stephenson**. 69°49' S, 69°43' W. Rising to 2985 m (the British say about 3100 m), it is the highest mountain in the Douglas Range, at the heads of Toynbee Glacier and Sedgwick Glacier, 13 km W of George VI Sound, on the E side of Alexander Island. Probably first seen on Jan. 21, 1909, by FrAE 1908-10, but not then recognized as part of (what would later be called) the Douglas Range. Surveyed from the air on March 13, 1936, by BGLE 1934-37, and from the ground, on its E face, in Oct.-Nov. 1936, by Stephenson, Fleming, and Bertram, during the same expedition. Also during BGLE it was sketched from the air on its W face, on Feb. 1, 1937, a sketch that was reproduced on Stephenson's map of 1940. The results of the 1936 aerial survey appear on Rymill's 1938 map of the expedition. Photographed aerially again in late 1947 by RARE 1947-48. The E side of the mountain was re-surveyed by Fids from Base E in 1948, and named by them for Alfred Stephenson. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a 1955 U.S. Hydrographic Office chart, and on a British chart of 1957. In 1959-60 FIDS cartographers mapped it from the RARE photos. On an Argentine map of 1966 it appears as Monte Stephenson.

[2]**Mount Stephenson**. 80°25' S, 156°45' E. Rising to 2400 m, on the N side of Byrd Glacier, and near the head of Ramseier Glacier, 6 km SW of Mount Quackenbush, in the Britannia Range. Named by US-ACAN in 2001, for Simon Stephenson, part of the BAS glacial geophysical survey of the Rutford Ice Stream, 1978-80 (he did not winter-over). Between 1984 and 1989 he was part of the NASA team studying ice stream for 4 seasons on the West Antarctic ice sheet. From 1989 onwards, he was NSF representative in Antarctica during austral summers, and research support manager at the NSF's Office of Polar Programs during off-seasons, overseeing the planning and implementing of USAP projects.

Stephenson, Alfred "Steve." b. Nov. 25, 1908, Norwich. In 1930, on graduating from Cambridge in geography, he became chief surveyor to the British Arctic Air Route Expedition, and in 1932-33 was exploring and surveying in northern Canada. While a university demonstrator at Cambridge, he became chief surveyor and meteorologist on BGLE 1934-37, and led the sledging party to George VI Sound to about 72°S. He continued as a lecturer, and in World War II developed photo interpretation techniques while serving in the RAF as a squadron leader. He was reader in surveying at Imperial College, London, from 1946 until he retired in 1972. In 1960 (on the *Kista Dan*) and 1984 he was back in Graham Land, as a visitor, and died on July 3, 1999, in Southampton.

Stephenson, Philip Jon. Known as Jon. b. 1930, Brisbane. After studying geology at Brisbane University, and doing post grad work in petrology at Imperial College, London, he became the glaciologist who crossed the continent with Fuchs during BCTAE 1955-58, the only Australian on the expedition. He was at South Ice with Lister and Blaiklock, and was the first man to drive dogs to the Pole since Amundsen. He later worked on Heard Island. In 2009 his book was published, *Crevasse Roulette: The First Transantarctic Crossing, 1957-58*. Died in 2011.

Stephenson, William Henry. Name also seen spelled Stevenson. Some called him "Steve." b. April 19, 1889, Hull, Yorks, son of painter and paperhanger Arthur Stephenson and his wife Fanny Anfield. He was a fisherman on trawlers out of Hull, Grimsby and Bridlington, and then joined the Royal Marines, as an officers' servant, in the Chatham Division. Fireman (senior stoker) on the *Endurance*, 1914-16, during Shackleton's expedition, BITE 1914-17. On Oct. 10, 1916, he and 9 others from the expedition sailed back to the UK on the *Highland Laddie*. He died of cancer in Hull on Aug. 19, 1953.

Stephenson Bastion. 80°46' S, 27°12' W. A mountain massif with steep rock cliffs on its S side, it rises to 1850 m (the British say 1560 m), S of Fuchs Dome, and W of Cornwall Glacier, in the south-central part of the Shackleton Range. It includes, from W to E, Mount Greenfield, Clayton Ramparts, and Ram Bow Bluff. First surveyed and mapped in Oct. 1957, by BCTAE, and photographed aerially by USN in 1967. The central and highest part of the feature was named by UK-APC on Aug. 31, 1962, for Dr. Jon Stephenson. US-ACAN accepted the name later in 1962. On Dec. 20, 1974, UK-APC re-applied the name to the whole feature as now described, and US-ACAN accepted that in 1975.

Stephenson Nunatak. 72°08' S, 69°08' W. A prominent, pyramid-shaped rock nunatak, rising to 640 m (the British say 470 m) above sea level, about 300 m above the surrounding ice at the NW side of Kirwan Inlet, in the SE part of Alexander Island. Discovered, roughly surveyed, and photographed in 1940-41 by Finn Ronne and Carl Eklund of East Base, during USAS 1939-41. USAS also reported an ice-covered cape in 72°25' S, 68°00' W (possibly Martin Ice Rise), and the name Cape Stephenson was given to it, named after Alfred Stephenson of BGLE 1934-37 (that expedition had seen this coast from a distance on Oct. 19, 1936). Cape Stephenson appears on a 1942 USAAF chart, and also (as Cabo Stephenson) on a 1949 Argentine chart. The area was re-surveyed in 1949 by Fids from Base E, who found no well-defined cape in this position. The name Stephenson was re-applied to this nunatak by UK-APC on March 31, 1955, and US-ACAN followed suit in 1956. In those days it was plotted in 72°11' S, 69°05' W, but the coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the corrected coordinates, the feature appears in the British gazetteer of 1977.

Stepped Lake. 69°23' S, 76°23' S. In the Larsemann Hills. The W half is very shallow, but the E half drops to a depth of 4 m. Named by ANCA on Nov. 24, 1987. The Chinese call it Tuanjie Hu.

Stepping Stone Pond. 77°33' S, 160°47' E. A small freshwater frozen pond, 0.6 km ENE of Craig Pond, in the feature called Labyrinth, in Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, following a visit there by a 2003-04 USAP field sampling party, which reported that the pond has perfect stepping stones that allow it to be crossed easily.

Stepping Stones. 64°47' S, 63°59' W. A group of 3 tiny but prominent islands (rocks really) 0.8 km N of Limitrophe Island, between Shortcut Island and Cormorant Island, off the SW coast of Anvers Island, ESE of Arthur Harbor, in the area of Palmer Station, in the Palmer Archipelago. The rocks form one of a series of boat refuges, and they form stepping stones for coastal trips between Palmer Station and Biscoe Bay. Charted by an RN Hydrographic Survey unit in the 1956-58 period. USARP personnel from Palmer Station worked here from 1965, and they named the feature descriptively in 1972. UK-APC accepted the name on Dec. 20, 1974, and US-ACAN followed suit in 1975.

Stepup Col. 63°34' S, 57°51' W. A snow-covered col running N-S at an elevation of about 500 m, it links Broad Valley with Cugnot Ice Piedmont, at the E end of Louis Philippe Plateau, Trinity Peninsula. Surveyed by Fids from Base D in 1960-61. Named descriptively by UK-APC on Feb. 12, 1964. When one traverses the col in a northerly direction, one gains 100 feet in height. US-ACAN accepted the name later in 1964.

Mys Steregushchij *see* **Cape Steregushchyy**

Steregushchiy Point *see* **Cape Steregushchyy**

Cape Steregushchyy. 67°40' S, 45°56' E. A rock cape, separating Voskhod Bay from Zerkal'naya Bay, on Alasheyev Bight, in the Thala Hills of Enderby Land, about 3.7 km E of Molodezhnaya Station. Photographed aerially by ANARE in 1956, and by SovAE 1957, and named by the Russians as Mys Steregushchij. The name was translated by ANCA first as Steregushchiy Point, and later as Cape Steregushchyy. There have been several Russian ships over the years named *Steregushchiy*, and this feature was presumably named after one of them.

Islote Sterna *see* **Sterna Island**

Sterna Island. 65°23' S, 64°14' W. A small island, 1.1 km N of Darboux Island, and WNW of Cape Pérez, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. Re-charted in 1957 by an RN Hydrographic Survey unit in cooperation with FIDS. Named by UK-APC on July 7, 1959, for the large number of Antarctic terns (*Sterna vittata*) which breed on this island. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. It appears on a Chilean chart of 1962 as Islote Sterna, and that name was accepted by the 1974 Chilean gazetteer.

Sternberg Peak. 80°04' S, 159°38' E. Rising to about 1300 m, just over 4 km NE of Rand Peak, in the Nebraska Peaks of the Britannia Range. Named by US-ACAN in 2000, for Ben Kollock Sternberg (b. Sept. 11, 1947), a member of the geophysical party during the Ross Ice Shelf

Project season of 1973-74. NZ-APC accepted the name on Feb. 20, 2001.

Cabo Sterneck *see* **Charles Point, Cape Sterneck**

Cape Sterneck. 64°04' S, 61°02' W. A bold, black cliff at the end of Chavdar Peninsula, it forms the N side of the entrance to Hughes Bay, and divides the Davis Coast from the Danco Coast, on the W coast of Graham Land. This is probably where Davis's momentous landing took place in 1821. In Jan.-Feb. 1829, Foster charted it during the *Chanticleer* Expedition of 1828-31, and named the mountain to the ESE of the cape as Mount Herschel (*see* **Mount Péneaud**). Sir John Frederick William Herschel (*see* **Mount Herschel**), the great British astronomer, was a member of the Royal Society Committee that prepared instructions for the voyage. On Jan. 24, 1898, BelgAE 1897-99 discovered and charted what they thought was a cape in this area, and named it Cap von Sterneck, for Austrian geographer and geodesist Freiherr Maj. Gen. Robert von Sterneck (1839-1910), a specialist in gravity, and designer of pendulum apparatus. However, what they named as a cape was, in fact an island to the S of the cape (*see* **Apéndice Island**). The present-day cape was charted in 1902 by SwedAE 1901-04, and misspelled Kap von Steineck. It also appears on their charts as Kap Wennersgaard (*see* **Wennersgaard Point**). FrAE 1908-10 erroneously called it Cap Charles (*see* **Charles Point**), and it appears as such on Charcot's 1912 map. On Capt. Johannessen's chart of 1919-20 it appears as Guvernor Point (sic), presumably named after the whaling ship *Gouvernøren*. Maxime Lester, during the British Imperial Antarctic Expedition of 1920-22, charted it as Cape Charles, and that name appears also on a 1938 British chart. On Aagaard's 1930 map it appears as Kapp Wennersgaard. On Bagshawe's 1939 map, also reflecting the British Imperial Antarctic Expedition of 1920-22, it appears as Guvernor Point. On a 1943 U.S. Hydrographic Office chart it appears as "Cape von Sterneck (Cape Charles)," and on a 1946 USAAF chart it appears as Cape von Sterneck. ChilAE 1946-47 surveyed in this area, and named the island that the Swedes had thought was Kap Steineck (sic) as Isla Telegrafista Rivera (a name later shortened to Isla Rivera; this island would later be known as Apéndice Island), and named the present-day cape as Cabo Carlos. US-ACAN accepted the name Cape Sterneck in 1947, and UK-APC followed suit on Nov. 21, 1949, with "Cape Sterneck (Charles)." It appears as Cape Sterneck on a British chart of 1949, and also in the 1955 British gazetteer. On an Argentine chart of 1949 it appears as Cabo Charles, as it does on one of their 1954 charts. However, on a 1957 Argentine chart it appears as Cabo Teniente Vivot, named for Lt. Mario Justo Vivot, of the Argentine navy, and that name was accepted by the 1970 Argentine gazetteer. Following air photos taken by FIDASE in 1956-57, and a further study of the charts prepared by BelgAE 1897-99, UK-APC determined that the name Sterneck had originally been applied by de Gerlache to the island, rather than to this cape, so, on Sept. 23, 1960, they changed the name Mount Herschel to Mount Pénaud, and gave the name Herschel to the present-day cape, as Cape Herschel. It appears as such on a British chart of 1961. It apepars on a U.S. Hydrographic Office chart as Charles Point. It appears on a 1961 Chilean chart as Cabo Sterneck, and that name was accepted by the Chilean gazetteer of 1974 (after they had rejected the proposed Punta Sterneck). Today, the Argentines also call it Cabo Sterneck. The Americans still call it Cape Sterneck.

Isla Sterneck *see* **Apéndice Island**

Sterneck Island *see* **Apéndice Island**

Sternhügel. 70°27' S, 160°59' E. A hill in the Kavrayskiy Hills, W of Rennick Bay. Named by the Germans.

Sterrett, James McAnlis "Jim." b. June 9, 1906, Pittsburgh, son of Dr. (and Capt.) William John Sterrett and his wife Elizabeth McAnlis Forbes. He studied medicine at the University of Pittsburgh (but never became a doctor), and married Mildred Gertrude Roberts. He had a four-year-old daughter when he became pharmacist and hospital corpsman on the *Bear of Oakland* as that vessel went south during ByrdAE 1933-35. He was biologist (bacteriologist) on the shore party as they wintered-over at Little America in 1934, and became Dr. Potaka's assistant while they were there. Byrd described him as "a conscientious, capable man." Back in the States, like many Byrd men, he lectured. He died in Wisconsin on April 21, 1975.

Sterrett Islands. 73°48' S, 103°23' W. Small group in the Amundsen Sea, 8 km NW of the Edwards Islands, and 8 km W of Canisteo Peninsula. Plotted by USGS from VX-6 air photos taken in Jan. 1960. Named by US-ACAN in 1960, for Jim Sterrett.

Nunatak Sterzhen'. 73°02' S, 73°55' E. In the Grove Mountains of Princess Elizabeth Land. Named by the Russians.

Steuri Glacier. 76°23' S, 112°24' W. Flows from the S slopes of Mount Takahe, in Marie Byrd Land, 5.5 km W of Möll Spur. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Heinrich Steuri, Swiss USARP glaciologist at Byrd Station in 1968-69.

Stevens, Albert Edward. b. Nov. 29, 1899, London, son of cabman William Stevens and his wife Alice. He was a painter, and, as such, spent time in South America before becoming a writer on the *Discovery II*, 1929-35. He later became a purser. He died in Dec. 1985, in London.

Stevens, Alexander O. "Alex." b. Jan. 11, 1886, Kilmarnock, Scotland, son of butler David Stevens (he later worked in the parish church office) and his wife Kate Louden. If he truly had a middle initial "O," then this researcher has been unable to find out what it stands for (he was born just Alexander Stevens, no middle initial). He was a pupil-teacher at 14, and after graduating from the University of Glasgow (MA, 1907), he became a biologist, and a schoolteacher in Stornoway. He returned to the university and got his BSc in geology in 1913, and worked for a year as an assistant in the geography department. He was chief of the scientific staff (and cook), of the Ross Sea party of BITE 1914-17, during which his attempts at geology were, according to him, constantly thwarted. During the last part of World War I he was in the Royal Engineers, went to Spitzbergen to explore the possibilities of coal fields there, and then taught geology at Glasgow, becoming a professor there in 1947. He retired in 1953, and died on Dec. 20, 1965, blind, suffering from emphysema (so long on the ice without a cigarette had really been a problem), and bitter that the Shackleton expedition had wasted two years of his life.

Stevens, Benjamin *see* **USEE 1838-42**

Stevens Cliff. 76°50' S, 162°40' E. A straight cliff, 5 km long, and rising to 200 m above the sea, between Tiger Island and Cape Archer, along the N side of Granite Harbor, in Victoria Land. Named by US-ACAN in 1999, for Alan R. Stevens, chief of the science and application branch of the National Mapping Division, and instrumental in USGS Antarctic mapping and geodesy programs in the 1990s. He worked in the area of McMurdo Sound during the 1994-95 USGS field program. NZ-APC accepted the name on Nov. 4, 1999.

Stevens Point *see* **Jebsen Point**

Stevens Rock. 67°37' S, 64°42' E. Also called Stevensskjeret. A small, lone, low-lying, ice-free rock in water, 2.5 km (the Australians say 4 km) E of Strahan Glacier, and between 1.5 and 2 km off the coast of Mac. Robertson Land. Discovered on Feb. 13, 1931, by BANZARE 1929-31, and named by Mawson for English-born Cdr. Charles Whettnall Stevens (1879-1967), hydrographic department of the Royal Australian Navy. US-ACAN accepted the name in 1947, and ANCA followed suit.

Stevenson Bluff. 69°51' S, 159°28' E. A bluff, 6 km NW of Mount Ellery, in the Wilson Hills, it forms a portion of the divide between Suvorov Glacier and Manna Glacier, 27 km ESE of Pope Mountain, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for William P. Stevenson, VX-6 aviation machinist's mate and helicopter crew member at McMurdo in the winter of 1968. ANCA accepted the name on July 31, 1972.

Stevenson Cove. 66°15' S, 110°37' E. An enclosed cove on the N side of Clark Peninsula, about 3.5 km ENE of Wilkes Station. The area was photographed aerially by OpHJ 1946-47, ANARE in 1956, and also by SovAE 1956. The cove was included in a 1957 survey conducted by Carl Eklund, who named it for Andrew Stevenson, economic adviser to the U.S. House of Representatives Committee on Interstate and Foreign Commerce, and author of a report for the committee on IGY in the Arctic and Antarctic. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961. The Russians call it Bukhta Moora.

Stevenson Glacier. 70°06' S, 72°48' E. Flows NW into the E side of the Amery Ice Shelf, just N of Branstetter Rocks. Delineated by U.S. car-

tographer John H. Roscoe in 1952, from air photos taken during OpHJ 1946–47, and named by him for Lt. James C. Stevenson, co-pilot on OpHJ flights here. US-ACAN accepted the name in 1956, and ANCA followed suit.

Stevenson Island. 67°26' S, 61°11' E. A small island, rising to an elevation of 122 m above sea level, at the E side of the Colbeck Archipelago, 3 km NE of Cape Simpson, on the coast of Mac. Robertson Land. Discovered on Feb. 18, 1931 by BANZARE 1929–31, and named by Mawson for Capt. John B. Stevenson, RAN, a member of the Australian *Aurora* Committee of 1916–17. US-ACAN accepted the name in 1947, and ANCA followed suit.

Stevenson Peak. 72°25' S, 168°17' E. Rising to 1780 m, 8 km WNW of Bypass Hill, in the Cartographers Range of the Victory Mountains, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Robert G. Stevenson, geologist at McMurdo, 1967–68.

Stevensskjeret *see* **Stevens Rock**

Steventon Island. 77°15' S, 148°15' W. A broad, ice-covered island, about 40 km long, it is the biggest of the grounded islands in the Sulzberger Ice Shelf, and lies W of Court Ridge. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1967, for Richard F. Steventon, USN, petty officer in charge of Eights Station in 1963.

Stever Ridge. 72°51' S, 168°02' E. An irregular ridge extending SE from Mount Riddolls to the confluence of Behr Glacier and Borchgrevink Glacier, in the Victory Mountains of Victoria Land. Named by US-ACAN for Horton Guyford Stever (1916–2010), director of the NSF, 1972–74, and former president of Carnegie Mellon University, who traveled and worked in Antarctica in 1973 and 1975. He was President Gerald Ford's science adviser. He was known by his middle name.

Steward, John *see* **USEE 1838–42**

Steward, Robert *see* **USEE 1838–42**

Steward, Samuel *see* **USEE 1838–42**

Steward, William. Captain of the maintop during USEE 1838–42. He joined the expedition in the USA, and was on the *Peacock* on March 9, 1839, when he was knocked off the yard, fell into the sea, and died 2 days later from internal injuries.

Mount Stewart. 80°59' S, 158°32' E. Rising to 1900 m, midway between Mount Durnford and Mount Liard. Named by NZ-APC on Feb. 27, 2003, for Ian Stewart, retired diplomat and NZ's whaling commissioner for 12 years. US-ACAN accepted the name later in 2003.

Nunatak Stewart. 66°09' S, 61°11' W. One of the many nunataks on Jason Peninsula named by the Argentines.

Stewart, Frederick Donald. b. July 12, 1814, NY. He married the very wealthy Catherine van Voorhis on May 17, 1835. He was captain's clerk on USEE 1838–42. He joined the expedition in the USA, and was on the *Peacock* from 1838 to 1841, and then transferred to the *Vincennes*, staying aboard Wilkes's ship until the end of the cruise. He assisted Wilkes with the correction of survey data obtained on the expedition. and became a draftsman, then a hydrographer. He was a conspicuous Odd Fellow. He died at his longtime home in Washington, DC, on Jan. 25, 1878, of pneumonia. His name has usually been seen misspelled as Stuart; that's because Wilkes spelled it that way.

Stewart, Hampton. From NY. Crew member on the *Jane Maria*, 1819–21, who made a manuscript chart (now lost) of the South Shetlands, the first of their kind of that area. On his return to Stonington, he married Sarah Wilcox on Nov. 5, 1821.

Stewart, Reginald Horace Anthony "Tony." b. Oct. 13, 1922. He was with the RAF's meteorological branch from 1944 to 1950, and from 1950 to 1955 was instructor in physics at the Nautical College, at Pangbourne, Berks, with experience with upper air balloons in the Atlantic. In 1951 and 1952 he was a member of the Schools Exploring expeditions to Iceland, and in 1953 to British Columbia. Then he became meteorologist in the advance party of BCTAE 1955–58, being one of the eight men at Shackleton Base (q.v.). He came back to London on the *Magga Dan*, on June 13, 1957.

Stewart, Walter Colin. b. March 7, 1907, Milton, Mass., but raised partly in Dorchester, son of Canadian (Prince Edward Island) immigrant parents, carpenter Peter S. Stewart and his wife Flora Brown Currie. He joined the Merchant Marine as a fireman, and in 1930 was on the *Sacramento*. He was an oiler on the *Jacob Ruppert* during the first half of ByrdAE 1933–35. He replaced Peter MacCurrach as 3rd assistant engineer for the second half (i.e., 1934–35). He died on Oct. 8, 1979, in Largo, Fla.

Stewart Buttress. 79°07' S, 28°30' W. A rock bluff, rising to 1005 m (the British say 790 m), 3 km S of Marø Cliffs, near the SW end of the Theron Mountains, in Coats Land. First surveyed and mapped in Dec. 1956, by BCTAE, and named by them for Tony Stewart (*see* **Stewart, Reginald**). UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Stewart Glacier. 77°29' S, 151°25' W. On the N side of Edward VII Peninsula, flowing NE along the E side of Howard Heights into the Sulzberger Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. Cdr. Wayne B. Stewart, USN, Hercules aircraft co-pilot during OpDF 68 (i.e., 1967–68).

Stewart Heights. 73°29' S, 163°58' E. Small, partly snow-covered heights rising to 2760 m at their highest, and snow-covered, just S of the Arrowhead Range, between the upper forks of Cosmonaut Glacier, in the Southern Cross Mountains of Victoria Land. Named by the Southern Party of NZGSAE 1966–67, for Ian Stewart, field assistant with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Stewart Hills. 84°12' S, 86°00' W. Several small nunataks and snow hills rising above an otherwise featureless terrain, 80 km NE of the Ford Massif, in the Thiel Mountains. Discovered by the U.S. Horlick Mountains Traverse of 1958–59, and again, during an airlifted geophysical traverse on Dec. 13, 1959, by Ed Thiel and Cam Craddock, who named them for Prof. Duncan Stewart (1905–1969), geologist and major student of Antarctic rocks at Carleton College, Minnesota, who was in the Ross Sea area in 1960–61. US-ACAN accepted the name in 1962.

Stewart Peak. 77°44' S, 163°52' E. A sharp coastal peak rising to 1097 m above sea level, on the S side of New Harbor, at McMurdo Sound, in Victoria Land. It is the easternmost summit in the range of hills flanking the S side of Ferrar Glacier. Named by US-ACAN in 1999, for James R. Stewart, diving safety officer from the Scripps Institution of Oceanography, who was principal adviser on research diving for the NSF's Office of Antarctic Programs, from 1967 onwards. NZ-APC accepted the name on Nov. 4, 1999.

Stewart Stacks. 62°38' S, 61°11' W. Two prominent sea stacks on the S side of the entrance of New Plymouth, Livingston Island, between Astor Island and Rugged Island, in the South Shetlands. Roughly charted by Fildes in 1820–21, and he named them Monuments. That name stuck until July 7, 1959, when UK-APC renamed them Stewart Stacks, in order to avoid confusion with other "monument" names in Antarctica. Hampton Stewart was the person honored. US-ACAN accepted the name in 1960. Last plotted by the UK, in late 2008.

Sthal, Frédéric. b. May 14, 1821, Metz. Junior seaman on the *Zélée* during FrAE 1837–40.

Stibbs Bay *see* **Utstikkar Bay**

Stibnite *see* **Antimony**

Stich Peak. 85°57' S, 132°01' W. Rising to 2305 m, on the W side of Reedy Glacier, between May Peak and Chapin Peak, in the Quartz Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Cdr. John D. Stich, USN, pilot at McMurdo in 1962–63 and 1963–64.

Stickle Ridge. 63°56' S, 57°55' W. Running N-S at an elevation of about 720 m, W of Saint Martha Cove, on James Ross Island. The weathered red lavas of the ridge were examined by BAS geologists in 1985–86. Named by UK-APC on Feb. 15, 1988, for the spiny nature of the ridge. They plotted it in 63°58' S, 57°57' W. US-ACAN accepted the name, but with slightly different coordinates.

Mount Stierer. 75°06' S, 162°09' E. Rising to 1080 m, 2.5 km NNE of Mount Bellingshausen, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1962. Named by US-ACAN in 1968, for Byron A. Stierer (b. April 15, 1937, Campbell, Ky.), USAF, airman first class who wintered-over at McMurdo in 1962.

Stiernblad, Curt *see* **Stjernblad**

Stig Nunatak. 73°20' S, 3°14' W. About 5 km NE of Mount Hallgren, in the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Stignabben, for Stig Hallgren. US-ACAN accepted the translated name Stig Nunatak in 1966.

Punta Stigan *see* **Stigant Point**

Pointe Stigant *see* **Stigant Point**

Punta Stigant *see* **Stigant Point**

Stigant Point. 62°01' S, 58°43' W. A conspicuous point, rising to 64 m above sea level, 10 km WSW of Davey Point, and about 20 km WSW of Pottinger Point, on the NW coast of King George Island, in the South Shetlands. Charted by the personnel on the *Discovery II* in 1934-35, and named by them for linguist George Bertie Stigant (1889-1973), a member of the Hydrographic Department of the British Admiralty, 1910-55 (superintending cartographer, 1935-51). It appears on a British chart of 1937. It appears on a 1939 Argentine chart, as Punta Stigant, and (in error) as Punta Stigan on a 1957 Argentine chart, and Punta Stigant was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name in 1953, but as Stignant Point, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. No one was checking, a situation that clearly has not changed much over the years, and no one seems to have known Mr. Stigant personally, except, perhaps, the French (it appears on a 1954 French chart as Pointe Stigant). It was photographed aerially by FIDASE in 1956-57. The name was corrected by UK-APC on July 7, 1959, and US-ACAN accepted the change in 1963. It appears with the corrected name on a British chart of 1962. Last plotted by the UK, in late 2008.

Stignabben *see* **Stig Nunatak**

Stignant Point *see* **Stigant Point**

Stillekette. 70°50' S, 165°30' E. A ridge, SW of Buskirk Bluffs, in the Anare Mountains of Victoria Land. Named by the Germans.

Stillwell, Frank Leslie. b. June 27, 1888, Hawthorn, Melbourne, son of printer Alfred Stillwell and his wife Mary Eliza Townsend. Geologist on AAE 1911-14, he led a party exploring the East Antarctica coastline. He served in World War I as a private, but from 1916 worked for the Australian government as a scientist. He died on Feb. 8, 1963, in the Isle of Wight.

Stillwell Hills. 67°26' S, 59°28' E. A group of rocky hills composed of banded gneisses of colors ranging between dark brown and light gray, about 5 km S of Fold Island, and extending for about 13 km in a NW-SE direction along the SW side of William Scoresby Bay, on the Kemp Coast of Enderby Land. Included in this feature are Lealand Bluff and Kemp Peak. Explored in Feb. 1936 by the personnel of the *William Scoresby*, and also by LCE 1936-37, the latter taking air photos that were used to map these hills for the first time. Dave Trail led an ANARE team here in 1961. Named by ANCA for Frank Stillwell (q.v.), who derived a theory of metamorphic differentiation from banded gneisses of the same type on the George V Coast. US-ACAN accepted the name in 1970.

Stillwell Island. 66°55' S, 143°48' E. A small, steep, rocky island, 0.4 km in diameter, it is the largest member of the Way Archipelago, at the W side of the entrance to Watt Bay, between 2.5 and 3 km NE of Garnet Point, off the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for Frank Stillwell. US-ACAN accepted the name in 1952, and ANCA followed suit.

Stillwell Lake. 67°24' S, 59°26' E. A lake, 3 km by 2 km, about 3 km NE of Kemp Peak. The lake is about 2 m above the high-tide limit and drains from its E end via a short stream to the sea. It is the largest lake in the Stillwell Hills, in association with which it was named by ANCA on March 12, 1992.

The *Stina*. A 251-ton, 116-foot whale catcher, built in 1928 at Smith's Dock, Middlesbrough, for Salvesen's South Georgia Company. She was in Antarctic waters in 1929-30, catching for the *Saragossa* and the *Salvestria*. She was back in 1930-31 and 1931-32, catching for the *Salvestria*, and again, for the *Sourabaya*, in 1933-34, 1934-35, 1935-36, and 1936-37. She then became an Arctic vessel, and was requisitioned by the Royal Navy for service in World War II. In Feb. 1946 she was returned to Salvesen's, and was used by the company as a service boat in South Georgia, towing and guiding other ships into Stromness and Leith Harbour. On March 24, 1955, she was scuttled off Leith Harbour, for use as a mooring place.

Mount Stinear. 73°05' S, 66°24' E. A prominent rock outcrop on a large massif, rising to 1950 m (the Australians say 1725 m above sea level, and that it rises to about 1500 m above the surrounding ice), in the Prince Charles Mountains, just E of Mount Rymill, at the junction of Fisher Glacier and Lambert Glacier. Mapped by Australian cartographers from air photos taken by the RAAF Antarctic Flight in 1956. Named by ANCA on April 29, 1958, for Bruce Stinear (q.v.), who first visited it with his ANARE party in Oct. 1957. US-ACAN accepted the name in 1961.

Stinear, Bruce Harry. b. Nov. 25, 1915, Christchurch, NZ. He worked for the Vacuum Oil Company, and during World War II was an RNZAF navigator. After the war he went back to Vacuum, prospecting in NZ, Australia, and New Guinea. A geophysicist at Mawson Station, during its first winter, 1954, he was back in 1957, at both Mawson and Davis Stations (but based at Davis), initiating the geological and survey program for the Vestfold Hills and the Larsemann Hills. He was back at Mawson in 1959.

Stinear Island. 67°35' S, 62°50' E. One of the Flat Islands, about 320 m (the Australians say about 400 m) N of Béchervaise Island, in Holme Bay, in Mac. Robertson Land, about 2 km WNW of Mawson Station. It is part of what was once called Flatøy (q.v.) by the Norwegians. In 1954 ANARE found it to be a separate island. Named by ANCA for Bruce Stinear. ANARE parties have visited the island frequently since 1954. US-ACAN accepted the name in 1965.

Stinear Lake. 68°34' S, 78°08' E. A salt water lake, 2.5 km long, and 0.4 km wide, immediately E of Lake Dingle, on Breidnes Peninsula, in the Vestfold Hills. Mapped from air photos taken during OpHJ 1946-47. First visited by ANARE in 1955. Named by ANCA for Bruce Stinear. US-ACAN accepted the name in 1965.

Stinear Nunataks. 69°42' S, 64°40' E. A group of dark brown nunataks, of different shapes, which occur within an area of 360 sq km, about 26 km N of the Anare Nunataks, in Mac. Robertson Land, and about 280 km SSE of Mawson Station. Visited by Bob Dovers' ANARE Southern Party in 1954, and named by him as the Southern Nunataks. However, ANCA renamed the group as the Stinear Nunataks, for Bruce Stinear, and plotted it in 69°42' S, 65°50' E. US-ACAN accepted the name in 1961, but with different coordinates. The group includes Summers Peak (the highest), Dovers Peak, Zebra Peak, Peak Seven, Nunatak Minina, Nunatak Pozharskogo, and Nunatak Shtyk.

Stinear Peninsula. 69°24' S, 76°18' E. In the Larsemann Hills, projecting out from the ice plateau into the sea, with uniformly steep sides rising to a central spine. Named by ANCA on Sept. 29, 1988, for Bruce Stinear. The Chinese call it Sanjiao Bandao.

Stinker Point. 61°13' S, 55°23' W. A point, 6 km S of Table Bay, between that bay and Cape Lookout, on the SW coast of Elephant Island, in the South Shetlands. Surveyed and mapped in Dec. 1970, by the British Joint Services Expedition of 1970-71. Named by UK-APC on Nov. 3, 1971, for the giant petrels which breed here. Stinker was the sailors' nickname for this bird (*Macronectes giganteus*). US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. It appears on a 1977 Argentine chart, as Punta Hedionda. That seems to be the name used by the Argentines today, despite the disgracefully inaccurate translation ("hedionda" is an adjective, referring to the "punta," and means "stinky," a complete irrelevance. There is nowhere in the Spanish-speaking world any application of the word "hedionda" to giant petrels). Last plotted by the UK, in late 2008.

Stipple Rocks. 68°06' S, 67°22' W. A group of more than 20 rocks in water, 5 km NW of Millerand Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in 1936 by BGLE 1934-37, it appears on Rymill's 1938 map of the expedition. These rocks, as well as nearby rocks to the E, appear on a 1949 Argentine chart collectively as Islotes Debenham (*see* **Debenham Islands**). Surveyed again in Dec. 1949 by Fids from Base E, who named this compact group for the way it looks on a map. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Further surveyed by FIDS between 1967 and 1969. The Argentines translated the name as Rocas Punteadas.

Mount Stirling. 71°33' S, 164°07' E. Rising to 2260 m, it forms part of the E wall of Leap Year Glacier, 8 km SW of Mount Freed, in the Bowers Mountains. Named by NZGSAE 1967-68, for Canadian zoologist Ian Stirling (b. Sept. 26, 1941, Nkana, Northern Rhodesia), who, upon his return from Scott Base that summer, got his PhD from Canterbury University (NZ). He was long associated with the University of British Columbia. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Stjernblad, Fritz Edvard Curt, Baron. Known as Curt. The last name is also seen (quite correctly) as Stiernblad. b. Sept. 30, 1882, Stockholm, son of bank director Major Carl William Stjernblad and his wife Tekla Sofia Natalia von Schwerin. In Cape Town, in Dec. 1901, he joined the *Gauss* as an able seaman, as part of GermAE 1901-03. In 1917 he wintered-over at Órcadas Station with the Argentines. On. Nov. 23, 1928, in Paris, he married Hilma Margareta Larsson.

Stobart, Thomas Ralph "Tom." b. March 10, 1914, Darlington, Durham, son of Ralph Forester Stobart and his wife Athole O.A. Bowden. Zoologist who served in India during World War II, making educational films. He led an expedition to the Himalayas in 1946, and in 1949-50 was photographer on NBSAE, making the official British film record of that Antarctic expedition. After film work in Africa and Australia, he was a member of the 1953 expedition in which Ed Hillary conquered Everest, and that year made the film *Conquest of Everest*. He also led a search for the Yeti, and wrote cook books. He died on Nov. 28, 1980, at Hassocks, Sussex.

Stock, Gordon Derek "Widger." b. Aug. 23, 1926, Braintree, Essex, son of Christopher Stock and his wife Irene Mabel Sullens. He did his national service as a rating radioman in the Navy, and was living in Frinton-on-Sea, Essex, when he joined FIDS in 1945, as a radioman. He arrived at Port Lockroy Station on Jan. 15, 1946, and the following day took over from Norman Layther as radioman, wintering-over at Lockroy in 1946. He left there on the *Fitzroy* on Jan. 27, 1947, in company with Mike Hardy and Frank White, and wintered-over again, at Base F, in 1947. He then returned to Port Stanley, where he caught the *Lafonia* back to London, arriving there on April 21, 1948. Later that year he left Southampton again, bound for the Falklands, and was base leader and meteorological assistant at Base B during the 1949 winter, and in 1950 wintered-over at South Georgia. After his tour he returned to Port Stanley, and from there to Montevideo, where he caught the *Alcantara* bound for Southampton, arriving there on Jan. 22, 1951. On board, he met Elvira "Vira" Thomas, daughter of a Welsh coal miner. She was a university graduate, teacher, and lecturer in Brazil, and they were married soon afterwards. In 1953 they left England for Northern Rhodesia, had two daughters, moved on to Kenya, Uganda, and Sudan, and finally returned to England in 1970. The marriage broke up, and Stock married again, in 1974, to Margaretta Bayne, in Herts. In 2001 he married a third time, to Veronica Barton, in Beds. He is still living in St. Albans, Herts. Vira Stock, who had continued as a lecturer, died in Jan. 2009, aged 90.

Stocking Glacier. 77°42' S, 161°50' E. A small, steep alpine glacier, just E of Catspaw Glacier, between Obelisk Mountain and The Matterhorn, it flows S toward Taylor Glacier, in Victoria Land. Named by Grif Taylor during BAE 1910-13, for its appearance as seen from above. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Stocks, Richard Frederick "Dick." b. March 1, 1928. He joined BAS in 1962, as a builder, and was at Base B for the summers of 1962-63, 1963-64, 1967-68, and 1968-69. He was in charge of the building of the aircraft hangar, a project that kept getting interrupted by volcanic explosions. He also wintered-over at Signy Island Station in 1964.

Stockton Peak. 71°08' S, 62°10' W. Sharp and mostly ice-covered, and rising to about 1460 m, along the S side of the upper part of (i.e., the head of) Murrish Glacier, 10 km WNW of Cat Ridge, in Palmer Land. Photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel from Base E in 1972-74. Named by US-ACAN in 1976, for William L. Stockton, USARP biologist at Palmer Station in 1972-73. UK-APC accepted the name on July 21, 1976.

Punta Stoffels *see* **Suffield Point**

Nunatak Stojkij. 71°01' S, 71°30' E. One of the central group of the Manning Nunataks, in the SE part of the Amery Ice Shelf. Named by the Russians.

Stoker Island. 62°24' S, 59°51' W. An island, 2 km WSW of Emeline Island, it is the westernmost of the Aitcho Islands, in English Strait, in the South Shetlands. There is a chinstrap penguin rookery here. Named by UK-APC on Nov. 3, 1971, for leading mechanic Donald N. Tait, RN (b. 1940), stoker of the survey motorboat *Nimrod* of the RN Hydrographic Survey unit here in Jan.-March 1967, on the *Protector*. It appears on the 1968 chart of the survey. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. Last plotted by the UK, in late 2008.

Stokes, Frank Welberg. Welberg was his middle name, despite the fact that it is almost always seen as Wilbert. b. Nov. 27, 1858, Nashville, Tenn., but raised in Philadelphia, son of book keeper Malone S. Stokes and his wife Harriet. After years in Paris, he was the artist with Peary twice in the Arctic in the 1890s. In Buenos Aires on Dec. 15, 1901, he joined SwedAE 1901-04. He flew with Amundsen over the Arctic in the 1920s. He died on Feb. 14, 1955, in NY.

Stokes, Jeffrey Colin Albert "Jeff." b. 1935, Hackney, London, son of Albert E. Stokes and his wife Alice A. Gibbs. He went to Sir George Monoux Grammar School, in Walthamstow, and in 1956 was in Norway, where he met Mike Stansbury. In 1958 he joined FIDS, as an assistant surveyor, and wintered-over at Base G in 1959, and at Wordie House in 1960.

Stokes Hill. 64°52' S, 63°32' W. A small but prominent rocky peak, rising to 270 m, 1.5 km SE of Doumer Hill, and E of South Bay, on Doumer Island, in the Palmer Archipelago. First charted by FrAE 1903-05. Named by ArgAE 1949-50, as Monte Teniente (i.e., "lieutenant mountain"). In 1953 it appeared on an Argentine photo as Monte Pelado (i.e., "bald mountain"). It was used as a triangulation point in Dec. 1956, by an RN Hydrographic Survey unit. ArgAE 1956-57 re-surveyed it, and named it Monte López, presumably for a member of that expedition. It appears as such on their 1957 chart. Named by UK-APC on July 7, 1959, for O. Lynch, the engineer (stokes means "stoker" in British naval slang) of the unit's motor launch here in 1956-57. He was the first to climb this hill. US-ACAN accepted the name in 1960. It appears as such on a 1960 British chart. Today, the Argentines tend to call it Monte Teniente. *See also* **Doumer Hill**.

Stokes Peaks. 67°24' S, 68°09' W. A group of peaks rising to about 800 m, between McCallum Pass and Sighing Peak, on the N side of Wright Peninsula, Adelaide Island, on the W side of Graham Land. Surveyed by Fids from Base E in Oct. 1948; photographed aerially by FIDASE 1956-57; and further surveyed from the ground in 1961-62, by Fids from Base T. Named by UK-APC on Dec. 8, 1977, for Jeff Stokes. The name appears in the British gazetteer of 1980. US-ACAN accepted the name.

Ozero Stokovoe. 67°41' S, 45°52' E. A lake, one of the cluster of such lakes in the Thala Hills of Enderby Land, it lies immediately S of Lake Globukoye, and just E of Lake Lagernoye and Molodezhnaya Station. Named by the Russians.

Nunatak Stolb. 68°10' S, 62°23' E. Immediately S of the Sørtindane Peaks, and due S of Simpson Ridge, in the Brown Range, toward the S end of the David Range, in the Framnes Mountains of Mac. Robertson Land. Named by the Russians.

Nunataki Stolby. 69°51' S, 64°30' E. A group of nunataks, NW of Gowlett Peaks, NE of the Anare Nunataks, in Mac. Robertson Land. Named by the Russians.

Gora Stoletova. 73°22' S, 61°34' E. A nunatak, NW of Mount Menzies, in the Prince Charles Mountains. Named by the Russians.

Stolhani, Theodore. Skipper of the *Gobernador Bories*, in Antarctic waters between the 1906-07 season and the 1911-12 season.

Stoltz Island. 69°15' S, 72°09' W. A small island just off the NW tip of Alexander Island, 11 km S of Cape Vostok. Photographed aerially by USN in 1966, by U.S. Landsat in Jan. 1974, and surveyed from the ground in 1975-76 by BAS personnel from Fossil Bluff Station. In 1977 the (British) Directorate of Overseas Surveys plotted it from all these efforts. UK-APC named it on June 11, 1980, for Lt. Cdr. Charles L. Stoltz, USN, staff photographic officer with U.S. Naval Support Force Antarctica, during OpDF 1970 (i.e., 1969-70) and OpDF 1971 (i.e., 1970-71).

Stolze Peak. 64°43' S, 62°26' W. Rising to 1585 m, W of (and near the head of) Beaupré Cove, on Arctowski Peninsula, on the Danco

Coast, on the W coast of Graham Land. In 1956-57 FIDASE photographed it aerially and Fids from Base O surveyed it from the ground. FIDS cartographers mapped it from these efforts in 1959. Named by UK-APC on Sept. 23, 1960, for Franz Stolze (1836-1910), German scientist who, in 1881, suggested improvements in methods of air photography, and, in 1892, established the principle of the "floating mark," used in stereophotogrammetry. It appears on a British chart of 1961, wrongly plotted in 64°40' S, 62°27' W. US-ACAN accepted the name (with corrected coordinates) in 1965.

Stone, Bernard James. b. Jan. 18, 1883, Southsea, Hants. He was a leading stoker, RN, on the *Terra Nova*, during BAE 1910-13. He died in Portsmouth, in 1940.

Stone Point. 63°24' S, 56°56' W. A rocky point with a small islet and some rocks lying off it, it marks the SE entrance point of Hope Bay, at the extreme NE end of Trinity Peninsula, off the NE end of the Antarctic Peninsula. In Feb. 1952, the area was surveyed by an RN Hydrographic Survey unit, led by Lt. Cdr. F.W. Hunt, RN, on the *John Biscoe*, and named by Hunt for Henry William Stone (b. 1914) of St. Johns, Newfoundland, first mate on the *Trepassey*, 1946-47. It appears as such on the 1953 chart of Hunt's expedition. UK-APC accepted the name on Sept. 22, 1954, and US-ACAN followed suit in 1956. ArgAE 1952-53 named it Punta Candado (i.e., "padlock point"), presumably for the 30 meter-high ice wall overhanging the point which makes the feature resemble a padlock in outline. However, on a 1957 Argentine chart it appears as Punta de las Rocas ("point of the rocks"), so named for the rocks lying off it, and that is the name that appears in the 1970 Argentine gazetteer. It appears on a Chilean chart of 1955 as Punta Stone, and that is the name that went into the 1974 Chilean gazetteer.

Stone Ridge. 77°16' S, 161°53' E. A ridge, surmounted by Mount Swinford, it extends SW-NE between Ringer Glacier and Dahe Glacier, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 2005, for Brian Stone, USAP logistics specialist with Antarctic Support Associates from 1990. He was science cargo coordinator for McMurdo, 1992-95; terminal operations manager there, 1995-97; terminal operations manager at Christchurch, 1997-2000; and research support manager with the NSF's Office of Polar Programs, 2000-05. NZ-APC accepted the name on Sept. 12, 2005.

Stonechute Gully. 60°43' S, 45°36' W. A steep gully W of Factory Bluffs, and falling NE into Factory Cove, on Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. Named descriptively by UK-APC on Sept. 29, 2004.

Stonecracker *see* **Chinstrap penguin**

Stonehocker Point. 66°15' S, 110°31' E. A rocky point forming the W extremity of Clark Peninsula, on the Budd Coast of East Antarctica. Wilkes Station is on this point. The region was first mapped from air photos taken during OpHJ 1946-47. ANARE photographed it from the air in 1956, and SovAE 1956 did the same thing. Named by Carl Eklund in 1957 for Garth Hill Stonehocker (b. March 19, 1925, Idaho. d. July 29, 1999, Hyde Park, Utah), chief physicist in the ionosphere-cosmic ray program at Wilkes Station in the winter of 1957. US-ACAN accepted the name in 1960.

Bahía Stonehouse *see* **Stonehouse Bay**

Mount Stonehouse. 84°24' S, 164°24' E. A large tabular mountain rising to about 2900 m (the New Zealanders say 3100 m), overlooking Bowden Névé, 5.5 km SW of Mount Falla, on the W end of the ridge that joins that mountain with Mount Kirkpatrick, in the Queen Alexandra Range. Named by the Northern Party of NZGSAE 1961-62, for Bernard Stonehouse. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Stonehouse, Bernard. b. May 1, 1926, Hull, Yorks, son of James Stonehouse and Margaret Smith. A Navy pilot, he joined FIDS in 1946, as a meteorologist, summered-over at Base E in 1946-1947, wintered-over there in 1947, then spent the 1947-48 summer there and the winter of 1948, the summer of 1948-49, the winter of 1949, and finally the summer of 1949-50. He was finally taken off after being stranded with Fuchs and party on Stonington Island, one of only a few men ever to spend 3 successive winters in Antarctica (not by choice). On Sept. 17, 1954 he married Sally Clacey. He wrote books on penguins (*see* the Bibliography), and, from 1982, was editor of the *Polar Record*. From 1961 to 1969 he was lecturer in zoology at Canterbury University, in NZ, and was at Scott Base and the Cape Royds hut, in 1964-65. In 1994 he began studying the effects of tourism on the Antarctic environment, and has been down virtually every summer since then.

Stonehouse Bay. 67°21' S, 68°05' W. A bay, 8 km wide, indenting the E coast of Adelaide Island between Hunt Peak and Sighing Peak, at Laubeuf Fjord, N of Wright Peninsula. Discovered, surveyed, and roughly charted in Jan. 1909, by FrAE 1908-10. Surveyed in Oct. 1948, by Fids from Base E, and named by them for Bernard Stonehouse. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957. Fids from Base T surveyed it again, 1961-62. The Argentines call it Bahía Stonehouse.

Punta Stoneley *see* **Stoneley Point**

Stoneley, Robert "Bob." b. July 22, 1929, Wharfedale, Yorks, son of distinguished geophysicist Robert Stoneley and his wife Dorothy Minn. He was evacuated to Pitlochry, in Scotland, during World War II, and after graduating from Cambridge in 1951, he joined FIDS, and went to Antarctica on the *John Biscoe* as a geologist, wintering-over at Base D in 1952, working on geological mapping. On Oct. 22, 1953, in Cambridge, he married Hilda Mary Margaret Cox. Brian Hunt was at the wedding. He joined BP, exploring for oil around the world, and on April 18, 1957 arrived back in London from Cape Town, on the *Durban Castle*, to be a member of the British IGY committee, 1957-58. In 1961 he went to work for the U.S. Department of Commerce's coast and geodetic survey, and lived in Redondo Beach, Calif. From 1974 to 1978 he was chief geologist to the Oil Service Company of Iran, and by the 1980s was in the geology department of Imperial College, London, specializing in the oil industry. He died on Sept. 15, 2008.

Stoneley Point. 63°52' S, 58°07' W. A rocky point on the NW coast of James Ross Island, it forms the NE entrance point to Whisky Bay, 6 km W of Brandy Bay. Probably discovered in Oct. 1903, by SwedAE 1901-04, it seems to be on their map (but not named). Surveyed by Fids from Base D in Dec. 1945, and again in 1952-53, and named by the latter group for Bob Stoneley. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963. The Argentines call it Punta Stoneley.

Stoner Peak. 77°54' S, 163°06' E. A distinctive peak surmounting the E extremity of the ridge between Covert Glacier and Spring Glacier, and, at 1300 m above sea level, forming the highest point of that ridge, in the NE part of the Royal Society Range of Victoria Land. Named by US-ACAN in 1992, for James E. Stoner, USGS cartographer, active in geodetic control planning and data reduction from 1981. He was a member of the USGS geodetic control teams at the McMurdo Dry Valleys in the 1986-87 and 1989-90 field seasons, being team leader in the latter season, and also working in remote areas of Antarctica, off icebreakers.

Stonethrow Ridge. 62°58' S, 60°44' W. A snow-covered ridge, running N-S at an elevation of about 325 m above sea level, W of Primero de Mayo Bay, and behind Fumarole Bay, on Deception Island, in the South Shetlands. ArgAE 1952-53 named it Monte Beazley, and it appears on their chart of 1953 (that is still the name used by the Argentines today). Surveyed in Jan. 1954 by FIDS, and named by them as Stonethrow Ridge for the stones at the base of the steep E face which have been thrown off the ridge. There is a 1955 Argentine reference to this feature, as Cerro Iglesias, but that name went nowhere. UK-APC accepted the name Stonethrow Ridge on Sept. 4, 1957, and US-ACAN followed suit in 1963. Last plotted by the UK, in late 2008. SCAR has this as a separate feature from Mount Beazley, but they are one and the same.

Isla Stonington *see* **Stonington Island**

Islita Stonington *see* **Stonington Island**

Islote Stonington *see* **Stonington Island**

Stonington Island. 68°11' S, 67°00' W. About 2500 feet long (from NW to SE), 1000 feet wide, and covered with boulders and large pebbles, it lies 1.5 km NE of Neny Island, off the W coast of Graham Land, in the E part of Marguerite Bay. Covered in snow during the winter, and surrounded by high mountains, its exteme N part is joined to the mainland by the drifted snow slope (or ice ramp) which forms the S side of the terminus of Northeast Glacier (itself on the mainland), the glacier leading up to a plateau 6500 feet up. This drifted snow slope was 1000

feet across in 1941, when USAS left, but by 1947, when RARE and FIDS were there, it had been reduced to 600 feet. Following the retreat of Northeast Glacier, this snow slope is now gone entirely, and Stonington really is an island. Selected on March 8, 1940, to be the site of East Base, during USAS 1939–41, who named it for the Connecticut town from which many of the whaling and sealing ships issued forth over the centuries. It was later the site of the FIDS station, Base E (called Marguerite Bay Station or Stonington Island Station). It appears on a U.S. Hydrographic Office chart of 1946, US-ACAN accepted the name in 1947, it appears on a British chart of 1948, UK-APC accepted the name on Sept. 8, 1953, and it appears in the British gazetteer of 1955. The British pronounce it "Stonnington," as if it has 2 ns. It appears on a Chilean chart of 1947, as Isla Stonington, and that was the name accepted by the Chilean gazetteer of 1974. A Chilean refuge hut was established here on Feb. 7, 1956, from the *Leucotón*. The name has also been seen as Islita Stonington, and even (erroneously) as Isla Stonnington. It appears on a 1953 Argentine chart as Islote Stonington.

Stonington Island Station *see* **Base E**

Stonnington *see* **Stonington**

Stony Point. 64°55' S, 62°56' W. The W entrance point of Oscar Cove and the SE entrance point of Argentino Channel, on the Danco Coast of Graham Land. ArgAE 1952–53 descriptively named it Punta Piedras (i.e., "stones point"), and it appears as such on their 1953 chart. However, it was inadvertently renamed Punta Popa ("poop-deck point") by ArgAE 1953–54, and that name appears on their 1954 chart. The name Punta Piedras was the one accepted by the 1970 Argentine gazetteer. In 1956–57 FIDASE photographed it from the air, and Fids from Base O surveyed it from the ground. UK-APC named it Stony Point on Feb. 7, 1978, and that is the name that appears in the 1980 British gazetteer. This feature is not the same as Islote Sandra (q.v.).

Stopes Point. 76°36' S, 159°35' E. The most northerly point on Tilman Ridge (the NW arm of the Allan Hills), in Victoria Land. Discovered by the NZARP Allan Hills Expedition of 1964, and named by them for Marie Carmichael Stopes (1880–1958), authority on carboniferous paleobotany, and later a celebrated pioneer of birth control. US-ACAN accepted the name in 1965. Originally plotted in 76°37' S, 159°37' E, it has since been replotted.

Cape Stopford *see* **Stopford Peak**

Stopford Peak. 63°46' S, 61°38' W. Rising steeply to 495 m from a straight piece of coast, it is the most prominent feature on the E side of Hoseason Island, in the Palmer Archipelago. Foster charted it roughly in 1829, and named the nearby point Cape Stopford, for Admiral Sir Robert Stopford (1768–1847), commander-in-chief at Portsmouth, 1827–30, where Foster's ship, the *Chanticleer*, had been fitted out for the expedition. Cape Stopford appears on an 1839 British chart. An Argentine chart of 1949 shows this feature named as Monte Sur (i.e., "southern mountain"). It is also seen as Monte Sud (which means the same thing). Following FIDASE aerial photography in 1956–57, the name Stopford was re-applied on Sept. 23, 1960, by UK-APC, from the cape to this peak,. It appears as such on a British chart of 1961. US-ACAN accepted this in 1965.

Stor Hånakken *see* **Stor Hånakken Mountain**

Stor Hånakken Mountain. 66°32' S, 53°38' E. Also called the Great Hånakken. A prominent, dark, steep-sided peak rising to about 1970 m above sea level, about 32 km SSE of Armstrong Peak, in the central part of the Napier Mountains, in Enderby Land. Mapped by Norwegian carographers in 1946 from aerial photographs taken in Jan.-Feb. 1937 by LCE 1936–37, and named by them as Stor Hånakken (i.e., "the great shark's neck") or Stor Hånakkenfjell. US-ACAN accepted the name Stor Hånakken Mountain in 1953. Photographed from ANARE aircraft in 1956, visited in 1960 by an ANARE party led by Syd Kirkby, and named by ANCA (but only for themselves) on July 4, 1961, as Mount Bennett, for Ken Bennett.

Stor Hånakkenfjell *see* **Stor Hånakken Mountain**

Punta Store *see* **Store Point**

Store Point. 68°12' S, 67°02' W. A point projecting toward the N from the central part of the N coast of Neny Island, it is the most northerly point on the island, and also the NW entrance point of Neny Bay, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed by Fids from Base E in 1947, and named by them for their food store here. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1956. It appears on a 1969 Chilean chart as Punta Store, and that is what the Chileans call it today. The Argentines have translated it all the way, as Punta Depósito.

Store Svarthorn *see* **Store Svarthorn Peak**

Store Svarthorn Peak. 71°35' S, 12°33' E. A very prominent black peak, rising abruptly to 2490 m, at the SW extremity of the Mittlere Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered aerially by GermAE 1938–39, and named by Ritscher as Grosses Schwarz-Horn (i.e., "the great black peak"). Remapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and translated by them from the German, as Store Svarthorn. In 1970, US-ACAN accepted the name Store Svarthorn Peak, rather than a German variant, because many of the features in this area have Norwegian names.

Storebusen. 71°41' S, 15°05' E. A mountain, SW of Vorposten Peak, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("large ogre").

Storegg *see* **Storegg Bank**

Storegg Bank. 66°40' S, 64°35' E. A submarine feature about 45 km off the Mawson Coast of Mac. Robertson. Discovered on Jan. 9, 1934, by the *Solglimt*, which found that the bottom shelved steeply from 5100 m to 310 m. It was thought that there was a large edge there, to which the Norwegians applied the name Storeggen (i.e., "the great edge"). ANCA accepted the name Storegg Bank. The Russians, who seem to call it Storegg, have plotted it in 67°24' S, 65°30' E.

Storeggen *see* **Storegg Bank**

Storegutt *see* **Mount Storegutt**

Mount Storegutt. 66°53' S, 55°27' E. Rising to about 1466 m, about 30 km S of the Nicholas Range, in Kemp Land, 42 km W of Edward VIII Bay, and 16 km S of Jennings Bluff. Photographed by LCE 1936–37, and mapped in 1946 from these photos by Norwegian cartographers, who named it Storegutt (i.e., "big boy"). US-ACAN accepted the name Mount Storegutt in 1961, and ANCA followed suit.

Storehø. 71°56' S, 25°14' E. A mountain S of Nipe Glacier, between the Austkampane Hills and Menipa Peak, in the north-central part of the Sør Rondane Mountains. Named by the Norwegians.

Storeidet *see* **Storeidet Col**

Storeidet Col. 71°41' S, 11°31' E. A prominent col 5.5 km W of Eidshaugane Peaks, in the north-central part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39. Mapped by Norwgian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Storeidet (i.e., "the great isthmus"). US-ACAN accepted the name Storeidet Col in 1970.

Mount Storer. 66°53' S, 51°00' E. A jagged peak in the Tula Mountains, 6 km ENE of Mount Harvey, and about 30 km SE of Mount Riiser-Larsen. Discovered from Observation Island in Oct. 1956, by Peter Crohn's ANARE party. Named by ANCA for William Joseph "Bill" Storer (b. Jan. 1, 1925), radio operator at Mawson Station, during that station's first winter, 1954. He had been at Macquarie Island in 1951. US-ACAN accepted the name in 1961.

Storey, Brian Cecil. b. Sept. 20, 1951. BAS structural geologist who summered at South Georgia, 1974–75 and 1975–76. He also summered at Signy Island Station and Base T in 1981–82, and was in the Thiel Mountains and the Ellsworth Mountains in 1983–84. In 1984–85 he was at Thurston Island, on the Black Coast in 1986–87, and in the Pensacola Mountains (1987–88). He was in Marie Byrd Land in 1990–91 and 1992–93, back on Alexander Island, 1994–95, in the Ellsworth Mountains in 1997–98, and in the Theron Mountains in 1998–99.

Storfallet. 68°52' S, 90°33' W. A large slope, very steep in places, that runs SE from Lars Christensen Peak, between Vestryggen and Austryggen, to the Vostok Coast, on Peter I Island. Named by the Norwegians ("large slope").

Storgaard, Henry. b. Dec. 3, 1892, Rockford, Ill., but raised partly in Chicago, son of Danish immigrants, bricklayer Niels Storgaard and his

wife Laurette Margrethe Madsen. The family moved to Fruitville, Wash., and on leaving school Henry became an elevator operator. He did 6 months as a private in the Washington state militia, and then went back to Chicago to study at the Chicago Hospital College of Medicine, graduating in 1916. He went to work for Chicago's Department of Health as an assistant bacteriologist, married, had a child, and then moved back out west, where, in the early 1920s he became a ship's doctor on vessels working out of Seattle, something he would do, on and off, for the rest of his life. In between ships, he was city and county health officer at Yakima. He was doctor on the *North Star* during the 2nd half of USAS 1939–41. He appears on not one single list concerned with that expedition, yet, on Jan. 28, 1941, when the *North Star* was at the Bay of Whales, he was one of the medical board who reviewed Malcolm Douglass's case [Cruzen's reports on and around that date]. He died in Seattle, on Nov. 7, 1942, as assistant health officer of King Co.

Storhausen. 71°33' S, 25°24' E. A height, with 3 crags on it, between Nordhausane and Nordhaugen Hill, in the north-central part of the Sør Rondane Mountains. Named by the Norwegians.

Storjoen *see* **Storjoen Peak**

Storjoen Peak. 72°07' S, 0°12' W. A peak, 6 km NW of Tvora, E of Straumsvola Mountain, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and first plotted from these photos. Remapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Storjoen (i.e., "the great skua"). US-ACAN accepted the name Storjoen Peak in 1966.

Stork Ridge. 67°31' S, 68°12' W. A ridge, 1.5 km long, running ENE-WSW at an elevation of about 420 m above sea level, 5.5 km NW of the airstrip at Rothera Station, at Wright Peninsula, on the SE part of Adelaide Island. Surveyed by Fids from Base T in 1961–62. In 1976, an RN Hydrographic Survey unit from the *Endurance* marked the highest point at the E end of this ridge with a flag and a pole, giving the appearance of a stork on the ridge, and UK-APC accepted the name Stork Ridge on Dec. 8, 1977. It appears as such in the 1980 British gazetteer. US-ACAN accepted the name. On Sept. 29, 2004, UK-APC individually named each of the 3 main peaks on this ridge as North Stork, Middle Stork, and South Stork.

Storkletten *see* **Storkletten Peak**

Storkletten Peak. 72°03' S, 3°25' W. A small, ice-free mountain, 1.5 km S of Flårjuven Bluff, in the SW part of the Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and named by them as Storkletten ("the big, steep mountain"). US-ACAN accepted the name Storkletten Peak in 1966.

Storknolten *see* **Storknolten Peak**

Storknolten Peak. 72°11' S, 8°03' E. A small mountain peak about 1.5 km W of Müller Crest, the southernmost peak in the Filchner Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Storknolten (i.e., "the big knoll"). US-ACAN accepted the name Storknolten Peak in 1966.

Storkvaeven *see* **Storkvaeven Cirque**

Storkvaeven Cirque. 72°42' S, 0°09' E. An ice-filled cirque (or corrie) on the NW side of Nupskåpa Peak, near the S end of the Sverdrup Mountains of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Storkvaeven. US-ACAN accepted the name Storkvaeven Cirque in 1966.

Storkvammen *see* **Storkvammen Cirque**

Storkvammen Cirque. 71°44' S, 11°44' E. Between Eidsgavlen Cliff and Kvamsgavlen Cliff, in the east-central part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Storkvammen. US-ACAN accepted the name Storkvammen Cirque in 1970.

Storkvarvet *see* **Storkvarvet Mountain**

Storkvarvet Mountain. 71°45' S, 6°54' E. A mountain that is round in plan, and which has several radial spurs, N of Habermehl Peak, at the NE end of the Mühlig-Hofmann Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Storkvarvet ("stor" means "big," and "kvarv" is the Norwegian word for a round of logs in a loghouse. The suffix "-et" is the definite article). US-ACAN accepted the name Storkvarvet Mountain in 1967.

Storkvarvsteinen *see* **Storkvarvsteinen Peak**

Storkvarvsteinen Peak. 71°36' S, 7°04' E. An isolated rock peak, in Otterflya (the large glaciated area N of the W part of the Orvin Mountains), 13 km NE of Storkvarvet Mountain and the main group of the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Storkvarvsteinen (i.e., "the big round of logs rock"). US-ACAN accepted the name Storkvarvsteinen Peak in 1967.

Storm Peak. 84°35' S, 164°00' E. Also called Storm Peaks. A flat-topped peak, rising to 3280 m (the New Zealanders say it is over 3300 m), 5.5 km NW of Blizzard Peak, in the Marshall Mountains, in the S sector of the Queen Alexandra Range. So named by the Northern Party of NZGSAE 1961–62, for the storms here. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Storm Peaks *see* **Storm Peak**

Stornes *see* **Stornes Peninsula**

Stornes Peninsula. 69°26' S, 76°05' E. A rocky, jagged peninsula, about 5 km long, projecting into Prydz Bay, on the Ingrid Christensen Coast, just W of the Larsemann Hills. Photographed by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Stornes (i.e., "the big promontory"). Visited by ANARE survey parties in 1968 and 1969. US-ACAN accepted the name Stornes Peninsula in 1971, and ANCA followed suit.

Stornesbukta *see* **Wilcock Bay**

Storneskloa *see* **Priddy Promontory**, **Tonagh Promontory**

Stornupen *see* **Stornupen Peak**

Stornupen Peak. 72°10' S, 2°22' E. Rising to 2275 m, in the S part of Nupskammen Ridge, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Stornupen (i.e., "the big mountain peak"). US-ACAN accepted the name Stornupen Peak in 1966.

Stornuten *see* **Mount Maines**

Gora Storozhevaja. 70°49' S, 68°05' E. A hill close W of Pagodroma Gorge, at the E end of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Nunatak Storozhevoj. 74°22' S, 66°32' E. Almost due SW of Wilson Bluff, near the Lambert Glacier. Named by the Russians.

Poluostrov Storozhevoj *see* **Storozhevoj Peninsula**

Storozhevoj Peninsula. 66°11' S, 101°07' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Poluostrov Storozhevoj. The name was translated by ANCA.

Storsåta. 71°28' S, 12°26' E. A mountain in the Mittlere Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Name means "the large haystack" in Norwegian.

Storsåtklubben *see* **Storsåtklubben Ridge**

Storsåtklubben Ridge. 71°25' S, 12°25' E. A mountain ridge, 5 km long, 8 km NE of Mount Hansen, in the Mittlere Petermann Range of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and first plotted from these photos. Remapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–

59 air photos taken during the same long expedition, and named by them as Storsåtklubben (i.e., "the large haystack mallet"). US-ACAN accepted the name Storsåtklubben Ridge in 1970.

Storskolten. 72°23' S, 27°56' E. A nunatak in the E part of Bleikskoltane Rocks (in fact, it is the largest of that group), S of Balchen Mountain, in the SE part of the Sør Rondane Mountains. Named by the Norwegians.

Storsponen *see* **Storsponen Nunatak**

Storsponen Nunatak. 72°00' S, 3°56' E. On the W side of Hoggestabben Butte, N of Mount Hochlin, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Storsponen (i.e., "the big chip"). US-ACAN accepted the name Storsponen Nunatak in 1966.

Storsveenfjellet. 74°35' S, 10°09' W. A mountain in the S part of the XU-fjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Arvid Storsveen (b. 1915), the civil engineer who, during World War II, reorganized and strengthened XU (Norway's largest Resistance organization for military intelligence) after a mass arrest had almost closed it down. He was killed while trying to escape arrest. His brother, Erik (b. 1918) was active in the Trondheim Resistance.

Stortjørna *see* **Lake O-ike**

Stout Spur. 84°52' S, 63°43' W. A knife-like rock spur running N-S descending from a height of about 1600 m above sea level, on the NE edge of the Mackin Table, 5 km E of Mount Campleman, in the Patuxent Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Dennis Kenneth Stout (b. May 8, 1941, San Francisco. d. Aug. 4, 2007, Dale City, Va.), radioman at Palmer Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Stowaways. Three English stowaways were found on the *Zélée* during FrAE 1837–40, just as the French expedition left Hobart. However, none of them got to Antarctica; at least 2 of them were put ashore in NZ. Over 20 men stowed away on the Dundee Whaling Expedition of 1892–93 (see that expedition for details). Two of them, Bill Brannan and Terry McMahon, actually became expeditioners. 14 hours after leaving Lyttelton, bound for the Ross Sea for their 3rd voyage of BAE 1910–13, the crew of the *Terra Nova* found a stowaway, aged about 35, and not in too good shape mentally. At midnight, they transferred him to the Norwegian bark *Triton*, which then took him to Dunedin. A couple of years later, Perce Blackborow, a young British sailor, found himself in Buenos Aires without a ship, befriended an American sailor in similar circumstances, Bill Bakewell, and when the *Endurance* arrived on its way to Antarctica and fired three of the personnel, Blackborow and Bakewell applied as replacements. Bakewell was accepted, but Perce was turned down because of his lack of experience. However, with the assistance of Bakewell and another crew member, Wally How, he was smuggled on board as a stowaway. Hidden in a locker, his friends brought him food regularly. Three days out of South Georgia, Shackleton discovered him, and, being too far into the expedition to turn back, reluctantly took him on as a steward, with the caution, "If anyone has to be eaten, you'll be the first." From then on Perce served the expedition well, first as steward and then as assistant cook. The 19-teens and 1920s were, in many ways, great days for stowaways. Two of the major coaling stations en route to Antarctica were the Canary Islands and the Cape Verde Islands, off the African coast. Many a local lad would hop on a Norwegian whaler, and a few weeks later find himself in unspeakably surprising cold. These fellows were always put to work in the "black gang," i.e., the coal-covered stokers below decks, very rarely seeing the light of day until they returned (if they ever did) to the sunny, but desperate, land they had once called home. ByrdAE 1928–30 picked up several stowaways, only one of whom, William Gavronski (q.v.), became a real expeditioner. As Byrd's flagship, the *City of New York*, was about to leave harbor, they found an unnamed teenage boy stowed away. Later that day of sailing they found a couple more, 18-year-old out-of-work former Wall Street runner Jack Solowitz, and a 20-year black man from Brunswick, Ga., Robert White Lanier, who was finally drawn from his hiding place by the smell of watermelon. The first two were put off (very nicely) while the ship was still in home waters. Mr. Lanier became part of the expedition, at least as far as Panama, where, and not because of his criminal record, nor because of the fortune he intended to make from the book he proposed to write about the expedition, but because Capt. Melville felt that he could not withstand the rigors of an Antarctic expedition, he was cast adrift, as it were. ByrdAE 1933–35 picked up a stowaway, Bob Fowler, as the *Bear of Oakland* sailed out of Newport News heading toward Panama. They kept him on. When the ship got to Tahiti, two local lads hopped aboard, and, upon discovery, the skipper Bob English, had to return to Tahiti to unload them, thus losing three days. When the expedition left NZ, three Wellington boys, Robert E. Christian, Geoffrey B. Wray, and Michael Pilcher, decided to join the expedition. The *Jacob Ruppert* was too far out of harbor to turn back, so they were put to work as deck hands. Byrd called them the Three Musketeers. They were shipped back at the end of the summer season. On April 3, 1930, as the *Eleanor Bolling* was making her way from NZ to Tahiti (after ByrdAE 1928–30) was over, they found Colin Gillespie. Since then, the opportunities for stowaways have somewhat diminished (and the desire too, perhaps), but have not stopped altogether, of course. In Dec. 1972, when the *Nella Dan* left Melbourne to resupply the ANARE bases, a stowaway was found, but Don Styles put him ashore long before Antarctic waters.

Stoyanov Cove. 62°31' S, 60°42' W. A cove, 2.6 km wide, indenting the E coast of Ioannes Paulus II Peninsula for 1.1 km between Sandanski Point and Agüero Point, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for scientist Velichko Stoyanov (1932–1999), for his support of the Bulgarian Antarctic Program.

Strachan, John M.D. Able seaman on the *Terra Nova* during the 1903–04 relief of BNAE 1901–04.

Strachan Hill *see* **Spiro Hill**

Strachan Island *see* **Nelson Island**

Strachan's Island *see* **Nelson Island**

Strachey Stump. 80°41' S, 23°10' W. A flat-topped mountain, rising to about 1630 m, 8 km NE of Mount Wegener, in the E part of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for John Strachey (1671–1742), English geologist who made one of the first attempts to construct a geological cross-section. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Strafford, John *see* **USEE 1838–42**

Islas Straggle *see* **Llanquihue Islands**

Straggle Islands *see* **Llanquihue Islands**

Straham, James *see* **USEE 1838–42**

Strahan Glacier. 67°38' S, 64°37' E. Flows N into the sea, 2.5 km W of Stevens Rock, midway between Cape Daly and Cape Fletcher, on the coast of Mac. Robertson Land, in East Antarctica. Discovered on Feb. 13, 1931 by BANZARE 1929–31, and named by Mawson for Frank Strahan (1886–1976), assistant secretary, prime minister's department in Australia, 1921–35 (he had been a senior clerk with that office since 1913), and secretary, 1935–49. He was also secretary to the Federal Cabinet, 1941–49. More germain, he was secretary of the BANZARE committee. US-ACAN accepted the name in 1947, and ANCA followed suit.

Gora Strahova. 70°54' S, 67°40' E. One of a number of nunataks in the Aramis Range of the Prince Charles Mountains, named by the Russians.

The Strand Moraines. 77°45' S, 164°31' E. Also called Stranded Moraines. An ancient lateral moraine of Koettlitz Glacier, deposited at the outer edge of Bowers Piedmont Glacier, on the W shore of McMurdo Sound, in Victoria Land. BNAE 1901–04 discovered and named it The Eskers (the name means a morainal deposit). Scott later renamed it The Strand Moraines, and US-ACAN accepted that name in 1947. NZ-APC also accepted it.

Stranded Moraines *see* **The Strand Moraines**

Strandknatten *see* **Landing Bluff**

Strandline Glacier. 74°42' S, 164°01' E. A small glacier flowing from beside Enigma Lake toward Gerlache Inlet, just S of Mount Browning, between Campbell Glacier and the Northern Foothills, at Terra Nova Bay, in Victoria

Land, and terminating on the strandline, giving an interesting combination of glacial and marine features. Named by NZ-APC in 1988.

Strandnebba. 69°57' S, 38°49' E. Low, bare, rock hills, 1.5 km SW of Vesleknausen Rock, they extend along the S shore of Lützow-Holm Bay for 2.5 km, on the Prince Olav Coast. Photographed by LCE 1936-37, mapped in 1946 by Norwegian cartographers using these photos, and named by them (name means "the shore beak"). US-ACAN accepted the name without modification in 1966.

Strandrud, Hans. b. 1909, Norway. One of the mechanics on LCE 1936-37, he joined the *Thorshavn* at Sandefjord, on Nov. 10, 1936. In 1938 he was flight mechanic in Svalbard, and was still a flight engineer in 1957.

Strandrud Mountain. 71°52' S, 25°36' E. Rising to 2070 m above the glacial ice, at the SE side of the Austkampane Hills, in the central portion of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from aerial photographs taken by the Americans during OpHJ 1946-47, and named by them as Strandrudfjellet, for Hans Strandrud. US-ACAN accepted the translated name Strandrud Mountain in 1966.

Strandrudfjellet *see* **Strandrud Mountain**

Mount Strandtmann. 72°07' S, 163°05' E. A mountain, 5 km N of Smiths Bench, in the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Prof. Russell William Strandtmann, biologist at McMurdo in 1966-67 and 1967-68.

Strandzha Glacier. 62°38' S, 59°54' W. On Burgas Peninsula, bounded by Delchev Peak and Spartacus Peak to the W, and by Yavorov Peak and Elena Peak to the N, it flows southeastward into Bransfield Strait, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for Strandzha Mountain, in Bulgaria.

Mount Strange. 74°58' S, 113°30' W. A partly ice-free mountain, 6 km ENE of Mount Isherwood, at the E side of Simmons Glacier, in the Kohler Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Algae and lichens are found here. Named by US-ACAN in 1967, for Joe F. Strange, topographic engineer on the Marie Byrd Land Survey Party of 1966-67.

Strange Glacier. 74°50' S, 63°40' W. Flows SE along the S side of Crain Ridge into the SW arm of Gardner Inlet, between Schmitt Mesa and Mount Austin, in the Latady Mountains, on the Orville Coast, on the E coast of southern Palmer Land. Surveyed in its lower reaches in Dec. 1947 by a combined RARE-FIDS team, photographed by USN between 1965 and 1967, and mapped from these efforts by USGS, who also used the results of ground surveys between 1961 and 1965. Named by US-ACAN in 1968, for Donald Lee "Doc" Strange, USN, hospital corpsman who wintered-over at Pole Station in 1964. It appears on the 1969 USGS sketch map of Ellworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

The *Stranger*. Boston whaling brig, which sailed from Fairhaven, Mass., on a sealing expedition to the South Shetlands in 1820-21, under the command of Capt. Joseph Adams. She anchored in Yankee Harbor, and got about 1000 skins. On her way back she stopped at Valparaíso, and was still there in Sept. 1821, taking on freight. *See also* **The *O'Cain***.

Kapp Stranger *see* **Cape Murdoch**

Stranger, Sigurd. b. 1885, Norway, son of shipping merchant Hagbart Nilsen and his wife Trine Stranger Holm. An Argentine naval lieutenant, he wintered-over at Orcadas Station in 1910, and led the 1912 party there. He was later a captain.

Stranger Point. 62°16' S, 58°37' W. Forms the southernmost tip of King George Island, SE of Potter Cove, and about 10.6 km WSW of Demay Point, in the South Shetlands. Charted by the Discovery Investigations in 1934-35, photographed aerially by FIDASE 1956-57, and surveyed from the ground by FIDS in 1957-59. Named by UK-APC on Sept. 23, 1960, for the *Stranger*. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. There is a 1966 Argentine reference to it as Punta Pingüinera, but in 1978 the Argentines officially named it (for themselves) as Cabo Funes, for Argentine patriot Deán Gregorio Funes (1749-1829; "dean" was his title; he was a priest), a member of the Junta Grande in 1811. The Chileans call it Cabo Ibarra, for Bautista Ibarra Carvajal, messboy on the *Yelcho* in 1916 when that vessel rescued Frankie Wild and the lads on Elephant Island.

Strassen, Otto Karl Ladislaus zur. b. May 9, 1869, Berlin. He studied natural sciences in Freiburg and Leipzig between 1887 and 1892, in the latter year earning his doctorate in biology from Leipzig, where he began teaching zoology. Between 1892 and 1894 he was in Russia and Nepal, and was still at Leipzig when he became zoologist on the German Navy Oceanographic Expedition, 1898-99 (on the *Valdivia*). After the expedition, he returned to Leipzig, and in 1914 became professor of zoology and comparative anatomy at the University of Frankfurt-am-Main. Between 1910 and 1934 he was director of the Senckenberg Museum there, and in 1922-23 was rector of the university. He retired in 1935, and died on April 21, 1961, at Oberstedten-in-Taunus.

Strath Point. 64°32' S, 62°36' W. A low, ice-covered point forming the S end of Brabant Island, and also the SW entrance point of Chiriguano Bay, in the Palmer Archipelago. Roughly charted in Jan. 1898, by BelgAE 1897-99. FrAE 1903-05 incorrectly called it Cap Lagrange (*see* **Lagrange Peak**), and this confusion was perpetuated for decades. It appears on a 1949 Argentine chart as Cabo Lagrange, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On a British chart of 1957, the N point of Chiriguano Bay appears as Cape Lagrange. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos. De Gerlache's original point was identified, and descriptively renamed Strath Point by UK-APC on Sept. 23, 1960. A strath is a stretch of flat land by the sea, or a broad river valley. US-ACAN accepted the name later in 1960. It appears as such on a British chart of 1961.

Mount Strathcona. 67°22' S, 99°11' E. An outstanding nunatak, rising to 1380 m above the continental ice on the W side of Denman Glacier, about 17.5 km (the Australians say 28 km) S of Mount Barr Smith, in Queen Mary Land. Discovered by AAE 1911-14, and named by Mawson for Scottish-born Canadian politician and financier Donald Smith (1820-1914), 1st Baron Strathcona and Mount Royal, high commissioner of Canada in 1911, and a patron of the expedition. US-ACAN accepted the name in 1947, and ANCA followed suit.

Stratton, David George. b. May 3, 1927, Bristol. Godson of Teddie Evans (q.v.). After Harrow, and service in the RNVR, he studied geography at Cambridge, and in 1951 was in Lapland, doing glaciological work with the Swedes. He joined FIDS in 1951, as an assistant surveyor and dog driver, and wintered-over at Base D in 1952 and 1953. He made the first detailed study of Jason Peninsula, in May-June 1953. He married Marion Carol Pearce (known as Carol), and they lived in Onslow Square, London. He was in charge of stores, was also a surveyor and dog handler, and was later 2nd-in-command to Fuchs during BCTAE 1955-58. After the expedition, he arrived back in Southampton on May 12, 1958, aboard the *Rangitoto*, from Wellington. From 1959 he worked with BP in North Africa and Europe, and in 1970 contracted polio, which left him totally paralyzed. He died on May 22, 1972, in Kintbury, Berks.

Stratton Glacier. 80°22' S, 29°00' W. A glacier, 30 km long, E of Haskard Highlands, it flows N from Pointer Nunatak and then NW into Slessor Glacier to the N of Mount Weston, in the Shackleton Range. First surveyed and mapped in Oct. 1957, by BCTAE, and named by them for David Stratton. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Stratton Hills. 77°47' S, 163°18' E. A small but geologically important group of rounded mountains, about 5 km long, and rising to about 850 m, they form the S wall of the Ferrar Glacier between Overflow Glacier and the vicinity of Bettle Peak, at the N end of Blue Glacier, in Victoria Land. Named by NZARP geologist Rob Findlay in the time period between 1977 and 1981, for Winthrop Scott Stratton, a NZ carpenter who made a fortune and devoted most of it to philanthropic causes. NZ-APC accepted the name, and US-ACAN followed suit. Given that the name has been accepted by both august naming bodies, this man must have existed. However, this writer has been unable to find Mr. Stratton. Instead, one would like to offer an alternative, not so much as compensation for research deficiencies, but more to illustrate the wonderful world of coincidence. There was an Indiana carpenter Winfield Scott Stratton (1848-

1902), nothing to do with New Zealand, who went west as a young man, and on July 4, 1891, in Colorado, struck it rich with the Independence Mine, the profits of which enabled him to leave over $13 million in his will to create a poor people's home in Colorado Springs.

Stratton Inlet. 66°18' S, 61°25' W. An extensive, ice-filled inlet, 20 km wide, it is entered northeastward of Veier Head, on the SE side of Jason Peninsula, on the Oscar II Coast, on the E coast of Graham Land. Jason Peninsula was first surveyed in detail by Fids from Base D in May-June 1953. Named in 1956 by FIDS for David Stratton (q.v.), who led the survey party. UK-APC accepted the name on Sept. 4, 1957, and it appears on a British chart of 1961. US-ACAN followed suit with the naming in 1963. It appears, misspelled as Stralton Inlet, in the 1974 British gazetteer (that has since been corrected).

Straumsida *see* **Straumsida Bluff**

Straumsida Bluff. 71°44' S, 1°15' W. An ice-covered bluff, about 40 km long, it is part of the E slope of Ahlmann Ridge, in the NE part of Maudheimvidda, in Queen Maud Land, and overlooks the terminus of Jutulstraumen Glacier. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Straumsida (i.e., "the stream side"). US-ACAN accepted the name Straumsida Bluff in 1966.

Straumsnutane *see* **Stein Nunataks**

Straumsvola *see* **Straumsvola Mountain**

Straumsvola Mountain. 72°07' S, 0°20' W. A prominent mountain, 10 km N of Jutulrøra Mountain, in the Gburek Peaks, in the NW part of the Sverdrup Mountains, overlooking the E side of Jutulstraumen Glacier, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Straumsvola (i.e., "the stream mountain"). US-ACAN accepted the name Straumsvola Mountain in 1966.

Mount Strauss. 71°41' S, 73°11' W. A snow-covered mountain rising to 815 m (so say the Americans; the British say about 400 m), with a steep scarp on the S side, 10 km (originally thought to be 6 km) ESE of the head of Brahms Inlet, on Beethoven Peninsula, in the SW part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken in Dec. 1947 by RARE 1947-48. He plotted it in 71°32' S, 73°11' W, and estimated its height at 250 m. Named by UK-APC on March 2, 1961, for the Austrian composer Johan Strauss (1804-1849) and German composer Richard Georg Strauss (1864-1949). No relation at all. US-ACAN accepted the name later in 1961. It appears on a U.S. Hydrographic Office chart of 1962, and, on a 1968 American chart was misspelled Mount Straus. The coordinates were corrected from U.S. Landsdat images taken in Jan. 1973, and, with those new coordinates, the feature appears in the 1977 British gazetteer. The Americans plot it in 71°39' S, 73°12' W.

Strauss, S. *see* **Órcadas Station**, 1917

Strauss Glacier. 77°20' S, 139°40' W. A glacier, 60 km long, it flows between the Ickes Mountains and Coulter Heights, to enter the sea at the E side of Land Bay, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by Byrd for Lewis Lichtenstein Strauss (1896-1974; name not pronounced like that of the composers or the jeans man), chairman of the Atomic Energy Commission, who proposed peaceful purposes for atomic energy in Antarctica. US-ACAN accepted the name in 1970. Mr. Strauss did so many good things, but is remembered today primarily (if not only) for his persecution of Bob Oppenheimer.

Stravinsky Inlet. 72°20' S, 71°30' W. An ice-covered inlet between Shostakovich Peninsula to the N and Monteverdi Peninsula to the S, in the S part of Alexander Island, it is covered by the Bach Ice Shelf. Photographed aerially in Dec. 1947, by RARE 1947-48, and mapped from these photos in 1959-60 by Searle of the FIDS. Re-mapped by the (British) Directorate of Overseas Surveys from U.S. Landsat images taken in Jan. 1973. Named by UK-APC on Dec. 20, 1974, for the Russian-French-American composer, Igor Fedorovich Stravinsky (1882-1971). US-ACAN accepted the name in 1975.

Strawberry Cirque. 83°20' S, 157°36' E. A semi-circular glacial cirque, 1.5 km wide, at the S end of Macdonald Bluffs, in the Miller Range, it indents the cliffs at the N side of the terminus of Argo Glacier, where that glacier enters Marsh Glacier. So named by the Ohio State University Geological Party of 1967-68, because the granite cliffs of the cirque have a bright pink to red color in certain lights. US-ACAN accepted the name in 1970.

Strawn Pass. 75°06' S, 135°16' W. A broad pass on the S side of McDonald Heights, it connects the heads of Kirkpatrick Glacier and Johnson Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1969. Named by US-ACAN in 1974, for Lawrence W. Strawn, glaciologist at Byrd Station in 1967-68.

Stray Islands. 65°10' S, 64°14' W. A group of islands 4 km W of Petermann Island, in the Wilhelm Archipelago, to the N of the Graham Coast, off the W coast of the Antarctic Peninsula. ChilAE 1947 named the group as Islotes Labbé, for 1st Lt. Custodio Labbé Lippi (*see* **Labbé Rock**), navigating officer on the *Angamos*, during that expedition. In 1956-57 FIDASE photographed these islands aerially, as did the crew of the *Protector*'s helicopter in March 1958. FIDS mapped the feature from these photos, and on July 7, 1959, UK-APC, unable, of course to follow the Chilean naming, renamed them Stray Islands, because, although the group is quite distinct, it is scattered. US-ACAN accepted the British naming in 1971. The Argentines, who, until they come up with their own name for this feature, cannot, unfortunately, refer to it at all.

Mount Streich. 78°09' S, 158°53' E. A buttress-type mountain, rising to 2250 m above the Skelton Icefalls, midway between Angino Buttress and Portal Mountain, in Victoria Land. Named by US-ACAN in 1999, for Lt. Paul R. "Bob" Streich, USN, one of the first VX-6 pilots in OpDF I (i.e., 1955-56) and OpDF II (i.e., 1956-57). He flew Otters from Little America V, and provided aerial reconnaissance for the establishment of Byrd Station. NZ-APC accepted the name on Nov. 4, 1999.

Streich, Paul Robert "Bob." b. Dec. 22, 1928, Wyandotte, Kans., son of Wisconsin parents, railroad machinist Alfred A. Streich and his wife Ruth. He went to school in Casper, Wyoming, joined the U.S. Navy at 17, married in 1952, and in March 1955, after Arctic experience, arrived as a lieutenant at Patuxent as volunteer for Antarctica, with VX-6, which was then just forming. He left Norfolk on the *Glacier*, as part of OpDF I (1955-56), was 2nd-in-command at Little America (under Bob Graham), and was the pilot who flew the Otter out to pick up Bursey's Byrd Station trail party in Feb. 1956. He left Antarctica in March 1957, on the *Curtiss*, bound for Christchurch, NZ. He later lived in Colorado Springs, where he died on Aug. 18, 1999.

Streitenberger Cliff. 85°03' S, 92°07' W. An abrupt rock and ice cliff, 2 km W of Reed Ridge, along the NW margin of the Ford Massif, in the Thiel Mountains. Named by Bermel and Ford of the Thiel Mountains party here in 1960-61, for Staff Sgt. Fred W. Streitenberger, U.S. Marine Corps, VX-6 navigator of the plane which took the party into the mountains. He was also one of the 2 navigators on the Hercules that flew in to Byrd Station on April 10, 1961, to evacuate Leonid Kuperov (q.v.). US-ACAN accepted the name in 1962.

Morena Strelka. 74°16' S, 66°59' E. A moraine, due E of Mount Twigg, near the Lambert Glacier, in Mac. Robertson Land. Named by the Russians.

Ostrov Strelka. 68°46' S, 77°45' E. An island, NW of the Rauer Islands, off the Ingrid Christensen Coast. Named by the Russians.

Strengen *see* **Strengen Valley**

Strengen Valley. 72°00' S, 3°28' W. An ice-filled valley, about 6 km long, between Flårjuvnutane Peaks to the W and Flårjuven Bluff and Aurnupen Peak to the E, on the W side of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Strengen (i.e., "the string"). US-ACAN accepted the name Strengen Valley in 1966.

Stretch, Samuel *see* **USEE 1838-42**

Cape Streten. 66°49' S, 49°15' E. An ice cape at the NE tip of Sakellari Peninsula, it forms the W side of the entrance to Amundsen Bay, in Enderby Land. Plotted by Australian cartographers from Nov. 1956 ANARE air photos. Named by ANCA on July 4, 1961, for Neil Anthony Streten

(b. Aug. 15, 1933, Brisbane), meteorologist with the Bureau of Meteorology from 1951 to 1997, and met man at Mawson Station in 1960. He was back in the summers of 1982-83, 1985-86, 1988-89, and 1992-93. From 1987 to 1997 he was the World Meteorological Organization's representative at SCAR and at meetings of the Antarctic Treaty. US-ACAN accepted the name in 1965.

Striated Nunatak. 67°21' S, 56°13' E. A low, rounded outcrop of banded gneiss, about 11 km ENE of Rayner Peak, on the E side of Robert Glacier, in Kemp Land, in Enderby Land. Mapped by Australian cartographers from ANARE air photos. First visited on Feb. 8, 1965, by Ian McLeod's ANARE party. So named by ANCA on July 29, 1965, because its surface displays a remarkable development of striations, grooves, and polishing caused by ice movement across the nunatak. US-ACAN accepted the name in 1970.

Striation Valley. 70°53' S, 68°23' W. A valley trending SE into George VI Sound, N of Jupiter Glacier, on the E side of Alexander Island. Surveyed by a field party from the geology department of the University of Aberdeen (i.e., in Scotland), with support from BAS personnel from Fossil Bluff station, 1978-79, and so named by them for the glacial striations on the rocks. UK-APC accepted the name on Dec. 9, 1981, and US-ACAN followed suit.

Strickland Nunatak. 86°29' S, 124°12' W. A large nunatak beween Savage Nunatak and Spear Nunatak, at the head of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Ernest E. Strickland, utilitiesman at Byrd Station in 1962.

Strid, S. *see* **Órcadas Station**, 1916

Stridbukken *see* **Stridbukken Mountain**

Stridbukken Mountain. 72°48' S, 3°13' W. A small, partly snow-capped bluff-like mountain, about 1.5 km SW of Møteplassen Peak, between Frostlendet Valley and Penck Trough, in the SE part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Stridbukken (i.e., "the hard head," "the stubborn person"). US-ACAN accepted the name Stridbukken Mountain in 1966.

Stride, Geoffrey Alfred "Geoff." b. 1927, Willesden, London, but raised in Binfield Heath, Berks, near Henley, son of Alfred A. Stride and his wife Florence E. Collins. He joined FIDS in 1956, as a diesel electric mechanic, summered at Base B in 1957, and wintered-over at Base Y in 1958. He also served as a cook with FIDASE in 1956-57. He died out on the trail sometime in the days after May 27, 1958, with Stan Black and Dave Statham.

Stride Peak. 67°41' S, 67°38' W. Rising to 675 m, at the head of Dalgliesh Bay, on Pourquoi Pas Island, off Adelaide Island, in Marguerite Bay, on the W coast of Graham Land. BAS personnel from Base E did geological work here in 1965 and 1970. Named by UK-APC on June 11, 1980, for Geoff Stride, who died near here on May 27, 1958, with Stan Black and Dave Statham. US-ACAN accepted the name.

Strider, John Philip. b. March 18, 1930, Leetown, West Virginia, son of storekeeper, farmer, and banker James William Strider (the Striders had been co-founders of the Bank of Charles Town, 6 miles away, and very close to Harpers Ferry), and his wife Carrie Lee Gardner. He joined the Navy on July 15, 1948, for 3 years, went to boot camp at Great Lakes, then to Memphis for 2 years, re-enlisted for 6 years in 1951, went to Norfolk, then returned to Memphis, which is where he volunteered for VX-6, to go to Antarctica as aviation machinist's mate and pilot officer 2nd class. This was OpDF I (1955-56). He flew as plane captain (chief engineer on a flight) on Cdr. Gordon Ebbe's plane, from Patuxent, via Albuquerque, Alameda, Barber's Point (Hawaii), Canton Island, Christmas Island, to Christchurch, NZ, and there picked up the *Wyandot* to McMurdo Sound. That first season (1955-56) he was plane captain on several long-range exploratory flights that included the one flown by Hal Kolp that also carried Byrd, Ebbe, and Cdr. Hansen over the Pole and the Pole of Inaccessibility, but mostly he was on mapping flights. In late Jan. 1956 he returned to NZ, and then by plane back to the Patuxent, and then on to Quonset, RI, and thus did not winter-over in Antarctica. Gus Shinn (who, for some reason, called him "Striker"; Strider called Gus "Mr. Shinn") asked him to be his plane captain for the next summer season (1956-57), for OpDF II. In the fall of 1956 he, Shinn and Cordiner flew to NZ, and in early Oct. 1956 they flew in the *Que Sera Sera* to McMurdo (a 17 hour flight). He was crew chief and plane captain on the *Que Sera Sera* when it made the famous flight that Gus made to the Pole on Oct. 31, 1956, carrying Admiral Dufek. As Strider was the first man to step out of the plane he became the 11th man ever to stand at the Pole (for a more complex discussion of this, *see* **South Pole**), and the first American. He continued to make several flights to the Pole while the Seabees were setting up the base there, and, on two or three occasions got out of the plane. He also flew to Little America V and supported trail parties. At the end of the season, he returned to NZ on the *Towle*, and from there flew back to Quonset. He was based at Anacostia, DC, from 1957 to 1959, and made several trips in the Arctic, including a flight over the North Pole. From 1959 to 1963 he was at Barber's Point, Hawaii. In 1962 he married Maxine Simpson, and in 1963 took part in the A-Bomb tests at Christmas Island. Then back to Norfolk, as chief petty officer, and as crew chief to the c-in-c Atlantic. This was followed by tours in the Middle East, Africa, India, then back to Norfolk as crew chief until he retired from the Navy on Feb. 1, 1974, in Norfolk, and a day later married again, to Thelma Hallett. He worked in civilian life util 1998, having moved to Newport, News, Va.

Strider Rock. 78°02' S, 155°26' W. A rock, 1.5 km NW of Mount Nilsen, in the Rockefeller Mountains of Edward VII Peninsula, in Marie Byrd Land. Discovered in 1929 during ByrdAE 1928-30. Named by US-ACAN in 1971, for Chief Strider.

Stringfellow Glacier. 64°09' S, 60°20' W. Just W of Henson Glacier, it flows N from the Detroit Plateau of Graham Land, into Wright Ice Piedmont, on the Davis Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed in its upper reaches by Fids from Base D in Nov. 1957, and mapped by FIDS cartographers from these efforts. It was plotted in 64°10' S, 60°18' W. Named by UK-APC on Sept. 23, 1960, for John Stringfellow (1799-1883), aeronautics pioneer. US-ACAN accepted the name later in 1960. It has since been replotted from USN air photos taken in 1968-69.

The Strip. Williams Field plus all the attendant buildings. Near the end of OpDF 65 (1964-65), when ice threatened to break out, the whole complex of buildings had to be moved a mile and a half to the south. The Strip was a village in itself. The men who worked there rarely went up on "The Hill" (McMurdo Station itself). The Strip had its own sickbays, movies, and mess halls.

Striped Hill. 63°40' S, 57°53' W. A small, ice-free hill, rising to 90 m (the British say about 125 m), near the S shore of Trinity Peninsula, 1.5 km ENE of Church Point, at the head of Botany Bay. Charted by Fids from Base D in 1946, and named by them for the marked stratifications on a small cliff on the seaward side of the hill. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. Further surveyed by FIDS in 1959-60.

Striped Island. 69°21' S, 76°21' E. A small island off the N tip of Manning Island, in the Larsemann Hills. Named by ANCA.

Stripes Promontory. 74°50' S, 163°37' E. A promontory, characterized by clearly visible black stripes, 10 to 30 m in height, set in light rock, on the N side of Inexpressible Island, in Terra Nova Bay, Victoria Land. Named by the Italians on July 17, 1997.

Ostrova Stroitelej *see* **Stroiteley Islands**

Stroiteley Islands. 66°33' S, 92°58' E. A chain of about 4 small islands, aligned in a N-S direction, in the S part of the Haswell Islands, close to the mainland of East Antarctica, 1.5 km W of Mabus Point. Photographed aerially by OpHJ 1946-47, and mapped from these photos by American cartographer Gard Blodgett. Photographed by SovAE 1956, and shown on their chart as Ostrova Stroitelej (i.e., "builders' islands"). US-ACAN accepted the name Stroitely Islands in 1968.

Strom. Carpenter on Lincoln Ellsworth's first expedition to Antarctica, 1933-34.

Strøm, Sverre Andreas. Known as Strom. b. Feb. 2, 1898, Tromsø, Norway, son of ship's boatswain Karl Strøm and his wife Marie. A sailor in the northern seas since he was 12, then a sealing skipper, running his own ship, and later his own fleet, out of Tromsø. He was the ice pilot

who went to Antarctica as 1st mate on the *City of New York* with ByrdAE 1928-30. He became a member of the shore party, and headed the snowmobile party that hauled supplies in support of field parties. He was replaced on this ship by Harry Adams. He died on June 15, 1950, at Camp Carson, Colo., where he was working for SAC as Arctic specialist.

Strom Camp. 85°12' S, 165°15' E. Near the foot of Strom Glacier, at the W portal of the Axel Heiberg Glacier, in the Queen Maud Mountains. Occupied at various times in Dec. 1929 by Larry Gould's geological party of that year, during ByrdAE 1928-30. Named for Sverre Strøm.

Strom Glacier. 85°10' S, 164°30' W. A steep valley glacier draining the N side of Mount Fridtjof Nansen, between the Duncan Mountains to the NW and (to the SE) the mountainous ridge terminating in Mount Betty, in the Herbert Range, or (to put it another way) between Liv Glacier and the Axel Heiberg Glacier, and flowing NE into the Ross Ice Shelf. Named by US-ACAN in 1955, in association with Strom Camp, which in turn had been named for Sverre Strøm. NZ-APC accepted the name.

The *Strombus*. A 6549-ton, 410-foot Norwegian factory whaling ship, built in 1900 as a steam tanker for Shell, transferred in 1907 to the Anglo-Saxon Petroleum Company, and in 1917 was torpedoed in the Mediterranean, but survived. In 1925 she was sold to the Compañía Ballenera del Perú, and converted into a factory whaling ship. In 1929 she was sold to Waalman & Bugge's Africa Company, out of Tønsberg, Norway, and, after operating in African waters, did pelagic whaling in the Antarctic in 1928-29, 1929-30 (the *Silva* was one of her whale catchers that season), and 1930-31. That last season she fished between 40°W and 60°E, along with the *Ready* (formerly the *Pythia*). She was back in Antartcic waters in 1935-36, under the command of Capt. Gullik Jensen, and that season made the last whaling expedition to Signy Island. In 1936 she had a stern slip fitted. That year she was sold to the Sevilla Company, and was back in Antarctic waters in 1936-37. Among her whale catchers that year was the *Shera*. On Oct. 26, 1940 she hit a mine in the Bristol Channel, ran aground, and was then destroyed in a storm.

Strømme Ridge. 71°27' S, 61°42' W. A broad, ice-covered ridge, about 24 km long, running NNW-SSE at an elevation of about 1200 m above sea level between Muus Glacier and Soto Glacier, and terminating at the N side of Odom Inlet, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS from 1966 USN air photos and 1972-73 ground surveys conducted by BAS personnel from Base E. Named by US-ACAN in 1976, for Jan. A. Strømme, Norwegian oceanographer from the University of Bergen, a member of the International Weddell Sea Oceanographic Expedition of 1968 and 1969. UK-APC accepted the name on July 21, 1976.

Strømmebakken. 74°18' S, 9°08' W. An ice slope, 9 km long, at the NE corner of Milorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Johanne Strømme (b. 1915), Norwegian post office clerk and Resistance leader.

Strømnaesberget. 74°32' S, 9°23' W. A partly snow-covered hill, the most northeasterly in XU-fjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for student and part-time police constable Øistein Strømnaes (1914-1980), Norwegian Resistance leader of XU, 1943-45, and his future wife Anne-Sofie Østvedt (1920-2009), also a student, and 2nd-in-command under Strømnaes.

Mount Strong. 70°35' S, 62°45' W. A ridge-like mountain, rising to about 1200 m, about 8 km E of the Eland Mountains, and NW of Gurling Glacier, on the Wilkins Coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Frank E. Strong, USARP biologist at Palmer Station in 1971-72. UK-APC accepted the name on July 21, 1976.

Strong, John Richard. b. March 22, 1909, London. He qualified as a doctor in 1932, and was surgeon on the *Discovery II* during the 1935-37 cruise for the Discovery Investigations. After World War II he lived in Bulawayo, as medical consultant for Rhodesia Railways. He was still there in the 1970s, as deputy president of the Rhodesia senate, and chairman of the Matabeleland Division of Ian Smith's Rhodesia Front Party.

Strong Peak. 79°56' S, 82°19' W. A small sharp peak at the end of a ridge in the Enterprise Hills, 5 km WSW of Parrish Peak, overlooking the head of Horseshoe Valley, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Jack E. Strong, USARP biologist at Palmer Station in 1965.

Mount Stroschein. 84°25' S, 63°35' W. Rising to 1020 m, 3 km SW of Weber Ridge, in the Anderson Hills, in the N part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Leander Adolph "Lea" Stroschein (b. Oct. 14, 1940, SD. d. April 19, 2002, Natick, Mass.), meteorologist at Pleateau Station for the summer seasons of 1965-66 and 1966-67. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Stroud, Edward Dacre. b. Nov. 12, 1919, East Stonehouse, Devon, only son of Lt. Gen. Edward James Stroud, commandant of the Royal Marine Light Infantry barracks there, and his wife Evelyn St. Aubyn Barrett (who before she married the general, had been married to Capt. H.C. Morton, of the Marines). He joined the Royal Marines, and on Sept. 2, 1937 was made a probationary 2nd lieutenant. On Oct. 1, 1939 he was promoted from acting lieutenant to probationary lieutenant. He was a captain when he joined FIDS in 1951, as a meteorologist, and wintered-over as base leader at Base B in 1952. After his tour, he returned to Port Stanley, and there caught the *Fitzroy*, bound for London, where he arrived on Feb. 3, 1953. He was promoted to major, and in 1959 married Daphne Iris Vandepeer. He once lived in Kenya. Since the 1980s he has lived at West Harnham, near Salisbury.

Stroud, Michael Adrian "Mike." b. April 17, 1955. He qualified as a doctor in 1979. He was a BAS medical officer for 9 months in 1980-81, and was medical officer on the In the Footsteps of Scott Expedition, 1985-86. In 1988, 1989, and 1990, he and Ranulph Fiennes atempted to walk to the North Pole, and he was with Fiennes again on the Transantarctic Crossing of 1992-93.

Stroup Peak. 77°06' S, 162°37' E. Rising to 1100 m, and overloking the N part of Wilson Piedmont Glacier, it stands at the extremity of the ridge extending just over 4 km E from Mount Curtiss, in the Gonville and Caius Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for William "Bill" Stroup, chief electrician at Little America V during the winter of 1956. In 1956-57 he was part of Vic Young's team that left Little America to open up Byrd Station. NZ-APC accepted the name on April 7, 2008.

Strover Peak. 69°43' S, 74°07' E. A low rock peak along the Ingrid Christensen Coast, 10 km WNW of Mount Caroline Mikkelsen, in Princess Elizabeth Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Svartmulen (i.e., "the black snout"). Because there were far too many Norwegian-named features beginning with "svart," it was renamed by ANCA for William G.H. "Bill" Strover, radio supervisor at Davis Station in 1963, and a member of Bill Young's ANARE survey party that fixed its position from an astrofixed baseline. US-ACAN accepted the Australian naming in 1970.

Struma Glacier. 62°36' S, 60°08' W. A glacier, 4.8 km long and 1.5 km wide, bounded by Melnik Ridge to the N, Yankov Gap to the W, and Bowles Ridge to the S, it flows eastward into Moon Bay S of Sindel Point and N of Elemag Point, in the E part of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2005 and 2009, primarily from their 2004-05 Tangra survey, and named by them for the Struma River, in Bulgaria.

Mount Strybing. 78°41' S, 85°04' W. Rising to 3200 m, 5 km SE of Mount Craddock, in the S part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Master Sgt. Henry Strybing (b. Dec. 5, 1921, Patchogue, NY. D. March 6, 1998, Bullhead City, Ariz.), who enlisted in the U.S. Marine Corps on July 1, 1941, served as an aircraft mechanic at Guadalcanal and Midway, and who

was lead navigator on R4D reconnaissance flights here during OpDF III (i.e., 1957–58). He had fulfilled a similar function during OpDF I and OpDF II. On Jan. 21, 1958, he survived a crash landing in Antarctica. He retired on Feb. 28, 1961, to California, and later to Arizona.

Mount Stuart. 72°33' S, 162°15' E. Rising to 1995 m, 8 km N of Mount VX-6, in the Monument Nunataks. Named by US-ACAN in 1964, for Alfred Wright "Al" Stuart (b. Nov. 16, 1932, Pulaski, Va.), glaciologist, deputy leader of the U.S. Victoria Land Traverse Party here in 1959–60.

Stuart, Frederick Donald *see under* **Stewart**

Stuart, Kenneth Roy. Chief machinist's mate on the *Bear* during the 2nd half of USAS 1939–41. That is how he is listed on the expedition's crew sheets, but his middle name may be Ray.

Stuart, Walter William. British whaling officer at the South Orkneys in 1930–31.

Stuart, William Wigmore. Administrator of the Ross Dependency, 1929–53. He died in 1953.

Stuart Doyle Point *see* **Doyle Point**

Stuart Point. 66°28' S, 125°10' E. Ice-covered, at the E side of the entrance to Maury Bay. Delineated from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1955, for Frederick D. Stuart.

Stubb Glacier. 65°41' S, 62°10' W. A glacier, 17.5 km long, flowing E into Scar Inlet between Mount Queequeg and Tashtego Point, on the Oscar II Coast, on the E coast of Graham Land. In Nov. 1947 it was surveyed in its lower reaches by Fids from Base D, and they did the same thing in its upper reaches, in Dec. 1955. Named by UK-APC on Sept. 4, 1957, for the *Moby Dick* character, and it appears on a British chart of 1961. US-ACAN accepted the name in 1963. The British plot it in 65°40' S, 62°20' W.

Mount Stubberud. 86°07' S, 158°45' W. Also called Mount Jørgen Stubberud. Rising to 2970 m, 3 km SE of Beck Peak, on a ridge extending from the N side of Nilsen Plateau, in the Queen Maud Mountains. In 1911, on his way to the Pole, Amundsen named a peak in this general area as Mount J. Stubberud, for Jørgen Stubberud. This may or may not be the exact peak that Amundsen had in mind, but it is the one that has been arbitrarily selected in order to honor both Stubberud and Amundsen's intention. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. US-ACAN accepted the name in 1967.

Stubberud, Jørgen. b. April 17, 1883, Bekkensten, Svartskog, in Oppegaard, Norway. In 1909 he was a carpenter engaged by Amundsen to renovate his house in Svartskog. The great leader was so impressed with Stubberud that he asked him along on his next expedition, on the *Fram*, for NorAE 1910–12. One of the shore party, he took part in many of the local coastal expeditions. He also built the hut that was the nucleus of Framheim. He was one of the group who returned to London on June 29, 1912, on the *Highland Scot*, from La Plata. He became a customs house officer, in Oslo, and died on Feb. 12, 1980.

Stubbs Pass. 68°09' S, 65°11' W. Runing NNW-SSE at an elevation of about 900 m above sea level, through the middle of Joerg Peninsula, on the Bowman Coast, on the E coast of Graham Land. It was photographed aerially by USAS 1939–41, traversed and surveyed by Fids from Base E in 1946, and photographed aerially again by RARE 1947–48. Also in 1947–48 it was traveled by Reg Freeman of the FIDS. Named by UK-APC on July 21, 1976, for Guy Miles Stubbs (b. 1940), BAS geologist at Base E, 1963–65, including the winter of 1964. He served with BAS from July 1, 1963 to Dec. 31, 1968. US-ACAN accepted the name later in 1976.

Stubel Hill. 63°30' S, 58°32' W. An ice-covered hill rising to 485 m and forming the N extremity of Marescot Ridge, 1.61 km N of Bardarevo Hill, 6.65 km NNE of Crown Peak, 3.2 km ESE of Marescot Point, and 11.2 km W of Ogled Peak, it overlooks Bransfield Strait to the N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Stubel, in northwestern Bulgaria.

Stuckless Glacier. 78°16' S, 166°12' E. A broad glacier in the SW part of Black Island, flowing SW between Rowe Nunataks and Cape Beck to Moraine Strait, at the McMurdo Ice Shelf, in the Ross Archipelago. Named by US-ACAN in 1999, for John S. Stuckless, of the department of geology at Northern Illinois University at DeKalb, who, in several seasons from 1972–73, investigated the geochemistry of McMurdo volcanic rocks, correlating samples from several Ross Island sites with core samples taken during the McMurdo Dry Valley Drilling Project. He was later with USGS. NZ-APC accepted the name on Nov. 4, 1999.

Studd, Garry. b. May 13, 1954, Tonbridge. He joined BAS as a pilot in 1977, and became chief pilot in 1979. He spent 7 summers in Antarctica, and racked up more miles than any other BAS pilot, mostly in DHC-6 Twin Otter aircraft.

Studena Point. 64°34' S, 63°12' W. On the S coast of Fournier Bay, Anvers Island, in the Palmer Archipelago, it separates the termini of Kleptuza Glacier to the W and Altimir Glacier to the E. Named by the Bulgarians on Nov. 23, 2009, for the settlements of Studena in western and southern Bulgaria, and Upper and Lower Studena in northern Bulgaria.

Ozëra Studënye. 70°32' S, 67°36' E. A group of lakes in the Medvecky Peaks, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Stuhlinger Ice Piedmont. 70°22' S, 162°30' E. A coastal ice piedmont, 16 km long and 16 km wide, immediately N of the Bowers Mountains, and between the lower ends of Gannutz Glacier and Barber Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Ernst Stuhlinger of NASA, a member of the NSF's advisory panel for Antarctic Programs.

Stuiver Valley. 77°29' S, 161°01' E. A high, largely ice-free hanging valley (at an elevation of 1400 m above sea level) between Mount Circe and Mount Dido to the W and (to the E) Mount Boreas, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 1997, for Minze Stuiver (b. Oct. 25, 1929), geochemist, head of the Quaternary Isotope Laboratory, at the University of Washington, Seattle (retired in Oct. 1998; he had founded the lab in 1969), Quaternary specialist in dating Antarctic samples, with USARP from 1969 onwards. Authority on the glacial history of the McMurdo Sound area and the McMurdo Dry Valleys. NZ-APC accepted the name.

The Stump. 79°53' S, 156°54' E. A small ice-free mountain, rising to 1200 m above sea level, to the W of Smith Heights, in the Darwin Mountains. It has a distinctive flat summit that rises 300 m above the lake at Wellman Valley. Named descriptively by US-ACAN in 2001.

Mount Stump. 86°11' S, 153°02' W. A mostly ice-free mountain, rising to 2490 m, 1.5 km NNE of Mount Colbert, and 3 km NE of Mount Borcik, in the SE part of the Hays Mountains, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN for Edmund "Ed" Stump (b. Dec. 28, 1946, Danville, Pa.), geologist with Arizona State University, USARP investigator of the lower Shackleton Glacier in 1970–71, of the Duncan Mountains in 1974–75, of the Leverett Glacier in 1977–78, of the Scott Glacier and the Byrd Glacier in 1978–79, and of the La Gorce Mountains in 1980–81. In 1981–82 he was chief scientist on the International Northern Victoria Land Project, and, in addition, made investigations at the McMurdo Dry Valleys in Jan. 1983, and in the area of the Nimrod Glacier in 1985–86.

Roca Stump *see* **Stump Rock**

Stump Mountain. 67°29' S, 60°56' E. A rock peak, rising to over 310 m, about 3 km (the Australians say about 4 km) SW of Byrd Head, in Mac. Robertson Land. Photographed by LCE 1936–37, and, 10 years later, mapped from these photos by Norwegian cartographers, who named this feature Stabben (i.e., "the stump"). ANCA translated it, and US-ACAN accepted the translation in 1966.

Stump Rock. 62°06' S, 58°10' W. A rock in the W part of King George Bay, 0.8 km NW of Martello Tower, in the South Shetlands. Charted and named in 1937 by personnel on the *Discovery II*. UK-APC accepted the name, and US-ACAN followed suit. Last plotted by the UK, in late 2008.

Morena Stupenchataja. 70°25' S, 66°04' E. A moraine at the NE foot of Mount Leckie, in the Porthos Range of the Prince Charles Mountains. Named by the Russians.

Sturge Island. 67°28' S, 164°38' E. A parallelogram-shaped island, the largest and most southerly and most easterly of the Balleny Islands, it lies 25 km SE of Buckle Island. There seems to be some considerable degree of variance in the estimates of its length, all those estimates

sounding truly authoritative and categoric. Some say it is 12 km long at its longest stretch (between Cape Freeman in the N and Cape Smyth in the S), while the U.S. gazetteer says 30 km and the NZ gazetteer says about 43 km. Other sources put it at about 50 km. Naturally, estimates of its width do not vary so greatly, US-ACAN claiming 6 km and NZ-APC claiming 13 m. The truth is, it is probably a lot smaller than people once thought. Brown Peak is its highest point, rising to 1524 m. The cliffs are rocky and steep, and there are broad ice tongues reaching to the coast. Discovered on Feb. 9, 1839 by John Balleny, who named it for cement manufacturer Thomas Sturge (b. July 13, 1787, Walworth, Surrey. d. April 14, 1866, Northfleet, Kent, unmarried), one of the merchants who sent out the expedition. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Mount Sturm. 71°03' S, 162°58' E. A high peak, rising to 2320 m, directly at the head of Rastorguev Glacier, at the S end of the Explorers Range, in the Bowers Mountains. Named by the Northern Party of NZGSAE 1963-64, for Arnold G. Sturm, senior geologist on the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Sturm Cove *see* **Mascías Cove**

The *Sturmvogel*. Whale catcher, built in 1913, which was in Antarctic waters in 1930, catching for the Norwegian factory ship *Anglo-Norse*.

Sturmvogelbach. 62°13' W, 58°58' W. A little stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Stuttflog Glacier. 71°56' S, 4°45' E. Flows N between Mount Grytøyr (to the W) and Petrellfjellet (to the E), in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Stuttflogbreen (i.e., "the short rock wall glacier"). US-ACAN accepted the translated name Stuttflog Glacier in 1966.

Stuttflogbreen *see* **Stuttflog Glacier**

Stuttfloget *see* **Stuttfloget Cliff**

Stuttfloget Cliff. 72°03' S, 4°30' E. A steep rock cliff forming the SW end of Mount Grytøyr, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Stuttfloget (i.e., "the short rock wall"). US-ACAN accepted the name Stuttfloget Cliff in 1966.

Stüwe Gully. 69°25' S, 76°08' E. A steep-sided gully at the NE end of a small valley, connecting the E side of Lake Burgess with Thala Fjord, in the Larsemann Hills. Named by ANCA.

Stuxberg, Anton. b. Jan. 16, 1887, Göteborg, Sweden, son of Anton Julius Stuxberg, Arctic explorer and keeper of the zoology department at Göteborg Museum. In 1909 he emigrated to Brazil, where he worked at the Institute of Astronomy and Geophysics, in São Paolo. He wintered-over at Órcadas Station in 1913 and 1915, and led the wintering-over party there in 1917.

Stwosz Icefall. 62°09' S, 58°13' W. A large icefall at the head of Legru Bay, at the Bransfield Strait, it is an outlet of Kraków Dome, on King George Island, in the South Shetlands. Named by the Poles in 1980, as Wit Stwosz Icefall, for Wit Stwosz (1445-1533), the carver (between 1477 and 1487) of the wooden altar piece in Mariacki Church in Krakow. UK-APC accepted the shorter name Stwosz Icefall on July 8, 2003, and US-ACAN followed suit that year. Last plotted by the UK, in late 2008.

Styggebrekka *see* **Styggebrekka Crevasses**

Styggebrekka Crevasses. 71°58' S, 5°44' E. A crevasse field, containing an icefall, near the center of Austreskorve Glacier, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Styggebrekka (i.e., "the dangerous slope"). US-ACAN accepted the name Styggebrekka Crevasses in 1967.

Styggebrekkufsa *see* **Styggebrekkufsa Bluff**

Styggebrekkufsa Bluff. 71°55' S, 5°53' E. A bluff, NE of the Styggebrekka Crevasses, overlooking the east-central part of Austreskorve Glacier, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Styggebrekkufsa ("the dangerous slope bluff"), in association with the crevasses. US-ACAN accepted the name Styggebrekkufsa Bluff in 1967.

Stygian Bay *see* **Stygian Cove**

Stygian Cove. 60°42' S, 45°37' W. Immediately W of Berry Head, in the N part of Signy Island, in the South Orkneys. Roughly surveyed by Petter Sørlle in 1912-13, and named (by him, perhaps) as Palmer Bay, for Nat Palmer. Again roughly, it was surveyed by the Discovery Investigations in 1933. It appears as such on their 1934 chart, and Jimmy Marr, who was part of the DI, refers to it in 1935 as Palmer Bay. Re-surveyed by Fids from Signy Island Station in 1947, and named by them as Stygian Cove because it is overshadowed by the steep rock cliffs rising to Robin Peak on its W side, thus lending a sense of Stygian gloom. That is the official reason. However, Gordon Robin really named it for his wartime submarine, the *Stygian*. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. *See also* [1]**Palmer Bay**. It appears (erroneously) in the 1966 British gazetteer as Stygian Bay.

Styles, Donald Franklin "Don." b. May 18, 1916, Albury, NSW, son of H.B. Styles. After Melbourne University, he became an engineer and went to work for the government in 1937, being with both the Postmaster General's department and the Civil Aviation department. In 1957 he joined ANARE. In 1966 Phil Law retired as director of the Antarctic Division, and Styles, his assistant director, stepped in as acting director, a position he held whenever there wasn't a director (and that was for most of Styles's time in that awkward role; he was judged unfit to be director). In 1959-60 and 1960-61 he led parties that explored the coasts of Kemp Land and Enderby Land. In 1968 he established the wintering-over party on the Amery Ice Shelf. In all, he made 19 trips to the ice. He retired from the Antarctic Division on June 23, 1972, and died on May 21, 1995, in Melbourne.

Styles Bluff. 66°41' S, 57°18' E. A light-colored rock bluff at the SE side of Edward VIII Plateau, rising out of the sea about 1.75 km N of Cape Gotley. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. First visited in Feb. 1960 by an ANARE party led by Don Styles. The feature was named by ANCA on Oct. 11, 1960, for Mr. Styles. US-ACAN accepted the name in 1965.

Styles Glacier. 72°33' S, 68°25' E. A valley glacier flowing northward at the N end of the Mawson Escarpment. Photographed aerially by ANARE in 1956, 1960, and 1973. Seen frequently by the ANARE Prince Charles Mountains survey parties of 1971 and 1972. Named by ANCA on Nov. 27, 1973, for Don Styles. US-ACAN accepted the name on Oct. 20, 2009. The Russians call it Lednik Loshkina.

Styles Strait. 66°51' S, 48°35' E. A strait, between 24 and 28 km long, and between 10 and 19 km wide, it separates White Island from Sakellari Peninsula, in Enderby Land. The depth of water in the strait ranges from 173 m near the W entrance to 686 m near the center. Plotted by Australian cartographers from ANARE air photos taken in Nov. 1956. Visited in Feb. 1960 and in Feb. 1961 by Don Styles' ANARE parties on the *Thala Dan*. Named by ANCA on July 4, 1961, for Mr. Styles. US-ACAN accepted the name in 1965.

Styrbordsknattane *see* **Styrbordsknattane Peaks**

Styrbordsknattane Peaks. 72°13' S, 3°26' W. A cluster of small peaks just N of the Kjølrabbane Hills, near the SW end of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Styrbordsknattane (i.e., "the starboard peaks"). US-ACAN accepted the name Styrbordsknattane Peaks in 1966.

Styx Glacier. 74°02' S, 163°51' E. A tributary glacier in the Southern Cross Mountains of Victoria Land, it flows SE to enter Campbell Glacier between Wood Ridge and Pinckard Table. Observed by the Northern Party of NZGSAE 1965-66, and named by them for the mythological river. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mount Suarez. 86°27' S, 145°42' W. Rising to 2360 m, just E of Mount Noville, on the divide between Van Reeth Glacier and Robison Glacier, in the Queen Maud Mountains.

Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. (jg) Ralph Suarez, VX-6 navigator in Antarctica during OpDF 65, OpDF 66, and OpDF 67.

Nunatak Suárez. 66°29' S, 61°46' W. West of Veier Head (the S part of Jason Peninsula), on the Oscar II Coast, on the E coast of Graham Land. Named by the Argentines.

Puerto Suárez *see* **New Plymouth**

Ventisquero Suárez *see* **Suárez Glacier**

Suárez Glacier. 64°56' S, 62°56' W. Flows N into Oscar Cove, between (on the one hand) Skontorp Cove and (on the other) Punta Leniz and Mascías Cove, SE of Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. First surveyed by David Ferguson in 1913-14, it appears on his 1921 map. Re-mapped by ChilAE 1950-51, and named by them as Ventisquero Suárez, for Capitán de corbeta Francisco Suárez V., operations officer on the *Angamos* during that expedition. The Chilean gazetteer of 1974 accepted that name. Photographed aerially by FIDASE in 1956-57. On Sept. 23, 1960, UK-APC accepted the name Petzval Glacier, named for Josef Max Petzval (1807-1891), Austrian photography pioneeer. It appears as such on a British chart of 1961. US-ACAN accepted the name Suárez Glacier in 1965.

Suárez Nunatak. 82°12' S, 41°47' W. Rising to about 830 m, 8 km NW of Mount Ferrar, in the Panzarini Hills of the Argentina Range, in the Pensacola Mountains. Named by US-ACAN in 1968, for Capt. Jorge Suárez, of the Argentine Navy, officer-in-charge of Ellsworth Station, 1959-61. The Americans omit the accent mark, but UK-APC, although they accepted the American naming (as it stood) on Nov. 3, 1971, and put it as such in their 1974 gazetteer, had the good linguistic grace to add the mark for their 1986 gazetteer. In the Argentine gazetteer of 1978, plotted in 82°11' S, 41°45' W, appears a feature called Nunatak San Juan. This would put it to the immediate NE of Suárez Nunatak, and as there are (or would be, if the Argentine gazetteer is correct) only these two nunataks in this immediate vicinity, one is led to believe that the two are one and the same.

Caleta Suazo *see* **Caleta Aguilera**

Punta Sub. Ribes *see* **Hannah Point**

Subantarctic islands. These are islands and island groups often referred to in this book, but which lie north of 60°S, and therefore do not qualify to be part of Antarctica proper. They include South Georgia, Macquarie Island, Campbell Island, Bouvet Island, the Antipodes Islands, the Kerguélen Islands, the Heard and McDonald Islands, the Auckland Islands, the Prince Edward Islands, the Crozet Islands, the Bounty Islands, the Diego Ramírez Islands, the Ildefonso Islands, Amsterdam Island, Saint-Paul Island, and the South Sandwich Islands. Some sources include more, and there is a recent tendency to refer to them as the Peri-Antarctic Islands. Perhaps the list should also include non-existent islands such as Swain's Island, Dougherty's Island, Aurora Island, and Pagoda Rock.

Subantarcic Surface Water. This forms the N limit of the Antarctic Ocean (q.v.), between the Subtropical Convergence (40°S) and the Antarctic Convergence (between 50°S and 60°S), a very broad 20-degree range, and it is where the warmer waters of the Indian Ocean, the Pacific and the Atlantic meet the Antarctic Surface Water (q.v.) and form a mass with combined characteristics.

Paso Subercaseaux. 64°50' S, 63°07' W. A marine passage between Lautaro Island (on the NE) and Unwin Point, Bryde Island (on the SW), forming the S entrance to Lientur Channel, off the W coast of the Antarctic Peninsula. Named by the Chileans for writer Benjamín Subercaseaux (1902-1973), who was on the *Maipo* during ChilAE 1952-53, just after he had written his famous 1950 novel *Jemmy Button*.

Subglacial lakes *see* **Concordia**, **Ellsworth**, and **Vostok**

Sublimation. In the narrower, Antarctic, sense, it means the change from ice directly to water vapor.

Submarines. The first sub to be tried in Antarctic waters was the *Sennet*. This was the project of Dr. Waldo Lyon, the submarine specialist who, indeed, went on OpHJ 1947-47 with the *Sennet*. The machine failed, becoming icebound and unable to handle the pack-ice, and was rescued by the *Northwind*. This was a very definite lesson for the future. Between June and Aug. 1956 the RN sub *Telemachus* conducted a hydrographic survey off the Wilkes Land coast. In 1966 Russian nuclear subs operated in a pack south of the Antarctic Circle. On ChilAE 1979-80, the Chilean sub *Simpson* was in the waters of the Antarctic Peninsula, helping on the Japanese movie shoot of *Virus*.

Islotes Subof. Rubianes *see* **Pi Islands**

The *Suboficial Castillo*. Argentine ship, built in Charleston, SC, as the *Takelma*, and launched on Sept. 18, 1943. She took part in ArgAE 1995-96 (Capt. Álvaro González Lonzieme); ArgAE 1996-97 (Capt. Miguel O.D. Dalmiro); ArgAE 1997-98 (Capt. Miguel O.D. Dalmiro); ArgAE 1998-99 (Capt. Miguel Santiago); ArgAE 1999-2000 (Capt. Gabriel Catolino); and every year since then.

Islote Suboficial Nievas *see* **Gränicher Island**

Suboficial Principal Kurzmann Refugio. 63°25' S, 57°06' W. Argentine refuge hut built by the Army on Sept. 27, 1976, at Eddy Col, Hope Bay, Trinity Peninsula. Known as Kurzmann.

Grupo Sub-teniente Abott *see* **Demas Rocks**

Isla Sub-teniente Horn *see* **Largo Island**

Islote Sub-teniente Ross *see* **Link Island**

Isla Sub-teniente Rozas *see* **Largo Island**

Isla Sub-teniente Swett *see* **Largo Island**

Subtense Valley. 77°50' S, 160°06' E. A mostly ice-free valley, 2.5 km long, 3 km NW of Tabular Mountain, in the W extremity of the Quartermain Mountains of Victoria Land. In keeping with the practice of naming several features in this area after surveying terms, this one was named by NZ-APC in 1992, for the subtense bar (a fixed base, usually 2 meters long, used in conjunction with a theodolite in the calculation of horizontal distance. US-ACAN accepted the name in 1993.

The *Success*. A tender, assembled from a kit in South Georgia, to service the *King George* on her 1821-22 voyage to the South Shetlands. Skipper was Robert Black.

Succession Cliffs. 71°11' S, 68°16' W. A line of steep cliffs, 2.5 km long, and rising to about 250 m, on the E coast of Alexander Island, and facing E onto George VI Sound just S of the mouth of Pluto Glacier. They were probably seen by Ellsworth on Nov. 23, 1935, as he flew over here, photographing as he went. Roughly surveyed in Oct. 1936 by BGLE 1934-37, the feature appears on Stephenson's 1940 map of the expedition. Re-surveyed in 1948 by FIDS, who so named them because a geologic succession, or depositional sequence, is revealed here by the accessible rock exposures of the cliffs. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a 1956 U.S. Hydrographic Office chart.

Suchland Islands. 74°06' S, 102°32' W. Eight small islands, just inside the central part of the mouth of Cranton Bay, S of Canisteo Peninsula, at the E end of the Amundsen Sea. Mapped by USGS from ground surveys, and from USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Everett Burdett Suchland, Jr. (b. Nov. 1939), USN, radioman who wintered-over at Byrd Station in 1967.

Isla Sucia *see* **Sucia Island**

Punta Sucia. 64°11' S, 60°58' W. A point on the N shore of the marine passage the Chileans call Paso Alfaro, N of Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Sucia Island. 64°58' S, 63°36' W. A small, almost entirely snow-covered island in Flandres Bay, immediately N of Ménier Island, at the SW end of the Gerlache Strait, off the Danco Coast, on the W coast of Graham Land. It appears as Isla Sucia on Argentine charts of 1952 and 1954, and that was the name accepted by the 1970 Argentine gazetteer. As well as meaning "dirty," the name means "foul" in Argentine Spanish, and describes the navigational dangers around the island. Surveyed in Dec. 1956 by an RN Hydrographic Survey unit on the *Protector*, and named by them as Littlespace Island for the fact that they had difficulty finding a suitable small area of snow-free rock for a triangulation station. UK-APC accepted that name on July 7, 1959, and it appears on a 1960 British chart. US-ACAN accepted the name Sucia Island in 1965, and it appears as such on an American chart of 1967. For a history of the naming of this feature, *see* **Ménier Island**.

Cap Sud *see* **South Cape**

Monte Sud *see* **Stopford Peak**

Terme Sud *see under* **T**

Ostrova Sudakova *see* **Sudakova Island**

Sudakova Island. 66°04' S, 100°57' E. An island in the Bunger Hills, on the Knox Coast of Wilkes Land. Named by the Russians apparently as Ostrova Sudakova (i.e., in the plural), for Valeriy Aleksandrovich Sudakov, petrographer who died in Antarctica in 1959. ANCA translated the name as Sudakova Island (i.e., in the singular).

Sudare-iwa *see* **Sudare Rock**

Sudare Rock. 69°42' S, 39°12' E. A rock on land (the Japanese describe the feature as "small rocks," and the Norwegians as a "bare crag, the easternmost and largest of several crags"), on the SE shore of Lützow-Holm Bay, 1.5 km SW of the Skallevikhalsen Hills, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and roughly mapped (but not named) from these photos by Norwegian cartographers in 1946. Remapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as Sudare-iwa (i.e., "bamboo blinds rock"). US-ACAN accepted the name Sudare Rock in 1968. The Norwegians translated this as Persienneknatten ("Persienne" means a Persian blind).

Südberge *see* **Stansbury Peninsula**

The *Suderøy*. Completed in 1913 by Armstrong, Whitworth, of Sunderland, for the Kim Company, out of Tønsberg, Norway, and named *Kim*. She was used in the Canadian ore trade, and in 1917 was bought by the Balto Company, and renamed the *Balto*. In Nov. 1924 Knut Knutsen bought her, and in Sept. 1929 converted her into a 7592-ton Norwegian whaler, from 1929 on owned by his ad hoc Suderøy Company, and she conducted pelagic whaling in Antarctic waters in 1929-30, with her four catchers—*Suderøy I* through *IV*. *Suderøy IV* was lost on Oct. 5, 1929, in Uruguayan waters, on her way to Antarctica. On April 9, 1930, the vessel and her 3 remaining catchers set out for home, via Cape Town, where the catchers were laid up. The *Suderøy* arrived back in Tønsberg in May 1930. On Aug. 20, 1930, she left Tønsberg, for the 1930-31 Antarctic whaling season, this time with five catchers—*Suderøy I* through *V* (there was a new *Suderøy IV*). She left Antarctica in April 1931, and arrived back in Tønsberg in May 1931. During the whaling depression of 1931-32, she was laid up at Haugersund, and again in 1932-33. She was back in Antarctica for the 1933-34 season, with her 5 catchers, arriving back in Tønsberg on May 11, 1934. She had a slip fitted in 1934, and on Aug. 29, 1934, left Norway bound for the 1934-35 Antarctic whaling season, in company with her 5 catchers. Same for 1935-36, but for the 1936-37 season *Suderøy III* had been replaced by *Suderoyøy VI*. She was refitted, and back again in Antarctic waters for the 1937-38 and 1938-39 seasons, with the same five catchers as for the 1936-37 season. Despite the outbreak of war, she did the 1939-40 season, with her usual 5 catchers, as well as with the catcher *Star XVI*, which had been chartered. After this expedition, she left Antarctic waters in March 1940, heading for home with the *Star XVI* and *Suderøy IV*, *Suderøy V*, and *Suderøy VI*—the other two catchers having gone separately to Cape Town. On April 23, 1940, the *Suderøy* and her accompanying catchers pulled into Halifax, Nova Scotia, and in Nov. 1940 unloaded her oil in New Orleans. She then went to Mobile for repairs, and was chartered by the Sinclair Oil Company for 6 voyages to Cuba, after which she went to NY to be armed, and made 25 voyages across the Atlantic. In the 1944-45 season she was back in Antarctic waters as a transport ship for the whaling factory *Sir James Clark Ross*, and in early 1945 worked for the U.S. coastal service. Then she went back to Nova Scotia, and on Nov. 1, 1945, left New York, in company with 5 catchers, including *Suderøy V* through *VIII*, for the 1945-46 Antarctic whaling season. She arrived in Antarctic waters on Dec. 20, 1945, for the 1945-46 season. She missed the 1946-47 season, but was back in 1947-48, 1948-49, and 1949-50. She was extensively refitted in the summer of 1950, in Bremen, and continued in Antarctic waters every season until 1958-59. In May 1959 she returned to Haugesund, where she was laid up, and was sold in Sept. 1959, to Norges Hvalfangstforbund, of Sandefjord, along with the catchers *Suderøy XI* and *XII*, and *Suderøy XIV*, *XV*, *XVI*, and *XVII*. In Dec. 1961, she was sold to Anders Jahre, and renamed the *Jalinga*. Laid up at Gonvik until May 1964, when she was sold to a scrap metal company in Germany, and broken up that year.

Südliche Collinsmoräne. 62°11' S, 58°55' W. A moraine in the area of Norma Cove, Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Südliche Petermann Range. 71°46' S, 12°20' E. The southern of the 3 main Petermann Ranges, this one trends NE-SW for about 33 km, between Svarthausane Crags and Gneiskopf Peak, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Named by NorAE 1956-60 as Søre Petermannkjeda (i.e., "southern Petermann Range"). US-ACAN accepted the name Südliche Petermann Range in 1970. The Russians call it Gory Otto Grotevolja.

The *Südmeer* *see* **The *Torodd***

Islote Sudoeste *see* **Klo Rock**

Sudor, George *see* **USEE 1838-42**

Südpassage. 62°13' S, 58°59' W. A pass on Byers Peninsula, King George Island, in the South Shetlands. Named by the Germans ("south pass").

Cabo Suecia *see* [1]**Cape Alexander**

Monte Suecia. 64°52' S, 62°57' W. A mountain between Punta Gutiérrez and Punta Soffia, on the SE side of Bryde Island, at the entrance to Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Almost certainly named by ChilAE 1950-51. It does mean "Point Sweden," but it is more likely to have been named for a crew member of either the *Lautaro* or the *Angamos*.

Península Suecia *see* **Churchill Peninsula**

Suecia Refugio. 64°20' S, 57°01' W. This was the old Nordenskjöld hut from SwedAE 1901-04 (hence the name Suecia). Argentine naval refugio opened on Snow Hill Island, on Jan. 1, 1954. It was inaugurated on Jan. 8, 1954. From July 26, 1965, it has been a historical national monument.

Mount Suess. 77°02' S, 161°42' E. A huge, conspicuous, mountain, capped by 3 black peaks rising to 1190 m (the New Zealanders say about 1127 m), and projecting through the ice just to the S of Mackay Glacier, it surmounts the S part of Gondola Ridge, in Victoria Land. Discovered by Shackleton during BAE 1907-09, and named by Edgeworth David, for Eduard Suess (*see* **Suess Glacier**). However, during the expedition, Frank Debenham named it Gondola Mountain, or Mount Gondola, and that was the name used until they discovered that David had seen it from the coast and named it. On Jan. 4, 1912, 4 members of the Second Geological Party, led by Grif Taylor, climbed it, during BAE 1910-13. US-ACAN accepted the name Mount Suess in 1952, and NZ-APC followed suit.

Suess Glacier. 77°38' S, 162°40' E. A small glacier flowing S between Canada Glacier and Lacroix Glacier, to enter Taylor Valley, in southern Victoria Land. Charted by BAE 1910-13, and named by them for Prof. Eduard Suess (1838-1914), the American geologist and paleontologist who first proposed the idea of Gondwanaland (q.v.). US-ACAN accepted the name in 1960, and NZ-APC followed suit.

Pontal Suffield *see* **Jasper Point**

Punta Suffield *see* **Suffield Point**

Suffield, William E. Able seaman on the *Discovery II*, 1929-30, and bosun's mate on the same vessel, 1930-31, and as bosun from 1931 to 1939.

Suffield Point. 62°12' S, 58°55' W. A rocky promontory in the form of a cliffed hill, visible from a great distance, it forms the SW entrance point of Norma Cove, 2.5 km SW of Collins Harbor, on the E side of Fildes Peninsula, at Maxwell Bay, on King George Island, in the South Shetlands. Charted by personnel on the *Discovery II*, in 1934-35, and named by them for William Suffield. It appears on a British chart of 1948, and the name was accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer and also on a 1962 British chart. It appears on an Argentine chart of 1949, as Punta Suffield, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. It appears on Krzysztof Birkenmajer's 1984 Polish map as Przyla dek Grikurova, which has been translated as Grikurov Point (*see* **Grikurov Ridge**). On the 1984 Brazilian map of Fildes Peninsula it appears as Punta Stoffels. Last plotted by the UK, in late 2008. *See also* **Jasper Point**.

Sugarloaf Hill. 62°14' S, 58°28' W. Between Blue Dyke and Windy Glacier, at Admiralty Bay, King George Island, in the South Shetlands.

Named descriptively by the Poles as Glowa Cukru, which means "sugar mound" ("cukra" being the adjective meaning "sugar"). The name has been translated into English as Sugarloaf Hill.

Sugarloaf Island. 61°13' S, 54°01' W. A small island close to the E side of Clarence Island, midway between Cape Lloyd and Cape Bowles, in the South Shetlands. Roughly charted by sealers before 1822, and named by them as Sugar Loaf Island, for its shape. It appears as such on Powell's 1822 chart. It appears on another 1822 chart as Sugar Loaf Point. All nations with an interest in the area translated according to their language, for example, on Friederichsen's 1895 German map it appears as Zuckerhut Insel, on Irízar's 1903 Argentine map as Isla Sugar Loaf, and on a 1907 Argentine map translated all the way as Isla Pan de Azúcar. It appears on a British chart of 1901 as simply Sugar Loaf, on a 1927 British chart as Sugarloaf Island, on a 1939 British chart as Sugar Loaf Island, on a British chart of 1948 as Sugarloaf Islet, on a 1949 Argentine chart as Isla Sugarloaf, and on a 1953 Argentine chart as Islote Pan de Azúcar (but wrongly referring to Sérac Island). On Sept. 20, 1955, UK-APC accepted the name Sugarloaf Islet, with coordinates 61°09' S, 63°52' W, and US-ACAN followed suit in 1956. On a 1956 Argentine chart it appears as Terrón de Azúcar. However, on July 7, 1959, UK-APC re-defined it as Sugarloaf Island, still with the same coordinates. The 1961 British gazetteer apparently failed to catch up with the latest developments, for they still listed it as Sugarloaf Islet. US-ACAN accepted the name Sugarloaf Island in 1963. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Islote Pan de Azúcar. By the time of the 1977 British gazetteer, the coordinates had been corrected to 61°11' S, 54°00' W. There is a 1979 reference to the central ridge of this island as Sugar Loaf Ridge, made by the British Joint Services Expedition. It was re-plotted by the UK yet again, in late 2008.

Sugarloaf Peninsula *see* **Aspland Island**, **Eadie Island**

Mount Suggs. 75°16' S, 72°13' W. A mountain rising to about 1500 m, and with a bare rock N face, 3 km S of Mount Goodman, in the Behrendt Mountains, NW of Cape Zumberge, on the Orville Coast, where Ellsworth Land meets southern Palmer Land. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1966, for Henry E. Suggs, Seabee equipment operator who helped open up the new Byrd Station in 1961-62. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Suggs Peak. 75°05' S, 113°06' W. A small, ice-covered peak, 10 km SSW of Mount Wilbanks, in the Kohler Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for James DeShae Suggs (b. 1935), USARP geologist with the Marie Byrd Land Survey party of 1966-67.

Sugisaki, Rokugoro. b. 1876, Kanagawa, Japan. Stoker on the *Kainan Maru* during Shirase's Japanese South Polar Expedition. He died in 1929.

Suhindol Point. 63°05' S, 62°39' W. A point, 3.6 km ENE of Cape James, on the SE coast of Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town of Suhindol, in northern Bulgaria.

Suicides. At the time of writing (2009), suicide still carries with it in the western world an overtone of disgrace, and worse — one can't get into the kingdom of heaven. Presuming there to be a judge in such matters, that judge would surely look kindly on Oates, one of history's most glamorous and famous suicides. Frostbitten and ravaged by scurvy, he is thought to have done the honorable thing during Scott's disastrous return journey from the Pole in 1912. He was slowing up the rest of the party, and just walked out into the blizzard with the classic last line, "I am just going outside and may be some time." Some historians suspect that Scott and the others just threw him out, or at least strongly suggested he do the right thing, but this is grossly unfair to Scott, Wilson, and Bowers. No British gentleman would do such a thing. Foreigners, perhaps, but not British. Besides, the nobility of the act is typical of Oates, as were the wry one-liners. On Jan. 7, 1915, Max Slavonski fell overboard, from a whaler in the Belgica Strait. Earlier that day, his very good friend Karl Moe Johansen, had died of blood poisoning. Whether or not one thing led to another, and whether or not Max jumped or fell, may never be known. There was the case of a laborer on the whaler *Solstreif*, in Feb. 1920, who tried it by slashing his wrists and throat. Whether he succeeded or not, is not known (probably not; he would almost certainly have been buried in the Whaler's Graveyard, on Deception Island, and no one interred there matches him in the remotest way). Malcolm Douglass tried it a few times during USAS 1939-41. In the 1950s, Arthur Farrant committed suicide while with the FIDS. He is buried on Deception Island. The exact number of suicides in Antarctic cannot be computed with any accuracy, as they would, naturally, be hushed up, possibly like the case of Carl Disch, at Byrd Station in 1965, or Peter Orbansen, at Davis Station, in 2005.

Punta Suipacha. 64°51' S, 62°59' W. A point on the E side of Alvaro Cove, on the N side of Bryde Island, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Suisyo-iwa. 71°26' S, 35°35' E. A small rock exposure, at an elevation of 1980 m above sea level, 2 km S of Mount Fukushima, in the Queen Fabiola Mountains. Surveyed by JARE in 1969, and named by the Japanese on March 22, 1979 ("crystal rock").

The *Sukha*. A 251-ton, 125-foot whale catcher built at Smith's Dock, Middlesbrough, for Salvesen's South Georgia Company. In 1929-30 she was in Antarctic waters, catching for the *Sourabaya*. She was back in 1930-31 and 1931-32, catching for the *Salvestria*, then in 1932-33 was back with the *Sourabaya*, and again in 1933-34, 1934-35, and 1935-36. For the 1936-37 season she was with the *New Sevilla*, and then back with the *Salvestria* for 1937-38, 1938-39, and 1939-40, before being requisitioned by the Royal Navy in 1940. In Nov. 1945, she was returned to her owners, and caught for the *Empire Venture* in Antarctic waters in 1945-46. Her last season in Antarctica was 1946-47, catching for the *Southern Venturer*, and then she became a Newfoundland vessel, being sold for scrap in 1971.

Sukiennice Hills. 62°08' S, 58°09' W. A group of hills rising to about 100 m between Lions Rump and Polonia Glacier, at King George Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the famous Gothic-Renaissance Cloth Hall, at Main Market Square, in Krakow.

Sukkertoppen *see* **Istind Peak**, **Mount Zuckerhut**

Lago Sulfuroso *see* **Kroner Lake**

The *Sulla*. A 251-ton, 116-foot whale catcher built in 1929 at Smith's Dock, Middlesbrough, for Salvesen's South Georgia Company. She was catching for the *Sourabaya* in 1929-30, 1930-31, 1931-32, and 1932-33; for the *New Sevilla* in 1934-35 and 1935-36; and for the *Strombus* in 1936-37. In 1937 she was transferred to the Arctic whaling grounds. In 1940 she was requisitioned by the Royal Navy, and was transferred to the Soviet Navy in 1942, being sunk by a German warship on March 24 of that year in the Barents Sea.

Monte Sullivan *see* **Mount Sullivan**

Mount Sullivan. 69°39' S, 63°49' W. Rising to 2070 m, 20 km E of the N part of the Eternity Range, in the central part of the Antarctic Peninsula. This mountain falls in the area photographed aerially by Wilkins on Dec. 20, 1928, and by Ellsworth on Nov. 23, 1935, but it does not appear on W.L.G. Joerg's 1937 map, which used both these sets of photos. First surveyed from the ground and charted in Dec. 1936, by BGLE 1934-37, and shown in 69°35' S, 63°51' W. It appears as such on Stephenson's 1940 map of the expedition. Photographed aerially in 1940, during USAS 1939-41, and again in late 1947, during RARE 1947-48, and surveyed from the ground by a joint sledging team comprising RARE personnel and Fids from Base E. Named by Finn Ronne in 1948, for Col. H.R. Sullivan, of the Office of Research and Development of the USAAF, which furnished equipment for RARE 1947-48. Col. Sullivan's name had originally been applied to Mill Inlet. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on an Argentine chart of 1957 as Monte Sullivan, and that is what the Argentines, and the Chileans, call it today.

Seno Sullivan *see* **Mill Inlet**

Sullivan, James. b. 1873, Hull, Yorks, and was on the steamer *Beeforth*, at Tyne Docks, at South Shields, when he was taken on as a steward on the *Morning*, 1902-03, during that vessel's relief voyage to Antarctica during BNAE 1901-04. After the expedition he went back to his wife in Hull.

Sullivan, S.J. Crewman on the *Jacob Ruppert*, 1933-34, during ByrdAE 1933-35.

Sullivan, Walter Seager "Walt," Jr. b. Jan. 12, 1918, son of New York *Times* ad manager and later insurance exec Walter S. Sullivan and his wife Jeanet Loomis. The younger Sullivan, after Groton, became a New York *Times* staff writer, in Antarctica (*see* the Bibliography). His brilliant stories of USAS 1939-41 and OpHJ 1946-47 awakened much interest in the great southern continent. An example of his memorable writing style was during the United States Navy Antarctic Expedition, 1954-55, when the *Atka* was attempting to pierce the ice pack at the head of Sulzberger Bay on Feb. 1, 1955, he led off his on-the-spot article with these words, "This icebreaker slugged at the Antarctic ice pack for twelve hours last night with its 6,500-ton fist." He was on OpDF II, and was one of the reporters on the Globemaster piloted by Chet McCarty, that flew over the Pole on Oct. 26, 1956. He died on March 19, 1996.

[1]**Sullivan Glacier**. 69°50' S, 70°51' W. A glacier, 10 km long and 5 km wide, flowing SW into Gilbert Glacier immediately S of the Elgar Uplands, in the N part of Alexander Island. First seen aerially from a distance on Feb. 1, 1937, by BGLE 1934-37, and roughly mapped by them. It appears on Stephenson's 1940 map of the expedition. Re-mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 by RARE 1947-48. He plotted it in 69°42' S, 70°41' W. Named by UK-APC on March 2, 1961, for the composer of light opera, Sir Arthur Seymour Sullivan (1842-1900). It appears as such on a British chart of 1961. US-ACAN accepted the name later in 1961, with the coordinates 69°42' S, 70°45' W. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

[2]**Sullivan Glacier**. 71°30' S, 162°25' E. A glacier, SW of Sledgers Glacier, in the Bowers Mountains. Named by NZ-APC.

Sullivan Heights. 78°19' S, 85°03' W. A compact group of mountains rising to 2760 m in Mount Levack, and centered 18 km ENE of Mount Tyree, in the Sentinel Range of the Ellsworth Mountains. Roughly elliptical in plan, and about 17.5 km long, the feature includes sharp mountain peaks (including Mount Farrell and Mount Segers), rugged ridges, and steep peripheral scarps, all encompassed by the flow of the Crosswell Glacier, the Ellen Glacier, and the Dater Glacier. Named by US-ACAN in 1997, for American oceanographer Cornelius Wayne Sullivan (b. 1943), USAP field team leader for Sea Ice Microbial Cummunities (SIMCO) studies in McMurdo Sound, 1980-86, 1988, and 1989; chief scientist and cruise coordinator for AMERIEZ (Antarctic Marine Ecosystem Research at the Ice Edge Zone) projects in the Weddell Sea, Nov.-Dec. 1983, Feb.-April 1986; and June-July 1988; professor of biological science at the Hancock Institute of Marine Studies, and director from 1991 to 1993; director of the NSF's Office of Polar Programs, 1993-97; and later at the University of Southern California.

Sullivan Inlet *see* **Mill Inlet**

Sullivan Nunatak. 82°31' S, 156°35' E. A long, narrow nunatak, about 6 km long, 3 km E of the S end of Wellman Cliffs, and about 13 km NW of Arrowhead Nunatak, in the Geologists Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for James G. Sullivan, USARP geologist who wintered-over at McMurdo in 1961, and also summered-over there in 1961-62. ANCA accepted the name.

Sullivan Nunataks. 70°52' S, 65°33' E. Three nunataks, about 3 km NE of Mount Bewsher, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Reginald N. Sullivan, radio operator at Wilkes Station in 1968 (*see* **Deaths**, 1968). US-ACAN accepted the name in 1971. The Russians named a group of nunataks very close to these coordinates, as Nunataki Skalistye, and they are probably one and the same.

Sullivan Peaks. 84°50' S, 63°05' W. Two sharp peaks, rising to over 1400 m (the British say 930 m), on a spur descending from Pierce Peak, on the NE side of the Mackin Table, in the Patuxent Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Lt. Ronald C. Sullivan, USN, who wintered-over as medical officer and officer-in-charge at Pole Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Sullivan Ridge. 84°47' S, 177°05' E. A massive, spur-like ridge, anywhere between 20 and 24 km long, displaying a steep, irregular E slope which overlooks Ramsey Glacier, and a low-gradient, ice-covered W slope which overlooks Muck Glacier. The ridge extends generally N from Husky Heights and terminates at the confluence of the 2 aforementioned glaciers. Discovered and photographed aerially on Feb. 16, 1947, during OpHJ 1946-47. Named by US-ACAN in 1962, for Walter Sullivan. NZ-APC accepted the name.

Sulphide Pass. 78°12' S, 162°45' E. A saddle on Rücker Ridge, 4 km E of Mount Rücker, in the Royal Society Range of Victoria Land. A band of extremely hard pyritized shale is exposed in this feature, and, when hit by a hammer, gives off a characteristic sulphurous smell. NZ-APC is reported to have named this feature in 1980. US-ACAN accepted the name in 1994.

The *Sultan*. Based at Gosport, she is the headquarters of the Royal Navy's Defence College of Electro-Mechanical Engineering, and, as such, is a shore-based school ship, responsible for the training of all three branches of the forces. She is also the home of the Royal Naval School of Marine Engineering, and of the Royal Naval Air Engineering and Survival School. She is there to provide the forces with engineers. She was at Elephant Island, in the South Shetlands, used as the base of the British Joint Services Expedition of 1970-71.

Glaciar Sultan *see* **Sultan Glacier**

Sultan Glacier. 61°09' S, 55°20' W. A glacier flowing SW into Table Bay, in the W part of Elephant Island, in the South Shetlands. Surveyed in Dec. 1970, by the British Joint Services Expedition of 1970-71, and named by them as Services Glacier, for the joint services. It appears as such on Burley's 1971 map of the expedition. However, it was renamed on Nov. 3, 1971, by UK-APC, for the *Sultan*. US-ACAN accepted the name in 1972. It appears as such in the 1974 British gazetteer. Since 1977, at least, the Argentines have been calling it Glaciar Sultan (apparently without an accent mark over the "a").

Sultan's Head *see* **Sultans Head Rock**

Sultan's Head Cliffs *see* **Sultans Head Rock**

Sultans Head Rock. 77°43' S, 167°12' E. A rock spur along the E flank of Hut Point Peninsula, projecting into Windless Bight, 12 km SW of Vee Cliffs, between those cliffs and Pram Point, on the S side of Ross Island. Named descriptively by BNAE 1901-04, as Sultan's Head. Rocks were collected here by Hodgson, during that expedition. This name later became Sultan's Head Cliffs, and then the name by which it is known today (with no apostrophe). US-ACAN accepted the name in 1972, and NZ-APC followed suit.

Sulzberger Basin. 77°00' S, 152°30' W. An undersea feature on the central Ross shelf, named by international agreement in 1988, in association with the Sulzberger Ice Shelf.

Sulzberger Bay. 77 00 S, 152 00 W. Also known as Sulzberger Embayment and Biscoe Bay. A gigantic Ross Sea embayment, about 160 km wide, indenting the front of the Sulzberger Ice Shelf for about 100 km between Fisher Island and Vollmer Island, on the NW coast of Marie Byrd Land, northeastward of Edward VII Peninsula, between that peninsula and Guest Peninsula. Scott passed the entrance to the bay early in 1902 in the *Discovery* during BNAE 1901-04, but never saw it in the fog. Discovered on Dec. 5, 1929, during ByrdAE 1928-30, and named by Byrd as Arthur Sulzberger Bay, for Arthur H. Sulzberger, publisher of the *New York Times*, and a supporter of Byrd's first two expeditions. The *Bear of Oakland* in 1934 and again (as the *Bear*) in 1940 tried to get into the bay, but was blocked by the pack each time. In 1948 the *Burton Island* tried. Same thing. In 1955 the *Atka* tried 6 times. Same thing. US-ACAN accepted the name in 1947, but in 1966 shortened it to Sulzberger Bay. NZ-APC accepted the new name.

Sulzberger Bluff. 73°03' S, 68°09' E. A partly snow-covered rock mass in the central part of the Mawson Escarpment, between Petkovic Glacier and Helmore Glacier. Plotted by Australian

cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA for Phillip H.S. "Phil" Sulzberger, acting assistant director (scientific) of the Antarctic Division, Melbourne.

Sulzberger Ice Shelf. 77°00' S, 148°00' W. A large ice shelf, about 135 km long and 88 km wide, it borders the coast of Marie Byrd Land from Guest Peninsula in the N to Edward VII Peninsula in the S. It is strictly speaking part of the Ross Sea, and is full of islands: Steventon Island, Kizer Island, Cronenwett Island, Vollmer Island, Hutchinson Island, and Morris Island. It is fed by glaciers such as Boyd Glacier, Hammond Glacier, and Crevasse Valley Glacier. Discovered and roughly mapped during ByrdAE 1928-30. Byrd gave the name Sulzberger Bay to the open water indenting the feature. Named by US-ACAN in 1966, in association with the bay.

Sumgin Buttress. 80°18' S, 25°44' W. A prominent, elevated rock mass rising to about 1100 m, 4 km SW of Charpentier Pyramid, on the W side of the Herbert Mountains, in the Shackleton Range. Roughly surveyed in Oct. 1957, by BCTAE; photographed aerially by USN in 1967; and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Mikhail Ivanovich Sumgin (1873-1942), Russian pioneer in permafrost research. US-ACAN accepted the name. It appears in the 1974 British gazetteer. *See also* **Gora Sumgina** (below).

Gora Sumgina. 72°52' S, 75°01' E. A nunatak just N of Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Named by the Russians for Mikhail Sumgin (*see* **Sumgin Buttress**).

Summer *see* **Seasons**

Summers, John Welsford. b. Dec. 21, 1949. Joined the *John Biscoe* as a deck hand in 1971, and sailed on her every summer season until 1991, having been promoted to bosun in 1983. In 1991 he transferred to the *James Clark Ross*, in charge of all deck equipment to be used in scientific operations.

Summers Glacier. 72°13' S, 167°28' E. A tributary glacier that flows S from the area W of Latino Peak, to enter Pearl Harbor Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for James L. Summers, USN, chief utilitiesman at McMurdo in 1967.

Summers Peak. 69°42' S, 64°53' E. Rising to 2225 m (the Australians say 2205 m), it is the highest peak in the Stinear Nunataks, in Mac. Robertson Land, about 285 km SSE of Mawson Station. Discovered by Bob Dovers and his ANARE Southern Party of 1954, and named by Dovers as Bruces Peak, for Bruce Stinear. However, ANCA renamed the group as the Stinear Nunataks (Dovers had called them the Southern Nunataks, which, although descriptive, was a rather unimaginative name), and renamed this peak as Summers Peak, for Robert Olveston "Bob" Summers (b. Dec. 25, 1922. d. March 13, 2007), wartime RAAF pilot, who was the medical officer and biologist who wintered-over at Mawson Station, that first year of the station's existence, 1954, and who accompanied Dovers on the journey. In 1987 he retired as director of medical services for the state of Victoria's Department of Social Security. ANCA accepted the name, and US-ACAN followed suit in 1961. The Russians call it Gora Ostrovok.

Mount Summerson. 82°43' S, 155°05' E. Rising to 2310 m, it surmounts the N end of Endurance Cliffs, in the Geologists Range, 26 km S of Mount Fyfe. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Charles Henry Summerson (b. Nov. 15, 1914. d. April 28, 2008, Columbus, O.), geologist in the Mount Weaver area in 1962-63. ANCA accepted the name.

Summit Pass. 63°27' S, 57°02' W. A col, running in a NE-SW direction at an elevation of about 345 m above sea level, between Passes Peak and Summit Ridge, 4 km S of the head of Hope Bay, and 5.5 km NE of Duse Bay, Trinity Peninsula, at the NE end of the Antarctic Peninsula. First explored by SwedAE 1901-04. Surveyed and charted by Fids from Base D in 1945-46, and so named by them because it marks the highest point on the sledging route between Hope Bay and Duse Bay. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the British gazetteer of 1955, the same year it was re-surveyed by FIDS. The Argentine hut, Antonio Moro Refugio, was here. There is a 1955 Argentine reference to it as Paso del Medio.

Summit Ridge. 63°27' S, 57°02' W. A ridge, at an elevation of 380 m above sea level, with a steep ice slope on its N side and a rock cliff on its S side, it extends eastward for 0.8 km from Passes Peak, 3 km S of the head of Hope Bay, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. First explored by SwedAE 1901-04. First charted by FIDS in 1945-46, and named by them in association with nearby Summit Pass. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. Re-surveyed by FIDS in 1955.

Mount Sumner. 74°30' S, 63°45' W. Rising to about 1300 m, at the SE end of Rare Ridge, on the Orville Coast of Palmer Land. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. Named by US-ACAN in 1968, for Joseph Wilburn "Joe" Sumner, USN, utilitiesman who wintered-over at Pole Station in 1964. UK-APC accepted the name on Dec. 20, 1974.

Sumner, Maurice Reginald. b. March 25, 1935, Brighton. FIDS meteorologist who wintered-over at Base F in 1960, and then at Halley Bay Station in 1961 and 1963, the last times as base leader. He later went into local politics in Sutton Mandeville, Wilts.

Sumner, Thomas Robert "Tom." b. Nov. 14, 1919, Liverpool. RAF flight sergeant who was FIDS aircraft engineer at Base B for the winters of 1960 and 1961. He was also at Base T for a while.

Sumner Glacier. 68°53' S, 65°43' W. A short, broad tributary glacier flowing NE into the lower reaches of Weyerhaeuser Glacier, close W of Mount Solus, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Sketched from the air by Dougie Mason of the FIDS, on Aug. 14, 1947, and surveyed from the ground in its lower reaches by FIDS in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for Thomas Hubbard Sumner (1807-1876), navigation pioneer. US-ACAN accepted the name later in 1962. In those days it was plotted in 68°53' S, 65°40' W. Surveyed in its upper reaches by BAS personnel from Base E between 1962 and 1964. It appears, with corrected coordinates, on the 1979 USGS sketch map of the N part of Palmer Land.

Sumnerkammen. 74°55' S, 11°55' W. A mountain ridge in the northeasternmost part of the Tottan Hills, in the Heimefront Mountains of Maudheimvidda, in Queen Maud Land. Named by the Norwegians (name means "the Sumner crest"), for Maurice Sumner.

Sumrall Peak. 82°48' S, 53°33' W. Rising to 1130 m, 1.5 km S of Rosser Ridge, it is the central of the Cordiner Peaks, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Ensign William H. "Bill" Sumrall, USNR, VX-6 airplane pilot who wintered-over at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Sun-dogs *see* **Phenomena**

Sun Yat Sen Station *see* **Zhongshan Station**

Lake Sunanda. 70°46' S, 11°43' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

Sunburn. Perhaps surprisingly, the Antarctic sun can be fierce. Tourists should bring suntan lotion if they normally do so in the tropics.

Île Sunday *see* **Sunday Island**

Sunday Island. 66°28' S, 66°27' W. Close NE of Rambler Island, in the Bragg Islands, in Crystal Sound, off the Loubet Coast, on the W coast of Graham Land. First surveyed and mapped by Cdr. Peter Carey of the *Discovery II*, in 1930-31, and he named it, for reasons unknown, but which may (or may not) be difficult to surmise. It appears on a 1937 French chart as Île Sunday. Re-identified and re-surveyed by Fids from Base W in Sept. 1958. UK-APC accepted the name on Sept. 23, 1960, and it appears in the 1961 British gazetteer. US-ACAN accepted the name in 1965.

Mount Sundbeck. 86°10' S, 158°28' W. Also called Mount Knut Sundbeck. Rising to 3030 m, 6 km SE of Mount Stubberud, on a ridge from the N side of Nilsen Plateau, in the Queen Maud Mountains. When Amundsen was speeding by here on his way to the Pole in Nov. 1911,

he named a mountain in this general area as Mount K. Sundbeck, for Knut Sundbeck. Later geographers arbitrarily picked this mountain with which to honor Sundbeck and Amundsen's intention. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. US-ACAN accepted the name Mount Sundbeck.

Sundbeck, Knut Oscar. b. Jan. 13, 1883, Lidköping, Sweden, son of merchant Karl Johan Sundbeck and his wife Anna Lovisa Larsdotter. He worked for the Diesel Motor Company, of Sweden, and helped design the new engine for the *Fram*. He replaced Eliassen as the *Fram*'s chief engineer during NorAE 1910-12. He was one of the group who returned to London on June 29, 1912, on the *Highland Scot*, from La Plata. He was 1st engineer on the *Maud*, in the Arctic, 1918-20. He died on Sept. 2, 1967, in Vällingby, Sweden.

Mount Sundberg. 70°35' S, 66°48' E. A pyramidal mountain surmounting the central part of the Thomson Massif, on the N face of the Aramis Range, in the Prince Charles Mountains. Visited in Dec. 1956 by Bill Bewsher's ANARE Southern Party. Named by ANCA for Sgt. Gerald Joseph S. "Gerry" Sundberg (b. Oct. 27, 1924. d. Aug. 1994), RAAF, engine fitter with the Antarctic Flight, servicing the Beaver and Otter aircraft at Mawson Station in 1956. He took part in 14 separate aerial operations, as well as dog sledge journeys. US-ACAN accepted the name in 1965.

Sundholmen *see* **Hum Island**

Sundsvassheia. 70°45' S, 11°40' E. The central part of the Schirmacher Hills, on the Princess Astrid Coast of Fimbulheimen, in Queen Maud Land. Named by the Norwegians in association with nearby Sundsvatnet. Name means "the sound's water heath."

Sundsvatnet. 70°44' S, 11°38' E. A lake on the N side of Sundsvassheia (the central part of the Schirmacher Hills), on the Princess Astrid Coast of Fimbulheimen, in Queen Maud Land. There is a narrow sound in the middle of this lake, and the name means "sound lake," in Norwegian.

Sundt, Sigfred. b. Jan. 9, 1892, Flakstad, in Østre Naesland, Norway, as Sigfred Sundt Johansen, son of fisherman Johan Sigfred Sundt and his wife Ovidie Kristensdatter Holst. On July 12, 1913, he boarded the *Christiansfjord* in Bergen, bound for the USA, arriving in New York on July 20, 1913. He made a beeline for the state of Washington, arriving there on Aug. 4, and joined the Army, being stationed at Camp Lewis, near Tacoma. On Nov. 11, 1918, still a soldier at Camp Lewis, he became a U.S. citizen. In 1919, in Seattle, he married Magnhild, then turned around and went up to Ketchikan, Alaska, fishing for halibut. He was a steward on the *North Star* during USAS 1939-41. He died in May 1963, in Seattle. Magnhild died on Mercer Island, Wash., in 1985, aged 89.

Sunfix Glacier. 69°16' S, 64°30' W. A tributary glacier, 24 km long and 3 km wide, flowing ENE from Wakefield Highland, between Grimley Glacier and Lurabee Glacier, into Casey Glacier, in the north-central part of Palmer Land. Photographed aerially on Nov. 22, 1947, by RARE 1947-48. Surveyed by Fids from Base E in Nov. 1960. An important and rarely possible sunfix for latitude was made at the head of the glacier (cloud cover here usually forbids one). UK-APC accepted the name on Aug. 31, 1962 (with the coordinates 69°16' S, 64°36' W), and US-ACAN followed suit that year (but with the coordinates as listed at the head of this entry).

Sunglasses. Necessary because of sun glare.

Sungold Hill. 64°23' S, 57°52' W. A prominent round hill, rising to 860 m, and with distinctive convex slopes, 3 km inland, NE of Cape Foster, between that cape and Jefford Point, on the S coast of James Ross Island. Surveyed by Fids from Base D in 1955, and again in the period 1958-61, and named by UK-APC on Feb. 12, 1964, for the color of the exposed rock cliffs here. US-ACAN accepted the name later in 1964.

Sunk Lake. 77°34' S, 166°13' E. A tiny lakelet between Deep Lake and the coastline of Cape Royds, N of Cape Barne, on Ross Island. The surface of the ice comprising the lake is 4.5 m below sea level. Named descriptively by BAE 1907-09, it appears on maps of BAE 1910-13. US-ACAN and NZ-APC both accepted the name in 1968.

Sunker Nunataks. 76°40' S, 161°25' E. A group of small, rounded nunataks rising through the ice on the E side of Northwind Glacier, and through the lowest portion of the upper Fry Glacier, in the Convoy Range of Victoria Land. So named by a 1989-90 NZARP field party here, because, in Newfoundland fisherman's parlance, a sunker is a rocky reef, and this feature does resemble such a reef in appearance. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Sunny Ridge. 87°00' S, 154°26' W. A partly snow-free ridge, trending southward for 1.5 km from the W extremity of Mount Weaver, at the W side (and near the head) of Scott Glacier, in the Queen Maud Mountains. Climbed by the Ohio State University Geological Party in Nov. 1962, and named by party leader George Doumani for the sunny conditions experienced during the climb. US-ACAN accepted the name in 1965.

Sunny Side Inlet. On the W entrance to the Bay of Whales. Like the bay, it is gone now.

Sunshine Glacier. 60°38' S, 45°30' W. A glacier, 5 km long and 3 km wide, flowing S into Iceberg Bay, on the S coast of Coronation Island, in the South Orkneys. It is the largest glacier on the S side of the island, and terminates in ice cliffs up to 60 m high. Surveyed in 1948-49 by Fids from Signy Island Station, and so named by them because, on cloudy days, when all else was in shadow, there were usually small gaps of blue sky above the glacier and a patch of sunshine at its surface. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It was further surveyed by FIDS in 1956-58.

Mount Supernal. 73°04' S, 165°42' E. A large mountain with two summits, rising to 3655 m, surmounting the SE corner of Hercules Névé and the heads of Gair Glacier and Meander Glacier, and overlooking Mariner Glacier from the S, in Victoria Land. Often mistaken for Mount Murchison. Named by the Northern Party of NZGSAE 1962-63, for its prominent and lofty appearance. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Support Force Glacier. 82°45' S, 46°30' W. A major glacier, it flows NNE between the Forrestal Range and the Argentina Range, in the Pensacola Mountains, to enter the Filchner-Ronne Ice Shelf. Following the first Argentine flight to the South Pole by Grupo Aeronaval UT 78, in Jan. 1962, the lower part of this glacier, in about 82°50' S, 46°00' W, was named Glacier Les Éclaireurs, after the *Les Éclaireurs*. It appears on an Argentine chart of 1964, and was the name accepted by the 1970 Argentine gazetteer. At the same time, the upper part of the glacier, in about 83°18' S, 47°00' W, was named Glaciar Punta Ninfas, for the *Punta Ninfas*. Again, 1964 chart, and 1970 gazetteer. The feature was re-photographed aerially by USN in 1964, mapped from these photos by USGS, and found to be one glacier, which was named Support Force Glacier, by US-ACAN in 1968, for U.S. Naval Support Force, Antarctica. UK-APC accepted the name on Nov. 3, 1971, and it appears as such in the 1974 British gazetteer. We are told (by the British gazetteer) that the 1970 Argentine gazetteer also accepted the name Glaciar Bahía Buen Suceso, for the lower part of the glacier (i.e., Glaciar Les Éclaireurs), but this is not true. Glaciar Bahía Buen Suceso was the name given by the Argentines to what the Americans call Foundation Ice Stream, which is some way to the west.

Supporters Range. 85°04' S, 169°30' E. A rugged range of mountains, about 40 km long, it borders the E side of Mill Glacier, and runs between that glacier and Snakeskin Glacier, or from Keltie Glacier in the N to Mill Stream Glacier in the south. The highest peak is Mount Westminster, at 3370 m. Surveyed by the Southern Party of NZGSAE 1961-62, and so named by them because several peaks in the range are named for financial supporters of BAE 1907-09. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Supporting Party Mountain. 85°27' S, 147°33' W. Rising to 560 m, 5 km E of Mount Fridovich, in the vicinity of Leverett Glacier, in the Harold Byrd Mountains, overlooking the Ross Ice Shelf. Discovered, and first climbed, in Dec. 1929 by Larry Gould's geological party, who took panoramic photos from the summit, during ByrdAE 1928-30, and named by Gould for his supporting party. US-ACAN accepted the name in 1947.

Brazo Sur *see* **Argentino Channel**

Cabo Sur *see* **South Cape**

Islote Sur *see* **Mite Skerry**

Monte Sur *see* **Stopford Peak**, **Mount Vesalius**

Islote Sura. 63°19' S, 57°54' W. A small island between Schmidt Peninsula and Toro Point, on the W coast of Trinity Peninsula, on the W coast of the Antarctic Peninsula. Named by ChilAE 1947–48, for radio operator Cabo 2nd class Raúl Sura Mesías, of the Chilean Army, part of the expedition, and who helped build General Bernardo O'Higgins Station.

Sureau, Jean. b. July 16, 1810, Le Gua, France. Able seaman on the *Zélée* during FrAE 1837–40.

Surf Rock. 68°12' S, 67°06' W. A small, low island (really a rock), 0.8 km W of the W tip of Neny Island, and 0.3 km SE of Runaway Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. First roughly charted in 1936, by BGLE 1934–37. Named by ChilAE 1946–47 as Isla Profesor Barrera, for glaciologist Humberto Barrera Valdebenito (1903–1996), professor of mathematics and physics at the University of Chile and of the Catholic University of Chile, a member of the expedition. It appears as such on their 1947 expedition chart. Surveyed in 1947 by Fids from Base E, who named it Surf Rock for the the noise of the surf breaking. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears as such on a British chart of 1956. The Argentines translated this as Roca Rompiente. It appears on a 1969 Chilean chart as Islote Barrera, and that was the name accepted by the 1974 Chilean gazetteer.

Surge Rocks. 64°47' S, 64°04' W. A group of 5 offshore rocks, two of which are always exposed, about 160 m SW of Eichorst Island, and about 1 km SSE of Bonaparte Point, on Anvers Island. Surveyed (but not named) by a team of FIDS and Royal Navy personnel between 1956 and 1958. Work was done here by personnel from Palmer Station from 1965 onwards, and in 1972 they so named this feature because ocean swells working on the shoal surrounding these rocks cause breaking and a surge of the water level in any weather condition. UK-APC accepted the name on Dec. 20, 1974, and US-ACAN followed suit in 1975.

Surgeon Island. 70°40' S, 166°59' E. Made up of granitic rocks, 3.5 km by 1 km, it is the largest of the Lyall Islands, and lies 6 km ESE of Cape Hooker, in Yule Bay, off the Pennell Coast of northern Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. The island, named by US-ACAN in 1970, is one of several features in the area that sport names of surgeons who have worked in Antarctica.

Mount Suribachi. 69°29' S, 39°38' E. A conical, round-topped hill, rising to 258 m above sea level, just W of Suribati-ike, in the south-central part of Skarvsnes Foreland, on the coast of Queen Maud Land. Photographed aerially by LCE 1936–37, and mapped (but not named) from these photos in 1946 by Norwegian cartographers. Mapped more accurately (1:25,000) by Japanese cartographers from JARE ground surveys and air photos, 1959–73, and named by them on Nov. 22, 1973, as Suribati-yama, or Suribachi-yama, in association with Suribati-ike. US-ACAN accepted the translated name Mount Suribachi in 1975.

Suribachi-yama *see* **Mount Suribachi**

Suribati-ike. 69°29' S, 39°41' E. A lake below sea level in a circular depression, just E of Mount Suribachi, in the south-central part of Skarvsnes Foreland, on the coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1962–73, and named by them on June 22, 1972, for its shape ("suribati" or "suribachi" is a type of Japanese bowl).

Suribati-yama *see* **Mount Suribachi**

Surin, Pierre. b. Oct. 14, 1808, Lormont, France. Able seaman on the *Astrolabe* during FrAE 1837–40.

Surko Stream. 77°25' S, 163°44' E. A meltwater stream issuing out of the front of Wilson Piedmont Glacier and flowing eastward to Arnold Cove, 1.5 km S of Gneiss Point, on the coast of southern Victoria Land. Studied by Robert L. Nichols, geologist here in 1957–58, for Lt. Alexander Surko, USN, 2nd-in-command of the Navy party which worked on the aircraft landing strip, close N of the stream, at Marble Point. US-ACAN accepted the name in 1968.

Cape Surovyj. 66°13' S, 100°51' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Mys Surovyj. ANCA translated it.

Mys Surovyj *see* **Cape Surovyj**

Cape Surprise. 84°31' S, 174°25' W. Marks the N end of the Longhorn Spurs, between Massam Glacier and Barrett Glacier, at the edge of the Ross Ice Shelf. So named by the Southern Party of NZGSAE 1963–64 because, to their surprise, they found it to be composed of rocks of the Beacon and Ferrar groups. Rocks of this type had never been found on the coast before. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit in 1966.

Surprise Island *see* **Sorpresa Rock**

Surprise Rock *see* **Sorpresa Rock**

Surprise Spur. 86°34' S, 147°50' W. A prominent spur, the most northerly of 3 on the SW side of Ackerman Ridge, in the La Gorce Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. So named by NZGSAE 1969–70 because, in the middle of an extensive region of purely basement rocks, slightly altered sedimentary rocks, which seem to belong to the much younger Beacon series, appear on this spur. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Survakari Nunatak. 63°47' S, 58°27' W. A rocky hill rising to 412 m in the SE foothills of Trakiya Heights, 4.92 km SE of Bozveli Peak, 2.16 km S of Papiya Nunatak, 5.17 km SW of Rayko Nunatak, and 7.06 km NE of Mount Reece (in Kondofrey Heights), it overlooks Victory Glacier to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the Bulgarians' New Year's folkloric ritual of Survakari.

The *Surveyor*. American ship, belonging to the National Oceanographic and Atmospheric Administration, which, under the command of William Stubblefield, was in Antarctic waters in 1988–89 and 1989–90, investigating fish and krill in the South Shetlands and South Orkneys. She was back in 1992–93, on an oceanographic voyage, under the command of Capt. Frederick Jones, and in company with the *Knorr*. She was back a last time, in 1994–95.

Surveyors Range. 81°37' S, 160°15' E. A prominent mountain range of peaks, 48.3 km long, it extends N along the E side of Starshot Glacier, from the Thompson Mountains area to the glacier's terminus at Sapper Hill, at the Ross Ice Shelf. Named by NZGSAE 1960–61 for all surveyors, but notably the early pioneers from NZ. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA also accepted the name.

Survival school. The Snowcraft/Survival School was begun in 1962 to teach American and NZ personnel about cold weather living and survival in emergencies. Bill Bridge designed the first course. Summer personnel are taught at Ross Island, or on sea ice nearby, or in the dry valleys of southern Victoria Land. Wintering personnel are taught at McMurdo, Pole Station, and Siple Station. 400 students took part in the 1983–84 course.

The *Susan*. A sealing schooner out of Sag Harbor, NY, which was in the South Shetlands for the 1856–57 sealing season, under the command of Capt. Smith (ex of the *Parana*). She took 375 barrels of oil, and returned to Sag Harbor on June 1, 1857. She was back in Patagonia for the 1857–58 season, and may have gone to the South Shetlands again.

Susan Nichols Glacier *see* **Russian Gap**

The *Susanna Ann*. Single-decked London cutter of 79 tons, and under 60 feet in length, built at Bridport in 1814, and owned by James Lucas and master mariner Matthew Brown, of Deptford. Brown took her out of London for the 1823–24 season in the South Shetlands. They left Gravesend on Sept. 11, 1823, and two days later left Deal. Also aboard were three apprentices from the Marine Society, but, when the ship got to Buenos Aires (with 3700 seal skins), they ran. Capt. Brown died on this voyage, and Capt. Robinson brought the ship back to Buenos Aires on Aug. 12, 1824, from the Falklands, and thence back to London. The ship was back in the South Shetlands for the 1824–25 season, under Capt. Robert Ferguson. The apprentice this time was James Lucas, who, given that he was the son of the owner, did not run. The ship arrived back at Gravesend on June 27, 1825. She was back yet again, again under Ferguson, for the 1826–27 season.

Sushila Automatic Weather Station. 74°42' S, 161°18' E. American AWS at an elevation of 1441 m. It operated from Jan. 20, 1988 to March 16, 1988, and was removed in Jan. 1992. Named for a daughter of Mr. Rabindra, a former graduate student of Dr. Charles Stearns, the founder of the AWS project. *See also* **Shristi AWS**.

Islote Susini *see* **Weertman Island**

Monte Susini *see* **Mount Susini**

Mount Susini. 60°44' S, 44°49' W. Rising to about 370 m above Route Point, at the SW end of Mackenzie Peninsula, on Laurie Island, in the South Orkneys. This mountain was named Mount Omond, by Bruce, during ScotNAE 1902-04, but the name did not catch on. It was re-named Monte Susini by ArgAE 1956-57, and as such appears on their 1957 expedition chart. The name was translated into English as Mount Susini, by UK-APC on Feb. 15, 1988, and US-ACAN followed suit. Dr. Telémaco Susini (1856-1936) was professor of pathological anatomy at the University of Buenos Aires, and father of radio and movie pioneer Enrique Telémaco Pedro Susini.

Ledolom Suslova *see* **Hovdebrekka Slope**

Otrog Suslova. 73°12' S, 68°26' E. A spur due E of Greenall Glacier, in the Mawson Escarpment, in Mac. Robertson Land. Named by the Russians.

Bahía Suspiros *see* **Suspiros Bay**

Suspiros Bay. 63°19' S, 56°28' W. A small bay, about 2.8 km wide at its mouth, indenting the W end of Joinville Island for 3 km, just S of Madder Cliffs, between those cliffs and Cape Kinnes (which lies about 6 km to the SW). Its coasts are formed by inaccessible ice cliffs between 70 and 140 m high. Probably discovered by DWE 1892-93. Named by Capt. Emilio L. Díaz, leader of ArgAE 1951-52, as Bahía Suspiros, for the difficulties in anchoring in the bay (suspiros means "sighs" in Spanish). It appears as such on a 1953 Argentine chart, and was the name accepted by the 1970 Argentine gazetteer. It was surveyed by Fids from Base D in 1953-54, and on Sept. 4, 1957 UK-APC named it (for themselves only) as Kinnes Cove, in association with the cape. It appears as such on a 1962 British chart. ChilAE 1948-49 named it Bahía Koegel, after Capitán de fragata Raúl Koegel M., skipper of the *Maipo* during that expedition. It appears as such on a Chilean chart of 1962, and was the name accepted by the Chilean gazetteer of 1974. US-ACAN accepted the name Suspiros Bay in 1965.

Islote Sussy. 64°49' S, 63°00' W. A small island in the Lemaire Channel, about 1200 m NW of Punta Valparaíso (the extreme SW tip of Lemaire Island). Named by ChilAE 1950-51, for Susana Hiriart "Sussy" Suárez, the wife of Capitán de corbeta (later admiral) Victor Bunster del Solar (b. Sept. 29, 1915, Concepción), skipper of the *Lautaro* that season.

Suszczewski Cove. 62°10' S, 58°27' W. Between Rakusa Point and Llano Point, in front of Ecology Glacier, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Stanislaw Rakusa-Suszczewski (*see* **Rakusa Point**).

Suter Glacier. 73°31' S, 167°10' E. A short glacier in the Mountaineer Range of Victoria Land, it flows SE into Lady Newnes Bay just S of Spatulate Ridge. Named by NZ-APC in 1966, for Douglas Suter, senior NZ scientist at Hallett Station in 1962-63. US-ACAN accepted the name in 1966.

Suter Island. 68°36' S, 77°54' E. A small island off the Vestfold Hills, 0.8 km SW of the entrance point to Heidemann Bay, and about 3 km SE of Gardner Island. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos in 1946, by Norwegian cartographers. Named by ANCA for William J. "Bill" Suter, who wintered-over as cook at Davis Station in 1960. US-ACAN accepted the name in 1965.

Mount Sutherland. 77°30' S, 168°28' E. A peak, rising to about 2500 m, about 2.1 km WNW of the summit of Mount Terror, on Ross Island. Named by US-ACAN in 2000, for Alexander L. Sutherland, Jr., ocean projects manager with the NSF's Office of Polar Programs, with responsibility for directing operations and logistics for USAP research vessels from 1989 onwards. It was Sutherland who acquired the *Laurence M. Gould* and the *Nathaniel B. Palmer*. NZ-APC accepted the name on June 19, 2000.

Sutherland, James. Stoker on the *William Scoresby*, 1926-27, and an engine room artificer on the same vessel, 1927-30.

Sutherland, John O. b. June 13, 1930, Edinburgh, but raised partly in Peterhead, the famous old north Scottish whaling town. He joined the Merchant Navy at 15, serving as an engine room apprentice on a tramp to the Persian Gulf, Bombay, the Straits of Magellan, and New York, and, at 17 he joined the British whaler *Southern Harvester*, for the 1947-48 and 1948-49 seasons in Antarctic waters. After that he joined the Canadian Pacific Line, working as a seaman on the *Empress of Canada*, and in 1952 he moved to Fresno, Calif., to live with his brother and sister. Then he was drafted into Company C of the 39th Infantry Regt., and by 1955 was in Germany, as a pfc. He died in Fresno on Nov. 28, 2009.

Sutherland Peak. 77°38' S, 161°03' E. One of the peaks on the Inland Forts, 3 km NNW of Round Mountain, in the Asgard Range of Victoria Land. Named by US-ACAN in 1976, for Cdr. William P. Sutherland, USN, officer-in-charge of the Naval Support Force winter-over detachment at McMurdo in 1974.

Sutley Peak. 73°39' S, 94°32' W. A rock peak, rising to 1400 m, just N of Wright Peak, and 5 km ENE of Miller Crag, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61. Named by US-ACAN in 1963, for Lt. Cdr. Robert M. "Bob" Sutley, USN, Seabee officer, executive officer of Mobile Construction Battalion One during OpDF 62 (i.e., 1961-62).

Sutton, Alan William Frank "Alfie." b. May 21, 1912, "Fairview," Chigwell, Essex, son of William Sutton and his wife Madeline Elsie Tayler. His father was killed on the Somme during World War I. After school at Christ's Hospital, Alfie entered the Navy in 1930, as a special entry cadet, was on the *Erebus* for a year, at Devonport, until Aug. 1931, and then served on the *Renown*, the *Repulse*, and the *Basilisk*, being promoted to acting sub lieutenant on Jan. 1, 1934, and on March 15, 1935 to sub lieutenant (with seniority dating back to the time he became an acting sub lieutenant). On Oct. 11, 1937, he started his training course as a naval observer, passed, and joined the Fleet Air Arm. On Jan. 23, 1940, at Buckfast Abbey, Devon, when he was a lieutenant, he married Mary Margaret "Peggy" Cazeaux de Grange, and later that year, during World War II, he was leading dive-bombing raids on Rhodes. With his Swordfish pilot, Tiffy Torrens-Spence, he attacked the Italian fleet at Taranto, and, with the other planes on that very influential raid on the night of Nov. 11-12, 1940, inflicted more damage on the Italian fleet than the British Navy had inflicted on the German fleet during the the entire great battle of Jutland during World War I. The Japanese used this battle as a model for their raid on Pearl Harbor the next year. Sutton was awarded a DSC for that adventure, and then proceeded to fight everywhere in the Mediterranean, with great distinction, getting another DSC, being promoted to acting commander, and in 1945 was headed out to the Far East to take on the Japanese when the war ended. On June 30, 1948, he was promoted from lieutenant commander to commander, and, after a few staff jobs, commanded the *Bigbury Bay*, 1951-53, and was in Antarctica in 1953, taking on the Argentines (*see* **Wars**). On Dec. 31, 1955, he was promoted to captain, and took part in the invasion of Suez, in 1956. On Oct. 21, 1959, he took command of the *Falcon*, in the Mediterranean, and from Sept. 3, 1962, until 1965 he was director of the Royal Naval Staff College, in Greenwich, after which he retired. In 1964 he had been a naval aide de camp to the queen. He worked in the private sector for a while, sometimes with BP, and finally retired in 1977, to Northanger, Surrey. He died on Nov. 8, 2008, aged 96.

Sutton, John L. b. Feb. 4, 1900, Paterson, NJ. Ship's engineer, he went to sea in 1919, was with Byrd in the Arctic, spent 7 years as an aviation mechanic, and was part of the crew on Adolph Zukor's yacht. He was 2nd engineer on the *City of New York* during the first half of ByrdAE 1928-30. He left Little America for NZ on the *City of New York* on Feb. 22, 1929, and returned to the expedition as 3rd engineer. He married Mary McGill. For many years a supervisor with the Curtiss-Wright Corporation, he died in West New York, NJ, on Nov. 26, 1972.

Sutton, Samuel *see* **USEE 1838-42**

Sutton Automatic Weather Station. 67°08' S, 141°37' E. An American AWS, installed on Dec. 26, 1994, at an elevation of 871 m, on the coast of Adélie Land. Named for Bob Sutton, a machinist at the University of Wisconsin's Space Science and Engineering Center. It was removed in Dec. 2000.

Sutton Heights. 69°45' S, 71°30' W. Rising to about 800 m between the Lassus Mountains and Debussy Heights, in the N part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken in Nov. 1947 by RARE 1947-48. Surveyed from the ground by BAS personnel from Fossil Bluff in 1975-76. Named by UK-APC on June 11, 1980, for John Sutton

(1919-1992), professor of geology at Imperial College of Science and Technology, London University, 1958-73; dean of the Royal School of Mines, 1965-68 and 1974-77; a member of the BAS scientific advisory committee, 1970-85; a member of NERC, 1977-79; and chairman of the British National Committee on Antarctic Research from 1979. US-ACAN accepted the name in 1995.

Sutton Peak. 79°49' S, 82°34' W. A sharp peak, rising to 1410 m on the ridge separating Henderson Glacier and Ahrnsbrak Glacier, in the Enterprise Hills of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Walter C. Sutton, meteorologist at Little America in 1957.

Suture Bench. 73°31' S, 162°57' E. A bench-like elevation at the SE end of Gair Mesa, it overlooks the névé (i.e., the head) of Campbell Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, for the sutures needed for a dog after a violent fight here. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Suvorov Glacier. 69°56' S, 160°05' E. About 8 km wide, E of Hornblende Bluffs, it flows E (the New Zealanders say westerly) from the Wilson Hills into the sea S of Northrup Head and Belousov Point, between that point and Yermak Point, in Oates Land, in Victoria Land. Discovered, photographed, and mapped by SovAE 1958, and named by them as Lednik Suvorova, for V.I. Suvorov, a mechanic who died with hydrographer A.I. Gaudis, in a plane crash at Cape Shegalskiy, in the Arctic, on Aug. 10, 1959. It was re-photographed aerially by ANARE in 1959, and by USN. US-ACAN accepted the translated name Suvorov Glacier in 1964. NZ-APC and ANCA have also accepted the translated name.

Lednik Suvorova *see* **Suvorov Glacier**

Mount Suydam. 84°32' S, 65°27' W. Rising to about 1020 m, 5 km W of Clark Ridge, in the Anderson Hills of the northern Patuxent Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Ervin Lynn Suydam (known as Lynn) (b. May 1941), USARP biologist who wintered-over at Palmer Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Svart Mountain *see* **Svart Peak**

Svart Peak. 67°16' S, 58°28' E. A rock peak rising to 210 m, a short distance inland from the coast on the SW side of Law Promontory, near the coast of East Antarctica. Photographed aerially in Jan.-Feb. 1937, by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Svartfjell (i.e., "black mountain"), for its appearance. US-ACAN accepted the name Svart Peak in 1947. The Australians call it Svart Mountain.

Svartbandufsa *see* **Svartbandufsa Bluff**

Svartbandufsa Bluff. 73°29' S, 3°48' W. A partly snow-capped bluff, in the N part of Heksegryta Peaks, at the SW side of Tverregg Glacier, between that glacier and Belgen Valley, in the N part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Svartbandufsa (i.e., "the black band bluff"). US-ACAN accepted the name Svartbandufsa Bluff in 1966.

Svartfjell *see* **Svart Peak**

Svarthamaren *see* **Svarthamaren Mountain**

Svarthamaren Mountain. 71°54' S, 5°10' E. A prominent ice-free mountain area at the E side of the mouth of Vestreskorve Glacier, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land, about 200 km from the coast. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Svarthamaren (i.e., "the black hammer"). US-ACAN accepted the name Svarthamaren Mountain in 1967. It was designated SSSI #23 because it contains 2 rock amphitheatres inhabited by the largest colony of breeding Antarctic petrels — 208,000 pairs — the colony being discovered in Jan. 1961 by the crew of a Soviet AN-2 aircraft which landed here, and first closely observed in Jan.-Feb. 1985 by Norwegian ornithologists. There are also between 500 and 1000 breeding pairs of snow petrels, and 50 pairs of South Polar skuas. Svarthamaren is the largest known seabird colony situated inland in Antarctica.

Svarthausane *see* **Svarthausane Crags**

Svarthausane Crags. 71°40' S, 12°40' E. A group of crags surmounted by Zhil'naya Mountain, this feature forms the NE end of the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Svarthausane (i.e., "the black crags"). US-ACAN accepted the name Svarthausane Crags in 1970.

Svarthausen *see* **Svarthausen Nunatak**

Svarthausen Nunatak. 69°49' S, 74°30' E. A jagged, dark rock nunatak with a small outlier to the SW, on the W side of Polar Times Glacier, about 6.5 km SSE of Mount Caroline Mikkelsen, on the Ingrid Christensen Coast. Mapped by Norwegian cartographers in 1946 from air photos taken during LCE 1936-37, and named by them as Svarthausen (i.e., "the black crag"). US-ACAN accepted the name Svarthausen Nunatak in 1973.

Svarthorna *see* **Svarthorna Peaks**

Svarthorna Peaks. 71°35' S, 12°37' E. Five or more peaks in a semicircular row around Svarthornbotnen Cirque, on the curving ridge which forms the S end of the Mittlere Petermann Range, in the southernmost part of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named descriptively by Ritscher as Schwarze-Hörner (i.e., "black peaks"). Re-mapped by NorAE 1956-60, who called it Svarthorna (which, in Norwegian, means the same thing). US-ACAN accepted the name Svarthorna Peaks in 1970.

Svarthornbotnen *see* **Svarthornbotnen Cirque**

Svarthornbotnen Cirque. 71°35' S, 12°36' E. A large cirque (or corrie) just NE of Store Svarthorn Peak, in the southernmost part of the Mittlere Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by NorAE 1956-60, and named by the Norwegians as Svarthornbotnen (i.e., "the black peak cirque"), in association with Svarthorna Peaks. US-ACAN accepted the name Svarthornbotnen Cirque in 1970.

Austre Svarthornbreen *see under* **A**

Vestre Svarthornbreen *see under* **V**

Svarthornkammen *see* **Svarthornkammen Ridge**

Svarthornkammen Ridge. 71°31' S, 12°31' E. A high rock ridge with peaks, extending N for 8 km from Svarthorna Peaks in the Mittlere Petermann Range, in the Wohlthat Mountains of Maudheimvidda, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Svarthornkammen (i.e., "the black peak ridge"), in association with Svarthorna Peaks. US-ACAN accepted the name Svarthornkammen Ridge in 1970.

Svarthovden *see* **Falla Bluff**

Svartknattane. 69°59' S, 38°26' E. Two small nunataks on the W side of Havsbotn (the bay that marks the head of Lützow-Holm Bay), on the Prince Harald Coast. Name means "the black crags" in Norwegian.

Svartmulen *see* **Strover Peak**

Svartnipa. 66°36' S, 56°29' E. A peak about 450 m above sea level, on the W side of the upper reaches of the Rippon Glacier, in Kemp Land. Some references say it was named by ANCA, which is interesting, in that it is very definitely a Norwegian name (means "black peak").

Svartnupen *see* **Svartnupen Peak**

Svartnupen Peak. 71°55' S, 8°53' E. A mountain peak on the S side of Håkon Col, on Nupsskarvet Mountain, in the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Svartnupen (i.e., "the black peak"). US-ACAN accepted the name Svartnupen Peak in 1967.

Svartpiggen *see* **Tschuffert Peak**

Svarttindane *see* **Svarttindane Peaks**

Svarttindane Peaks. 71°39' S, 12°30' E. A cluster of three sharp mountain peaks, 3 km S of Store Svarthorn Peak, in the northernmost part of the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. They include Veselaya Mountain. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Svarttindane (i.e., "the black peaks"). US-ACAN accepted the name Svarttindane Peaks in 1970.

Svaton Peaks. 82°35' S, 161°00' E. A cluster of rugged peaks at the N end of the Queen Elizabeth Range, surmounting the area between the mouths of Heilman Glacier and Otago Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Ernest M. Svaton (b. 1930), USARP ionosphere physicist who wintered-over at McMurdo in 1963 and 1964.

Svea Cross Automatic Weather Station. 74°29' S, 11°31' W. A Belgian AWS, 11 km from Svea Station, at the foot of the Heimefront Range, in Queen Maud Land, installed at an elevation of 1100 m.

Svea Glacier. 72°08' S, 1°53' E. A broad glacier flowing N between the Sverdrup Mountains and the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Sveabreen (i.e., "the glacier of the Swedes"). US-ACAN accepted the name Svea Glacier in 1966.

Svea Station. 74°35' S, 11°13' W. The first Swedish scientific station (it is actually a field station) in Antarctica. Established in Jan. 1988, close to Haldorsentoppen, in Sivorgfjella, in the Heimefront Range, at the Princess Martha Coast of Maudheimvidda, in Queen Maud Land. It consists of 2 joined fiberglass modules. In 1992-93 it was expanded, to include living quarters, a workshop, and storage container. In 2006-07 a seismographic station was installed there.

Sveabreen *see* **Svea Glacier**

The *Svega*. A 251-ton, 116-foot whale catcher built at Smith's Dock, in Middlesbrough, in 1929 for Salvesen's South Georgia Company. In 1929 she was catching off the coast of South Africa, and was then catching for the *Salvestria* and the *Saragossa*, in Antarctica, for the 1929-30 whaling season there. She was back in 1930-31 and 1931-32, catching for the *Saragossa*, and in 1932-33 for the *New Sevilla*. She caught for the *Salvestria* in 1933-34, 1934-35, 1935-36, and 1936-37. In 1936 she was also in the Shetlands, in Scotland. In 1940 she was requisitioned by the Royal Navy, and in 1942 transferred to Russia. In 1947 she was re-acquired by the Royal Navy, and laid up until 1951, when she was sold to a Norwegian company, and her name changed to the *Sjovik*. In 1972 she became the *Sjovaag*, and in Oct. 1983 was sold for scrap.

Svelget. 73°55' S, 5°22' W. A cirque (the Norwegians, however, describe it as a glacier) on the SW side of Tunga Spur, between that spur and Uven Spur, in Uhligberga, in the N part of the Urfjell Cliffs, in the SW part of the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them (name means "the throat"). US-ACAN accepted the name without modification in 1966. *See also* **Tunga Spur** (name means "the tongue") and **Gommen Valley** (name means "the gum").

Svellnuten *see* **Svellnuten Peak**

Svellnuten Peak. 72°40' S, 3°09' W. A low peak (or crag, as the Norwegians describe it) on the S side of Breidsvellet (the steep ice slope on the E side of Jøkulskarvet Ridge), in the Regula Range, in the NE part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Svellnuten (i.e., "the ice sheet peak"), in association with the nearby slope Breidsvellet. US-ACAN accepted the name Svellnuten Peak in 1966.

Rocas Sven *see* **Sven Rock**

Sven Rock. 63°44' S, 60°12' W. A rock awash, S of the Oluf Rocks, in Gilbert Strait, in the Palmer Archipelago, E of Trinity Island. Roughly charted by Capt. Johannessen in 1919-20, and together with Oluf Rocks and Ryge Rocks, it appears on the chart as Trinity Land. ChilAE 1946-47 named this rock and Oluf Rocks collectively as Rocas Paredes, for Luis Paredes (*see* **Oluf Rocks**), and it appears as such on their 1947 chart, and also on a 1961 Chilean chart. Photographed aerially by FIDASE, who used this rock as a mobile base during their 2 summers of operation, 1955-56 and 1956-57. It was mapped from these photos by FIDS cartographers, who were now able to dismiss Jonannessen's collective concept, and rename this one Sven Rock on Sept. 23, 1960, for the *Oluf Sven*. US-ACAN accepted the name later in 1960. It appears as such on a British chart of 1962. The Argentines call it Rocas Sven (i.e., in the plural), and, on an American chart of 1963, it appears as Sven Rocks.

Sven Rocks *see* **Sven Rock**

[1]**The *Svend Foyn***. Norwegian factory whaling ship, named for the inventor of the harpoon gun, and owned by the Sydhavet Whaling Company. She operated in the South Shetlands between the 1909-10 season and the 1912-1913 season, and was sold in 1913 to the Norge Company, being replaced that year by the *Svend Foyn I*. However, under Norge's banner she was in the South Shetlands and Graham Land in 1913-14.

[2]**The *Svend Foyn***. A 14,596-ton, 538-foot, twin-screw, 997 hp, British whaling service ship, with two side-by-side funnels and a stern slip, built by the Furness Shipbuilding Co., of Teesside, in 1931, for the Johann Rasmussen's Sydhavet Whaling Company, of Sandefjord. She was in Antarctic waters in 1931-32, with her catchers, the *Busens* (q.v.). In 1932, upon liquidation of Sydhavet, Rasmussen was forced to sell her to the London merchant bankers Dawnay-Day for £240,000, and she was, in turn, sold to the Star Whaling Company, of Guernsey (in turn owned by the St Helier Ship Owners, Norwegians). She whaled pelagically in West Antarcic waters in 1932-33 (Capt. Gullik Jensen), 1933-34, 1934-35, 1935-36, 1936-37, 1937-38, 1938-39, 1939-40, and 1940-41, the last season using the whale catchers *Sigfra*, *Simbra* and *Sarka*. Another catcher, used between 1936-37 and 1939-40, was the *Helier 2*. In 1941 she came under the management of Salvesen's, but did not whale for them. In 1941 she reverted to the St Helier Ship Owners, and was used as an oil tanker. On March 19, 1943 she sank in the Atlantic, after hitting an iceberg. *See* **The *Queen of Bermuda***.

The *Svend Foyn I*. Built in 1894, by Gray of Hartlepool, as the *Strathness*, for Burell & Son, of Glasgow. In 1900 she was sold to Bucknell Bros., of Glasgow, and renamed the *Buceros*. In 1912 Johan Bryde's Østkysten Company bought her, and renamed her the *Østkysten*. Later that year she was converted into a 5800-ton, 365-foot whaling factory, and renamed the *Johan Bryde*. In 1913 Peder Bogen's Sydhavet Company, of Sandefjord, bought her and renamed her the *Svend Foyn I*, to replace the original *Svend Foyn*. She operated in the South Shetlands and Graham Land (and out to sea as well) every season from 1913-14 to 1930-31. Three of her whale catchers over the years were the *Scott*, the *Selvik*, and the *Graham*. She had a crew of 110, 80 of them on the ship and 10 each on the catchers. In 1918 she was under the command of Carl Andersen. In 1920-21 and 1921-22, she was under the command of Ole Andersen, in the South Shetlands, and was instrumental in the British Imperial Antarctic Expedition of 1920-22 (*see also* **The *Graham***). In 1925-26 she had the catchers *Alex Lange* and *Scott*. In 1927-28 she was in at Deception Island. She was in Antarctic waters in 1928-29, again under Ole Andersen, being at Deception Island in Jan. 1929. She was scrapped in 1934.

Puerto Svend Foyn *see* **Foyn Harbor**, **Gouvernøren Harbor**

Svend Foyn Coast *see* **Foyn Coast**

Svend Foyn Harbor *see* **Foyn Harbor**

Svend Foyn Island *see* **Foyn Island**

Svendsen, Johan. Skipper of the whaler *Henrik Ibsen* in the South Shetlands, 1929-30.

Svendsen Glacier. 70°21' S, 160°00' E. A meandering glacier, 21.5 km long, about 13 km SE of Robilliard Glacier, in the Usarp Mountains, it flows northeastward from Mount Marzolf, and emerges between McCain Bluff and Lenfant Bluff, into an ice piedmont just W of the terminus of Rennick Glacier, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960

and 1962. Named by US-ACAN in 1971, for Kendall Lorraine Svendsen (b. June 24, 1919, Greenville, Mich. d. July 18, 2005, Silver Spring, Md.), USARP geomagnetician at McMurdo, 1967-68.

Svenner *see* **Svenner Islands**

Svenner Channel. 68°51' S, 76°20' E. A channel on the SE sea floor of Prydz Bay, consisting of 2 deeps, each one deeper than 750 m. The SW one is 22 km long and 5 km wide, and the NE one is 70 km long with an average width of 17 km. Named by ANCA in association with the Svenner Islands.

Svenner Islands. 69°02' S, 76°50' E. A small group of islands and rocks 22 km SW of the Rauer Group, in Prydz Bay, 30 km off the Ingrid Christensen Coast. Discovered in Feb. 1935 by Mikkelsen, charted by him as 2 islands and some offlying rocks, and named by him as Svenerøyane, for the islands of that name, off Sandefjord, in Norway. LCE 1936-37 photographed this feature aerially, and Norwegian cartographers were able to map it with more accuracy from these photos, in 1946. US-ACAN accepted the translated name Svenner Islands in 1963.

Svennerøyane *see* **Svenner Islands**

Svensson Ridge. 70°11' S, 64°29' E. A rock ridge, running in an E-W direction, with the main peak at the W end, 1.5 km (the Australians say about 3 km) NW of Mount Starlight, in the Athos Range of the Prince Charles Mountains. Mapped by Australian cartographers from ground photos taken by Robb Lacey in 1955, and from ANARE air photos taken in 1959 and 1965. Named by ANCA for Alf Ake Svensson, weather observer at Davis Station in 1964, Macquarie Island in 1967, and at Casey Station in 1969. US-ACAN accepted the name in 1970.

Sverdrup Mountains. 72°20' S, 1°00' E. A group of mountains about 80 km long, E of Jutulstraumen Glacier, and just W of the Gjelsvik Mountains, between the Gburek Peaks and Svea Glacier, in the westernmost part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first roughly mapped from these photos. Mapped in detail by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as H.U. Sverdrupfjella, for Harald Ulrik Sverdrup (1888-1957), Norwegian oceanographer and meteorologist, director of the Scripps Institution of Oceanography from 1936 to 1948, director of the Norsk Polarinstitutt, 1948-47, and chairman of the Norwegian Committee for NBSAE 1949-52. The name was later shortened to Sverdrupfjella, and US-ACAN accepted the name Sverdrup Mountains in 1962.

Sverdrup Nunataks. 72°45' S, 63°15' W. A line of peaks trending WNW-ESE, and rising to about 1800 m, at the NW end of the Carey Range, near the edge of the interior plateau, on the Black Coast, on the SE coast of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969, and from ground surveys conducted by BAS personnel from the Fossil Bluff station in 1974-75. Named by UK-APC on Feb. 7, 1978, for Harald Sverdrup (*see* **Sverdrup Mountains**). US-ACAN accepted the name later in 1978, and it appears on the 1979 USGS sketch map of the N part of Palmer Land, and also in the 1980 British gazetteer.

Sverdrupfjella *see* **Sverdrup Mountains**

Mount Sverre Hassel *see* **Mount Hassel**

Sverre Peak. 71°43' S, 9°39' E. A small peak, or nunatak, 0.8 km off the N end of Pettersen Ridge, in the N part of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Sverreborga, for Sverre Pettersen, steward during the 1957-58 phase of that expedition. US-ACAN accepted the translated name Sverre Peak in 1970. The Russians call it Pik Leningradskogo Universiteta, after the University of Leningrad.

Sverreborga *see* **Sverre Peak**

The *Svetaeva*. Correct name: *Marine Svetaeva*. A 4575-ton, 89.98-meter Russian tourist ship, built in the Gdynia Shipyards, in Poland, in 1989, for Arctic tourism, and named for the Russian poet. A bulkier version of the *Polar Pioneer*, she could carry 100 passengers, and a crew of 34 Russians, has 4 passenger decks and 47 passenger cabins. After being re-furbished (a helicopter deck was added), she made her maiden voyage to Antarctica, in the 2005-06 summer, what was called "the Aurora voyage," following in the tracks of Mawson down to Commonwealth Bay. Take money, big money!

Svetlana Passage. 60°44' S, 45°35' W. A navigable passage between the Oliphant Islands and Gourlay Peninsula, Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, for Svetlana Solyanik (b. 1936: known as Sveta), the (much younger) movie actress second wife of powerful and (reportedly) utterly ruthless and corrupt Russian whaler Alexei Nikolayevich Solyanik, who both visited Signy on the *Gnevny* in 1964-65. Svetlana's visit created a huge stir at Signy. Alexei Nikolayevich (b. 1913) was the general captain-director of the *Slava* fleet and the *Sovietskaya Ukraina* fleet throughout a good part of the 1960s, and would often travel with his wife, who was conveniently made a highly-paid employee aboard ship. She was touted as a qualified engineer, one of her jobs on board being to check the whales for signs of radioactivity. Needless to say, she found no such signs. He even had a swimming pool built on the *Ukraina*, where his wife would disport herself while the whaling laborers (literally) sweated to death below. His son, by his first marriage, Gennadiy Solyanik, was made government whaling inspector, and accompanied his father and the actress to Signy on that trip. Alexei Nikolayevich's downfall came after an exposé in the *Komsomolskaya Pravda*. His abuses of power had been so flagrant that no one could help him, and he was exiled to the Far East as skipper of the shrimper *Van Gogh*, spending the last years of his life causing trouble in Australian waters, and assailed by bitter paranoia. All in all, it seems odd that UK-APC should have named an Antarctic feature after Svetlana.

Skaly Svetlye. 73°33' S, 64°22' E. A group of rocks at the nunatak the Russians call Gora Koksharova, in the southern Prince Charles Mountains. Named by the Russians.

Obryv Svetlyj. 73°12' S, 68°22' E. A bluff, due E of Prior Bluff, in the central part of the Mawson Escarpment. Named by the Russians.

Svindlandfjellet. 72°05' S, 23°48' E. A mountain W of Mount Walnum, in the central part of the Sør Rondane Mountains. Named by the Norwegians for Sigurd Ålvik Svindland (b. 1921), Norwegian topographer on Operation Pingvin, 1958-59, the air photography mission during the long NorAE 1956-60.

The *Svip*. Norwegian whale catcher, built in 1906 at Chris Christensen's Framnaes Mek. shipyard. In 1906-07 she accompanied the *Nor* to the South Shetlands (*see* **The *Admiralen***** for details of this voyage). On March 18, 1907 she pulled into Port Stanley, with T. Andersen Lystad (manager of the *Nor*) aboard, so he could get a whaling license from the Falkland Islands government. The *Svip* was back again in 1908-09, working for the *Vesterlide*.

Roca(s) Svip *see* **Svip Rocks**

Rocher du Svip *see* **Svip Rocks**

Rochers Svip *see* **Svip Rocks**

Svip Klippene *see* **Svip Rocks**

Svip Rock *see* **Svip Rocks**

Svip Rocks. 62°34' S, 61°38' W. A group of submerged rocks W of Start Point (the NW end of Livingston Island) and 17.4 km WNW of Rugged Island, in the South Shetlands. Roughly charted in 1908-09, by August Christensen, on the *Vesterlide*, and named (apparently) by him as Svip Klippene, for the *Svip*. The feature appears as Svip Rock (i.e., in the singular) on a British chart of 1910, and on another, of 1954, but on one of 1916 as Svip Rocks. Charcot's maps, reflecting FrAE 1908-10, refer to it as Rocher du Svip or Rocher du Swip. The rocks were not sighted during a running survey of the area conducted by the Discovery Investigations in 1930-31. It appears on a Chilean chart of 1947, as Roca Svip, and on a 1951 French chart as Rochers Svip. It appears on an Argentine chart of 1953 as Rocas Svip, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Svip Rocks in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer and on a 1957 British chart. The 1974 British gazetteer stated that the existence of these rocks in the given coordinates was considered doubtful, but they were last plotted by the UK, in late 2008.

Holmy Sviridova. 67°42' S, 45°26' E. A hill on Point Widdows, Enderby Land. Named by the Russians.

Svishtov Cove. 62°35' S, 61°11' W. A cove, 2 km wide, indenting the NW extremity of Byers

Peninsula for 1.5 km, it is entered between Essex Point and Start Point, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the town of Svishtov, in northern Bulgaria.

Svoge Knoll. 62°37' S, 60°12' W. An ice-covered peak rising to 560 m on Bowles Ridge, 620 m SW of Mount Bowles, 3.57 km E of Rezen Knoll, and 3.1 km NE of Orpheus Gate, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the town of Svoge, in the western Balkans.

Gora Svyatogo Georgiya Pobedonosta *see* **Saint George Peak**

Swaabsteinen. 72°19' S, 23°15' E. A nunatak at the S side of Mount Widerøe, in the south-central part of the Sør Rondane Mountains. Named by the Norwegians.

Mount Swadener. 77°16' S, 153°45' W. A peak in the Snedden Nunataks, in the N portion of the Alexandra Mountains of Edward VII Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1971, for Dick Swadener.

Swadener, John Richard "Dick." b. April 29, 1928, Mishawaka, Ind., son of banker Dean Swadener and his wife Alice. He joined the Navy in 1945 as part of the V-5 Program, went to Georgia Tech for 2 years, then to flight school, and flew patrol in a Neptune off the China Coast during the Korean War. He was navigator in the Skymaster that Ed Ward piloted as the 3rd plane in from NZ for OpDF II (*see* **Operation Deep Freeze II**, Oct. 18, 1956), and on Oct. 31, 1956 was navigator on the famous *Que Sera Sera* flight to the South Pole, and thus one of the first 17 men ever to stand at the South Pole. He married Nina King in Georgia, on June 15, 1958, retired from the Navy in New Orleans in 1974 as a captain, and died on Aug. 4, 1996, in New Orleans.

Swain, Arthur Marston. b. Sept. 16, 1931, Derby, but raised mostly in North Yorkshire, son of railway millwright Arthur M. Swain and his wife Fanny Olive Morrell (later just Olive). He worked as a radioman on trawlers before joining FIDS in 1953, as a radio operator, and wintering-over at Port Lockroy Station in 1954. Every 5th week he would pull kitchen duty (all the boys rotated this job), and Mike Faulkner would be his gash hand (assistant). At the end of his tour he returned to Port Stanley, and from there to Montevideo, and there caught the *Andes* heading back to Southampton, where he arrived on Feb. 24, 1955. After FIDS he worked for International Air-Radio Ltd., in the Sudan, Ethiopia, and the Arctic, and was in Libya when Hurricane Donna caused such devastation in the British Virgin Islands in 1960. He was transferred there on a 9-month contract to restore the telecommunications system, a contract which was extended for 4 years. He decided to stay, and in July 1961 married a Tortola girl, Thelma Titley, left the company, moved to Road Town, on Tortola, and went to work for the BVI government, as their telecommunications officer. In 1962 he established a radio link between BVI and Antigua. He became known as the "Father of Telecommunications in the British Virgin Islands," and his wife became a major figure in the Red Cross. After he retired he became the emergency officer of the Department of Disaster Management. He died in Tortola of throat cancer on March 16, 2005. He wrote *43 years of Telecommunications in the BVI*.

Swain, James Cook. b. 1769, Nantucket, Mass., son of Samuel Swain and his wife Mary. Skipper of the the whaling ship *Alliance*, out of Newport, RI. In 1824 he reported seeing an island in 59°31' S, 90°W, "covered with snow, and abounding with seadogs and fowl." So, he may have gone south of 60°S, and therefore into Antarctic waters as defined in this book.

Swain, Kenneth C. "K.C." Photographer's mate with the Central Group of OpHJ 1946-47. He was on the plane that took Byrd to the Pole on Feb. 15, 1947. He was back in Antarctica during OpW 1947-48.

Swain Group *see* **Swain Islands**

Swain Islands. 66°13' S, 110°37' E. A group of small islands and rocks, 3 km in extent, 0.8 km N of Clark Peninsula, at the NE end of the Windmill Islands, N of Wilkes Station. They include Berkley Island, Burnett Island, Cameron Island, Hailstorm Island, Honkala Island, Bradford Rock, Green Rocks, Patterson Rock, Quinn Rock, Wonsey Rock, Magee Rock, and Wyche Island. First delineated from aerial photographs taken in Feb. 1947 by OpHJ 1946-47. Named by US-ACAN in 1956, for K.C. Swain. Called the Swain Group by the Australians, this feature was photographed by ANARE in 1956, by SovAE 1956, and again by ANARE in 1962. It was also surveyed from the ground by Carl Eklund in 1958.

Swain's Island *see* **Dougherty's Island**

The *Swan*. Bob Headland has this as a London sealer, in the South Shetlands for the 1820-21 season, under the command of Capt. David Thompson (he has a question mark beside this name). Actually the *Swan* was a 44-ton single-deck ship owned and skippered by Thompson, built in 1784 in Blythe, in the north of England, and usually ran between Wales and Liverpool.

Mount Swan. 76°58' S, 143°45' W. A mountain, 6 km S of the Gutenko Nunataks, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for Paul Swan.

Rocas Swan *see* **Swan Rock**

Swan, Frank Douglas. A sub lieutenant in the RNVR, he was 3rd engineer on the *William Scoresby*, 1936-37, and on the *Discovery II*, 1937-39. During World War II he was an engineer lieutenant in the South African Navy, on the *Protea*. He was alive in 1958.

Swan, Paul Clifford, Jr. b. Oct. 7, 1905, Washington, Kans., son of automobile dealer Paul Clifford Swan and his wife Edith Hamilton. He became an airplane engineer and pilot in Detroit, went to work for Curtiss-Wright, and was on the shore party, during the wintering-over at Little America in 1934 during ByrdAE 1933-35, in charge of aircraft maintenance. After the expedition he became a hydraulic engineer with the Douglas Aircraft Company in Santa Monica, and on June 5, 1937, in Santa Barbara, he married Elizabeth Jamison, and they lived in Los Angeles. He died on Oct. 1, 1967, in Unterseen, Switzerland. He was cremated at Thun, in Switzerland, and his ashes were sent back to his wife in Costa Mesa, Calif.

Swan, Robert Charles. b. July 28, 1956, Neasham, Durham. He studied ancient history at Durham, and was with BAS in 1980 (although he wasn't a Fid), which is when he met Roger Mear (q.v.). He rode a bicycle from Cape Town to Cairo (in 7 months), and circumnavigated the Vatnajokull Ice Cap, in Iceland, on skis, man-hauling supplies. He was leader of the In the Footsteps of Scott Expedition of 1985-86, during which he got to the South Pole by foot on Jan. 11, 1986, thus also making him the first person ever to walk to both poles.

Swan Glacier *see* **Swann Glacier**

Swan Point. 60°22' S, 110°30' E. The most westerly point on Odbert Island, in the Windmill Islands. First mapped from air photos taken in 1947 by OpHJ 1946-47, and in 1948 by OpW 1947-48. Named by US-ACAN in 1963, for aerographer's mate John R. Swan, USN, at Wilkes Station in 1958.

Swan Rock. 64°58' S, 63°18' W. A low rock in water, rising to an elevation of 2 m above sea level, 2.5 km SW of Cape Willems, at Flandres Bay, on the Danco Coast, on the W coast of Graham Land. It appears (unnamed) on a 1950 Argentine government chart. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Sir Joseph Wilson Swan (1828-1914), photography pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call the feature Rocas Swan (i.e., they have it in the plural).

Glaciar Swann *see* **Swann Glacier**

Swann Glacier. 73°52' S, 61°58' W. A broad glacier of undetermined length, flowing E into Wright Inlet to the N of Mount Tricorn, on the Lassiter Coast, on the E coast of Palmer Land, between the Rivera Peaks and the Playfair Mountains. Discovered and photographed aerially on Dec. 30, 1940 by members from East Base, during USAS 1939-41. However, due to an error in navigation, it was wrongly located in 74°40' S, 60°30' W. On Nov. 21, 1947, it was again photographed aerially, this time by RARE 1947-48, and plotted in 73°54' S, 61°45' W. In Dec. 1947 it was surveyed from the ground in its lower reaches by a combined sledging team of RARE personnel and Fids from Base E. Named by Finn Ronne in 1948 for British-born physicist Prof. William Francis Gray Swann (1884-1962), first director of the Bartol Research Foundation of the Franklin Institute, 1927-59, at Swarthmore, Pa., a contributor to RARE. US-ACAN accepted the name in 1949, and UK-APC followed suit on Jan. 28, 1953. It appears in the 1955 British gazetteer, plotted in 73°53' S, 61°48' W. It appears on a Chilean chart of 1966 as Glaciar Swann, and that is the name the

Chileans use today, as do the Argentines. The coordinates were corrected from air photos taken by USN between 1965 and 1967, and, with the new coordinates, it appears on the 1969 USGS sketch map of Ellsworth Land–Palmer Land, and in the 1977 British gazetteer.

Swanson Glacier. 71°30' S, 160°24' E. A glacier, 14 km long, it flows from the E slopes of the Daniels Range in the Usarp Mountains, northward of Thompson Spur. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Charles D. Swanson, USARP biologist at McMurdo, 1967–68.

Swanson Mountains. 77°00' S, 145°00' W. A mountain range, 13 km long, 10 km SE of Saunders Mountain, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1934 by ByrdAE 1933–35, and named by Byrd as Claude Swanson Mountains, for Claude Augustus Swanson (1862–1939), secretary of the Navy, 1933–39. The name was later shortened, and, as such, accepted by US-ACAN in 1947.

Swarm Peak. 76°29' S, 146°20' W. A rock peak rising to 610 m, it is the most easterly of the Birchall Peaks, in the Ford Ranges of Marie Byrd Land. Photographed aerially by ByrdAE 1928–30, and roughly plotted by them. Mapped definitively by USAS 1939–41. Named by US-ACAN in 1970, for Howard Myron (known as Myron) Swarm (b. July 12, 1916, Everett, Wash. d. Oct. 5, 1987, Seattle), ionosphere physicist at Byrd Station in 1966–67.

Swarsen Nunatak. 71°25' S, 63°39' W. A conspicuous, largely snow-covered nunatak, rising to about 2200 m, 8 km SW of Mount Jackson, in central Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Lt. Cdr. Ronald J. Swarsen, USNR, medical officer at Byrd Station in 1971, and at Pole Station in 1973. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Mount Swartley. 77°15' S, 143°12' W. A mountain, 1.5 km E of Mount Darling, in the Allegheny Mountains of the Ford Ranges, in Marie Byrd Land. Discovered by USAS 1939–41 during a flight from West Base, and named by Byrd for Stanley Simpson Swartley (1884–1963), professor of English at Allegheny College, Pa. US-ACAN accepted the name in 1947.

Swartz Nunataks. 78°39' S, 160°00' E. Two prominent nunataks, rising to 1563 m, midway between Tate Peak and the N part of the Worcester Range. Plotted from USN air photos. Named by US-ACAN in 1964, for Lt. Philip K. "Phil" Swartz, Jr., USN, officer-in-charge of Pole Station in 1961. ANCA accepted the name.

Arrecife Swash *see* **Swash Reef**

Swash Reef. 67°34' S, 67°33' W. A reef, WSW of the Petty Rocks, in the entrance to Bigourdan Fjord, close N of Pourquoi Pas Island, off the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956–57. Charted by FIDS on the *John Biscoe* in 1958–59, and so named by them because most of it is awash. FIDS cartographers mapped it in 1959–60 from these efforts. UK-APC accepted the name on Sept. 23, 1960, and it appears on British charts of 1961 and 1982. US-ACAN accepted the name in 1965. The Argentines translated it as Arrecife Swash.

Sweaters. Tourists should definitely use woolen sweaters and sweatshirts, one light one underneath and a heavy one on top. Turtlenecks are best.

Mount Sweatt. 85°47' S, 129°39' W. Rising to 2540 m, 10.5 km NE of Mount Soyat, on the ridge between Hueneme Glacier and Norfolk Glacier, in the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Earl E. Sweatt (b. April 17, 1935), who wintered-over as construction electrician at Byrd Station in 1961.

SwedAE *see* **Swedish Antarctic Expedition**

SwedARP *see* **Swedish Antarctic Reseach Program Expeditions**

Sweden. The first Swede south of 60°S has to have been Anders Sparrman, in 1773, with Captain Cook. Nordenskjöld led the first Swedish expedition to Antarctica, in 1901–04. Several Swedes found their way down to Antarctica one way or another, either as whalers, or as meteorologists at Órcadas Station. Admiral Palander was about to lead an expedition to Antarctica, planned for 1915–16, but World War I intervened (*see* **Swedish Antarctic Expedition**, 1915–20). In 1949–52 John Giaever (himself a Norwegian) led NBSAE 1949–52 (the Norwegian–British–Swedish Expedition of 1949 to 1952). Swedish scientists studied astronomy at Pole Station in the early 1980s, and on April 24, 1984 Sweden was ratified as the 30th signatory of the Antarctic Treaty. Svea Station, the first Swedish scientific station in Antarctica, went up in Jan. 1988, during a 12-man Swedish expedition led by Olle Melander on the *Polarstern*. Although it was under the auspices of the Germans, this was SwedARP 1. There has been a SwedARP every year since (see SwedARP). On Sept. 21, 1988 Sweden became a Consultative party to the Antarctic Treaty. In the 1988–89 season, Wasa Station was established. In 1991–92, the Swedes, Norwegians, and Finns decided to pool their resources, and form the Nordic Antarctic Research Program (q.v.). In 2007–08 the Swedes and the Japanese cooperated to form JASE.

Sweden Camp. 70°36' S, 8°22' W. A Swedish field camp on the Ekström Ice Shelf.

Swedish Antarctic Expedition. 1901–04. Abbreviated to SwedAE 1901–04. Led by Otto Nordenskjöld. It really should have been called the Swedish–Norwegian Antarctic Expedition, given that half the expeditioners were Norwegians. **Oct. 16, 1901**: The expedition left Göteborg. The 17 officers and men who formed the crew of the *Antarctic* were: Carl Anton Larsen (captain), F.L. Andreassen (1st mate), H.J. Haslum (2nd mate), Axel R. Reinholdz (3rd mate), Anton Olsen (bosun), Ole Kristian Wennersgaard, Toralf Grunden, Martin Tofte, and Ole Peder Duus (able seamen), Anders Karlsen (1st engineer), Georg Karlsen (2nd engineer), Vilhelm Holmberg and Karl Johansson (stokers), Axel Andersson and Gustaf Åkerlundh (cooks), G. F. Schönbäch (steward), Ole Johnsen Björnerud (smith), and Ole Martin Olaussen (carpenter). There were also 8 scientists: Nordenskjöld (geologist), Carl Skottsberg (botanist), Karl Andreas Andersson and Axel Ohlin (zoologists), Erik Ekelöf (medical officer and bacteriologist), Gösta Bodman (hydrographer and meteorologist), Lt. Samuel A. Duse (cartographer), and Ole Jonassen (sledger). **Oct. 26, 1901**: They put in at Falmouth, England, to pick up coal. **Dec. 15, 1901**: They arrived at Buenos Aires. There they picked up F.W. Stokes, the American artist, and Lt. José M. Sobral, an Argentine naval officer, whose presence as observer was part of the deal with the Argentines in exchange for free food, fuel, and help for the expedition. They also picked up a ship's carpenter. To offset these gains, they lost two able seamen, who signed off—Frank Jenner (b. 1880), an Englishman, and John "Antarctic Jack" Aitken (q.v.), a Falkland Islander. This wasn't the end of Antarctic Jack, by any means. **Dec. 21, 1901**: The expedition left Buenos Aires, with 29 men aboard. **Dec. 30, 1901**: They arrived at Port Stanley. Nordenskjöld now had only 4 of his 14 Greenland dogs left. The others had all died, mostly crossing the tropics. He would replace those lost with 4 Falkland Island sheepdogs, more as a trial-run for that sort of dog than anything else. **Jan. 1, 1902**: They left Port Stanley. **Jan. 6, 1902**: They arrived at Staten Island, in the southern part of Chile. **Jan. 8, 1902**: They were in 58°S. **Jan. 10, 1902**: They arrived at the South Shetlands, spotting King George Island first. **Jan. 11, 1902**: Nordenskjöld, Duse, Andersson, Bodman, Ekelöf, and Skottsberg, rowed in a Nordland boat from the *Antarctic* into Harmony Cove, on Nelson Island, and landed. They then went off to explore Orléans Strait and the west coast of the Antarctic Peninsula. Then up the coast again to the tip of the Antarctic Peninsula, through Antarctic Sound, and then landed on Paulet Island. They then crossed Erebus and Terror Gulf and established a depot on Seymour Island. **Jan. 22, 1902**: After an exploratory cruise to the unexplored region off the Oscar II Land Coast, they hit the pack-ice in 60°10' S and could proceed no farther south. They cruised northeastward along the line of ice for 2 days. **Jan. 24, 1902**: They tried to force their way through the pack. **Feb. 1, 1902**: They reached 63°30' S, 45°07' W, but had to turn back. **Feb. 9, 1902**: They spotted land again. **Feb. 13, 1902**: Nordenskjöld chose Snow Hill Island as his winter campsite because of the fossils he found there. Nordenskjöld, Bodman (2nd-in-command), Jonassen, Åkerlundh, and Sobral set up camp with several sledge dogs, the stores and equipment. Stokes, the artist, had intended to winter-over, and had even brought his own house with him in which to paint the aurora australis, but in the end he chickened out. The *Antarctic* left, to try to establish a depot farther south for the winterers (they failed, because of the pack-ice). **Feb. 17, 1902**: The hut built by

the wintering group was opened ceremoniously. It was 21 feet by 13½, had double walls of three-quarter-inch board, with a layer of air between the walls, and had a single roof. The entire exterior, walls and roof, was covered with tarred paste-board. The double floor was covered with a thick carpet. The loft occupied the upper part of the house, and formed the store room, and also helped insulate the downstairs, where there were 5 rooms. They also built an observatory. **Feb. 20, 1902**: The observatory collapsed due to the force of the wind. They then set about planning to spend the winter on Snow Hill Island. **Feb. 21, 1902**: The *Antarctic* returned. Larsen and the scientists came ashore, bringing coal. They visited for several hours, and then left for home. **Feb. 25, 1902**: The newly-born puppies were found frozen to death. **Feb. 27, 1902**: After being in dire straits, the *Antarctic* rounded King George Island, heading north to the warmer climes of the Falkland Islands, where she would lay up for the winter of 1902. At that point the ship's carpenter picked up in Buenos Aires, signed off. **March 9, 1902**: Nordenskjiöld and Sobral made a 10-hour trip southward from Snow Hill Island. **March 11, 1902**: Nordenskjöld, Sobral, and Jonassen made a boat trip, to explore, and also to set up a depot. They took all the Greenland huskies, and Jim, one of the Falkland Islands dogs. **Aug. 29, 1902**: In the Falklands, the *Antarctic* picked up Dr. J. Gunnar Andersson, who was to be in command of the expedition when Nordenskjöld was not there. Antarctic Jack Aitken signed on again. **Sept. 5, 1902**: The *Antarctic* left Port Stanley, bound for Ushuaia. **Oct. 1902**: Nordenskjöld, Jonassen, and Sobral set out on a 380-mile sledging journey on foot, covering the NE part of the Antarctic Peninsula coast from Snow Hill Island, through Robertson Island and the Larsen Ice Shelf, to Borchgrevink Nunatak, and then back. Jonassen hurt his arm on this trip. **Oct. 31, 1902**: They arrived back at Snow Hill Island, after 33 days. **Nov. 5, 1902**: The *Antarctic* left Ushuaia for the south to pick up the Snow Hill Island party. **Nov. 9, 1902**: The ship encountered pack-ice in 59°30' S. **Nov. 11, 1902**: The *Antarctic* was stuck in the ice. Finally, she got free, and made her way to the South Shetlands. She stopped at Deception Island, then went along Bransfield Strait, disproving the existence of Middle Island (q.v.). They next explored Orléans Strait and Gerlache Strait. **Dec. 5, 1902**: Their charting of the area completed, they then headed toward Nordenskjöld's winter campsite on Snow Hill Island. At Antarctic Sound, they found their way blocked by pack-ice in the sound itself. Capt. Larsen tried to ram it, but to no avail. **Early Dec. 1902**: Nordenskjöld sledged to Seymour Island, and found some important fossils. It began to look as if the *Antarctic* was not coming for them. **Dec. 29, 1902**: The *Antarctic* landed Dr. Andersson, Duse, and Grunden at Hope Bay. The 3 men set up a depot, then set off on foot for Snow Hill Island, 200 miles away, in order to let Nordenskjöld know what was happening with the ship. The *Antarctic* continued to batter at the ice in an effort to get through the sound to Nordenskjöld. She reached Paulet Island, but then got trapped in the pack. Meanwhile, the Hope Bay party of Dr. Andersson, Duse, and Grunden, who had set out to try to reach Snow Hill Island, crossed Crown Prince Gustav Channel to Vega Island, and thought they had reached James Ross Island. They saw open water ahead and "knew" that the *Antarctic* would be able to get through to Snow Hill Island to pick up Nordenskjöld. So they headed back to their base at Hope Bay. **Jan. 9, 1903**: The ice began squeezing the ship. **Jan. 10, 1903**: The ship began to sink to starboard. **Jan. 13, 1903**: The Hope Bay party arrived back at Hope Bay. They then sat down to wait for the *Antarctic* to pick them up, with (they assumed) Nordenskjöld's party aboard too. **Jan. 16, 1903**: The ship became upright again. **Feb. 3, 1903**: The ship was afloat again. However, the leaks in the vessel were too great for her to continue. **Feb. 11, 1903**: Feeling somewhat uncomfortable, the Hope Bay party began to build a more substantial hut, and started killing penguins for food. **Feb. 12, 1903**: The *Antarctic* sank, crushed by the ice, 25 miles from Paulet Island, to which the crew and the scientists now had to make their way over shifting sea ice, if they were to survive. They had to carry stores, equipment, and themselves. They were now without a ship. This was not a good situation for Antarctic explorers to be in in those days. On Paulet Island they set about killing 1100 penguins for food and building a stone hut. The chief engineer and Antarctic Jack were the first to kill a penguin, and had to decide on the method to use. They used a leather belt and garotted the penguin. **Feb. 18, 1903**: A storm came in and froze the pack-ice. **Feb. 19, 1903**: Nordenskjöld saw the pack-ice around Snow Hill Island freeze solid, and knew he and his men would have to winter-over again, that the ship was definitely not going to make it. **Feb. 28, 1903**: Larsen's party got ashore on Paulet Island after 14 days march and a 6-hour row in a boat. **April 1903**: Not having heard word from Nordenskjöld, Sweden began to worry about the safety of the expedition. **1903 winter**: The Hope Bay party wintered-over at Hope Bay, and Capt. Larsen's party wintered over at Paulet Island. Nordenskjöld's party wintered-over again at Snow Hill Island. **June 7, 1903**: Ole Wennersgaard died on Paulet Island. **Aug. 17, 1903**: The whole world was now experiencing alarm for the safety of the expedition, and the *Frithiof,* under Capt. Gyldén, left Stockholm to rescue them (*see* **The *Frithiof***, for that expedition). **Aug.-Sept. 1903**: Nordenskjöld and Jonassen set off on a sledging journey to Crown Prince Gustav Channel. **Sept. 29, 1903**: The Hope Bay party set out again, on foot, to try to get to Snow Hill Island. **Oct. 6, 1903**: The Hope Bay party began the long trip over the pack-ice from the mainland to Vega Island. **Oct. 9, 1903**: The Hope Bay party reached Vega Island. **Oct. 12, 1903**: The Hope Bay party reached a point that was later called Cape Well-met. It was here that they saw 2 figures coming toward them in the distance. It was Nordenskjöld and Jonassen, from the Snow Hill Island group. **Oct. 31, 1903**: Capt. Larsen and 5 of his crew set out in a boat to "rescue" the Hope Bay party. **Nov. 4, 1903**: Larsen reached Hope Bay. He found that the 3 men of the Hope Bay party had set out for Snow Hill Island (again), so Larsen and his men started rowing there also. The French explorer, Charcot, who was also leading his own expedition in Antarctica at this time (FrAE 1903-05), went looking for the missing Nordenskjöld, as did the Argentines in the *Uruguay*, under Irízar. While this was happening, Nordenskjöld and Jonassen, together with Dr. Andersson, Duse, and Grunden from the Hope Bay party, all got back to Snow Hill Island. **Oct. 26, 1903**: Nordenskjöld, Dr. Andersson, and Sobral sledged to Seymour Island. **Nov. 7, 1903**: Bodman and Åkerlundh left Snow Hill Island for Seymour Island, and were rescued by the *Uruguay* later that day. The Argentines then rescued Nordenskjöld and his party, and at that moment Capt. Larsen's Paulet Island party rowed into sight, having (just) come from Hope Bay. The *Frithiof* arrived to find the expedition already rescued. **Dec. 1, 1903**: The *Uruguay* arrived at Buenos Aires. Nordenskjöld published a book about his scientific results (*see* the Bibliography).

Swedish Antarctic Expedition, 1915-20. In 1904, when Nordenskjöld returned from SwedAE 1901-04, he began to contemplate a return visit to the ice. In 1913, famed Arctic explorer, Admiral Adolf Arnold Louis Palander of the Swedish Navy, organized a group called the Swedish Antarctic Committee, comprising (among others) himself, Nordenskjöld, and Dr. Gunnar Andersson. The aim was to send down a Swedish expedition on a Norwegian whaler, to Graham Land, to establish a base on the east coast of the Antarctic Sound, and to spend 5 years there, continuing the work done by SwedAE 1901-04. A veritable village would be established, with meteorological and radio huts, dog teams, a 40-ton motor boat, and the station would be relieved and supplied on a yearly basis by friendly whaling ships. All this would cost £15,000, half of that to come as a grant from the Swedish government. Britain agreed to share in the funding, although there would be no official participation from that country. There would be the leader, the doctor, 6 scientists (two of whom would be British), and 3 others. All the collections brought home would be split between the two countries. But it never happened. World War I did.

Swedish Antarctic Research Program Expeditions. Known as SwedARP. There has been a SwedARP every year since the the first one, in 1987-88, which was called SwedARP 1. Olle Melander led that one, and Svea Station was established, while a separate party worked on the *Polarstern*, in the waters of the Antarctic Peninsula and the South Shetlands. The Germans assisted the expedition. Olle Melander and Anders Karlqvist led SwedARP 2, in 1988-89, on the *Stena Arctica*, which also took down the Finnish expedition of that season and relieved the German

Georg von Neumeyer Station. Jan-Erik Hellsvik led SwedARP 3, in 1989-90, on the *Aranda*. Anders Modig led SwedARP 11, on the *Agulhas* and the *Outeniqua*. They worked with the South Africans. The ship used in latter years was the *Oden*.

Montañas Sweeney *see* **Sweeney Mountains**

Montes Sweeney *see* **Sweeney Mountains**

Sweeney Mountains. 75°06' S, 69°15' W. A group of mountains, about 60 km in extent, and of moderate height (1705 m), 50 km N of the Hauberg Mountains, N of Cape Zumberge, on the Orville Coast, where Ellsworth Land meets southern Palmer Land. The group includes, from W to E, Morgan Nunataks, Mount Smart, Mount Ballard, Mount Edward, Mount Jenkins, Potter Peak, Anderson Nunataks, and Hagerty Peak. Discovered aerially on Nov. 21, 1947, by RARE 1947-48, and named by Ronne as the Catherine Sweeney Mountains, for Catherine Sweeney (born 1914 as Catherine Denkmann Hauberg. d. Jan. 25, 1995), Ed Sweeney's wife, and a contributor in her own right. As such they appear on a 1948 American Geographical Society map. But, as the Sweeney Mountains, they appear on Ronne's own map of 1948, plotted in 75°45' S, 67°40' W, and again, as such, on a 1955 U.S. Hydrographic Office chart. US-ACAN accepted the name in 1949. It appears on an Argentine chart of 1952 as Monte Sweeney. The coordinates were corrected during USGS surveys during the Antarctic Peninsula Traverse of 1961-62, and from USN air photos taken between 1965 and 1967, and the feature appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974 (with the new coordinates). The Chilean gazetteer of 1974 accepted the name Montes Sweeney, although they have also used Montañas Sweeney. The British plot this feature in 75°10' S, 69°35' W. Edward C. Sweeney (1906-1967) was president of the Explorers Club.

Sweeny Inlet. 74°27' S, 115°20' W. An ice-filled Amundsen Sea indentation into the Bakutis Coast of Marie Byrd Land, 28 km wide, between Spaulding Peninsula and Martin Peninsula, and marking the SE end of the Getz Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967. Named by US-ACAN for Capt. Timothy A. Sweeny, U.S. Army, officer-in-charge of the aircraft recovery camp at Dome Charlie during OpDF 76 (i.e., 1975-76). The team recovered the 2 Hercs that had been damaged there on Jan. 15, 1975, and Nov. 4, 1975 (*see* **Disasters**).

Swensson, Emil. b. Aug. 19, 1912, Manasquan, NJ, son of Swedish immigrants, fisherman Hilding M. Swensson and his wife Albertina. He joined the U.S. Navy, and was cook 2nd class on the *Bear*, during USAS 1939-41. For the 2nd half of the expedition, he was promoted to cook 1st class. He married Ina, and they lived in Boston. He had become an acting pay clerk when he was killed on March 1, 1945, during World War II.

Isla Swett *see* **Largo Island**

Glaciar Swift *see* **Swift Glacier**

Mount Swift Balch *see* **Mount Balch**

Sommet Swift Balch *see* **Mount Balch**

Swift Bay. 64°22' S, 57°46' W. A prominent bay, entered W of Jefford Point, on the S coast of James Ross Island. About 4 km wide and about 5 km long, it is lengthening every year with the recession of Swift Glacier and Fleet Glacier, both of which back it. Named by UK-APC on Nov. 15, 2006, in association with Swift Glacier, which flows southward into the bay. US-ACAN accepted the name.

Swift Glacier. 64°22' S, 57°46' W. A steep glacier, about 3 km long, close W of Jefford Point, it flows southward into the Weddell Sea at Swift Bay, on the S coast of James Ross Island. It appears erroneously as Rabot Glacier on a 1943 U.S. Hydrographic Office chart, and from this error came forth another erroneous charting on a 1949 Argentine chart, as Glaciar Rabot (*see* **Rabot Glacier**). It was surveyed by Fids from Base E in the period between 1958 and 1961, and named descriptively by them as Swift Glacier (it is one of the most active glaciers on the island). UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year. The Argentines now call it Glaciar Swift. It is said in some quarters that the Chilean gazetteer of 1974 accepted the name Glaciar Rabot for this feature, but this is not so. Their Glaciar Rabot is another feature entirely (see that entry).

Swift Peak. 66°19' S, 63°08' W. Rising to 935 m, it is the highest point of an undulating, mainly snow-covered range of hills rising to perhaps 1000 m, at the N end (i.e., the base) of Churchill Peninsula, at Cabinet Inlet, on the Foyn Coast, on the E coast of Graham Land. In late 1947 this feature was photographed aerially by RARE 1947-48, and surveyed from the ground and charted by Fids from Base D. Resurveyed by BAS personnel from Base E in 1964-65. Named by UK-APC on July 21, 1976, for Jonathan Swift (1667-1745), the author of *Gulliver's Travels*. US-ACAN accepted the name later in 1976.

Swilly, James Tobias. Name also seen (incorrectly) as Swilley. He was baptized on April 25, 1764, at Swilly House, his master Tobias Furneaux's home in the village of Swilly, near Stoke Damerel, Devon, but he was older than 8 when he went as Capt. Furneaux's manservant aboard the *Adventure* during Cook's 2nd voyage, 1772-75. On Jan. 1, 1773, when the *Adventure* and the *Resolution* crossed the 60°S line, Swilly became indisputably the first black ever in Antarctic waters. On Jan. 17, 1773, he became the first black to cross the Antarctic Circle (66°30' S). Alas, poor Swilley! On Dec. 17, 1773, at Grass Cove, in New Zealand, he was eaten.

Swimming. It is possible for humans to swim in certain freak places, such as Pendulum Cove, Deception Island, in the summer, and, literally, thousands of people have tried it. The temperature of the water there can reach 100°F, due to the natural sulphur hot springs. Having said that, on Dec. 12, 2005, Mr. Lewis Gordon Pugh, in heavy snow, entered 32°F water near Vernadsky Station (65°S), wearing a swimming suit, cap, and goggles, and less than 18 minutes and 10 seconds later had covered a kilometer. 2 days later he swam a mile off Deception Island, in 30 minutes and 30 seconds. He thus set two records — the longest ever polar swim, and the most southerly in ocean waters. On July 16, 2007, the same astonishing Mr. Pugh spent 19 minutes swimming about at the North Pole, something considered impossible until then. There have been other swimming feats, of course, all over Antarctica. For example, just after New Year's, in early Jan. 1957, Lt. Lester J. Halsema, USN (of Miami) won the unofficial McMurdo swimming championships by staying 20 minutes in the water. It was 38°F that sunny day, and the temperature of the water was 28°, freezing point for the water at McMurdo. Halsema and 3 other lads [Air Force Lt. James M. O'Callaghan, of Surin, Wisc., civilian physiologist Dr. Sidney A. Schwartz, of Brooklyn), and Bob Barger (q.v.)]) donned the new exposure suits the Navy had developed for downed airmen, and took the plunge, and gunner's mate Nick Mano stood by on shore with a .45 in case any killer whales happened to venture into the bay while the experiment was going on. Halsema had a tiny device strapped to him, to enable Dr. Schwartz to take his temperature readings. He started off (as all Americans do, at 98.6 — the British start off at 98.4, for some reason, which proves that they are a biologically different species), and within 12 minutes he was up to 100.6, as his body developed a fever in an effort to cope with the cold. During the last 5 minutes, Halsema's temp dropped one degree every minute, and they pulled him out. O'Callaghan's suit leaked, and he was pulled out after 7 minutes.

Swinburne Ice Shelf. 77°10' S, 153°55' W. An ice shelf, 30 km long and 8 km wide, it extends from Fisher Island to the White Islands, just N of Edward VII Peninsula and the Alexandra Mountains, in the S part of Sulzberger Bay. Photographed aerially by ByrdAE 1928-30, and mapped from these photos. Named by US-ACAN in 1971, for World War II air ace Capt. Harry William Swinburne, Jr. (b. Jan. 4, 1923, Delhi, Iowa. d. March 14, 1991, Oak Harbor Island, Wash.), deputy commander and chief of staff, U.S. Naval Support Force, Antarctica, during OpDF 70 (i.e., 1969-70) and OpDF 71 (i.e., 1970-71).

Swine Hill. 71°24' S, 67°33' W. The southern of two rugged, rocky knolls, it rises to 550 m (the British say 400 m), 16 km WNW of the summit of Mount Bagshawe, between McArthur Glacier and Norman Glacier, and overlooks Gadarene Lake and George VI Sound, on the W coast of Palmer Land. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and mapped from these photos the following year by U.S. cartographer W.L.G. Joerg. Roughly surveyed in Oct. 1936 by BGLE 1934-37 (it appears on their maps), and again on Dec. 19, 1948, by Fids from Base E, who built a cairn on the summit, and named it in association with Gadarene Lake (i.e., the biblical reference to the Gadarene swine). UK-APC accepted the name

on on March 31, 1955, and US-ACAN followed suit that year. It appears on a U.S. Hydrographic Office chart of 1955.

Mount Swinford. 77°16' S, 161°54' E. About 5 km WNW of Mount Harker, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 1976, for Lt. Cdr. Harold D. Swinford, USN, who wintered-over at the Nuclear Power Unit at McMurdo in 1963 and 1968.

[1]**Swinford Glacier** *see* **Berwick Glacier**

[2]**Swinford Glacier**. 84°45' S, 164°10' E. A tributary glacier, 10 km long, it flows SE to enter the W side of the Beardmore Glacier between Mount Holloway and the Marshall Mountains. Discovered in 1908 by Shackleton during BAE 1907-09, and named by him as Berwick Glacier, for a ship that Jameson Adams had once served on. However, when British cartographers were mapping from Scott's BAE 1910-13 charts, an accidental transposition took place between this glacier and what Shackleton had named Swinford Glacier [for his eldest son, Raymond Swinford Shackleton (1905-60)], which lies 20 km to the northeastward. The wrong names have thus become applied to these two glaciers, but long usage has made them right. US-ACAN (in 1952) and NZ-APC both accepted this situation.

Swinnerton Ledge. 80°43' S, 22°28' W. A flat-topped ridge rising to about 1500 m, and marking the E end of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for British zoologist and palentologist Henry Hurd Swinnerton (1876-1966), professor of geology at University College of Nottingham (which would eventually become Nottingham University), 1912-46, and president of the British Geological Society, 1938-40. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Rocher du Swip *see* **Svip Rocks**

Swire, Herbert. b. 1850, Stretton, Staffs, but raised partly (from 1857) in Sidmouth, Devon, son of Yorkshire clergyman John Swire and his wife Beatrice. He entered the RN in 1864; on May 18, 1866 he became master's assistant on the *Achilles;* and on Feb. 7, 1867 was appointed to the *Psyche*, where he became navigating midshipman. In June 1870, still on the *Psyche*, he was promoted to navigating sub lieutenant, and as such went on the *Challenger* Expedition of 1872-76. He was promoted to lieutenant on Oct. 13, 1876, and served as navigating lieutenant on the *Flamingo*, in the Mediterranean. In 1882 he sailed on the *Hope*, bound for the Arctic, in search of the missing *Eira*, and from 1883 to 1888 was based in Australian waters on the *Myrmidon*. In 1888, in Dudley, Staffs, he married Nancy Ellen Holgate, but she died soon afterwards, and he married again. He was a widower by 1891, but married again, to Calcutta-born Evelyn Maud (known as Eva). In June 1892 he was promoted to commander, and appointed to the *Research*, a ship he had served on before. In 1895 he was appointed inspecting officer of Coast Guard, at Berwick, and in 1898 was transferred to Weymouth. He retired in 1899. He finally made captain, on the retired list, in 1907, and died on Dec. 14, 1934, at Bexhill-on-Sea. He was the last survivor. He wrote *The Voyage of the* Challenger, which came out in 1938. His wife died in 1959.

Swithinbank, Charles Winthrop Molesworth. b. Nov. 17, 1926, Pegu, Burma, son of Bernard Winthrop Swithinbank, of the Indian Civil Service, and his wife Dorothea Molesworth. After two years in the Royal Navy as a sub lieutenant (1944-46), he went to Oxford, where he read geography and took part in undergraduate expeditions to Iceland and the Gambia, earning his BA in 1949. He was assistant glaciologist and the youngest member of NBSAE 1949-52, after which he returned to Oxford for his PhD. He studied the distribution of sea ice in the Northwest Passage (1955-59), at the Scott Polar Research Insitute, in Cambridge, England, moved to the University of Michigan, and served with USARP on the Ross Ice Shelf for 3 field seasons between 1959 and 1963. On one of these expeditions he found a can of kerosene left in a cairn on Mount Betty by Amundsen in 1912; it was still full. In 1960 he married Mary Stewart Fellows. In 1963 he returned to SPRI, to develop BAS glaciological programs. In Dec. 1963 he sailed from Le Havre on the *Estoniya*, to serve in Antarctica as an exchange scientist with SovAE 1963-65, at Novolazarevskaya Station. He was in Antarctica for 3 summers during the period 1966-72, and in 1974 became head of BAS's Earth Sciences division, a position he held for 12 years. On Dec. 4, 1987 he and Giles Kershaw made the first wheeled aircraft landing in the Patriot Hills, in an ANI Twin Otter. He wrote *An Alien in Antarctica* (1996), *Forty Years on Ice* (1998), *Foothold on Antarctica* (1999 — about NBSAE), *Vodka on Ice: A Year with the Russians in Antarctica* (2002).

Swithinbank Automatic Weather Station. 81°12' S, 126°00' W. An American AWS installed in Jan. 1997, at an elevation of 959 m, on a bedrock ridge about 50 km S of the S margin of Ice Stream D, near the Siple Coast. Named for Charles Swithinbank. The site was visited on Jan. 12, 2006, and the site was raised.

Swithinbank Glacier. 67°56' S, 66°46' W. Flows NW to the SE corner of Square Bay, on the Fallières Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from ground surveys and air photos taken between 1946 and 1959, and following ground surveys conducted by Fids from Base E in 1961-62, it was named by UK-APC on Feb. 12, 1964, for Charles Swithinbank. US-ACAN accepted the name later in 1964. It appears in the 1974 British gazetteer.

Swithinbank Moraine. 85°00' S, 177°05' W. A spectacular medial moraine of considerable note, in Shackleton Glacier, trending northward from Matador Mountain. Named by the Southern Party of NZGSAE 1961-62, for Charles Swithinbank. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Swithinbank Range. 81°42' S, 159°00' E. A small range, about 22 km long, extending eastward from the Churchill Mountains, between Donnally Glacier and Ahern Glacier, to the W side of Starshot Glacier. Named by the Southern Party of NZGSAE 1959-60, for Charles Swithinbank. NZ-APC accepted the name, US-ACAN followed suit in 1965, and ANCA accepted the name on May 18, 1971.

Swithinbank Slope. 73°28' S, 2°12' W. A semi-circular ice-slope, about 40 km long, between Mount Hallgren and Neumayer Cliffs, in the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Swithinbankhallet, for C.W.M. Swithinbank. The name was translated into English by US-ACAN in 1966.

Swithinbankhallet *see* **Swithinbank Slope**

Switzerland. On Nov. 15, 1990, Switzerland signed the Antarctic Treaty, but, as a nation, is not a presence in Antarctica. However, many Swiss nationals have visited Antarctica, and worked there.

Swope Glacier. 77°20' S, 145°50' W. Flows westward from the Ford Ranges, between Mount Woodward and Mount West, into the Sulzberger Ice Shelf, in Marie Byrd Land. Named by Byrd for Gerard Swope (1872-1957), president of General Electric, 1922-39 and 1942-44, contributor to ByrdAE 1933-35. US-ACAN accepted the name in 1970.

Swyers Point. 78°10' S, 165°08' E. An ice-free point on the W side of Brown Peninsula, marking the N extent of Bellafronto Bight, on the Scott Coast of Victoria Land. Named by US-ACAN in 1999, for Lt. Cdr. Harry Merton Swyers (b. June 14, 1943), USN, a public works officer at McMurdo during OpDF 1976 (i.e., 1975-76) and OpDF 77 (i.e., 1976-77). NZ-APC accepted the name.

Sydhavet Whaling Company. Norwegian whaling company, formed in Sandefjord, in 1908, by Peder Bogen and Johan Rasmussen. It operated the *Svend Foyn* out of the South Shetlands, between 1909 and 1913, and then, from 1913 to 1931, her replacement, the *Svend Foyn I*. It also ran the *Sydhavet*, but out of South Georgia. Bogen died in 1914, Rasmussen took over, and the company was liquidated in 1932.

The *Sydis* *see* **The *Torodd***

Sydney Herbert Sound *see* **Herbert Sound**

Syenite Flat. 74°57' S, 163°42' E. An ellipsoidal rocky flat, made up of syenite (hence the name), about 1.5 km by 1 km in area, about 50 m above sea level, in the S part of Inexpressible Island. First observed by ItAE 1993-94, and named by the Italians on July 17, 1997.

Sygit Point. 62°05' S, 58°48' W. A rock cape S of Wisniewski Cove, on the Joannes Paulus II Coast, on the NE side of King George Island, in the South Shetlands. Named by the Poles in 1984, for Tadeusz Sygit, air mechanic on PolAE 1980-81.

Sykes, Christopher Charles Robert. b. 1940, Durham. He joined BAS in 1966, as a general

assistant and tractorman, and wintered-over at Halley Bay Station in 1967 and 1968, the second year as base commander.

Sykes Cliffs. 64°00' S, 57°50' W. Rising to over 300 m above sea level, they trend first W-E then N-S, and extend from a point 3 km WSW of Dreadnought Point to a point 3 km SSW of the same point, facing Shrove Cove to the N and Croft Bay to the E, on James Ross Island. Named by UK-APC on Nov. 15, 2006, for geologist Mark Adrian Sykes (b. 1964), of BAS and Nottingham University, 1986-89, whose work formed a major step forward in understanding the stratigraphy, vulcanology, and geochemistry of the volcanic group.

Sykes Glacier. 77°35' S, 161°32' E. Flows N, just E of Plane Table, in the Asgard Range of Victoria Land. Named by NZ-APC for Jeremy Sykes (*see* **Deaths**, 1969), (b. 1935), son of John and Doreen Sykes, of Bentworth, Hants. Mr Sykes had been living in Wellington, NZ. US-ACAN accepted the name in 1970.

Sylwester Glacier. 84°14' S, 159°48' E. A glacier, 8 km long, flowing N between Jacobs Nunatak and the MacAlpine Hills, into the head of Law Glacier. Plotted by USGS from USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for David Luther Sylwester (b. 1936), aurora scientist who wintered-over at Pole Station in 1961, and summered-over at Byrd Station (and Byrd Aurora Substation) in 1961-62.

Symaskinen *see* **Sewing-Machine Needles**

Symes Nunatak. 72°30' S, 164°55' E. Near the middle of Evans Névé, about 14 km SE of Mount Staley, in Victoria Land. Named by NZ-APC in 1983, for J. Symes, geological assistant in Roger Cooper's NZARP geological field party to the area in 1974-75. US-ACAN accepted the name in 1994.

Symington Islands. 65°27' S, 64°58' W. A group of small islands in Grandidier Channel, 2.5 km SE of the Huddle Rocks, 21 km WNW of Lahille Island, and 16 km E of the Pitt Islands, in the Biscoe Islands, off the Graham Coast of Graham Land. Charted (but not named) by BGLE 1934-37. They appear as early as 1947, on a Chilean map, as Islotes Riquelme (named after a Chilean naval signalman on the *Iquique*, during ChilAE 1946-47), and again on one of their 1962 charts, and in the 1974 Chilean gazetteer. In 1957 ArgAE roughly charted them from 1956 aerial photos, and called them Islotes Buen Tiempo ("good weather islets"), but they positioned them too far to the north (this bad positioning was later rectified, but the name stuck — for the Argentines, anyway). Photographed aerially by FIDASE in 1956-57, and named by UK-APC on July 7, 1959, for John Donald Lewis Symington (b. 1920, Doncaster), senior air photographer on FIDASE (q.v.), the one who photographed this area. They appear as such on a British chart of 1960. US-ACAN accepted the name in 1971.

Symons, Lloyd Peter. He wintered-over at Davis Station in 1991, at Casey Station in 1993, and at Davis again in 1995.

The *Symra*. A 70-ton, 106 foot 5 inch whale catcher built at Smith's Dock, Middlesbrough, in 1914, for Salvesen's. Her first season out, she caught in Iceland, and then transferred to South Georgia in 1912-13. She never seems to have been in Antarctic waters for Salvesen. In Feb. 1929, she was sold to the Pontos Company, and caught for the *Pontos* in Antarctica in 1929-30. In 1935, she was sold to Nippon Hogei, in Japan, and renamed *Shikotan Maru*. She was probably lost early on in World War II.

Syningen *see* **Syningen Nunatak**

Syningen Nunatak. 68°20' S, 59°09' E. A nunatak, 1.5 km S of See Nunatak, it is one of the group of nunataks at the E end of the Hansen Mountains, about 41 km SE of Fram Peak, in Kemp Land. Photographed by LCE 1936-37, mapped by Norwegian cartographers in 1946 from those photos, and named by them as Syningen (i.e., "viewing"). It was replotted from ANARE air photos, and renamed by ANCA (for themselves only) as Lindsay Nunatak, for Lindsay Smith, ANARE helicopter engineer on the 1965 *Magga Dan* expedition led by Phil Law. US-ACAN accepted the name Syningen Nunatak in 1967.

Synpiggen. 71°50' S, 25°24' E. The highest peak in the S part of Austkampane Hills, in the central part of the Sør Rondane Mountains. Name means "the view peak" in Norwegian.

Syowa *see* **Showa Station**

The *Syowa* *see* **The *Soya***

Syowa-daira *see* **Showa Flat**

Syozi-iwa. 71°29' S, 35°31' E. A small nunatak, rising to 1932.2 m and with a conspicuous cliff, 6 km NW of Tyo-ga-take, on Mount Eyskens, in the central part of the Queen Fabiola Mountains. Surveyed by JARE in 1969, and named by the Japanese on March 22, 1979. A syozi (or shoji) is a Japanese sliding paper door.

Cabo Syrezol *see* **Syrezol Rocks**

Rocas Syrezol *see* **Syrezol Rocks**

Syrezol Rocks. 62°12' S, 58°16' W. A small group of rocks in water, extending southwestward from a point the South Americans call Cabo Syrezol, and what the Americans and British used to call Cape Syrezol, 1.5 km W of Martins Head, between that head and Chabrier Rock, off the E side of the entrance to Admiralty Bay, King George Island, in the South Shetlands. In Dec. 1909, FrAE 1908-10 charted this area, and Charcot named two features to the ESE of Vauréal Peak, as Cap Legru and Cap Syrezol, after two supporters of his expedition. They appear as such on his 1912 map. The first feature was later identified as what had long been (and still is) known as Martins Head, and the second as a minor point between Martins Head and what later became known as Syrezol Rocks. This second (minor) feature appears on a 1929 British chart as Cape Legru. On that same chart, the name Cape Syrezol was applied to the point off which the present rocks lie (this is the point the South Americans still call Cabo Syrezol). In Jan. 1937, the area was re-charted by the Discovery Investigations who, in no way changed this situation, a situation that still appears on 1947 and 1948 FIDS charts, and which was accepted by US-ACAN. Cape Syrezol (the point off which the rocks lie) appears as such in the U.S. gazetteer of 1956, described as a rocky cliff, from which rocks extend southwestward for about half a mile (these rocks are the ones that would later be called Syrezol Rocks). On a Chilean chart of 1947, that second feature named by Charcot in 1908-10, the one he called Cap Syrezol, appears on a Chilean chart of 1947 as Cabo Legru, and the point off which the present Syrezol Rocks lie was called Cabo Syrezol. This situation was repeated in the 1970 Argentine gazetteer, and in the 1974 Chilean gazetteer. FIDASE photographed the area aerially in 1956-57, and FIDS surveyed it from the ground between 1957 and 1959, and this went a long way to clearing up the situation. On Sept. 23, 1960, in order to preserve Charcot's namings, UK-APC allocated the name Legru to what is now Legru Bay, and allocated the name Syrezol to the rocks. They left the point off which the rocks lie (the point that they used to call Cape Syrezol) unnamed. US-ACAN accepted this later in 1960. Last plotted by the UK, in late 2008. Today, the Argentines tend to call the rocks Rocas Syrezol. As for the origins of the name Syrezol, it may have been a supporter of the expedition, but no human being has ever had the name Syrezol, so it must be a corruption somehow.

Syrstad Rock. 75°58' S, 133°02' W. A rock outcrop below, and 1.5 km N of, Koerner Bluff, on the NW slopes of Mount Bursey, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Erik Syrstad, of the University of Bergen, in Norway, ionosphere physicist at Pole Station in 1970.

Syrtis Hill. 71°50' S, 68°20' W. A prominent, conical, terraced hill, an important snow-free landmark, rising to about 500 m on the NW corner of the massif called Two Step Cliffs, overlooking Viking Valley, on Alexander Island. It has been the site of biological and geological research. Named by UK-APC on Dec. 2, 1993, for Syrtis Major, the prominent dark feature on the planet Mars, first described by Huygens in 1659. US-ACAN accepted the name in 1994.

Systerflesene *see* **Systerflesene Islands**

Systerflesene Islands. 69°17' S, 39°25' E. Three small islands, 8 km W of Hamnenabben Head, and next to the Ungane Islands, in the E part of Lützow-Holm Bay, on the Prince Olav Coast. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who called this feature Systerflesene (i.e., "the sister islets"). US-ACAN accepted the name Systerflesene Islands in 1968.

Szabo Bluff. 86°29' S, 144°48' W. Just N of Price Bluff, on the divide between Van Reeth Glacier and Robison Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. (later Cdr.) Alex J. Szabo, USN, VX-6 pilot in Antarctica during OpDF 66 (i.e.,

1965-66) and OpDF 67 (i.e., 1966-67). Low-level radiation was found here in 1982-83.

Szafer Icefall. 62°05' S, 58°18' W. An icefall in Szafer Ridge, above Dobrowolski Glacier, Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, in association with the ridge.

Szafer Ridge. 62°05' S, 58°18' W. A mountain ridge, rising to anywhere between 250 and 260 m, between Professor Glacier and Dobrowolski Glacier, at Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Dr. Wladwyslaw Szafer (1886-1970), Polish botanist, paleobotanist, and nature conservationist.

Szanto Spur. 73°43' S, 161°18' E. A noteworthy rock spur, jutting out from the N wall into the head of Priestley Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Otto Ryan Szanto, USN, radioman at McMurdo for 4 seasons in the 1960s.

Szeeley, Walter. b. June 4, 1916, Newark, NJ, son of Polish (Galician) immigrants John Szela (sic) and his wife Ann. John Szela worked as an iron founder, and, in the 1930s, moved to Rutherford, NJ, and later still to Hawthorne. Walter joined the U.S. Navy, and became a trainee pilot. As soon as he got his wings, he volunteered for Admiral Byrd's next expedition to Antarctica. He was in Puerto Rico when, on Sept. 23, 1939, he boarded the *San Jacinto* at San Juan, along with Roger Scott, bound for New York, and then on to the *Bear*, at the Boston Navy Yard, from where he sailed as a seaman 1st class during USAS 1939-41, and, while in Antarctica, would occasionally fly off the *Bear*. After the expedition (only the first half; he did not go back in 1940-41), he transferred to the Army Air Corps, as a 2nd lieutenant, and, in P-47s, flew 85 combat missions over North Africa, Sicily, and Italy, being highly decorated. After the war, he married Helen, and became a captain in the newly-formed USAF, flying F-80 jets in Korea for 2 years, and serving as maintenance officer there. On April 7, 1957, he pulled into Southampton on the *United States*, from New York, with his wife and three daughters, bound for a tour at RAF Lakenheath, home of the American 3910th Air base Group. After returning to the US, he became an engineering technician at the U.S. Army's Picatinny Arsenal, in Dover, NJ. He died on Nov. 28, 1994, in Morristown, NJ.

Szmula, Edgar C. b. 1875, Zabrze, Silesia (then part of Prussia). A Polish salesman, he left Hamburg on Nov. 11, 1896, aboard the steamer *Tucuman*, bound for his new home, and became a naturalized Argentine. He was employed by the Argentine Met Office as an assistant meteorologist, and was responsible for the meteorological and magnetic observations at Órcadas Station in the winter of 1904. In 1929 he translated into Spanish Günter Henle's book, *Un viaje a la Patagonia y Tierra del Fuego*.

Szworak, Eric. Radio technical officer who wintered-over at Davis Station in 1975 and 1979, at Casey Station in 1984, and at Mawson Station in 1988.

Szymanowski Icefall. 62°11' S, 58°14' W. A steep icefall, about 300 m above sea level, an outlet of the Kraków Dome (also called the Kraków Ice Field), between Harnasie Hill and Martins Head, on the S coast of King George Island, in the South Shetlands. Named by the Poles in 1980, for composer Karol Szymanowski (1882-1937).

Szymanski Cove. 62°15' S, 58°33' W. A large cove in front of Polar Club Glacier, between Red Hill and Stranger Point, on the S coast of King George Island, in the South Shetlands. Named by the Poles in 1980, for Antoni Szymanski, a member of several Polish Antarctic expeditions. He had also worked in Spitsbergen, in the great North.

The *2041*. British yacht, which visited the South Shetlands and the Antarctic Peninsula in 2000-01, under the command of Mark Hopkins and Andrew Dare. She was back in 2001-02, under Capt. Dare.

The *T.H. Dahl*. Norwegian whale catcher, working for the *Ronald*, in Antarctic waters, between 1910-11 and 1913-14. She was catching for the new *Ronald*, in 1920-21.

Taaffe Ridge. 68°28' S, 78°29' E. A rock ridge extending ENE to the moraines at the edge of the plateau at the E end of Long Peninsula, in the Vestfold Hills. Named by ANCA for John McM. Taaffe, senior diesel mechanic at Davis Station for the winter of 1970.

Península Tabarín *see* **Tabarin Peninsula**

Tabarin Peninsula. 63°32' S, 57°00' W. A peninsula, 22 km long, and between 8 and 20 km wide, it lies S of the trough between, on the one hand Hope Bay and Antarctic Sound, and Duse Bay on the other, and forms the S portion of the NE extremity of Trinity Peninsula. It is bounded to the NW by Depot Glacier and Mondor Glacier, and extends S to Erebus and Terror Gulf. Rising to a maximum height of 744 m above sea level, the peninsula's S coast consists of ice cliffs across which jut out salients of bare rock. Discovered, surveyed, and charted in 1902 by SwedAE 1901-04, it was re-surveyed in March 1946 by Fids from Base D, and named by them for Operation Tabarin. It appears on their chart of 1949, and was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears on a 1951 Chilean chart as Península Tabarín, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Further surveyed by Fids from Base D in 1960-62.

Tabella, Victor. b. Sept. 13, 1813, Mont-de-Marsan, France. Junior seaman on the *Astrolabe* during FrAE 1837-40. On Nov. 1, 1840 he became a sail maker.

Caleta Table *see* **[1]Table Bay**

Isla Table *see* **Table Island**

[1]Table Bay. 61°09' S, 55°24' W. The largest bay on the W coast of Elephant Island, in the South Shetlands, immediately S of Cape Lindsey (the extreme W point of the island). Roughly charted by Powell in 1821-22, and named (perhaps by him) as Table Bay. For some reason, it appears on a 1943 U.S. Hydrographic Office chart as Southard Bay (*see* **Cape Southard**). It appears on a 1953 Argentine chart, translated as Bahía Mesa, and on a 1961 U.S. Hydrographic Office chart as "Southard Bay (Table Bay)." It appears on a Chilean chart of 1971 as Caleta Table (i.e., "table inlet"), and that was the name chosen by the Chilean gazetteer of 1974. On Nov. 3, 1971, UK-APC, being Latin scholars (as well as having, at that time, a few problems with South Africa, and not wishing in any way to appear to be honoring Cape Town's famous Table Bay), named it Mensa Bay (mensa meaning "table"). In 1972, US-ACAN (presumably not being Latin scholars), simply accepted the old sealers name of Table Bay.

[2]Table Bay. 84°47' S, 163°30' E. A small glacier flowing E between Mount Augusta and Mount Holloway into the Beardmore Glacier at Lizard Point, in the S part of the Queen Alexandra Range. Named rather oddly as a bay by Scott, on his push to the Pole, during BAE 1910-12, because of its appearance. It has been called Table Bay for so long, that it was decided not to tinker with the definition, and US-ACAN accepted it in 1966.

Table Hill. 62°03' S, 58°28' W. A flat-topped nunatak, rising to about 200 m, S of Three Musketeers Hill, in the area of Domeyko Glacier, Mackellar Inlet, in Admiralty Bay, on the coast of King George Island, in the South Shetlands. Named descriptively by the Poles in 1984.

Table Island. 62°21' S, 59°49' W. A tiny, but conspicuous flat-topped island, rising to 180 m, and with its sides dropping vertically to the sea, 4.5 km NW of Fort William (the NW tip of Robert Island), in the South Shetlands. On Jan. 17, 1820, Bransfield roughly charted it as Falcon's Island. It appears as such on a British sealing chart of 1822, but on an 1821 chart as Falcon Island. However, its appears as Table Island (named for its shape) on charts prepared by Robert Fildes (1821) and George Powell (1822). However, on another of Fildes' charts of 1821, it was misprinted as Sable Island, and that led to some confusion, with other countries doing all sorts of strange things with this name on charts they had translated from Fildes. On a James Weddell map of 1825, it appears as Table Isle, and on an 1839 British chart as Table Island. It appears as Isla Table on a Spanish chart of 1861 (this was merely a straight translation from British sealing charts, however). It was re-charted by the Discovery Investigations in 1934-35, and appears as Table Island on a 1937 British chart. This was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It appears on a 1947 Chilean chart as Isla Mesa, and that was the name accepted by the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. The Chileans, upon realizing that they had adopted a name that was also being used by the Argen-

tines, dropped Isla Mesa in favor of Isla Table. There is more to this Chile-Argentina placename rivalry than just sheer childishness. One has to look at territory. It must be quite clear, when the time comes, which of the two countries has named what feature, when, how, etc. And Britain, too, is far from being immune to this little game, as one can see constantly throughout this encyclopedia.

Table Isle *see* **Table Island**

Table Land *see* **Flat Top Peninsula**

[1]**Table Mountain** *see* **Tabular Mountain, Two Step Cliffs**

[2]**Table Mountain**. 77°57' S, 162°00' E. A large, flat mountain rising to over 2000 m (the New Zealanders say 1767 m), immediately S of the junction of Emmanuel Glacier and Ferrar Glacier, in the extreme S of Victoria Land. Discovered and named descriptively by BNAE 1901-04. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Table Nunatak. 68°30' S, 62°57' W. A low, flat-topped, rectangular nunatak, 0.8 km E of Cape Agassiz, Kenyon Peninsula, and projecting through the Larsen Ice Shelf, on the E side of the Antarctic Peninsula. This is probably the feature seen in 1940 by USAS 1939-41, and described by them as a snow-covered island close E of Cape Agassiz. There is nothing else that fits the bill. The nunatak was seen again by Chuck Adams, pilot on RARE 1947-48, during a flyover in Sept. 1947. Also that year (1947), it was surveyed from the ground by Fids from Base E. UK-APC accepted this descriptive name on Jan. 20, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer.

Tableland *see* **Flat Top Peninsula**

Tablemounts. Submarine features, seamounts with comparatively smooth, flat tops. The main ones are: Belgica Guyot, Lecointe Guyot, and Saint-Exupéry Guyot (named thus instead of the proposed Petit Prince Seamount).

Tabor Spur. 85°15' S, 90°14' W. A narrow, jagged spur jutting out from the front of the Bermel Escarpment, between Taylor Outlier and Elliott Nunatak, in the Thiel Mountains. Named by Peter Bermel and Art Ford, co-leaders of the Thiel Mountains surveying party here in 1960-61, for Rowland Whitney Tabor (b. 1932), USGS geologist with the 1961-62 Thiel Mountains party. US-ACAN accepted the name in 1962.

Taborovskijtoppen *see* **Taborovskiy Peak**

Taborovskiy Peak. 71°48' S, 11°35' E. Rising to 2895 m, it is the highest peak in the Skarshaugane Peaks of the Betekhtin Range, in the Humboldt Mountains of Fimbulheimen, in Queen Maud Land. Discovered and plotted from air photos taken by GermAE 1938-39. Mapped from ground surveys and new 1958-59 air photos taken during the long NorAE 1956-60. Re-mapped by SovAE 1960-61, and named by the Russians in 1966 as Gora Taborovskogo, for meteorologist N.L. Taborovskiy. US-ACAN accepted the name Taborovskiy Peak in 1970. The Norwegians call it Taborovskijtoppen.

Gora Taborovskogo *see* **Taborovskiy Peak**

Tåbreen. 68°48' S, 90°30' W. A glacier, about 2.5 km long, at the S side of the cove the Norwegians call Ranvika, on the N part of the the coast they call Von Bellingshausenkysten, on the E side of Peter I Island. Named by the Norwegians ("toe glacier").

Tabular bergs. The largest type of iceberg (q.v.), although not all tabs are huge. They break off from a floating ice sheet or ice shelf. When one sees a really big one, one might, at first, think it is land, because the area is so vast, until one sees it moving. Sailors in the high latitudes saw these monsters, and the early sealers came across them, but Ross seems to have been the first on record to use the table-top allusion, an allusion continued by most of the explorers until Byrd, although the term barrier berg was also used. In 1902, the *Eugene Fautrel* spotted one in 61°S, 68°W, that was 7 miles long and 300 feet high. On Jan. 7, 1927, off Clarence Island, in the South Shetlands, the *Odd I* spotted one, 130 feet high and 100 miles long. The *Glacier* sighted one 150 miles W of Scott Island, on Nov. 12, 1956, which was 208 miles long and 60 miles wide. On or around Feb. 12, 2010, the Mertz Glacier Tongue split, sending north a berg as big as Luxemburg, 48 miles long by 24 miles wide. It weighed 860 billion tons.

Tabular Mountain. 77°52' S, 160°14' E. Also called Table Mountain. A broad, flat-topped mountain, rising to 2740 m, centering about 10 km NNW of Mount Feather, on the S side of the upper Taylor Glacier, in the Quartermain Mountains of southern Victoria Land. Named descriptively by BNAE 1901-04. US-ACAN accepted the name in 1962, and NZ-APC followed suit. Originally plotted in 77°52' S, 160°18' E, it has since been replotted.

Tabuteau, François. b. May 6, 1921, Béconles-Bruyères, France, son of Jacques Tabuteau and his wife Marie, and nephew of distinguished architect Bernard Tabuteau. He fought as a sailor for the Free French during World War II, and was assistant biologist on the French Polar Expedition of 1949-52, wintering-over at Port-Martin Station in 1950 and 1951. He wrote several books, and after the birth of his fourth child quit polar expeditions and worked in Africa, and in Brazil. He finally moved to Tahiti, where he died in 2000.

Punta Tac *see* **Santa Cruz Point**

Tachimachi Point. 69°00' S, 39°37' E. A low, and usually snow-covered point marking the NE extremity of East Ongul Island, in the NE part of Lützow-Holm Bay. Mapped from JARE ground surveys and air photos conducted and taken between 1957 and 1962. Named Tatimatimisaki (i.e., "stand and wait point") by JARE on June 22, 1972. US-ACAN accepted the name Tachimachi Point in 1975.

Tachimachi-misaki *see* **Tachimachi Point**

Tada, Keiichi. b. 1883, Okayama, Japan. Expedition secretary for the first half of Shirase's Japanese South Polar Expedition of 1910-12. For the second half of the expedition he became assistant to naturalist Masakichi Ikeda, and was replaced as secretary by the 2nd engineer Susumu Muramatsu. Mr. Tada died in 1959.

Isla Tadpole *see* **Tadpole Island**

Mount Tadpole. 80°31' S, 158°41' E. A rounded and mostly ice-free mountain, rising to about 1000 m, with a narrow ridge running SW from the main mass, about 7 km ENE of Mount Tuatara, on the S side of Byrd Glacier. Named by US-ACAN in 2003, for its appearance. NZ accepted the name on Feb. 27, 2003.

Tadpole Island. 65°56' S, 65°19' W. An island, 1000 m long, and rising to 110 m above sea level, in the center of the SW mouth of Harrison Passage, just N of Ferin Head, between that head and Larrouy Island, which lies to the W, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959 for the shape of the island when seen from the air. US-ACAN accepted the name in 1971. The Chileans call it Isla Tadpole.

Taelavågisen. 74°23' S, 9°59' W. A glaciated area, about 16 km long and 7 km wide, in the S part of Milorgfjella, in the Heimefront Range, in the W part of Maudehimvidda, in Queen Maud Land. Named by the Norwegians for Taelevåg, a small fishing village near Bergen, used as a Resistance center during World War II.

The *Tafelberg*. A 13,640-ton whaling factory ship, 508 feet long, built in 1930 by Whitworth & Co, of Newcastle, for the Kerguélen Whaling and Sealing Company (i.e., Irvin & Johnson, Ltd., of Cape Town), specially with a stern slip and two side-by-side funnels. She conducted pelagic whaling in West Antarctica waters in 1930-31, replacing the *Radioléine*. She was back in 1932-33, under the command of Capt. Berg. The *Berea* was catching for her that season. She was back in Antarctic waters in 1933-34, 1934-35, 1935-36, 1936-37, 1937-38, and 1938-39. When World War II started she was laid up in Norway, and then requisitioned by the British government, to be operated by Salvesen's. On Jan. 28, 1941, during World War II, she was damaged by a mine in 51°21' N, 3°16' W. She was re-built as the 15,702-ton steam tanker *Empire Heritage*, and returned to war service in Feb. 1943. She was torpedoed and sunk on Sept. 8, 1944, by U-482, in 55°27' N, 8°01' W, off the coast of Ireland.

Taff y Bryn. 76°43' S, 161°25' E. A ridge-like summit capped by dolerite, rising to about 1600 m, 1.5 km W of Flagship Mountain, from which it is separated by a snow col, in the Convoy Range of Victoria Land. Name means "hill of the Taff," and was named by VUWAE 1976-77, led by Christopher J. Burgess, for the Welsh river Taff. US-ACAN accepted the name in 1993.

Tafonipass. 74°42' S, 162°38' E. A pass on the peak the Germans call Pilgerberg, immediately NE of Mount Nansen, in the Eisenhower Range of Victoria Land. Named by the Germans.

Taggen *see* **Taggen Nunatak**

Taggen Nunatak. 72°10' S, 21°48' E. Between Borchgrevinkisen and Kreitzerisen, in the W

portion of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by OpHJ 1946–47, plotted by them in 72°08' S, 21°18' E, and named by them as Taggen (i.e., "the prong"). US-ACAN accepted the name Taggen Nunatak in 1966. It has since been re-plotted.

Taiji Feng. 69°23' S, 76°24' E. A peak in the Larsemann Hills. Named by the Chinese.

Tail Island. 63°40' S, 57°37' W. A circular island, 2 km in diameter, and rising to an elevation of 130 m above sea level, midway between Egg Island and Eagle Island, in the NE part of Prince Gustav Channel, at the Trinity Peninsula, off the tip of the Antarctic Peninsula. Islands in this area were first seen in 1902–03, by Dr. J. Gunnar Andersson's party during SwedAE 1901–04. This island was surveyed and charted by Fids from Base D in Aug. 1945, and so named by them for its position relative to Eagle Island, Egg Island, and Beak Island. It appears on a British chart of 1949, and UK-APC accepted the name on Nov. 21, 1949, with US-ACAN following suit in 1952. It appears in the British gazetteer of 1955. It appears on an Argentine chart of 1957 as Isla Cola (which means the same thing), and on another Argentine chart, of 1959, as Isla Rocosa (i.e., "rocky island"). In the 1970 Argentine gazetteer it is Isla Cola, as it is in the Chilean gazetteer of 1974. It was further surveyed by Fids from Base D in 1959–60. There is a 1972 reference to it as South Tail Island.

Tailend Nunatak. 78°49' S, 27°25' W. Rising to 535 m (the British say about 550 m). First mapped in 1956–57 by BCTAE, and so named by them because it was the last rock feature at the NE end of the Theron Mountains seen, either from the ground or from the air, during their survey. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Taiping Wan *see* **Blair Bay**

Glaciar Tait *see* **Tait Glacier**

Tait, John Eland. b. Feb. 24, 1940, Sheffield, son of Eland Hanson Tait and his wife Marjorie Fields. BAS diesel electric mechanic who wintered-over at Base B in 1963, and at Base T in 1964. He also wintered-over at Base E in 1965, as a general assistant. He died in April 2003, in Sheffield.

Tait, Murdo Finlayson. As a youngster he was known as Murray, but in Antarctica he was generally called "Jock." b. June 10, 1923, Wick, Caithness. He got itchy feet after the war, moved to the Falkland Islands in late 1947, and while there applied to FIDS, and was interviewed by Ken Butler. He left Port Stanley on the *John Biscoe*, as the handyman who wintered-over at Base F in 1949 and 1950. He had been due to winter-over as a meteorological observer at Base F in 1952, but a seal bit his hand and he got blood poisoning. This delayed his arrival, and he wound up wintering at Base D instead in 1953, again as handyman. He returned to the UK in 1954, but later that year left England on the *John Biscoe*, bound for Base D again, again as handyman, and wintered over there in 1955. On Feb. 26, 1956, in Stanley, he married Flora Sarah Blanche Berntsen, and settled in the Falklands, working until 1961 as supply officer for FIDS, and then on contract for the Falkland Islands Company. In 1966 he decided that his son needed a better education than was then available in the Falklands, and so the family returned to England, where they settled in Colchester, Essex. He died on Jan. 13, 2009.

Tait Glacier. 64°22' S, 58°02' W. About 6 km long, it flows SW into Carlsson Bay, on the SW coast of James Ross Island. Probably discovered in Oct. 1903, by SwedAE 1901–04. Surveyed by FIDS in 1945, and again by Fids from Base D in 1952. Named by UK-APC on Sept. 4, 1957, for Murdo Finlayson Tait. US-ACAN accepted the name in 1963. The Argentines call it Glaciar Tait.

Taiwan. In 1976-77 and 1977-78 Taiwan Fisheries Research Institute sent the *Hai Kung* to the Enderby Land coast for 18 days, to investigate the possibilities of krill fishing. In 2006 Taiwan took the initiative of sending up a GPS satellite called FORMOSAT, which would give more accurate weather forecasts in Antarctica.

Taiyang Dao. 69°23' S, 76°13' E. An island in the Larsemann Hills. Named by the Chinese.

Taiyang Hu. 62°11' S, 58°56' W. A lake on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

[1]**Taiyang Shan**. 62°14' S, 58°56' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

[2]**Taiyang Shan** *see* **Canterbury Hill**

Taizi Ling. 69°26' S, 76°02' E. A peak in the Larsemann Hills. Named by the Chinese.

Taizumi, Yasunao. b. 1888, Tokyo. An engineer with Japan's Pathé Company, he was cinematographer on the 2nd half of Shirase's Japanese South Polar Expedition of 1910-12. He put together the 18-minute documentary movie of the voyage in 1912, *Nippon Nankyoku Tanken*. He also made many other movies, and died in 1960.

The *Taja*. Norwegian yacht in at the South Shetlands and the Antarctic Peninsula, in 1998–99, under the command of skipper Trygve Aanjesen (b. 1947).

Ledolom Tajmyrskij. 67°20' S, 83°00' E. A slope on the W portion of the Leopold and Astrid Coast. Named by the Russians.

Bukhta Tajnaja *see* **Taynaya Bay**

Taka-iwa. 71°45' S, 39°53' E. A small rock exposure rising to 2221 m above sea level, just SE of Mount Gaston de Gerlache, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979. Name means "high rock."

Takagawa, Sajiro. Also known as Inoue. b. 1881, Tokyo. A seaman on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910-12. He died in 1937.

The *Takahe*. Roy Curtis's R4D airplane during OpDF II (1956–57) and OpDF III (1957–58). It flew many times to the Pole.

Mount Takahe. 76°17' S, 112°05' W. A large, broad, circular, isolated, snow-covered symmetrical-shield extinct volcano rising to 3460 m, 31 km in diameter, capped by an 8 km-wide, snow-filled summit caldera, 100 km S of its nearest neighbor, Mount Murphy, 60 km SE of Toney Mountain, and just S of the Kohler Range and the Dotson Ice Shelf, in Marie Byrd Land. Probably seen on Feb. 24–25, 1940, from a distance, by USAS 1939–41, on flights from the *Bear*. Visited in Dec. 1957, by the Marie Byrd Land Traverse Party of 1957–58, and named by them for the flightless, almost extinct, New Zealand bird, the takahe. This was the nickname of the U.S. aircraft that supplied the U.S. party (*see* above). US-ACAN accepted the name in 1960. First plotted in 76°16' S, 112°14' W, it has since been replotted.

Takahe Nunatak. 77°13' S, 166°48' E. Rising to about 1100 m, it is the northern of 2 similar nunataks 0.5 km apart (Kakapo Nunatak lies close to the SW), and 5.5 km NNE of Mount Bird, in the NW part of Ross Island. The two nunataks appear to be ice-covered crater rims. Named by NZ-APC on Feb. 21, 2001, for the native NZ bird. US-ACAN accepted the name later in 2001.

Takaki Promontory. 65° 33' S, 64°14' W. Forms the NE entrance point of Leroux Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and charted by FrAE 1903–05, and named by Charcot as Pointe Núñez, for Capt. Guillermo Núñez of the Argentine Navy (*see* **Nuñez Point**). It appears as such on Charcot's 1906 map, but on his 1912 map that name refers to a point N of Mount Waugh. Charcot's original Pointe Núñez appears on a British photo of 1916, as Nuñez Point (sic), and. as such also on a British chart of 1948. It was the spelling (i.e., only one accent mark) accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and it appears a such in the 1955 British gazetteeer. In the 1920s the Norwegian whalers were charting it as Nunez Pynten (which means the same thing), and on a British chart of 1930 it appears without any accents at all, as Nunez Point. Charcot's 1912 Pointe Núñez (the one N of Mount Waugh) appears on a 1946 Argentine chart as Punta Lahille, named in association with Lahille Island, and on that same chart Punta Núñez is shown in error referring to the mainland point E of Chavez Island. However, Charcot's original Pointe Núñez appears on a Chilean chart of 1947 as Punta Núñez, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteeer. It was photographed aerially by FIDASE in 1956–57, surveyed by a FIDS-RN team between 1956 and 1958, and re-named by UK-APC on July 7, 1959, as Takaki Promonotory, for Baron Takaki Kanehiro (1849-1920), director general of the medical department of the Imperial Japanese Navy, pioneer in beriberi prevention. US-ACAN accepted the name later in 1959. It appears on a British chart of 1960.

Takami-ga Oka. 67°57' S, 44°34' E. Rising to 208.4 m above sea level, it is the highest point of elevation in the Shinnan Rocks, at the W side of Shinnan Glacier, in Queen Maud Land.

Mapped by Japanese cartographers from air photos taken by JARE in 1962, and from ground surveys conducted by JARE in 1974, and named by the Japanese on March 12, 1977. Name means "high viewpoint hill."

Takamurawand. 70°27' S, 161°00' E. The E wall of the hill the Germans call Sternhügel, in the Kavrayskiy Hills, S of Rennick Glacier. Named by the Germans.

Takano-tume-mine. 72°05' S, 23°45' E. A peak, rising to 1909 m, it forms the northwesternmost part of Svindlandfjellet, on Mount Walnum, in the central portion of the Sør Rondane Mountains. JARE took air photos in 1981-82, and again in 1986, and surveyed it from the ground in 1985-86. Named for its shape by the Japanese on Feb. 26, 1988 (name means "hawk's talon peak"). The Norwegians call it Klotoppen (which means the same thing).

Takatori, Sumimatsu. b. 1877, Tokyo. Stoker on the *Kainan Maru* during the 1st half of Shirase's Japanese South Polar Expedition of 1910-12.

Takeda, Terutaro. b. 1879, Fukuola. Leader of the scientific staff on Shirase's Japanese South Polar Expedition of 1910-12. A friend of Shirase's, he was a member of the Dash Patrol. He died in 1925.

Takrouna Bluff. 71°59' S, 163°23' E. A small but prominent bluff on the E side of the Alamein Range, in the Freyberg Mountains, it overlooks Canham Glacier from a position 10 km WSW of Galatos Peak. Named by the Northern Party of NZGSAE 1963-64, for Takrouna, a similar feature in in Tunisia, which has an association with Lord Freyberg in World War II. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Talamón, Gaston O. *see* **Órcadas Station**, 1906

Talbot Glacier. 65°15' S, 63°13' W. Flows N into Étienne Fjord, Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for William Henry Fox Talbot (1800-1877), British photography pioneer in the early 1840s. US-ACAN accepted the name in 1965, but with the coordinates 65°12' S, 63°14' W. It has since been replotted by the British.

Punta Talbott *see* **Talbott Point**

Talbott Point. 66°15' S, 67°10' W. The N point of Dubois Island, in the Biscoe Islands. Mapped by FIDS cartographers in 1959 from air photos taken by FIDASE in 1956-57, and named by UK-APC on Sept. 23, 1960, for John Harold Talbott (1902-1990), U.S. physiologist specializing in the reaction of the human body to climatic change. US-ACAN accepted the name in 1965. The Argentines call it Punta Talbott.

Talev Glacier. 65°37' S, 63°55' W. A glacier, 4 km long and 2.8 km wide, on Barison Peninsula, W of Cadman Glacier, and SE of Butamya Glacier, it flows northeastward into Beasochea Bay, on the Graham Coast, on the W coast of Graham Land. Mapped by the British in 1976. Named by the Bulgarians on Sept. 14, 2010, for Bulgarian writer Dimitar Talev (1898-1966).

Talg Falls. 68°38' S, 78°23' E. A waterfall forming when the Talg River flows over a 6 m ice cliff, in the Vestfold Hills. Named by ANCA, in association with Talg River.

Talg Gorge. 68°38' S, 78°23' E. A narrow gorge, or slot, about 150 m long, 5 m wide, 7 m high on the E, and 20 m high on the W, in the Vestfold Hills, through which, after dropping over the Talg Falls, the Talg River flows on its passage from Sørsdal Glacier into Krok Lake. Named by ANCA in associatin with the river.

Talg River. 68°38' S, 78°23' E. A major river in the Vestfold Hills, flowing from Sørsdal Glacier, over the Talg Falls, through Talg Gorge, into Crooked Lake. Named by the Australians, the name meaning "ice" in Arabic.

Mount Talisker *see* **Pardo Ridge**

Tallaksenvarden. 70°52' S, 11°31' E. A nunatak in the NW part of Lingetoppane, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Johan Edvard Tallaksen (b. 1918), one of the most active of the Resistance workers in the Linge group, in Oslo, during World War II. He killed himself in the Gestapo torture chamber in 1944.

The *Talma*. An 80-ton New London sealing schooner, built by John Poole, of Salem, Mass. In 1832, she had just been bought by Joseph Lawrence, and he hired Capt. Gurdon Allyn to take her sealing. She left New London in July 1832. First mate was Stephen Perkins, of Gales Ferry, Conn; 2nd mate was John Hill, of Stonington; and 3rd mate was Orlando Bolles, of New London. The ship went via the Cape Verde Islands, and on Sept. 20, 1832, crossed the Equator. Down the coast of South America, she reached Staten Island on Nov. 1, 1832. By May 1833, she was in at the Falkland Islands, and then did some sealing in the South Shetlands in the 1833-34 season, leaving there in March 1834, bound north for Pernambuco, Brazil. From there she headed home, crossing the Equator in mid-May 1834, arriving back in New London after a 22-month voyage. After this, Captain Daniel Carew took her out of port on July 16, 1834, bound for the South Shetlands, to take part in the 1834-35 season, in company with the *Pacific*. Rest of crew (many of them from Stonington): John Hill (1st mate; aged 37), J.T. Steocus (2nd mate; 23), Gurdon Pendleton (21), Hibrou Miller (?), Samuel Gairt (22), Amasa Raril (?), Samuel Dixon (21; from Montgomery, Maine), Ezra Bramble (32), John Keeffe (from NZ; 22), John Flanagan (from NZ; 24), Samuel Stebbins (24; from Boston), Isaac Cole (45; from Boston), Hendrick Guarthor, Enoch Smith (26), Franklin Joseph (22), Jose Postadealwly (?), Myro Disberry (a black sailor; aged 56; born in Middlebury, NJ, but living in Norwich, Conn.). William Merrihue was her skipper in 1837-38, but she was not in Antarctic waters that season.

Mount Talmadge. 78°25' S, 162°34' E. Rising to 2395 m above the steep cliffs at the W side of Koettlitz Névé, 5 km S of Fisher Bastion, in Victoria Land. Named by US-ACAN in 1995, for John B. "Jack" Talmadge, head of the NSF's Polar Coordination and Information section, Office of Polar Programs, 1984-84.

Talmage, Graham Henry. He joined FIDS in 1959, as a diesel electric mechanic, and wintered-over at Halley Bay Station in 1960 and 1961. Known as "Rubbish," for his old clothes, he returned to England in 1962, and with Colin Johnson, went to Australia, where they ran a garage for 5 years.

Ozero Taloe *see* **Istjørna**

Talos Dome. 73°00' S, 158°00' E. A large ice dome rising to 2300 m, to the SW of the Usarp Mountains, and overlying the E margin of the Wilkes Subglacial Basin. Delineated by the SPRI-NSF-TUD airborne radio echo-sounding program, 1967-79, and named after Talos, the giant in Greek mythology. NZ-APC accepted the name on Dec. 3, 1982, and US-ACAN also accepted the name.

Talutis Inlet. 77°15' S, 81°30' W. An ice-filled inlet in the W side of Fowler Ice Rise, it flows SW into the N side of Carlson Inlet, just S of Keeley Ice Rise. Mapped by USGS from imagery provided by NASA Earth Resources Technology Satellite (ERTS-1), in 1973-74, and named by US-ACAN for Lt. William Romans "Bill" Talutis (b. 1942), USN, officer-in-charge of Pole Station in the winter of 1972. UK-APC accepted the name on July 13, 2004.

Ozëra Talye. 70°29' S, 68°12' E. A group of lakes SW of Ritchie Point, in the Prince Charles Mountains. Named by the Russians.

Cape Tama *see* **Tama Point**

Tama Glacier. 68°47' S, 40°22' E. Flows to the sea between Tensoku Rock and Manju Rock, westward of Tama Point, and 38 km E of the Flatvaer Islands, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from surveys and air photos taken by JARE between 1957 and 1969, and named by them on May 1, 1963 as Tama-hyoga (i.e., "pearl glacier"). US-ACAN accepted the name Tama Glacier in 1964. The Norwegians translated it as Perlebreen.

Tama-hyoga *see* **Tama Glacier**

The *Tama Maru 3*. Japanese whale catcher, in Antarctic waters in 1939-40. *See also* **The *Tama Maru II*** (below).

The *Tama Maru II*. Japanese whale catcher, which, with the *Toshi Maru 6* and the *Toshi Maru 8*, was beset in 65°S, 122°E, on March 10, 1939. The total crew of the three vessels numbered 57. They were rescued on March 15, 1939, after crossing 16 km of drifting pack-ice in 12 hours to the *Nisshin Maru 2*. The next season, on Nov. 20, 1939, the *Tama Maru 3* found the *Toshi Maru 8* drifting in 60°12' S, 108°18' E, and the ghost ship was eventually towed to Shimomoseki, Japan, on March 10, 1940.

Tama-misaki *see* **Tama Point**

Tama Point. 68°43' S, 40°26' E. Also called Cape Tama. A rocky crag about 5.5 km NE of Tama Glacier, in the ice edge in the W part of the Prince Olav Coast of Queen Maud Land. Mapped from surveys and air photos taken by JARE between 1957 and 1969, plotted from these efforts by Japanese cartographers in 68°43' S,

40°29' E, and named by them on Oct. 1, 1962 as Tama-misaki (i.e., "pearl point"). US-ACAN accepted the name Tama Point in 1964. It has since been re-plotted. The Norwegians translated it as Perleknauten.

Tamarus Valley. 80°10' S, 156°20' E. An ice-free valley, S of Sabrina Ridge, and 4 km NE of Mount Henderson, in the Britannia Range. Named by Mike Selby's 1978-79 University of Waikato (NZ) field party here, in association with Britannia. Tamarus was the name used by the Romans in Britain for the River Tamar. NZ-APC accepted the name, and US-ACAN followed suit.

Cabo Tambor. 67°09' S, 67°40' W. A cape on the NE side of Sorge Island, on the Loubet Coast, on the W coast of Graham Land. Named by the Argentines.

Gora Tambovskaja *see* **Tambovskaya Peak**

Tambovskajatoppen *see* **Tambovskaya Peak**

Tambovskaya Peak. 71°41' S, 12°20' E. Rising to 2750 m, it is the central peak of Gråkammen Ridge, between Parizhskaya Kommuna Glacier and Vestre Svarthornbreen, in the southernmost part of the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the USSR in 1966, as Gora Tambovskaja, for the city of Tambov. US-ACAN accepted the translated name Tambovskaya Peak in 1970. The Norwegians call it Tambovskajatoppen (which means the same thing).

Tammann Peaks. 66°57' S, 66°21' W. A group of peaks rising to about 1230 m, 6 km SE of Orford Cliff, and 6 km E of Lallemand Fjord, on the Loubet Coast, on the E coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W in the same season, and named by UK-APC on Sept. 23, 1960, for Gustav Heinrich Johann Apollon Tammann (1861-1938), Russian chemist who, between 1900 and 1935, made studies in the physical properties of ice. US-ACAN accepted the name in 1965.

Tamseis Camp. 81°39' S, 122°35' E. A USARP hut, full name Transantarctic Mountains Seismic Station. It consisted of an 8' × 12' Jamesway hut and a couple of tents, and housed 8 geologists from the department of earth and planetary sciences, at Washington University, there over a 3-year period, to discover the origins of the huge mountain range. The experiment ran for three successive summers (beginning in November of each year)—2000-01, 2001-02, and 2002-03, the camp being winterized at the end of each season. Doug Wiens led the operation. During the 2003-04 season, the camp was completely removed, and shipped back to McMurdo.

Lednik Taneeva *see* **Hushen Glacier**

Pik Tanfil'eva. 71°10' S, 66°09' E. One of 2 peaks (*see also* **Gora Dokuchaeva**) due N of Mount Gleeson, in the Prince Charles Mountains. Named by the Russians.

The *Tangaroa*. A ship that helped relieve Showa Station in 2001-02, 2002-03, and 2003-04.

Tange Promontory. 67°27' S, 46°45' E. An ice-covered peninsula forming the W flank of Casey Bay, on the coast of Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in Nov. 1956, and again in Feb. 1957 by SovAE 1956-57 (they plotted it in 67°40' S, 46°40' E). Visited in Feb. 1961 by an ANARE expedition on the *Thala Dan*, led by Don Styles. Named by ANCA on July 4, 1961, for Sir Arthur Harold Tange (1914-2001), secretary of the Australian Department of External Affairs, 1954-65. US-ACAN accepted the name in 1974.

Tangekilen *see* **Tangekilen Bay**

Tangekilen Bay. 69°58' S, 26°20' E. An indentation of the ice shelf northward of the Sør Rondane Mountains, 70 km ENE of Breid Bay, on the Princess Ragnhild Coast of Queen Maud Land. First mapped by Norwegian cartographers in 1946, from air photos taken during LCE 1936-37, and named by them as Tangekilen (i.e., "the tongue bay"), for the large Kiletangen Ice Tongue just to the east. US-ACAN accepted the name Tangekilen Bay in 1970.

Tangent Island *see* **Prevot Island**

Isla Tangente *see* **Prevot Island**

Tangholmane *see* **Hyslop Islands**

Tanglefoot Peak. 67°21' S, 67°33' W. A prominent rocky peak rising to about 650 m, at the E end of Haslam Heights, 4 km E of Wyatt Island, on the W part of Arrowsmith Peninsula, at Laubeuf Fjord, on the Loubet Coast, on the W coast of Graham Land. Probably discovered in 1909 by FrAE 1908-10, who roughly charted the area that year, but, if so, not named by them. Surveyed by Fids from Base E in Sept. 1948, and named by them for the broken ridge extending S and SE from the peak. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1961.

Tangøy *see* **Ranvik Island**

Tangra Mountains. 62°40' S, 60°06' W. A mountain range, 7 km wide, and 30 km long in a WSW-ENE direction, between Barnard Point and Renier Point, in the E part of Livingston Island, in the South Shetlands. It is bounded to the N by Moon Bay and Huron Glacier, to the NW by Huntress Glacier, to the W by False Bay, and to the SE by the Bransfield Strait. Mapped by the British in 1968. In 1991 the Spanish Army Geographic Service mapped the westernmost portion in detail, and the Bulgarians also mapped the mountains in 1995-96. Named by the Bulgarians on Dec. 4, 2001, for Tangra, the Bulgarian mythological supreme god, the equivalent of Jehovah, Jove, Zeus, etc.

Tangren Shan. 77°44' S, 76°00' E. A very isolated hill in the interior of Mac. Robertson Land. Named by the Chinese.

Tangskjera *see* **Tongue Rock**

Taniwha Cove. 80°30' S, 160°40' E. A U-shaped cove within Couzens Bay, at the NE end of the Churchill Mountains. Its entrance is bounded at the E by Senia Point, and Mount Tadpole rises above its W shores. Named by NZ-APC on Feb. 27, 2003, after a Maori mythological creature of the deep. US-ACAN accepted the name later in 2003.

Tank *see* **Tanks**

Tankers. For a description of these vessels *see* **Cargo ships**, and **Ships**.

Tankobu Peak. 69°24' S, 39°48' E. A bare rock hill rising to 155 m, it is the northernmost mountain in the Byvågåsane Peaks, on the E shore of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos in 1946 by Norwegian cartographers. Re-mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them on Oct. 1, 1962, as Tankobu-yama (i.e., "craggy peak"). US-ACAN accepted the name Tankobu Peak. The Norwegians call it Kaunen (i.e., "the boil"). The SCAR gazetteer says that the Russians call it Tankobu-san, but this is doubtful at best.

Tankobu-san *see* **Tankobu Peak**

Tankobu-yama *see* **Tankobu Peak**

[1]**Tanks**. Or canvas tanks. Canvas hold-alls, containing food-bags, and strapped to a sledge.

[2]**Tanks**. Byrd brought Army MZA-2 tanks (tracked vehicles) on USAS 1939-41. West Base and East Base both had one. In order to lighten them they had to be stripped of their armor. They functioned well.

Tanna *see* **Tanna Peak**

Tanna Peak. 72°20' S, 1°20' E. At the E side of the mouth of Rogstad Glacier, W of Vendehø Heights, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tanna (i.e., "the tooth"). US-ACAN accepted the name Tanna Peak in 1966.

Cap Tannaron *see* **Thanaron Point**

Tanngarden *see* **Tanngarden Peaks**

Tanngarden Peaks. 72°02' S, 23°17' E. A row of peaks, about 13 km long, and rising to 2350 m, just N of Viking Heights and Mount Widerøe, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Tanngarden (i.e., "the row of teeth"). US-ACAN accepted the name Tanngarden Peaks in 1966.

Tanno, Zensaku. b. 1871, Japan. English-speaking 1st mate on the *Kainan Maru* during the first year of Shirase's Japanese South Polar Expedition of 1910-12. He was replaced for the 2nd half by former 2nd mate Tomoji Tsuchiya.

Tannvatnet *see* **Zub Lake**

Tantalus Bluffs. 84°55' S, 168°25' W. High rock bluffs forming the NE shoulder of Mount Ferguson, overlooking the W side of the terminus

of the Liv Glacier, near that glacier's entry into the Ross Ice Shelf. So named by the Southern Party of NZGSAE 1963-64 because they (the bluffs, that is) looked to be composed of very interesting rocks, but could not be reached. In an attempt to penetrate the crevasse field NE of the bluffs, one of the geologists was injured in a crevasse accident. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Tantalus Peak. 73°53' S, 161°21' E. Rising to 2220 m, it is the highest peak along the S wall at the head of Priestley Glacier, in Victoria Land. So named by the Southern Party of NZGSAE 1962-63 because they (the geologists, that is) failed to establish a station here due to steep ice. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Tanton, Raymond James "Ray." b. 1927, West Ashford, Kent, but grew up partly in Maidstone, son of Robert B. Tanton and his wife Esther E. Martin. He was working at Battersea Power Station when he joined FIDS in 1952, and became the diesel electric mechanic who wintered-over at Signy Island Station in 1953, and at Base F in 1954. A mountain climber and excellent photographer. He died on Feb. 12, 1979.

Tanxianjia Jiao. 69°22' S, 76°21' E. A cape in the Larsemann Hills. Named by the Chinese.

The *Taonui*. A 15-ton, 44-foot Canadian aluminum sloop, skippered by Tony Gooch, which visited the South Shetlands and the Antarctic Peninsula, in 1996-97.

Tapia, Augusto. b. Buenos Aires. Geologist who wintered-over at Órcadas Station in 1920. On the morning of June 6 he went out to take the temperature, and fell through the ice between two solid chunks. He only had his hands to get him out, but he made it. However, he was virtually dead. The others found him an hour and a half later. His hands had become hopelessly gangrenous, and he had to have 8 of his fingers removed by base leader Willi Kopelmann, using nail clippers and no anesthetic, and only a Swedish medical treatise to guide the surgeon (Kopelmann was not a surgeon, actually, nowhere near it. However, there was no doctor at the base). All Tapia had left were two thumbs. He married Cecilia Marandet, and died in 1966.

Tapley Mountains. 85°45' S, 149°00' W. A range of mountains of triangular platform, extending for 57 km in an E-W direction, overlooking the head of the Ross Ice Shelf, and marked by a base of about 28 km which fronts on the E side of Scott Glacier, between Albanus Glacier and Leverett Glacier, in the Queen Maud Mountains. Discovered in Dec. 1929 by Larry Gould's Southern Geological Party during ByrdAE 1928-30 (the New Zealanders say by Quin Blackburn's geological party of Dec. 1934, during ByrdAE 1933-35), and named by Byrd for Harold Livingstone Tapley (1875-1932), former member of parliament in NZ and ex-mayor of Dunedin, who took over as the expedition's NZ business manager when Dick Brophy quit in 1929. US-ACAN accepted the name, and NZ-APC followed suit.

Taplin, Michael Harry "Mike." b. 1936, Bilston, Staffs, son of Harry Rollason Taplin and his wife Constance Ethel Felton. He joined FIDS in 1959, as a meteorologist, and wintered-over at Halley Bay Station in 1960 and 1961. In 1963, in Bilston, he married Patricia M. Dunn, and they settled in Wolverhampton.

Tapp, Ronald Leslie "Ronnie." b. 1929, Worthing, Sussex, son of Edward A. Tapp and his wife Victoria A. Large. He trained as a dental technician, but went to work for the Met Office, which is where he was when he joined FIDS in 1953, as a meteorologist, and wintered-over at Base G in 1954, and at Base F in 1956 and 1957. In 1958, in Worthing, he married Janet Power, and they lived in Windsor.

Tapsell, Thomas James. Captain of the *Brisk*, in Antarctic waters in 1849-50.

Tapsell Foreland. 70°52' S, 167°20' E. A broad, mostly snow-covered foreland, projecting into the sea between Yule Bay and Smith Inlet, in northern Victoria Land. Much of the central portion of this feature rises to over 800 m. Named by NZ-APC in 1969, for Captain Tapsell. US-ACAN accepted the name in 1970.

Lake Tarachine. 69°01' S, 39°35' E. Also spelled as Lake Taratine. A small lake between Lake Kamome and Lake Minami, in the S part of East Ongul Island. Surveyed from the ground and photographed aerially by JARE 1957, and mapped by Japanese cartographers from these efforts. They named it Taratine-ike on May 1, 1963 (name means "mother pond"). US-ACAN accepted the name Lake Tarachine in 1968.

Tarakäkä Peak. 77°30' S, 169°09' E. A peak, rising to about 700 m, about 2 km ENE of Ainley Peak, in the Kyle Hills of Ross Island. Named by NZ-APC on Feb. 20, 2001, in keeping with the practice of naming several features in this area after winds with Maori names. US-ACAN accepted the name later in 2001.

Tarakanov Ridge. 82°19' S, 159°24' E. A prominent ridge extending from the E side of the Cobham Range, between Gray Glacier and Prince Philip Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Gennadiy "Gena" Tarakanov (b. Dec. 7, 1923, Astrakhan. d. July 30, 2008, Leningrad), USSR exchange meteorologist who wintered-over at McMurdo in 1963. ANCA accepted the name.

Tarakchiev Point. 63°49' S, 59°12' W. A point, 4.4 km SSW of Cape Kater, and 5 km NE of Wennersgaard Point, it forms the W extremity of Whittle Peninsula, on the Davis Coast, on the W coast of Graham Land. Named by the Bulgarians on Nov. 23, 2009, for Prodan Tarakchiev (1885-1969). *See* **Milkov Point**.

Mount Tararua. 72°08' S, 166°14' E. A prominent peak, rising to 2550 m, 5 km NE of Head Peak, and on the W side of the Pterodactyl Massif, it surmounts the SW part of the Monteath Hills, in the Victory Mountains, at the head of Pearl Harbor Glacier. Climbed on Jan. 3, 1963, by the Southern Party of the New Zealand Federated Mountain Clubs Antarctic Expedition of 1962-63, and named by them for their parent mountain club, the Tararua Tramping Club of Wellington. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Lake Taratine *see* **Lake Tarachine**

Taratine-ike *see* **Lake Tarachine**

Tarbuck Crag. 68°35' S, 78°12' E. One of a group of 3 high points, it rises to 140 m with steep sides with cliffs to the S and E, 1.3 km SW of Club Lake, and 1.4 km S of Deep Lake, in the Vestfold Hills. It was the terminal tellurometer station of the 1969 ANARE Prince Charles Mountains Survey. Named by ANCA on May 18, 1971, for John W. Tarbuck, cook at Wilkes Station in 1965, and at Davis Station in 1969, and expedition assistant with ANARE at Wilkes Station in 1967. US-ACAN accepted the name in 1973.

Tardigrades. Also called water bears, these are microfauna of Antarctica (*see also* **Fauna**).

Tardy de Montravel, Louis-François-Marie. b. Sept. 28, 1811, Vincennes, France. Ensign on the *Zélée* during FrAE 1837-40. He was promoted to lieutenant on Aug. 20, 1839. He was governor of New Caledonia from Jan. 1, 1854 to Oct. 31, 1854, and, on May 15, 1859 Rear Admiral Tardy de Montravel became governor of French Guiana. On May 1, 1864, fatigued after a long voyage, he left Cayenne on May 1, 1864, for France, and died at his villa in Elebeuf on Oct. 4, 1864.

Target Hill. 66°00' S, 62°57' W. A prominent hill, rising to 1010 m above the level of the Larsen Ice Shelf, 10 km W of Mount Fritsche, on the S flank of Leppard Glacier, on the Oscar II Coast, on the E coast of Graham Land. It was the most westerly point reached by a FIDS survey party from Base D in Sept. 1955, and was named descriptively by them as West End Nunatak. Major Bill Anderson was part of that survey, and the feature appears as such on his 1957 map. However, on Sept. 4, 1957, UK-APC renamed it Target Hill because, being visible from quite a distance, it provided a target for the survey party from which to steer from the summit of Richthofen Pass (which lies to the E). US-ACAN accepted the new name in 1963.

Targovishte Glacier. 62°33' S, 59°39' W. A glacier flowing for 700 m in an E-W direction and then 1.6 km in a N-S direction into Bransfield Strait E of Sartorius Point, it is bounded by Viskyar Ridge to the W, and Vratsa Peak to the NE, on Greenwich Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the town of Targovishte, in northeastern Bulgaria.

Tarn Flat. 75°04' S, 162°30' E. An extensive flat rock area, to the E of Mount Gerlache, and adjoining Backstairs Passage Glacier, behind Terra Nova Bay, in northern Victoria Land. Named Tarn Flats by the Southern Party of NZGSAE 1962-63 because of the numerous small lakes or tarns found on this exposure. NZ-APC accepted the name, but in the singular.

Tarn Flats *see* **Tarn Flat**

Tarn Valley. 77°34' S, 163°08' E. An elevated, ice-free valley, 2.5 km long, at the N side of the lower Taylor Valley, N of Mount Falconer, in

Victoria Land. Tarn Valley contains 4 tarns, which were visited by a field party of VUWAE 1965-66, and named by the party's leader, Edward D. Ghent, for four American universities — Harvard Tarn, Yale Tarn, Princeton Tarn, and Penn Tarn. In 1997 US-ACAN named the whole valley in association with these tarns.

Tårnet *see* **Tårnet Pinnacle**

Tårnet Pinnacle. 72°01' S, 25°34' E. A prominent rock pinnacle (the Norwegians describe it as a crag) on the NW side of Mount Bergersen, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Tårnet (i.e., "the tower"). US-ACAN accepted the name Tårnet Pinnacle in 1966.

Tarnica. 62°11' S, 58°28' W. A hill in the area of Ecology Glacier, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles for Tarnica Mountain, in the Bieszczady Mountains, in the West Carpathians, in Poland.

Tarns. A tarn is a small lake. There are very few in Antarctica. In the Australian sector, the Vestfold Hills and the Larsemann Hills, there are Deep Lake Tarn, Perched Rock Tarn, Station Tarn, Tassie Tarn, and Twin Tarns. In Victoria Land there is Tarn Valley, which contains Yale Tarn, Harvard Tarn, Princeton Tarn, and Penn Tarn. Then the South Shetlands and South Orkneys have Sea Lion Tarn and Thomas Tarn.

Tarnovo Ice Piedmont. 62°45' S, 60°14' W. The ice piedmont next ENE of Barnard Point, on Rozhen Peninsula, in the E part of Livingston Island, in the South Shetlands. It flows southeastward into Bransfield Strait, extends for 3.5 km in an E-W direction and 2.5 km in a N-S direction, therefore having an area of about 6 sq km, and is bounded to the N and W by the southernmost offshoots of Mount Friesland. Mapped by the British in 1968. Named by the Bulgarians on Oct. 29, 1996, as Lednik Tarnovo (i.e., "Tarnovo glacier"), for the town of Tarnovo, in central northern Bulgaria, capital of the medieval Second Bulgarian Kingdom. US-ACAN accepted the translated name in 1997.

Taro and Jiro. When Nagata led the first Japanese team to Antarctica, in 1956-57 (JARE 1), and wintered-over at Showa Station in 1957, 20 sledge dogs did too. When the *Soya* returned in Feb. 1958 to relieve the team and lift them off the ice, she could not approach land because of the ice and weather, so the small station plane was used to ferry passengers and equipment to the *Soya*. It took 10 trips, and it was decided not to land the replacement team after all, and JARE 2 was abandoned. The dogs had to be left behind. In Jan. 1959, a year later, the Japanese returned for JARE 3, and re-occupied Showa Station. They found, to their amazement, that two of the dogs were alive and well — Taro and Jiro (they had been named for the only two dogs to survive Shirase's expedition of 1910-12, which is an odd coincidence). These two modern survivors were Karafuto sledge dogs from Sakhalin Island, in northern Japan. Apparently they had not eaten the other 18 dogs, and it is a mystery how they survived so well. They became real heroes in Japan, and a movie (*Antarctica* — q.v.) was made of their story in the early 1980s, and the story has also inspired other movies. Statues were built in Tokyo of the 2 dogs, they are on postage stamps, and the dogs themselves are in museums.

Mount Tarr. 70°25' S, 65°46' E. About 2.5 km ESE of Mount Creighton, and about 2 km W of Mount Gardner, in the Porthos Range of the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956. Named by ANCA for Frank Tarr, aircraft engineer with the ANARE Prince Charles Mountains Survey Party of 1969. US-ACAN accepted the name in 1971.

Tarr, Laurence Walter "Wally." b. 1924, Hamilton, NZ. He joined the Air Training Corps, and then, in 1943, the RNZAF, becoming a sergeant engine fitter in 1945. He was in Fiji, 1945-49, and Cyprus, 1952-54. He flew as engine fitter with John Claydon on BCTAE 1955-57, wintering-over at Scott Base in 1957. He became an officer, was posted to the USA, which is where he met his wife, and retired from the Air Force in 1976.

Tarr Nunatak. 77°29' S, 166°53' E. Rising to about 1700 m, on the NW slope of Mount Erebus, 2 km SSW of Abbott Peak, on Ross Island. Named by NZ-APC on Feb. 20, 2001, for Wally Tarr. US-ACAN accepted the name later in, 2001.

Caleta Tarragona *see* **Caleta Aldea**, **Mackellar Inlet**

The *Tartar*. A snow of 183 tons, an American vessel taken as a British prize in 1808. In 1821, she was bought by Messrs Davis, Gale, Whitmore, Hill, and Todrig, and converted into a London sealing brig. Capt. Charles Pottinger was appointed skipper on July 4, 1821, and the *Tartar* left London on July 13, 1821, and left Deal on July 23, 1821, bound for the South Shetlands 1821-22 sealing season. She was also in at South Georgia. She left southern waters in company with the *George IV*, and, on March 20, 1822, on the way to South America, the two ships were hit by lightning during a storm, and the *Tartar*'s mast was damaged. By April 15, 1822, the *Tartar* was in at Bahia de Todos los Santos, in Brazil. She left there, bound for Rio, and there was something of a mutiny, certainly a desertion, when 7 of Pottinger's crew and 12 others took the ship's launch and set out to sea, presumably with piracy on their minds. The *Tartar* had to pull into Rio on Aug. 30, 1822, and was sold there on Oct. 8, 1823.

Tartar Island *see* **Tartar Point**

Tartar Point. 61°56' S, 58°26' W. At first this was thought to be an island (because it was an island), 0.5 km long, lying 0.8 km NW of Round Point, off the N coast of King George Island, in the South Shetlands. In 1947 the Argentines called it, erroneously, Isla Owen, confusing it with Owen Island. Photographed aerially by FIDASE in 1956-57. It was named by UK-APC on Sept. 23, 1960, as Tartar Island, for the *Tartar*, and plotted by them in 61°56' S, 58°29' W. US-ACAN accepted that name later in 1960. In the early 1980s, the Poles reported that it had become joined to Round Point, on the mainland, by a gravel spit, and therefore was no longer an island. It appears on Krzysztof Birkenmajer's 1982 map as Przyladek Tartaru (i.e., "Tartar point"), and, as such, on another Polish map of 1984, and that was the name accepted by the Poles in 1984. BAS also found it to be a point, not an island, and UK-APC accepted the name Tartar Point in 2008, which is when the British replotted it. US-ACAN accepted the change of name.

Tasch Peak. 76°40' S, 118°03' W. A rocky peak in the SE portion of Mount Rees, in the Crary Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Paul Tasch, USARP geologist in the Sentinel Range and Ohio Range in 1966-67, and at Coalsack Bluff in 1969-70.

Punta Tashtego *see* **Tashtego Point**

Tashtego Point. 65°44' S, 62°09' W. A rocky point marking the E end of the ridge at the S side of Stubb Glacier, and also marking the NW entrance point of Scar Inlet, on the Oscar II Coast, on the E coast of Graham Land. Surveyed and photographed by Fids from Base D in Nov. 1947. Named by UK-APC on Sept. 4, 1957, for the *Moby Dick* character. It appears on a British chart of 1961. US-ACAN accepted the name in 1963. The Argentines call it Punta Tashtego.

Task Force 39. The U.S. naval force that put OpW 1947-48 into effect. Created on Sept. 15, 1947, as part of the U.S. Pacific Fleet, it comprised the icebreakers *Edisto* and *Burton Island*, and and was led by Gerald L. Ketchum. Dr. Earl T. Apfel was the Task Force geologist.

Task Force 43. U.S. Navy force created on Feb. 1, 1955, within the U.S. Atlantic Fleet, to "implement the planned program in the Antarctic by conducting operations during the period 1954-59 [sic] and subsequent thereto as directed." In short, it backed up the scientists during OpDF. It set up bases and supplied and maintained them, for the benefit of the U.S. scientific personnel. Task Force 43, under the command of Rear Adm. George Dufek and his 2nd-in-command Gerald Ketchum, consisted (that first year, anyway) of 7 ships — the *Glacier*, the *Edisto*, the *Eastwind*, the *Greenville Victory*, the *Nespelen*, the *Arneb*, and the *Wyandot*, and two YOGs (see *YOG-34* and *YOG-70*). The vanguard arrived at McMurdo Sound on Dec. 17, 1955, and did the most astonishing job of opening up the hitherto practically unknown and hostile continent of Antarctica. The force comprised not only military personnel (although this formed the lion's share of the task force), but also scientific. Its air arm was VX-6 (q.v.), formed on Jan. 17, 1955, and consisting of 20 planes. Admiral Tyree took over from Dufek, and for subsequent commanders of Task Force 43 *see* **Operation Deep Freeze**. On July 1, 1974 Task Force 43 became Task Force 199, under the administrative command of the Third Fleet.

Task Force 43.7. Two ships, the *Staten Island* and the *Wyandot*, formed this force, under the

command of Capt. Edwin McDonald, to establish Ellsworth station in the summer of 1956-57, for IGY. *See* **Ellsworth Station** for details.

Task Force 68. Established in 1946, this was the U.S. Naval force which executed OpHJ 1946-47 (q.v. for details).

Task Force 199. On July 1, 1974 this U.S. Naval force replaced Task Force 43 as the USA's military support of Antarctic activity. Commanders: Capt. Eugene W. Van Reeth (July 1, 1974-June 4, 1976); Capt. Claude H. Nordhill (June 4, 1976-?); Capt. Darrell E. Westbrook, Jr. (?-June 24, 1980; Capt. Jare M. Pearigen (June 24, 1980-July 26, 1982); Capt. Brian H. Shoemaker (July 26, 1982-Aug. 16, 1985); Capt. David A. Srite (Aug. 16, 1985-?).

Tasman, S. *see* **Spaulding, Tasman**

Tasman Ridge. 78°02' S, 163°03' E. A ridge, 5 km long, 16 km NE of Mount Hooker, it is bounded on the NW by Ball Glacier and on the SE by Hooker Glacier, descending into Blue Glacier, in the Royal Society Range of Victoria Land. Named by NZ-APC in 1994, in association with other names from New Zealand's Mount Cook National Park that are found in this area. US-ACAN accepted the name in 1995.

Tasman Rip. 61°29' S, 55°58' W. A marine channel in the South Shetlands, running E-W between O'Brien Island and Eadie Island, and characterized by strong tidal rips and whirlpools. Crossed on Jan. 22, 1977, by the British Joint Services Expedition to Elephant Island, and named by them as The Rip. It appears as such on Chris Furse's expedition map of 1979. On June 11, 1980, UK-APC renamed it for the Tasman canoes used in the crossing. US-ACAN accepted the new name. It was last plotted in 2008, by the British.

Tassie Lake. 68°32' S, 78°13' E. The more westerly of 2 small lakes NW of Club Lake, on the route between Davis Station and Platcha, in the Vestfold Hils. Named by ANCA. The other lake is Trident Lake.

Tassie Tarn. 69°25' S, 76°04' E. A very small, triangular lake, in a steep-sided valley near the top of a range of hills, about 400 m S of Johnston Fjord, on Stornes Peninsula, in the Larsemann Hills. It resembles in shape the island state of Tasmania, hence the name given by ANCA on Nov. 24, 1987.

Tate Glacier. 85°54' S, 160°50' W. A tributary glacier on the S side of Thomas Spur, flowing E, and merging with Moffett Glacier, just E of the spur where the two glaciers enter the larger Amundsen Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Robert G. Tate, geomagnetist and seismologist with the U.S. Coast and Geodetic Survey, who wintered-over at Pole Station in 1964.

Tate Peak. 78°38' S, 159°31' E. A sharp peak, rising to 1885 m, 3 km (the Australians say 2 km) E of Escalade Peak, at the S side of Skelton Névé. Plotted from USN air photos. Named by US-ACAN in 1965, for Lt. T.N. Tate, USN, public works officer at McMurdo in 1963. ANCA accepted the name.

Tate Rocks. 72°40' S, 74°33' E. Three small nunataks, 11 km NNW of Mason Peaks, and about 31 km NW of Mount Harding, in the Grove Mountains. Plotted by Australian cartographers from ANARE air photos taken between 1956 and 1960. Named by ANCA for Kenneth A. "Ken" Tate, radio officer at Mawson Station for the winter of 1962. US-ACAN accepted the name in 1967.

Tatimati Point *see* **Tachimachi Point**

Tatimati-misaki *see* **Tachimachi Point**

Nunataki Tatishcheva *see* **Lawrence Hills**

Tatul Island. 62°20' S, 59°32' W. A triangular island, 350 m long by 200 m wide, 120 m off the N coast of Robert Island, and 950 m WNW of Newell Point, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the settlement of Tatul, adjacent to the site of a major Thracian shrine, in the Rhodope Mountains of Bulgaria.

Tatur Hills. 62°05' S, 57°57' W. A group of hills rising to an elevation of between 50 and 60 m above sea level, in the area of Turret Point, at the E end of King George Bay, on the S coast of King George Island, in the South Shetlands. Named by the Poles for Andrzej Tatur, director of the department of Antarctic biology.

Islotes Tau *see* **Tau Islands**

Tau Island *see* **Tau Islands**

Tau Islands. 64°18' S, 62°55' W. A small group of 3 islands with offlying rocks, immediately off the NE extremity of Eta Island, in the Melchior Islands, in Dallmann Bay, in the Palmer Archipelago. Surveyed by ArgAE 1942, ArgAE 1943, and ArgAE 1946, the name Islotes Tau first appears on the 1946 chart prepared by the last of those 3 expeditions, named for the Greek letter. The name Tau Islands appears on a British chart of 1947, but on one of their 1948 charts, and on one of their 1950 charts, it appears as Tau Islets, and that last name was the one accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. The feature appears on a 1953 Argentine chart as Islotes Trío, and that was the name accepted by the 1970 Argentine gazetteer. On July 7, 1959, UK-APC changed the name to Tau Islands, and US-ACAN followed suit in 1963. The group was photographed aerially by USN in 1969. The 1974 Chilean gazetteer accepted the name Islotes Tau. On a 1974 BAS chart, the main island appears as Tau Island.

Tau Islets *see* **Tau Islands**

Taurus Nunataks. 70°52' S, 66°23' W. A line of 3 nunataks, running E-W, and rising to about 1150 m, with only the outer 2 of any prominence, 39 km ENE of Gurney Point and the Pegasus Mountains, in Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. They applied the name St Valentine's to the vicinity of these nunataks, and it appears as such on a 1973 British map. Re-named by UK-APC on July 21, 1976, for the constellation. US-ACAN accepted the name later in 1976, and it appears as such on the 1979 USGS sketch map of the N part of Palmer Land.

Tauziet, Jean. b. Aug. 18, 1805, Pimes, France. Able seaman on the *Astrolabe* during FrAE 1837-42.

Tavera, Constantine. b. Dec. 19, 1810, Ajaccio, Corsica. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Estrecho Tay *see* **Firth of Tay** (below)

Firth of Tay. 63°22' S, 55°45' W. A sound, 20 km long and 10 km wide, extending in a NW-SE direction between the NE point of Dundee Island and the SE point of Joinville Island. It merges to the NW with Active Sound, forming the E entrance to that sound, and with which it completes the separation of the two aforementioned islands. Discovered and charted from the *Active* on Jan. 7, 1893, by Thomas Robertson, during DWE 1892-93, and named by him as Firth of Tay, for the Scottish firth of that name. It appears as such on his 1893 chart. On Dr. Donald's chart, however, it appears as Tay Firth. It appears as Firth of Tay on a British chart of 1937, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN in 1956. It appears as such on a British chart of 1962. From at least 1908, the Argentines were calling it Seno de Tay (which means approximately the same thing), but on one of their 1949 charts it appears as Estrecho de Tay, and on a 1953 chart as Estrecho Tay. That last name was the one accepted by the Argentine gazetteer of 1970. Estrecho is better than seno. The Chileans also use the name Estrecho Tay. It was surveyed by Fids from Base D in 1953-54, and again between 1958 and 1961.

Tay Firth *see* **Firth of Tay** (above)

Tay Head. 63°21' S, 55°34' W. A rocky headland, 10 km E of Mount Alexander, it projects into the N side of the Firth of Tay on the S coast of Joinville Island. Surveyed by Fids from Base D in 1953-54, and again between 1958 and 1961. Named by UK-APC on Feb. 12, 1964, in association with the firth. US-ACAN accepted the name later that year. One of the Argentine Antarctic expeditions of the 1970s gave it the name Cabo Castex, for Maj. Gen. Pedro Castex Lainford, chief of the Argentine Air Force, 1945-46.

Taygete Cone. 72°41' S, 165°34' E. An extinct volcanic cone NE of Alcyone Cone, in the N part of The Pleiades, in Victoria Land. Named by NZ-APC for Taygete, one of the stars in the Pleaiades. US-ACAN accepted the name.

Monte Taylor *see* **Mount Taylor**

Mount Taylor. 63°26' S, 57°08' W. A large, flat-topped mountain, rising to 987 m, with steep cliffs on the NE side, at the head of Arena Glacier, 4 km WSW of the head of Hope Bay, at the NE end of the Antarctic Peninsula. Discovered in 1902 by SwedAE 1901-04. Charted by Fids from Base D in 1946, and named by them in 1948 for Andrew Taylor. It appears on a British chart of 1949, and was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1951 as Monte Taylor, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Surveyed by FIDS in 1955.

Punta Taylor *see* **Taylor Point**

Taylor, Andrew "Andy." b. Nov. 2, 1907, Edinburgh. He emigrated to Canada in 1911, graduated from the University of Manitoba in 1931, in civil engineering, and in 1933 became Dominion surveyor, moving to the town of Flin Flon, Manitoba, where he became town engineer, and married Martha Porter in 1939. He joined the Royal Canadian Engineers in 1940 and that year went back to the UK. In 1943, responding to a demand for surveyors with cold weather experience, he was seconded to the RN as part of Operation Tabarin, spending the winter of 1944 as surveyor at Port Lockroy Station, and took over from Jimmy Marr as leader of Phase II of the operation, 1944-45 (one of the first Canadians ever to lead an Antarctic expedition). By virtue of his being in place when FIDS came into existence in 1945 as a successor to Tabarin, Taylor became the first FIDS leader in 1945, leading Base D (at Hope Bay) that winter. On his assuming command, he had been promoted to major, but no one thought to tell the Canadian Army, and his pay suffered as a result. Also, no one told him he'd won the Polar Medal until years later, when an ex-Fid mentioned it to him casually. In 1946 he returned to the Canadian Army, and did work in the Arctic. He was also part of Task Force 68, during OpHJ 1946-47. He retired in 1952 and became a private contractor. His wife died of cancer in 1963, and in 1965 he married Pauline Hansen. From 1970 to 1978 he owned an antiquarian bookstore in Winnipeg, specializing in polar regions. His wife died of cancer in 1979, and he died on Oct. 8, 1993.

Taylor, Ashton *see* **USEE 1838-42**

Taylor, Bernard "Bernie." b. Nov. 21, 1924. Raised in Bradford, Yorks. He worked in Ecuador, and was working for the Ministry of Defence, as a wireless operator monitoring the Russians, when he joined FIDS in 1952, as a radio operator (one of the best, as it turned out), wintering-over at Base B in 1953, and at Port Lockroy Station in 1955. On Feb. 27, 1956, he left Port Lockroy on the *Shackleton*.

Taylor, Brian James. b. March 20, 1937, Cardiff, son of decorator Frank Harries Taylor and his wife Elsie Maud Jones. He graduated from Swansea in 1959, joined FIDS, and went south on the *Kista Dan*, in Dec. 1959, as a geologist, bound for Stonington Island and then Fossil Bluff Station, which was due to be set up that year, and where he was scheduled to winter-over. However, the pack-ice was so bad they couldn't get in, and the *Kista Dan* was beset, having to be rescued by the *Glacier*. So, Taylor was then transferred to Base Y, but the last flight in from the ship to the shore didn't take off, so Vivian Fuchs, who was on board the ship, asked Taylor if he wanted to go to South Georgia instead. Taylor agreed, but the idea was squelched by the governor of the Falkland Islands, so Taylor went back to the UK. Late in 1960 he set out again from the UK on the *John Biscoe*, and this time succeeded in wintering-over at Fossil Bluff, in 1961 and 1962. A professional, he worked 10 to 12 hours every day, no matter what the weather, maximizing his opportunity for geological studies. In March 1963 the *John Biscoe* came to pick him up (a plane flew him from shore to ship), and he returned to the UK in May 1963, going to work at the BAS Geology Unit at Birmingham University, from where he got his PhD in 1966, for his thesis on the stratigraphy and paleontology of the Aptian of the central east coast of Alexander Island. He married Judith Hackett in 1965. In 1973 he proposed a mini BAS expedition, to finish the work he had started in Antarctica, but BAS (i.e., Ray Adie) was prepared to give him only a year, far too little time to go there, work, come back, and write up his report. So, under a cloud, he left FIDS in Dec. 1973. He was then seconded to the Foreign & Commonwealth Office, and attached to the UK delegation of a UN body making new laws for the sea. He was at 3 international conferences, and then went to work for the British Geological Survey, from which organization he retired to Swansea in 1997.

Taylor, Daniel. Captain of the *Caroline*, 1821-22. He was still her skipper when she foundered, at Macquarie Island, in 1825. *See* **The *Caroline***, for more details.

Taylor, David. b. May 7, 1915, Ryles Mill, Ga., son of Nathaniel "Nat" Taylor and his wife Lady Mae. Nat had worked in a saw mill in Ryles Mill, but, with a growing family, had taken a farm near that town, on Sand Hill Road, next to his parents' farm (Bob and Rachel Taylor), and that is where David was born, the sixth of nine children. In the 1920s the family moved to Rockwood, Tenn., where they all got jobs working for a private family. David joined the U.S. Navy, and served as a mess attendant 2nd class on the *Bear*, during USAS 1939-41, one of only four blacks (with George Gibbs, Joseph Littleton, and Cyrus Napier) on the expedition. For the 2nd half of the expedition, he was promoted to 1st class mess attendant. He died in Denmark, Tenn., in April 1971. His mother, Lady Mae, died in Rockwood, in 1988, aged 103.

Taylor, G. On Dec. 24, 1912, he signed on to the *Aurora* as an able seaman, at £5 per month, for the 2nd Antarctic voyage during AAE 1911-14. He left the expedition at Lyttelton, NZ, on March 18, 1913.

Taylor, G.R. On Oct. 30, 1912, he signed on to the *Aurora*, as a fireman, at £5 per month, for the 2nd Antarctic voyage during AAE 1911-14. He left the expedition at Lyttelton, NZ, on March 19, 1913.

Taylor, Howard C., III. b. NY, son of an obstetrician. From Yale, he joined the Navy Medical Corps, and was medical officer at Pole Station for the winter of 1957. For his return to McMurdo, *see* **South Pole**, Oct. 26, 1957. On his return to the States, in 1958, he married Sarah Winslow Dulles, the secretary of state's cousin.

Taylor, Isaac. On Cook's voyage of 1772-75. He died in Tahiti on Aug. 20, 1773.

Taylor, Isaac Montrose "Ike" II. b. June 15, 1921, Morganton, NC, son of Alexander Taylor and Theodosia Hayes. Medical officer from NY. He married Trudy in 1946, in Massachusetts, and became singer James Taylor's father. He was a lieutenant commander in the USN when he became the doctor at McMurdo for the winter of 1956. On May 5 and Nov. 12 he had an irregular heart movement, and everyone thought the Doc was having a heart attack. But he wasn't. He was dean of the University of North Carolina Medical School from 1964 to 1971. He finally did have a heart attack, a fatal one, in Boston on Nov. 3, 1996.

Taylor, John. b. 1871. Steward on the *Polar Star*, during DWE 1892-93.

Taylor, Leslie. Ordinary seaman on the *William Scoresby*, 1927-30.

Taylor, Richard Dennis "Dick." After national service in the Army, he did a few odd jobs then met, of all things, an old sealer, who recommended FIDS. Despite having no training, he joined, in 1954, as a meteorologist, and wintered over at Base Y in 1955. Vivian Fuchs supplied a camera and film stock for him (even though Taylor had never used a camera), and he took a film of his year there, which was later dubbed and processed by the BBC as *67 Degrees South*. He married Allegra. In 1968-69 he was the BBC cameraman who covered Wally Herbert's Arctic expedition.

Taylor, Robert Julian Faussitt. Known as Julian Taylor. b. June 21, 1929, Chuman, in Northwest India, son of Dr. Geoffrey Fausitt [sic] Taylor and his wife Dr. Frances Margaret Kenyon (known as Margaret; cousin of archeologist Kathleen Kenyon). At the age of 6 he was sent to boarding school in England, and from 1947 to 1949 did his national service in the Royal Scots and the Parachute Regiment. He graduated in zoology from Cambridge in 1953, then joined FIDS, as a dog physiologist, leaving Southampton on the *John Biscoe* bound for Montevideo, then on to Port Stanley, and down to the Antarctic, where he was dropped off at Joinville Island for 2 months, working with Ken Blaiklock and John Standring. Then on to winter-over at Base D for 1954 and 1955. Between winters he was on Anvers Island for 6 weeks. On his way back to the UK in 1956 he and a friend went mountain climbing in the Andes for 2 months, and he arrived back in London on May 3, 1956, on the *Highland Chieftain*. Then he was back at Cambridge, writing up his reports and papers, until March 1957, and failing to get his doctorate by virtue of being short one term's attendance. In 1957 he began work for a shipping company, married Jackie Castaing, a New Zealander, on Dec. 24, 1964, and was made redundant in 1980. He then became chief executive of the Manchester Ship Canal, working there for 8 years, and then on to a variety of environmental jobs, retiring at the age of 65, to Foscote Stables, in Grittleton, Wilts.

Taylor, Simon Everard. b. May 24, 1942, Surrey. Between 1975 and 1994 he spent a total of 60 months in Antarctic waters on, first, the *Bransfield*, as engineer, than as chief engineer on the *John Biscoe*. He was back on the *Bransfield*, as chief engineer, and then went over to the new *James Clark Ross*.

Taylor, Thomas Griffith "Grif." b. Dec. 1,

1880, in Walthamstow, Essex, son of metallurgist James Taylor and his wife Lily Alice Griffiths. When Grif was young his father moved to Serbia as manager of a copper mine, then in 1884 back to the UK, and in 1893 to Australia. At Sydney University Grif came under the influence of Prof. Edgeworth David and became a famous geologist, working for years for the Commonwealth Weather Service, whose paid representative he was on BAE 1910-13, during which, as the expedition's physiographer, he led the Western Journey Party into Victoria Land. In March 1911 Scott described him as, "an addition to the party, but not very practically useful." By April, Scott was writing in his diary, "Taylor very nervous," and "Taylor an increasing nuisance." However, he has some nice things to say, "Taylor's intellect is omnivorous & versatile — his mind is unceasingly active, his grasp wide." On July 8, 1914, at Melbourne University, Grif married Raymond Priestley's sister, Doris Marjorie Priestley. He wrote *With Scott; The Silver Lining* (see Bibliography), and in 1921 founded the geography department at Sydney University, and also founded the Geographical Society of New South Wales. He was thwarted in his career in Australia owing to his unpopular (then) views on immigration, and lived in North America for many years. In 1958 he published his autobiography, *Journeyman Taylor* (see Bibliography). He died in Sydney on Nov. 5, 1963. Of curious interest: His goddaughter was the astronomer Helen Bailey, who married Fid Bryan Bayly.

Taylor Bluff. 64°00' S, 57°40' W. A prominent, castellated headland, rising to about 310 m, with vertical cliffs facing NW and SW, about 2 km W of Blancmange Hill, on the E side of Croft Bay, and just N of an unnamed glacier, on James Ross Island. Named by UK-APC on Nov. 15, 2006, for Alistair James Taylor (b. 1961), who wintered-over 3 times at Rothera Station, as a BAS field assistant —1991, 1992, and 2001.

Taylor Buttresses. 70°08' S, 67°23' W. An oval-shaped, whalebacked hill, rising to 1410 m, E of Mount Pitman, near the heads of Riley Glacier and Chapman Glacier, in western Palmer Land, at George VI Sound. Its smooth contours are broken at the N end by 3 rock buttresses which are conspicuous from the north. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for Brian Taylor. US-ACAN accepted the name later that year. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Taylor Dome. 77°40' S, 157°40' E. An elliptical ice dome, running ESE-WNW for between 65 and 70 km, and about 26 km wide, it rises to about 2400 m above sea level, its central point being located about 46 km WNW of Mount Crean, in the Lashly Mountains of Victoria Land. Delineated by the SPRI-NSF-TUD radio echo-sounding program, 1967-79, the name was first used by David Drewry in 1980. The dome is one of the local sources of ice to the Taylor Glacier, in assocation with which it was named. US-ACAN accepted the name in 1994, and ANCA followed suit on April 27, 1995.

[1]**Taylor Glacier**. 67°27' S, 60°50' E. A glacier, 2.5 km wide, just E of Hayes Peak, it flows N into the sea just E of Cape Bruce, on the coast of Mac. Robertson Land. Discovered on Jan. 18, 1931 by BANZARE, and named by Mawson for Grif Taylor. US-ACAN accepted the name in 1947, and ANCA followed suit.

[2]**Taylor Glacier**. 77°37' S, 162°00' E. A glacier, about 56 km long, flowing from the plateau of Victoria Land into the W end of Taylor Valley, N of the Kukri Hills. There is an emperor penguin colony here. Discovered in 1903 by Albert Armitage during BNAE 1901-04, considered by him to the N arm of Ferrar Glacier, and named by him as Upper Ferrar Glacier, or North Fork. In 1911, during BAE 1910-13, Grif Taylor's Western Journey Party determined that the upper and lower portions of what was then known as the Ferrar Glacier are apposed (i.e., joined in Siamese-twin fashion) N of Knobhead. With this discovery, Scott named the upper portion for Grif Taylor. US-ACAN accepted the name Taylor Glacieri n 1947, and NZ-APC followed suit.

Taylor Glacier Dry Valley *see* **Taylor Valley**

Taylor Glacier Field Station. 67°27' S, 60°52' E. An Australian field station which burned on July 4, 1959.

Taylor Hills. 82°38' S, 163°50' E. A line of ice-covered hills bordering the E side of Lowery Glacier, between Oliver Glacier and Robb Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Lawrence Dow Taylor (b. Oct. 6, 1932, Boston), glaciologist at Pole Station in 1963-64.

Taylor Islands. 66°10' S, 100°17' E. A group of rocky islands and rocks, at the W side of the Edisto Ice Tongue, they mark the W end of the Highjump Archipelago, off the Bunger Hills. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1963, for Richard Spence Taylor, surveyor on OpW 1947-48. ANCA accepted the name on Dec. 7, 1976.

Taylor Ledge. 78°30' S, 85°57' W. A notable flat-topped ridge, displaying abrupt cliffs N and S, between Boyce Ridge and Mount Shinn, on the W slope of the Sentinel Range, in the Ellsworth Mountains. The upper surface of the ledge is ice-covered and relatively level except for Knutzen Peak (3400 m) on the N edge. Named by US-ACAN in 2006, for Thomas N. and Edith L. Taylor, of the department of ecology and evolutionary biology, at the University of Kansas, Lawrence, a husband and wife team, USAP researchers of plant fossils, in the Transantarctic Mountains, from the 1980s until 2004.

Taylor Nunatak. 84°54' S, 176°00' W. A large, long, low nunatak lying close to the E wall of Shackleton Glacier, and about 50 km from the mouth of that glacier, just S of the terminus of Dick Glacier, in the Queen Maud Mountains. Named by the Southern Party of NZGSAE 1961-62, for Thomas Edwin "Tom" Taylor (b. Nov. 8, 1923. Telluride, Colo. d. July 17, 2008, Las Vegas), Navy man in World War II and Korea, then USGS topographic surveyor who worked with Charles Swithinbank's geological party near the mouth of the Shackleton Glacier for a short while in 1960-61 and 1961-62. He made two other trips to Antarctica, one being in the Pensacola Mountains in 1962-63. He also did 7 seasons in the Arctic. He retired from USGS in 1993, after 40 years, and lived in Alaska. He was a mountain climber and recognized expert on Alaskan place names. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Taylor Nunataks. 63°15' S, 55°33' W. Two isolated nunataks, rising to 650 m and 660 m respectively and joined by a narrow ridge, SE of Mount Quilmes, and N of Tay Head, in the E part of Joinville Island. Surveyed by Fids from Base D in Dec. 1953, and named by UK-APC on Sept. 4, 1957, for Julian Taylor (q.v.), of FIDS, who was on the survey party to Joinville Island in 1953-54. The feature appears on a 1962 British chart. US-ACAN accepted the name in 1963. It appears by error on a 1957 Argentine chart as Monte Percy (*see* **Mount Percy**).

Taylor Outlier. 85°13' S, 90°19' W. A relatively isolated rock on land, just in front of the W end of the Bermel Escarpment, and about 2.5 km E of the lower part of Counts Icefall, in the Thiel Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1961. Named by US-ACAN in 1962, for USGS geologist Alfred R. Taylor, a member of the USARP Victoria Land Traverse of 1959-60.

Taylor Peak. 72°12' S, 168°38' E. Rising to 2550 m, it is the main peak of the heights separating Helman Glacier from Tyler Glacier, or, to put it another way, it is near to the W end of the ridge N of Tyler Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Claude B. Taylor, aurora scientist, NZ scientific leader at Hallett Station in 1962. NZ-APC accepted the name.

Taylor Platform. 71°01' S, 67°09' E. A low, fairly flat, rock massif, about 1.5 km N of Mount Brocklehurst, and about 41 km SE of Mount Bunt, in the Prince Charles Mountains of Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for F.J. "Jock" Taylor, ionosphere physicist at Mawson Station in 1964 and at Wilkes Station in 1966. US-ACAN accepted the name in 1967.

Taylor Point. 61°56' S, 57°39' W. A point forming the N entrance point of Destruction Bay, on the E coast of King George Island, in the South Shetlands. Roughly charted by the Discovery Investigations in 1937, and photographed aerially by FIDASE in 1956. Named by UK-APC on Sept. 23, 1960, for Daniel Taylor. US-ACAN accepted the name later that year. The Argentines call it Punta Taylor. Last plotted by the Briish, in late 2008.

Taylor Ridge. 85°48' S, 153°21' W. A rock ridge, 16 km long, forming a precipitous wall along the W side of Scott Glacier, between the mouths of Koerwitz Glacier and Vaughan Gla-

cier, in the Queen Maud Mountains. Discovered by Quin Blackburn and his party in Dec. 1934, during ByrdAE 1933-35. Named by US-ACAN in 1967, for John H. Taylor, ionosphere physicist who wintered-over at Pole Station in 1966.

Taylor Rookery. 67°27' S, 60°53' E. On the E side of Taylor Glacier, in Mac. Robertson Land. Named by ANCA on July 22, 1959. It is the largest emperor penguin rookery wholly on land, and is an SPA (Specially Protected Area). Originally plotted in 67°50' S, 60°50' E, it has since been replotted.

Taylor Spur. 78°31' S, 84°09' W. A wedge-shaped spur marking the N side of the terminus of Guerrero Glacier, on the E side of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Howard C. Taylor III.

Taylor Valley. 77°37' S, 163°00' E. The most famous of the dry valleys of Victoria Land (indeed in Antarctica), no snow, no ice, of spectacular nature, about 28 km long, 6 km wide, and 3000 feet deep, N of the Kukri Hills, near McMurdo Sound, and just behind New Harbor, between that feature and the Taylor Glacier (that glacier having once occupied it, before the glacier receded). It was the first of the dry valleys to be discovered — in 1902, by BNAE 1901-04. They called it Dry Valley. It later became known as New Harbor Dry Valley. BAE 1907-09 explored it, and in Jan. 1911 Grif Taylor explored it, during BAE 1910-13, and that year Scott renamed it as Taylor Glacier Dry Valley. The name was later shortened. US-ACAN accepted the name in 1947, and NZ-APC has followed suit. Originally plotted in 77°37' S, 163°25' E, it has since been replotted.

Bukhta Taynaya *see* **Taynaya Bay**

Taynaya Bay. 68°27' S, 78°16' E. An almost completely enclosed bay within the N part of Langnes Peninsula, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and plotted as a lake by Norwegian cartographers working from these photos in 1946. It certainly looks like a lake from the air, having only a tiny entrance to the sea on the N side, invisible from such aerial photos. Re-defined by U.S. cartographer John H. Roscoe in 1952, as he worked from photos taken by OpHJ 1946-47. The region was photographed again, aerially, by ANARE in 1954, and again by SovAE 1956, who named it Bukhta Tajnaja (or Taynaya) (i.e., "secret bay"). It was re-photographed aerially by ANARE in 1957 and 1958. ANCA accepted the name Taynaya Bay on June 28, 1962, and US-ACAN followed suit in 1970.

The *Tazar*. A 1576-ton Polish fish-processing factory trawler, built in Nov. 1975, which, with the *Professor Siedlecki*, conducted the Polish Antarctic Marine Research Expedition around the South Shetlands in 1975-76. Skipper that season was Jozef Muzia. She was back in 1976-77, the two skippers (of the same ship) being Wincenty Kuriata and Andrzej Furmanski.

Tazieff Rocks. 77°27' S, 166°30' E. A nunatak, rising to about 200 m, 1.3 km SE of Micou Point, at the S end of Endeavour Piedmont Glacier, on Ross Island. Named (rather erroneously, it would seem, given its true nature) by Phil Kyle for Haroun Tazieff (b. May 11, 1914, Warsaw. d. Feb. 6, 1998, Paris), Polish-Belgian vulcanologist and famous documentary film maker, who worked at Mount Erebus with several groups of French scientists for 3 field seasons between 1973 and 1979. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Mount Tchaikovsky. 71°24' S, 73°15' W. A snow-covered mountain, rising to about 600 m (the British say about 300 m; the original estimate was 250 m), with scarps on the SE and E sides, in the N part of Derocher Peninsula, between Mendelssohn Inlet and Brahms Inlet, on Beethoven Peninsula, in the SW part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 by RARE 1947-48. He plotted it in 71°14' S, 73°31' S. UK-APC accepted that on March 2, 1961, and US-ACAN followed suit that year, the name being for the great Russian composer Pyotr Il'yich Tchaikovsky (1840-1893). The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, it appears in the 1977 British gazetteer.

Te Islands. 69°03' S, 39°34' E. Three small islands and several rocks lying close together just S of Ongul Island, in the Flatvaer Islands, off the Prince Olav Coast. Photographed aerially by LCE 1936-37. The Norwegian cartographers (notably Capt. Hans Hansen) who worked from these aerial photos in 1946 plotted the 3 major islands as one, and named it Teøya (i.e., "the tea island"). Re-defined by the Japanese in 1962, after JARE ground surveys and air photos, 1957-62, had revealed that there were, in fact, 3 islands, separated by narrows. US-ACAN accepted the translated name Te Islands in 1968. The Norwegians call them Teøyane. The easternmost one is called Higasi-Teøya, the SW one is Nisi-Teøya.

The *Te-Ivi-O-Atea*. The war canoe, captained by Ui-Te-Rangiora, which, legend has it, sailed from Rarotonga to Antarctica about 650 A.D.

The *Te Kaha*. NZ Navy frigate in Antarctic waters in Feb. 1999, looking for toothfish pirates.

Te Puna Roimata Peak. 77°27' S, 167°34' E. Rising to about 890 m, 2.5 km W of Terra Nova Glacier, and 3 km S of Lewis Bay, on the lower NE slopes of Mount Erebus, on Ross Island. Named by NZ-APC on June 19, 2000 (name means "spring of tears" in Maori) to commemorate the infamous 1979 plane crash here (*see* **Deaths**, 1979). In 1987 a stainless steel cross was erected W of this peak. US-ACAN accepted the name on Oct. 25, 2000.

The *Teake Hadewych*. Dutch yacht which left Ushuaia and reached the Antarctic Peninsula on Dec. 21, 1991. Her skipper was Eerde Beulakker. Also aboard were Beulakker's wife, Hedwig, and an English doctor, Richard Wood (b. Dec. 29, 1943). They then made the same trip Shackleton made in the *James Caird* in 1916, from Elephant Island to South Georgia.

[1]**Cape Teall**. 79°03' S, 161°04' E. Also spelled (erroneously) as Cape Teale. The Americans describe it as a high, rocky cape, and the New Zealanders as a low, rocky headland. Perhaps, then, it is a rocky cape, or headland, of medium height. Anyway, it forms the N side of the entrance to Mulock Inlet, between that inlet and Moore Bay, along the W edge of the Ross Ice Shelf. Discovered in Dec. 1902 by the Southern Polar Party of BNAE 1901-04, and named by them for petrologist Jethro Justinian Harris Teall (1849-1924; knighted in 1916), director of the Geological Survey and Museum of Practical Geology, London, 1901-13. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

[2]**Cape Teall** *see* **Teall Island**

Teall Island. 79°03' S, 161°54' E. Also spelled (erroneously) as Teale Island. A high, ridge-like island that rises above the Ross Ice Shelf at the W side of the mouth of Skelton Inlet. BNAE 1901-04 discovered and named a feature in this area (probably this one) as Cape Teall. From the Ross Ice Shelf, Scott's party would naturally have seen it as part of the Worcester Range; however, from the Skelton Glacier it appears as an island. It was thus later re-defined, and its position was clarified, by the NZ party of BCTAE, in Feb. 1957, and named in association with the nearby cape. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Teall Nunatak. 74°50' S, 162°33' E. Also called Beehive Nunatak. A rock outcrop at the mouth of Reeves Glacier, 5 km (the New Zealanders say about 8 km) SE of Hansen Nunatak, in Victoria Land. Discovered (but not named) by BNAE 1901-04. The area was more fully explored by BAE 1907-09, who named this feature for Jethro Teall [*see* [1]**Cape Teall**]. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Lake Teardrop. 78°09' S, 163°55' E. A small frozen lake shaped remarkably like a teardrop, located on the lip of a hanging glacier, on the SE wall of Hidden Valley, in southern Victoria Land. Visited in Dec. 1960 by VUWAE 1960-61, and named descriptively by them. NZ-APC accepted the name.

Teardrop Pond. 76°54' S, 145°18' W. A meltwater pond, 1.5 km SW of Greegor Peak, in the Denfeld Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. So named by US-ACAN in 1970, because of its shape when seen in plan view.

Teasdale Corrie. 62°09' S, 58°11' W. A large cirque (or corrie) about 600 m in an E-W direction, and about 450 m in a N-S direction, about 480 m NNE of Cinder Spur, on the S coast of King George Island, in the South Shetlands. It is banked on its N flank by the high, rocky crags of Dunikowski Ridge. Formerly believed to a volcanic vent, its true nature was discovered as the feature was exposed by recent glacial retreat. It contains a series of small lakes near the S margin, which are fed by seasonal meltwater. Named by UK-APC on Feb. 15, 1998, for

Andrew Teasdale (b. 1966), BAS field assistant to John Smellie (q.v.), for the duration of the Jan.–April 1996 field season. He had wintered-over at Rothera Station in 1995. US-ACAN accepted the name on Jan. 21, 1999. Last plotted by the UK in 2008.

Tech Crags. 77°37' S, 166°45' E. A narrow broken ridge, rising to about 1000 m, 3 km S of Williams Cliff, it marks a declivity along the N flank of the broad Turks Head Ridge, from which ice moves to Pukaru Icefalls, on Ross Island. Named by US-ACAN in 2000, for the New Mexico Institute of Mining and Technology, known as New Mexico Tech. From 1981, many Tech students, under the direction of Phil Kyle, have undertaken graduate research projects on Mount Erebus, on Ross Island. NZ-APC accepted the name on Feb. 20, 2001.

Pian delle Tectiti *see under* **D**

Tedaldi, José *see* **Órcadas Station**, 1947

Mount Tedrow. 82°53' S, 163°00' E. Rising to 1490 m at the E side of the mouth of DeBreuck Glacier, at the junction of that glacier with Kent Glacier, in the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Jack V. Tedrow, USARP glaciologist at McMurdo in 1959-60 and 1960-61.

Tedrow Glacier. 77°58' S, 161°50' E. A tributary glacier flowing N into Ferrar Glacier along the W side of Table Mountain, in Victoria Land. Named by US-ACAN in 1964, for John Charles Fremont Tedrow (b. April 21, 1917, Rockwood, Pa.), USARP project leader for soil studies at McMurdo in 1961-62. NZ-APC accepted the name.

Teeny Rock. 83°38' S, 59°10' W. A small rock at the NW end of the Williams Hills (it is, in fact, the northernmost feature in those hills), in the Neptune Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. So named by US-ACAN in 1968, for its size. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Teeters Nunatak. 74°12' S, 100°01' W. Rising to 615 m, 8 km N of Hodgson Nunatak, in the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Robert E. Teeters, USN, storekeeper at Byrd Station in 1966.

Tegerdine, David. b. 1939, East Elloe, Lincs, the 10th child of Cyril Tegerdine and his wife Maud Mary Issitt. He joined FIDS in 1960, as a diesel electric mechanic, and wintered-over at Base B in 1961. In late 1962, in East Elloe, he married June Reive, and they lived in Portsmouth.

Mount Tegge. 77°57' S, 85°15' W. An isolated mountain mass rising to 1570 m, at the mouth of Embree Glacier, on the E side of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for 1st Lt. Richard C. Tegge, USAF, who, with airdrops, helped the Seabees build Pole Station in 1956-57.

Isla Tegualda *see* **Hansen Island**

The *Teie*. A 1000-ton whaling motor schooner, built by the Dane Jens Pedersen for the Tønsbergs Hvalfangeri Company (of Norway) and with building supervised by Frithjof Randulff Kjørboe (q.v.), she was launched as the *Syd Georgia*, on Sept. 13, 1919, from a Danish shipyard, the largest wooden ship ever built in Denmark, and the largest schooner in the world. She had 4 pitch pine masts, each 85 feet tall. With her name changed to *Teie*, she left Norway in 1920, took on coal in Cardiff, and headed south for the 1920-21 whaling season in the South Shetlands and South Orkneys, arriving first at South Georgia on Jan. 13, 1921. Skipper was Edmund Wang, and manager was Morten Fadum. William Barlas was aboard. Her catchers were the *Husvik* and the *Herkules*, and she was in at Signy Island that season. On April 12, 1921 she sailed for Norway, via Cape Verde, and was sold later in 1921, to Greenland, as the *Fox III*. She later became part of Gustav Eriksen's fleet, based out of Åland, Norway, as the *Madare*. She sailed as a German ship, and was broken up in 1956. Not to be confused with another, later, ship of the same name.

Teigan, Bernarr. b. Aug. 15, 1920, New Rockford, ND, but raised for part of his childhood in Escondido, Calif., son of Iowa-born chiropractor Edward Teigan (the name is Norwegian) and his wife Violet. He joined the Navy and served in World War II. He was chief photographer's mate with the Central Task Group of OpHJ 1946-47, and again on OpW 1947-48. He served in Korea and Vietnam. He died on March 1, 1999, in Seal Beach, Calif., and is buried in Arlington National Cemetery.

Teigan Island. 66°27' S, 110°36' E. A small rocky island, about 315 m long, and 160 m NE of Bosner Island, near the S end of the Windmill Islands. First mapped from air photos taken in Feb. 1947, during OpHJ 1946-47. Named by US-ACAN as Teigan Rock, for Bernarr Teigan. ANCA accepted the name on July 4, 1961. In 1963, US-ACAN redefined this feature as Teigan Island, and ANCA accepted the change.

Teigan Rock *see* **Teigan Island**

Teil Island *see* **Deception Island**

Tejas Glacier *see* **Beaumont Glacier**

Tekapo Ridge. 77°30' S, 168°52' E. A crescent-shaped chain of low peaks, 5 km long, in the Kyle Hills of Ross Island. The ridge descends SW-NE from Scanniello Peak (about 2200 m) to Parawera Cone (about 1300 m). Named by NZ-APC on Feb. 20, 2001, for Tekapo, a place in NZ where Antarctic training used to take place. US-ACAN accepted the name later in 2001.

The *Tekoa*. Stonington sealing schooner, which left Stonington in March 1854, under the command of Capt. George S. Keene, and was in the South Shetlands, on and off, during the period 1854-56.

Teksla Island. 67°27' S, 60°56' E. The largest island in the Colbeck Archipelago, 1.5 km N of Chapman Ridge, and about 3 km N of Stump Mountain, near the coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Teksla (i.e., "the cooper's axe"). ANCA named it (for themselves only, as it turned out) on Oct. 11, 1960, as Norris Island, for David J. "Dave" Norris, aurora physicist who wintered-over at Mawson Station in 1959. US-ACAN accepted the name Teksla Ridge in 1965.

Cape Tektonicheskij. 66°15' S, 100°47' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Mys Tektonicheskij, a name that was translated by ANCA to Cape Tektonicheskij.

Mys Tektonicheskij *see* **Cape Tektonicheskij**

Tekubi-yama. 71°55' S, 24°38' E. Rising to 2361 m in the SE part of the Brattnipane Peaks, it is the highest point in that group, in the Sør Rondane Mountains. Name means "wrist peak" in Japanese, and it was named thus because JARE, who took aerial photographs in 1981-82, and again in 1986, and who did land surveys, 1984-91, thought it resembled the wrist of the left hand that reminded them of Brattnipane Peaks as a whole. The Norwegians call it Nipehovden, and the Russians call it Gora Aleksandr Nevskogo (i.e., "Alexander Nevsky mountain").

Lednik Tekuchij *see* **Tekuchiy Glacier**

Tekuchiy Glacier. 69°52' S, 68°12' S. A broad glacier flowing southward between Tingey Rocks and the ice-covered Single Island, at the W side of the Amery Ice Shelf. The name Lednik Tekucij (or Tekuchij) appears on a 1974 Russian map. US-ACAN accepted the translated name on Oct. 20, 2009.

Telebreen *see* **Telen Glacier**

The *Telefon*. A 4000-ton Norwegian collier and whaling supply vessel, built in 1900. On Dec. 26, 1908, under the command of Capt. Roland Nilsen, while carrying coal to the Magellan Whaling Company on Deception Island, she was blown onto an uncharted reef in the Telefon Rocks, off Demay Point, at the W side of the entrance to Admiralty Bay, King George Island, in the South Shetlands, where she was stranded and abandoned. Olava Paulsen was aboard (she was the wife of Capt. Julius Paulsen, the Norwegian skipper of the whaler *Ørn*). Mrs. Paulsen was in a lifeboat for 6 hours before being rescued. In early 1909 Capt. Adolfus Amandus Andresen salvaged the vessel, and moved her to Telefon Bay, where she was moored for the winter. In the summer of 1909-10 repairs were carried out, and in Feb. 1910, she sailed for Punta Arenas, Chile. In 1911 she was sold to Scottish owners, Lovart (Love & Stewart), of Bo'ness, became the *Kinneil*, and was wrecked off the Skagen, on Oct. 31, 1913, after colliding with a German steamer.

Baie du Telefon *see* **Telephone Bay**

Bahía Telefon *see* **Telefon Bay**

Rocas Telefon *see* **Telefon Rocks**

Telefon Bay. 62°55' S, 60°40' W. A small bay in the NW side of Port Foster, inside Deception

Island, in the South Shetlands. Charted in 1909, during FrAE 1908-10, and named later by Charcot as Baie du Telefon, for the *Telefon*. It appears as such on Charcot's 1912 map. There is a 1929 reference to it as Telephone Bay. This belief that the feature was named after a regular telephone is manifested on a 1944 Argentine chart, wherein it appears as Bahía del Teléfono, and there is a 1947 reference to it as as Caleta Teléfono. It appears as Telefon Bay on British charts of 1921 and 1949, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart of 1953 as Bahía Telefon, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On Dec. 7, 1967 a new island (*see* **Yelcho Island**) was formed in Telefon Bay as the result of volcanic eruptions. This new island was made up of ash and scoriae. Last plotted by the British, in late 2008. Note: We are led to believe that the Chileans today call it Bahía Teléfono.

Telefon Klippene *see* **Telefon Rocks**

Telefon Pass. 62°57' S, 60°44' W. A narrow pass between Telefon Ridge and Stonethrow Ridge, at the W rim of Deception Island, in the South Shetlands. Mapped by Don Hawkes in 1961, but not named until the Poles did so on Sept. 1, 1999.

Telefon Point. 62°14' S, 58°28' W. A flat promonotory in front of Windy Glacier, it is the most southerly point on the W side of Admiralty Bay, 3 km SW of Demay Point, between that point and Stranger Point, W of Telefon Rocks, on King George Island, at the Bransfield Strait, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. Named by UK-APC on Dec. 8, 1977, in association with the rocks. The Poles descriptively call it Patelnia (i.e., "frying pan"), and, with that typical warm glow of Polish prose, tell us that it "is full of chinstrap penguins, sea elephants, and Kerguélen fur seals happily basking in sun." It was last replotted by the British in late 2008.

Telefon Ridge. 62°56' S, 60°43' W. A ridge, rising to 265 m, and running in a NE-SW direction, W of (i.e., behind) Telefon Bay, on Deception Island, in the South Shetlands. The NE end of the ridge is Mount Achala (q.v.), and the SW end is called Monte de Bahía Teléfono. Surveyed by FIDS in 1953-54. There is a 1955 Argentine reference to Cerro Noroeste, probably this ridge. Named by UK-APC on July 7, 1959, in association with the bay. US-ACAN accepted the name in 1965.

Telefon Rocks. 62°15' S, 58°26' W. A group of rocks, rising to an elevation of about 25 m above sea level, off Telefon Point, 2.5 km SSW of Demay Point, at the W side of the entrance to Admiralty Bay, on the S coast of King George Island, in the South Shetlands. Charted by Aug Christensen on the *Vesterlide*, in 1908-09, and named by him as Telefon Klippene, for the *Telefon*. It appears translated as Telefon Rocks on a British chart of 1910. On Charcot's 1912 map it appears as both Rocher Telefon and Rochers du Telefon. It appears as Telefon Rocks on a British chart of 1938, on an Argentine chart of 1946 as Rocas Teléfono, on a Chilean chart of 1947 as Roca Teléfono, and on an Argentine chart of 1949 as Rocas Telefon. The feature was recharted by Frank Hunt's 1951-52 RN Hydrographic Office Survey on the *John Biscoe*. The name Telefon Rocks was the one accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1962. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Rocas Telefon. Last plotted by the British, in late 2008.

Bahía Teléfono *see* **Telefon Bay**

Isla Telegrafista Arriagada *see* **Alcock Island**

Isla Telegrafista Rivera *see* **Apéndice Island**

The *Telemachus*. From June to Aug. 1956 this Royal Navy submarine, under the command of John Evelyn Moore, conducted a hydrographic survey off the coast of Wilkes Land, in cooperation with the Royal Australian Navy.

Telemeter Glacier. 77°48' S, 160°12' E. A small glacier, 1.5 km SW of Fireman Glacier, in the W part of the Quartermain Mountains, in Victoria Land. Named by NZ-APC in 1992, in keeping with the surveying motif running through the names of several features in this area, a telemeter being an instrument used to ascertain ranges and distances. US-ACAN accepted the name in 1993.

Telen *see* **Telen Glacier**, **Telen Hill**

Telen Glacier. 69°38' S, 39°42' E. Flows between Telen Hill and Kjuka Headland, to the E side of Lützow-Holm Bay, on the Prince Olav Coast. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on May 1, 1963, as Telenhyoga, in association with the nearby hill. US-ACAN accepted the translated name Telen Glacier in 1968. The Norwegians call it Telebreen (which means the same thing).

Telen Hill. 69°39' S, 39°42' E. A small, bare rock hill along the Prince Olav Coast between Skallen Glacier and Telen Glacier, on the E side of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Telen ("the frozen crust"). US-ACAN accepted the name Telen Hill in 1968.

Telen-hyoga *see* **Telen Glacier**

Telen Kaitei-koku. 69°35' S, 39°20' E. A drowned glacial trough, about 35 km long, and reaching a depth of 1148 m, it extends northwestward from Telen Glacier to Shirase Kaitei-koku, on the E side of Lützow-Holm Bay, on the Prince Olav Coast. Mapped by Japanese cartographers from soundings taken by JARE between 1973 and 1981, and named by them on Oct. 23, 1989 ("Telen submarine valley"), in association with the glacier. The Norwegians call it Telerenna.

Telephones. The first Antarctic expedition to take telephones was FrAE 1908-10. In Sept. 1911, during BAE 1910-13, Scott laid aluminum wire on the ice for about 12 miles, connecting the main base at Cape Evans to two outlying bases. In that month he used the telephone, between Cape Evans and Hut Point. Today, there are two public telephones at Scott base. One uses phone cards bought in the shop there, or credit cards. You can also reverse the charges. Casey Station, Mawson Station, Davis Station, and McMurdo also have direct dialing facilities to the outside world.

Telerenna *see* **Telen Kaitei-koku**

Telerig Nunatak. 62°30' S, 59°56' W. A rocky peak rising to 170 m in the SW extremity of Dryanovo Heights, it projects out of the icecap of Greenwich Island, in the South Shetlands, 1.6 km SE of Kerseblept Nunatak, 1.68 km SSE of Panagyurishte Nunatak, and 1.9 km W of Lloyd Hill. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for Khan Telerig, Bulgarian ruler from 768 to 777.

Telescope Peak. 77°56' S, 163°07' E. Rising to 1270 m, it is the summit peak of the E portion of Transit Ridge, on the E side of the Royal Society Range, in Victoria Land. Named by NZ-APC in 1992, in keeping with the surveying motif running through the names of several features in this area. US-ACAN accepted the name in 1993. The telescope here is the refracting telescope used in surveying, most commonly used as theodolites.

Television. Bill Hartigan arrived in Antarctica as NBC-TV film maker for OpDF I (1955-56). This was the continent's first exposure to TV. Antarctica's first TV station opened at McMurdo Station on Nov. 9, 1973. American Forces Antarctic Network Television (AFAN TV) was installed, owned, and operated by the U.S. Navy, and has re-runs of U.S. shows, local programs, and daily news and weather. The first live TV link from Antarctica was from Showa Station to Tokyo and back, between Jan. 28 and Feb. 3, 1979.

Teliga Island. 62°05' S, 58°53' W. A small island between Atherton Island and Sygit Point, on the Joannes Paulus II Coast, on the NW coast of King George Island, in the South Shetlands. Named by the Poles in 1984, for Karol Teliga, an engineer on PolAE 1977-78, and depty leader of PolAE 1980-81 (while it was in the preparatory stages in Poland).

Telish Rock. 62°42' S, 60°52' W. A small island off the S coast of Livingston Island, 400 m S of Elephant Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Telish, in northern Bulgaria.

Teller Peak. 85°57' S, 135°28' W. Rising to 3550 m, it marks the NE extremity of the Michigan Plateau and the Watson Escarpment, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1966, for James T. "Jim" Teller, geologist here in 1964-65, with the Ohio State University party to the Horlick Mountains.

Punta Téllez *see* **Clapp Point**

Gory Tel'mana *see* **Thälmann Mountains**

Telmo Island *see* **San Telmo Island**

Teltet *see* **Teltet Nunatak**

Teltet Nunatak. 71°59' S, 23°43' E. A prominent nunatak, 3 km N of Vengen Spur, and about 15 km NNE of Mount Widerøe, in the NW part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946–47, and named by them as Teltet (i.e., "the tent"). US-ACAN accepted the name Teltet Nunatak in 1966.

Temmondai-iwa *see* **Temmondai Rock**

Temmondai Rock. 68°25' S, 41°41' E. Also spelled Tenmondai Rock. A partly ice-capped rock exposure on the coast, with an area of 1.7 sq km, and with a dome-like hill, at the E side of the terminus of Higashi-naga-iwa Glacier, about 33 km E of Cape Omega, in Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957–59, and named by them on Oct. 1, 1962, as Tenmondai-iwa or Temmondai-iwa (i.e., "astronomical observatory rock"). US-ACAN accepted the name Temmondai Rock in 1968. The Norwegians call it Observatorieheia. JARE newly surveyed it from the ground and photographed it from the air between 1977 and 1981, and from these efforts Japanese cartographers made up a 1:25,000 scale map.

Temnikow Nunataks. 70°37' S, 64°10' W. A rather scattered group of low rock outcroppings, or nunataks, over an area of about 10 km, and rising to about 1950 m at the head of Clifford Glacier, at the E margin of the Dyer Plateau, 8 km W of the Kelley Massif, in northern Palmer Land. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for biologist Nicolas Temnikow, of the University of California (at Davis), USARP biologist at Palmer Station in 1974. UK-APC accepted the name on July 21, 1976. The feature appears on the 1979 USGS sketch map of the N part of Palmer Land.

Ostrova Tëmnye *see* **Temnyje Islands**

Skaly Tëmnye. 72°52' S, 68°12' E. A group of rocks, due W of Rofe Glacier, in the Mawson Escarpment. Named by the Russians.

Temnyje Islands. 66°09' S, 101°00' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrova Tëmnye. ANCA translated the name.

Caletón Témpanos. 64°49' S, 62°51' W. A large inlet between Waterboat Point and Toro Mazote Glacier, on the Danco Coast, on the W coast of the Antarctic Peninsula. Named descriptively by ChilAE 1950–51 (name means "large inlet with icebergs").

Temperatures. Temperatures in this book are generally listed in Fahrenheit (°F). Antarctica is the coldest place on Earth, and there are only a few places where the temperature goes above freezing (32°F), even in the summer. In the South Orkneys, South Shetlands, and the N sections of the Antarctic Peninsula, it can get into the 50s in the summer (58.3°F or 14.6°C is the highest ever recorded, twice, both on the same day, Jan. 5, 1974, at Hope Bay and at Vanda Station, although it has almost certainly gone over 60°F at times), and during summer those areas rarely drop below freezing. It is the wind chill factor that makes it colder. Indeed, one can swim in the hot caldera of Deception Island, where the water temperatures can reach 100°F. Generally, though, in those more northerly regions of Antarctica, summer temperatures are in the upper 30s, lower 40s, dropping in the evening, and the average year-round temperature is 26°F. In the winter, temperatures can reach 52°F in these areas. The highest temperature recorded outside of these areas was 48°F, at Casey Station. On the other end of the scale, the coldest temperature ever recorded (and confirmed) on Earth was -128.6°F (-89.2°C), at Vostok Station, deep in the interior of Antarctica, although there were two successive ones (unconfirmed): -129°F (-89.6°C), and -132°F (-91°C), both also at Vostok. At Plateau Station, on June 5, 1968, the temperature reached -123°F, but it has been estimated that, including wind chill, the temperature at Plateau (which, like Vostok, has a claim to be the coldest place on Earth) may have reached -228°F. The average temperature at Plateau for the calendar year of 1966 (the first year that station was up and running) was -70°F, and that included summer and winter averaged out. Mean temperatures of the coldest months in the interior of the continent are -40°F to -90°F. The average year-round temperature at the South Pole is -60°F, and the highest temperature recorded there has been 7°F or -14°C. When Admiral Dufek landed at the Pole on Oct. 31, 1956, the temperature was -58°F. In Antarctica, temperatures may rise and fall 100°F within a few weeks, and on some heated rocks as far south as 85°S, surface temperatures may reach 59°F. The coldest period on the Polar Plateau is August, just before the return of the summer sun, when it has had months of its most intense cold. Mean temperatures of the coldest months on the coast are -4°F to -22°F, although it can reach -76°F on the coast. ByrdAE 1933–35 was only the third expedition to record meteorological data, although Órcadas Station, in the South Orkneys, has been manned continuously since 1903. The winter of 1934, at Little America, sported two weeks of phenomenally high temperatures, from May 24, 1934, after a blizzard, the temperature was often at 25°F. The temperature at Hallett Station in Dec. 1956 was 44°F. In Aug. 1956 it had been -44°F. Progressive low temperature records in Antarctica have been: **-5°F**, set sometime between 1829 and 1842, on Deception Island (*see* ***The Chanticleer***); **-46°F**, Sept. 8, 1898, taken by BelgAE 1897–99 in the Bellingshausen Sea; **-100.4°F**, May 11, 1957, South Pole; **-102.1°F**, Sept. 17, 1957, South Pole; **-109.1°F**, May 2, 1958, Sovietskaya; **-113.3°F**, June 15, 1958, Vostok; **-114.1°F**, June 19, 1958, Sovietskaya; **-117.4°F**, June 25, 1958, Sovietskaya; **-122.4°F**, Aug. 8, 1958, Vostok; **-124.1°F**, Aug. 9, 1958, Vostok; **-125.3°F**, Aug. 25, 1958, Vostok; **-126.9°F (-88.3°C)**, Aug. 24, 1960, Vostok; **-128.6°F**, July 21, 1983, Vostok (recorded by A. Budretski on a platinum thermometer); **-129.3°F**, July 21, 1983, Vostok (unconfirmed); **-129.9°F**, July 21, 1983, Vostok; **-132°F**, 1997, Vostok (unconfirmed). *See also* **Global warming**.

Tempest Peak. 84°31' S, 164°11' E. Also called Tempest Peaks. A sharp, ice-covered peak (the New Zealanders call it a tabular mountain), rising to 3410 m, with a subordinate summit to the SW of 3345 m, 5 km NNE of Storm Peak, in the Marshall Mountains, in the S sector of the Queen Alexandra Range, in the Queen Maud Mountains. So named by the Northern Party of NZGSAE 1961–62, because of the storms here. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Tempest Peaks *see* **Tempest Peak**

Baie des Tempêtes *see under* **D**

Temple, Gerald Alton. b. June 19, 1920, Flint, Mich., son of Glen Otis Temple and his wife Pearl Wiggins. He joined the U.S. Navy, and was coxswain on the *Bear* during the 2nd half of USAS 1939–41. He later lived in Treasure Island, Fla., and died in Vineland, NJ, in July 1980.

Temple Glacier. 64°00' S, 60°01' W. Flows NW into the S side of Lanchester Bay, on the Davis Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956–57. Named by UK-APC on Sept. 23, 1960, for Félix du Temple (1823–1890), French naval officer who, in 1857, designed the first powered model airplane to take off unaided, fly, and land safely. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. Originally plotted in 64°02' S, 59°55' W, it has since been replotted. The British plot it in 64°00' S, 59°53' W.

Templeton Peak. 77°17' S, 161°50' E. Rising to about 1400 m on the ridge between the head of Ringer Valley and Deshler Valley, 2.6 km SW of Mount Swinford, in the Saint Johns Range of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for Malcolm Templeton (b. 1924), former NZ Foreign Service officer, who wrote the 2000 book *A Wise Adventure: New Zealand & Antarctica 1920–1960*. US-ACAN accepted the name in 2006.

Mount Tempyo. 69°31' S, 39°43' E. A rocky, round-topped hill rising to 254 m in the S extremity of Skarvsnes Foreland, on the coast of Queen Maud Land. Photographed aerially by LCE 1936–37, and mapped (but not named) from these photos in 1946 by Norwegian cartographers. Mapped in more detail (1:25,000 scale) by Japanese cartographers from JARE ground surveys and air photos, 1959–73, and named descriptively by them on Nov. 22, 1973, as Tenpyo-zan or Tempyo-zan (i.e., "flat-topped mountain"). US-ACAN accepted the translated name Mount Tempyo in 1975.

Tempyo-zan *see* **Mount Tempyo**

Ten-Year International Antarctic Glaciological Project. 1971–81. Also known as the International Antarctic Glaciological Project, or IAGP. A large co-operative venture between Aus-

tralia, France, USSR, USA, and the UK, to determine the dynamics of the East Antarctica Ice Shelf, and to measure it precisely.

Tenaza Peak. 71°05' S, 167°24' E. Rising to 1345 m, 4 km E of Mount Pechell, in the W central part of Hedgpeth Heights, in the Anare Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Richard Reuben Tenaza (b. March 22, 1939, San Mateo, Calif.), USARP biologist at Hallett Station in 1967-68.

The *Tenedos*. Sealing and whaling barque of 245 tons, owned by Lawrence & Co., of New London, Conn. Named for the island from which Agamemnon sailed in Greek legend. On Aug. 7, 1856, she sailed out of New London, bound for the South Shetlands, under the command of Captain Samuel H. King. Rest of crew: Stephen B. Bennett (1st mate), Isaac Avery (2nd mate), John F. Clark (3d mate), John Robinson, Joseph Edmastone, John Palmer, John Rogers, James Whalley, Theodore Powers, Levi Crouch, Henry Cook, Thomas Carroll, Fred Mitchell, William Ferguson, Richard J. Lemar, Herbert B. Hull, Frank Howland, George W. Glasson, and 5 Hawaiians — John Adams, John Bowhead, Charles Tenedos [sic], John Merry, and Ben Morgan. She was definitely in at the South Shetlands that first sealing season, 1856-57, and perhaps in successive seasons too, not returning to New London until 1860. She was laid up on May 12, 1860, and on Oct. 16, 1861 was purchased by the U.S. Navy as the first in a contingent of whalers to be used in the "stone fleet," i.e., to be sunk and to act as obstacles to Confederate shipping at Southern ports during the Civil War; in the case of the *Tenedos*, at Charleston Harbor on Dec. 19, 1861.

The *Tenera Luna*. A 14-meter Italian cutter in at the South Shetlands and the Antarctic Peninsula, in 1995-96, under the command of skipper Paolo Mascheroni.

Teneycke, William *see* **USEE 1838-42**

Tenga-hyobaku. 72°35' S, 31°20' E. An icefall in the S part of the Belgica Mountains. Mapped by Japanese cartographers from JARE air photos taken in 1976, and from ground surveys conducted by JARE 1979-80, and so named by the Japanese on Nov. 24, 1981 (name means "tenga icefall") because of the occurrence of amazonite (which the Japanese call "tenga-isi") nearby.

Teniente Arturo Parodi Station. 80°19' S, 81°18' W. Semi-permanent Air Force station, established by the Instituto Antártico Chileno at the base of the Patriot Hills, in the Ellsworth Mountains of Ellsworth Land. It opened on Dec. 6, 1999, as Estación Polar Teniente Arturo Parodi Alister, and is also known as Arturo Parodi Station, but more commonly known as Base Patriot Hills, or the Patriot Hills Base. Open to Chilean military personnel only; however, Adventure Network expeditioners could occasionally visit the base. Built by architects Paul Taylor and Marcelo Bernal, it is U-shaped, with an entrance on both sides, and has modules containing living quarters attached to it. It studies glaciology, meteorology, cartography, and geology. Named for the 1st lieutenant of that name who was the first Chilean to fly over the continent, in a Vought Sikorsky off the *Angamos*, on Feb. 15, 1947, during ChilAE 1946-47.

Teniente Cámara Station. 62°36' S, 59°57' W. Argentinian scientific station at the head of the harbor on the E side of Half Moon Island, 11 km from Capitán Arturo Prat Station, in the South Shetlands. **March 1952**: Built as a refuge hut by ArgAE 1951-52, and named Refugio Media Luna. **April 1, 1953**: It was extended by ArgAE 1952-53, and established as a permanent meteorological station that year. Its new name was Destacamento Naval Bahía Luna. It had 6 buildings, which could accommodate 7 persons. **1953 winter**: Lt. Humberto Fernández Grellet (leader; *see* **Caleta Higueras**). **1954 winter**: Jorge Aramburú (leader). **1955 winter**: Carlos A. Bonino (leader). That year the name was changed to Destacamento Naval Teniente de Navío Juan Cámara (i.e., Naval Detachment Lieutenant Juan Cámara), but more often seen as Destacamento Naval Teniente Cámara, and popularly called Base Cámara. **1956 winter**: Julio Sbarbi Osuna (leader). **1957 winter**: José M. González Silvano (leader). **1958 winter**: Raúl L. Billingshurst (leader). **1959 winter**: Ernesto D. Brignone (leader). The station was closed at the end of the 1959 winter. It was officially closed in 1961, was re-opened in 1988-89, as a temporary base, and closed in 1998. It was being used in the 2000s.

Teniente Cándido de Lasala Refugio *see* **Lasala Refugio**

Teniente Carvajal Station. 67°46' S, 68°55' W. On Aug. 14, 1984 the UK handed over their Base T, on Adelaide Island, to the Chileans, and it was re-named Base Antártica Teniente Luis Carvajal Villaroel Antarctic Base, or Teniente Carvajal Station for short, or, better still, just Carvajal. It could accommodate 20 persons, and had a snow runaway for planes. Used as a summer-only station by the Chilean Air Force until Jan. 28, 1999, when Prof. Eduardo García Soto, aged 65, fell to his death down a 50-meter crevasse in a Snowmobile, and another person was injured and had to be rescued, when a snowbridge collapsed. At that point it was discontinued. The Chilean Navy visits it regularly, to check on it.

Teniente Esquivel Refugio. 59°27' S, 27°16' W. Argentine refugio on Morrell Island, in the South Sandwich Islands. They began building it on Dec. 14, 1955, and it was inaugurated on Jan. 25, 1955. It was abandoned after volcanic eruptions. Later it became the site for Corbeta Uruguay (q.v.). However, as this is not in Antarctica proper, it does not fall into the mandate of this book. It is only here in case a reader thinks it's been left out.

Teniente Matienzo Station. 64°58' S, 60°02' W. More popularly known as Base Matienzo. Argentine scientific station, at Larsen Nunatak, in the Seal Nunataks, between Robertson Island and the Nordenskjöld Coast, in the Larsen Ice Shelf, off the E coast of the Antarctic Peninsula. Built on a volcanic rock surface, 32 m above sea level, and 50 m from the coast, it originally consisted of 2 buildings for 20 persons, then expanded to 6 buildings, and an ice runway of 1500 m about 2 km away from the station, which would later bring around 30 flights in a season in Twin Otters and a Bell 212 helicopter. **March 15, 1961**: The station opened, as Base Conjunta Teniente Matienzo. 6 buildings, 15 persons. Named for aviator Lt. Benjamín Matienzo. **1961 winter**: Engineer Captain Ignacio Carro (leader). **1962 winter**: Air Force Captain Jorge Raúl Muñoz (pilot and leader). **1963 winter**: Infantry Major Raúl Héctor Toledo (leader). **Nov. 15, 1963**: Its name was changed to Destacamento Aeronáutico Teniente Matienzo. **1964 winter**: Héctor René Guidobono (leader). **1965 winter**: 1st Lt. Eduardo Fontaine (leader). That year the name of the base changed to Base Aérea Teniente Banjamín Matienzo (Air Force Base Lieutenant Benjamin Matienzo). **1966 winter**: 1st Lt. Reynaldo Edgar Cravero (leader). **1967 winter**: 1st Lt. Hugo Enrique Rey (leader). **1968 winter**: Capt. Julio Florentino Lujan (leader). **Aug. 1968**: Capt. Luján was evacuated from the British base, along with Lt. Óscar José Pose Ortiz de Rozas and the doctor, 1st Lt. Eliseo Iturrieta Guardiola. **1969 winter**: Lt. Óscar José Pose Ortiz de Rozas (leader). The station was closed after the 1969 winter, but re-opened for the 1970 winter. **1970 winter**: Rubén Alberto del Punta (leader). **1970-71 summer**: The station was re-opened. **1971 winter**: there were only 5 men

there that winter, led by Jorge Múñoz. The station was closed again after the 1971 winter, but re-opened for the 1972 winter. **1972 winter:** Óscar E. Rodríguez Lavalle (leader). The station was closed during 1972-73, and reopened on Sept. 8, 1974, then closed again. **1975-76 summer**: The station was re-opened. **1976 winter**: Ernesto Lynch (leader). The station was closed for good as an all-year base after the 1976 winter. **1984-85**: The station was re-opened, but only for summer work.

The *Teniente Olivieri*. Argentine ship used on ArgAE 2008-09.

Islotes Teniente Patrignani *see* **Flyspot Rocks**

Isla Teniente Primero Marinero Rubilar *see* **Postillion Rock**

Teniente Rodolfo Marsh Station. 62°11' S, 58°57' W. Chilean Air Force scientific station with a gravel runway, it was begun 1 km from Presidente Frei Station in the 1979-80 summer. Its full name was Teniente Rodolfo Marsh Martín Station, but that name was hardly ever used. This new base, built to service Frei, coexisted with Frei, as a separate unit administratively, for a year or so. **March 22, 1980**: The first Hercules airplane arrived. **June 25, 1980**: A winter flight was made. **1980-81 summer**: Villa de las Estrellas was established here. **1981 winter**: César Tejos Echeverría (leader). **1981-82 summer**: Nearby Presidente Frei Station was placed under Marsh as one administrative unit, and relegated back to its original status of meteorological center within Marsh. **1982 winter**: Ricardo Rosas Benítez (leader). **1983 winter**: Miguel Camus Saldías (leader). **1984 winter**: Daniel Contreras Avalos (leader). **Nov. 21, 1984**: The first child was born here. **1985 winter**: Capt. Daniel Contreras Avalos (leader). **1986 winter**: Germán Fuchslocher (leader). **1987 winter**: Juan Bastías Silva (leader). **1988 winter**: Juan Bastías Silva (leader). **1989 winter**: Héctor Barrientos Parra (leader). **1990 winter**: Héctor Barrientos Parra (leader). **1991 winter**: Héctor Barrientos Parra (leader). **1992 winter**: Julio Escobar Díaz (leader). **1993 winter**: Julio Escobar Díaz (leader). **1994 winter**: Renato Barria Muñoz (leader). After this season, Marsh became re-incorporated into Presidente Eduardo Frei Station, and the entire complex reverted to the name Presidente Eduardo Frei Montalva Station, or Frei for short. Teniente Rodolfo Marsh, as a name, was, from now on, used only for the runway and its operational buildings.

Isla Teniente Rodríguez *see* **Terminal Island**

Teniente Ruperto Elichiribehety Station. 63°24' S, 56°59' W. Scientific summer station at Hut Cove, Hope Bay, near Esperanza Station, Trinity Peninsula. it was Uruguay's second scientific station in Antarctica. Known officially as ECARE (Estación Científica Antártica Teniente de Navío Ruperto Elichiribehety), it was the former FIDS/BAS Base D (Hope Bay Station), transferred to Uruguay on Dec. 8, 1997, and renamed to honor the captain of the *Instituto de Pesca No. 1*, who attempted to rescue Shackleton's Elephant Island party in 1916. It was ready for use on Dec. 22, 1997, and inaugurated on Jan. 12, 1998, under new management. José Unzurruzaga was the first summer leader, that season (1997-98). Summer leader for 1998-99 was Jorge Filardi. It can accommodate 6 persons.

Monte Tennant *see* **Mount Tennant**

[1]**Mount Tennant**. 64°41' S, 62°41' W. A conspicuous, steep-sided, conical peak, rising to 688 m, near Georges Point, at the N end of Rongé Island, off the Danco Coast, on the W coast of Graham Land. Discovered in 1898 by BelgAE 1897-99. Named by personnel on the *Snipe* in Jan. 1948, for Vice Admiral Sir William Tennant (1890-1963), commander-in-chief of the America and West Indies station. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1953. It appears in the 1955 British gazetteer. On 1953 Argentine charts it appears variously as Pico Lucy and Monte Lucía, and on a 1957 chart as Monte Lucy. On a Chilean chart of 1962 it appears (misspelled) as Monte Tennent, but the spelling Monte Tennant was accepted by the 1974 Chilean gazetteer. Today, the Argentines call it Monte Lucía. *See also* **Chair Peak**.

[2]**Mount Tennant** *see* **Tennant Peak**

Tennant, George W. b. March 7, 1882, Manistee, Mich., son of Canadian carpenter James H. Tennant and his wife Lorinda. He worked as a deck hand on canal ships in Chicago, operated a bakery in the California oil fields, cooked hot dogs at the World's Fair in St. Louis, worked as a cook on Alaskan salmon ships and sealers, prospected for gold in Mexico, and was a soldier of fortune in a South American revolution before he turned sea cook in 1919. He was 7 years in the California and Washington National Guard, and was chief cook on the *Chantier* during Byrd's North Pole expedition in the spring of 1926 (he offered to donate his meagre salary to Byrd to help defray the expenses of that expedition), then cook on ByrdAE 1928-30, to Antarctica. His big ambition was to retire from the sea, to a lonely spot in the country, with no women. However, he married a widow with several children, and spent the next several years plying between NY, Boston, and Philadelphia. The last work he did was cooking for a dredge crew at Mackinac Island. He died on Feb. 15, 1953, in Manistee.

Tennant Peak. 78°09' S, 155°18' W. Also called Mount Tennant. About 1.5 km (the New Zealanders say 4 km) S of Gould Peak, in the S group of the Rockefeller Mountains, on Edward VII Peninsula. Discovered on Jan. 26, 1929, during ByrdAE 1928-30, and named by Byrd for George Tennant. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Mount Tennent. 85°22' S, 166°45' E. A rocky peak rising to 2895 m above sea level, 3 km S of Vandament Glacier, in the central part of the Dominion Range. Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for William Blair Tennent (1898-1976), minister in charge of Scientific and Industrial Research, NZ. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mount Tenney. 74°49' S, 65°19' W. A mountain, rising to about 1700 m, about 15 km NW of Mount Hyatt, to the W of the Latady Mountains, and N of Ketchum Glacier, on the Orville Coast, at the base of the Antarctic Peninsula. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Philip J. Tenney, traverse engineer on South Pole-Queen Maud Land Traverse III, 1967-68. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Monte Tenniel *see* **Mount Tenniel**

Mount Tenniel. 70°20' S, 62°49' W. Rising to 1635 m, at the head of Smith Inlet, 11 km WNW of the mouth of Clifford Glacier, on the Wilkins Coast, on the E coast of Palmer Land. Discovered in 1936 by a sledging party, during BGLE 1934-37. They mapped it roughly in 70°18' S, 62°48' W, and it appears as such on Stephenson's 1940 map of the expedition. Photographed aerially in late 1947, by RARE 1947-48, and that same season (in Jan. 1948) it was charted from the ground by a joint sledging party of RARE personnel and Fids from Base E. Named in 1952 by Sir Miles Clifford, governor of the Falkland Islands, for his great uncle, Sir John Tenniel (1820-1914), the artist. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on an Argentine chart of 1963 as Monte Tenniel, and that is the name used today by both the Argentines and the Chileans. It was further photographed aerially by USN, in 1966, and surveyed from the ground by BAS personnel from Base E in 1972-73.

Tennis. Possibly the first tennis match played in Antarctica, certainly the most famous, was played at Base W on Jan. 1, 1957, by Crawford Brooks and Ray Priestley, a game attended and cheered on by the Duke of Edinburgh and officers from the *Protector*. They had 4 or 5 hours at the base, and someone had brought rackets. It would be unfair to say that the match was enlivened by considerable drinking, but it would be fair to say that the Prince had a shot (at the game, that is). Someone even took a film of the event. VXE-6 pilot Charlie Gaussiran (*see* **Gaussiran Glacier**) claims to be only one of two persons who have played tennis in Antarctica (in a helicopter hangar), the other presumably being the exec officer he played with. Of course, this was an exaggeration, meant for the desired effect.

Cape Tennyson. 72°22' S, 168°18' E. Also called Cape Campbell. A small, dark rock outcrop ("scarcely a headland," says Bernacchi) on the N coast of Ross Island, about 40 km southeastward of Cape Bird. Discovered in Feb. 1900

by BAE 1898-1900, and named by Borchgrevink for the British poet, Alfred Lord Tennyson (1809-1892). US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Islote Tenorio *see* **Tenorio Rock**

Tenorio Rock. 62°28' S, 59°44' W. A small rock island, rising to about 1 m above sea level, it is the outermost of a group of rocks about 0.7 km off the W coast of Discovery Bay, in Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946-47, and named by them as Islote Aviador Tenorio. It appears as such on their 1947 chart. Chilean Air Force 2nd Lt. Humberto Tenorio Iturra was the 2nd pilot of the Sikorsky helicopter used by ChilAE 1946-47. He was also on ChilAE 1948-49. Later a comandante de escuadrilla (squadron leader), Tenorio flew the first non-stop return flight from Punta Arenas to Deception Island (Dec. 28, 1955). He was later a captain. In 1951 the name was shortened to Islote Tenorio, and that is how it appears on a 1961 Chilean chart, and it was the name accepted by the 1974 Chilean gazetteer. It was re-surveyed by an RN Hydrographic Survey unit on the *Protector*, in 1964, and it appears on their chart of 1965, as well as on a British chart of 1968. UK-APC accepted the translated name on Nov. 3, 1971, and US-ACAN followed suit in 1972. It appears as such in the 1974 British gazetteer.

Tenpyo-zan *see* **Mount Tempyo**

Tensoku-iwa *see* **Tensoku Rock**

Tensasi-mine. 72°02' S, 24°41' E. A peak rising to 1729 m, at the narrowest part of Luncke Ridge, in the N part of the Vestfold Hills. Mapped by Japanese cartographers from JARE air photos taken in 1981-82 and in 1986, and also from JARE ground surveys conducted between 1984 and 1991, and named descritively by them on Feb. 26, 1988 ("peak that points to the sky"). The Norwegians call it Fingertoppen.

Tensoku Rock. 68°48' S, 40°11' E. Also called Daiichi Rock. The westernmost rock exposure on the edge of the ice fringing the Prince Olav Coast of Queen Maud Land, midway between Tama Glacier and Flattunga, about 30 km E of the Flatvaer Islands. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-69, and named by them on Oct. 1, 1962, as Tensoku-iwa (i.e., "astronomical observation rock") because this rock served as a point of observation for a JARE survey party in the 1950s. US-ACAN accepted the name Tensoku Rock in 1968. The Norwegians call it Observasjonberget.

Nunatak Tent *see* **Tent Nunatak**

[1]**Tent Island** *see* **Tent Nunatak**

[2]**Tent Island**. 77°41' S, 166°23' E. An island, roughly rectangular in shape, rising to 138 m above sea level, it is 1.5 km long, and is the largest of the four Dellbridge Islands, S of Cape Evans (on Ross Island) in McMurdo Sound. The island is composed of volcanic debris of a similar nature to that of Ross Island. Discovered by BNAE 1901-04, and named by Scott for its tent-like appearance. US-ACAN accepted the name in 1948, and NZ-APC followed suit.

Tent Nunatak. 67°40' S, 65°17' W. A conspicuous pyramid-shaped nunatak, the eastern of 2 nunataks on the cape between Fleet Point and Choyce Point, and marking the S entrance point of Whirlwind Inlet, on the Bowman Coast, on the E coast of Graham Land. Discovered and photographed aerially in Sept. 1940, during USAS 1939-41, and described as "a distinctive tent-shaped rock nunatak." It appears as such on a 1943 U.S. Hydrographic Office chart and photo. In 1946-47, Fids from Base E sighted it from the NW. In Dec. 1947, Fids from Base D roughly charted it as an island in the Larsen Ice Shelf. From a distance, it looks like an island, as many nunataks in this area do, something Carl Anton Larsen had found out in the 1890s. The Fids plotted this in 67°26' S, 65°21' W, and named it Tent Island. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such on a 1952 British chart, and in the 1955 British gazetteer. In 1963-64, BAS personnel from Base E showed it to be a nunatak, and that it was part of the mainland, which is how it had been recognized in 1940. On Dec. 20, 1974, UK-APC renamed it Tent Nunatak, and, with the new coordinates, it appears in the 1977 British gazetteer. US-ACAN accepted this in 1975.

Tent Peak. 77°30' S, 168°58' E. A tent-shaped peak rising to about 1570 m, about midway between Cape Crozier (to the W) and the slopes leading up to Mount Terror (to the W), in the E part of Ross Island. On Jan. 5, 1959, a party from NZGSAE 1958-59 occupied the peak as an astronomical control station, and pitched their tent just below it (hence the doubly descriptive name given by them). The name remained in use, but unofficial, for a long time, until it was finally accepted by US-ACAN and NZ-APC.

Tent Rock. 75°42' S, 158°34' E. A small nunatak shaped like a ridge tent, between Brimstone Peak and Ricker Peak, 1.5 km SW of Thomas Rock, and 11 km W of the Ricker Hills, in the Prince Albert Mountains of Victoria Land. Discovered by the Southern party of NZGSAE 1962-63, and named descriptively by them. NZ-APC accepted the name, as did ANCA, and US-ACAN followed suit in 1966.

Tentacle Ridge. 79°37' S, 157°15' E. A long, partially ice-free ridge, extending SE from the mouth of McCleary Glacier at the lower slopes of Mount Longhurst, along the N side of Darwin Glacier. Discovered by the Darwin Glacier Party of BCTAE 1956-58, and named descriptively by them. ANCA accepted the name on Nov. 24, 1961, and US-ACAN followed suit in 1962.

Tenterhooks Crevasses. 71°40' S, 162°30' E. A large system of crevasses in Rennick Glacier, between the Morozumi Range and the Lanterman Range. The S part of these crevasses (near Onlooker Nunatak) was traversed with great difficulty by members of the Northern Party of NZGSAE 1963-64, who aptly named it. NZ-APC accepted the name, and US-ACAN followed suit in 1964. Originally plotted in 71°45' S, 162°35' E,, it has since been replotted.

Cerro Teodolito *see* **Theodolite Hill**

Monte Teodoro *see* **Mount Theodore**

Teöya *see* **Te Islands**

Utës Teplinskogo *see* **Ruthven Bluff**

Ozero Tëploe. 70°54' S, 68°02' E. A lake. Named by the Russians. These coordinates place it SE of Radok Lake, at the SE extremity of the Aramis Range, in the Prince Charles Mountains. However, it may well be the Russian name for Lake Radok itself.

Teres Ridge. 62°34' S, 60°24' W. A ridge, at an elevation of about 330 m, extending 1.5 km in a S-N direction, on the coast of Hero Bay, on the coast of Livingston Island, in the South Shetlands. Its summit is 2.5 km SE of Siddons Point, 10.2 km WNW of Hemus Peak, 9.6 km NW of Rezen Knoll, and 9 km N of Sinemorets Hill. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the Thracian king Teres, 480-440 BC.

Oazis Tereshkovoj *see* **Shinnan Rocks**

Cerro Teresita. 63°24' S, 57°35' W. A hill, SW of Fidase Peak, on Trinity Peninsula. Named by the Argentines.

Vulcano di Fango Tergeste. 75°57' S, 165°25°E. An elliptic-shaped submarine mud volcano, about 75 m by 200 m, and trending NW-SE, with a base at 680 m, in the W part of the Ross Sea, about 46 km SSE from the Drygalski Ice Tongue, and 85 km NNW from Franklin Island. Discovered during the geophysical expedition aboard the *Explora*, 2005-06. Named by the Italians on Dec. 6, 2007 (fango" means "mud," and "Tergeste is an asteroid). *See also* **Vulcano di Fango Iulia** (*under* **I**).

Terje. The name of several whale catchers belonging to the *Baleana* (q.v.).

The *Terje VI*. Whale catcher working for the *Sevilla*, in at Marguerite Bay in Feb. 1924, skippered by Søren Beckman.

The *Terje Viken*. A large British factory whaling ship, built in Germany for United Whalers, and which operated in Antarctic waters in 1935-36 and 1936-37. For the 1937-38 voyage, the crew signed on at Rotterdam, on April 29, 1937, under skipper Fred Gjertsen. When the ship arrived in New York, Gjertsen left, and Gullik Jensen took over as skipper. Lauritz Bigseth was 2nd mate, Anton Bjønnes was 3rd mate, Emil K. Bull was 4th mate, Nils Henrik Nielsen was bosun, and Otto Ludovik Beckmann was radio operator. There were also 3 stewardesses on board (*see* **Women in Antarctica**). The vessel left Rotterdam for Yokohama, then on to California, and from there south into Antarctic waters. By the time the ship arrived in Antarctic waters, Gullik Jensen was the skipper. She was back for the 1938-39 and 1939-40 seasons. On board, during the latter voyage (Capt. Otto Borchgrevink), were Jimmy Marr and Taffy Davies, investigating, for the British government the possibility of whale meat as food for the war. She was torpedoed on March 7, 1941, in the North Atlantic.

Terleckijtoppen *see* **Terletskiy Peak**

Gora Terleckogo *see* **Terletskiy Peak**

Terletskiy Peak. 71°49' S, 10°31' E. Rising to 2505 m, 2.75 km NW of Chervov Peak, in the Shcherbakov Range of the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the USSR in 1966, as Gora Terleckogo, for hydrographer N.A. Terletskiy (1910-1954). US-ACAN accepted the translated name Terletskiy Peak. The Norwegians call it Terleckijtoppen (which means the same thing).

Terme Sud. 71°09' S, 139°12' E. On the continental glacial plateau, 520 km from the coast of Adélie Land, S of Dumont d'Urville Station and Charcot Station. It was the most southerly point achieved by the French during IGY (1957-59). The term "terme" here is used as an abbreviation for terminus, or "terminaison," meaning "end." "Sud," of course, means "south."

Isla Terminal *see* **Terminal Island**

Terminal Island. 68°45' S, 70°26' W. A low, snow-covered island, rising to an elevation of about 150 m above sea level, 0.8 km off the N tip of Alexander Island. If it was seen in Jan. 1909, by FrAE 1908-10, it was not recognized as an island. ChilAE 1949-50 roughly surveyed it, and named it Isla Teniente Rodríguez, after Sub Lt. Renato Rodríguez Palominos, navigation officer on the *Lientur* during that expedition. It appears as such on their chart of 1947. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 by RARE 1947-48. He plotted it in 68°45' S, 70°35' W. Named descriptively as Terminal Island, by UK-APC on March 2, 1961, in relation to Alexander Island. It appears as such on a British chart of 1961. US-ACAN accepted that name in 1965. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with the new coordinates, the feature appears in the 1986 British gazetteer. It appears on a Chilean chart of 1962 as Isla Terminal, but on one of their 1971 charts as Isla Rodríguez, that latter name being the one accepted by the 1974 Chilean gazetteer. The Argentines call it Isla Terminal.

Terminal Peak. 75°53' S, 158°24' E. A small peak, rising to 1920 m, 1.5 km N of Griffin Nunatak, in the Prince Albert Mountains of Victoria Land. So named by the Southern Party of NZGSAE 1962-63, because it marked the W limit of their journey. NZ-APC accepted the name, as did ANCA, and US-ACAN followed suit in 1966.

Termination Barrier *see* **Termination Land, Shackleton Ice Shelf**

Termination Ice Tongue *see* **Termination Land**

Termination Land. The westward end of the Shackleton Ice Shelf. Discovered on Feb. 17, 1840, by Wilkes, and so named by him because this was as far as he got along the coast. Mawson re-discovered it in Feb. 1912, during AAE 1911-14, and re-named it Termination Ice Tongue (rather he re-defined it as such). In 1931, Mawson, during BANZARE 1929-31, found that it had gone.

Terminus Mountain. 78°08' S, 163°36' E. Rising to over 800 m (the New Zealanders say about 900 m), immediately S of Adams Glacier, on the E side of the Royal Society Range, near Heald Island, in Victoria Land. Climbed on March 1, 1911, by Grif Taylor and his Western Journey Party during BAE 1910-13. So named by Taylor, because it was the farthest point which they ascended in the area of the Koettlitz Glacier. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Terminus Nunatak. 69°52' S, 68°20' W. A conspicuous nunatak, rising to 670 m, between (on the one hand) Eureka Glacier and (on the other) Riley Glacier and Warren Ice Piedmont, 0.8 km inland from George VI Sound, W of the Traverse Mountains, on the W coast of Palmer Land. Photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos by U.S. cartographer W.L.G. Joerg in 1936-37. Photographed aerially and surveyed from the ground in 1936, by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition. Surveyed in 1948 by Fids from Base E, and so named by them because this nunatak marks the end of the sledge route from the Wordie Ice Shelf, down Eureka Glacier, to George VI Sound. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a 1955 U.S. Hydrographic Office chart.

Tern Cove. 60°42' S, 45°37' W. A small cove, the entrance to which is blocked by submerged rocks, immediately SE of Berry Head, in the NE part of Signy Island, in the South Orkneys. An area near the head of the cove dries at low water. Roughly charted by the Discovery Investigations in 1933. Surveyed by FIDS in 1947, and named by them for the colony of terns (*Sterna vittata*) on the most southerly (and largest) of the 3 small islands in the cove. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Tern Glacier. 77°17' S, 166°32' E. A glacier, flowing to the immediate E of Albatross Glacier, on the NE side of the Quaternary Icefall, in the NW part of Ross Island. Named by NZ-APC.

Tern Nunatak. 62°06' S, 58°19' W. Rising to 265 m, just E of Lussich Cove, Admiralty Bay, King George Island, in the South Shetlands. Charted by FrAE 1908-10. Surveyed by FIDS in 1948, and named by them for the terns seen here. It was photographed aerially by FIDASE in 1956-57, and named by them as Colins Nunatak, for Colin Brown. UK-APC accepted the name Tern Nunatak on Sept. 23, 1960, and US-ACAN followed suit later that year. Last plotted by the British, in late 2008.

Tern Valley *see* **Italia Valley**

Terningen *see* **Terningen Peak**

Terningen Peak. 72°11' S, 2°45' E. A small rock peak, rising to 2680 m, it marks the summit of Terningskarvet Mountain, in the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Terningen (i.e., "the die"). US-ACAN accepted the name Terningen Peak in 1966.

Terningskarvet *see* **Terningskarvet Mountain**

Terningskarvet Mountain. 72°11' S, 2°46' E. A large, complex, mostly ice- and snow-capped mountain just E of Mayr Ridge, it forms the SE portion of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Sauter-Riegel (i.e., "Sauter ridge"), for Siegfried Sauter. This feature proved difficult for post-war geographers to pinpoint with accuracy, and so they gave the name Sauter Range to a feature in the vicinity. The 1956 American gazetteer has this to say about the Sauter Range: A range of mountains projecting through the ice cap of New Schwabenland, at the N edge of the Polar Plateau. The range extends about [20 km] in an E-W direction, transverse to the general structural grain of the area, and rises to about 10,500 feet in elevation near the W end. Centering near 72°30' S, 2°20' E. Discovered by GermAE under Ritscher, 1938-39, and named for Siegfried Sauter. The range was mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60. They re-plotted it, re-defined it, and renamed it Terningskarvet (i.e., "the die mountain"). US-ACAN accepted the name Terningskarvet Mountain in 1971. Today, the Germans call it Sauterriegel, and it is reported that the Russians call it Mount Sauter (one supposes "Gora Sauter").

Terns *see* **Arctic terns, Antarctic terns**

Colina Ternyck *see* **Ternyck Needle**

Pico Ternyck *see* **Ternyck Needle**

Ternyck Needle. 62°05' S, 58°15' W. Name also seen misspelled as Ternyk Needle (in fact, Ternyck Needle itself is a misspelling, as we shall see). A conspicuous nunatak rising to 364 m (so say the Americans and the Chileans; the British say 435 m), and standing 2.5 km E of the head of Martel Inlet, at the base of the small peninsula separating Admiralty Bay from King George Bay, on King George Island, in the South Shetlands. Charted in Dec. 1909 by FrAE 1908-09, and named by Charcot as Aiguille Ternyck. It appears as such on Charcot's 1912 map, and on Bongrain's 1914 map of the expedition. It appears translated as Ternyck Needle on a British chart of 1929, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was used as a survey station by FIDASE in Jan. 1957. It appears on a Chilean chart of 1947 as Monte Aguja Ternyck (i.e., "Ternyck needle peak"), on one of their 1962 charts as Pico Ternyck, but the name Monte Aguja Ternyck

was the one accepted by the 1974 Chilean gazetteer. It appears on an Argentine chart of 1949 as Colina Ternyck (i.e., "Ternyck hill"), and that was the name accepted by the 1970 Argentine gazetteer. It was climbed by Fids on May 6, 1949. Last plotted by the British, in late 2008. Henri-Félix-Louis Ternynck (sic; 1847-1914)) was the famous French sugar manufacturer, a patron of Charcot's expedition.

Bukhta Terpenija. 67°39' S, 46°08' E. A bay immediately N of Molodezhnaya Station, in the Thala Hills of Enderby Land. Named by the Russians.

Fondeadero Terra Australis. 64°54' S, 62°54' W. An anchorage, about 0.73 km WSW of Muñoz Point (the extreme SE point of Lemaire Island), in Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named (probably) by ChilAE 1950-51.

Terra Australis Incognita. Latin for "unknown southern continent." The idea of a great southern land had been proposed for centuries (*see* **Origin of name Antarctica**). It was, of course, fabled as a land of great treasures, strange peoples, etc., even though no one had ever been there. Magellan's sighting of Tierra del Fuego in 1519 led to a renewed interest in its discovery, and in Jan. 1772 Kerguélen discovered the islands which now bear his name, and claimed that his "La France Australe" was the center of the Antarctic continent. He was wrong. Like Kerguélen, Captain Cook was sent to find this unknown land, but, unlike the Frenchman, Cook admitted to not having seen land at all south of 60°S. It remained for the early sealers to discover Antarctic lands, in the early 1820s, and to begin to convert it into Terra Australis Cognita (so to speak).

Terra Cotta Mountain. 77°54' S, 161°15' E. Also called Terra Cotta Mountains. Between Windy Gully and Knob Head, or, to put it another way, between New Mountain and Knob Head, on the S side of Taylor Glacier, in Victoria Land. Named descriptively by BNAE 1901-04. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Terra Cotta Mountains *see* **Terra Cotta Mountain**

Islas Terra Firma *see* **Terra Firma Islands**

Terra Firma Islands. 68°42' S, 67°33' W. A small group of islands in Mikkelsen Bay, in the Marguerite Bay area, 13 km N of Cape Berteaux, off the W coast of Graham Land. They include Alamode Island, Dumbbell Island, Hayrick Island, Lodge Rock, and Twig Rock. Discovered and roughly surveyed on June 18, 1936, by BGLE 1934-37, who named the largest island (i.e., what would later be renamed Alamode Island) as Terra Firma Island because a depot-laying party camped there following the break-up of sea ice during the expedition. The name Terra Firma was later applied to the whole group. US-ACAN accepted the name in 1950.

Terra Firma II Island *see* **Twig Rock**

The *Terra Nova*. The largest of all the Scottish whaling ships, this Dundee vessel was built by Alexander Stephen & Sons of that town, in 1884. She was 187 feet long, with a 31-foot beam, and weighed 747 tons. She had 3 masts and was rigged as a bark (barque). She was sent to Antarctica in 1903-04, under the command of Harry Mackay, in company with the *Morning*, in order to relieve BAE 1901-04. In 1910-13 she was Scott's expedition ship for BAE, and Harry Pennell commanded her in Scott's absence during the expedition. She sank off Newfoundland, in late Sept. 1943.

Glacier Terra Nova *see* **Astrolabe Glacier**

Mount Terra Nova. 77°31' S, 167°57' E. A mountain, snow-covered except for its peak, rising to 2130 m on the long ridge between Mount Erebus and Mount Terror, pretty much in the center of Ross Island, it is the third highest mountain on the island. First explored and mapped by BNAE 1901-04, and named by them for the *Terra Nova*. US-ACAN accepted the name in 1948, and NZ-APC followed suit. Originally plotted in 77°30' S, 160°03' E, it has since been replotted.

Terra Nova Bay. 74°45' S, 164°30' E. A large bay, about 60 km (the New Zealander say about 90 km) long, and often ice-free, it is a Ross Sea indentation into the coast of northeastern Victoria Land, between Cape Washington and Drygalski Ice Tongue. Discovered by BNAE 1901-04, and named by Scott for the *Terra Nova*. US-ACAN accepted the name in 1947, and NZ-APC followed suit. Originally plotted in 74°50' S, 164°30' E, it has since been replotted. The Italians have an Automatic Weather Station here, at an elevation of 88 m.

Terra Nova Bay Polynya. An ice-free area of water in Terra Nova Bay, off the coast of Victoria Land, in the Ross Sea. Between 1000 and 5000 sq km, it centers on 75°S, 163° 15 E. Two things keep it ice free: The strong katabatic winds blowing down the Reeves Glacier valley, and the Drygalski Ice Tongue, which blocks the northward flow of sea ice into Terra Nova Bay.

Terra Nova Bay Station *see* **Baia Terra Nova Station**

Terra Nova Canyon. 68°00' S, 159°00' E. An undersea feature. Named by international agreement in June 1988, in association with the nearby Terra Nova Islands, off the coast of Oates Land.

Terra Nova Glacier. 77°27' S, 167°42' E. A glacier flowing N for about 8 km from the saddle between Mount Erebus and Mount Terra Nova, in the north-central part of Ross Island, into Lewis Bay. Named by NZ-APC on Nov. 4, 1999, for its proximity to Mount Terra Nova. US-ACAN accepted the name in 2000.

Terra Nova Islands. 68°53' S, 157°57' E. Two small islands, about 22 km (the Australians say about 26 km) N of Williamson Head, on the coast of Oates Land. Discovered from the *Magga Dan* on March 8, 1961, by Phil Law's ANARE party, and named by ANCA for the *Terra Nova*. US-ACAN accepted the name in 1970.

Terra Nova Saddle. 77°31' S, 167°37' E. Rising to about 1400 m between Mount Erebus and Mount Terra Nova, it is one of the 3 prominent snow saddles on Ross Island. Named by NZ-APC on Feb. 20, 2001, in association with Mount Terra Nova, which rises to 2130 m to the E of this saddle. US-ACAN accepted the name later in 2001. *See also* **Terror Saddle** and **Bird Saddle**.

Terrabus. A large bus that transports passengers from Willy Field to McMurdo. Nicknamed "Ivan the Terrabus."

Terrace. 71°18' S, 170°13' E. A terrace, 15 m high, which borders a considerable length of cliff face at Ridley Beach, at Cape Adare, in northern Victoria Land. Named by NZ-APC.

Terrace Island *see* **Dunlop Island**

Terrace Lake. 77°34' S, 166°13' E. A small, elongate lake in a valley with moraine from Barne Glacier, 0.8 km E of Cape Barne, on Ross Island. Named descriptively, probably by BAE 1907-09, it appears on maps prepared by BAE 1910-13. US-ACAN accepted the name in 1968, and NZ-APC followed suit.

Terrace Ridge. 84°49' S, 113°45' W. A ridge, or spur, mostly ice-free, it descends NW from the summit area at the S end of Mount Schopf, in the Ohio Range of the Horlick Mountains. Terraces, partly ice-covered, and separated by scarps, have been formed by the resistant sandstone strata which predominate in the lower half of the slope of the ridge. Named by geologists of the Ohio State University expedition, who worked here in 1960-61 and 1961-62. US-ACAN accepted the name in 1962.

The Terraced Moraines. 77°33' S, 163°02' E. The moraines at Cape Royds, Ross Island. Named descriptively by BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

Cabo Terrada *see* **Terrada Point**

Terrada Point. 64°23' S, 62°14' W. The NE entrance point to Buls Bay, on SE Brabant Island, in the Palmer Archipelago. Roughly mapped by BelgAE 1897-99. Mapped in detail by ArgAE 1953-54. Surveyed by FIDS on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. In 1978 it was named by the Argentines as Cabo Terrada, for Juan Florencio Terrada (1782-1824; known as Florencio Terrada), an Argentine patriot. The British Joint Services Expedition used this point as the site for a refuge hut and main base camp. UK-APC accepted the name Terrada Point on Nov. 13, 1985, and US-ACAN followed suit.

Cerro Terrapin *see* **Terrapin Hill**

Terrapin Hill. 63°58' S, 57°32' W. A rounded, reddish-colored hill rising to 548 m, E of Croft Bay, at the S end of The Naze, a peninsula of northern James Ross Island, close S of Trinity Peninsula. Probably first explored in 1902-03, by SwedAE 1901-04. Charted by Fids from Base D in 1945, and named descriptively by them in 1948 (it is shaped like a terrapin). UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the 1955 British gazetteer. Further surveyed by FIDS between 1952 and 1955. It appears on a Chilean chart as Cerro Terrapin, and that was the name accepted by the 1974 Chilean gazetteer. The Argentine call it the same thing.

Lake Terrasovoe. 70°33' S, 68°02' E. A lake about 1 km wide and 2 km long, and shaped like

a teardop, in the NE sector of the Loewe Massif, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians as Ozero Terrasovoe, and it appears as such on one of their 1978 maps. ANCA accepted the translated name on May 1, 2006.

Ozero Terrasovoe *see* **Lake Terrasovoe**

Mount Terrazas. 74°52' S, 63°51' W. A prominent, ridge-like mountain, rising to about 1000 m, on the N side of Gardner Inlet, 16 km W of Mount Austin, in the Latady Mountains, on the Orville Coast of Palmer Land. Surveyed from the ground by USGS, and photographed aerially by USN between 1965 and 1967. Named by US-ACAN in 1968, for Rudolph D. "Rudy" Terrazas (b. Nov. 9, 1942, San Diego), builder who wintered-over at Pole Station in 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Terre Adélie *see* **Adélie Land**

Terre Adélie Expeditions *see* **French Polar Expeditions**

Terres Australes et Antarctiques Françaises. On March 27, 1924, all French claims in Antarctica were placed under the governor of Madagascar, and in 1925 were made a national park. On April 1, 1938, the boundaries of this territory were fixed, and on Aug. 6, 1955, all French Antarctic and sub-Antarctic lands came under a new administration, from Paris, and achieved territorial status, independent of Madagascar. This was TAAF, and included the sub-Antarctic Île Saint-Paul, Île Amsterdam, the Kerguélen Islands, the Crozet Islands, and Terre Adélie in Antarctica.

Terrie Bluff. 77°32' S, 169°05' E. A rock bluff rising to about 1000 m, 2.5 km SSE of Ainley Peak, in the Kyle Hills of Ross Island. The steep rock bluff face marks the E end of a mound-shaped and mostly ice-covered elevation 0.8 km NW of Detrick Peak. Named by US-ACAN in 2005, for Theresa M. "Terrie" Williams, professor of ecology and evolutionary biology, at the University of California, at Santa Cruz, USAP co-principal investigator of hunting behavior of free-ranging Weddell seals, several seasons in the sea-ice areas of McMurdo Sound, 1984-2002. NZ-APC accepted the name on Sept. 12, 2005.

Territorial Claims. Great Britain was the first to claim a piece of Antarctica (*see* **British Antarctic Territory**, and **Falkland Islands Dependencies**). This was in 1908, and the claim was based on propinquity to the Falkland Islands (the Falklands being actual UK territory) as well as discovery by Ross, Scott, et al, not to mention Cook. In 1919 Leo Amery of the Colonial Office started pushing for annexation of the whole continent, and although this idea waned throughout the 20s, it was still on the books until 1928. Part of the British territory went to NZ in 1923 (*see* **Ross Dependency**). The reasons that NZ subsequently established their claim were 1. Britain gave it to them; 2. propinquity to NZ. Note: NZ is the least assertive of the claimants. The Argentines formulated claims to the South Orkneys in 1925, and to all of the remaining British claims in 1937. In 1942 Argentina formally staked their claim. Their reasons were 1. propinquity; 2. geological continuity from their own country; 3. the Papal Bull, issued in Columbus's day, giving all land W of a line in the Atlantic to Spain (a certain portion also went to Portugal). Norway claimed Peter I Island in 1931, and the Queen Maud Land area in 1939 (*see* **Norwegian Dependency**). They based their claim to the island on the fact that it was a Norwegian ship that discovered it. The Norwegian claim to the continental mass was based on Amundsen's being the first man to the South Pole. The Norwegian claim was also made to pre-empt the Nazis (*see* below). In 1933 Australia claimed a huge chunk of the Antarctic continent, based on propinquity to their own country, and on Mawson's discoveries (*see* **Australian Antarctic Territory**). In 1938 France formally fixed the boundaries of Adélie Land (*see* **Terres Australes at Antarctiques Françaises**), basing their claim on FrAE 1837-40. In 1938-39 Nazi Germany claimed the New Schwabenland area of Queen Maud Land (*see* **German Antarctic Expedition 1938-39**). In 1940 Chile made a formal claim to most of the area claimed by Britain and Argentina. It used the same arguments that Argentina did. These, then, have been the (serious) claimants. All except Nazi Germany still-claim their wedge-shaped areas. Although certain partisan-minded explorers have claimed land for the USA and Russia, these two countries (or permutations thereof) have not claimed it for themselves, although they have as good a right as anyone to do so, probably better, and they do not recognize the claims of other nations (when one looks at some of the bases for some of these claims it is hardly surprising). Interestingly, though, these two countries (USA and Russia) have reserved the right to claim later (i.e., at some future, unspecified date). One supposes that if the economy should dictate it, they would claim. Indeed, the French claim upset the Americans who, in 1924, had stated that in order to establish a claim (anywhere in the world), a valid settlement must be made. All Antarctic land between 90°W and 150°W is unclaimed. The Antarctic Treaty does not compromise claims made before 1959 (which is when the treaty was signed), but it does not allow new claims while the treaty is in force. The spirit of the treaty does not actually recognize pre-existing claims either. Geographically, then, working the sectors from E to W, the Antarctic pie is divided as follows: 20°W to 80°W, Great Britain; 25°W to 74°W (overlapping), Argentina; 53°W to 90°W (overlapping), Chile; 90°W to 150°W, unclaimed; 150°W to 160°E, NZ; 160°E to 142°E, Australia; 142°E to 136°E, France; 136°E to 45°E, Australia; 45°E to 20°W, Norway (but only as far south as *about* 85°S, and as far north as *about* 65°N. All the other claimants go from 60°S all the way to the Pole). There have been the occasional plans to colonize Antarctica, and some have come to pass, such as the South American bases. In the early 1950s, George Krouse, a testing lab technician from Brunswick, Ga., formed a group with colonization in mind, but it has come to nought so far.

Territory Cirque. 77°33' S, 163°19' E. Immediately E of Colony Cirque, which in turn is immediately E of Mount Knox, in the MacDonald Hills, in the Asgard Range of Victoria Land. Named by NZ-APC in 1998, in association with Colony Cirque, and, indeed, with Commonwealth Glacier. US-ACAN accepted the name later in 1998.

The *Terror*. A small bomb/signal boat of 340 tons, made entirely of wood, and reinforced for the ice. She was Ross's cadet ship during the 1839-43 expedition, and had the same crew complement as the *Erebus*. Crozier commanded and Pownall P. Cutter was master.

Mount Terror. 77°31' S, 168°32' E. An extinct volcano rising to 3230 m (the New Zealanders say 3278 m), 30 km eastward of Mount Erebus, in the E half of Ross Island, it is the 2nd highest peak on the island. Discovered in 1841 by Ross, and named by him for the *Terror*. US-ACAN accepted the name in 1947, and NZ-APC followed suit. Bruce Alexander, Michael White, and Jim Wilson were the first to climb it, during NZARP 1958-59.

Terror Basin. 77°15' S, 169°00' E. A submarine feature of the Ross Sea, to the immediate N of Ross Island.

Terror Glacier. 77°37' S, 168°03' E. A large glacier between Mount Terra Nova and Mount Terror, this is one of the 3 major glaciers on Ross Island (cf Aurora Glacier and Barne Glacier), and feeds Fog Bay (part of Windless Bight), at the McMurdo Ice Shelf. Named by Arnold J. Heine of the McMurdo Ice Shelf Project during NZGSAE 1962-63, in association with Mount Terror. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Terror Point. 77°41' S, 168°13' E. A point projecting out into Windless Bight, and marking the E limit of Fog Bay, between Cape Mackay (6 km to the ESE) and Sultans Head Rock, on the S side of Ross Island. Named by BNAE 1901-04 for Mount Terror, which overlooks this point from the NE. US-ACAN accepted the name in 1972.

Terror Saddle. 77°31' S, 168°05' E. Rising to about 1600 m between Mount Terra Nova and Mount Terror, it is one of the 3 prominent snow saddles on Ross Island. Named by NZ-APC on Feb. 20, 2001, in association with Mount Terror, which rises to 3262 m to the E of this saddle. US-ACAN accepted the name later in 2001. *See also* **Terra Nova Saddle** and **Bird Saddle**.

Terry, Richard *see* **USEE 1838-42**

Terry Peak. 77°45' S, 163°31' E. Rising to 1282 m, it is the highest peak on the rock bluffs at the S side of New Harbor, 7 km WSW of Stewart Peak, on the Scott Coast of Victoria Land. Named by US-ACAN in 2000, for Terry L. Johnson, environmentalist with Antarctic Support Associates from 1990. NZ-APC accepted the name on Feb. 20, 2001. There were simply too many features in Antarctica named Johnson.

Tertene *see* **Tertene Nunataks**

Tertene Nunataks. 72°16' S, 21°57' E. Several small nunataks on the W side of Kreitzerisen, near the W end of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946–47, and named by them as Tertene (i.e., "the tarts"). US-ACAN accepted the name Tertene Nunataks in 1966.

Terter Peak. 62°32' S, 59°43' W. An ice-covered peak rising to 570 m, in Breznik Heights, 650 m NW of Razgrad Peak, 1.67 km ESE of the summit of Oborishte Ridge, and 1.9 km W of Momchil Peak, on Greenwich Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004–05, and named by them on Nov. 4, 2005, for Czar Svetoslav Terter of Bulgaria, 1300–21.

Tervel Peak. 62°43' S, 60°16' W. A triple peak rising to 810 m in Friesland Ridge, 1.2 km W of St. Methodius Peak, 1.57 km ENE of MacKay Peak, and 5.75 km NE of Barnard Point, it overlooks Peshtera Glacier and Zagore Beach to the NW, and Charity Glacier to the SW, in the Tangra Mountains of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 1995–96, and named by them on March 15, 2002, for Khan Tervel of Bulgaria, who stopped the Arab invasion of Europe at Constantinople in 718.

Mount Terwileger. 75°13' S, 64°44' W. Rising to about 1200 m, on the N side of Ueda Glacier, at the SE extremity of the Scaife Mountains, W of Hansen Inlet, on the Orville Coast, near the base of the Antarctic Peninsula. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961–62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Stephen E. Terwileger, hospital corpsman who wintered-over at Pole Station in 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Teshel Cove. 63°17' S, 62°15' W. A cove, 1.3 km wide, indenting the W coast of Low Island for 1.5 km, 6 km S of Cape Wallace, and 8 km N of Cape Garry, in the South Shetlands. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Teshel, in southern Bulgaria.

Cerro Tesore *see* **Tesore Hill**

Tesore Hill. 64°20' S, 56°55' W. Rising to about 160 m above sea level, on the E side of Spath Peninsula, on Snow Hill Island. Named by the Argentines as Cerro Tesore. UK-APC accepted the name Tesore Hill on Dec. 11, 1995, and US-ACAN followed suit in 1996.

Tessensohnrücken. 72°34' S, 166°40' E. A ridge on the SW side of Mount Burton, in the Barker Range, in the Victory Mountains of Victoria Land. Named by the Germans.

Tesson, Joseph-Philippe. b. Feb. 25, 1816, Sables d'Olonne, France. Junior seaman on the *Astrolabe* during FrAE 1837–40.

Testa Ridge. 78°27' S, 163°32' E. A ridge on the N slope of Mount Morning, on the Scott Coast of Victoria Land. Campbell Crag is at the S end of this ridge. Named by US-ACAN in 1994, for biologist J. Ward Testa, of the University of Minnesota, who conducted seal studies during 8 field seasons at McMurdo Sound and other coastal regions, from 1982 to 1992. He was later at the University of Alaska.

Tester Nunatak. 70°58' S, 71°29' E. The southernmost of a group of 3 nunataks in the N part of the Manning Nunataks, in the E part of the Amery Ice Shelf. Photographed aerially by OpHJ 1946–47, and again by ANARE in 1957. Visited by SovAE 1965 and by ANARE in 1969. Named by ANCA on May 18, 1971, for J. Tester, aircraft engineer with the ANARE Prince Charles Mountains survey party in 1969. US-ACAN accepted the name in 1973.

Tête du Lion. 66°40' S, 140°01' E. A major rocky massif on which stands the highest point in the central part of Lion Island, in the Géologie Archipelago. So named by the French because this part of the island resembles the head of a sleeping lion. The name was officially discontinued in 2009.

Teteven Glacier. 62°28' S, 59°52' W. Flows for 7 km in an E-W direction and 3.5 km in a N-S direction, from the N slopes of Dryanovo Heights into the Drake Passage between Crutch Peaks and the ice-free area at Agüedo Point, on Greenwich Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the town of Teteven, in the central Balkans, in Bulgaria.

Tether Rock. 79°40' S, 156°09' E. A rock outlier, 1.5 km N of Lindstrom Ridge, in the Darwin Mountains. The rock marks the N margin of the ice-covered Access Slope, a route through the Circle Icefall of the upper Darwin Glacier. Named by US-ACAN in 2001, in association with Lindstrom Ridge, to which Tether Rock appears to be subglacially connected.

Tethys Bay. 74°41' S, 164°04' E. On the W side of Gerlache Inlet, in the NW corner of Terra Nova Bay, in northern Victoria Land. Named by NZ-APC.

Tethys Nunataks. 72°08' S, 68°59' W. A group of about 5 rock nunataks, rising to about 450 m, 3 km NE of Stephenson Nunatak, in the SE corner of Alexander Island. Presumably first seen by Ronne and Eklund as they sledged through the George VI Sound in 1940–41, during USAS 1939–41. Surveyed in Dec. 1949 by Fids from Base E, and named by UK-APC on March 31, 1955, for Tethys, one of Saturn's moons (Saturn Glacier is nearby). US-ACAN accepted the name in 1956. In those days the feature was plotted in 72°10' S, 68°59' W. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with those new coordinates, the feature appears in the 1977 British gazetteer.

Tetrad Islands. 63°53' S, 60°45' W. Name also seen as Tetrad Rocks. A group of 4 small islands, SE of Borge Point, Mikkelsen Harbor, Trinity Island, in the Palmer Archipelago. Surveyed (but not named) by Hans Borge, they appear on his 1915 chart. During a new survey conducted by ChilAE 1951–52, the northernmost and largest of the group was named Islote Leucotón (q.v.), and another was named Islote Gastón, for Raúl Gastón Kulczewski Silva (known as Gastón), 1951 wintering-over leader at Capitán Arturo Prat Station. Both of these names were accepted by the 1974 Chilean gazetteer (the Chileans rejecting Isla Gastón in favor of Islote Gastón). According to the American gazetteer, the group was shown (unnamed) on an Argentine chart of 1952. Photographed aerially by FIDASE in 1956–57. The four islands were named as a group, the Tetrad Islands, by UK-APC on Sept. 23, 1960, and US-ACAN followed suit with that naming later in 1960. They appear as such on a 1961 British chart. The Argentines call them Islotes Tetraedro (i.e., "tetrahedron islets"). However, the 1970 Argentine gazetteer did accept the name Islote Entrada (i.e., "entrance island) for the southernmost one. The name appears misspelled in the 1974 British gazetteer as Tetras Islands.

Tetrad Rocks *see* **Tetrad Islands**

Islotes Tetraedro *see* **Tetrad Islands**

Tetras Islands *see* **Tetrad Islands**

Teyssier Island. 67°36' S, 62°54' E. The most southerly of the Jocelyn Islands, in Holme Bay, Mac. Robertson Land, about 1.4 km NE of Mawson Station. Photographed aerially by LCE 1936–37. Named by ANCA on Oct. 11, 1960, for Paul J. Teyssier, cook at Mawson Station in 1959, and at Davis Station in 1962. In 1952 he had been at Heard Island. US-ACAN accepted the name in 1965. Naturally, this island has been visited frequently by personnel from Mawson.

The *Thala Dan*. Purpose built, ice-strengthened 1400- ton supply/research ship, 81 m long, belonging to the J. Lauritzen Lines of Copenhagen. Because of the success of the *Kista Dan*, Lauritzen built two new ships of the same type in 1957, at the Aalborg Yard, but larger and more powerful — the *Magga Dan* and the *Thala Dan*. The *Thala Dan* was used extensively by ANARE in the late 1950s and early 1960s. She had 3 cargo holds with a general cargo capacity of 1800 cubic meters. She also had a refrigeration compartment capable of storing 139 cubic meters of cargo at -20°C, and 40 cubic meters at 4°C. Nine derricks could lift 2 to 30 tons, and there was a lot of space on deck for heavy equipment and vehicles. She also had ice-cutting capability. Her captain on her first ANARE voyage, 1957–58, was Kaj Hindberg. That season she also visited Mirnyy Station. In 1958–59, also for ANARE, her skipper was Hans Christian Petersen, and that season, on Dec. 26, 1958, she ran aground and was damaged. On Jan. 16, 1959 she got speared by a rock, and was saved by the skill of the skipper. Petersen was her skipper for ANARE again in 1959–60 and 1960–61, and Hans A.J. Nielsen was skipper for the ANARE seasons of 1961–62 and 1962–63. In the 1963–64 season, under the command of Capt. Harald Møller Pedersen, she took down the French expedition. In the 1964–65 she took the French down again. Harald Møller Pedersen was again skipper, but only for this French mission. Also this season, she resumed her ANARE activities, but under Capt. Vilhelm Pedersen. This dual Pedersen situation continued in 1965–66, but in 1966–67 the ship was commanded by Wenzel Gommersen for both missions. Hans A.J. Nielsen commanded for both

missions in 1967-68 and 1968-69; Anders Jacobsen in 1969-70 and 1970-71; and Capt. Nielsen again in 1971-72. In 1972-73 the French part was skippered by Capt. Nielsen and the ANARE part by Capt. Jacobsen. Nielsen commanded the ship for both missions in 1973-74, 1974-75, and 1975-76; and Peter Granholm did the same in 1976-77, 1977-78, 1978-79, 1979-80, 1980-81, and 1981-82. In 1982-83 Brazil bought her for an expedition in that summer, and re-named her the *Barão de Teffe* (q.v.).

Roche du Thala Dan *see under* **D**

Thala Hills. 67°39' S, 45°58' E. Low, rounded, reddish-brown, rocky hills on the coast of Enderby Land, between Freeth Bay and Spooner Bay, behind Molodezhnaya Station. Plotted by Australian cartographers from ANARE air photos taken in Nov. 1956. Named by ANCA on July 4, 1961, for the *Thala Dan*, from which an ANARE party led by Don Styles visited these hills in Feb. 1961. US-ACAN accepted the name in 1965.

Thala Fjord. 69°25' S, 76°10' E. A bay, E of Stornes Peninsula, in the Larsemann Hills. Plotted by Norwegian cartographers in 1946, from air photos taken during LCE 1936-37, and named by them as Pollen (i.e., "the deep bay"). ANCA renamed it (for themselves) as Thala Fjord, on Sept. 29, 1988, for the *Thala Dan*. The Chinese call it Shenzhou Wan.

Thala Island. 70°37' S, 166°05' E. The southern and larger of two small rocky islands, just off the NW edge of Davis Ice Piedmont, about 11 km ENE of Cape North, along the N coast of Victoria Land. Named by ANCA for the *Thala Dan*, one of 2 expedition ships used to explore this coastline in 1962. A landing was made here from the ship on Feb. 11, 1962. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Thala Rock. 68°33' S, 77°52' E. A submerged, isolated rock off the Vestfold Hills, between 0.5 and 1 km from the W point of Turner Island, bearing 250. The depth of water over the rock probably does not exceed 2 m. The *Thala Dan* ran into it on Jan. 16, 1959, when approaching Davis Anchorage with the ANARE relief team. Named by ANCA on July 4, 1961, for that ship. US-ACAN accepted the name in 1965.

Thala Valley. 66°17' S, 110°32' E. An ice valley just S of Casey Station, separating the station area from the main part of Bailey Peninsula. Named by ANCA on July 31, 1972, for the *Thala Dan*.

Thalatine Lake. 68°34' S, 78°25' E. A small lake in the Vestfold Hills, it has 30 prominent wave-formed beaches on the W side as well as on the gravel lead-up from the S end. Named by ANCA on Dec. 3, 1984. The name is an adaptation of the Arabic word for the numer 30 ("talatin" or "thalathin").

Thälmann Mountains. 72°00' S, 4°45' E. A group of mountains between Flogeken Glacier and Vestreskorve Glacier, in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Remapped by SovAE 1960-61, and named by them as Gory Tel'mana, for German Communist leader Ernst Thälmann (1886-1944). US-ACAN accepted the translated name in 1970. *See also* **Gruberberge**.

Thamyris Glacier. 64°34' S, 63°19' W. A glacier, 3 km long and 2.8 km wide, flowing northeastward from the E slopes of the Trojan Range into Fournier Bay S of Predel Point and N of Madzharovo Point, on Anvers Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for Thamyris, the Thracian singer in Homer's *Iliad*.

Cap Thanaron *see* **Thanaron Point**

Punta Thanaron *see* **Thanaron Point**

Thanaron, Charles-Jules-Adolphe. b. July 7, 1809, Toulon. Lieutenant on the *Zélée* during FrAE 1837-40.

Thanaron Hill *see* **Hanson Hill**

Thanaron Point. 63°30' S, 58°40' W. A rock point, 13 km ENE of Cape Roquemaurel, between that cape and Marescot Point, on Trinity Peninsula. Roughly charted on Feb. 27, 1838, by FrAE 1837-40, and named by Dumont d'Urville as Cap Tannaron (sic; Dumont d'Urville was a notoriously bad speller), for Charles-Jules-Adolphe Thanaron. During a survey conducted by Fids from Base D in 1946, this cape could not be found, and so the name Thanaron Hill was given by them to a hill 6 km SE of Cape Roquemaurel. UK-APC accepted that on Nov. 21, 1949, and US-ACAN followed suit in 1952. For a more detailed history of the naming and renaming of these features, *see* **Hanson Hill**. In short, however, Dumont' d'Urville's cape was found by FIDS cartographers studying air photos taken by FIDASE in 1956-57, and named by UK-APC on Feb. 12, 1964 as Thanaron Point, a name accepted by US-ACAN later that year. The Argentines call it Punta Thanaron.

Thanksgiving Point. 84°56' S, 177°00' W. A conspicuous rock nunatak at the W side of Shackleton Glacier, just N of the mouth of Mincey Glacier (indeed, it is at the confluence of those 2 glaciers), in the Queen Maud Mountains. Named by Al Wade of the Texas Tech Shackleton Glacier Party of 1962-63, who reached here on Thanksgiving Day, 1962. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Tharp Ice Rise. 72°25' S, 59°54' W. An ice rise, about 2 km long, off Violante Inlet, on the Black Coast, on the E coast of Palmer Land. In 1966 it was located at the ice front of the Larsen Ice Shelf, 24 km E of Cape Fanning (which is on Merz Peninsula). Mapped by USGS from USN photos taken between 1966 and 1969. In Jan. 1977, it was sighted by a BAS glaciological party camped on the summit of Butler Island. Named by UK-APC on Feb. 7, 1978, for Marie Tharp, U.S. marine geologist and oceanographer from Lamont-Doherty Geological Observatory at Columbia University. US-ACAN accepted the name, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Thawley, Elbert J. b. July 10, 1898, Denton, Md. He was living in Harrington, Delaware, when he became 2nd (assistant) engineer on the *Eleanor Bolling*, during the first half of ByrdAE 1928-30. During the second half he replaced John Cody as 1st (assistant) engineer. He died on March 14, 1973, in Jacksonville, Texas.

Mount Theaker. 70°18' S, 159°38' E. Rising to 1685 m, along the N wall of Robilliard Glacier, 5 km NE of Mount Simmonds, in the Usarp Mountains, and about 31.5 km SSE of Mount Gorton, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Paul R. Theaker, USARP biologist at McMurdo, 1967-68. ANCA accepted the name on July 31, 1972.

Theatre. Possibly the first theatre in Antarctica was the Royal Terror Theatre, Ross Island. Showing there on June 25, 1902, was the "screaming comedy" *Ticket of Leave*, starring Horace Buckridge, Gilbert Scott, and Frank Wild. It was a great success. On April 14, 1956, during the winter-over at McMurdo, Father Condit staged a theatrical presentation, a "wake" for actress Grace Kelly just before she married Prince Rainier. John Tuck played Grace, and Howard Wessbecher played Rainier. Father Condit "married" them.

Thebe Peak. 70°48' S, 68°31' W. A peak, rising to about 800 m above sea level, N of Ablation Valley, on Alexander Island. In association with Jupiter Glacier, this feature was named by UK-APC on Jan. 18, 2002, for one of the moons of the planet Jupiter.

Themis Nunatak. 71°37' S, 69°06' W. A very large, flat-topped nunatak, rising to 1035 m, 10 km WSW of Mount Umbriel, in the SE part of Alexander Island. Photographed aerially by RARE 1947-48, and surveyed from the ground by FIDS between 1948 and 1950. In 1959, FIDS cartographers mapped it from the RARE photos. Re-surveyed by BAS personnel from Fossil Bluff between 1961 and 1973. Named by UK-APC on Dec. 20, 1974, for one of the planet Saturn's satellites (Saturn Glacier is near Themis Nunatak). US-ACAN accepted the name in 1975.

Thène, Edwin *see* **USEE 1838-42**

Theodolite Hill. 63°29' S, 57°35' W. Rising to 690 m (the British say 775 m, and the Chileans say 785 m) with a small rock outcrop at its summit, on the SE corner of the Laclavère Plateau, 8 km W of the NW end of Duse Bay, in the NE part of Trinity Peninsula. Discovered and surveyed by Fids from Base D in Sept. 1946. They used this hill as a theodolite station, and named it accordingly. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer, and also on a British chart of 1957. In 1957, the Chileans built a refugio about 10 km NE of this hill (see the entry immediately below). The feature appears on a Chilean chart of 1961, translated as Cerro Teodolito, and that name was accepted by the Chilean gazetteer of 1974. It was also the name accepted by the Argentines.

Theodolite Refugio. 63°25' S, 57°26' W. Chilean refuge hut opened in 1957 on Theodolite Hill, on the inland ice, 10 km NE of Theodolite Hill, in the NE part of Trinity Peninsula.

Monte Theodore *see* **Mount Theodore**

Mount Theodore. 64°58' S, 62°38' W. A mountain, rising to about 1650 m, 6 km SE of Mount Inverleith, on the SW side of Bagshawe Glacier, near the Danco Coast, on the W coast of Graham Land. Sighted and named by David Ferguson in 1913, it appears on his 1921 chart. It appears on a 1949 Argentine chart as Monte Teodoro. Roughly surveyed by FIDS on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Mount Theodore on Sept. 4, 1957, and it appears as such on a British chart of 1961. On a 1962 Chilean chart it appears as Monte Theodoro, and on one of their 1963 charts as Monte Theodore, that latter name being the one accepted by the Chilean gazetteer of 1974. US-ACAN followed suit with the British naming in 1963.

Theodore Island. Unofficial name of an island in the South Shetlands, used as an anchorage by Salvesen Whaling Company ships. Named by them for Theodore E. Salvesen.

Monte Theodoro *see* **Mount Theodore**

The *Theoros*. Swiss yacht, skippered by Eric Barde (b. 1959; a philosophy graduate), which visited the South Shetlands and the Antarctic Peninsula in 1989-90, and 1991-92. *See also* **The *Philos***. Mr. Barde wrote *Nar Koude Kusten*.

Theresa Automatic Weather Station. 84°36' S, 115°48' W. An American AWS, at an elevation of 1463 m, on the Polar Plateau. Installed in Nov. 1994, and named for the wife of former AWS project scientist Rob Holmes.

Thermometers. Foster left two self-recording thermometers on Deception Island in 1829 which, when recovered by Smyley in 1842, gave the low reading of -5°F. The high recording one was broken. Most expeditions, especially from the time of the Heroic era (q.v.) took thermometers.

Thern Promontory. 74°33' S, 162°06' E. A high, ice-covered promontory, rising to 2220 m, it forms a westward projection at the S end of the Eisenhower Range, about 11 km W of Mount Nansen, in Victoria Land. Named by US-ACAN in 1968, for Michael G. Thern, station engineer at McMurdo, 1965-66 and who also wintered-over there in 1967.

The *Theron*. Fuchs's ship for BCTAE 1955-58. She was an 839-ton, 1310 hp, Canadian motor sealer, with an 0.7 inch steel hull, built in Glasgow in 1950 for Arctic work. The captain from 1955 to 1958 was Capt. Harald Marø, and the crew were basically Nova Scotia sealers. She left London on Nov. 14, 1955, bound for Montevideo and South Georgia, and then on to Vahsel Bay, arriving a month late after barely making it through the pack-ice without being crushed, to drop off the 8 winterers at Shackleton Base, as well as the materials to build that base. In 1969-70 she took part in the Argentine expedition of that season, captain unknown. She relieved General Belgrano Station.

Cadena Theron *see* **Theron Mountains**

Theron Mountains. 79°05' S, 28°15' W. Rising to 1175 m, and running NE-SW for 44 km from Tailend Nunatak to Mount Faraway, on the NE side of the Filchner Ice Shelf, and N of Slessor Glacier, in Coats Land, they are composed of permo-carboniferous sediments, intruded by dolerite sills. An Argentine aircraft flew over here in Nov. 1955, and named (what looks like) the SW portion of these mountains as Cordón Rufino, after the town of Rufino, in Argentina. It appears that way on a 1959 Argentine chart. It is also seen as Cordillera Rufino, plotted in 80°00' S, 34°00' W. Also in Nov. 1955, during a flight, BCTAE reported seeing mountains in about 79°28' S, 25°00' W. This is probably the group seen by them again, aerially, on Jan. 29, 1956, and named by them as the Theron Range, for the *Theron*. In Dec. 1956, the same expedition surveyed them from the ground, and mapped them as the Theron Mountains, a name accepted by UK-APC on July 7, 1959, and by US-ACAN in 1960. Finn Ronne's map of 1961 shows the Rufino Range, probably referring to this group, and an Argentine chart of 1964 does the same thing (as Montes Rufino, a name accepted by the 1970 Argentine gazetteer). However, on an Argentine chart of 1966, the feature appears as Cadena Theron.

Theron Range *see* **Theron Mountains**

Mount Theseus. 77°27' S, 162°16' E. A prominent peak rising to 1830 m (the New Zealanders say 2100 m), just S of Clark Glacier, in the Olympus Range of Victoria Land. Named by VUWAE 1958-59, for the Greek mythological hero. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Islotes Theta *see* **Theta Islands**

Theta Islands. 64°19' S, 63°01' W. Several small islands and rocks, close W of Kappa Island, at the W extremity of the Melchior Islands, in the Palmer Archipelago. Roughly surveyed in 1927 by the personnel on the *Discovery*, and named by them as The Southern Maids. They appear as such on their 1929 chart, as well as on a British chart of 1947. Surveyed by ArgAE 1942 and ArgAE 1943, and named by them in 1946 as Islotes Theta, for the Greek letter. Resurveyed by ArgAE 1946, who renamed them Grupo de las Revistas Chilenas (i.e., "group of the Chilean newspapers"; several famous Chilean newspapers were, at one time or another, honored by features; however, those namings were ephemeral). It appears as such on the Chilean chart of 1947. The group appears as Theta Islands on a British chart of 1947, but on one of their charts of 1948 it appears as Theta Islets, and that latter name was the one accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Meanwhile, ArgAE 1947-48 surveyed the group again, and renamed them Islotes Alzogaray, after Álvaro José de Alzogaray (1811-1879), who commanded a detachment of the Argentine Navy under the famous Almirante Brown. It appears as such on their 1947 chart, and also on a 1953 Argentine chart. On a 1957 Argentine chart it appears as Islotes Alzogaray, and that name was accepted by the 1970 Argentine gazetteer. On July 7, 1959, UK-APC redefined the group as Theta Islands (rather than Theta Islets), and US-ACAN accepted that name in 1963. However, on a 1963 American chart appears the name Theta Island (probably a misprint). Photographed aerially by USN in 1968-69. The name Islotes Theta was accepted by the Chilean gazetteer of 1974.

Île Thiébault *see* **Thiébault Island**

Islote Thiébault *see* **Thiébault Island**

Thiébault Island. 65°11' S, 64°11' W. A small island, next W of Charlat Island, in the small group off the W end of Depeaux Point (which is the S end of Petermann Island), in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered and charted in 1909, by FrAE 1908-10, and named by Charcot as Île Thiébault, for the French minister to Argentina. It appears as such on Charcot's 1912 map. It appears as Thiébault Islet on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by US-ACAN and UK-APC. It appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Islote Thiébault. Photographed aerially by FIDASE in 1956-57. UK-APC renamed it Thiébault Island on July 7, 1959, and US-ACAN accepted that new name in 1971. Unfortunately, the name has been spelled wrong since the very beginning. The diplomat in question was Eugène-Émile-Napoléon Thiebaut (b. 1857).

Thiébault Islet *see* **Thiébault Island**

Thiel, Edward Carl "Ed." b. May 4, 1928, NY, but raised in Passaic, NJ, son of Carl Thiel and his wife Linda. He graduated from the University of Wisconsin in 1950, and continued his studies there until 1955, when he got his doctorate. In 1957 he joined the faculty, as a geophysicist within the geology department. He went to Alaska on a field trip, and later in 1957 was in Antarctica, as chief seismologist at Ellsworth Station that winter. He was back in Antarctica in 1958 and 1959, making airborne magnetic measurements. In Jan. 1961 he became assistant professor of geophysics at the University of Minnesota. He married Patricia. He was back in Antarctica on a $42,960 grant from the NSF, when he died on Nov. 9, 1961, in an air crash near Wilkes Staton (*see* **Deaths**, 1961).

Thiel Mountains. 85°15' S, 91°00' W. A group of mountains, 72 km long, isolated, and mainly snow-capped, between the Horlick Mountains and the Pensacola Mountains, they extend from the Moulton Escarpment on the W to Nolan Pillar on the E, and include the Ford Massif and the Bermel Escarpment, as well as a group of eastern peaks near Nolan Pillar. Observed and first positioned by the Horlick Mountains Traverse Party of 1958-59. Surveyed by USGS Thiel Mountains parties of 1960-61 an 1961-62, and named by US-ACAN in 1962, for Ed Thiel (q.v.).

Thiel Subglacial Trough *see* **Thiel Trough**

Thiel Trough. 81°30' S, 57°00' W. A submarine trough with depths reaching to below 1500 m, it trends NE-SW from about 76°30' S,

35°00' W (in the Weddell Sea) to about 83°00' S, 85°00' W (near the Martin Hills), and underlies the Filchner Ice Shelf and the S part of the Ronne Ice Shelf, S of Henry Ice Rise. The portion NE of the Henry Ice Rise was discovered in 1957-58 by a U.S. traverse party from Ellsworth Station, and named Crary Trough, after Albert Crary. The SW portion was traced by U.S. seismic traverse parties between 1958 and 1964, and the whole of the feature was delineated in greater detail by the SPRI-NSF-TUD airborne echo-sounding program between 1967 and 1979. Bert Crary himself suggested that the name Crary Trough be discontinued, and that the name Thiel Subglacial Trough be used for the entire feature, named after Ed Thiel (q.v.), leader of the traverse party that discovered the feature. It appears that way in the 1975 *National Geographic* atlas. US-ACAN accepted the shortened version, Thiel Trough, as did UK-APC on Dec. 9, 1981. ANCA accepted the name in 1984, but misspelled it as Theil Trough. Since 1978, the NE portion has been called Señal Cruz Cristiana by the Argentines.

Thierbachfirnfeld. 73°10' S, 161°34' E. A snow field due W of the Caudal Hills, in Victoria Land. Named by the Germans.

Thil Island. 70°08' S, 72°39' E. A small rocky island, 1.5 km NE of Jennings Promontory, and about 2 km SSW of the Braunstetter Rocks, in the E part of the Amery Ice Shelf. Delineated by U.S. cartographer John H. Roscoe in 1952, using photos taken by OpHJ 1946-47, and named by him for René Bernard Thil IV (b. Feb. 13, 1923, Saarbrücken. d. May 21, 1996, St. Petersburg, Fla.), French-American air crewman on OpHJ flights here (he had come to the USA in 1925). ANCA accepted the name on July 22, 1959, and US-ACAN followed suit in 1963.

Thimble Peak. 63°27' S, 57°06' W. A truncated cone, rising to 485 m, consisting of rock and ice, at the E side of Mondor Glacier, on Tabarin Peninsula, 3 km NE of Duse Bay, Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered in 1903 by SwedAE 1901-04. Charted by Fids from Base D in 1946, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. Further surveyed by FIDS in 1956. There is a 1956 Argentine reference to it as Cerro del Circo Frustrado, but one of the Argentine Antarctic expeditions renamed it Cerro Pirámide (i.e., "pyramid hill"), and that name has been used by them since 1978.

Thin Rock. 66°31' S, 98°53' E. A long, narrow outcrop of exposed rock on the N side of Davis Peninsula, about 2.3 km SW of The Mitre, in Queen Mary Land. Named descriptively by AAE 1911-14. ANCA accepted the name.

Third Crater. 77°48' S, 166°44' E. A crater behind Castle Rock, on Ross Island. The name appears in the 1958 NZ provisional gazetteer.

Thirin, Antoine-Auguste. Ensign on the *Zélée* during FrAE 1837-40.

Thode Island. 77°02' S, 148°03' W. A small, ice-covered island in the Sulzberger Ice Shelf, 1.5 km NW of Benton Island, and 8 km E of Przybyszewski Island, in the Marshall Archipelago. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for George C. Thode, meteorologist at Byrd Station in 1968.

Mount Tholus. 63°16' S, 56°04' W. Rising to 825 m (the British say about 550 m), it is the highest mountain on the ridge extending SW from Postern Gap, in the central part of Joinville Island. Surveyed by Fids from Base D in 1953-54, and named descriptively by UK-APC on Sept. 4, 1957. A tholus is a circular, domed structure. It appears on a British chart of 1962. US-ACAN accepted the name in 1963.

Thom, Ingvar O. b. 1880, Norway. He went to sea as a whaler, and was commander of the *Orwell* at South Georgia in 1916. An old friend of Shackleton's, the British explorer asked him to try rescuing the Elephant Island party, so Thom agreed to act as skipper of the *Southern Sky*. On March 14, 1922, he signed on in New York as 2nd mate on the Munson Line's Tønsberg-based *Tancred* (the *Orwell* belonged to Tønsbergs Hvalfangeri), for a trip to Cuba and back. Then he went back to commanding the *Orwell* in 1922-23. He was skipper of the new *Orwell*, in Antarctic waters in 1925-26, 1926-27, 1927-28, 1928-29, 1929-30, and 1930-31. *See also* **Berntsen, Søren**.

Thomander, Fredrik *see* **Órcadas Station**, 1906

Thomann, James Bradlee "Jim." b. June 20, 1939, New Haven, Mo., as Henry Bernart Thomann, Jr., son of building contractor Henry Bernart Thomann and his wife Eldena C. Kelley. Raised partly in Lincoln, Neb., where he enlisted in the Navy in Jan. 1960. After 22 weeks of aviation electronics school in Jacksonville, Fla., he was posted to Alameda, Calif., where he made his first parachute jump (at Calistoga). After 40 jumps, he joined VX-6 in 1962, and was at McMurdo in 1962-63. Back in the USA, from 1963 to 1964, he was part of the Shooting Stars Navy parachute team. He married Joyce in Pawtucket, RI, on Dec. 21, 1963, and was back in Antarctica in 1966-67. On Dec. 23, 1966, he made his 500th jump, the first freefall parachute jump over the South Pole, being the first Navy man to jump over the Pole. He was back in 1967-68, as jump master, and on Dec. 20, 1968, at McMurdo Station, he and Dick Spaulding set an Antarctic altitude record of 10,500 feet (above ground level), from an H-34 (*see* **Parachutes**). He retired in 1968, briefly went into insurance, then, in 1969 into the Kentucky Fried Chicken business, got his pilot's license, changed his name legally, opened a sub shop in Burlington, Vt., and in 1975, at Sugar Loaf USA, Maine, while a hang-gliding instructor, sustained an injury to his spinal cord that left him a paraplegic. He took up wheelchair racing, setting an almost unbelievable time of 2 hours 34 minutes for a full marathon. From there into ultra-lite flying (flying as high as 13,500 feet without oxygen). He became the first paraplegic to free fall (in 1983), and has made 11 jumps since his accident. In the early 1990s he went into computer flight simulation software programming, and in 2006 moved from Florida to Springfield, Ill. He made a total of 1100 jumps in his career. His story is told in Jim McGowan's 2005 book, *Walking on Air*.

Lake Thomas. 77°24' S, 162°15' E. A meltwater lake in Victoria Land. Robertson Ridge is on the NW of it, and Clark Glacier is on the NE. Named by US-ACAN in 1976, for Robert H. Thomas, glaciologist on the Ross Ice Shelf in 1973-74 and 1974-75.

Mount Thomas. 71°01' S, 64°36' E. A mainly snow-covered mountain, about 12 km N of Mount Hicks, in the Prince Charles Mountains. It has a domed appearance, with a ridge running E to a smaller peak. Plotted by Australian cartographers from ANARE air photos taken in 1960. Named by ANCA for Ivan Neville Thomas (b. April 2, 1932), who wintered-over as radio officer-in-charge at Wilkes Station in 1963. He had also wintered-over at Macquarie Island in 1960. US-ACAN accepted the name in 1967.

Point Thomas. 62°09' S, 58°29' W. A steep, snow-free point, rising to 173 m above sea level, on the W side as you enter Admiralty Bay, it is the farthest point N before Ezcurra Inlet (i.e., it marks the S side of the entrance to that inlet), King George Island, in the South Shetlands. There is a mixed penguin colony here (gentoos, Adélies, and chinstraps). Charted in Dec. 1909, by FrAE 1908-10, and named by Charcot as Pointe Thomas, for Thomas (*see* the entry almost immediately below). It appears as such on Charcot's 1912 map, and on Bongrain's 1914 map of the same expedition. It appears as Thomas Point on a 1916 British chart, but on a 1929 British chart as Point Thomas, and that latter name was the one accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1962. It appears on a Chilean chart of 1947 as Punta Thomas, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the British, in late 2008. Arctowski Station is here.

Pointe Thomas *see* **Point Thomas**

Punta Thomas *see* **Point Thomas**

Thomas. Crewman on the *Pourquoi Pas?* during FrAE 1908-10.

Thomas, Charles *see* **USEE 1838-42**

Thomas, Charles W. "Tommy." b. Sept. 3, 1903, Pasadena, Calif. U.S. Coast Guard captain who, with Arctic experience and World War II behind him, commanded the *Northwind* during OpHJ 1946-47. During OpDF I (1955-56) he was chief of staff to Admiral Dufek, and was officer in tactical command of Little America V after Dufek left for home. He retired as a rear admiral in 1957. He wrote *Ice Is Where You Find It*. He was ice pilot on the *Lindblad Explorer* at the time of his death on March 3, 1973, in a car crash in Ushuaia, Argentina.

Thomas, David *see* **USEE 1838-42**

Thomas, Gwynne Meyler. b. Dec. 18, 1931, Cardiff. Aurora physicist and airglow scientist on the 2nd and 3rd parts (i.e., 1956-58 and

1957-59) of the British Royal Society Expedition, and as such wintered-over at Halley Bay in 1957 and 1958. He died on March 22, 1973, after a long illness.

Thomas, Leonard Henry. Ordinary seaman on the *Discovery II*, 1929-31, and fireman on the same vessel, 1931-39.

Thomas, Lowell. b. April 6, 1892, Woodington, Ohio, son of Dr. Harry Thomas and his wife Harriet Wagner. At the age of 8, he and his family moved to Victor, Colo., where Lowell became a gold miner, cook, and reporter. In 1912, heavy with university degrees, he went to work for the *Chicago Journal*, as well as becoming a professor of oratory, something he continued at Princeton, where he got another master's degree in 1916. He went to the Middle East during World War I, as a correspondent, and made Lawrence of Arabia (and himself, incidentally) famous. His "Lawrence tours" around the world also made Thomas a millionaire, and he wrote (among many, many other books, including *Back to Mandalay*, in 1951, about Orde Wingate) *With Lawrence in Arabia*. In the 1920s he was a magazine editor, and in 1930 became a radio broadcaster, "Good evening, everybody." He was a passenger to the South Pole during a flight in 1963-64. He retired in 1976, and died on Aug. 29, 1981. Norman R. Bowen wrote, *Lowell Thomas: The Stranger Everyone Knows*, in 1968. "So long, until tomorrow."

Thomas, Norman Edwin. b. May 2, 1951. Marine electrical officer on the *John Biscoe*, 1981-90. In 1990 he sailed on the first voyage of the new *James Clark Ross*.

Thomas, Robert Harold "Bob." b. June 1, 1937, Birkenhead, Cheshire, but raised partly in Hoylake, son of Walter Thomas and his wife Alice Beatrice Ellis. After the University of Liverpool (physics), he was recruited by Bill Sloman of the FIDS in 1959, did four months meteorology training at Birmingham Airport, and left Southampton at the end of the year on the *Kista Dan* as a met man, bound for Montevideo and the Falkland Islands. He wintered-over at Base F in 1960 and 1961, and while there developed glaciology as a hobby. After his tour he took a trip through South America, mostly Chile, and then returned to England, wrote up his reports, then returned to Chile (with Tony Haynes) to work as warden in a seamen's mission in Valparaíso. He and Haynes also taught English to Chilean students. Thomas then made his way back to the UK, working his way as an assistant purser on a steam navigation ship. Back in Cambridge, he applied for a second tour with BAS, and wintered-over at Halley Bay as glaciologist in 1966 and 1967. After getting his PhD, he went to the US, became associated with the University of Maine, and worked for several years with the Ross Ice Shelf Project, spending several summers in Antarctica between 1973 and 1978. He was later a manager in NASA's polar research program, starting their Greenland program in 1991. He has lived in the USA ever since.

Thomas, W. *see* **Órcadas Station**, 1905, 1907

Thomas, William G. "Bill." b. 1922. He joined FIDS in 1947, as a radio operator, and left London on the *John Biscoe* on Dec. 20, 1947, bound for Montevideo, the Falkland Islands, and Antarctica. He wintered-over at Base F in 1948. He was scheduled to winter-over at Base K in 1949, but when that station failed to open, he shipped back to Port Stanley in April 1949. From Port Stanley he caught the *Losada* back to London, arriving there on June 13, 1949. In 1951 he participated in the Festival of Britain.

Thomas Cove. 64°56' S, 63°06' W. A cove, S of Haigh Point, on the Danco Coast, on the W coast of Graham Land. Surveyed by Fids from Base O in 1956-57, and photographed aerially by FIDASE that same season. Named by UK-APC on Nov. 13, 1985, for Cambridge-educated Joan Ena Thomas (b. 1917), personal assistant to the secretary of UK-APC, 1948-62, and former section officer in the WAAF during World War II. US-ACAN accepted the name.

Thomas Glacier. 78°40' S, 83°58' W. A glacier, roughly Z-shaped, flowing from the SE slopes of the Vinson Massif, for about 28 km, through the S part of the Sentinel Range of the Ellsworth Mountains, leaving the range S of Johnson Spur. Discovered by VX-6 on photographic flights of Dec. 14-15, 1959, and mapped by USGS from these photos. Named by US-ACAN in 1961, for Rear Admiral Charles W. "Tommy" Thomas (q.v.).

Thomas Heights. 77°47' S, 163°52' E. A line of prominent summit ridges and hills that extend from Bettle Peak eastward to the Scott Coast of Victoria Land, at the N end of Blue Glacier, they form a portion of the divide between the lower ends of the Ferrar Glacier and the Blue Glacier. Named by NZ geologist R.H. Findlay, here between 1977 and 1981. He arrived on the same day in Dec. 1979 that Arthur Allan Thomas (b. 1938) was pardoned in NZ, after being twice convicted (on police-planted evidence) for the 1970 Crewe murders in Pukekawa. NZ-APC accepted the name in 1983, and US-ACAN followed suit that year. Mr. Thomas was the subject of a movie, *Beyond Reasonable Doubt*, and in 2009, collaborated with Ian Wishart on a book.

Thomas Hills. 84°21' S, 65°12' W. A line of hills, 27.5 km long, and rising to about 1045 m, between Foundation Ice Stream and MacNamara Glacier, at the NW end of the Patuxent Range of the Pensacola Mountains. They include, from NE to SW: Mount Warnke, Martin Peak, Nance Ridge, and Mount Yarborough. Named by Finn Ronne for Charles Sparks Thomas (1897-1983), secretary of the U.S. Navy, 1954-56. US-ACAN accepted the name in 1968, and UK-APC followed suit on Nov. 3, 1971. It appears in the 1974 British gazetteer.

The *Thomas Hunt*. Boston whaling schooner. She arrived at Stonington on July 14, 1872, under Capt. Samuel Clark, to be fitted out for sealing in the South Shetlands, and left there precisely one week later, Clark taking her to the South Shetlands for the 1872-73 sealing season. She was back for the 1873-74 sealing season, under the command of Capt. William Appelman. On Jan. 21, 1874, while their small boat was attempting to land, it capsized in the surf, and four men drowned — Andrew Jacobs, of NY (who had been several times in the South Shetlands), James Meehan (aged 21), of Pawtucket, RI, and 2 Portuguese (almost certainly Cape Verde Islanders).That season, at Elephant Island, she met Dallmann's German expedition. On May 12, 1874, she arrived back in Stonington. In 1874-75, again under Appelman, she got only one seal skin, due to difficult ice conditions. A man was buried on Low Island that season. The vessel was back in 1875-76 (again under Appelman; they landed on the Antarctic Peninsula), 1878-79 (under Capt. Andrew J. Eldred), and 1879-80 (again under Eldred), the last season also helping in the search for the lost *Charles Shearer*. She seems to have been lost with all hands (except one man).

Thomas Island. 66°07' S, 100°57' E. The largest island in the Highjump Archipelago, it is 9 km long, and between 2 and 6 km wide, and is near the center of the main cluster of islands, off the N flank of the Bunger Hills, on the Knox Coast of Wilkes Land. First delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Lt. (jg) Randolph G. Thomas, USN, hydrographic officer on OpW 1947-48, who served as a surveyor with the astronomical control parties.

The *Thomas J. Gary*. More popularly known as the *Gary*. Laid down on June 15, 1943, at Orange, Tex., by the Consolidated Steel Co.; launched on Aug. 21, 1943, as the *Gary*, named for Thomas Jones Gary (1922-1941), Naval hero of Pearl Harbor; and commissioned as DE-326 on Nov. 27, 1943. Lt. Cdr. William H. Harrison was her first skipper. Throughout the rest of the war she served as an escort in the Atlantic, and on Jan. 1, 1945 her name was changed to *Thomas J. Gary*. She served in the Far East after the war, and was decommissioned in Florida in 1947. In 1956 she was brought out of mothballs and redesignated DER-326, a radar picket destroyer escort, and re-commissioned on Aug. 2, 1957. She took part in OpDF 66 (1965-66; skipper was Capt. Richard Carl Smith) and OpDF 67 (1966-67; skipper was Lt. Cdr. John J. Kingston). On Oct. 22, 1973 she was transferred to the Tunisian government, and in 1992 there was a major fire, and she has not been operational since.

Thomas Mountains. 75°32' S, 70°57' W. A separate cluster of rocky mountains, about 8 km long, and rising to about 1485 m, 24 km NE of Mount Horne, just S of the Sweeney Mountains, and NW of the Hauberg Mountains, on the Orville Coast, in eastern Ellsworth Land, at the base of Palmer Land. Discovered aerially on Nov. 21, 1947, by RARE 1947-48, roughly mapped as rising to about 2900 m in about 76°30' S, 70°45' W, and named by Finn Ronne as Mount Lowell Thomas, or Lowell Thomas Mountains, for Lowell Thomas (q.v.), a supporter of the expedition. Both names appear on Ronne's 1948 map, and on one of his 1949 photos. On a 1952 Ar-

gentine chart they appear as Montes Lowell Thomas. Mapped by USGS from ground surveys conducted by the Antarctic Peninsula Traverse of 1961-62, and from USN air photos taken between 1965 and 1967. In 1966, US-ACAN accepted the name Thomas Mountains, and that is how they appear on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted that name on Dec. 20, 1974. It seems that the Chilean gazetteer of 1974 accepted the name Monte Lowel Thomas (sic), but that hardly seems credible.

Thomas Nunatak. 78°58' S, 87°28' W. The northern of two nunataks which stand 3 km apart (the one to the southeastward is Hall Nunatak), about 28 km W of the Camp Hills, along the ice escarpment at the head of Minnesota Glacier, in the Ellsworth Mountains. Named by the University of Minnesota Geological Party here in 1963-64, for Hollie Thomas, helicopter crew chief with the 62nd Transportation Detachment who helped the party. US-ACAN accepted the name in 1966. Originally plotted in 78°54' S, 87°25' W, it has since been replotted.

Thomas Nunataks. 70°32' S, 65°11' E. A group of 3 nunataks, about 3.5 km SW of Mount Mervyn, in the Porthos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1965. Named by ANCA for Ian L. Thomas, physicist at Mawson Station in 1967. US-ACAN accepted the name in 1971.

Thomas Peak. 72°46' S, 166°43' E. Rising to 2040 m, at the W side of the Malta Plateau, on the ridge between Wilhelm Glacier and Olson Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Francis J. Thomas, biologist at McMurdo in 1962-63 and 1964-65.

Thomas Rock. 75°42' S, 158°36' E. A small nunatak, 1.5 km NE of Tent Rock, 10 km W of the Ricker Hills, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Kenneth E. "Ken" Thomas, radioman at Pole Station in 1966. ANCA accepted the name on Sept. 26, 1978.

Thomas Spur. 85°53' S, 161°40' W. A prominent spur extending eastward from the Rawson Plateau, between Moffett Glacier and Tate Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Harry F. Thomas, meteorologist who wintered-over at Pole Station in 1960.

Thomas Tarn. 60°42' S, 45°37' W. A small pool, NE of Jane Peak, on Signy Island, in the South Orkneys. It was initially formed in the 1980s, and appears to have become permanent. Several "doubting Thomases" among the BAS personnel at Signy Island Station did not believe that a permanent collection of water had formed, hence the name given by UK-APC on Sept. 29, 2004.

Thomas Valley. 77°27' S, 162°12' E. At the E side of McClelland Ridge, in the E part of the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 1997, for Jean-Claude Thomas, associate professor of geography and cartography at the Catholic University of America, 1967-76; at George Mason University, 1976-85; and USGS cartographer from 1985, specializing in satellite imagery mapping at various scales, including the 1:25,000-scale color maps of the McMurdo Dry Valleys, in 1997.

The *Thomas Washington*. Research vessel operated by the Scripps Institution of Oceanography. In 1969 she was engaged in an oceanographic survey between 62°W and 64°W, as far south as 62°15' S. In 1970-71 she was on a 9-month Pacific-wide expedition, and spent about 35 days south of 60°S, in Jan. and Feb. 1971.

Thomas Watson Escarpment *see* **Watson Escarpment**

Thompo Icefall. 83 18 S, 50 08 W. An icefall flowing E at the NE edge of the Saratoga Table, between Mount Hummer and Mount Hook, in the Forrestal Range of the Pensacola Mountains. Named by US-ACAN in 1979, for Robert W. "Thompo" Thompson, VX-6 photographer who worked in the areas of the Balleny Islands and the Sky-Hi Nunataks in 1963-64, and in the Pensacola Mountains in 1964-65. He was part of the team who photographed the icefall aerially in 1964. It was surveyed from the ground during USGS's Pensacola Mountains Project of 1965-66, and from all these efforts it was mapped by USGS. UK-APC accepted the name on May 21, 1979.

The *Thompson*. Her more correct name was the *Thomas G. Thompson*. U.S. research vessel, sometime in the Antarctic in the mid-1970s.

Estrecho Thompson *see* **Admiralty Sound**

Monte Thompson *see* [1]**Mount Thompson**

[1]**Mount Thompson**. 70°40' S, 62°21' W. Rising to 1690 m, NW of Lehrke Inlet, it surmounts the central part of the base of Eielson Peninsula, on the Black Coast, on the E coast of Palmer Land. Photographed aerially in Dec. 1940, during USAS 1939-41. On Nov. 11, 1947, it was seen from the ground by a combined sledging party of Fids from Base E and personnel from RARE 1947-48, and they surveyed it in Jan. 1948. On Nov. 22, 1947, RARE also saw it from the air. Named by Finn Ronne for Andy Thompson, it appears on his (Ronne's) map of 1948. US-ACAN accepted the name, and UK-APC followed suit on Sept. 8, 1953. It appears on a British chart of 1954, and also in the 1955 British gazetteer. It appears on an Argentine chart of 1952 as Monte Thompson. It was photographed aerially by USN in 1966, and further surveyed from the ground by BAS personnel from Base E in 1972-73.

[2]**Mount Thompson** *see* **Thompson Mountain**

Península Thompson *see* **Thompson Peninsula**

Thompson, A. On May 2, 1912, in Sydney, he signed on to the *Aurora*, as fireman, at £5 per month (a sum that would increase to £7 10s), and on Nov. 1, 1912, was promoted to donkeyman (3rd engineer), going to Antarctica for the 2nd voyage during AAE 1911-14. He left the expedition at Lyttelton, NZ, on March 14, 1913.

Thompson, Andrew Anderson "Andy," Jr. b. Dec. 2, 1922, Fla., but raised partly in Uniontown, Fayette Co., Pa., son of banker and state politician Andrew Anderson "A.A." Thompson and his wife Lida Foster Grimm, daughter of Daniel Grimm, the oil man. He was also grandson of Josiah VanKirk Thompson, Fayette County's greatest coal baron. A.A's first cousin was the remarkable Lida Nicolls, who, as Princess Lida of Thurn and Taxis (more than just a curious coincidence of naming), entertained the American newspaper-reading public for years with her escapades. His father died when Andy was 15, he became a boxer for a while (interestingly, one of the princess's famous news stories revolved around her jewels purportedly being stolen in Belgium by the legendary boxer Kid McCoy), and, after Yale (BSc in physics, 1945) and Columbia (masters degree in geology) he went as geophysicist and deckhand on RARE 1947-48. He married Rosalie Hunter. He later worked in the U.S. Army Ballistic Research Labs at the Aberdeen Proving Grounds, in Maryland, and lived in nearby Havre de Grace. He died in Johns Hopkins Hospital, Baltimore on Sept. 17, 1969, after a car crash on Sept. 3.

Thompson, Egbert Dibblee. b. June 6, 1822, NY, son of Egbert Thompson and Catherine Dibblee. He joined the U.S. Navy, and was promoted to midshipman on March 13, 1837. In that rank he served on the *Peacock* during USEE 1838-42. On June 29, 1843, he was promoted to passed midshipman, and on June 12, 1846 became acting master. He was promoted to lieutenant on Oct. 3, 1850. He married Everly, and they lived in Washington, DC. He was promoted to commander on July 16, 1862, and to captain on July 25, 1866, retiring on Jan. 5, 1874. He died on Jan. 5, 1881, in Washington, DC.

Thompson, Frank N. He was on the *North Star* for the 2nd half of USAS 1939-41. He lived at Richmond Beach, Wash.

Thompson, Geoffrey B. "Geoff." b. NZ. He was with the NZ Antarctic Program at Scott Base for the summer of 1960-61, and, at the request of Johnny Green, transferred to FIDS, as general assistant, electronics man, and deputy leader of Base F, for the winter of 1961. He was scheduled to winter over for two years, but halfway through the first winter it became apparent that he was not suited to FIDS life, and he decided to sleep most of the time. Bob Harkness, the base leader, handled the case by radio with Port Stanley, and Thompson was fired and returned to Stanley, where he stayed with the Greens for a while, under which circumstances his state of mind rapidly improved.

Thompson, Howard Ernest. b. June 11, 1946. Electronics engineer who wintered-over at Sanae Station (South African) in 1975, and then, with BAS, summered 5 times at Rothera Station.

Thompson, John *see* **USEE 1838-42**

Thompson, John *see* **USEE 1838-42**

Thompson, John Whiteside. b. 1928, Barrow-in-Furness, Cumberland, son of John Whiteside Thompson and his wife Pearl Cohen. A mountain-climbing and skiing friend of Ron Miller's, he and Miller heard from a Fid friend, Don Atkinson, of the alpine advantages to be had in Antarctica, and so they applied in 1955, were taken on as general assistants and mountain climbers, and on Dec. 29, 1955, left Southampton on the *Shackleton*, bound for Montevideo, and from there on to Port Stanley, where they transferred to the old *John Biscoe*. Thompson wintered-over at Base N in 1956 and 1957, and, in the second year, was also base leader. For his trip back to England in 1958, *see* **Miller, Ron**. He lived at Barrow-in-Furness.

Thompson, Matthew *see* **USEE 1838-42**

Thompson, Patrick Brendan "Pat." b. Oct. 17, 1921. He was in the RN during World War II, and was on the Arctic convoys to Russia. He joined FIDS in 1955, as a meteorologist, and wintered-over at Base D in 1956 and 1957. He died in Nov. 1994, in Southend-on-Sea, Essex.

Thompson, Richard Hugh John "Dick." Australian administrative officer, Antarctic Division, Melbourne. 2nd-in-command for several years in the 1950s of ANARE relief expeditions to Mawson Station. He was supply officer, 1950-60.

Thompson, Russell Duncan. b. June 16, 1937, Neath, Wales, son of steelworks cashier and (later) personnel officer Robert Gordon Thompson (who went to school with Ray Milland, the actor), and his wife Muriel Duncan. After Neath Grammar School, he went to the University of Wales (Swansea), with the ambition to teach geography, and came under the tutelage of Derek Maling (q.v.), and from him developed an interest in FIDS. He applied, but was told to get his degree first, which he did, in July 1958, then, in Oct. 1958, took the *Shackleton* down to Base G, where he arrived at the end of November, and where he wintered-over as senior meteorologist in 1959 (he had studied meteorology at University, and had also attended a course at the Air Ministry training school, mainly to learn how to repair instruments). In 1960 he was due to winter-over again, as base leader, at Base Y, but the *Kista Dan*, which was transporting him there, got trapped in the ice at Marguerite Bay, and they had to be rescued by the *Glacier*. And so he went back to England. In Oct. 1960 he sailed again for Antarctica, on the *John Biscoe*, to be base leader at Signy Island Station for the winter of 1961. In 1962, on his return to England, he taught geography at a school in Bedford, and then in the Hague. In 1963 he married Gaynor Davies, and in 1965 took up a post at the University of New England, in NSW. In 1967 he moved to NZ, in 1970 got his PhD, and made the move to the University of Guelph, in Ontario. In 1974 he returned to England, as a lecturer at the University of Reading, and retired in 1999. But, in 1997 he began a new career, as lecturer on the cruise ships to Antarctica, making 30 trips over the next decade. His first trip was on the *Marco Polo*, and he was subsequently on the Saga Line ships, *Saga Rose* and *Saga Ruby*.

Thompson, William *see* **USEE 1838-42**

Thompson Escarpment. 79°27' S, 83°30' W. A steep, east-facing escarpment, 13 km long, at the head of Flanagan Glacier, in the Pioneer Heights of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Cdr. Robert C. Thompson, VX-6 operations officer during OpDF 65 (i.e., 1964-65).

Thompson Glacier. 66°45' S, 123°39' E. A channel glacier which flows northward into the S side (i.e., the head) of Paulding Bay, on the Banzare Coast. Delineated in 1955 by U.S. cartographer Gard Blodgett, working from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Egbert Thompson. ANCA accepted the name on May 18, 1971.

Thompson Island. 66°00' S, 111°07' E. The largest and most northeasterly of the Balaena Islands, about 0.8 km from the Budd Coast, and about 24 km NE of the Windmill Islands, it consists of 2 rocky knolls separated by a low snow saddle which could mean that it is two islands connected by ice. It was discovered by the *Balaena* in 1947. First delineated by U.S. cartographer Gard Blodgett in 1955 from air photos taken in Feb. 1947 during OpHJ 1946-47. First visited by an ANARE party led by Phil Law on Jan. 19, 1956, and named by them for Richard H.J. Thompson. ANCA accepted the name on July 22, 1957, and US-ACAN followed suit in 1958. A cairn has been built on the highest point.

Thompson Mountain. 81°50' S, 159°48' E. Also called Mount Thompson. Rising to 2350 m, 8 km S of Mount McKerrow, in the SW part of the Surveyors Range. Named by NZGSAE 1960-61 for Edgar H. Thompson, professor of surveying and photogrammetry at University College of London, England. NZ-APC accepted the name, and US-ACAN followed suit in 1966, as did ANCA on Sept. 26, 1978.

Thompson Nunataks. 79°27' S, 85°49' W. Three evenly-spaced nunataks, 6 km S of Navigator Peak, they surmount the central part of the White Escarpment, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for American ozone physicist Russel [sic] William "Russ" Thompson, USARP meteorologist at Wilkes Station in 1963.

Thompson Peak. 69°25' S, 157°40' E. Rising to 980 m, 8 km S of Ringgold Knoll, in the NW end of the Wilson Hills, in Oates Land, in Victoria Land. Plotted by Australian cartographers from air photos taken during OpHJ 1946-47, and also from sketches and photos made by Phil Law on the *Magga Dan* on Feb. 20, 1959. Named by ANCA on July 22, 1959, for Richard H.J. Thompson. US-ACAN accepted the name in 1961.

Thompson Peaks. 84°26' S, 166°30' E. Two peaks on the divide between the upper Moody Glacier and Bingley Glacier, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Douglas C. Thompson, cosmic ray scientist with the Bartol Research Foundation, who wintered-over as a usarp at McMurdo Station in 1963, and at Pole Station in 1965.

Thompson Peninsula. 64°28' S, 63°08' W. A peninsula, 5 km long, it forms the N side of the entrance to Fournier Bay, between that bay and Patagonia Bay, in the NE part of Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N between 1955 and 1957, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for John W. Thompson. It appears on a British chart of 1959. US-ACAN accepted the name in 1971. On a Chilean chart of 1962 it appears misspelled as Península Thomson, and that name was accepted by the 1974 Chilean gazetteer. The Argentines call it Península Thompson.

[1]**Thompson Point** *see* **Thomson Point**

[2]**Thompson Point**. 70°18' S, 161°04' E. A point of land descending northeastward from the Kavrayskiy Hills into the W part of the terminus of Rennick Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Max C. Thompson, USARP biologist at McMurdo in 1966-67.

Thompson Ridge. 76°27' S, 146°05' W. A rock ridge, 3 km long, and trending N-S on the S shore of Block Bay, 5.5 km NW of Mount Iphigene, in Marie Byrd Land. Photographed aerially and mapped during USAS 1939-41, and named by Byrd in 1941 for Gershom Joseph Thompson (1901-1975), urologist at the Mayo Clinic, supporter and adviser on ByrdAE 1928-30 and ByrdAE 1933-35. US-ACAN accepted the name in 1970.

Thompson Spur. 71°33' S, 160°23' E. A large, rugged mountain spur descending eastward from the Daniels Range, between Swanson Glacier and Edwards Glacier, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for David H. Thompson, USARP biologist at Hallett Station in 1965-66 and 1967-68.

Thoms, Joseph George. Alias Geordie Bolts. b. April 20, 1798, Liverpool, son of John Thoms. He was a crew member on the *Lynx*, which sailed out of Sydney Harbor in 1820 bound for the South Shetlands. He later lived in the Cook Strait area, in NZ, establishing a whaling station at Paremata, near Porirua. He owned another two stations, one at Te-awa-iti, and a third at Port Underwood, with a pub in all three places. He got his nickname, apparently, after being sideswiped by a whale's tail. All the bones in one side of his body were broken, and his face was disfigured. He struck an awesome appearance in later life, short, stout, squat, with a bullet head and remarkably ugly features. He married a whaling girl named Te Ua Torikiriki, daughter of the local chief. He died on Aug. 2, 1852, at Te-awa-iti, on South Island, and was buried there three days later.

Islotes Thomsen *see* **Thomsen Islands**

Thomsen Islands. 65°47' S, 66°16' W. A group of small islands, 3 km SSW of Speerschneider Point, off the W side of Renaud Island, in the Biscoe Islands. First accurately shown on an Argentine chart of 1957. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Helge Thomsen (1904-1985), Danish meteorologist who, from 1946 to 1954, was responsible for editing the Dansk Meteorologisk Institut's annual reports on the state of the sea ice in the Arctic. It appears on a British chart of 1961. US-ACAN accepted the name in 1971. The Argentines call them Islotes Thomsen.

Bahía Thomson *see* **Thomson Cove**

Caleta Thomson *see* **Thomson Cove**

Point Thomson *see* **Thomson Point**

Punta Thomson *see* **Rahir Point**, **Thomson Point**

Thomson, Colin Sinclair. b. May 27, 1888, NZ, son of John Sinclair Thomson. He joined the Royal Navy on Jan. 15, 1904, and on Oct. 3, 1905, as a midshipman, he was transferred to the *Powerful*. On Jan. 4, 1908, he was transferred to the *Hibernia*, and on Sept. 30, 1908, was promoted from acting sub lieutenant to sub lieutenant. On Aug. 1, 1909, he was transferred to the *Bulwark*, on March 1, 1910, to the *Blake*, and on April 1, 1911, was promoted to lieutenant. On May 26, 1915, he married Royale Carter Falk, in London. In 1920, by now a lieutenant commander (promoted April 1, 1919), he was skipper of the *Verdun*, when that destroyer took the body of the Unknown Warrior across the Atlantic. On Aug. 30, 1925, he was promoted to commander, and on June 30, 1931, to captain. He was the first captain of the *Ajax*, and as such was in Antarctic waters in 1937. During World War II, he was deputy superintendent of Devonport Dockyard, and from there became commodore in charge of the dockyard at Sheerness, a position he held until war's end. He retired as a rear admiral, and later lived in Chilham, Kent, to raise roses, and died in hospital in Canterbury, on July 24, 1959.

Thomson, George Wyville. b. March 5, 1830, Bonsyde, West Lothian. Marine biologist and professor of natural history at the University of Edinburgh. Immediately after leading the *Challenger* Expedition, 1872-76, he was knighted. He died on March 10, 1882, at Bonsyde.

Thomson, Janet Wendy. Née Brown. British geologist, wife of Mike Thomson (see below; they married in 1967, in Wokingham). In Jan. 1977, while working for USARP (i.e., not for the British) in the South Orkneys, she became the first British female scientist to set foot on Antarctica, while she was working from the *Hero* that season. In 1983-84 she was on the *John Biscoe* (now working for the British), in the Biscoe Islands and the South Shetlands, as part of the BAS Geological Landings Program. In 1984-85 she was the only BAS member and the only female geologist with the USGS team on the English Coast, in eastern Ellsworth Land, and in southern Palmer Land, and in 1986 was the only female on the *Bransfield*, during the BAS Geological Landings Program of that season, at the Danco Coast and Marguerite Bay. For more on Mrs. Thomson, *see* **Thomson Glacier**, and **Women in Antarctica**, 1977.

Thomson, Leslie James Felix "Tommy." b. 1886, Young, NSW, son of Daniel Gordon Thomson and his wife Mary Ann McIntosh. He joined the merchant service, working his way up through the mate ranks until on Dec. 9, 1911, he got his first mate's certificate, and, on April 23, 1914, his master's certificate. In Hobart, on Dec. 23, 1914, at the last minute before the ship sailed for Antarctica, he was taken on as 2nd officer on the *Aurora*, 1914-15, and 1st officer, 1915-16. When the *Aurora* drifted away from the base, he and Capt. Stenhouse were the only two officers on board. Without Thomson, the ship would probably never have got back home. After the expedition, Thomson joined Capt. Stenhouse on the *Ianthe*. In 1927, in Sydney, he married Violet May McIntosh, and they lived in Wahroonga. where Tommy, after leaving the sea, became a lift driver. He died in Hornsby, NSW, on June 20, 1946. Violet died in 1979.

Thomson, Michael Robert Alexander "Mike." b. May 28, 1942, Brentford, Mdsx, son of Frank J. Thomson and his wife Hilda M. Pickhaver. After Birmingham University, he was BAS geologist who wintered-over at Base T in 1964 and at Base E in 1965, and during that period also spent time at Fossil Bluff Station. In 1969 he got his PhD from Birmingham, and from Dec. 1972 to Feb. 1973 was in southern Alexander Island, leading the first ever remote BAS summer geological project. It was this trip that proved that BAS geological winter programs were unnecessary. In Dec. 1974-March 1975 he led a 6-man team to conduct the first ever regional survey of the South Shetlands, and in Jan. 1977 was in the South Orkneys, part of a 6-person team (including his wife, Janet Wendy Thomson — see above), mapping the island group from the *Hero*. From Nov. 1977 to Jan. 1978 he was paleontologist on a 9-man USGS expedition to the Orville Coast, and in Dec. 1979 and Jan. 1980 he was a usarp in the Ellsworth Mountains. In Feb. 1981 he was fossil hunting on Adelaide Island, and in March of that year made geological landings from the *Bransfield*. He was fossil hunting on Adelaide Island from Nov. 1981 to March 1982, and from Nov. 1982 to Feb. 1983 led a 4-man geological party to Ross Island. In 1984 he became chief geologist with BAS, and from Nov. 1985 to Feb. 1986 he was back at James Ross Island, as head of a 10-man geological party. From 1986 to 1992 he was head of BAS's geology division, was back at James Ross Island in Dec. 1988-Jan. 1989, and in Jan. and Feb. 1991 was at Byers Peninsula, in the South Shetlands, as leader of a 14-person joint geological and biological party. From 1992 to Sept. 2000 he was head of the geosciences division of BAS, and in Dec. 1994 and Jan. 1995 he was co-leader of EUROSHACK (q.v.). In Jan. and Feb. 1997 he led a BAS team into the Shackleton Range to follow up on fauna studies made there during EUROSHACK. He was at McMurdo briefly in Nov. 1997, for an emergency meeting of the Cape Roberts Project (q.v.), and in Nov. and Dec. 1998, and again in Nov. and Dec. 1999, he was part of the 2nd and 3rd seasons of the Cape Roberts Project. In March 2002 he took part in ANDEEP II (q.v.), and retired on May 27, 2002.

Thomson, Robert Baden "Bob." b. May 18, 1927, North Island, NZ, son of William E. Thomson and his wife Nellie. After a spell on Campbell Island, in the sub-Antarctic, as senior ionospheric observer, 1958-59, he became upper atmosphere physicist and scientific leader at Hallett Station for the winter of 1960, was public relations officer and postmaster at Scott Base in 1960-61, and leader at Scott Base in 1961-62. He left NZ for Australia, became stores and logistics officer for ANARE, and wintered-over as officer-in-charge at Wilkes Station in 1962. In the summer of 1962-63 he led the Vostok Traverse (q.v.). He went back to NZ, and was deputy leader at Scott Base in 1963-64. From 1965 to 1988 he was superintendent of the Antarctic Division of the Department of Scientific and Industrial Research, in Wellington; in other words he headed NZ's Antarctic research program (NZARP). In 1968 he established Vanda Station in the dry valleys of Victoria Land. In 1970 he married Betty. He died on Jan. 3, 2008, in Virginia, where he had moved to in the 1990s from Christchurch. They say he made 78 trips to Antarctica (but that figure includes sub-Antarctic islands).

Thomson, William Harvie. Known as Willie in his family, but as Tommy in the Navy, in FIDS, and at work. b. Sept. 13, 1922, Airdrie, Lanarkshire, son of engineer Alexander Thomson and his wife Mary. After Airdrie Academy and Glasgow University, he volunteered for the Fleet Air Arm, where he trained as a pilot lieutenant in Britain and Canada. He joined the escort carrier *Fencer*, and 842 Squadron, mainly Atlantic and Russian convoys. He sank a U-boat, and was awarded the DSC. In 1946 he married former WREN Nancy "Nan" Metcalf. He met James Wordie in an officer's club in London, applied for a job with FIDS, and in Nov. 1946 took the *Trepassey* from London to Port Stanley, and the *Fitzroy* from there to Marguerite Bay. At Base E (Stonington Island) he was the one who flew the Auster *Ice Cold Katie* (name proposed by Stonehouse), and Fids still talk with some awe about the time he crashed the plane, and had to walk 72 miles back to base. After the expedition, Tommy traveled around the islands, left Antarctica in May 1948, and flew home. He later became a teacher and headmaster (one of his schools was in Malaya). After teaching, he became Inspector of Schools in 1964, retiring in 1982 to Ardrossan, Scotland.

Thomson Bay *see* **Thomson Cove**

Thomson Cove. 65°06' S, 63°14' W. A cove, 1.5 km wide, just N of Étienne Fjord, between that fjord and Rahir Point, in Flandres Bay, along the Danco Coast, on the W coast of Graham Land. First charted by FrAE 1903-05, and named by Charcot as Baie Thomson, for Gaston-Arnold-Marie Thomson (1848-1932), minister of the French Navy in 1905, who was of assistance to both this expedition and FrAE

1908-10. It appears on a 1943 U.S. Hydrographic Office chart as Thomson Bay, and on a 1949 Argentine chart as Bahía Thomson. On a 1953 Argentine chart it appears as Bahía Thompson (sic). Fids on the *Shackleton* surveyed it in Feb. 1956, and FIDASE photographed it aerially in 1956-57. UK-APC accepted the name Thomson Cove on Sept. 23, 1960, and US-ACAN followed suit in 1965. The 1974 Chilean gazetteer accepted the name Bahía Thomson.

Thomson Glacier. 73°27' S, 80°13' W. A glacier, about 13 km long, on the Bryan Coast, flowing between Rydberg Peninsula and Wirth Peninsula, into Fladerer Bay. Named by US-ACAN in 2003, for Janet W. Thomson (q.v.), of BAS, head of the mapping operations from the 1980s, and a member of the US-UK cooperative project to compile *Glaciological and Coastal-Change Maps of the Antarctic Peninsula*. *See also* **Women in Antarctica**, 1977.

Thomson Head. 67°35' S, 66°46' W. A steep, rocky headland rising to 915 m, at the SE side of Bourgeois Fjord, W of Perutz Glacier, between that glacier and Bader Glacier, on the Fallières Coast, on the W coast of Graham Land. First surveyed in Aug. 1936, by BGLE 1934-37. Re-surveyed in Nov. 1949, by Fids from Base E, and named by them for Tommy Thomson. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Thomson Massif. 70°35' S, 66°48' E. A rock massif in the Aramis Range of the Prince Charles Mountains. Mount Sundberg and Mount McGregor rise from it. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for New Zealander Robert Baden "Bob" Thomson. US-ACAN accepted the name in 1967.

Thomson Peak. 71°59' S, 166°07' E. A high peak, rising to 2350 m, 17.5 km SE of Mount Shute, W of Jutland Glacier, at the extreme S limit of the Mirabito Range, in the Victory Mountains of Victoria Land. Named by the Northern Party of NZGSAE 1963-64 for Bob Thomson. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Thomson Point. 60°43' S, 44°38' W. On the E side of Pirie Peninsula, 2.8 km SE of Cape Mabel, on Browns Bay, on the N coast of Laurie Island, in the South Orkneys. Surveyed and charted in 1903 by ScotNAE 1902-04, and named by Bruce as Thomson Point, or Point Thomson, for John Arthur Thomson (1861-1933; knighted as Sir Arthur Thomson), Regius professor of natural history, University of Aberdeen, 1899-1930. It appears both ways on the expedition charts. On Petter Sørlle's chart of 1912, it appears as Point Tomson, on his and Hans Borge's chart of 1913 it appears as Point Tomsen, and on Sørlle's 1930 chart it appears as Tomsen Pynten (which means the same thing as Point Tomsen. However, all this Tomsen and Tomson business is just ignorance). Re-surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart as Thompson Point (just ignorance). It appears as Thomson Point on a British chart of 1938. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On an Argentine chart of 1952 it appears as Punta Thomson.

Thomson Rock. 71°27' S, 66°56' W. A rock nunatak rising to about 900 m, along the E margin of the Batterbee Mountains, 5 km E of Mount Bagshawe, in Palmer Land, at George VI Sound. Surveyed by BAS personnel from Base E and from Fossil Bluff Station between 1962 and 1972. Named by UK-APC on July 21, 1976, for Mike Thomson. US-ACAN accepted the name later that year, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Thomson Summit. 75°16' S, 72°26' W. A mostly snow-covered mountain, rising to 1515 m, between Mount Goodman and Mount Chandler, in the Behrendt Mountains, on the Orville Coast, in Ellsworth Land. Climbed by a University of Wisconsin field party in 1965-66. These mountains were visited by Peter Rowley's 1984-85 USGS geological party, and he named this summit for Janet Thomson (q.v.), who, with Rowley's party, made the second ascent of this mountain. US-ACAN accepted the name, and UK-APC followed suit on Nov. 13, 1985.

Thonhauserfelsen. 70°43' S, 163°37' E. A crag at the W end of Platypus Ridge, in the Bowers Mountains. Named by the Germans.

Mount Thor. 77°35' S, 160°41' E. A prominent peak, rising to about 2000 m (the New Zealanders say about 2200 m), S of the feature called Labyrinth, in the Asgard Range of Victoria Land. Named by VUWAE 1958-59, after the Norse god. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Thor Island. 64°33' S, 62°00' W. The largest of a group of small islands at the E side of Foyn Harbor, Nansen Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Named South Thor Island in 1920-21 by whalers in the area, for the *Thor I*, which was moored here that season and again in 1921-22. Lester and Bagshawe charted it as such during their British Imperial Antarctic Expedition of 1920-22. Photographed aerially by FIDASE in 1956-57. Renamed by UK-APC on Sept. 23, 1960, it appears in the 1961 British gazetteer. US-ACAN accepted the new name in 1965. *See also* **North Thor Island** for a more detailed explanation of what happened here in the naming and renaming of these features.

The *Thor I*. Built by Harland & Wolff, of Belfast, in 1890, for Liverpool owners, and bought in 1910 by Norwegian whaling company Bryde & Dahls Hvalfangerselskab (Thor Dahl and I. Bryde), and converted into a modern, 4365-ton whaling factory ship. From the 1910-11 season until the 1916-17 season, she operated out of Godthul in South Georgia. Harald Horntvedt was her skipper in 1912. She was in South Shetlands and Graham Land waters in 1917-18 (Capt. John Berggreen; Gustav Sørensen was 1st mate; Hans Jespersen was a gunner on board that season), 1918-19 (Capt. Gustav Sørensen; Nils Hansen died on board that season, in Dec. 1918), 1919-20, 1920-21 (one of her catchers that season was the *Odd 1*), and 1921-22 (Capt. Hansen Vermili). Between 1922 and 1929 she operated out of Godthul, operating in Antarctic waters in 1927-28 and 1928-29. In 1929-30 and 1930-31 she did pelagic whaling in Antarctic waters, fishing along the ice-edge. In 1930 she was in Cape Town. She was owned by Lars Christensen at this point, was laid up in 1931, and broken up in Germany in 1937.

The *Thor Major* *see* **The *Odd III***

The *Thor Minor*. Christensen tanker at Deception Island in 1928-29.

[1]**The *Thorarinn***. Norwegian whale catcher, built in 1929 in Oslo, for Bryde & Dahl. She was in Antarctic waters in 1940-41, and narrowly avoided capture by the German raider *Pinguin*, on Jan. 14, 1941. She was sold in 1942.

[2]**The *Thorarinn***. 138 foot 4 inch Norwegian whale catcher built in 1945, at Smith's Dock, Middlesbrough, for Thor Dahl's company. She was the second catcher to bear this name. She was in Antarctic waters in 1948-49, catching for the *Thorshammer*. In 1958 she became a training school in Sandefjord for new Thor Dahl whaling recruits, and in 1959 was sold to the Compañía Industrial, of Chile.

Mount Thorarinsson. 67°15' S, 64' 59' W. Rising to 860 m, at the SW side of the terminus of Hess Glacier, on the Foyn Coast, on the E coast of Graham Land. It forms a point on the rocky spur that descends from the plateau, and is one of the most distinctive features along the coast as viewed from the Larsen Ice Shelf. Photographed aerially by USAS 1939-41, by RARE 1947-48, and surveyed and mapped by Fids from Base D in Dec. 1947. Further surveyed by BAS personnel from Base E in 1963-64. Re-photographed aerially by USN in 1968. Named by the UK for Sigurdur Thorarinsson (1912-1983), Icelandic glaciologist, professor of geology and geography at the University of Iceland, at Reykjavik, 1969-83. UK-APC accepted the name on Dec. 20, 1974, and US-ACAN followed suit in 1975. It appears in the 1976 British gazetteer.

The *Thorbrann*. A 148 foot 4 inch Norwegian whale catcher built in 1947 at Smith's Dock, in Middlesbrough, for Thor Dahl's company. She was catching in Antarctica in 1948-49, for the *Thorshammer*.

The *Thordønn*. 176-foot Norwegian whale catcher, built in 1941 for Thor Dahl's company. The Germans seized her that year, and renamed her *Seelöwe* (i.e., "sea-lion"). After the war, Dahl got her back, and renamed her *Thordønn* again. She was in Antarctic waters in 1948-49, catching for the *Thorshammer*. In 1969 she was sold to Christiania Spigerverk for scrap.

The *Thordr*. A 249-ton, 115 foot 7-inch whale catcher, built in 1929, at Akers Mek., Oslo, for Bryde & Dahl, of Sandefjord. On April 14, 1929, while she was docked in Sandefjord, undergoing final adjustments, the *Pythia*, which was moored next to her, capsized, and almost crushed the catcher. However, she was fixed up in time for the 1929-30 whaling season in Antarctic waters, when she caught for the

Thorshammer, as she did also for every season from then until 1939-40, when she was requisitioned for war service. In 1942 she became the U.S. Coast Guard ship *Bodega*. She sank in Panama at the end of 1943.

Thoresen, Thor. Manager of the *Southern Queen* in the 1920s.

Thoreson Peak. 77°44' S, 163°38' E. Rising to about 1200 m, it is one of the highest peaks on the rock bluffs at the S side of New Harbor, 3.2 km WSW of Stewart Peak, on the Scott Coast of Victoria Land. Named by Paul Dalrymple, for Ronald D. Thoreson, biology laboratory manager with the wintering-over party at McMurdo in 1970. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

The *Thorfinn*. Norwegian whale catcher, in Antarctic waters in 1933-34, working for the *Thorshavn*.

Thorfinn Islands. 67°21' S, 60°54' E. A group of small islands (including Heckmann Island), about 8 km (the Australians say 13 km) off the coast of Mac. Robertson Land, between Campbell Head and Cape Simpson. Probably discovered by BANZARE 1929-31, but certainly not named by them. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named them Thorfinnøyane, for the *Thorfinn*. ANCA accepted the translated name on July 29, 1965, and US-ACAN followed suit in 1966.

Thorfinnøyane *see* **Thorfinn Islands**

The *Thorfjell*. A 129 foot 1 inch Norwegian whale catcher, built in 1934 at Framnaes Mek., in Sandefjord, for Bryde & Dahl. She was launched as the *Terminus*, but delivered to Dahl as the *Thorfjell*. She was in Antarctic waters in 1940-41, catching for the *Thorshammer*. In 1943 she was chartered briefly by the U.S. Coast Guard, as a patrol boat, but was back in Antarctic waters in 1943-44, again catching for the *Thorshammer*. In 1944-45 she was catching for the *Sir James Clark Ross*, and in 1945 was overhauled at Walvis Bay, in South Africa. She was back with the *Sir James Clark Ross* in 1945-46. In 1946-47 and 1947-48 she was back in Antarctic waters, catching for the *Antarctic*, and in 1948-49 was catching for the *Thorshammer*. In 1951-52 she was a buoy boat for the *Thorshammer*, and in 1952 was laid up. In 1953 she was sold to Gunvald Ottesen, of Stord, and converted into a coaster, being renamed the *G.O.* On Nov. 26, 1959, she capsized and sank, off Varberg, Sweden, with a load of grain aboard.

The *Thorgaut*. Norwegian whale catcher, in Antarctic waters in 1930-31, under the command of Rolf Walter. She foundered in the Southern Ocean in 1938. 3 men died.

Thorgaut Island. 67°27' S, 63°33' E. The largest island in the NE part of the Robinson Group, 11 km NW of Mount Daly, off Mac. Robertson Land. Discovered in late Jan. 1931 by the *Thorgaut* (hence the name). Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who, if they named the feature, that name is unknown. Named by ANCA on Nov. 28, 1955. US-ACAN accepted the name in 1965.

Thorgaut Islands *see* **Robinson Group**

The *Thorgrim*. Norwegian whale catcher (gunner: Harald Nilsen-Dalen) belonging to Thor Dahl. She was in Antarctic waters in 1961-62, catching for the *Thorshavet*, during that factory's last Antarctic season. She took only one sperm whale that season.

The *Thorgry*. Norwegian whale catcher (gunner: Hagobert Hansen) belonging to Thor Dahl. She was in Antarctic waters in 1961-62, catching for the *Thorshavet* in that factory's final Antarctic season. She took 12 blues, 126 fins, one sei, and 29 sperms.

[1]**The *Thoris***. A 133-foot Norwegian whale catcher, built in 1936 at Framnaes Mek., in Sandefjord, as the *Amos*, for Thor Dahl's company. Later renamed *Thoris*, she was in Antarctic waters in 1948-49, catching for the *Thorshammer*. In 1956 she was sold to the Brunvold Brothers, in Tromsø, and renamed the *Polarbris IV*. In 1967 she was broken up in Grimstad.

[2]**The *Thoris***. Norwegian whale catcher (gunner: Thomas Augensen) belonging to Thor Dahl. She was in Antarctic waters in 1961-62, catching for the *Thorshavet* in that factory's final Antarctic season. She took 5 blues, 108 fins, 2 seis, and 44 sperms.

The *Thorlyn*. Norwegian whale catcher (gunner: Alf Andreassen) belonging to Thor Dahl. She was in Antarctic waters in 1961-62, catching for the *Thorshavet* in that factory's final Antarctic season. She took 4 blues, 145 fins, and 28 sperms.

Mount Thorne. 85°41' S, 158°40' W. A prominent peak, rising to 1465 m, on the E flank of Amundsen Glacier, and on the W side of Scott Glacier, 10 km NW of Mount Goodale, in the Hays Mountains of the Queen Maud Mountains. Discovered in Jan. 1929 by Larry Gould's Southern Geological Party (the New Zealanders say it was discovered on Byrd's South Pole flight of Dec. 28-29, 1929), and named by Byrd for one of this 6-man party, George A. Thorne. Mapped by the Southern Sledging Party during ByrdAE 1933-35. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Punta Thorne *see* **Thorne Point**

Thorne, George Arthur, Jr. "Mike." b. Dec. 20, 1901, Winnetka, Ill., son of George A. Thorne, of Brookline, Mass., and grandson of George R. Thorne, founder of Montgomery Ward & Co. A Yale geologist, he afterwards went to forestry school, spent a year skiing in Norway, worked in lumber camps, then learned to fly in Chicago. He had his own plane by the time he went on ByrdAE 1928-30 (it was rumored that he was a millionaire, and he probably was). He wintered-over in 1929, and was one of the Southern Geological Party led by Larry Gould in Dec. 1929. On Sept. 12, 1931, in Brookville, Long Island, he married Mrs. Elinor G. Toerge. He died on Dec. 7, 1939, in Harrisville, NH.

Thorne, John. b. Nov. 12, 1928, Thornton Heath, Surrey, son of Frederick Henry Thorne and his wife Edith Mary Grove. His father's electrical business failed during the Depression, so he became a rent collector, then a highly successful real estate agent, being a captain in the London Home Guard during World War II. Just after the war, John Thorne joined the Indian Army as a cadet, but then partition happened in India, so he joined a British regiment, serving a year patrolling the Somaliland-Abyssinia border, as a 2nd lieutenant with the Somalia Gendarmerie (native unit). After college, he trained as a mechanical engineer, and worked as a test engineer on aircraft pressurization and air conditioning. An oarsman, canoeist, and mountain climber, and with experience in central Norway's ice-cap area (as deputy leader of a school's expedition there), as well as much experience handling meteorological equipment, he was a natural for FIDS, which he joined in 1955, and, with 8 other Fids, sailed south from Southampton on the *Andes*, as a meteorologist, reaching Montevideo on Nov. 28, 1955. The next day he left Uruguay on the *Fitzroy*, bound for Port Stanley, reaching there on Dec. 4, 1955, immediately joining the *John Biscoe*, which, the next day, sailed south (*see* **The *John Biscoe*** for her itinerary). On Dec. 26, 1955, after a major tour of the bases, loading, unloading, relieving the bases, Thorne was set down at Base G, where he summered-over. On Feb. 10, 1956, the *Biscoe* came to pick him up to take him to his wintering-over base (Base W), but first they did the usual tour (again, *see* **The *John Biscoe*** for itinerary). On Feb. 21, 1956, the *Biscoe* arrived at Detaille Island, where Thorne wintered-over at Base W in 1956 and 1957. In Sept.-Nov. 1956 he and Hedley Wright were out on the trail, and for a time were reported missing, causing some consternation in the British press. They were finally pulled out by helicopter, perhaps the first helo rescue operation south of the Antarctic Circle (Nov. 7, 1956). On Feb. 8, 1958, the new *John Biscoe* picked him up (see that ship for itinerary), and he toured the local area on the ship for a week, and then headed back to Port Stanley (*see* [2]**The *John Biscoe***), arriving there on March 29, 1958. He lodged at James Street from April 1 to April 9, 1958, and on April 9, joined the *Shackleton*, leaving on April 11, 1958, for Montevideo, arriving there on April 15, and leaving on April 17, for the UK, where he arrived on May 15, 1958.

Thorne Glacier *see* [2]**Scott Glacier**

Thorne Point. 66°57' S, 67°13' W. Forms the W entrance point of Langmuir Cove, on Hanusse Bay, and marks the NW extremity of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers in 1960 from air photos taken by FIDASE in 1956-57, and from surveys conducted by Fids from Base W that same season. Named by UK-APC on July 7, 1959, for John Thorne (q.v.), a member of the first sledging party to visit Hanusse Bay, in 1956. US-ACAN accepted the name in 1964. The Argentines call it Punta Thorne.

Thorne Refugio. 62°55' S, 60°42' W. Argentine refuge hut at Telefon Bay, Deception Island, opened on March 23, 1949, during ArgAE 1948-49. By 1952-53 it was covered with snow, and

on Jan. 3, 1953 was rebuilt, as Refugio Naval Thorne. It was closed in 1956. It was named for Coronel de marina Juan Bautista Thorne (1807-1885). of the Argentine Navy.

Thorne-Middleton, Anthony Cyril "Tony." b. 1937, Newton Abbot, Devon, but raised partly in Croydon, son of Cyril Thorne-Middleton and his wife Doris M. Mulligan. He joined FIDS in 1960, as a cook, and wintered-over at Halley Bay Station in 1961, and at Base F in 1962. In 1988, in Milton Mowbray, Leics, he married Christina Dare.

Caleta Thornton. 63°16' S, 57°28' W. An inlet approximately 8 km SW of Cape Siffrey, on the NW coast of Trinity Peninsula, on the coast of the Antarctic Peninsula. Named by the Chileans for 1st Lt. George Thornton M., hydrographer on the *Yelcho* during ChilAE 1971. The Argentines call it Caleta Mercado.

Islote Thornton. 62°12' S, 58°43' W. A small island off the NE coast of Marian Cove, Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chileans, presumably for Lt. George Thornton M. (*see* **Caleta Thornton** above).

Mount Thornton. 73°34' S, 77°07' W. Rising to about 700 m, S of Carroll Inlet, between Mount McCann and Mount Benkert, in the east-central part of the Snow Nunataks, on the English Coast of Ellsworth Land. Discovered and photographed aerially by USAS 1939-41. Named by US-ACAN in 1968, for Capt. Richard Thornton, commander of the *Eltanin*, 1967-68. It appears on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted the name on Dec. 20, 1974.

Thornton, Edwin "Ed." FIDS/BAS meteorologist who wintered-over at Halley Bay Station in 1961 and 1962. He was at Base E for the winters of 1964 and 1965, as a general assistant.

The *Thorøy*. Built in England by Armstrong-Mitchell, for Bowring, launched on Oct. 25, 1893, and completed in Dec. 1893, as the *Snowflake*. She was sold in 1913, and became the *Kremlin*, being sold again in 1922 to Johann Rasmussen, in Norway, and being renamed the *Velløy*. In 1925 Thor Dahl bought her, and renamed her the *Thorøy*, a 2710-ton auxiliary cookery vessel, tanker, and supply ship. She left Sandefjord on Aug. 25, 1925, with Anton Severin Anderssen as skipper and Haakon Hansen as 1st mate, to work out of South Georgia, gathering oil. She may well have been south of 60°S that 1925-26 season. She left South Georgia for Barbados, in turn leaving there on April 20, 1927, reaching NY on April 30, 1927, taking her load to the USA. On May 10, 1927, she left NY for Norfolk, Va., and thence to Houston. In 1947 she was sold for the last time, to the French, and became the *Anne de France*, and was scrapped at Rosyth on Jan. 12, 1953.

Thorp Ridges. 66°34' S, 52°51' E. Three almost parallel ridges, 29 km W of Stor Hånakken Mountain (what the Australians call Mount Bennett), in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA for Arnold Thorp, electrical fitter at Wilkes Station in 1961. US-ACAN accepted the name in 1965.

The *Thorshammer*. Known by the men who worked aboard her as *Hammer'n* (i.e., short for Hammeren, meaning "the hammer"). The former Eagle Oil Company tanker *San Nazario*, built by W. Doxford & Sons, of Sunderland, in 1914, and bought by Lars Christensen, for Bryde & Dahl, out of Sandefjord, Norway. At Framnaes Mek., Lars converted her into a 12,215-ton factory whaling ship, 526 feet long, 66 feet 6 inches wide, and with 795 nhp. Under the command of Capt. Hjalmar Bråvold, she was pelagic whaling in Antarctic waters in 1928-29 (manager was Christen Granøe), 1929-30, and 1930-31, the last season being under the command of manager Gustav B. Bull. A stern slip was fitted in 1931-32 (she was not in Antarctic waters that season), and Bull took her back to Antarctica in 1932-33 (Hjalmar Bråvold was still skipper). Still under Bråvold, she was back in 1933-34 (Einar Siggessen was manager), 1934-35, 1935-36, and again in 1936-37. She was in Antarctic waters again in 1937-38, 1938-39, and 1939-40. She was back in 1940-41, under a new captain, Einar Torp (her log books were destroyed, but *see* **The Queen *of Bermuda***, for her movements during part of this season). That was the season the German raider *Pinguin* captured three Norwegian whaling vessels, only the *Thorshammer* escaping, with her 7 catchers, to South Georgia. She was back in Antarctic waters in 1941-42, still under Torp. Again under Capt. Bråvold, she was back in 1942-43, 1943-44, and 1944-45. In 1945-46 her skipper in Antarctic waters was Kristian Evensen. Capt. Bråvold was back in 1946-47, and in 1947-48 Capt. Torp was her skipper again. In 1948-49 Thorvald Hansen was her skipper, and her catchers were *Thordønn*, *Hauk*, *Ottern*, *Thorfjell*, *Seksern*, *Thorarinn*, *Thoris*, and *Thorbrann*. She was back in Antarctic waters in the following seasons: 1949-50 (Capt. Torp), 1950-51 (Capt. Torp), 1951-52 (Capt. Torp), 1952-53 (Capt. Finn A. Ramberg), 1953-54 (Capt. Dagfin Sivas), and 1954-55 (Capt. Sivas). Captain Nils Larsen was her skipper for the seasons 1955-56, 1956-57, 1957-58, 1958-59, 1959-60, and 1960-61), and, for her final season, 1961-62, her skipper was Gilbert Knutsen. In 1962 she was sold to Cantieri, Navali, in La Spezia, for scrap.

Thorshammerhallet. 71°20' S, 24°00' E. An ice slope between 21°E and 27°E, at the N side of the Sør Rondane Mountains. Named by the Norwegians for the *Thorshammer*.

The *Thorshavet*. A 17,081-ton, 571 foot 1 inch Norwegian factory whaling ship, built in 1947, by Harland & Wolff, of Belfast, for Thor Dahl's Ørnen Company, and named after Dahl's 11,051-ton ship *Thorshavet* (built in 1938 and sunk by the Nazis in 1942). She was in Antarctic waters every season from 1947-48 until 1961-62. That last season, she left Sandefjord on Oct. 17, 1961, with 10 catchers, and a total complement of 350 men. The catchers were *Thorlyn*, *Thorgry*, *Tiger*, *Thorvald*, *Thoris*, *Seksern*, *Femern*, *Djerv*, *Pingvin*, and *Thorgrim*. She returned to Sandefjord on May 5, 1962. She had taken 45 blue whales, 876 fins, 5 seis, and 354 sperms. In 1955 she had been lengthened to 644 feet 2 inches, and her new weight was 19,268 tons. She was back in Antarctic waters in 1962-63, 1963-64, 1964-65, 1965-66, and 1966-67, and was sold to Astra Overseas Fishing (which was really the Dahl company combined with Astrea of Sweden) in 1969, becoming the *Astra*, a fish protein factory ship. On April 14, 1974, the *Karonga* ran into her and 3 days later she sank off the coast of Guinea-Bissau, one man dying. Dahl's company then built a third *Thorshavet*.

The *Thorshavn*. Norwegian tanker owned by Lars Christensen. She came down to the Antarctic every summer between the 1930-31 season and the 1936-37 season, Christensen himself leading each of the expeditions except the one of 1934-35, which Klarius Mikkelsen led. Her whale catchers in the 1933-34 season were: *Ørn II*, *Thorfinn*, *Toern*, *Treern*, *Femern*, and *Seksern*. On Feb. 20, 1935 a landing party, including Caroline Mikkelsen, made it ashore from the vessel, after having discovered the Ingrid Christensen Coast. The 1936-37 expedition is the one referred to in this book as LCE 1936-37.

Thorshavnheiane. 71°00' S, 40°00' E. The area between the Belgica Mountains in the W and the E border of Queen Maud Land. Named by the Norwegians for the *Thorshavn*. Originally, this feature extended from Borchgrevinkisen to 45°E, in Queen Maud Land but in 1973, the Norwegians fixed the limits to what they are now.

The *Thorshøvdi*. Also seen as *Thorshövdi*. Norwegian factory whaling ship, acquired by Lars Christensen in 1948, in Antarctica for every season from 1948-49 until 1964-65. In the season 1949-50 she was commanded by Capt. Hansen. This ship brought down the equipment and some of the members of NBSAE 1949-52.

Thorstensen, Gunder. Name also seen as Torstensen. b. July 21, 1874 (baptized on Aug. 14, 1874), in Borøen, Dybvaag, Aust-Agder, Norway, son of sailor Bernt Andreas Thorstensen and his wife Jensine Teresia Gundersdatter. He went to sea as a whaler, worked his way up through the mate ranks, and was skipper of the *Solstreif*, in Antarctic waters, 1917-18, 1919-20, and 1920-21. In 1928, at Sandefjord, he signed on as skipper of the *Sir James Clark Ross* for 1928-30.

The *Thorvald*. Norwegian whale catcher (gunner: Alf Karlsen) owned by Thor Dahl. She was in Antarctic waters in 1961-62, catching for the *Thorshavet* in that factory's final Antarctic season. She took 7 blue whales, 111 fin whales, and 45 sperm whales.

Mount Thorvald Nilsen *see* **Nilsen Plateau**

Thorvald Nilsen Mountains *see* **Nilsen Plateau**

Thorvaldsen, Leif *see* **Begann, A.M.S.**

Bay of the Thousand Icebergs *see* **Duse Bay**

Mount Thrace. 77°30' S, 161°07' E. Rising to 1800 m at the SE side of Mount Boreas (it is connected by a ridge to the Mount Boreas

massif), in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Thrace, the home of the mythological character Boreas. NZ-APC accepted the name on Nov. 30, 2004.

Three Brothers Hill. 62°15' S, 58°40' W. Also called Brothers Hill. A conspicuous hill rising to 210 m (the British say 195 m), and with 3 summits (2 higher and one lower), it is the remnant neck of an extinct volcano, forming the E entrance point of Potter Cove, King George Island, in the South Shetlands. The descriptive name Three Brothers was given by early sealers in the area. Capt. Sherratt refers to it in 1820-21, and describes it as "somewhat resembling three joints of the fingers, when the hand is closed." It appears as such on British charts of 1916 and 1930. However, Capt. Fildes, in 1821, called it The Three Brothers. David Ferguson in a 1921 report based on his survey of 1913-14, calls it Three Brothers Hill. Resurveyed by the Discovery Investigations in 1934-35, it appears on their 1935 chart as Three Brothers Hill, as it does on a 1948 British chart, that being the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer, and also on a 1962 British chart. The Argentines initially called it Colina Three Brothers, and it appears that way on one of their 1948 charts (misspelled, however, as Colina Thres Brothers) and on one of their 1949 charts. There are 1955 references to it as Tres Hermanos, Los Tres Hermanos, and Cerro Tres Hermanos. The 1970 Argentine gazetteer accepted the name Colina Tres Hermanos. The 1974 Chilean gazetteer accepted Cerro Tres Hermanos. Tony Bancroft, in 1959, referred to Middle Brother, the central part, used as a triangulation station by FIDASE in 1956-57. Last plotted by the British, in late 2008.

Three Brothers Islands. 61°30' S, 55°51' W. Discovered in the South Shetlands in Feb. 1821 by von Bellingshausen, and named by him as Ostrova Tri Brata. Later given individual names — Aspland Island, O'Brien Island, and Eadie Island.

Three Children and a Baby *see* **Windscoop Nunataks**

Three Degree Depot. 86°56' S, 160°03' E. One of Scott's depots during his trek to the Pole, during BAE 1910-13. Built on Dec. 31, 1911, at a height of 9126 feet above sea level. So named because it was 3 degrees of latitude from the Pole.

300-Mile Depot. Established by Byrd in 1928-29, 300 miles S of Little America, on the Ross Ice Shelf.

Three Kings Cove. 62°05' S, 57°56' W. Between Three Sisters Point and Mersey Spit, on King George Island, at the Bransfield Strait, in the South Shetlands. So named by the Poles in 1981 because members of PolAE 1979-80 spent the day of Jan. 6, 1980 (i.e., Christmas Day) at this cove.

Three Lakes Valley. 60°42' S, 45°37' W. A low valley containing 3 freshwater lakes (from N to S: Pumphouse Lake, Knob Lake, and Heywood Lake), it extends N from Marble Knolls, in the vicinity of Elephant Flats, to Stygian Cove, on Signy Island, in the South Orkneys. Surveyed and named descriptively by FIDS in 1947. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Three Little Pigs. 65°14' S, 64°17' W. Three small islands, with offlying rocks, 0.5 km NW of Winter Island, in the Argentine Islands, off the Graham Coast, on the W coast of Graham Land. Charted in 1935 by BGLE 1934-37, and named by them as The Three Little Pigs. The definite article was dropped by UK-APC on Sept. 8, 1953, and the feature appears as Three Little Pigs in the 1955 British gazetteer, and on a 1960 British chart. US-ACAN accepted the shortened version in 1956. It appears on a 1953 Argentine chart as Isla Tres Chanchitos, but on a 1958 Argentine chart as Islas Tres Chanchitos (a "chanchito" is a little pig), and that was the name accepted by the Argentine gazetteer of 1970. The group appears on a 1962 Chilean chart as Grupo de los Tres Chanchitos, but the Chilean gazetteer of 1974 accepted the name Isla Tres Chanchitos.

Three Man Peak *see* **Ali Shan**

Three Musketeers Hill. 62°04' S, 58°28' W. A hill, rising to 300 m, with 3 rocky cliffs (Kowalski Clif, Kumoch Cliff, and Zubek Cliff), in Domeyko Glacier, at Mackellar Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

Three Nunataks. 80°04' S, 154°50' E. Three mostly ice-covered nunataks, one of which has an altitude of 2190 m above sea level, 3 km (the Australians say 6 km) SW of Haven Mountain, at the NW edge of the Britannia Range. Discovered by the Darwin Glacier Party of BCTAE 1956-58, and named descriptively by them. NZ-APC accepted the name, and US-ACAN followed suit in 1962, as did ANCA on May 18, 1971.

The Three Pigs. Icy rock towers, at False Cape Renard. Popular with mountain climbers.

Three Pup Island *see* **Pup Rock**

Three Sails. 80°27' S, 80°42' W. Three small, isolated nunataks in a row, 10 km E of Redpath Peaks, at the S extremity of the Heritage Range, in the Ellsworth Mountains. Named descriptively by the University of Minnesota Geological Party here in 1963-64. US-ACAN accepted the name in 1966.

Three Sisters. 71°27' S, 68°27' W. Three peaks at the W end of the Kuiper Scarp, about 11 km SSW of Fossil Bluff, Alexander Island. Used by BAS pilots as a readily identifiable calling point on the approach to the skiway near the field station. Named by UK-APC on May 11, 2005.

Punta Three Sisters *see* **Three Sisters Point**

Three Sisters Cone *see* **Three Sisters Cones**

Three Sisters Cones. 77°34' S, 166°58' E. Three aligned cones at a height of about 1800 m, on the lower SW slopes of Mount Erebus, Ross Island. Named by BAE 1910-13. US-ACAN accepted the name in 1972. NZ-APC seems to call the feature Three Sisters Cone (i.e., in the singular).

Three Sisters Point. 62°05' S, 57°55' W. Marked by 3 conspicuous dark boulders, 6 m high, it forms the W side of the entrance to Sherratt Bay, NE of Mersey Spit, and 2.5 km NNE of Penguin Island, on the SE coast of King George Island, in the South Shetlands. Charted and named descriptively by the personnel on the *Discovery II* in 1937, and it appears on their 1938 chart. It was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1949 Argentine chart as Punta Three Sisters, but on a 1953 Argentine chart translated as Punta Tres Hermanas. That was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer. Last plotted by the British, in late 2008.

Nunatak Three Slice *see* **Three Slice Nunatak**

Three Slice Island *see* **Three Slice Nunatak**

Three-Slice Nunatak. 68°02' S, 64°57' W. A conspicuous nunatak, rising to about 500 m, and surmounting the low NE extremity of Joerg Peninsula, just N of Mobiloil Inlet, on the Bowman Coast, on the E coast of the Antarctic Peninsula. This distinctive landmark, in the form of a serrated ridge 2.5 km long, is snow-covered except for 3 almost vertical rock faces which suggest its name. Discovered aerially and from the ground in 1940 by personnel from East Base during USAS 1939-41, and named by them. It appears on a 1943 U.S. Hydrographic Office chart, and, for some reason, US-ACAN accepted the name Three Slice Island in 1947 (this was corrected by the time of the 1956 U.S. gazetteer). On a 1947 Chilean chart it appears as Isla Williams Rebolledo. It was re-surveyed by Fids from Base E in Dec. 1947, and appears on Dougie Mason's 1950 FIDS chart as Three-Slice Nunatak. It appears on a British chart of 1952, and was the name accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer. On an Argentine chart of 1957 it appears as Nunatak Three Slice, and that name was accepted by the 1970 Argentine gazetteer. On Ray Adie's 1957 map it appears as 3-Slice Nunatak. On a Chilean chart of 1962 it appears fully translated as Nunatak Tres Tajadas, but the 1974 Chilean gazetteer pluralized it as Nunataks Tres Tajadas. However, today, it seems they have re-singularized the feature.

Threshold Nunatak. 83°46' S, 166°06' E. An isolated nunatak, 8 km NE of Portal Rock, in the Queen Alexandra Range. Named by John Gunner of the Ohio State University Geological Expedition of 1969-70, in association with Portal Rock, and also because it reflects the location of this nunatak at the mouth of Tillite Glacier. Mr. Gunner was landed here by helicopter to collect a rock sample. US-ACAN accepted the name in 1972.

Thrinaxodon Col. 85°12' S, 174°19' W. A rock col, 3 km SE of Rougier Hill, along the ridge that trends southward from that hill, in the Cumulus Hills of the Queen Maud Mountains. Named by David H. Elliot of the Ohio State

University Institute of Polar Studies. Many samples of the fossil Thrinaxodon (a mammal-like creature) were found here. US-ACAN accepted the name in 1971.

[1]**The *Thule***. Lars Christensen's ship, the *Aquila*, which had whaled out of San Pedro, Calif., was bought by the Thule Whaling Company of Stabekk, Christiania (manager Hans Fredricksen, also of the Rethval Whaling Company), and renamed *Thule*. She was one of the first factory whaling ships to flense whales at sea, operating in the South Orkneys in 1912-13 and 1913-14. Skipper was H.G. Melsom, and manager was Hans Fredriksen. The *Paal* was her catcher.

[2]**The *Thule***. Tanker which accompanied the *Balaena* into Antarctic waters from the 1947-48 season until she was sold to the Japanese in Aug. 1960. She had a canning plant aboard.

Rocas Thule *see* **Thule Islands**

Thule Bluff. 68°31' S, 78°33' E. A prominent rocky bluff, the easternmost outcrop in the Vestfold Hills. Surrounded by ice and snow, it is the last outcrop as one travels up onto the plateau. Named by ANCA, in reference to Ultima Thule.

Thule Islands. 60°42' S, 45°37' W. A group of 3 small islands and offlying rocks, running N-S, 0.4 km SW of Balin Point, in the NW part of Borge Bay, Signy Island, in the South Orkneys. Charted by Petter Sørlle in 1912-13, the name at that time seems to have applied only to the eastermost of the islands in this group. That definition persisted into a 1916 British chart. A 1930 British chart shows Thule Rock, as applied to one of the larger rocks in the easternmost part of the group. Either way, the feature was named for the *Thule*. The Discovery Investigations team surveyed the group in 1933, and on their chart they appear wrongly as being joined to Signy Island. The feature appears on a 1945 Argentine chart as Rocas Thule. Following a survey conducted by FIDS in 1947, UK-APC accepted the name Thule Islets, on March 31, 1955, and US-ACAN followed suit in 1956. However, on July 7, 1959, UK-APC redefined the feature as Thule Islands, and US-ACAN followed suit. They appear on an Argentine chart of 1960 as Grupo Tule del Sur (i.e., "the southern Thule group"), which sort of defeats the intent of the original naming, but that was the name accepted by the Argentine gazetteer of 1970.

Thule Islets *see* **Thule Islands**

Thule Rock(s) *see* **Thule Islands**

The *Thuleland*. Ship that took down the Indian Antarctic expeditions of 1985-86, 1986-87, 1987-88, 1988-89, 1989-90, 1990-91, 1991-92, and 1992-93. The skipper for all seasons was Lennart Hedlund.

The *Thulla*. Name also seen as *Tulla*. A 545-ton Norwegian steamship, an experimental combined factory and catcher, built in 1911 by Framnaes Mek., for Chris Christensen's Kosmos Company. In 1911-12 she was in the South Sandwich Islands, the South Orkneys and the South Shetlands, looking for suitable anchorages for whaling ships. Ole Jørgensen was skipper. She was supported by the transport vessel *Havfruen*, which, on Dec. 31, 1911, was sunk by ice.

Thulla Cove. 60°42' S, 45°39' W. A cove, S of Thulla Point, on the W side of Signy Island, in the South Orkneys. Named by UK-APC on May 13, 1991, in association with the point. US-ACAN accepted the name.

Thulla Point. 60°43' S, 45°40' W. An ice-free point, 1.5 km NE of Jebsen Point, and SW of Foca Point, on the W coast of Signy Island, in the South Orkneys. Roughly surveyed in 1933 by personnel on the *Discovery II*, and, in more detail in 1947 by FIDS. Named by UK-APC on March 31, 1955, for the *Thulla*. US-ACAN accepted the name in 1956.

Thulla Ridge. 60°42' S, 45°38' W. A substantial ridge SE of Tranquil Lake, on Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 an 1950, and photographed aerially in 1968 by the Royal Navy. Named by UK-APC on Sept. 29, 2004, in association with Thulla Cove and Thulla Point.

Thuma Peak. 69°40' S, 72°03' W. A mainly ice-free peak, rising to about 550 m, 3 km NW of Overton Peak, in the Desko Mountains, at the SE end of Rothschild Island, 5 km W of the NW part of Alexander Island. Named by US-ACAN for Capt. Jack S. Thuma (b. May 16, 1921, Mich. d. April 16, 1991, St. Petersburg, Fla.; his wife, Marguerite, had died only 3 weeks earlier), of the U.S. Coast Guard, skipper of the *Westwind* during OpDF 68 (i.e., 1967-68). UK-APC accepted the name on June 11, 1980. Originally plotted in 69°39' S, 72°10' W, it has since been replotted.

Thumb *see* **Little Thumb**

Islote Thumb *see* **Thumb Rock**

Thumb Island *see* **Thumb Rock**

Thumb Islet *see* **Thumb Rock**

Thumb Point. 75°58' S, 160°28' E. A rock spur extending from the NW side of The Mitten, in the Prince Albert Mountains of Victoria Land. So named by the Southern Party of NZGSAE 1962-63 because it looks like the thumb on a mitten. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Thumb Promontory. 84°48' S, 116°18' W. A prominent rock spur on the N side of Lackey Ridge, in the Ohio Range. Named by an NZARP geological field party to the Ohio Range in 1979-80, and formally proposed by Margaret Bradshaw, here in 1983-84. From certain angles the upper part of this feature resembles an upturned thumb. NZ-APC accepted the name, and US-ACAN followed suit.

Thumb Rock. 65°15' S, 64°16' W. A rock in the NW entrance of Stella Creek, between Winter Island and the NW end of Galíndez Island, in the Argentine Islands, in the Wilhelm Archipelago, off the W coast of Graham Land. Charted in 1935 by BGLE 1934-37, and named descriptively by them. It appears as such on a British chart of 1947, but on a 1948 British chart it appears as Thumb Islet, and that latter name was the one accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. However, on July 7, 1959, UK-APC redefined it as Thumb Rock, and it appears as such on British charts of 1960 and 1967. US-ACAN accepted the new name later in 1959. It appears on a 1953 Argentine chart as Isla Pulgar (which means the same thing), but when it came to the 1970 Argentine gazetteer, someone had a lapse of concentration, and put down Punta Pulgar. It appears on a 1962 Chilean chart as Islote Thumb, and that was the name accepted by the 1974 Chilean gazetteer. In 1964-65 it was re-charted by an RN Hydrographic Survey unit on the *Protector*.

Thunder Glacier. 64°50' S, 63°24' W. A through glacier, 6 km long, flowing across Wiencke Island from E to W, from Gerlache Strait to Peltier Channel, between Sierra DuFief and the Wall Range, in the Palmer Archipelago. Probably discovered by BelgAE 1897-99. Surveyed and charted in Sept. and Oct. 1944 by the personnel of Port Lockroy Station, during Operation Tabarin, and so named by them because a thunderous avalanche nearly covered them here. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1950. It appears on a British chart of 1950, and also in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Segunda Garganta (i.e., "second pass"), named in association with Channel Glacier (q.v.). The feature was re-surveyed in April 1955, by Fids on the *Norsel* and Fids from Base N.

Mount Thundergut. 77°39' S, 161°24' E. A rock peak, 5 km NE of Saint Pauls Mountain, in the Asgard Range of Victoria Land. Named descriptively by NZ-APC. When seen from the E, it presents a very steep domed face with a vertical gut subject to rockfall. US-ACAN accepted the name in 1976.

Mount Thurman. 84°42' S, 170°51' W. Rising to 780 m, it is the highest summit in the Bravo Hills, along the edge of the Ross Ice Shelf, between the mouths of Gough Glacier and Le Couteur Glacier. Named by US-ACAN in 1966, for Cdr. Robert K. Thurman, USN, assistant chief of staff for operations, U.S. Naval Support Force, Antarctica, 1963.

Thuronyi Bluff. 66°48' S, 64°45' W. A prominent bluff at the head of Mill Inlet, between Balch Glacier and Gould Glacier, on the Foyn Coast, on the E coast of Graham Land. Photographed aerially by RARE 1947-48, and surveyed by FIDS in 1947. Named by US-ACAN for Geza T. Thuronyi, Antarctic bibliographer at the Library of Congress, 1967-90. He was a member of US-ACAN from 1987 to 1990. UK-APC accepted the name on Feb. 12, 1988.

Isla Thurston *see* **Thurston Island**

Mount Thurston *see* **Johansen Peak**

Thurston, Michael Harbour "Mike." b. 1937, London, son of Cyril Charles D. Thurston and his wife Daisy Olive Harbour. He joined FIDS in 1959, as a zoologist, and wintered-over at Halley Bay Station in 1960 and 1961. A specialist in Amphipoda, he had a species of carabid beetle, Thurstonella, named after him. He was with the Southampton Oceanographic Centre, and the Institute of Oceanographic Sciences, at Wormley.

Thurston Glacier. 73°18' S, 125°18' W. About

24 km long, it flows from the SE slopes of Mount Siple, on Siple Island. It trends eastward, and then ENE to reach the N shore of the island. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Thomas R. Thurston, USARP meteorologist at Byrd Station in 1965.

Thurston Island. 72°20' S, 99°00' W. A largely ice-covered, glacially dissected island, about 215 km long and 90 km wide, between the Amundsen Sea and the Bellingshausen Sea, off the NW end of Ellsworth Land, it is separated from the mainland by Peacock Sound, which is occupied by the W portion of the Abbot Ice Shelf. Discovered aerially by George Dufek on Feb. 27, 1940, on a flight from the *Bear*, during USAS 1939-41. Charted as a peninsula, and named by Byrd as Thurston Peninsula, for W. Harris Thurston, New York textile manufacturer and a supporter. The name Eights Peninsula was also given to it, before it was re-defined in Feb. 1960. It was only then, during the USN Bellingshausen Sea Expedition, that Peacock Sound was found to run parallel to the entire S coast of the feature, thus making Thurston Island an island, rather than a peninsula. US-ACAN accepted the name in 1961.

Thurston Peninsula *see* **Thurston Island**

Thwaites Glacier. 75°30' S, 106°45' W. A broad glacier flowing into the Amundsen Sea, about 50 km E of Mount Murphy, at the Walgreen Coast of Marie Byrd Land. Though imperfectly delineated, the glacier has tremendous flow, and in Jan. 1966 had formed a large floating glacier tongue (60 km long; *see* **Thwaites Glacier Tongue**) and an extensive grounded iceberg tongue (110 km long; *see* **Thwaites Iceberg Tongue**). Together, these features extend into the Amundsen Sea more than 160 km, and inhibit E-W navigation. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in association with Thwaites Glacier Tongue.

Thwaites Glacier Tongue. 75°00' S, 106°50' W. About 60 km long and 30 km wide, it is the seaward extension of Thwaites Glacier, in the Amundsen Sea. It enters the sea about 50 km E of Mount Murphy, in Marie Byrd Land. Delineated from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Fredrik T. Thwaites, glacial geologist at the University of Wisconsin.

Thwaites Iceberg Tongue. 74°00' S, 108°30' W. A very large and rather compact iceberg tongue, about 110 km long and 30 km wide, about 30 km NE of Bear Peninsula, aground in the Amundsen Sea, off the coast of Marie Byrd Land. In Jan. 1966, its S end was only 5 km N of Thwaites Glacier Tongue, from which it had broken off. Delineated from air photos taken in Jan. 1947, during OpHJ 1946-47, and from USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, in association with the glacier tongue and the glacier.

Thyasira Hill. 64°22' S, 57°00' W. A distinctive hill rising to about 60 m above sea level, and standing out among a small group of hills, between 250 and 300 m S of Nordenskjöld's hut (from SwedAE 1901-04) on Spath Peninsula, on Snow Hill Island. So named by UK-APC on Dec. 11, 1995, because of the abundance of the fossil bivalve mollusk *Thyasira towensendi* found in the area. US-ACAN accepted the name in 1996.

Thyer, Norman Harold. b. Sept. 3, 1929, Gloucestershire, son of Percy Thyer and Esther Lilian Hodnett. After national service, he joined FIDS in 1950, as a meteorologist, and wintered-over at Signy Island Station in 1951 and at Base F in 1952. In 1953 the *John Biscoe* came to pick him up, to take him back to Southampton, where he arrived on June 11, 1953. On his return to England he got his degree in mathematics, and then went to Seattle where he earned his PhD in meteorology. It was in the great Northwest that he began mountain climbing, and over the next several decades would climb all over the world, including the Himalayas. In 1956 he moved to Canada — to Vancouver, then to Montreal, and finally to Nelson, where he settled. He married Anna. He was with the division of surveying engineering, at the University of Calgary, and worked in Nepal. He died on July 20, 2006.

Thyer Glacier. 67°43' S, 48°45' E. A tributary glacier flowing NW along the S side of the Raggatt Mountains, between the Nye Mountains and the Scott Mountains, in Enderby Land, to enter Rayner Glacier near Casey Bay. Mapped by Australian cartographers from air photos taken by the RAAF Antarctic Flight of 1956. Named by ANCA on Aug. 11, 1958, for Robert Francis Thyer (1908-1992), chief geophysicist, Bureau of Mineral Resources, Australian Department of National Development. US-ACAN accepted the name in 1961. Originally plotted in 67°45' S, 49°00' E, it has since been replotted.

Thyssenhöhe. 79°34' S, 45°42' W. A rather solitary ice dome, rising to about 886 m, on Berkner Island, SW of Roberts Inlet, on the E side of the Ronne Ice Shelf. Named by the Germans, for Franz Thyssen, German geophysicist. Also known as South Dome. *See also* **Reinwarthhöhe**.

The *Tiama*. NZ yacht, built between 1991 and 1998, skippered by Dutchman and longtime New Zealander Henk Haazen and his wife Bunny (who worked for Greenpeace), that visited the Antarctic Peninsula and the South Shetlands in Jan. and Feb. 1999, as the vessel for the 6 mountain climbers who formed the Young Australian Antarctic Expedition (led by Kieren Lawton).

Tian Hu. 69°23' S, 76°20' E. A lake in the Larsemann Hills. Named by the Chinese.

Tiane Hu. 62°11' S, 58°55' W. A lake on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Tiane Ling. 69°22' S, 76°22' E. A hill in the Larsemann Hills. Named by the Chinese.

Tianlong Bandao *see* **Donovan Promontory**

Tiantang Wan. 69°25' S, 76°12' E. A cove in the Larsemann Hills. Named by the Chinese.

Rocas Tiber *see* **Tiber Rocks**

Tiber Rocks. 68°23' S, 67°00' W. A group of two rocks near the head of Rymill Bay, close W of the mouth of Romulus Glacier, 5 km NW of the highest summit of Black Thumb, off the Fallières Coast, on the W coast of Graham Land. Discovered and roughly surveyed in 1936 by BGLE 1934-37. The larger of the two rocks was given the name Chasm Island, by RARE 1947-48, but that name died. Re-surveyed by Fids from Base E in 1948-49, and named Tiber Rocks by them in association with Romulus Glacier and Remus Glacier. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit that year. The Argentines call this feature Rocas Tiber.

Ticha Peak. 62°37' S, 60°11' W. Rising to 790 m in Bowles Ridge, next E of Omurtag Pass, and 780 m ENE of the summit of Mount Bowles, 2.3 km SW of Melnik Peak, 1.7 km W of Asparuh Peak, and 2.6 km NW of Kuzman Knoll, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the Ticha River, in northeastern Bulgaria.

Promontorio Tickell *see* **Tickell Head**

Tickell, William Lancelot Noyes "Lance." b. Oct. 21, 1930, Coventry. After National Service in the Army (including a stint with the Paras), he graduated in 1954 from the University of Wales at Bangor, in botany, chemistry, and zoology. Attracted by the prospect of doing some interesting mountain climbing, and of studying seabirds in the field, he answered an ad for the FIDS, in a weekly news magazine, and wintered-over as meteorologist at Signy Island Station in 1955, and was the leader there for the winter of 1956. In 1960 he was invited by Bill Sladen to teach at Johns Hopkins University, in Baltimore, and also led expeditions to Bird Island, South Georgia, 1960-61, 1961-62, and 1962-64 (including a wintering-over in 1963), becoming one of the world's authorities on albatrosses. In 1962 he married Willow Anne Phelps. He has written his autobiography, *Signy to South Georgia: A Naturalist on the Edge of Antarctica, 1954-1964*.

Tickell Head. 60°32' S, 45°48' W. A headland forming the E entrance point of Bridger Bay, on the NW coast of Coronation Island, in the South Orkneys. Discovered in Dec. 1821 by Powell and Palmer. Surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart. Surveyed by Fids from Signy Island Station between 1956 and 1958, and named by them for Lance Tickell (q.v.), who took part in the survey, and made the first ascent of Mount Nivea. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1964. The Argentines call it Promontorio Tickell.

Tickhill, Terry Lee. b. 1950. American sophomore, a chemistry major at Ohio State, who, in 1969-70, went to Antarctica as cook and field assistant with Lois Jones' all-women party. She was one of the first 6 women ever at the South Pole. She later became an aquatic ecologist with the U.S. Fish and Wildlife Service, and lived in Colorado, as Terry Lee Tickhill Terrell.

Canal Tickle *see* **Tickle Channel**

Paso Tickle *see* **Tickle Channel**

Tickle Channel. 67°06' S, 67°43' W. A narrow channel, 8 km long, and between 1.5 and 5 km wide, in the S part of Hanusse Bay, this marine channel extends N-S from from Landauer Point (at Hanusse Bay) to The Gullet, and separates Hansen Island from the E extremity of Adelaide Island. Discovered aerially on Feb. 25, 1936, by BGLE 1934-37. Surveyed on the ground by Fids from Base E in Sept. 1948, and named by them. In Newfoundland and Labrador, a tickle is a narrow water passage between two islands. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a 1961 British chart. It appears on a Chilean chart of 1963 as Paso Tickle. The Argentines call it Canal Tickle.

Ticoca Havna *see* **Port Jebsen**

Tidblom, Charles. His name is also seen spelled Tidblón, Tedblón, and (most often) Timblón, but it was always Tidblom (pronounced "tidbloom"). b. 1785, Stockholm, as Carl Oliver Tidblom. He went to sea, came to London, became an Englishman, changed his name to Charles, and was living on Jacob Street, Bermondsey, when, on May 28, 1815, at the nearby church, St. Mary Magdalene, he married local girl Hannah Paine. Their first child, Hannah, was born there in 1817, and then the family moved to the Ratcliff Highway, in Stepney. In the fall of 1818, leaving his newly-pregnant wife in London, Charles set sail for Buenos Aires, where, on Dec. 2, 1818, he and merchant Adam Guy (and a third party) took a charter on the merchant brig *San Juan Nepomuceno* (which was, at that moment sealing in Patagonia, under the command of Don Pedro Nelson). When the *San Juan Nepomuceno* returned to Buenos Aires, Tidblom took command of her on May 2, 1819, and, on Aug. 25 of that year skippered the vessel to Patagonia and on to the South Shetlands for the 1819-20 sealing season (the first sealing season in those newly-discovered waters). His son Charles had been born in Stepney earlier that year, but had died five days after his first birthday, before Tidblom could make it back to the Ratcliff Highway, where his next child, Sophia Louisa, was born in 1822. Tidblom's investments having paid off in South America, he took his family to live in Buenos Aires, and their next three children, George William, Eliza, and Charles Samuel, were born there in 1823, 1825, and 1827 respectively. In 1827 Don Carlos was commanding the privateer *Sin Par* during the war for Argentine independence. He is described as short, olive-skinned, and with fair hair and blue eyes. He became a naturalized Argentine, and died on July 4, 1830, aged 45, being buried in the British Protestant church of St. John's. George William became a merchant, married, and ultimately moved to Callao, Peru, taking his mother with him. Charles Samuel became a broker in Arenales, married, and had, among others, Ronald Tidblom, who would become famous in Argentine agriculture. Sophia Louisa and young Hannah also married. George and his wife and mother were back in Buenos Aires in 1871, as was Charles Samuel, and all of them died in the yellow fever epidemic of that year, and are buried in St. John's, along with Don Carlos.

Mount Tidd. 81°17' S, 85°13' W. Also called Mount Pirrit. A prominent rock peak, the highest summit in the Pirrit Hills. It was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 10, 1958. Named by US-ACAN in 1964, for Lt. Paul Tidd, USNR, a helicopter pilot, who took over from Finn Ronne as officer in charge of Ellsworth Station on Jan. 16, 1958.

Tierney Creek. 68°38' S, 78°18' E. A seasonal feature, 38 m above sea level, flowing for about 5 months each year between Chelnok Lake and Krok Lake, in the Vestfold Hills. Named by ANCA on July 26, 1983, for Trevor Tierney, who was the first to describe the system represented by this creek, wherein such seasonal creeks and lakes, when they are not flowing, remain in basins separated by sections of dry river bed or ice-filled channels. For more on Dr. Tierney, *see* **Tierney Hill** (below).

Tierney Hill. 68°32' S, 78°05' E. A prominent hill, rising to 91 m, and surrounded by hills 40-60 m high, in the Vestfold Hills. Named by ANCA on Sept. 26, 1978, for Trevor J. Tierney, medical officer with the Antarctic Division for 5 years, who helped to establish the survey network as part of the Davis Station airstrip survey. He was the medical officer for the first Enderby Land exercise, and wintered-over at Davis in 1973. For more on Dr. Tierney, *see* **Tierney Creek** (above).

Tierney Peninsula. 72°20' S, 95°45' W. About 22 km long, and ice-covered, between Savage Glacier and Morgan Inlet, on the E end of Thurston Island. Discovered on helicopter flights from the *Burton Island* and the *Glacier* during the USN Bellingshausen Sea Expedition of Feb. 1960. Named by US-ACAN in 1960, for James Q. Tierney (b. 1924, Md.), oceanographer on the *Burton Island* that season, i.e., 1959-60.

Tierney River. 68°36' S, 78°22' E. A seasonal river in the Vestfold Hills, it flows for about 5 months each year, from November to the middle of May, between Krok Lake and Lake Druzhby. When it is not running, lakes remain in basins separated by sections of dry river bed or ice-filled channels. Named by ANCA, for Trevor Tierney (*see* **Tierney Hill**).

Tierra de O'Higgins *see* **O'Higgins Land**

Islotes Tierra Firma *see* **Terra Firma Islands**

Tierra San Martín *see* **San Martín Land**

Tiffany Automatic Weather Station. 77°54' S, 166°12' E. American AWS installed on White Island, on the Ross Ice Shelf, at an elevation of 25 m, on Jan. 23, 1984, and named for a friend of Dr. Charles Stearns, the leader of the AWS project. It operated from Jan. 24, 1984 to Jan. 23, 1986, when it was removed.

The *Tiger*. Norwegian whale catcher (gunner: Herman Berntsen, of Cape Town), belonging to Thor Dahl. She was in Antarctic waters in 1961-62, catching for the *Thorshavet* during that factory's final Antarctic season. She took 8 blues, 108 fins, 2 seis, and 48 sperms.

Tiger Hill. 73°29' S, 167°14' E. In the SW area of Spatulate Ridge, it has vertical walls toward the SW and NE, sloping down toward Apostrophe Island toward the SE, in Lady Newnes Bay, Victoria Land. Discovered by ItAE 1996-97. Named by the Italians on July 17, 1997, for the way the rock is made up of black and white lines.

Tiger Island. 76°47' S, 162°28' E. An island, 6 km N of Lion Island, on the N side of Granite Harbor, between the lowest reaches of Benson Glacier on the W and an overflow from the Evans Piedmont Glacier on the E, in Victoria Land. The NZ Northern Survey Party of BCTAE established a survey station on its highest point on Oct. 20, 1957, and named it in association with nearby Lion Island. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Tiger Nunatak. 81°21' S, 152°45' E. Rising to about 1600 m in the Lonewolf Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for a dog who worked in the area in 1959-60 (*see* **Lonewolf Nunataks**).

Tiger Peak. 70°52' S, 165°58' E. Rising to 1490 m above the cirque wall near the head of Ludvig Glacier, at the W end of a chain of peaks extending NE-SW, about 16 km SE of Mount Elliot, in the central Anare Mountains. It is distinguished by stripes of different colored rock, and, because of that, was so named by the ANARE party which explored this area from the *Thala Dan* in 1962. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Tigerstripe Ridge. 76°42' S, 161°30' E. The N ridge of Flagship Mountain, notable for the alternating stripes of rock and snow which extend over much of its length, in the Convoy Range of Victoria Land. Named descriptively by a 1988-89 NZARP field party here. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Tigert, Emerald Lee. b. Sept. 2, 1910, Omaha, Tex., son of George Washington Tigert and his wife Cathryn Virginia "Cattie" Justiss. Oiler and then engineer on the *Jacob Ruppert*, during ByrdAE 1933-35. In 1935 he married Esther Clark in NZ, and had to have his uncle Monroe, then a cop in Philadelphia, vouch for him. He lived most of his life in Morris Co., Tex., as a carpenter and welder. He married again, to Nisida I. "Jackie" Hanes, and 6 months after she died he married again, in Morris County, on Dec. 1, 1978, to Iva M. Daniel. He died on Dec. 26, 1992, at Red Bud Nursing Home, in Naples, Tex.

Tighe Rock. 74°26' S, 100°04' W. A rock outcropping along the coastal slope at the W margin of the Hudson Mountains, 24 km NW of Mount Moses. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Robert F. Tighe, electrical engineer at Byrd Station, 1964-65.

Islote Tigre. 67°11' S, 67°42' W. A little island, just off the S coast of Sorge Island, off the Loubet Coast, on the W coast of Graham Land. Named by the Argentines for the *Tigre*, the Ar-

gentine whaling ship that took part in the war against Brazil in 1827.

The *Tigre-Mou*. French yacht (name means "the Tiger Moth"), skippered by Hervé Le Goff, which visited the South Shetlands and the Antarctic Peninsula in 1996-97. The following season she was around southern waters, but only as far south as South Georgia.

Ozero Tihoe *see* **Lake Tikhoje**

Gora Tihova. 73°09' S, 63°49' E. A peak on the S side of the ridge the Russians call Hrebet Astrofizikov, W of Mount Dummett, in the southern Prince Charles Mountains. Named by the Russians.

Lake Tikhoje. 66°19' S, 100°58' E. A lake in the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ozero Tihoe. ANCA translated it.

The *Tijuca*. An 846-ton 3-masted iron corvette, built in 1866 by E. Gouin, of Nantes, in France, and converted into a barque in 1907, and bought by the Compañía Argentina de Pesca. For 35 years she carried provisions and mail to the whaling station at Grytviken (in South Georgia), and carried whale oil back to Buenos Aires, and was sold in 1942. In 1946 she ran aground near the Rio Grande, in Brazil, and had to be written off. There is a jetty at Grytviken named after her.

Tilav Cirque. 71°19' S, 160°57' E. On the NW side of McLean Buttress, in The Fortress, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for Serap Z. Tilav, USAP field team member in support of the Antarctic Muon and Neutrino Detector Array (AMANDA), and cosmic ray studies at Pole Station for 9 seasons between 1991 and 2005. NZ-APC accepted the name on Sept. 12, 2005.

Tilberg Islands *see* **Tillberg Peak**

Tilbrook, Peter John. Known by his Antarctic colleagues as "Tilly." b. Dec. 12, 1938, Romford, Essex, son of William John Tilbrook and his wife May Pegrum. He joined Fids in 1961 (FIDS became BAS in 1962), as a zoologist, and wintered-over at Signy Island Station as base leader in 1962 and 1963. In 1966, in London, he married Frances C. Brander, and they lived in Ely, Cambridgeshire. He was later head of the terrestrial biology section at BAS.

Tilbrook Hill. 60°45' S, 45°36' W. Rising to about 70 m, between Hillier Moss and Caloplaca Cove, in the SE part of Signy Island, in the South Orkneys. Named by UK-APC on May 13, 1991, for Peter Tilbrook (q.v.), who initiated two long-term research sites near this hill. US-ACAN accepted the name.

Tile Ridge. 62°30' S, 59°51' W. A partly ice-free ridge, rising to 240 m in Dryanovo Heights, 2.4 km SE of Lloyd Hill, 2.5 km N of Triangle Point, and 2.3 km W of Malamir Knoll, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for Tile (Tylis), the ancient capital of the Celtic kingdom of Thrace, 279-213 BC, and ancestor of the present-day Bulgarian settlement of Tulovo, near the city of Stara Zagora.

Nunataks Tillberg *see* **Tillberg Peak**

Tillberg Islands *see* **Tillberg Peak**

Tillberg Nunataks *see* **Tillberg Peak**

Tillberg Peak. 64°46' S, 60°54' W. A largely ice-free peak, a useful landmark, rising to 610 m (the British say 900 m), on the ridge running E from Foster Plateau toward Sentinel Nunatak, on the S side of Drygalski Glacier, on the Nordenskjöld Coast, on the E coast of Graham Land. A feature was discovered by SwedAE 1901-04 in about 69°49' S, 60°51' W, between Andersson Peak and Sentinel Nunatak, roughly mapped by them as a group of small islands in the Larsen Ice Shelf, and named by Nordenskjöld as Tillberg Öarna (i.e., "the Tillberg Islands"), for Judge Knut Henning Robert Tillberg (1860-1940), a supporter. On a 1908 Argentine map the feature appears misspelled as Isla Fillberg, and on Wilkins' chart of 1929 misspelled as Tilberg Islands. They appear as the Tillberg Islands on British charts of 1934 and 1940, plotted in 64°47' S, 65°50' W. On a 1946 Argentine chart it appears as Isla Tilberg, on a 1947 Chilean chart as Islas Tillberg, and on a 1953 Argentine chart as Islotes Tillberg. During a survey conducted in Nov. 1947 by Fids from Base D, it was found that the feature was not a group of islands at all, but 4 rocky outcrops, and the Fids renamed them Tillberg Nunataks, which included this feature (i.e., the one today called Tillberg Nunatak), Sentinel Nunatak (which these Fids named during this survey), and two others — one in 64°49' S, 60°53' W, and another in 64°50' S, 60°52' W. UK-APC accepted that situation on Jan. 22, 1951, US-ACAN followed suit in 1952, and it appears that way in the 1955 British gazetteer. It appears as Nunataks Tillberg on a 1958 Argentine chart, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (the Chileans rejected the proposed Isla Tillberg). Fids from Base D re-surveyed the group again in 1960-61, and, found that the name Tillberg Nunataks had been applied to a feature that was not distinctive enough to warrant such a collective name. So. on Feb. 12, 1964, UK-APC dropped the name Tillberg Nunataks entirely, re-applied the name Tillberg to the present-day peak, kept the name Sentinel Nunatak, and left the other two unnamed. US-ACAN followed suit with this later in 1964.

Tillergone Slope. 76°44' S, 161°24' E. A shallow "blue ice" glacial slope, or overflow, about 2 km wide, which is a distributary of Flight Deck Névé, over subdued steps between Dotson Ridge and Flagship Mountain, in the Convoy Range of Victoria Land. Named by an NZARP field party to commemorate an incident when the steering gear of a motor toboggan broke during the 1989-90 season. At the time, this glacier was being used as access to a camp at Flagship Mountain, and the slope had to be negotiated twice without steerage. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Tilletøyane *see* **Tillett Islands**

Tillett Islands. 67°11' S, 59°27' E. The name is also spelled Tillet Islands, and called Tilletøyane by the Norwegians. A group of small, somewhat dispersed islands, the largest rising to a height of 70 m out of the sea, 8 km NE of Cape Wilkins. Discovered and named in Feb. 1936 by the personnel on the *William Scoresby*. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Mount Tilley. 69°45' S, 69°31' W. A flat-topped, ice-capped mountain, rising to about 1850 m, 11 km S of Mount Tyrrell, and 5 km inland from George VI Sound, in the E part of Alexander Island. Despite its height, it is best described as a foothill of the Douglas Range, from which it is separated by Toynbee Glacier which bounds it to the west. First photographed aerially on Feb. 1, 1936, by BGLE 1934-37. Surveyed by Fids from Base E in 1948, and named by them for Cecil Edgar Tilley (1894-1973), professor of mineralogy and petrology at Cambridge, 1931-61. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year.

Tilley Bay. 67°24' S, 60°04' E. Just E of Tilley Nunatak, on the coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Nabbvika (i.e., "peg bay"). Renamed by ANCA on April 29, 1958, in association with the nunatak. US-ACAN accepted the name in 1965.

Tilley Nunatak. 67°24' S, 60°03' E. A bold, rocky outcrop rising to 95 m, 8 km S of the Hobbs Islands, it projects from the coastal ice cliffs E of William Scoresby Bay, on the W end of the coast of Mac. Robertson Land. Discovered in Feb. 1936 by the personnel on the *William Scoresby*, and named by them for Cecil Tilley (*see* **Mount Tilley**), who studied the rock specimens brought back by the expedition. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959. The Norwegians call it Nabbodden.

Tillite Glacier. 83°51' S, 166°00' E. A small tributary glacier flowing NW from Pagoda Peak and the NW slopes of Mount Bell, to join Lennox-King Glacier N of Fairchild Peak, in the W part of the Queen Alexandra Range. So named by the Northern Party of NZGSAE 1961-62 because it contains outcrops of ancient moraine (tillite), indicative of glacial action in remote Paleozoic times. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Tillite Lake. 67°47' S, 62°52' S. A long, narrow, permanently frozen lake, on the SE side of the North Masson Range. It measures 3.4 hectares in area. Named by ANCA on Dec. 3, 1984, for the beds of tillite found here.

Tillite Spur. 85°59' S, 126°36' W. A narrow, steep-cliffed rock spur, 5 km long, descending from the southern Wisconsin Plateau, between Red Spur and Polygon Spur, and terminating at the E side of Olentangy Glacier, in the area of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. So named by John H. Mercer (*see* **Mercer Ridge**) in 1964-65, because tillite extends the length of the spur above its granitic cliffs. US-ACAN accepted the name in 1967.

Tilman, Harold William "Bill." b. Feb. 14, 1898, Wallasey, Cheshire, son of Lancashire produce broker John Hinkes Tilman and his wife Adeline Schwabe Rees. He attended the Royal Military Academy, Woolwich, was commissioned into the Artillery in 1915, and was a highly decorated young officer wounded several times in the trenches in World War I. He took up mountain climbing while farming in Kenya in the 1920s and early 1930s, and during this period began a long association with Eric Shipton (*see* **Shipton Ridge,** and **Ewer, Jack**). He left Africa by bicycle, crossing the continent from Kenya to the West Coast. In 1936, with Noel Odell (one of the last men to see Mallory alive on Everest in 1924), he climbed Nanda Devi without oxygen (the highest point ever reached by man to that point), and in 1938 led the British expedition to Everest. He fought at Dunkirk and in North Africa during World War II, helped the partisans in Albania, and was again much decorated. He and Peter Lloyd got to a record 27,200 feet on Everest in 1950, without oxygen, before being driven down by storms, and the following year he became a British consul in Burma. These are only the tip of the iceberg of his adventures. He taught himself to sail, and in 1954 bought the *Mischief* (q.v.), and sailed her all over the world, including to the South Shetlands in 1966-67. When the *Mischief* foundered in the Arctic, he replaced her with the *Sea Breeze*, which was wrecked in 1972. In 1973 he acquired his final cutter, the *Baroque*. He never married. On Nov. 1, 1977 he and some others left Rio in a steel-hulled tug, the *En Avant*, skippered by old *Baroque* shipmate Simon George Richardson, bound for the Falklands and from there on to Smith Island, in the South Shetlands, to climb mountains. They were never seen again, and his loss at sea was confirmed on April 15, 1979. He wrote 15 books about his travels, and has been biographized.

Tilman Ridge. 76°40' S, 159°35' E. A ridge forming the NW arm of the Allan Hills, in Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, who named it for Bill Tilman, in association with Shipton Ridge and Odell Glacier (both also named after famous mountain climbers). NZ-APC accepted the name, and US-ACAN followed suit in 1965, as did ANCA on Aug. 10, 1966.

Tilt Rock. 70°27' S, 68°44' W. An isolated rock peak, rising to 670 m (the British say about 550 m), 3 km inland from the ice shelf of George VI Sound, and 3 km NE of Block Mountain, on the S side of Transition Glacier, in eastern Alexander Island. First photographed aerially by Ellsworth, on Nov. 23, 1935, and mapped from these photos by U.S. cartographer W.L.G. Joerg, in 1936. Further photographed aerially, and roughly surveyed from the ground, in Oct. 1936, by BGLE 1934-37, and named by them descriptively as Pyramid Point. It appears as such on Stephenson's 1940 map of the expedition. Fids from Base E re-visited it in Nov. 1948, and in 1949 re-surveyed it, and it was so re-named by them because the dip of the rock strata gives a tilted appearance to the whole rock mass. UK-APC acepted that name on March 31, 1955, and US-ACAN followed suit in 1956.

Timber Peak. 74°10' S, 162°23' E. Rising to 3070 m, it is the high peak above Priestley Glacier, on the S side of that glacier, 3 km WNW of the summit of Mount New Zealand, in the Eisenhower Range of Victoria Land. So named by the Southern Party of NZGSAE 1962-63 because petrified sections of tree branches were found in sandstone deposits at this peak. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Cape Timberlake. 78°58' S, 161°37' E. A bold cape at the W side of the mouth of Skelton Glacier. Named by US-ACAN in 1965, for Lt. Cdr. Lewis G. Timberlake, USN, public works officer at McMurdo in 1962. NZ-APC accepted the name on Feb. 1, 1965.

Cabo Timblón *see* **Cape Timblón**

Cape Timblón. 62°42' S, 61°20' W. A conspicuous rocky cape forming the N extremity of Snow Island, in the South Shetlands. It was known to 19th-century sealers. On maps it has sometimes been confused with Cape Hooker and with President Head. Named for Charles Tidblom (sic and q.v.). It appears on a 1943 U.S. Hydrographic Office chart as Cape Timblón, and on a 1948 Argentine chart as Cabo Timblón. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit in 1965. Last plotted by the UK, in late 2008.

Timblón, Carlos *see under* **Tidblom**

Time zones. All time zones come together at the South Pole, so that a clock is never wrong here. It is never really right either, so, for convenience, South Polers use New Zealand time.

Gora Timirjazeva. 71°11' S, 66°13' E. A somewhat isolated nunatak, NE of Mount Gleeson, in the Prince Charles Mountains. Named by the Russians.

Timok Cove. 62°37' S, 61°15' W. A cove, 460 m wide, indenting the N coast of Rugged Island for 330 m, off the W coast of Byers Peninsula (which is on Livingston Island), in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for the Timok River in northwestern Bulgaria.

Mount Timosthenes. 69°08' S, 65°57' W. A prominent peak, rising to 2025 m, between the head of Hariot Glacier and the N side of Airy Glacier, 5 km NW of Peregrinus Peak, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially on Sept. 28, 1940, during USAS 1939-41. Re-photographed aerially on Nov. 27, 1947, by RARE 1947-48, and surveyed in Dec. 1958 by Fids from Base E. Named by UK-APC on Aug. 31, 1962, for Aristotle Timosthenes of Rhodes, navigation pioneer under the Ptolemies. US-ACAN accepted the name later that year. Note: The names of this mountain and Peregrinus Peak were exchanged in 1974, thus giving us the situation we have today, a situation that appears on the 1979 USGS sketch map of the N part of Palmer Land.

Tin. Has been found in Antarctica.

Tinbergen, Jaap "Jack." b. Dec. 19, 1934, Leyden, Holland, son of animal behaviorist Prof. Nikolass "Niko" Tinbergen and his wife Elisabeth "Lies" Rutten. He saw his father go off to a hostage camp for 2 years during the war, and in the early 1950s the family moved to Oxford, on the invitation of Sir Alister Hardy, and his father became a professor there. After Cambridge, Jack became a FIDS ionosphere physicist who wintered-over at Port Lockroy Station in 1957 and 1958. He later lived in Oxford. In 1973 his father won the Nobel Prize. Jack died on June 20, 2010.

Tindal, Ronald "Ron." b. May 9, 1936. He became a FIDS general field assistant and mountain climber on Oct. 30, 1958, and wintered-over at Base D in 1959 and 1960. From May to Sept. 1961 he was at Birmingham University, writing up his report. He wintered-over again, this time at Base E, in 1963, and was a member of the Larsen Ice Shelf Party in 1963-64. On his way home, on the *Shackleton*, that ship and the *John Biscoe* rendezvoused in rough seas, and as Tindal was transferring from one ship to the other, the ships touched each other, and Tindal's arm was crushed between them. He left FIDS in Aug. 1964, went to Scotland, and then to NZ.

Tindal Bluff. 67°04' S, 64°52' W. A rocky headland rising to about 800 m, NW of Monnier Point, between that point and the terminus of Fricker Glacier, on the SW side of Mill Inlet, on the Foyn Coast, on the E coast of Graham Land. Surveyed by BAS personnel from Base E in 1963-64, and named by them for Ron Tindal (q.v.), who was on the survey. UK-APC accepted the name on Dec. 20, 1974, and US-ACAN followed suit in 1975. It appears in the 1976 British gazetteer. The 1974 Chilean gazetteer accepted the name Cabo Froilán González, for Capitán de navío Froilán-González (*see* [2]**Macaroni Point**).

Tindegga *see* **Tindegga Ridge**

Tindegga Ridge. 72°31' S, 2°54' W. A rock ridge immediately SW of Ytstenut Peak, in the Regula Range, at the NE end of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegain cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tindegga (i.e., "the summit ridge"). US-ACAN accepted the name Tindegga Ridge in 1966.

Tindeklypa. 72°05' S, 2°22' W. A double summit separated by a deep ravine (the name in Norwegian means "the summit ravine"), 1.5 km N of Istind Peak, on the easternmost end of the Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them. US-ACAN accepted the nem, without modification, in 1966.

Tindley, Roger Charles. b. April 24, 1950, Southampton. BAS general assistant and me-

chanic who wintered-over at Fossil Bluff station in 1973 and 1974.

Tindley Peaks. 71°18' S, 67°26' W. A group of peaks rising to about 760 m between Christie Peaks and McArthur Glacier, E of Horse Bluff, in the Batterbee Mountains, on the Rymill Coast, at George VI Sound, on the W coast of Palmer Land. Surveyed from 1970 by BAS personnel from Base E and Fossil Bluff Station. Named by UK-APC on Dec. 8, 1977, for Roger Tindley. US-ACAN accepted the name. It appears on the 1979 USGS sketch map of the N part of Palmer Land, and also in the 1980 British gazetteer.

Tingey Glacier. 73°34' S, 68°25' E. A small glacier at the S side of McCue Bluff, at the S end of the Mawson Escarpment, it flows W into Lambert Glacier, about 98 km S of Barkell Platform. Photographed aerially by ANARE in 1956 and 1960. Named by ANCA on Nov. 27, 1973, for Robert J. "Bob" Tingey, geologist with the ANARE Prince Charles Mountains Survey parties of 1970, 1971, and 1972. US-ACAN accepted the name on Oct. 20, 2009.

Tingey Rocks. 69°57' S, 67°52' E. Two small rock features SW of Single Island, on the W edge of the Amery Ice Shelf. Discovered in 1971 by the ANARE Prince Charles Mountains Survey Party. Named by ANCA for Robert J. "Bob" Tingey, geologist with the party (*see* **Tingey Glacier**). US-ACAN accepted the name in 1973.

Tinglof, Iver August "Chips." b. Sept. 2, 1895, Winchester, Mass., but raised in Boston, son of carriage maker August Tinglof and his wife Christina, both Swedish immigrants. He started off as a builder of elevators in Boston, and became a cabinet maker. In 1922 he married a Canadian girl, Bertha, and they moved to Watertown, Mass. He made the hut for Byrd to winter-over alone in at Bolling Advance Weather Station during ByrdAE 1933-35. Tinglof himself sailed south on the *Jacob Ruppert* to Antarctica, and wintered-over, as a tractor mechanic, during that expedition. In Feb. 1935 he returned to NZ on the *Jacob Ruppert*. He had been sick on the trip north, and died as the result of a virus, in Dunedin, on March 4, 1935.

Tinglof Peninsula. 72°02' S, 100°06' W. An ice-covered peninsula, 16 km long, between Henry Inlet and Wagoner Inlet, on the N side of Thurston Island. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1960, for Chips Tinglof. Originally plotted in 71°59' S, 100°24' W, it has since been replotted.

Tingtao Wan. 69°26' S, 76°00' E. A cove in the Larsemann Hills. Named by the Chinese.

Isla Tinguiririca *see* **Day Island**

Tinker, Ronald Arthur "Ron." b. April 13, 1913, Christchurch, NZ, son of Australian immigrants to NZ, veterinary dentist Harry Albert Tinker and his wife Millicent Elizabeth Wood. After a variety of jobs he was working as a cab driver when World War II broke out, and he joined the Army, being sent to Egypt, where he volunteered for what became the Long Range Desert Group, operating way behind enemy lines. He was commissioned in 1942. After tremendous "Boys Own" adventures in North Africa, the Aegean, Lebanon, Albania, and Italy, he was in hospital in Italy where he met Elsie Frances Brown, a Scottish-born NZ nurse. They were married in Senigallia, on March 14, 1945. He left the Army in 1945, but re-joined in 1947, in 1949 heading a battalion of the Fijian Army, leading that Battalion into action in Malaya in 1952-53. He left the Army as a lieutenant colonel in 1962, and was team leader at Scott Base in Antarctica in the winter of 1963. He became a salesman and retired in 1980. His wife died in 1969, and he died on Feb. 16, 1982, in Christchurch.

Tinker Glacier. 74°00' S, 164°50' E. About 40 km long, it flows not from the Polar Plateau, but rather from the interflow between Aviator Glacier and Campbell Glacier, and thus drains the central part of the Southern Cross Mountains, flowing SE into Wood Bay, on the coast of Victoria Land. Named by the Northern Party of NZGSAE 1962-63, for Ron Tinker. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Tinker Glacier Tongue. 74°06' S, 165°02' E. The seaward extension of Tinker Glacier, it projects into the NW corner of Wood Bay, on the coast of Victoria Land. Named by US-ACAN in 1968, in association with the glacier.

Tinkham, Silas. He was skipper of the New Bedford whaler *Junior*, in Antarctic waters in 1848-49, and died on Nov. 27, 1850, worn out.

Tinsel Dome. 63°44' S, 58°55' W. A small, ice-covered hill rising to 700 m, SE of Bone Bay, between that bay and the Aureole Hills, on Trinity Peninsula. Surveyed and charted in July 1948 by Fids from Base D, and named descriptively by them from its appearance with the sun shining on it. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and on a 1962 British chart. Photographed aerially by FIDASE in 1956-57, and further surveyed by FIDS in 1959-60.

Tintyava Peak. 63°31' S, 58°14' W. An ice-covered peak rising to 950 m in the N foothills of the Louis Philippe Plateau, 2.28 km WSW of Mount D'Urville. 9.57 km NNW of Kukuryak Bluff, and 13.16 km ENE of Lartigo Peak, it surmounts the upper course of Sestrimo Glacier to the ESE, on Trinity Peninsula. Mapped by the Germans and British in 2006. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Tintyava in southern Bulgaria.

The *Tioga*. Norwegian factory whaling ship, built in 1890. Owned by the Corral Company (based in Chile, but a subsidiary of a company owned by Wilhelm Jebsen, out of Bergen, Norway; *see* **Sociedad Ballenera Corral**), managed by Lauritz Christiansen, and skippered by Thoralf Moe, she was in the South Orkneys in the summers of 1911-12 (she was in at Signy Island that season) and 1912-13, with her steam whalers the *Corral*, the *Samsón*, the *Germania*, the *Scott*, and the *Fyr* (and, some say, the *Dove*). She was one of the first factory ships to flense whales at sea (*see also* **The *Thule***). The ship's manager was Bernhard Jebsen. Capt. Moe led a surveying expedition of the west coast of Signy Island from this ship, and it was in this area that she was wrecked in a storm, off Jebsen Point, on Feb. 4, 1913. There was one death, the Chilean Cayetano Muñoz. The wreck was still visible in 1984.

Tioga Hill. 60°44' S, 45°39' W. A rounded summit, rising to 280 m, at the W side of the head of McLeod Glacier, ESE of Port Jebsen, it is the highest point on Signy Island, in the South Orkneys. Surveyed in 1947 by FIDS. Named by UK-APC on March 31, 1956, for the *Tioga*. US-ACAN accepted the name in 1956.

Tioga Lake. 60°42' S, 45°39' W. A small lake, NNE of Port Jebsen, and NW of Tioga Hill, on the W side of Signy Island, in the South Orkneys. BAS conducted biological freshwater studies here from 1970. Named by UK-APC on Dec. 9, 1981, in association with the hill. US-ACAN accepted the name.

Tioga Point. 60°43' S, 45°40' W. At the N end of Port Jebsen, on Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, for the *Tioga*.

Tippet Nunataks. 66°44' S, 53°15' E. Two nunataks, about 22 km SW of Mount Breckinridge, in Enderby Land. Named by ANCA for Richard K. Tippet, fixed-wing pilot with the ANARE Enderby Land Survey Party of 1976.

Península Tirado. 64°55' S, 63°04' W. A small peninsula projecting toward the NNW, and whose NW coast, which terminates in Léniz Point, forms the SW shore of Argentino Channel, on the W coast of the Antarctic Peninsula. Named by the Chileans for Capitán de navío Hugo Tirado Barrios, leader of ChilAE 1959-60. The Argentines call it Península Laprida.

Cabo Tisné *see* **Cierva Point**

Tisné Point *see* **Cierva Point**

Tisobis Valley. 80°11' S, 156°20' E. An ice-free valley just NE of Mount Henderson, in the Britannia Range. Named by a University of Waikato (NZ) party of 1978-79, led by Mike Selby, for Tisobis, the Roman name for the Dwyryd River. Several features in this area are named for place names in old Britannia. NZ-APC accepted the name, and US-ACAN followed suit.

The *Titan*. In Antarctic waters in 1980-81, as part of the German Antarctic Expedition. Her skipper was M. Boese.

Nunatak Titan *see* **Titan Nunatak**

Titan Dome. 88°30' S, 165°00' E. A large ice dome on the Polar Plateau, trending E-W and rising to over 3100 m, between the Queen Maud Mountains and the South Pole. The dome was first crossed by the sledging parties of Shackleton, Amundsen, and Scott, during their treks to (or toward) the Pole during, respectively, BAE 1907-09, NorAE 1910-12, and BAE 1910-13, and described by them as a major snow ridge. It was delineated by the SPRI-NSF-TUD airborn radio echo-sounding program, 1967-79, and named after the Cambridge University Titan

computer, which was used to process all the early radio echo-sounding data for this part of Antarctica. US-ACAN accepted the name, and ANCA followed suit on Dec. 3, 1982.

Titan Nunatak. 72°05' S, 68°44' W. A broad, rather flat-topped nunatak, rising to 460 m (the British say 490 m), N of Kirwan Inlet, between Coal Nunatak and the Tethys Nunataks, in the SE corner of Alexander Island, overlooking George VI Sound. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Seen from the NW, as Ellsworth saw it, only the summit protrudes above the coastal ice, and so it was uncertain whether this was a peak on Alexander Island or an island in George VI Sound. A survey conducted by Fids from Base E on Dec. 7, 1949, cleared this up. Named by UK-APC on March 31, 1955, for one of the satellites of the planet Saturn (Saturn Glacier is near Titan Nunatak). US-ACAN accepted the name in 1956. In those days it was plotted in 72°09' S, 68°43' W, but the coordinates were corrected from U.S. Landsat images taken in Jan. 1973. With the new coordinates, this feature appears in the 1977 British gazetteer. The Argentines call it Nunatak Titan.

Titania Peak. 71°30' S, 69°16' W. A rock peak, rising to 1250 m (the British say 1190 m), WSW of (and near the head of) Uranus Glacier, and 17.5 km WNW of Mount Umbriel, in eastern-central Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken in 1947 by RARE 1947-48. He plotted it in 71°32' S, 69°25' W. Named by UK-APC on March 2, 1961, for one of the satellites of the planet Uranus. US-ACAN accepted the name later in 1961. It has since been replotted from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, the feature appears in the 1977 UK gazetteer.

Titanium. Has been found in Antarctica, probably first by Edgeworth David.

Tito Peak. 76°36' S, 162°17' E. A prominent peak, rising to over 600 m, at the end of the ridge 3 km E of Mount Creak, in the SE extremity of the Endeavour Massif, in the Kirkwood Range. Named by NZ-APC on Nov. 4, 1999, for Ramón Tito (see the first of the ***Endeavour*** entries). Apparently, Tito raised the first NZ flag over Scott Base, on Jan. 20, 1957. US-ACAN accepted the name in 2000.

Gora Titova *see* **Gjeruldsenhøgda**

Mount Titus. 72°15' S, 169°02' E. Rising to 2840 m, it surmounts the heights at the W end of the ridge between Staircase Glacier and Kelly Glacier, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Robert W. Titus, U.S. Weather Bureau meteorologist of Reno, Nev., scientific leader at Hallett Station in 1961. NZ-APC accepted the name. Originally plotted in 72°18' S, 168°59' E, it has since been replotted.

Tiw Valley. 77°36' S, 161°47' E. The valley next eastward of Odin Valley, in the Asgard Range of Victoria Land. Named by US-ACAN and NZ-APC together in 1976, for the Norse god.

Tizire Glacier *see* **Chijire Glacier**

Tizire-hyoga *see* **Chijire Glacier**

Tizire-iwa *see* **Chijire Rocks**

Tizire Rocks *see* **Chijire Rocks**

Tjøntveit, Thor; and **Pedersen, Einar Sverre**. Two Norwegians who finished second in the London to Sydney air race, and who decided to fly over both the South Pole and the North Pole in their twin-engine Cessna, the *Roald Amundsen*, on their way back to Norway. On Jan. 15, 1970, after some political maneuvering, they received clearance from the U.S. authorities, and on Jan. 18, 1970, left Invercargill, NZ, bound for Antarctica. After a brief fuel stop at McMurdo, they arrived at the South Pole on Jan. 19, 1970, only 12 hours after Max Conrad had landed there. They hadn't originally planned to land, just to drop the Norwegian and U.S. flags, but they did land, causing some consternation and a lot of unexpected work for the American lads at Pole Station. The "Flying Vikings" stayed at the Pole for 5 hours, then returned to McMurdo. It was reckoned to be the first time a plane had landed and taken off at the South Pole using wheels (as opposed to, say, skis). On Jan. 23, 1970 they left for Punta Arenas, Chile. Pedersen (b. 1919, Trondheim. d. Jan. 20, 2008, Anchorage, Alaska) had been a navigator with Scandinavian Airlines since 1946. He married pilot Inge Liljegran. Thor, who had been born in Norway, was now an American, flying for a living in Alaska.

Ostrova Tjulen'i *see* **Tyulen'i Islands**

Mys Tjulenij *see* **Cape Tulenij, Tyuleniy Point**

Tjulenijodden *see* **Tyuleniy Point**

Nunataki Tjutcheva. 80°37' S, 28°15' W. A group of nunataks SE of the glacier the Russians call Lednik Derzhavina, in the Shackleton Range. Named by the Russians.

Tjuvholene *see* **Tjuvholene Crags**

Tjuvholene Crags. 71°57' S, 4°28' E. High rock crags (the Norwegians describe them as small mountain ridges) rising to 2495 m, forming the N end of Mount Grytøyr, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Tjuvholene (i.e., "the thief's lair"). US-ACAN accepted the name Tjuvholene Crags in 1967.

Gora Tkachëva. 81°53' S, 159°30' E. A nunatak, N of the Gutenberg Glacier, in the Churchill Mountains. Named by the Russians.

Toadstool Rocks. 68°50' S, 69°25' W. A group of ice-covered rocks in water, rising to 2.5 m above sea level, in the SW part of Marguerite Bay, ESE of Terminal Island, off Alexander Island, off the Fallières Coast, on the W coast of Graham Land. Roughly charted from the *Bransfield* in Feb. 1977. Named descriptively by UK-APC on Feb. 7, 1978, in association with Mushroom Island and Puffball Islands. The feature appears in the 1980 British gazetteer, and on a British chart of 1983. US-ACAN accepted the name.

Punta de Toba *see* **Inott Point**

Tobias, Cato, Jr. b. 1802. Black crew member on the *Huron*, 1820-21. This may be the black crew member who was punished for stealing. What happened, apparently, was that back in 1820, when the *Huron* was leaving New Haven, a crew member had his jacket stolen. For 19 months it never showed up, but on Sept. 5, 1821, while the ship was in at the Falklands between South Shetlands seasons, it was discovered in the possession of a black man on board. As we know of only one black man on board the *Huron* during this expedition, it may well be Mr. Cato. Anyway, the culprit had been a steward on board, but, as he had been found guilty of other petty thefts, that job had been taken away from him. Now, after the discovery of the jacket, the crew decided to punish him for it. One is not clear what this punishment consisted of, but it was severe enough for the officers to break it up, and for the captain to order the man's release, not because the captain considered the punishment unjust, but because the man was in no condition to take his medicine, having been on the sick list for 2 months with scurvy.

Tobin Mesa. 73°17' S, 162°52' E. A large mesa (or tableland), between Pain Mesa on the N and Gair Mesa on the S, in the Mesa Range of Victoria Land. Named by the Northern Party of NZGSAE 1962-63, as Tobin Tableland, for James Tobin, surveyor with the party. NZ-APC accepted that name, and US-ACAN followed suit in 1967, but with the name Tobin Mesa.

Tobin Tableland *see* **Tobin Mesa**

Toboggan Gap. 72°16' S, 166°03' E. A steep pass, about 1.2 km wide, through the Millen Range, just N of Turret Peak, offering good sledging from the Polar Plateau to the Pearl Harbor Glacier névé. Named by the Southern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Tobogganers Icefall. 71°31' S, 163°30' E. A prominent icefall in the west-flowing tributary to Sledgers Glacier, located at the N side of the Molar Massif, in the Bowers Mountains. Named by Malcolm Laird in association with nearby Sledgers Icefall. NZ-APC accepted the name in 1983, and US-ACAN followed suit.

Toboggans. Motor toboggans were much used after IGY (1957-58). *See also* **Ski-Doos**.

Tocci Glacier. 72°10' S, 168°18' E. A steep tributary glacier descending from Mount Lozen to enter the N side of Tucker Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Joseph J. Tocci II, USN, aerographer's mate at McMurdo in 1967.

The *Tocopilla*. Chilean ship, on ChilAE 1980-81. Captain Manuel Lagunas Alfaro.

Mount Tod. 67°13' S, 50°39' E. On the SW side of Auster Glacier, at the head of Amundsen

Bay, in Enderby Land. Plotted from ANARE air photos taken in 1956. Named by ANCA for Ian Maxwell Tod (b. May 10, 1927), weather observer who wintered-over at Wilkes Station in 1959, and at Mawson Station in 1961. US-ACAN accepted the name in 1965.

Tod Gully *see* **Todd Gully**

Mount Todd. 78°03' S, 85°56' W. A peak rising to 3600 m on the E side of Embree Glacier, 3 km NNE of Mount Press, in the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1960. Named by US-ACAN in 1984 for Edward P. Todd, physicist with the NSF, 1963-84; director of the NSF's Division of Polar Programs, 1977-84, with responsibility for the development of USARP.

Todd Glacier. 68°03' S, 67°03' W. A glacier, 11 km long, it flows SW into Calmette Bay, in western Graham Land. Photographed aerially by RARE 1947-48, and surveyed from the ground by FIDS in 1961-62. Named by UK-APC on Feb. 12, 1964, for Gertrude Evelyn "Anne" Todd (b. 1927), FIDS scientific officer and editor in London, 1950-87, very famous in FIDS circles (the British did not send women to Antarctica, but no one else did then either. However, the British were rather slow in this field). She won the Fuchs medal in 1987. US-ACAN accepted the name later in 1964.

Todd Gully. 76°43' S, 159°42' E. A valley, 1.1 km W of Brock Gully, in the Allan Hills of Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for its similarity to fox-hunting country (a todd is a fox). NZ-APC accepted the name, and US-ACAN followed suit in 1965. Some sources claim that this gully was originally known as Tod Gully, but that the Australians changed the name in late 2008. However, in 1990 (when the first edition of this encyclopedia was written, say, it appeared as Todd Gully, just as it does today).

[1]**Todd Hill**. 77°31' S, 169°16' E. A hill, about 500 m high, on the E flank of Mount Terror, inland from Cape Crozier, 3 km WNW of The Knoll, and 2 km NNE of Bomb Peak, on Ross Island. It is a plug, or dome, of trachyte, through which a deep, perfectly conical crater has been drilled by a basaltic explosion. The white trachyte of the hill is obscured by a thin covering of black moraine. Named by NZGSAE 1958-59, for Colin Todd, from Dunedin, a Himalayan climber and medical research worker, who had a strong influence on the development of techniques used by NZ Antarctic expeditioners in the period 1956-59. He died in a mororcycle crash in Ravensbourne, in 1955, aged 28. NZ-APC accepted the name on July 16, 1964.

[2]**Todd Hill**. 77°51' S, 163°03' E. A bluff-type elevation, rising to 1245 m, which forms the S extremity of the Briggs Hill massif and the N point of the entrance to Descent Pass (which leads to Ferrar Glacier), in Victoria Land. Named by US-ACAN in 1992 for USGS cartographer Ronald L. Todd, a member of the USGS field team that established geodetic control in the areas of the Hudson Mountains, the Jones Mountains, Thurston Island, and Farwell Island, on the Walgreen Coast and Eights Coast of Marie Byrd Land, during the 1968-69 season.

Todd Ridge. 85°16' S, 119°19' W. A narrow, flat-topped rock ridge, at the NW end of the Long Hills, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Marion N. Todd, aurora scientist at Byrd Station in 1958.

Todd-White, Roger Anthony. b. 1927, West Ham, London, son of Donald S. Todd-White and his wife Edith E. Watson. He joined FIDS in 1950, as a meteorologist, and wintered-over at Base G in 1951 and at Base B in 1952. At the end of his tour he returned to Port Stanley, and there caught the *Fitzroy*, bound for London, where he arrived on Feb. 3, 1953. He returned as a FIDS met man to Base F for the winter of 1956, and was studying statistics during that winter. He was later in Abu Dhabi.

Toddy Pond. 76°42' S, 161°21' E. A pond, or small lake, over 200 m in diameter, in an enclosed basin on the rock flats, 3 km NW of Flagship Mountain, in the Convoy Range of Victoria Land. In keeping with naming certain features (Rum Pond and Tot Pond) in this area for nautical beverages and allied terms, this one was named by a 1989-90 NZARP field party. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Todt Ridge. 71°22' S, 13°57' E. A partly snow-covered ridge, 5 km long, 8 km E of Mount Mentzel, at the E end of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered by GermAE 1938-39, and named by Ritscher as Todtriegel, for his assistant Herbert Todt, who served as home secretary for the expedition. US-ACAN accepted the translated name Todt Ridge in 1970. The Norwegians call it Todtskota (which means the same thing).

Todtriegel *see* **Todt Ridge**

Todtskota *see* **Todt Ridge**

The Toe. 62°20' S, 59°10' W. A point which marks the SE side of the entrance to Harmony Cove, on the W side of Nelson Island, in the South Shetlands. Surveyed and named descriptively as both Toe Point and The Toe by the personnel on the *Discovery II* in 1934-35. It appears both ways on their chart. It appears as The Toe on British charts of 1942 and 1948, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It appears on a 1948 Argentine chart as Punta Toe. ChilAE 1950-51 surveyed it, and it appears on their 1951 chart as Punta Soto, named for 1st Lt. Fernando Soto Montero, the dental officer on the *Angamos* during that expedition. It appears on an Argentine chart of 1953 translated all the way as Punta Dedo, and that was the name accepted by the 1970 Argentine gazetteer. The 1974 Chilean gazetteer accepted the name Punta Soto, but today the Chileans call it Punta Toe. Last plotted by the British, in late 2008. Note: The Spanish word for finger is "dedo." The full name for a toe is "dedo del pie" (i.e., "foot finger"), which sounds better in English than in Spanish, which is why the Spanish almost always call a toe "dedo."

Punta Toe *see* **The Toe** (above)

Toe Point *see* **The Toe**

The *Toern*. Whale catcher working for the *Thorshavn*, 1933-34. Name means "the second" in Norwegian.

Tofani Glacier. 68°21' S, 65°35' W. Flows NE from the E coast of Graham Land into the Larsen Ice Shelf at the head of Solberg Inlet, to the N of Houser Peak, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially in 1940, during USAS 1939-41, surveyed from the ground by Fids from Base E between 1946 and 1948, and photographed aerially again by USN in 1966. Named by US-ACAN in 1977, for Walter Tofani, physician at Palmer Station in 1975. It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

Glaciar Tofte *see* **Tofte Glacier**

Tofte, Eyvind. b. 1879, Trondheim, Norway. He was a bank correspondent in Larvik before going to sea. He was leader of the *Odd I* expedition of 1926-27.

Tofte, Martin. b. 1852, Norway. Able seaman on SwedAE 1901-04.

Tofte Glacier. 68°48' S, 90°42' W. A glacier, about 3 km long, immediately S of Sandefjord Cove, it flows to the coast the Norwegians call Lazarevkysten, on the W side of Peter I Island. Discovered in 1927 by the *Odd I*, and named Toftebreen, for Eyvind Tofte. US-ACAN accepted the translated name Tofte Glacier in 1952. The Argentines call it Glaciar Tofte.

Tofteaksla. 68°49' S, 90°40' W. A mountain at the NW side of Lars Christensen Peak, in the NW part of Peter I Island. Named by the Norwegians for Eyvind Tofte.

Toftebreen *see* **Tofte Glacier**

Toftefallet. 68°50' S, 90°41' W. A steep slope, covered with ice and snow, at the S side of the mountain the Norwegians call Tofteaksla, including the NE part of Tofte Glacier, in the NW part of Peter I Island. Named by the Norwegians for Eyvind Tofte.

Toilers Mountain. 71°44' S, 164°52' E. A massive peak, rising to 1955 m, 6 km NE of Halverson Peak, in the NW end of the King Range, in the Concord Mountains. It was used as a survey and gravity station by the Northern Party of NZGSAE 1963-64, and so named by them because of the long climb up to it and the unpleasant conditions while occupying the summit. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Cape Tokarev. 68°28' S, 152°26' E. An ice cape on the coast of George V Land, just E of the Cook Ice Shelf. Photographed aerially by OpHJ 1946-47, and again by SovAE 1958. Named by the Russians as Mys Tokareva, for Aleksey Tokarev (*see* **Tokarev Island**). ANCA accepted the translated name on July 31, 1972.

Tokarev Island. 66°32' S, 92°59' E. Also called Tokaryev's Island. One of the small islands

in the Haswell Islands, it lies about 160 m W of Gorev Island. Discovered and first mapped (but, apparently, not named) by AAE 1911-14. Photographed by SovAE 1956, and named by the Russians in 1957, as Ostrov Tokareva, for Aleksey T. Tokarev (1915-1957), biologist on SovAE 1956-57, who died on the way back to the Soviet Union from that expedition. US-ACAN accepted the name Tokarev Island in 1962.

Mys Tokareva *see* **Cape Tokarev**

Ostrov Tokareva *see* **Tokarev Island**

Tokarski Peak. 62°04' S, 58°24' W. Rising to 320 m, N of Keller Peninsula, between Stenhouse Glacier and Domeyko Glacier, N of Rolnicki Pass, in the area of Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Antoni K. Tokarski, geologist with PolAE 1978-79, PolAE 1979-80, and PolAE 1985-86. Latest plotting done by UK in late 2008.

Tokei, Hirose. Also known as Sasazaki. b. 1885, Chiba, Japan. Oiler on the *Kainan Maru* during the first half of Shirase's Japanese South Polar Expedition of 1910-12. For the second half of the expedition he replaced Susumu Muramatsu, who had been elevated to the position of expedition secretary. Tokei died in 1953.

Mount Tokoroa. 71°13' S, 162°50' E. A massive snow-covered mountain, on a spur from the Explorers Range, in the Bowers Mountains, 10 km SE of the summit of Mount Soza, close N of Morley Glacier, and at the junction of that glacier with Carryer Glacier. Mapped by the USGS Topo West party of 1962-63, and named by them to honor Tokoroa, NZ, for that town's continued support to the U.S. teams heading to the ice. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Tokroningen *see* **Kroner Lake**

Mount Tolchin. 85°06' S, 65°12' W. Rising to 1730 m, 8 km SW of Houk Spur, at the SW end of the Mackin Table, in the S part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Sid Tolchin. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Tolchin, Sidney M. "Sid." b. 1932. From Easton, Pa. Lt. (retired as a captain), USN. Medical officer and officer-in-charge of South Pole Station during the 1959 winter-over. He took over from Vernon Houk. After the expedition, he went back to the U.S. Naval Hospital, at Portsmouth, and was later clinical professor of neurosurgery, at the University of California, San Diego School of Medicine.

Pico Toledo. 73°42' S, 67°19' W. A peak, about 70 km ENE of Mount Coman, in the central part of the Antarctic Peninsula. Named by the Chileans for Sub Lt. Raúl Toledo Castillo, of the Chilean Air Force, one of the pilots of the 3 Vought Sikorski helos brought to Antarctica on the *Maipo*, during ChilAE 1949-50.

Toledo, Joaquín *see* **De Toledo, Joaquín**

Toler, Calvin Hubert. b. Jan. 22, 1899, Berkley, Va. He joined the U.S. Navy at the age of 20, and later became an able seaman in the merchant service, going to Antarctica on the *Jacob Ruppert* during ByrdAE 1933-35. He was still sailing in 1949.

Pik Tol'jatti. 71°54' S, 8°44' E. A peak to the NW of Lokehellene Cliffs, on the W side of Nupsskarvet Mountain, in the Kurze Mountains of Queen Maud Land. Named by the Russians.

Tollefsen, Adam. b. March 12, 1866, Arendal, Norway. Seaman who went insane during the wintering-over on the *Belgica* in 1898, during BelgAE 1897-99. Amundsen took him back to Norway in a mail boat, and he very quickly recovered, got a job as a telephone worker in Kristiania, and married Allette Sophie.

Tollefson Nunatak. 74°25' S, 72°25' W. Rising to about 1700 m, S of the Ronne Entrance, 8 km W of Olander Nunatak, it is one of several scattered and somewhat isolated nunataks 60 km N of the Merrick Mountains, on the English Coast, in Ellsworth Land. Mapped by USGS from ground surveys conducted between 1961 and 1965, and from air photos taken by USN between 1965 and 1967. Named by US-ACAN in 1968, for Truman W. Tollefson (b. Jan. 17, 1940. d. Nov. 14, 2004, Mathis, Texas), USARP construction electrician who wintered-over at Eights Station in 1963.

Mount Tolley. 77°17' S, 143°07' W. Also seen spelled (erroneously) as Mount Tolly. Rising to 1030 m, 3 km S of Mount Swartley, in the Allegheny Mountains, in the Ford Ranges of Marie Byrd Land. Discovered aerially by members of West Base during USAS 1939-41, and named for William Pearson Tolley (1900-1996), president of Allegheny College, Pa., 1931-42. Allegheny was Paul Siple's alma mater. US-ACAN accepted the name in 1947.

Gora Tollja. 82°32' S, 162°35' E. A nunatak, SW of Kieffer Knoll, in the Queen Elizabeth Range. Named by the Russians.

Mount Tolly *see* **Mount Tolley**

Tolnay, Alberto *see* **De Tolnay, Albert**

Glaciar Tolosa *see* **William Glacier**

Tolstikov, Yevgeniy Ivanovich. b. Feb. 9, 1913, Tula. Russian meteorologist. In 1937 he married Nina Nikolayevna. He became well-known during World War II for his Arctic flights, and in 1954-55 led the drifting station SP-4, in the Arctic. He led SovAE 1957-59, and died on Dec. 4, 1987.

Toltec Butte. 76°38' S, 159°53' E. A truncated peak, E of Harris Valley, in the Shipton Range of the Allan Hills, in Victoria Land. Reconnoitered by the NZ Allan Hills Expedition of 1964, and named by them for its resemblance to Toltec buildings. US-ACAN accepted the name in 1965, and ANCA followed suit.

The *Tom Crean*. Irish boat, the would-be modern-day *James Caird*, used by the South Aris Expedition in 1996-97 to recreate the legendary trip made by Shackleton from Elephant Island to South Georgia. In company with the *Pelagic*, (as a safeguard cum rescue ship), she set sail, but was swamped by water en route, and the trip was abandoned. Frank Nugent was the skipper.

Tom-Wrightrücken. 71°18' S, 163°45' E. A ridge, SW of Smithson Glacier, in the Bowers Mountains. Named by the Germans.

Toman-jima. 68°59' S, 39°38' E. A small island, with a highest elevation of 12.2 m above sea level, about 500 m NNE of Iwa-zima, off East Ongul Island. Named by the Japanese on July 10, 2008, after the anchoring site used by the *Shirase*, when that icebreaker would come into Showa Station.

Tomandl Nunatak. 76°49' S, 144°57' W. An isolated nunatak, on the S side of Crevasse Valley Glacier, 11 km E of Mount Stancliffe, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Frank Tomandl, Jr. (b. 1934, Nebr.), USN, aviation electrician's mate who wintered-over at McMurdo in 1968.

Tombaugh Cliffs. 71°05' S, 68°18' W. Ice-free cliffs at the N side of the mouth of Pluto Glacier, facing George VI Sound, on the E side of Alexander Island. Photographed aerially in 1947 by RARE 1947-48, and surveyed from the ground by FIDS between 1948 and 1950. Re-surveyed by FDS/BAS personnel from the Fossil Bluff station from 1961. In association with Pluto (the planet) it was named by UK-APC on Dec. 20, 1974, for Clyde William Tombaugh (1906-1997), American astronomer who discovered the planet Pluto in 1930 (recently this planet has been relegated by some to a lower status; *see also* **Eris Glacier**). US-ACAN accepted the name in 1975.

The *Tombigbee*. An 1850-ton, 310 foot 9 inch U.S. Patapsco-class gasoline tanker, built by Cargill, in Savage, Minn., launched in 1943, and commissioned as AOG-11 on July 13, 1944. After service in World War II, she took part in the atom bomb tests at Bikini, and was decommissioned in 1949. She was recommissioned in 1950, for Korea, and after more service, left Hawaii on Dec. 18, 1962, bound for Lyttelton, NZ, and OpDF 63 (i.e., 1962-63), under the command of Lt. R.H. McSweeney. She arrived there on Jan. 5, 1963, and left on Jan. 9, bound for McMurdo. She was there from Jan. 18 to Jan. 22, 1963, then returned to NZ, then on to Sydney, and finally back to Hawaii. That was her only deployment in Antarctic waters. After Vietnam, she was sold to the Greeks in 1972, and became the *Ariadni*, finally being decommissioned in 2003.

Cerro Tombstone *see* [1]**Tombstone Hill**

[1]**Tombstone Hill**. 64°49' S, 63°31' W. Rising to 50 m, close ENE of Damoy Point, on Wiencke Island, in the Palmer Archipelago. Discovered and mapped by FrAE 1903-05. Named in 1944 by the Port Locroy Station personnel during Operation Tabarin. Some of the rocks atop the hill look like tombstones. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1950. It appears on a 1950 British chart, and also in the 1955 British gazetteer. It appears on a Chilean chart of 1955

as Cerro Tombstone, and that was the name accepted by the 1974 Chilean gazetteer.

[2]**Tombstone Hill**. 72°27' S, 169°42' E. A prominent hill, rising to 1050 m, on the N side of Edisto Glacier, in the Admiralty Mountains of Victoria Land. Its summit is littered with slabs of hard sedimentary rock, many of which are steeply tilted on end, giving the appearance of tombstones. A survey station was established there (marked by a very large rock cairn) by NZGSAE 1957-58, who aptly named the feature. NZ-APC accepted the name, and US-ACAN followed suit in 1971.

Tomilin Glacier. 69°30' S, 159°00' E. Over 24 km long, it flows N from Pope Mountain, in the central Wilson Hills, and enters the sea E of the Goodman Hills and Cape Kinsey, in Oates Land, and forms a substantial glacier tongue. Photographed aerially during OpHJ 1946-47, and again by SovAE 1958. Named by the USSR as Lednik Tomilina, for Arctic aviator Mikhail N. Tomilin (1908-1952), who died in the Arctic. ANCA accepted the translated name on Oct. 11, 1960, and US-ACAN followed suit in 1961. Originally plotted in 69°15' S, 158°44' E, it has since been replotted.

Lednik Tomilina *see* **Tomilin Glacier**

Mount Tomlinson. 67°15' S, 51°11' E. A mountain, 3 km S of Mount Marsland, on the S side of Beaver Glacier, in the NE part of the Scott Mountains of Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for Raymond Tomlinson. US-ACAN accepted the name in 1965.

Tomlinson, Raymond Christian. b. 1901, Eccleshall Bierlow, Yorks, but grew up in Sheffield, son of bank clerk George Ernest W. Tomlinson and his wife Mary Emily F. Whiteley. He did his seaman's apprenticeship on the *Carmania* during World War I, and in 1925, in Eccleshall Bierlow, he married Mary C. Wilshaw. He was a seaman on the *Discovery* during the first half of BANZARE 1929-31, i.e., 1929-30, and came home to Eccleshall to the birth of his only child, David. He died in North Walsham, Norfolk, in 1947, aged 46.

Tommelen. 72°00' S, 2°49' E. A rock in the area of Troll Station, in the N part of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians as Jutulkuken (i.e., "the giant's dick"), but this was, of course, unacceptable to the Norwegian naming body, who renamed it, officially, on Oct. 12, 2007, as Tommelen ("the thumb").

Tommeliten *see* **Tommeliten Rock**

Tommeliten Rock. 71°47' S, 2°29' W. A small, isolated rock, 10 km E of Lorentzen Peak, on Ahlmann Ridge, in the NE part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tommeliten (i.e., "Tom Thumb"). US-ACAN accepted the name Tommeliten Rock in 1966.

Tomovick Nunatak. 74°59' S, 161°51' E. Along the S side of the upper portion of Larsen Glacier, 14 km W of Mount Gerlache, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Donald S. "Don" Tomovick (b. July 1934), USN, utilitiesman at Pole Station in 1966.

Tonagh Island. 67°06' S, 50°18' E. A steep-sided, flat-topped island, 6 km (the Australians say 4 km) long, and between 2 and 3 km wide, SW of the mouth of Beaver Glacier, in the SW part of Amundsen Bay. Peter Crohn's ANARE party discovered it in Oct. 1956. Named by ANCA on July 22, 1957, for Leslie Tonagh (*see* **Tonagh Promontory**). US-ACAN accepted the name in 1961.

Tonagh Promontory. 69°26' S, 76°01' E. One of 2 promontories to the SW of Stornes Peninsula, in the Larsemann Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Stornesskloa (i.e., "Stornes claw"), in association with Stornes Peninsula, which they named at the same time (but as Stornes). Actually, the name Stornesskloa was applied to both this promontory and the one that became known as Priddy Promontory. This one was named by ANCA on Sept. 29, 1988, for Lt. Leslie Tonagh, RAASC, dukw driver who landed the first party on Jesson Island on Feb. 7, 1958. He had also been a dukw driver with ANARE in 1956. The Chinese call it Wuyue Bandao.

[1]**The *Tonan Maru***. Formerly the *Antarctic* (built in 1906), she was chartered by the Japanese in 1934, and converted into the 9866-ton *Tonan Maru*, Japan's first factory whaling ship into Antarctic waters. With 5 catchers she sailed for Antarctica and the 1934-35 whaling season, and midway through the season, the charter turned into a purchase, and she officially became the *Tonan Maru*. That first season, between Dec. 24, 1934 and Feb. 17, 1935, she took 125 blue whales, 83 fin whales, 4 humpbacks, and a sperm, which made 2159 tons of whale oil. She was back in 1935-36 and 1936-37. In 1937-38 she was back, in company with the *Tonan Maru 2*, and again in 1938-39, and 1939-40, in company with the *Tonan Maru 2* and the *Tonan Maru 3*. She became a Japanese oil tanker in World War II, and was torpedoed off the coast of Indo-China, on Nov. 28, 1943.

[2]**The *Tonan Maru***. This was the old *Tonan Maru 3*, refloated in 1951 (7 years after having been torpedoed during World War II) as the 19,320-ton *Tonan Maru* (named after the original *Tonan Maru*, which had been sunk by the Allies in 1943). She sailed into Antarctic waters for the 1951-52 season, and was back every season until her last one, 1965-66. She was scrapped in 1971.

[1]**The *Tonan Maru 2***. A 19,263-ton Japanese whaler, built in 1937, and in Antarctic waters in 1937-38, in company with the *Tonan Maru*. She was back in 1938-39, 1939-40, and 1940-41, in company with the *Tonan Maru* and the *Tonan Maru 3*. She became a Japanese oil tanker in World War II, and was sunk in the South China Sea on Aug. 22, 1944. Not to be confused with the second *Tonan Maru 2* (see below).

[2]**The *Tonan Maru 2***. This was the second Japanese whaler to bear this name (see the entry above). This second one was formerly the freighter *Matsushima Maru*. She weighed 13,792 tons, and was in Antarctic waters in 1956-57, and then back again each season with the *Tonan Maru* until 1965-66. From 1966-67 she sailed in Antarctic waters without the *Tonan Maru*, every season until her last, 1976-77. She was scrapped in 1978.

The *Tonan Maru 3*. A 19,201-ton Japanese whaler, built in 1938, and in Antarctic waters in 1938-39, 1939-40, and 1940-41, on all occasions along with the *Tonan Maru* and the *Tonan Maru 2*. She became a Japanese oil tanker in World War II, and on Feb. 20, 1944 was sunk off Truk. However, in April 1951, she was refloated, and towed 3700 km back to Japan, where she was refitted as the *Tonan Maru*, and sailed again (*see* [2]**The *Tonan Maru***).

Isla Toneles *see* **Pythia Island**

Toney, George Robert, Jr. b. June 26, 1918, West Barrington, RI, but raised in Newton and Needham, Mass., son of cotton-thread salesman George Robert Toney and his wife Winifred Adams. In 1941 he married Sara Grant Dowty, enlisted in the Army on Dec. 22, 1942, in Boston, and was an interpreter in France and Belgium during World War II. From 1946 to 1951 he was a high school teacher in Gloucester, Mass., and then became Arctic logistics specialist with the U.S. Weather Bureau (he went north 3 times). He was the IGY representative taking observations, on the United States Navy Antarctic Expedition, on the *Atka*, in 1954-55, in Antarctic waters, and was scientific leader at Byrd Station for the winter of 1957. He later summered twice at McMurdo in the early 1960s, while working for the NSF (which he did between 1958 and 1967). He had a second career, as a lawyer within the juvenile justice system in Washington, DC, 1975 to 2000. He died on Jan. 17, 2008, at Bethesda, Md., of lung cancer.

Toney Mountain. 75°48' S, 115°48' W. An elongated, snow-covered volcanic mountain massif, 65 km long, and rising to 3595 m (in Richmond Peak), on the Bakutis Coast of Marie Byrd Land, 56 km SW of the Kohler Range. Algae and lichens are found here. It was probably seen from a distance in Feb. 1940, on flights from the *Bear*, during USAS 1939-41. Mapped in Dec. 1957, by Charles Bentley's oversnow traverse party from Byrd Station to the Sentinel Range, in 1957-58, and named by Bentley for George Toney. US-ACAN accepted the name in 1960.

Tongji Xueji. 69°30' S, 76°19' E. A ridge in the Larsemann Hills. Named by the Chinese.

Tongue Peak. 86°34' S, 153°02' W. Rising to 2450 m, between Holdsworth Glacier and Scott Glacier, 5 km WNW of Mount Farley, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Geologically mapped by a USARP-Arizona State University field party in 1978-79, and named by Scott G. Borg, one

of the party, for the well-developed tongue-shaped moraine in an abandoned cirque between the W and N ridges of the peak. US-ACAN accepted the name.

Tongue Rock. 67°33' S, 62°00' E. A small skerry, or rock in water, close inshore, just N of Low Tongue, off the coast of Mac. Robertson Land, about 44 km W of Mawson Station. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Tangskjera (i.e., "the tongue rock"). First visited by ANARE parties in 1954 and 1955. ANCA translated it on Aug. 20, 1957, and US-ACAN accepted that translation in 1965.

Tongue Rocks. 63°38' S, 57°21' W. Small, ice-free, volcanic rocks between Eagle Island and Beak Island, off Trinity Peninsula, in the Prince Gustav Channel. Surveyed by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, in association with the two nearby islands. US-ACAN accepted the name later in 1964.

Isla Tonkin *see* **Tonkin Island**

Tonkin, John Eliot. b. July 21, 1920, Singapore, son of Sydney Tonkin, a chartered civil engineer with the Malayan Public Works Service, and his wife Ethel Beatrice Lea (whose father was a missionary in the Far East). John went back to England at the age of 4, to be with his aunt in Liverpool, and finally went to King William's College, on the Isle of Man, and from there on to Bristol University, to study civil engineering. He volunteered for the Army in 1939, but was told to go back to University, as he would be more valuable with a degree. However, he never got his degree, instead joining the SAS in 1942, eventually becoming a major. His exploits (including the one where he parachuted into France just before D-Day) can be found in any book on the SAS. In 1945 he joined the newly-formed FIDS as a general assistant, and was flown to Montevideo in Dec. 1945. He left there on Dec. 30, 1945, with Paddy Mayne, bound for the Falklands, arriving there on Jan. 3. On Jan. 9, 1946, he and Mayne left Port Stanley for Deception Island, arriving there on Jan. 13. He wintered-over at Base E (Stonington Island) in 1946 and 1947, becoming deputy leader by the time he left in early 1948. He led several sledging trips across Graham Land. On one occasion he was rescued from a crevasse in Northeast Glacier by Kevin Walton. On his way back to England, he stopped off in the Falkland islands, met Heather Sedgwick, the governor's secretary (and Una Sedgwick's sister—*see* **Una Peaks**), and they were married later that year, in Montevideo. They flew back to England on a converted bomber belonging to British South American Airlines. On his return to England, he went into industrial management, joining the Dutch Shell Corporation, and he and his wife went to Holland for almost a year, and then John went to Brunei. 9 months later his wife joined him, and their first child was born there. After 2 years he left Shell and Brunei, and they moved to Melbourne, and then Queensland. In 1953 he joined the company that would become Rio Tinto, and went up to Northern Territory, to Rum Jungle, to be the personnel and industrial manager at one of the world's first uranium mines, for 5 years. In 1961 he returned to Melbourne, went to work for an aluminum company, and retired in 1980, dying on June 10, 1995, in Mornington, Vic. His daughter, Rosemary Jane Storey, was at Port Lockroy, in Antarctica, in 2008-09.

Tonkin Island. 67°49' S, 65°03' W. A narrow, ice-capped island, 5 km long in a N-S direction, and about 1.5 km wide, marked by ice-free peaks at each end, and rising to about 520 m above the Larsen Ice Shelf, 17.5 km SE of Choyce Point, E of Cape Church, at Seligman Inlet, off the Bowman Coast, on the E coast of Graham Land. Probably first seen aerially by Wilkins on Dec. 20, 1928, and then by Ellsworth in Nov. 1935, it was officially discovered aerially in Dec. 1940 by USAS 1939-41, and they photographed it. The same expedition surveyed it from the ground in Jan. 1941. It appears on a 1942 USAAF chart, and on a 1943 U.S. Hydrographic Office chart. Seen from a distance, and roughly located, by Fids from Base E in 1946-47, it was re-surveyed by Fids from Base D in late 1947, and named by them for John Tonkin. A Chilean chart of 1947 (based on the first Chilean Antarctic Expedition's survey) showed the N and S parts of this island erroneously as two separate islands, respectively Isla Mateo de Toro Zambrano (*see* **Zambrano Ridge**), and Isla Riquelme (*see* **Punta Riquelme**, **Riquelme Peak** and **Symington Islands**). These two misidentified features would later transmute into Zambrano Ridge and Riquelme Peak. In 1948, just after RARE 1947-48, Finn Ronne, unaware that the British had already named this feature, named it Lewis Island, for Col. Richard Lewis, office of the quartermaster general, at Austin, Texas (*see* **Lewis Point**). On Jan. 22, 1951, UK-APC accepted the name Tonkin Island, and US-ACAN followed suit in 1952. It appears on a British chart of 1952, and also in the 1955 British gazetteer. It appears on an Argentine chart of 1957, as Isla Tonkin, and that was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer.

Tønnesen Glacier. 72°04' S, 3°28' E. A broad glacier flowing N between Risemedet Mountain and Festninga Mountain, and separating the Mühlig-Hofmann Mountains and the Gjelsvik Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition, and named by them as Tønnesenbreen, for Jarl Tønnesen (b. 1919), chief meteorologist at Norway Station for the winters of 1957 and 1958, during NorAE 1956-60 (*see also* **Jarl Nunataks**). US-ACAN accepted the translated name Tønnesen Glacier in 1966.

Tønnesenbreen *see* **Tønnesen Glacier**

Lago Tonolli. 74°58' S, 162°30' E. A circular lake with seasonal ice covering, it measures 150 m by 150 m, with a maximum depth of 3.9 m, 70 m above sea level, 30 km NE of Mount Gerlache, in Victoria Land. Discovered by Giuseppe Orombelli during ItAE 1986-87. Surveyed in 1988 by Vittorio Libera, who named it for Prof. Vittorio Tonolli (1913-1967), director of the Italian Institute of Hydrobiology. Italy accepted the name on July 17, 1997.

Caleta Tønsberg *see* **Tønsberg Cove**

Tønsberg Cove. 60°32' S, 45°55' W. A cove, 1.5 km SE of Penguin Point, Bridger Bay, on the N coast of Coronation Island, in the South Orkneys. Used as a whaling anchorage, it was charted by Petter Sørlle in 1912-13, as Tønsberg Fjord, named for Tønsbergs Hvalfangeri (q.v.). On a British chart of 1916 it appears as Tensberg Fiord, and on a 1930 British chart as Tonsberg Fiord. No one can say it like the Norwegians, of course, but, to the untrained ear it could sound like Tensberg. It certainly doesn't sound like Tonsberg, but the name Tonsberg was popular with non-Norwegians because typesetters didn't have to find the rather unusual accent mark. It was re-surveyed by the Discovery Investigations in 1933, and appears as Tonsberg Fjord (i.e., without the accent) on their 1934 chart. Consequently it appears on a 1945 Argentine chart as Fiord Tonsberg. UK-APC accepted the name Tønsberg Fjord on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such in the 1955 British gazetteer, and in the 1956 U.S. gazetteer. Note: There is no difference in Norwegian between "ö" and "ø." It's the same thing. It's just that, generally speaking, the Norwegians when writing use "ö" and when printing (in type) use "ø." Re-surveyed by Fids from Signy Island Station between 1956 and 1958. It appears on a 1958 Argentine chart as Fiordo Tonsberg (i.e., without the accent). On Sept. 23, 1960, UK-APC changed the name to Tønsberg Cove, and US-ACAN followed suit that year. It appears as such on a 1961 British chart. The 1970 Argentine gazetteer accepted the name Fiordo Tønsberg, but today the Argentines call it Caleta Tønsberg.

Tønsberg Fjord *see* **Tønsberg Cove**

Tønsbergs Hvalfangeri. Norwegian whaling company out of Tønsberg, Norway, owned by Søren Berntsen, who was actually a ship's captain himself. It operated a permanent whaling base in the South Orkneys between 1920 and 1930, and already had a well established base at Husvik Harbor, in South Georgia (54°S). It ran the *Teie* (1920-21), the *Orwell* (1922-25), and a second *Orwell* (1925-31), all in the South Orkneys.

Tonyknausane. 72°12' S, 20°11' E. Three crags E of the front of Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians for Tony Van Autenboer.

Tonynuten. 72°23' S, 20°12' E. A small nunatak, about 3 km SSW of Van Autenboerfjellet, E of Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians for Tony Van Autenboer.

Mount Toogood. 71°37' S, 160°14' E. Rising to 2100 m, at the S side of the head of Edwards Glacier, in the Daniels Range of the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960

and 1963. Named by US-ACAN in 1970, for USARP geologist David John Toogood (b. 1940, London), of the University of Wyoming, at McMurdo in 1967-68 and 1968-69.

The *Tooluka*. A 14.5-meter (47-foot), double steel, single-masted Australian steel yacht built in Victoria, registered in the Netherlands, and owned by her skipper Roger Wallis. She carried 6 passengers and sailing crew of 2. She was in Antarctic waters in 1999-2000 and 2000-01, visiting the South Shetlands and the Antarctic Peninsula. The yacht wintered each year in Valdivia, Chile. Wallis sold her, but she was back in Antarctica in 2005-06 and 2006-07, under new skipper Eef Willems, a woman captain.

Toomey Strait. 64°53' S, 63°24' W. The strait separating Fridtjof Island from Wiencke Island, in the Palmer Archipelago. Named by the Canadians on Oct. 22, 2010, for Patrick R.M. Toomey, retired captain of the Canadian Coast Guard, who had many years experience as an ice pilot in Antarctic waters.

Tooth. 62°08' S, 58°07' W. A sharp andesitic peak in the form of a tooth, on the S face of Lions Rump, on King George Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999. It was designated SSI #34.

The Tooth. 77°31' S, 168°59' E. A distinctive rock outcrop, rising to 1479 m on the E slopes leading up to Mount Terror, 1.5 km SSE of Tent Peak, on Ross Island. Named by a party from NZGSAE 1958-59, working in the E part of Ross Island. It resembles a fossilized shark's tooth. NZ-APC accepted the name, and US-ACAN followed suit.

Tooth Hill *see* **Tooth Peak**

Tooth Peak. 72°47' S, 162°03' E. Also called Tooth Hill. A small, sharp, jagged peak, on the N end of Sculpture Mountain, in the upper Rennick Glacier. Named descriptively by the Northern Party of NZGSAE 1962-63. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Tooth Rock. 62°52' S, 61°26' W. Rising to 85 m above sea level, it is the largest of a group of rocks S of Cape Conway, Snow Island, in the South Shetlands. Roughly charted by Weddell in 1821-22, and named descriptively (probably by him) as Black Rocks. It appears as such on Weddell's 1825 chart, and on an 1861 Spanish chart as Roca Black. Re-named descriptively by Lt. Cdr. Frank Hunt, following his RN Hydrographic Survey on the *John Biscoe* in 1951-52. UK-APC accepted that name on Sept. 22, 1954, and US-ACAN followed suit in 1965. It is of note that the group, as such, was not named until 1978, when the Argentines applied the name Rocas Cuis (i.e., "guinea pig rocks"). They also use the name Roca Cuis for the large rock. Last plotted by the British, in late 2008.

Toothed whales. Order: Cetacea (whales); sub-order: Odontoceti (toothed whales). They form by far the larger of the two sub-orders of whales (the other being baleen whales). Toothed whales use echo-location (like radar) to find their food, which is practically anything and everything they can find — squid, fish, birds, mollusks, other mammals including baleen whales and even themselves. Baleen whales, as far as we know, do not use echo-location, their feeding system not particularly requiring such a system. The male toothed whale grows larger than the female, a situation reversed for the baleen whale. The toothed whales in Antarctica are: Sperm whales (q.v.), beaked whales (q.v.), dolphins (q.v.). Porpoises (which are not found in Antarctic waters) are also toothed whales, whereas the killer whale is a dolphin [sic].

Toothfish. These are fish of the genus Dissostichus, belonging to the family Nototheniidae. *Dissostichus eleginoides*, also known as the Patagonian toothfish, Chilean sea bass, and Antarctic sea bass, is found not only off Patagonia, but in all the southern oceans around 50°to 55°S, but not in true Antarctic waters, a domain reserved for its cousin, the larger *Dissostichus mawsonii*, also (but erroneously) called the giant Antarctic cod (*see* **Antarctic cod**). Eleginoides is fished legally and illegally. The legal fishing of Eleginoides is controlled by CCAMLR, and the legal toothfish fishermen have grouped together as the Coalition of Legal Toothfish Operators (CLTO). They are very aware that illegal fishermen (toothfish pirates) will, unless stopped, render extinct this particularly vulnerable animal, vulnerable because it lives for 50 years and does not begin to breed until it is ten years old. And, because the toothfish provides a substantial part of the whale's diet, the extinction of the toothfish would seriously disturb the marine ecosystem in the southern oceans. CCAMLR and organizations such as Greenpeace, have lists of toothfish pirate ships, but the trade continues. Chilean sea bass is much valued as a delicacy in restaurants in Japan, the USA, Canada, and Europe. Off Heard Island, in Aug. 2003, the Australian, French, and South African authorities found a Uruguayan pirate ship trawling for toothfish, and pursued her across the Southern Ocean for 21 days, before finally surrounding her off the South African coast.

Punta Tophet *see* **Tophet Bastion**

Tophet Bastion. 60°42' S, 45°17' W. A conpsicuous ice-capped rock wall, 1.5 km long, with an apron of talus, 1.5 km E of Saunders Point, on the SE coast of Coronation Island, in the South Orkneys. Roughly surveyed by the Discovery Committee in 1933, it appears on their chart of 1934. Re-surveyed in 1948-49 by Fids from Signy Island Station, who named it for the biblical place of heathen sacrifice near Jerusalem. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Further surveyed by FIDS between 1956 and 1958. The Argentines call it Punta Tophet.

Topo East and Topo West. USGS map-making surveys conducted in Antarctica in the 1962-63 summer season. Four topographic engineers were helicoptered to the mountains to establish 68 ground control points. This, plus USN air photography, made it one of the great Antarctic surveys. Topo West covered about 40,000 sq miles in NE Victoria Land. Topo East covered about the same area from the Beardmore Glacier through the Quen Maud Mountains and the Horlick Mountains. The only person who took part in both traverses was Zeke Soza (*see* **Soza Icefalls**).

Ostrov Topografov *see* **Topografov Island**

Topografov Island. 68°30' S, 78°11' E. Just N of Partizan Island, in the N part of the entrance to Langnes Fjord, in the Vestfold Hills area of East Antarctica. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos in 1946 by Norwegian cartographers. Re-photographed aerially by OpHJ 1946-47, by ANARE in 1954, 1957, and 1958, and also by SovAE 1956. Named by the Russians as Ostrov Topografov (i.e., "topographers' island"), it first appears as such on one of their 1959 maps. ANCA translated the name on June 28, 1962, and US-ACAN accepted that translation in 1970.

Rocher du Topographe *see under* **D**

Topping Cone. 77°29' S, 169°16' E. An exposed volcanic cone near Cape Crozier, 2.5 km NW of the summit of The Knoll, in the E part of Ross Island. Named by NZ-APC for Wayne W. Topping, VUWAE geologist who examined this cone in 1969-70. Dr. Topping, also a mountain climber, in the late 1970s went into holistic medicine, and became renowned for his studies in kinesiology. US-ACAN accepted the name in 1972.

Topside Glacier. 76°42' S, 160°57' E. A cirque glacier, 0.8 km long, descending the S wall of Elkhorn Ridge, in Greenville Valley, above Bridge Riegel and Greenville Hole, in the Convoy Range of Victoria Land. The name is a nautical approximation of the glacier, and was given by a 1989-90 NZARP field party to the area. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Isla Toqui *see* **Lumus Rock**

Tor Station. 71°53' S, 5°09' E. Norwegian summer station opened in Feb. 1993, at Svarthamaren, in the Mühlig-Hofmann Mountains of Queen Maud Land. Named for Tor (i.e., Thor), the old Norse god.

Glaciar Torbellino *see* **Robillard Glacier, Whirlwind Glaciers**

Mount Torbert. 83°30' S, 54°25' W. A pyramidal mountain rising to 1675 m, it is the main feature and highest point on the Torbert Escarpment, at the NE side of the Neptune Range, in the Pensacola Mountains. Discovered aerially on Jan. 13, 1956, during the famous non-stop flight from McMurdo to the Knox Coast and back (*see* **Operation Deep Freeze I**). It was roughly mapped in 83°55' S, 53°00' W. Named by US-ACAN in 1957, for Jack Torbert (q.v.; the pilot of this flight), and with those coordinates. As such, it appears in the 1960 U.S. gazetteer, and also on a 1962 American Geographical Society map. In 1964 it was photographed from the air by USN, and in 1965-66 was surveyed from the ground by USGS, during their Pensacola Mountains Project. From these new efforts, it was re-plotted in 1969, and, with the new coordinates, the name was accepted by UK-APC on Nov. 3, 1971, and it appears as such in the 1974 British

gazetteer. US-ACAN also amended the coordinates.

Torbert, John Hallett "Jack." b. Nov. 9, 1920, Washington, DC, son of bank cashier John Peyton Torbert (known as Peyton) and his wife Marjorie Nettleton. His parents divorced and Jack's mother married again in the 1920s, to Red Cross accountant John A. Smith, and they went out to San Francisco, and later to Carmel Valley. Jack joined the U.S. Navy, and was a lieutenant commander when he took part in OpDF I and OpDF II, flying P2V-2N Neptunes. During OpDF I (1955-56), he flew the Neptune in to bring back the injured, after Trigger Hawkes' Otter went down near Cape Bird on Dec. 22, 1955 (*see* Hawkes for details). He was also the pilot who made a flight from McMurdo Sound to Vincennes Bay, on the Knox Coast, and back, on Jan. 13, 1956. This flight was 14½ hours and covered 2900 miles, non-stop. He was back for OpDF II (1956-57), and was the pilot who landed at the Pole on Dec. 7, 1956, and then couldn't get away for 2 days (*see* **South Pole Station**). He died on Aug. 4, 1983, in Palm Beach, Fla.

Torbert Escarpment. 83°29' S, 54°08' W. About 24 km long, and running NNE-SSW, it marks the W margin of the Median Snowfield, on the NE side of the Neptune Range, in the Pensacola Mountains. Mapped by USGS from 1964 USN air photos, and from ground surveys conducted in 1965-66, during the USGS Pensacola Mountains Project. Named by US-ACAN in 1968, in association with Mount Torbert, the salient feature along its edge. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Torbjørn Rocks. 71°53' S, 6°21' E. A group of small nunataks in the mouth of Lunde Glacier, in the E part of the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and also from 1958-59 air photos taken during that long expedition, and named by them as Torbjørnskjera, for Torbjørn Lunde, glaciologist on NorAE 1956-58. US-ACAN accepted the translated name Torbjørn Rocks in 1967. *See also* **Lunde Glacier**.

Torbjørnskjera *see* **Torbjørn Rocks**

Mount Torckler. 66°52' S, 52°44' E. A mountain, 5 km SE of Mount Smethurst, and 42 km SW of Stor Hånakken Mountain, in Enderby Land. Plotted from ANARE air photos taken in 1957. Named by ANCA for Raymond M. "Ray" Torckler, radio officer who wintered-over at Davis Station in 1959 and at Wilkes Station in 1961. US-ACAN accepted the name in 1966.

Torckler Island *see* **Ranvik Island**

Torckler Rocks. 68°35' S, 77°56' E. Three small islands, at the N side of the entrance to Heidemann Bay, in the Vestfold Hills, about 1.5 km SW of Davis Station. Photographed by LCE 1936-37, and mapped (but not named, apparently) from these photos in 1946, by Norwegian cartographers. Replotted by Australian cartographers from ANARE air photos, it was named by ANCA for Ray Torckler (*see* **Mount Torckler**). US-ACAN accepted the name in 1965.

Gora Toreza. 71°58' S, 9°40' E. A nunatak, or peak. The coordinates, as given by the Russians, place it immediately W of Mount Bjerke, so close, in fact, that one suspects that it is the Russian name for Mount Bjerke. Either way, it is in the Conrad Mountains, in the Orvin Mountains, in Queen Maud Land.

Torge Plateau. 68°24' S, 9°00' W. An undersea feature, with a least depth of 2300 m, in the NE part of the Weddell Sea. Named by Heinrich Hinze, for Wolfgang R.J. Torge (b. 1931), head of the Institute for Theoretical Geodesy, in Hanover. The name was accepted by international agreement, in 1997.

Isla Torgersen *see* **Torgersen Island**

Islote Torgersen *see* **Torgersen Island**

Torgersen, Torstein. b. 1918, Norway. On Jan. 19, 1937, in Oslo, he signed on to the "K" Lines ship *Vito* as a deck boy. He was 18, this was his first voyage, and they went to the Americas. He worked his way up through ordinary seaman, and able seaman, to the mate ranks, and was 1st mate on the *Norsel*, 1954-55. He was the first person to enter Arthur Harbor (where Palmer Station was later built), on Feb. 28, 1955, preceding the *Norsel* in one of the ship's sounding boats. He was still 1st mate when the *Norsel* took down the French in 1955-56. In 1957-58 and 1958-59 he was skipper of the *Norsel*, in Antarctica, bringing down the French Antarctic Expedition.

Torgersen Island. 64°46' S, 64°05' W. A small rocky island, just E of Litchfield Island, and about 0.8 km W of Palmer Station, in the entrance to Arthur Harbor, off the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed by FIDS in 1955, and named by them as Torgersen Islet, for Torstein Torgersen. UK-APC accepted that name on Sept. 4, 1957, and it appears on a British chart of 1958. US-ACAN accepted the name in 1958. On July 7, 1959, UK-APC redefined it as Torgersen Island, and it appears as such on a British chart of 1960. US-ACAN accepted the new name in 1963. It appears on a British chart of 1967. It appears on a Chilean chart of 1962 as Isla Torgersen, and that was the name accepted by the Chilean gazetteer of 1974 (after they had rejected the proposed Islote Torgersen).

Torgersen Islet *see* **Torgersen Island**

Torgersrud, Jacob. Doctor on the *Frithiof* in 1903-04.

Torghattbreen *see* **Ichime Glacier**

The *Torgny* *see* **The *Odd III***

Torgny Peak. 71°51' S, 8°06' E. A bare rock nunatak in the lower part of Vinje Glacier, 3 km W of Fenriskjeften Mountain, in the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Torgnyskjeret, for Torgny Vinje, of the Norsk Polarinstitutt, meteorologist and sea-ice specialist during NorAE 1956-60. US-ACAN accepted the somewhat loosely translated name Torgny Peak in 1967.

Torgnyskjeret *see* **Torgny Peak**

Torihane-dai. 68°24' S, 41°43' E. A flat-topped hill with a skua nest on it, in the W part of Temmondai Rock, in Queen Maud Land. Named by the Japanese during a 1981 geological survey of the area ("feather heights"). The name was accepted on Nov. 24, 1981.

Glacier Torii *see* **Torii Glacier**

Mount Torii. 77°37' S, 162°44' E. A prominent bluff-type mountain above Lake Chad and Lake Hoare, it surmounts the N wall of Taylor Glacier between Suess Glacier and Canada Glacier, in Victoria Land. Named by US-ACAN in 1997, for Tetsuya Torii (*see* **Torii Glacier**). NZ-APC accepted the name.

Torii Glacier. 71°19' S, 35°40' E. Flows NW between Mount Goossens and Mount Fukushima, in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960, by BelgAE 1960-61, and named by leader Guido Derom as Glacier Torii, for geochemist Tetsuya Torii, leader of the Japanese party that visited here in Nov. 1960. US-ACAN accepted the name Mount Torii in 1966. Mr. Torii led Japanese geochemical expeditions to the ponds and lakes of the McMurdo Dry Valleys for 20 seasons between 1963 and 1986-87.

Torimai-dake. 71°20' S, 35°44' E. Rising to 2256 m, it is the second highest peak in Mount Goossens, in the N part of the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese ("bird circling peak") on March 22, 1979.

Torinosu Cove. 69°29' S, 39°34' E. A narrow indentation, rather like an estuary, in the W side of Skarvsnes Foreland (the Japanese say the E side of that foreland), in the E part of Lützow-Holm Bay, 2.5 km W of Mount Suribachi, on the coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Mapped in greater detail by Japanese cartographers from JARE surveys and air photos taken between 1957 and 1962, and named by them on Nov. 22, 1973 as Torinous-wan (i.e., "birds's nest cove"). US-ACAN accepted the name Torinosu Cove in 1975.

Torinosu-wan *see* **Torinosu Cove**

The *Torlyn*. Norwegian whale catcher built in Oslo in 1929 for Bryde & Dahl's Whaling Company. She was off the coast of Mac. Robertson Land in Jan. and Feb. 1931, under the command of Klarius Mikkelsen, and was back in 1932-33, under skipper Lorens Basberg. On Jan. 14, 1941, while catching for the *Ole Wegger* in Antarctic waters, she and the crew were taken by the Nazi raider *Pinguin*. Her crew that season were: Ludvig Fremstad (captain); Nils Henriksen (1st mate); Juel Hansen, Leif Andersen, and Willy Sørensen (able seamen); Hans Strandlie (chief engineer); Henry Krømke (2nd engineer); Johan Zachariassen (engineer's assistant); Thoralf Thorsen and Einar Mørk (stokers); Håkon V.

Johansen (galley boy and cabin boy); Leopold Scheit (steward); Finn Bryde (whale gunner). In 1950 she was re-named *Finnhval*, and later *Lafjord*, and finally *Saelodden*.

Torlyn Fjell *see* **Torlyn Mountain**

Torlyn Mountain. 67°48' S, 66°55' E. An elongated rugged rock ridge (thus described by the Australians), 6 km E of Scullin Monolith, on the Mawson Coast of Mac. Robertson Land. In Jan. 1930, BANZARE flew over it, and on Feb. 13, 1931, they returned, threw a flag and proclamation ashore, and named it Murray Monolith. Also in Jan. and Feb. 1931, several Norwegian whale catchers explored along this coast, making sketches as they went, and they named this mountain as Torlyn Fjell, for one of the catchers, the *Torlyn*, from whose deck it was seen that February, even though this part of the coast was sketched as early as Jan. 19 from the *Bouvet II*. The term Murray Monolith is now used only for the detached NE front of the feature (*see* **Murray Monolith**). US-ACAN accepted the name in 1947, and ANCA followed suit on May 18, 1971 (at least with the naming; from the ANCA gazetteer, one sees that the Australians do not understand the latest developments with this feature, or perhaps, do not go along with the description as given by the Americans).

Tornen. 72°17' S, 27°40' E. A small, sharp nunatak, between Eremitten Nunatak and the Bleikskoltane Rocks, in the SE part of the Sør Rondane Mountains. Named by the Norwegians "the thorn").

Bajo Toro *see* **Reyes Spit**

Banco Toro *see* **Reyes Spit**

Punta Toro *see* **Reyes Spit**, **Toro Point**

Toro, Federico Guesalaga *see* **Guesalaga Toro, Federico**

Glaciar Toro Mazote *see* **Toro Mazote Glacier**

Península Toro Mazote *see* **Toro Point**

Toro Mazote Glacier. 64°49' S, 62°51' W. Flows westward into Aguirre Passage, S of Waterboat Point, on the Danco Coast, on the W coast of Graham Land. ChilAE 1950-51 surveyed it, and named it Glaciar Toro Mazote, for Carlos Toro (see above). That name was accepted by the 1974 Chilean gazetteer. Meanwhile, back in 1921, when Lester and Bagshawe were in this area, during the British Imperial Antarctic Expedition of 1920-22, they named this feature as Mount Lunch Ho! Glacier, in association with a feature they had named similarly (*see* **Vidaurrazaga Glacier**). As this was a totally unacceptable name, UK-APC accepted the name Toro Mazote Glacier on March 31, 2004.

Toro Mazote Granada, Carlos. Chilean aviation lieutenant in 1948, he was one of the men who occupied General Bernardo O'Higgins Station that year. He was later on the *Lientur* during ChilAE 1950-51. He was later a general.

Toro Point. 63°19' S, 57°54' W. Forms the S extremity of Schmidt Peninsula, and the N side of the entrance to Unwin Cove, at Cape Legoupil, on Trinity Peninsula. Surveyed by ChilAE 1947-48, and erroneously charted by them as an island, which they named Islote Teniente Araos. The British gazetteer tells us this was named after Lt. Roberto Araos Tapia (*see* **Punta Araos**), but this does not seem likely. It was more probably named after Jorge Araos Santibáñez, who was actually on ChilAE 1947-48 (*see* **Cerro Araos**). At the same time the base of the point was charted as a small peninsula, and named Península Toro Mazote, for Carlos Toro Mazote Granada (see above). All this appears on their 1948 chart. Re-surveyed by ChilAE 1950-51, who now applied the name Punta Toro to the whole point. It appears that way on their 1951 chart, on a Chilean chart of 1959, and was the name accepted by the Chilean gazetteer of 1974. It appears on a U.S. chart of 1963 as Toro Point, and that name was accepted by US-ACAN in 1964, and by UK-APC on Dec. 15, 1982. It appears in the 1986 British gazetteer.

The *Torodd*. Whaling factory ship, launched on Feb. 14, 1902, at the Wigham, Richardson yard in the north of England, as the *Colonia*, for the Telegraph Construction & Maintenance Co., of London. She plied between London, Bermuda, and New York, and in 1928 was sold to the Odd Company (Lars Christensen), of Sandefjord, Norway, and converted into the 7976-ton, 148.4-meter factory whaling ship *Torodd*. She worked in the South Shetlands and off Graham Land in 1928-29, 1929-30, and 1930-31, also doing pelagic whaling. In 1934 she was sold to Nordstrom & Jespersen's Hvalprodukter Company, of Oslo, and renamed *Sydis* (8118 tons). As such, she was back in Antarctic waters in 1934-35 and 1935-36. She was sold again, to Hamburger Walfang-Kontor (along with her 5 whale catchers), and renamed the *Südmeer*. As such she was back in Antarctic waters in 1937-38, 1938-39, and 1939-40. In 1940 the German Navy took her over, and she was torpedoed by the Allies on Oct. 14, 1944.

Torp, Einar. b. Norway. Skipper of the *Thorshammer*, in Antarctic waters in 1940-41, 1941-42, 1947-48, 1949-50, 1950-51, and 1951-52.

Isla Torre *see* **Cecilia Island**, **Tower Island**

Monte Torre *see* **Lyon Peak**, **Tower Hill**, **Tower Peak**

Roca Torre Martello *see* **Martello Tower**

Torrent Valley. 63°59' S, 57°53' W. A valley running from an ice field below precipitous cliffs ESE of Massey Heights to Shrove Bay, on James Ross Island. Named by UK-APC on Dec. 2, 1993, in association with a river which flows under the 2 separate ice fields and emerges about 0.8 km downstream from an ice cave onto a deltaic plain.

Torres, Alberto Rubén *see* **Órcadas Station**, 1951

Torres, Alfredo *see* **Órcadas Station**, 1947, 1949

Torresen, Ivar Likness. b. Sept. 18, 1893, Norway. Whaler who died in the South Shetlands under unknown circumstances, on April 1, 1929, and was buried in the Whalers Bay Cemetery on Deception Island. This is a most unlikely name in Norwegian. There is a place called Liknes. The name Torresen does exist, but barely. It is more likely to be Toresen, Thoresen, or even Thorsen, but even then, he is unfindable.

Cape Torson. 66°40' S, 90°36' E. On the E side of Posadowsky Bay, on the ice coast of Wilhelm II Land. First mapped from air photos taken during OpHJ 1946-47. Re-mapped by SovAE 1956, who named it Mys Torsona, for Konstantin Petrovich Torson. ANCA translated the name on Oct. 11, 1960, and US-ACAN accepted that translation in 1962.

Torson, Konstantin Petrovich. b. 1793. Lieutenant, and watch officer on the *Vostok* with von Bellingshausen, in Antarctic waters in 1820-21. After the expedition he was in charge of processing the scientific data accumulated. He was exiled to Siberia in 1826, and died in 1851.

Mys Torsona *see* **Cape Torson**

Torsviktoppen. 74°35' S, 11°08' W. A mountain peak S of Sharffenbergbotnen, in the northernmost part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for lawyer Harald Torsvik (1904-1941), Resistance leader in Norway during World War II, executed by the Nazis.

Isla Torta *see* **Diomedea Island**

Tortoise Hill. 64°22' S, 57°30' W. Rising to 505 m, 5 km W of The Watchtower, in the SE corner of James Ross Island. Surveyed by Fids from Base D between 1958 and 1961. Named by UK-APC on Feb. 12, 1964, in association with Terrapin Hill to the N, which it looks like and resembles geologically. US-ACAN accepted the name later in 1964.

Îlot de la Tortue *see under* **D**

Cerro Tortuga *see* **Cerro Raúl**

Isla(s) Tortuga *see* **Saffery Islands**, **Turtle Island**

Islotes Tortuga *see* **Saffery Islands**, **Turtle Island**

Punta Tortuga *see* **President Head**

The *Toshi Maru 6*. Japanese whale catcher in Antarctic waters in the 1938-39 season. For her story, *see* **The *Tama Maru 11***.

The *Toshi Maru 8*. Japanese whale catcher in Antarctic waters in the 1938-39 season. For her story that year, *see* **The *Tama Maru 11***.

The *Toshi Maru 11*. Japanese whale scouting vessel that took part in the International Whaling Commission Expedition (q.v.) of 1979-80. Her skipper that year was Shigeru Suzuki. Chief officer was Toshinori Tsurui. She was back for the 1980-81 expedition. Her skipper that year was Ikuo Uchiike, and 2nd officer was Katsuji Gomi. She was also near the Balleny Islands in 1981, as part of that expedition.

The *Toshi Maru 16*. Former Japanese whale catcher, in Antarctic waters in 1978-79, as part of the International Whaling Commission Expedition (q.v.). Skipper that year was Kazuo Kitayama.

The *Toshi Maru 18*. Former Japanese whale catcher, in Antarctic waters in 1978-79, as part of the International Whaling Commission Expedition (q.v.). Skipper that year was Kazuhiko Yamashita. 2nd officer was Atsushi Owada (he would later command the *Shonan Maru 2*).

Tot Island. 65°31' S, 64°20' W. A small island, just N of the NE end of Lahille Island, off the Graham Coast, on the W coast of Graham Land. First charted by BGLE 1934–37, photographed aerially by FIDASE in 1956–57, and surveyed from the ground by a combined FIDS-Royal Navy team in 1958. Named by UK-APC on July 7, 1959, for its size. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Tot Pond. 76°54' S, 161°07' E. The smaller and western of 2 closely spaced frozen ponds in the floor of Alatna Valley, with a diameter of less than 100 m, it is filled by overflow from the larger, adjacent, Rum Pond, in the Convoy Range of Victoria Land. Named by Trevor Chinn's 1989–90 NZARP geological field party here, in association with Rum Pond. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Mount Toth. 86°22' S, 155°15' W. Rising to 2410 m, it is the most easterly peak on the small, ice-covered ridge 8 km E of Mount Kendrick, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Cdr. Arpad J. Toth, USNR, operations officer in charge of Williams Field, 1962–64.

Toth Nunataks. 73°33' S, 64°47' W. A small group of isolated nunataks, rising to about 1500 m, W of the head of Meinardus Glacier, 27 km NNW of Mount Coman, on the Lassiter Coast, on the E coast of Palmer Land. Mapped by USGS from ground surveys conducted in 1961–62, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Stephen R. Toth, USARP glaciologist at Byrd Station in 1965–66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Totoa Nunatak. 77°19' S, 160°26' E. At the SW end of the Moremore Nunataks, 1.3 km W of Mount Bastion, on the plateau of the Willett Range, in Victoria Land. Named descriptively by NZ-APC on Sept. 12, 2005. Apparently, the word "totoa" signifies a boisterous and stormy wind in Maori. US-ACAN accepted the name in 2006.

The *Totorore*. NZ yacht which visited the South Shetlands in the period 1984–86. The crew were Gerald S. Clark (skipper), Julia von Meyer, and Chris Sale. Mr. Clark wrote *The Totorore Voyage*.

The *Tottan*. Steel-hulled Norwegian sealer of 540 tons, chartered by France, which, under the command of Capt. J. Engebretsen, arrived at Port-Martin Station on Jan. 14, 1952, and picked up the French Polar Expedition (q.v.) on Feb. 2, 1952. In between those two dates Port-Martin burned down. In Feb. and March, 1952, and again in March and April, 1952, the Australians chartered the ship to relieve Macquarie Island and Heard Island, leasing it through their shipping agents Westralian Farmers Transport Ltd., in London. Then, for the remainder of 1952, the ship stayed in sub-Antarctic waters, with L.L. Fredriksen as skipper. Later in 1952 H.C. Andersen took over as captain, and he took the ship to Adélie Land to take off the 7 French winterers at Pétrel Island. In Feb. and March, and March and April 1953, Australia chartered her again (captain was still Andersen), to relieve Heard and Macquarie, as before. Although only a small vessel, she had the advantage of being more stable in rough seas than the *Wyatt Earp*. The Australians and the Norwegian crew got on famously. The *Tottan* then worked in the Arctic, but was back south in 1955–56, delivering the members of the British Royal Society Expedition to the ice, during the period of IGY, at Halley Bay Station. Captain: Leif Jakobsen. Under the same captain, the ship relieved Halley Bay in 1956–57, and 1957–58.

Récif Tottan. 66°33' S, 139°56' E. A rock in the Dumont d'Urville Sea, N of Gouverneur Island, on the Antarctic Circle. Named by the French as Récif du Tottan, for the *Tottan*, from which this reef was discovered. The name was later shortened. It is reported that the Russians call it Tottan Rock.

Tottan Hills. 74°48' S, 12°10' W. A group of rocky hills, 30 km in extent, and forming the SW portion of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. They were discovered and photographed in Jan. 1952, on a reconnaissance flight, during NBSAE 1949–52. Mapped from these photos by Norwegian cartographers, and named by them as Tottanfjella, for the *Tottan*. US-ACAN accepted the translated name Tottan Mountains in 1966.

Tottan Rock *see* **Récif Tottan**

Tottanbukta. 70°13' S, 2°47' W. A small bay in the ice shelf N of Blåskimen Island, on the Princess Martha Coast. Named by the Norwegians for the *Tottan*.

Tottanfjella *see* **Tottan Hills**

Tottankaia. 70°12' S, 2°45°W. An unloading place in Tottanbukta, on the Princess Martha Coast. Named by the Norwegians ("the Tottan quay").

Totten, George M. b. Nov. 20, 1816, Plattsburg, NY, son of Gen. Joseph Gilbert Totten and his wife Catlyna Pearson. He joined the U.S. Navy, and was a passed midshipman on the *Vincennes* and the *Porpoise* during USEE 1838–42. On July 26, 1842, in Brooklyn, he married Julia Rush Gamble, and they lived in Washington, where he was promoted to liutenant and had several children. He died on July 18, 1857, in Mendham, NJ.

Totten Glacier. 66°45' S, 116°10' E. A massive glacier, about 60 km long and 30 km wide, it flows northeastward from the continental ice, but turns northwestward at the coast where it terminates in a prominent tongue (the Totten Glacier Tongue) just E of Cape Waldron, on the W part of the Sabrina Coast, between that coast and the Budd Coast, in Wilkes Land. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1955, for George M. Totten. ANCA accepted the name.

Totten Glacier Tongue. 66°35' S, 116°05' E. The prominent seaward extension of the Totten Glacier, on the Wilkes Land coast between the Sabrina Coast and the Budd Coast. Delineated by U.S. cartographer Gard Blodgett from air photos taken by OpHJ 1946–47, and named by US-ACAN in 1956, in association with the glacier.

Tottenbukta Sanae *see* **Sanae Station**

Totten's Highland. 67°00' S, 119°30' E. Off the Sabrina Coast, this area is now generally incorporated into what we know as the Sabrina Coast. Discovered by Wilkes in 1840, and named by him for George M. Totten.

Tottsuki-misaki *see* **Tottsuki Point**

Tottsuki Point. 68°55' S, 39°49' E. Also called Tottuki Point. A small rock point projecting westward, 5 km SW of Flattunga, on the coast of Queen Maud Land. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers. Mapped in greater detail by Japanese cartographers from JARE surveys and air photos taken between 1957 and 1962, and named by them on Oct. 1, 1962, as Tottuki-misaki, or Tottsuki-misaki (i.e., "first point"). US-ACAN accepted the name Tottsuki Point in 1968.

Tottuki-misaki *see* **Tottsuki Point**

Tottuki Point *see* **Tottsuki Point**

Totyaku-hyoga. 71°20' S, 35°45' E. A small glacier between Mount Pierre and Mount Goossens, in the Queen Fabiola Mountains. A JARE field party arrived here in Nov. 1960, hence the name ("arrival glacier") given by the Japanese on March 22, 1979.

Totyaku-iwa. 71°47' S, 36°11' E. Rising to 2366.5 m, it is the northwestern of 2 small rock exposures 13 km SE of Mount Gaston de Gerlache, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1969, and named ("arrival rock") by the Japanese on Nov. 24, 1981.

Touchard, Simon-Jean. b. Jan. 3, 1815, Lyon. Able seaman on the *Zélée* during FrAE 1837–40. He ran at Guam on Jan. 10, 1839.

Touchdown Glacier. 79°48' S, 158°10' E. A tributary glacier flowing S between Roadend Nunatak and Bastion Hill (which is in the Brown Hills), into Darwin Glacier. Discovered and mapped by VUWAE 1962–63, and so named by them because the glacier was used as a landing site for aircraft supporting the expedition. US-ACAN accepted the name in 1965, and ANCA followed suit.

Touchdown Hills. 78°07' S, 35°00' W. A group of snow-covered hills, rising to about 500 m, and extending N-S from Vahsel Bay, on the E side of the Filchner Ice Shelf, to about 78°40' S. Discovered on Feb. 6, 1956, by BCTAE, and so named by them because one of the expedition members, while piloting a ski-equipped Otter, landed on them, thinking they were clouds, and bounced off, undamaged. Roughly mapped in Dec. 1956, during the same expedition. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. On an Argentine map of 1966, the feature appears as Colina Touch-down.

Touchstone Crag. 77°12' S, 161°18' E. A rugged mountain rising to 1550 m, 2 km W of

Mick Peak, in the W part of the Helicopter Mountains. The abrupt south-facing cliffs of this feature also mark the NW extremity of the Saint Johns Range, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Steven Touchstone, helo mechanic who supported USAP at McMurdo Sound and the McMurdo Dry Valleys, for 9 austral field seasons between 1999-2000 and 2007-08. NZ-APC accepted the name on April 7, 2008.

Cerro La Tour *see* **The Tower**

Tour de Pise. 66°40' S, 140°01' E. An isolated rock dome, or hill, rising to 27 m, which protrudes through the ice in the NW part of Rostand Island, in the Géologie Archipelago. Charted by the French in 1951, and named by them for the Tower of Pisa. US-ACAN accepted the French name in 1962.

Anses des Tourbillons *see under* **D**

Mount Touring Club. 65°17' S, 63°56' W. Also called Mount Club. A small, snow-capped peak near the extremity of a spur that descends southwestward from Mount Peary, on the W side of Graham Land. Discovered by FrAE 1908-10, and named by Charcot as Sommet du Touring Club. While a party was charting the area, they hiked along the S side of this feature. US-ACAN accepted the name Mount Touring Club in 1950.

Tourism. **1924**: this was the year the *Fleurus* was chartered from Tønsbergs Hvalfangeri by the Falkland Islands government, to run mail between Port Stanley, South Georgia, and the South Shetlands. She was contracted to make 5 voyages between Port Stanley and South Georgia per season, and one to the South Shetlands, and she did, between 1924 and 1933. However, she was also a tourist ship, and tourist berths were actually advertised. **1928-30**. Capt. J.R. Stenhouse, the British chief officer on the *Aurora* during Shackleton's BITE 1914-17, planned a luxury cruise to Antarctica, on a liner out of Southampton, for 5 months, at a cost of $2,500 per person. The trip would include a week cruising in the Ross Sea. By early Nov. 1928, 12 persons had booked, including 4 women. It never happened. **1930**: Charles J. "Nomad" McGuinness seriously proposed Antarctic tourism when he got back from ByrdAE 1928-30. **1932-33**: Actually at the beginning of 1933, during that season's relief expedition of Órcadas Station, in the South Orkneys, the Argentine vessel *Pampa* transported some of the first tourists to Antarctica — members of the University Club of Buenos Aires, and a journalist named Juan José de Soiza Reilly. **1936-37**: Lars Christensen took his wife, daughter, and 2 female friends down to see the continent (*see* **Lars Christensen Expedition 1936-37**). **Dec. 22, 1956**: A LAN Chile Douglas DC6-B flew the first tourists, 66 of them, from Chabunco, Chile, over the Antarctica Peninsula and South Shetlands, at an average altitude of 20,000 feet, on a non-stop aerial tour of Chile's bases in the Antarctic Peninsula (i.e., they did not land). This was the first tourist flight to Antarctica. **1956-57**: Scandinavian Airlines planned a tourist flight from Australia to Antarctica after the 1956 Olympics in Melbourne, but it was called off. **Oct. 15, 1957**: A Pan Am chartered flight landed at McMurdo Base (*see also* **Women in Antarctica**, for that date). **Jan.-Feb. 1958**: The Argentine Naval Transport Command organized the first two tours to the Antarctic Peninsula — 9 and 12 days, in Jan. and Feb. of that year, aboard the *Les Éclaireurs*. About 100 tourists on each voyage. **Jan. 1959**: The *Yapeyú*, an Argentine vessel belonging to Empresa Líneas Marítimas Argentinas, took 260 tourists to the South Shetlands. **Feb. 9-March 4, 1959**: The *Navarino*, a Chilean vessel belonging to Empresa Marítimo del Estado, took 84 tourists to the South Shetlands. **1959-60**: The *General San Martín* took tourists. **Nov. 26, 1962**: American secretary of commerce Luther H. Hodges, suggested that the South Pole could become a busy tourist center. "It's really amazing to see what goes on down there." **Jan.-Feb. 1966**: Lindblad Travel made their first American tourist expedition to Antarctica, on the *Lapataia*, a vessel Mr. Lindblad chartered from the Argentine Navy. He also led the expedition. **Jan.-Feb. 1967**: The *Lapataia* made two Lindblad cruises to the South Shetlands, from Ushuaia. Between Feb. 14 and 16, 1967, 14 tourists were stranded on Half Moon Island, when their landing craft was wrecked. **Jan.-March 1968**: The *Magga Dan*, chartered by Lindblad, became the first tourist ship south of the Antarctic Circle, when she visited sites in the Ross Sea. **Feb. 1968**: The *Navarino*, chartered by Lindblad, left Punta Arenas, Chile, for the South Shetlands and the Antarctic Peninsula. **Dec. 26, 1968-Feb. 28, 1969**: The Argentine ship *Libertad* conducted 4 tourist cruises to the South Shetlands and the Antarctic Peninsula. **Jan. and Feb. 1970**: Two Argentine tourist cruises by the *Río Tunuyán*. **Dec. 18, 1971-Jan. 22, 1972**: Two Argentine tourist cruises made by the *Libertad*. **Dec. 24, 1971**: The *Lindblad Exlorer* ran aground in the Gerlache Strait. **Feb. 11, 1972**: The *Lindblad Explorer* ran aground again, in the South Shetlands. **1972-73**: Two Argentine tourist cruises by the *Libertad*. **1973**: The Spanish tourist ship, *Cabo San Roque*, visited the South Shetlands and the Antarctic Peninsula, with a reported 900 tourists aboard. **Dec. 27, 1974-March 5, 1975**: The *Regina Prima* (an Italian vessel chartered by Argentina) made 6 tourist visits to the South Shetlands and the Antarctic Peninsula. **Dec. 16, 1975-March 6, 1976**: The *Regina Prima* did 6 tourist cruises to the South Shetlands and the Antarctic Peninsula. **Feb. 13, 1977**: A Boeing flew 300 persons over the Antarctic (including the South Pole) from Sydney in a 10½-hour flight. This was the first "champagne flight," arranged by Dick Smith. Not only Qantas began such annual flights this season, but NZ did too. There were 9 Qantas and 6 Air New Zealand flights this season. **Feb. 10-March 10, 1978**: The *Bahía Buen Suceso* took a group of tourists to the South Shetlands and the Antarctic Peninsula, on an Argentine cruise. There were 13 Qantas flights over Antarctica this season, and 4 Air New Zealand ones. **1979**: There were 5 Qantas champagne flights this season, and an Air New Zealand one that crashed (*see* **Deaths**, 1979). **Feb. 16, 1980**: The last Qantas tourist flight over Antarctica. **1981**: The Argentines announced that they would be making Vicecomodoro Marambio Station into a commercial air terminal in 1983. **1982**: Chile offered tourist flights between the mainland of South America and Teniente Rodolfo Marsh Station on King George Island, in the South Shetlands. This base was subsequently heavily promoted for tourism. A 100-guest hotel went up there. **1983-84**: Eight ships visited just Palmer Station, with 822 passengers. **1984**: 200 tourists were taken from Chile to Teniente Rodolfo Marsh Station by a Chilean Air Force Hercules during the winter of 1984, and put up at the hotel for 3 days. **Dec. 31, 1985**: Two Chilean pilots and 8 U.S. tourists were killed when their light aircraft crashed coming in to land at Teniente Rodolfo Marsh Station. **1986-87**: 13 ships visited just Palmer Station, with 1295 tourists. That summer there were over 5000 tourists all over Antarctica, from all over the world. **1987-88**: Despite National Science Foundation (NSF) limitations, there were 10 tourist ships in at Palmer Station, with 1102 passengers. **Jan. 1988**: 50 tourists arrived at the South Pole itself. **Early Jan. 1989**: The NSF exerted its influence on tour operators to keep the number of cruise ships visiting Antarctica down to no more than the 1987-88 figure. **1989-90**: Mountain Travel sent a party to the Pole, by foot. This operator, and a few others, conducted other exotic tours as well, such as regular climbs up Vinson Massif, and other land jaunts, but such organized expeditions, by true professionals, are usually exceedingly careful of their presence on the continent. But, airstrips, hotels, recreational facilities, gift shops, motor transport, the road to the Pole, are all now a feature of Antarctica, and one can only hope that sewage disposal, search and rescue squads, and policemen keep pace. One big uncertainty is whether the penguins are safe. Many concerned individuals believe in one simple summary of this topic: Tourism is going to foul up the Antarctic environment, so don't go. However, if one is bent on going south, here is how one goes about it: Call LAN Chile Airlines Tour Department, and say, "Buenos Días." In the 1980s they would book you on a Society Expeditions cruise. Society Expeditions were as good as anyone, better than most, and the best known. They were probably the easiest to deal with. Antarctic tours are not cheap. The standard package of a few days around the Antarctic Peninsula area cost several thousand U.S. dollars, while a trip to the Pole retailed at around $70,000 (1990 figures). If you want to go it alone, you have to apply for a permit from the Antarctic authorities in your own capital city. The same applies if you go on an organized tour, and then want to strike out on your own once in Antarctica. Other tour operators who covered Antarctica included: Mountain Travel (the most adventurous), Travel Dynamics, Lindblad Travel, Sobek, Adventure Network, Alpine Tours, Special Odysseys, Antarctica Tours. A lot of travel agents (as opposed to these tour operators) pretend they have never

heard of tours to Antarctica. They are just being protective of the environment, so those persons still keen to go can call one of the tour operators listed in this book under their own entries. Expeditions start in Jan.-Feb. or Nov.-Dec. of a given year, in order to get in on the Austral summer. The season is about 60 days, that's all, and then the Antarctic night arrives. Normally it's a matter of a cruise around the South Shetlands and the northern tip of the Antarctic Peninsula, and of going ashore at certain stations to annoy scientists. Palmer Station was already becoming hostile in 1990, as 40 man-hours were being lost each season showing the tourists around the station, fixing them coffee, going out to look for them when they got lost, and cleaning up after them when they'd gone — coke cans, cigarette butts, garbage, etc. Although the NSF looks askance at tourism (not all national authorities are averse to tourism), and its (tourism's) days may be numbered, the number of ships and chartered planes was on the increase throughout the 1990s. 6700 persons visited Antarctica as tourists in 1992-93. In the 2004-05 season alone, there were 30,232 tourists to Antarctica. In 2008-09, 45,213 persons visited Antarctica.

Tourmaline Plateau. 74°10' S, 163°27' E. An ice-covered plateau in the central portion of the Deep Freeze Range, bounded by Howard Peaks and the peaks and ridges which trend N-S from Mount Levick, in Victoria Land. So named by the Northern Party of NZGSAE 1965-66, for the tourmaline-granite found here. NZ-APC accepted the name, and US-ACAN followed suit in 1966. The Italians set up an AWS here, at an elevation of 1700 m.

Tournachon Peak. 64°19' S, 61°05' W. Rising to 860 m, SSW of Spring Point, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57 and from ground surveys conducted by Fids from Portal Point between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Gaspard-Félix Tournachon (1820-1910), pioneer balloonist and aerial photographer known as "Nadar." It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Tousled Peak. 73°11' S, 169°01' E. A small, ice-covered peak, rising to 1220 m, 5.5 km NW of the summit of Mount Lubbock, in the S end of Daniell Peninsula, in Victoria Land. Named by NZ-APC in 1965 for its exceptionally broken ice summit. US-ACAN accepted the name in 1966.

Toutcher, Norman Champion. b. 1884, Ararat, Vic., son of Richard Frederick Toutcher and his wife Marion Theresa Ryan. He joined the Merchant Navy, and on Nov. 18, 1907, got his 2nd mate's certificate, and on June 19, 1909, his 1st mate's certificate. On July 27, 1911, in Cardiff, he signed on to the *Aurora* as chief officer, at £12 10s per month, for the first Antarctic voyage during AAE 1911-14. He left the expedition at Hobart on March 12, 1912, and on July 3, 1912 got his master's certificate, in Melbourne. He died in 1924.

The Tower. 62°13' S, 58°29' W. A mountain, rising to 345 m (the British say about 365 m), and snow-covered except at the summit, close W of Demay Point, at the W side of the entrance to Admiralty Bay, King George Island, in the South Shetlands. Roughly charted in Dec. 1909, by FrAE 1908-10, and named descriptively by Charcot as La Tour (i.e., "the tower"). It appears as such on his 1912 chart, as well as on British charts of 1929 and 1947. It was re-charted by the Discovery Investigations between 1935 and 1939. It appears on a 1946 Argentine chart as Monte la Torre, on two 1947 Chilean charts as, respectively, Monte La Tour and Cerro La Tour, on a 1948 British chart as "The Tower (La Tour")", on a 1948 Argentine chart as Pico La Tour, on another 1948 British chart as simply The Tower, and on a 1953 Argentine chart as Pico Torre. US-ACAN accepted the name The Tower in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1962. It appears on a 1957 Argentine chart as Pico la Torre, and that was the name accepted by the 1970 Argentine gazetteer. The feature was photographed aerially by FIDASE 1956-57, and they also surveyed it from the ground. The Chilean gazetteer of 1974 accepted the name Cerro La Tour. Last plotted by the UK, in late 2008.

Mount Tower *see* **Tower Hill**

Tower Glacier. 62°12' S, 58°27' W. Between the hills called Brama, Bastion, and The Tower (hence the name given by the Poles in 1980), in the area of Admiralty Bay, King George Island, in the South Shetlands.

Tower Hill. 63°42' S, 60°45' W. Also called Mount Tower. A sharp, conical summit, rising to 1125 m, it surmounts the NW part of Trinity Island, being the highest point on that island, in the Palmer Archipelago. Pendleton's log of Dec. 31, 1821, refers to Shoe Land Hill, which is probably this feature. In 1824, James Hoseason, mate of the *Sprightly*, roughly charted it, and named it Tower Hill. The origin of the name is unknown, but it may be descriptive. It appears as such on Powell's chart of 1828, and also on a 1901 British chart. On an 1861 Spanish chart it appears as Monte Tower. It appears on a 1937 British chart, plotted in 63°46' S, 60°37' W, and, as such, was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Cerro Torre. Photographed aerially by FIDASE in 1956. The coordinates were corrected in time for a 1957 British chart, and, with the new coordinates, the feature appears in the 1977 British gazetteer. *See also* **Lyon Peak**, with which it was confused by ArgAE 1953-54, who charted it as Monte Torre. However, today, the Argentines have the right feature, which they do call Monte Torre, as do the Chileans.

Tower Island. 63°33' S, 59°51' W. An island, 7 km long and rising to 305 m above sea level, it lies 30 km N of Charcot Bay, and is separated from Cape Kater by Orléans Strait, off the Davis Coast, on the W coast of Graham Land, and marking the NE extent of the Palmer Archipelago. Roughly charted by Bransfield on Jan. 30, 1820, who named "a round island" in the area as Tower's Islands (sic). This was probably Ohlin Island. The name Tower was subsequently given to the bigger island (i.e., what is now Tower Island). Palmer was the next to see it, on Nov. 7, 1820. On Powell's chart of 1828, this island and Trinity Island appear collectively as Trinity Land, a situation repeated on the 1838 map drawn up by FrAE 1837-40 (as Terre de la Trinité) and on Larsen's 1894 chart. On a British chart of 1839, the name Tower Islands was applied to a group of small islands off the N coast of Trinity Island, a situation that re-appears on an 1894 U.S. Hydrographic Office chart, on Friederichsen's 1895 German map (as Tower Inseln), on de Gerlache's map of 1902 (as Îles Tower; this map reflected BelgAE 1897-99), and on Balch's map of 1904. This island was further charted in 1902, by SwedAE 1901-04, and Nordenskjöld named it Pendletons Ön, for Ben Pendleton. On a British chart of 1916, it appears translated as Pendleton Island, and Wilkins calls it that on his 1929 map. On a British chart of 1921, it appears as Tower Island. It was re-surveyed by the Discovery Investigations in 1930-31, and appears as Tower Island on their 1931 chart, as it does also on a British chart of 1938. It appears on a Chilean chart of 1947 as Isla Tower. US-ACAN accepted the name Tower Island in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1962. It appears on an Argentine chart of 1953, as Isla Torre, and on a 1962 Chilean chart as Isla Torres, but the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer was Isla Torre.

Tower Islands *see* **Tower Island**

Tower Peak. 64°23' S, 59°09' W. Rising to 855 m (the British say 830 m), its rock exposure stands out clearly from an evenly contoured icefield 8 km NW of Longing Gap, between that gap and Mount Tucker, on the Nordenskjöld Coast, on the E coast of northern Graham Land. Surveyed and charted by Fids from Base D in Aug. 1945, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57, and re-surveyed by Fids from Base D in 1960-61. The Argentines call it Monte Torre (which means the same thing).

Tower's Islands *see* **Ohlin Island**, **Tower Island**
